Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> failover maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
----------	--

Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item failover partner-down-delay</i> <i>number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer [*address*] *reference*

Synopsis	Enter the peer list instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item failover peer</i> <i>reference</i>
Tree	<i>peer</i>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *reference*

Synopsis	IP address of the failover peer
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item failover peer</i> <i>reference</i>
Tree	<i>peer</i>
Reference	configure <i>redundancy multi-chassis peer</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sync-tag *named-item*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> failover peer <i>reference</i> sync-tag <i>named-item</i>
Tree	sync-tag
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-wait-time *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-lease-time *number*

Synopsis	Maximum lease time
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item</i> <i>pool</i> <i>named-item</i> max-lease-time <i>number</i>
Tree	max-lease-time
Range	10 to 315446399
Units	seconds
Default	864000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-lease-time *number*

Synopsis	Minimum lease time
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item</i> <i>pool</i> <i>named-item</i> min-lease-time <i>number</i>
Tree	min-lease-time
Range	10 to 315446399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-free

Synopsis	Enter the minimum-free context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item</i> <i>pool</i> <i>named-item</i> minimum-free
Tree	minimum-free
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

absolute *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> minimum-free absolute <i>number</i>
Tree	absolute
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event-when-depleted *boolean*

Synopsis	Generate notification when addresses are depleted
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> minimum-free event-when-depleted <i>boolean</i>
Tree	event-when-depleted
Description	<p>When configured to true, a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.</p> <p>When configured to false, no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

percent *number*

Synopsis	Minimum free addresses as a percentage
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> minimum-free percent <i>number</i>
Tree	percent
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

nak-non-matching-subnet *boolean*

Synopsis Send NAK if no match for request address pool range

Context **configure** *service* *vpn* *service-name* *dhcp-server dhcpv4* *named-item pool* *named-item nak-non-matching-subnet* *boolean*

Tree *nak-non-matching-subnet*

Description When configured to **true**, a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.

When configured to **false** or unconfigured, the system drops the DHCP packet.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

offer-time *number*

Synopsis Time interval during which a DHCP offer remains valid

Context **configure** *service* *vpn* *service-name* *dhcp-server dhcpv4* *named-item pool* *named-item offer-time* *number*

Tree *offer-time*

Range 10 to 600

Units seconds

Default 60

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

options

Synopsis Enter the **options** context

Context **configure** *service* *vpn* *service-name* *dhcp-server dhcpv4* *named-item pool* *named-item options*

Tree *options*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

option [*number*] (*number* | *keyword*)

Synopsis	Enter the option list instance
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> options option (<i>number</i> <i>keyword</i>)
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[number] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> options option (<i>number</i> <i>keyword</i>)
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> options option (<i>number</i> <i>keyword</i>) ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duration *number*

Synopsis	DHCP option as time duration
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item options option</i> (<i>number</i> <i>keyword</i>) <i>duration</i> <i>number</i>
Tree	<i>duration</i>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

empty

Synopsis	Remove DHCP option from the configuration
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item options option</i> (<i>number</i> <i>keyword</i>) <i>empty</i>
Tree	<i>empty</i>
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item options option</i> (<i>number</i> <i>keyword</i>) <i>hex-string</i> <i>hex-string</i>
Tree	<i>hex-string</i>
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> options option (<i>number</i> <i>keyword</i>) ipv4-address <i>ipv4-address</i>
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> options option (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i>
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

subnet [[ipv4-prefix](#)] *ipv4-unicast-prefix*

Synopsis	Enter the subnet list instance
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i>
Tree	subnet
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-prefix] *ipv4-unicast-prefix*

Synopsis	IPv4 prefix for the subnet
Context	configure <i>service vprn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet</i> <i>ipv4-unicast-prefix</i>
Tree	<i>subnet</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address-range [start] *ipv4-unicast-address* end *ipv4-unicast-address*

Synopsis	Enter the address-range list instance
Context	configure <i>service vprn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet</i> <i>ipv4-unicast-prefix</i> address-range <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	address-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[start] *ipv4-unicast-address*

Synopsis	Lower bound of the IP address range
Context	configure <i>service vprn</i> <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet</i> <i>ipv4-unicast-prefix</i> address-range <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	address-range
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv4-unicast-address*

Synopsis	Upper bound of the IP address range
----------	-------------------------------------

Context	configure service vprn <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet ipv4-unicast-prefix address-range ipv4-unicast-address end ipv4-unicast-address</i>
Tree	address-range
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

failover-control-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Failover control type for this range
Context	configure service vprn <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet ipv4-unicast-prefix address-range ipv4-unicast-address end ipv4-unicast-address failover-control-type keyword</i>
Tree	failover-control-type
Options	local, remote, access-driven
Default	local
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

drain *boolean*

Synopsis	Prevent new lease assignment from this subnet
Context	configure service vprn <i>service-name dhcp-server dhcpv4</i> <i>named-item pool</i> <i>named-item subnet ipv4-unicast-prefix drain boolean</i>
Tree	drain
Description	When configured to true , new leases cannot be assigned and existing leases are kept up until they are released. When configured to false , the subnet is active and new leases can be assigned.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude-addresses [**start**] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Synopsis	Add a list entry for exclude-addresses
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> exclude-addresses <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	exclude-addresses
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[start] *ipv4-unicast-address*

Synopsis	Lower bound of the IP address range
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> exclude-addresses <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	exclude-addresses
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv4-unicast-address*

Synopsis	Upper bound of the IP address range
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> exclude-addresses <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	exclude-addresses
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-declined *number*

Synopsis	Maximum number of declined addresses allowed
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet ipv4-unicast-prefix maximum-declined <i>number</i>
Tree	maximum-declined
Max. range	0 to 4294967295
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-free

Synopsis	Enter the minimum-free context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet ipv4-unicast-prefix minimum-free
Tree	minimum-free
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

absolute *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet ipv4-unicast-prefix minimum-free absolute <i>number</i>
Tree	absolute
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: absolute or percent .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event-when-depleted *boolean*

Synopsis	Generate notification when addresses are depleted
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet ipv4-unicast-prefix minimum-free event-when-depleted <i>boolean</i>
Tree	event-when-depleted
Description	<p>When configured to true, a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.</p> <p>When configured to false, no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.</p>
Default	false
Introduced	25.3.R2

String length 1 to 127

String format 'string-not-all-spaces' must contain at least one non-space character

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

duration *number*

Synopsis	DHCP option as time duration
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> options option (<i>number</i> <i>keyword</i>) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

empty

Synopsis	Empty DHCP option
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> options option (<i>number</i> <i>keyword</i>) empty
Tree	empty
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> options option (<i>number</i> <i>keyword</i>) hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> options option (<i>number</i> <i>keyword</i>) ipv4-address <i>ipv4-address</i>
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool <i>named-item</i> subnet <i>ipv4-unicast-prefix</i> options option (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i>
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pool-selection

Synopsis	Enter the pool-selection context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection
Tree	pool-selection
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-gi-address

Synopsis	Enable the use-gi-address context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-gi-address
Tree	use-gi-address
Description	<p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

scope *keyword*

Synopsis	GI address-matching scope
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-gi-address scope <i>keyword</i>
Tree	scope
Options	subnet, pool
Default	subnet
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-pool-from-client

Synopsis	Enable the use-pool-from-client context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-pool-from-client
Tree	use-pool-from-client
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delimiter *string-not-all-spaces*

Synopsis	Delimiter to combine primary and secondary pool names
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv4 <i>named-item</i> pool-selection use-pool-from-client delimiter <i>string-not-all-spaces</i>
Tree	delimiter
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String length	1
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-db *reference*

Synopsis	Local user database for authentication

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) domain-string <i>string</i>
Tree	domain-string
String length	1 to 127
String format	'domain-string' must be a DNS-style label sequence (RFC 1035)
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duration *number*

Synopsis	DHCP option specified as time
Context	configure service vprn service-name dhcp-server dhcpv6 named-item defaults options option (number keyword) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

empty

Synopsis	Empty DHCP option
Context	configure service vprn service-name dhcp-server dhcpv6 named-item defaults options option (number keyword) empty
Tree	empty
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure service vprn service-name dhcp-server dhcpv6 named-item defaults options option (number keyword) hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults options option (<i>number</i> <i>keyword</i>) ipv6-address <i>ipv6-address</i>
Tree	ipv6-address
Max. instances	4
Notes	<p>The following elements are part of a mandatory choice: ascii-string, domain-string, duration, empty, hex-string, or ipv6-address.</p> <p>This element is ordered by the user.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults preferred-lifetime <i>number</i>
Tree	preferred-lifetime
Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rebind-time *number*

Synopsis	Rebind time for the lease
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv6</i> <i>named-item</i> <i>defaults</i> <i>rebind-time</i> <i>number</i>
Tree	<i>rebind-time</i>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

renew-time *number*

Synopsis	Renew time for the lease
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv6</i> <i>named-item</i> <i>defaults</i> <i>renew-time</i> <i>number</i>
Tree	<i>renew-time</i>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to</p>

extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range	0 to 604800
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> defaults valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-client-lead-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv6</i> <i>named-item failover</i> maximum-client-lead-time <i>number</i>
Tree	<i>maximum-client-lead-time</i>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

partner-down-delay *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server dhcpv6</i> <i>named-item failover</i> partner-down-delay <i>number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough

	time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

peer [[address](#)] *reference*

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-wait-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-rapid-commit *boolean*

Synopsis	Ignore Rapid Commit option
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> ignore-rapid-commit <i>boolean</i>
Tree	ignore-rapid-commit
Description	When configured to true , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-id-mapping *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> interface-id-mapping <i>boolean</i>
Tree	interface-id-mapping
Description	When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-hold

Synopsis	Enter the lease-hold context
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> lease-hold

Tree	sync-tag
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-wait-time *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure service vpn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> preferred-lifetime <i>number</i>
Tree	preferred-lifetime
Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length-threshold [**prefix-length**] *number*

rebind-time *number*

Synopsis	Rebind time for the lease
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> rebind-time <i>number</i>
Tree	rebind-time
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

renew-time *number*

Synopsis	Renew time for the lease
Context	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i> pool <i>named-item</i> prefix <i>ipv6-prefix</i> renew-time <i>number</i>
Tree	renew-time

Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>named-item</i> <i>pool</i> <i>named-item</i> <i>prefix</i> <i>ipv6-prefix</i> valid-lifetime <i>number</i>
Tree	<i>valid-lifetime</i>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Default	use-interface-ip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-source-address (*keyword* | *ipv6-unicast-address*)

Synopsis	Source address to contact an IPv6 DNS server
Context	configure service vpn <i>service-name</i> dns ipv6-source-address (<i>keyword</i> <i>ipv6-unicast-address</i>)
Tree	ipv6-source-address
Options	use-interface-ip
Default	use-interface-ip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	DNS server used for DNS name resolution
Context	configure service vpn <i>service-name</i> dns server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	server
Max. instances	3
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp *number*

Synopsis	Maximum equal-cost routes for routing table instance
Context	configure service vpn <i>service-name</i> ecmp <i>number</i>
Tree	ecmp
Description	<p>This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p>

1. The system selects the lowest next hop router ID.
2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.

Range	1 to 128
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecmp-unequal-cost *boolean*

Synopsis	Enable ECMP unequal cost capability
Context	configure <i>service vpn</i> <i>service-name</i> ecmp-unequal-cost <i>boolean</i>
Tree	ecmp-unequal-cost
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entropy-label *boolean*

Synopsis	Use entropy label
Context	configure <i>service vpn</i> <i>service-name</i> entropy-label <i>boolean</i>
Tree	entropy-label
Description	<p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> <p>The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.</p> <p>When configured to false, the use of entropy labels is disabled.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-neighbor-synchronization

Synopsis	Enable the evpn-neighbor-synchronization context
Context	configure service vprn <i>service-name</i> evpn-neighbor-synchronization
Tree	evpn-neighbor-synchronization
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of EVPN synchronization
Context	configure service vprn <i>service-name</i> evpn-neighbor-synchronization admin-state <i>keyword</i>
Tree	admin-state
Description	<p>This command configures local static and dynamic ARP and ND entries to be advertised using an EVPN MAC/IP advertisement route. On reception of those routes, ARP and ND entries are created on the routing context and interface identified by the EVI route target and the ESI.</p> <p>When unconfigured, local static and dynamic ARP and ND entries are not advertised.</p>
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

evi-route-target *evi-route-target*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVI route target to use for EVPN neighbor synchronization
Context	configure service vprn <i>service-name</i> evpn-neighbor-synchronization evi-route-target <i>evi-route-target</i>
Tree	evi-route-target

Description	This command configures the EVI route target used on the MAC/IP routes advertised for the routing context. On reception, the EVI route target is used to identify the routing context in which the ARP and ND entries are installed.
String length	10 to 28
String format	'evi-route-target-32' must be evi-target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Time that an EVPN ARP or ND entry is retained
Context	configure service vpn <i>service-name</i> evpn-neighbor-synchronization retention-timer <i>number</i>
Tree	retention-timer
Description	<p>This command sets the timer that determines how long an EVPN ARP or ND entry is retained after the remote PE withdraws the MAC/IP route that originated it. The behavior for a synchronized ARP and ND entry is as follows:</p> <ol style="list-style-type: none"> 1. When the originating EVPN MAC/IP route is withdrawn, the retention timer starts, and the entry remains present until the timer expires. 2. While the retention timer is active, the system attempts to refresh the entry by sending an ARP Request or Neighbor Solicitation to the IP owner. This refresh may occur at any point from the start of the timer until 30 seconds before it expires. 3. ARP Requests and Neighbor Solicitations are staggered within the timeout period to prevent overloading the CPM transmitter when many entries require refreshing.
Range	1 to 65535
Units	seconds
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

route-distinguisher *vpn-route-distinguisher*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route distinguisher used for synchronization
Context	configure service vpn <i>service-name</i> evpn-neighbor-synchronization route-distinguisher <i>vpn-route-distinguisher</i>

Tree	route-distinguisher
Description	This command configures the route distinguisher of the MAC/IP routes used for synchronization.
String format	'vpn-route-distinguisher' must be IP:comm or AS-number pair per RD rules
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BGP route tag for MAC/IP routes synchronization
Context	configure service vpn <i>service-name</i> evpn-neighbor-synchronization route-tag <i>number</i>
Tree	route-tag
Description	This command applies the BGP route tag to MAC/IP routes generated from local ARP and ND entries. This tag can be matched by any export policy.
Range	1 to 255
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

export-inactive-bgp *boolean*

Synopsis	Export preferred BGP route even if inactive
Context	configure service vpn <i>service-name</i> export-inactive-bgp <i>boolean</i>
Tree	export-inactive-bgp
Description	<p>When configured to true, the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE.</p> <p>When configured to false, the preferred BGP route is not exported if it is inactive.</p>
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-inactive-bgp-enhanced *boolean*

Synopsis	Export best BGP route when better non-BGP route present
Context	configure <i>service vprn service-name</i> export-inactive-bgp-enhanced <i>boolean</i>
Tree	export-inactive-bgp-enhanced
Description	<p>When configured to true, the router allows a BGP route that is inactive (because a better non-BGP route for the same prefix is present) to be exportable as a VPN-IP route.</p> <p>A BGP route learned from a VPRN BGP peer is exportable as a VPN-IP route, only if it is the best route for the prefix and is installed in the route table of the VPRN. If the export-inactive-bgp command is true in the VPRN configuration, this rule is relaxed, and the best inactive VPRN BGP route is exportable as a VPN-IP route, provided that the active installed route for the prefix is an imported VPN-IP route.</p> <p>The rule described in the preceding paragraph can be relaxed even further by configuring this command to true. When this command is true, the best inactive VPRN BGP route (best amongst all routes received from all CEs) is exportable as a VPN-IP route, regardless of the route type of the active installed route.</p> <p>The configuration of this command overrides the export-inactive-bgp command. If this command is true, the export-inactive-bgp command does not need to be true.</p> <p>When configured to false, the router disables allowing an inactive BGP route in the presence of a better non-BGP route to be exportable as a VPN-IP route.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fib-priority *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	configure <i>service vprn service-name</i> fib-priority <i>keyword</i>
Tree	fib-priority
Description	<p>This command prioritizes the order in which BGP FIB entries across different routing instances are pushed to the IOM for updating. This allows BGP route updates for higher priority router instances to occur as quickly as possible by assigning a FIB priority to the associated router instances (base and VPRN instances).</p> <p>If routing updates are available for multiple router instances, the IOMs or IMM update the FIB with entries with high priority router instances before entries with standard priority router instances.</p>
Options	standard – Standard FIB priority for routing instances

	high – High FIB priority for routing instances
Default	standard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grt-leaking

Synopsis	Enter the grt-leaking context
Context	configure service vprn <i>service-name</i> grt-leaking
Tree	grt-leaking
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-local-management *boolean*

Synopsis	Enable management traffic
Context	configure service vprn <i>service-name</i> grt-leaking allow-local-management <i>boolean</i>
Tree	allow-local-management
Description	<p>When configured to true, this command enables the support of specific management protocols over VPRN interfaces that terminate on Base routing context IPv4 and IPv6 interface addresses, including Base loopback and system addresses.</p> <p>This command does not control the support for management protocols terminating on VPRN interfaces directly.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-grt

Synopsis	Enter the export-grt context
Context	configure service vprn <i>service-name</i> grt-leaking export-grt
Tree	export-grt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name (*policy-expr-string* | *string*)

Synopsis	Route policy name or policy logical expression
Context	configure service vprn <i>service-name</i> grt-leaking export-grt policy-name (<i>policy-expr-string</i> <i>string</i>)
Tree	policy-name
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-limit *number*

Synopsis	Maximum number of routes exported from VRF to GRT
Context	configure service vprn <i>service-name</i> grt-leaking export-limit <i>number</i>
Tree	export-limit
Range	0 to 1000
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-v6-limit *number*

Synopsis	Maximum number of IPv6 routes exported from VPRN to GRT
Context	configure service vprn <i>service-name</i> grt-leaking export-v6-limit <i>number</i>
Tree	export-v6-limit
Range	0 to 1000
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grt-lookup *boolean*

Synopsis	Enable global route table lookup
Context	configure service vprn <i>service-name</i> grt-leaking grt-lookup <i>boolean</i>
Tree	grt-lookup
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-grt

Synopsis	Enter the import-grt context
Context	configure service vprn <i>service-name</i> grt-leaking import-grt
Tree	import-grt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-name (*policy-expr-string* | *string*)

Synopsis	Route policy name or policy logical expression
Context	configure service vprn <i>service-name</i> grt-leaking import-grt policy-name (<i>policy-expr-string</i> <i>string</i>)
Tree	policy-name
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-label *boolean*

Synopsis	Include hash label
Context	configure service vprn <i>service-name</i> hash-label <i>boolean</i>

Tree	hash-label
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igmp

Synopsis	Enable the igmp context
Context	configure service vprn <i>service-name</i> igmp
Tree	igmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of IGMP
Context	configure service vprn <i>service-name</i> igmp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-if-query-source-address *ipv4-unicast-address*

Synopsis	Default query-source address for all group interfaces
Context	configure service vprn <i>service-name</i> igmp group-if-query-source-address <i>ipv4-unicast-address</i>
Tree	group-if-query-source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface *[ip-interface-name] interface-name*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of IGMP
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy

Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Description	<p>This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.</p>
Range	1 to 32000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	configure service vpn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
----------	--

Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redundant-mcast *boolean*

Synopsis	Use interface as a redundant-pair member for multicast
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> redundant-mcast <i>boolean</i>
Tree	redundant-mcast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [start](#) *ipv4-multicast-address* [end](#) *ipv4-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *ipv4-multicast-address*

Synopsis	Lower bound of the IP address group range
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>ssm-translate</i> <i>group-range</i> start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	<i>group-range</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv4-multicast-address*

Synopsis	Upper bound of the IP address group range
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>ssm-translate</i> <i>group-range</i> start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	<i>group-range</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [*source-address*] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>ssm-translate</i> <i>group-range</i> start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	<i>source</i>
Min. instances	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis Source IP address of multicast channel sending data

Context **configure** *service vprn* *service-name igmp* *interface interface-name* *ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address* *source ipv4-unicast-address*

Tree *source*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

static

Synopsis Enter the **static** context

Context **configure** *service vprn* *service-name igmp* *interface interface-name* *static*

Tree *static*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

group [group-address] *ipv4-multicast-address*

Synopsis Enter the **group** list instance

Context **configure** *service vprn* *service-name igmp* *interface interface-name* *static group* *ipv4-multicast-address*

Tree *group*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[group-address] *ipv4-multicast-address*

Synopsis Group address of static IGMP multicast channel

Context **configure** *service vprn* *service-name igmp* *interface interface-name* *static group* *ipv4-multicast-address*

Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group <i>ipv4-multicast-address</i> source <i>ipv4-unicast-address</i>
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
----------	--------------------------

Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group <i>ipv4-multicast-address</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [start](#) *ipv4-multicast-address* [end](#) *ipv4-multicast-address* [step](#) *ipv4-address*

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *ipv4-multicast-address*

Synopsis	IP address for the start of the static group range
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv4-multicast-address*

Synopsis	IP address for the end of the static group range
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

	'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

step *ipv4-address*

Synopsis	Step interval in the group-range address
Context	configure <i>service vprn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>static</i> <i>group-range</i> <i>start</i> <i>ipv4-multicast-address</i> <i>end</i> <i>ipv4-multicast-address</i> step <i>ipv4-address</i>
Tree	<i>group-range</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
MD-CLI default	0.0.0.1
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [*source-address*] *ipv4-unicast-address*

Synopsis	Add a list entry for source
Context	configure <i>service vprn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>static</i> <i>group-range</i> <i>start</i> <i>ipv4-multicast-address</i> <i>end</i> <i>ipv4-multicast-address</i> step <i>ipv4-address</i> source <i>ipv4-unicast-address</i>
Tree	<i>source</i>
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[*source-address*] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure <i>service vprn</i> <i>service-name</i> <i>igmp</i> <i>interface</i> <i>interface-name</i> <i>static</i> <i>group-range</i> <i>start</i> <i>ipv4-multicast-address</i> <i>end</i> <i>ipv4-multicast-address</i> step <i>ipv4-address</i> source <i>ipv4-unicast-address</i>

Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg

Synopsis	any source address (*,G)
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> static group-range start ipv4-multicast-address end ipv4-multicast-address step ipv4-address starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

subnet-check *boolean*

Synopsis	Allow subnet checking
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> subnet-check <i>boolean</i>
Tree	subnet-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vprn <i>service-name</i> igmp interface <i>interface-name</i> version <i>keyword</i>
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** **service** **vprn** *service-name* **igmp** **query-interval** *number*

Tree **query-interval**

Description This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.

Range 2 to 1024

Units seconds

Default 125

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** **service** **vprn** *service-name* **igmp** **query-last-member-interval** *number*

Tree **query-last-member-interval**

Description This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.

Range 1 to 1023

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-response-interval *number*

Synopsis Time to wait for a response to the host-query messages

Context **configure** **service** **vprn** *service-name* **igmp** **query-response-interval** *number*

Tree **query-response-interval**

Range 1 to 1023

Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vprn <i>service-name</i> igmp robust-count <i>number</i>
Tree	robust-count
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, this value can be increased.
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vprn <i>service-name</i> igmp ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [start](#) *ipv4-multicast-address* [end](#) *ipv4-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start <i>ipv4-multicast-address</i> end <i>ipv4-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start ipv4-multicast-address

Synopsis	Lower bound of the IP address group range
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end ipv4-multicast-address

Synopsis	Upper bound of the IP address group range
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] [ipv4-unicast-address](#)

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> igmp ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address source ipv4-unicast-address
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	configure <i>service vprn service-name igmp ssm-translate group-range start ipv4-multicast-address end ipv4-multicast-address source ipv4-unicast-address</i>
Tree	<i>source</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-nh-metric *boolean*

Synopsis	Ignore next hop metric
Context	configure <i>service vprn service-name ignore-nh-metric boolean</i>
Tree	<i>ignore-nh-metric</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [*interface-name*] *interface-name*

Synopsis	Enter the interface list instance
Context	configure <i>service vprn service-name interface interface-name</i>
Tree	<i>interface</i>
Description	Commands in this context configure the interface options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[*interface-name*] *interface-name*

Synopsis	Interface name
Context	configure <i>service vprn service-name interface interface-name</i>
Tree	<i>interface</i>

String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

autoconfigure

Synopsis	Enter the autoconfigure context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure
Tree	autoconfigure
Description	Commands in this context configure the autoconfigure functionality for the interface.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4
Tree	ipv4
Description	Commands in this context configure IPv4 autoconfigure settings.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

dhcp-client

Synopsis	Enable the dhcp-client context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client
Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

class-id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the class-id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ascii-string *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as an ASCII string
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

hex-string *hex-string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Vendor class ID as a hexadecimal string
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client class-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

client-id

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the client-id context
----------	------------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id
Tree	client-id
Description	Commands in this context configure the client ID for the DHCP client.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

ascii-string *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as an ASCII string
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id ascii-string <i>string</i>
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

hex-string *hex-string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID as a hexadecimal string
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client client-id hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

interface

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interface name as the client ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> interface
Tree	interface
Description	This command configures the node to use the interface name as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

mac

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address as the client ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client <i>client-id</i> mac
Tree	mac
Description	This command configures the node to use the MAC address as the client ID.
Notes	The following elements are part of a choice: ascii-string , hex-string , interface , or mac .
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

lease-time (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lease time the DHCP client requests
----------	-------------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client lease-time (<i>number</i> <i>keyword</i>)
Tree	lease-time
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds
Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

request-options

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the request-options context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options
Tree	request-options
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

dns-server *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the DNS server option
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options dns-server <i>boolean</i>
Tree	dns-server

Description	When configured to true , the node includes the DNS server option (Option 54) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

router *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the router option
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options router <i>boolean</i>
Tree	router
Description	When configured to true , the node includes the router option (Option 3) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

static-route *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the static route option
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> autoconfigure ipv4 dhcp-client request-options static-route <i>boolean</i>
Tree	static-route
Description	When configured to true , the node includes the static route option (Option 121) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

description *very-long-description*

Synopsis	Text description
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> description <i>very-long-description</i>
Tree	<i>description</i>
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> dynamic-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	<i>dynamic-tunnel-redundant-nexthop</i>
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for dynamic IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of a corresponding service.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

hold-time

Synopsis	Enter the hold-time context
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> hold-time
Tree	<i>hold-time</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

down

Synopsis	Enter the down context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 down seconds <i>number</i>

Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

up

Synopsis	Enter the up context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv4 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

down

Synopsis	Enter the down context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down init-only <i>boolean</i>
Tree	init-only
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

up

Synopsis	Enter the up context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> hold-time ipv6 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

if-attribute

Synopsis	Enter the if-attribute context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> if-attribute
Tree	if-attribute
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-group *reference*

Synopsis	Administrative group name for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> if-attribute admin-group <i>reference</i>
Tree	admin-group

Description	This command specifies the administrative group membership to an interface. The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.
Reference	configure routing-options if-attribute admin-group <i>named-item</i>
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srlg-group [[name](#)] *reference*

Synopsis	Add a list entry for srlg-group
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *reference*

Synopsis	SRLG name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> if-attribute srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options if-attribute srlg-group <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress

Synopsis	Enter the ingress context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ingress
Tree	ingress
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ip-mtu *number*

Synopsis IP MTU applied to outgoing packets

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* **ip-mtu** *number*

Tree *ip-mtu*

Description This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.

Range 512 to 9786

Units bytes

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ip-tunnel-interface *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Enable IP tunnel interface

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* **ip-tunnel-interface** *boolean*

Tree *ip-tunnel-interface*

Description When configured to **true**, the system enables a GRE virtual IP interface.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipsec

Synopsis Enable the **ipsec** context

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* **ipsec**

Tree *ipsec*

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-exception *reference*

Synopsis	IP exception filter
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ip-exception <i>reference</i>
Tree	ip-exception
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	configure filter ip-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *named-item*

Synopsis	IPsec tunnel name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'name' must not start with a number (e.g. tunnel-1)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-designate *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-liveness**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dest-ip *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
----------	--

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

service-name *service-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> bfd bfd-liveness service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
String format	'service-name' must contain at least one non-space character

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

clear-df-bit *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encapsulated-ip-mtu *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-generation**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp-generation context
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable

Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp6-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big
Tree	packet-too-big
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big interval <i>number</i>
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
----------	--

Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>icmp6-generation</i> <i>packet-too-big</i> <i>message-count</i> <i>number</i>
Tree	<i>message-count</i>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>ip-mtu</i> <i>number</i>
Tree	<i>ip-mtu</i>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

key-exchange

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i>
Tree	<i>key-exchange</i>
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the **dynamic** context

Context **configure** *service vpn* *service-name* *interface interface-name* *ipsec ipsec-tunnel* *named-item key-exchange* **dynamic**

Tree **dynamic**

Notes The following elements are part of a choice: **dynamic** or **manual**.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Attempt to establish a phase 1 exchange automatically

Context **configure** *service vpn* *service-name* *interface interface-name* *ipsec ipsec-tunnel* *named-item key-exchange* **dynamic** **auto-establish** *boolean*

Tree **auto-establish**

Description When configured to **true**, the system automatically attempts to establish a phase 1 exchange.

The system automatically establishes phase 1 SA as soon as the tunnel is provisioned and enabled. This command should only be configured on one side of the tunnel.

Static routes that use the **auto-establish** tunnel as the next hop are brought down when the tunnel goes down.

When configured to **false**, the system does not automatically attempt to establish a phase 1 exchange.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish-sustain *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable sustain mode for auto-establish tunnels
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish-sustain <i>boolean</i>
Tree	auto-establish-sustain
Description	<p>When configured to true, the tunnel initiator keeps the IKE_SA and CHILD_SA up to prevent phase 2 expiry when there is no traffic, and starts a new exchange to establish a replacement when the peer deletes the SA.</p> <p>When configured to false, the tunnel initiator does not prevent the SA from expiring and does not establish a replacement when the peer deletes the SA.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>

Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

status-verify

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify primary <i>keyword</i>

Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic cert trust-anchor-profile reference
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fqdn *fully-qualified-domain-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 *ipv4-unicast-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>dynamic</i> <i>id</i> ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<i>ipv6</i>
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>dynamic</i> <i>ike-policy</i> <i>reference</i>
Tree	<i>ike-policy</i>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure <i>ipsec</i> <i>ike-policy</i> <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ppk

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

list reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pre-shared-key *encrypted-leaf*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key
Description	This command specifies the pre-shared key for authentication in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

reverse-route-injection

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the reverse-route-injection context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection
Tree	reverse-route-injection
Description	<p>Commands in this context configure reverse route injection for IPsec tunnels.</p> <p>When reverse route injection is enabled, the system injects routes into the service based on the final TSr. One route is created for each TS in the TSr, with the prefix length as the longest number that covers the address range in the TS. The system removes the reverse route when the corresponding CHILD_SA is removed.</p>
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

metric number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Metric to use for reverse route injection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection metric <i>number</i>
Tree	metric
Description	<p>This command configures the metric for reverse routes installed by reverse route injection. The system uses the metric when selecting a route to install in the route table.</p> <p>If there are multiple reverse routes with the same preference but different metrics, the lower cost (metric) route is installed.</p>
Range	0 to 65535
Default	0
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

preference *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference to use for reverse route injection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection preference <i>number</i>
Tree	preference
Description	This command configures the route preference assigned to reverse routes installed by reverse route injection. The system uses this preference when selecting a route to install in the route table. The lower the preference value, the more the route is preferred by the system.
Range	0 to 255
Default	0
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

manual**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the manual context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual
Tree	manual
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

keys [[security-association](#)] *number* [direction](#) *keyword*

Synopsis	Enter the keys list instance
----------	-------------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[security-association] *number*

Synopsis	SA entry ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

authentication-key *hex-string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
----------	---

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>hex-string</i>
Tree	authentication-key
String length	1 to 130
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encryption-key *hex-string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> encryption-key <i>hex-string</i>
Tree	encryption-key
String length	1 to 66
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

spi number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction keyword spi <i>number</i>
Tree	spi
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> local-gateway-address-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-history-key-records

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike

Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pmtu-discovery-aging *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service vpn service-name interface interface-name ipsec ipsec-tunnel named-item pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-sap *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure service vpn service-name interface interface-name ipsec ipsec-tunnel named-item private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.

Introduced25.3.R2

Platforms7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-service *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

SynopsisPrivate service name

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **ipsec** **ipsec-tunnel** *named-item* **private-service** *service-name*

Tree**private-service**

DescriptionThis command configures the private service name.

If unconfigured, the private service is the service where the secured interface resides.

String length1 to 64

String format' service-name' must contain at least one non-space character

Introduced25.3.R2

Platforms7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisTCP maximum segment size (MSS) adjustment

Context**configure** **service** **vpn** *service-name* **interface** *interface-name* **ipsec** **ipsec-tunnel** *named-item* **private-tcp-mss-adjust** *number*

Tree**private-tcp-mss-adjust**

DescriptionThis command specifies the TCP MSS to adjust for the tunnel on the private side.

When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.

Range512 to 9000

Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v4 *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v6 *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> remote-gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

replay-window *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
----------	-------------------------

Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item replay-window</i> <i>number</i>
Tree	<i>replay-window</i>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

security-policy

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item security-policy</i>
Tree	<i>security-policy</i>
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec ipsec-tunnel</i> <i>named-item security-policy id</i> <i>number</i>
Tree	<i>id</i>
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

strict-match *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipsec ipv6-exception <i>reference</i>
Tree	ipv6-exception
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface.</p> <p>When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	configure filter ipv6-exception <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-sap *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec public-sap number</i>
Tree	<i>public-sap</i>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tunnel-group *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipsec tunnel-group reference</i>
Tree	<i>tunnel-group</i>
Reference	configure isa tunnel-group number
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> ipv4
Tree	<i>ipv4</i>
Description	Commands in this context configure the IPv4 command options for the interface.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

addresses

Synopsis Enter the **addresses** context

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4](#) [addresses](#)

Tree [addresses](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

address [[ipv4-address](#)] *ipv4-unicast-address*

Synopsis Enter the **address** list instance

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4](#) [addresses](#) [address](#) *ipv4-unicast-address*

Tree [address](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[[ipv4-address](#)] *ipv4-unicast-address*

Synopsis IPv4 address for the interface

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4](#) [addresses](#) [address](#) *ipv4-unicast-address*

Tree [address](#)

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

prefix-length *number*

Synopsis IPv4 address prefix length

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4](#) [addresses](#) [address](#) *ipv4-unicast-address* [prefix-length](#) *number*

Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd

Synopsis	Enter the bfd context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd
Tree	bfd
Description	Commands in this context configure the BFD settings for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *number*

Synopsis	Receive interval
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd receive <i>number</i>
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmit-interval *number*

Synopsis	Transmit interval
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 bfd type <i>keyword</i>
Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp

Synopsis	Enter the dhcp context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp
Tree	dhcp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of DHCP
----------	------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 511999
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option-82

Synopsis	Enter the option-82 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

none

Synopsis	Do not include the circuit ID
----------	-------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-id

Synopsis	Use the SAP ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-id

Synopsis	Enter the remote-id context
----------	------------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

none

Synopsis	Do not include the remote ID
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 remote-id none
Tree	none

Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>
Tree	client-mac-address
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i>
Tree	pool-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option string <i>string-not-all-spaces</i>
Tree	string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>

Tree	system-id
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as the DHCP server address for the SAP
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp proxy-server emulated-server <i>ipv4-unicast-address</i>
Tree	emulated-server
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

lease-time

Synopsis Enter the **lease-time** context

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp proxy-server lease-time](#)

Tree [lease-time](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

radius-override *boolean*

Synopsis Use lease time information provided by RADIUS server

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp proxy-server lease-time radius-override](#) *boolean*

Tree [radius-override](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

value *number*

Synopsis DHCP lease time

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv4 dhcp proxy-server lease-time value](#) *number*

Tree [value](#)

Range 300 to 315446399

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

relay-plain-bootp *boolean*

Synopsis Enable relaying of plain BOOTP packets

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-plain-bootp <i>boolean</i>
Tree	relay-plain-bootp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i>
Tree	release-update-src-ip
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

siaddr-override *ipv4-unicast-address*

Synopsis	DHCP server IP address for address hiding function
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp relay-proxy siaddr-override <i>ipv4-unicast-address</i>
Tree	siaddr-override
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp server <i>ipv4-unicast-address</i>
Tree	server
Description	<p>This command configures a list of servers that this interface forwards requests to.</p> <p>The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.</p>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp src-ip-addr <i>keyword</i>
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	When configured to true , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.

A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-arp *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 dhcp use-arp <i>boolean</i>
Tree	use-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp

Synopsis	Enter the icmp context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

param-problem

Synopsis	Enter the param-problem context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redirects

Synopsis	Enter the redirects context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
----------	--

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4 icmp ttl-expired</i> <i>number</i> <i>number</i>
Tree	<i>number</i>
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4 icmp ttl-expired</i> <i>seconds</i> <i>number</i>
Tree	<i>seconds</i>
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unreachables

Synopsis	Enter the unreachables context
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4 icmp unreachables</i>
Tree	<i>unreachables</i>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachable admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachable number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 icmp unreachable seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ip-helper-address *ipv4-unicast-address*

Synopsis Gateway address

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv4* **ip-helper-address** *ipv4-unicast-address*

Tree *ip-helper-address*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

local-dhcp-server *reference*

Synopsis DHCP server for the interface

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv4* **local-dhcp-server** *reference*

Tree *local-dhcp-server*

Reference **configure** *service* *vpn* *service-name* *dhcp-server* *dhcpv4* *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

nat

Synopsis Enable the **nat** context

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *ipv4* **nat**

Tree *nat*

Description Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface.

These commands must be used in conjunction with NAT pools where the pool application is configured with the **configure service vpn outside pool applications use-interface-ip** command.

Introduced 25.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-nat-policy *reference*

Synopsis	CPM NAT policy association with public IPv4 interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 nat cpm-nat-policy reference
Tree	cpm-nat-policy
Description	<p>This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context.</p> <p>A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.</p>
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-spf-nat-policy *reference*

Synopsis	CPM NAT policy for static port forwards
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 nat cpm-spf-nat-policy reference
Tree	cpm-spf-nat-policy
Description	<p>This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.</p>
Reference	configure service nat cpm-nat-policy <i>external-named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

host-route

Synopsis	Enter the host-route context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route
Tree	host-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

populate [[route-type](#)] *keyword*

Synopsis	Enter the populate list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Description	Commands in this context enable the creation of ARP or ND host route entries in the route table from a certain ARP or ND entry type.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i>
Tree	populate
Options	static – Host routes created from EVPN ARP or ND entries dynamic – Host routes created from dynamic ARP or ND entries evpn – Host routes created from EVPN entries evpn-local-es – Host routes created from EVPN local ES entries
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit

Synopsis	Enter the limit context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Range	0 to 524288
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100

Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

populate *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery populate <i>boolean</i>
Tree	populate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic

that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery proxy-arp-policy reference
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery remote-proxy-arp boolean
Tree	remote-proxy-arp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-timer *number*

Synopsis	ARP retry interval
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery retry-timer number
Tree	retry-timer
Range	1 to 300

Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor [[ipv4-address](#)] *ipv4-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-address] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i>
Tree	static-neighbor
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor <i>ipv4-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary

Synopsis	Enable the primary context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>

Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag (*number* | *keyword*)

Synopsis	Route tag to be matched by BGP export policy rules
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 primary tag (<i>number</i> <i>keyword</i>)
Tree	tag
Description	This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route created by IP address configuration. This tag can be used to filter these routes when they are processed by a BGP export policy, a BGP RIB-management route table import policy, as IS-IS export policy or an OSPF export policy.
Range	1 to 4294967295
Options	no-tag
Default	no-tag
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>

Tree	secondary
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i> prefix-length <i>number</i>
Tree	prefix-length

Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag (*number* | *keyword*)

Synopsis	Route tag to be matched by BGP export policy rules
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address tag (<i>number</i> <i>keyword</i>)
Tree	tag
Description	This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route created by IP address configuration. This tag can be used to filter these routes when they are processed by a BGP export policy, a BGP RIB-management route table import policy, as IS-IS export policy or an OSPF export policy.
Range	1 to 4294967295
Options	no-tag
Default	no-tag
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 tcp-mss <i>number</i>
Tree	tcp-mss
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unnumbered

Synopsis	Enter the unnumbered context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 unnumbered
Tree	unnumbered

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ip-address *ipv4-unicast-address*

Synopsis IP address for the interface

Context **configure** *service vprn* *service-name* *interface interface-name* *ipv4 unnumbered ip-address* *ipv4-unicast-address*

Tree *ip-address*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes The following elements are part of a choice: **ip-address** or **ip-int-name**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ip-int-name *interface-name*

Synopsis IP interface name

Context **configure** *service vprn* *service-name* *interface interface-name* *ipv4 unnumbered ip-int-name* *interface-name*

Tree *ip-int-name*

String length 1 to 32

Notes The following elements are part of a choice: **ip-address** or **ip-int-name**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

urpf-check

Synopsis Enable the **urpf-check** context

Context **configure** *service vprn* *service-name* *interface interface-name* *ipv4 urpf-check*

Tree *urpf-check*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrrp [[virtual-router-id](#)] *number*

Synopsis	Enter the vrrp list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i>
Tree	vrrp

Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.

If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length	1 to 94
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup ipv4-unicast-address

Synopsis	Virtual router IP addresses for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number backup <i>ipv4-unicast-address</i>
Tree	backup
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7705 SAR Gen 2 Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
----------	--

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip *ipv4-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IP address to use for BFD session
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> bfd-liveness dest-ip <i>ipv4-address</i>
Tree	dest-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-name *service-name***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number bfd-liveness <i>service-name</i> <i>service-name</i>
Tree	service-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-delay *number*

Synopsis	VRRP initialization delay timer
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number init-delay <i>number</i>
Tree	init-delay
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p>

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

String format 'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

master-int-inherit *boolean*

Synopsis Allow master instance to dictate the master down timer

Context **configure** *service vprn service-name* *interface interface-name* *ipv4 vrrp number* **master-int-inherit** *boolean*

Tree **master-int-inherit**

Description When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

message-interval *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** *service vprn service-name* *interface interface-name* *ipv4 vrrp number* **message-interval** *number*

Tree **message-interval**

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>vrrp</i> <i>number</i> <i>monitor-oper-group</i> <i>reference</i>
Tree	<i>monitor-oper-group</i>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure <i>service</i> <i>oper-group</i> <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner

Description	When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to false , this virtual router instance is designated as a non-owner.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down). When configured to false , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	When configured to true , the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).

When configured to **false**, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.

Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy reference

Synopsis	VRRP priority control policy
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> policy reference
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> preempt boolean
Tree	preempt
Description	When configured to true , this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.

When configured to **false**, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Base priority for the VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssh-reply boolean

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp number ssh-reply boolean
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enable the ipv6 context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6
Tree	ipv6
Description	Commands in this context configure IPv6 command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address [[ipv6-address](#)] *ipv6-address*

Synopsis	Enter the address list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address
Description	<p>This command assigns an IPv6 address/subnet to the interface.</p> <p>Up to 16 total primary and secondary IPv4 and IPv6 addresses can be assigned to network interfaces, and up to 256 to access interfaces.</p> <p>Caution: Configurations must not exceed 16 secondary IP addresses when IPsec, GRE, L2TPv3, or IP in IP protocols are active on an access interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[\[ipv6-address\]](#) *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i>
Tree	address

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duplicate-address-detection *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD). When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eui-64 *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> primary-preference <i>number</i>
Tree	primary-preference
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag (*number* | *keyword*)

Synopsis	Route tag to be matched by BGP export policy rules
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 address <i>ipv6-address</i> tag (<i>number</i> <i>keyword</i>)
Tree	tag
Description	This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route

created by IP address configuration. This tag can be used to filter these routes when they are processed by a BGP export policy, a BGP RIB-management route table import policy, as IS-IS export policy or an OSPF export policy.

Range	1 to 4294967295
Options	no-tag
Default	no-tag
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

bfd

Synopsis	Enter the bfd context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd
Tree	bfd
Description	Commands in this context configure the BFD options for the associated IP interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000

Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *number*

Synopsis	Receive interval
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd receive <i>number</i>
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmit-interval *number*

Synopsis	Transmit interval
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000

Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 bfd type <i>keyword</i>
Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6
Tree	dhcp6
Description	Commands in this context configure the DHCPv6 command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

relay

Synopsis	Enter the relay context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay
Tree	relay
Description	Commands in this context configure the DHCPv6 relay command options for the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate
Tree	lease-populate
Description	Commands in this context configure the features of DHCPv6 leases on the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-nbr-of-leases *number*

Synopsis	Maximum lease state entries allowed for the interface
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate max-nbr-of-leases <i>number</i>
Tree	max-nbr-of-leases
Range	0 to 32767
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-populate

Synopsis	Enter the route-populate context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate
Tree	route-populate
Description	Commands in this context configure the route populate command options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

na *boolean*

Synopsis	Create route based on the IA_NA option
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate na <i>boolean</i>
Tree	na
Description	When configured to true , the router creates the route based on the IA_NA option in the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pd

Synopsis	Enable the pd context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate pd
Tree	pd

Description	When enabled, the router creates the route based on the IA_PD option in the Relay-Reply message.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude *boolean*

Synopsis	Create blackhole route based on prefix exclude option
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate pd exclude <i>boolean</i>
Tree	exclude
Description	When configured to true , the router creates a blackhole route based on the PD_EXCLUDE option contained in the IA_PD option of the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ta *boolean*

Synopsis	Create route based on IA_TA option
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay lease-populate route-populate ta <i>boolean</i>
Tree	ta
Description	When configured to true , the router creates the route based on the IA_TA option in the Relay-Reply message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option

Synopsis	Enter the option context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-id

Synopsis	Enter the interface-id context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id
Tree	interface-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id if-index
Tree	if-index
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 dhcp6 relay option interface-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

string *string-not-all-spaces*

Synopsis String for interface ID option in DHCPv6 relay packet
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [interface-id](#) **string** *string-not-all-spaces*
Tree [string](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

remote-id *boolean*

Synopsis Send remote ID option in the DHCPv6 relay packet
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay option](#) [remote-id](#) *boolean*
Tree [remote-id](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

server *ipv6-address-with-zone*

Synopsis DHCPv6 server to which the DHCPv6 requests are forwarded
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 dhcp6 relay server](#) *ipv6-address-with-zone*
Tree [server](#)
String format 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Max. instances 8
Notes This element is ordered by the user.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

source-address *ipv6-unicast-or-linklocal-address*

Synopsis Source IPv6 address of the DHCPv6 relay messages
Context **configure** *service vprn* *service-name* *interface* *interface-name* *ipv6 dhcp6 relay source-address* *ipv6-unicast-or-linklocal-address*
Tree *source-address*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

duplicate-address-detection *boolean*

Synopsis Enable Duplicate Address Detection per interface
Context **configure** *service vprn* *service-name* *interface* *interface-name* *ipv6 duplicate-address-detection* *boolean*
Tree *duplicate-address-detection*
Default true
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

forward-ipv4-packets *boolean*

Synopsis Forward unencapsulated IPv4 packets
Context **configure** *service vprn* *service-name* *interface* *interface-name* *ipv6 forward-ipv4-packets* *boolean*
Tree *forward-ipv4-packets*
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

icmp6

Synopsis Enter the **icmp6** context
Context **configure** *service vprn* *service-name* *interface* *interface-name* *ipv6 icmp6*

Tree	icmp6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packet-too-big

Synopsis	Enter the packet-too-big context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big
Tree	packet-too-big
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit Packet Too Big messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

param-problem

Synopsis	Enter the param-problem context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem
Tree	param-problem
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param-problem number <i>number</i>

Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit ICMPv6 Parameter Problem messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 param- problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redirects

Synopsis	Enter the redirects context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects
Tree	redirects
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Redirect message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number to limit ICMPv6 Redirect messages per time frame
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 icmp6 redirects</i> <i>number number</i>
Tree	<i>number</i>
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit ICMPv6 Redirect messages
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 icmp6 redirects</i> <i>seconds number</i>
Tree	<i>seconds</i>
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

time-exceeded

Synopsis	Enter the time-exceeded context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 icmp6 time-exceeded</i>
Tree	<i>time-exceeded</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Time Exceeded message sends
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 icmp6 time-exceeded admin-state keyword</i>

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 time-exceeded seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unreachables

Synopsis	Enter the unreachables context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachables
Tree	unreachables
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachablees admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Number to limit Unreachable messages per time frame
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachablees number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit ICMPv6 Unreachable messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 icmp6 unreachablees seconds <i>number</i>
Tree	seconds
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-local-address

Synopsis	Enter the link-local-address context
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address
Tree	link-local-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv6-address*

Synopsis	IPv6 link-local address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address address <i>ipv6-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 link-local-address duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD) on the interface. When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 local-dhcp-server reference
Tree	local-dhcp-server
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	configure service vprn <i>service-name</i> dhcp-server dhcpv6 <i>named-item</i>

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

neighbor-discovery

Synopsis Enter the **neighbor-discovery** context
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 neighbor-discovery](#)
Tree [neighbor-discovery](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

host-route

Synopsis Enter the **host-route** context
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) [host-route](#)
Tree [host-route](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

populate [[route-type](#)] *keyword*

Synopsis Enter the **populate** list instance
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) [host-route](#) [populate](#) *keyword*
Tree [populate](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[[route-type](#)] *keyword*

Synopsis Type of ARP or ND entries that generate host routes
Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 neighbor-discovery](#) [host-route](#) [populate](#) *keyword*
Tree [populate](#)
Options static – Host routes created from EVPN ARP or ND entries
dynamic – Host routes created from dynamic ARP or ND entries

	evpn – Host routes created from EVPN entries evpn-local-es – Host routes created from EVPN local ES entries
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i>
Tree	learn-unsolicited
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set. When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit

Synopsis	Enter the limit context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit
Tree	limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Description	When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned. When configured to false , the router does not send the warning message.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface. When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.

Options	global, link-local, both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>
Tree	proxy-nd-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reachable-time *number*

Synopsis	Neighbor reachability detection timer
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-time *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery stale-time <i>number</i>
Tree	stale-time
Range	60 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static-neighbor [*ipv6-address*] *ipv6-address*

Synopsis	Enter the static-neighbor list instance
Context	configure service <i>vpn</i> <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-address] *ipv6-address*

Synopsis	IPv6 address corresponding to the physical address
Context	configure service <i>vpn</i> <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	configure service <i>vpn</i> <i>service-name</i> interface <i>interface-name</i> ipv6 neighbor-discovery static-neighbor <i>ipv6-address</i> mac-address <i>mac-address</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service <i>vpn</i> <i>service-name</i> interface <i>interface-name</i> ipv6 tcp-mss <i>number</i>
Tree	tcp-mss

urpf-check

Synopsis Enable the **urpf-check** context

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 urpf-check](#)

Tree [urpf-check](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ignore-default *boolean*

Synopsis Ignore default route when performing a uRPF check

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 urpf-check ignore-default](#) *boolean*

Tree [ignore-default](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mode *keyword*

Synopsis Unicast RPF check mode

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [ipv6 urpf-check mode](#) *keyword*

Tree [mode](#)

Options
 strict – Check source address match in RT and interface
 loose – Check source address match in RT only
 strict-no-ecmp – Check source address match in ECMP route

Default strict

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

vrrp [[virtual-router-id](#)] *number*

Synopsis Enter the **vrrp** list instance

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

backup ipv6-address

Synopsis	Virtual router IP addresses for the interface
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number backup ipv6-address
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7705 SAR Gen 2 Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for the BFD session
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> bfd-liveness dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> bfd-liveness interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-name *service-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> bfd-liveness service-name <i>service-name</i>

Tree	service-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

init-delay *number*

Synopsis	VRRP initialization delay timer
Context	configure service vprn service-name interface interface-name ipv6 vrrp number init-delay <i>number</i>
Tree	init-delay
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure service vprn service-name interface interface-name ipv6 vrrp number mac <i>mac-unicast-address</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>

String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> master-int-inherit <i>boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	10 to 4095
Units	centiseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	<p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>vrrp</i> <i>number</i> passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>vrrp</i> <i>number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy reference

Synopsis	VRRP priority control policy
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> policy reference
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp <i>number</i> preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority number

Synopsis	Base priority for the VRRP
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby-forwarding boolean

Synopsis	Allow standby router to forward traffic
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number standby-forwarding boolean
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet-reply boolean

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> ipv6 vrrp number telnet-reply boolean
Tree	telnet-reply
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface

can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).

When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>ipv6 vrrp number</i> <i>traceroute-reply boolean</i>
Tree	<i>traceroute-reply</i>
Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing

Synopsis	Enter the load-balancing context
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>load-balancing</i>
Tree	<i>load-balancing</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>load-balancing ip-load-balancing keyword</i>

Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopback *boolean*

Synopsis	Use interface as a loopback interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> loopback <i>boolean</i>
Tree	loopback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address*

Synopsis	MAC address for the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	This command assigns a specific MAC address to an IP interface.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-accounting *boolean*

Synopsis	Enable MAC accounting functionality
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> mac-accounting <i>boolean</i>
Tree	mac-accounting
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

Tree [scheduler](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[scheduler-name] *named-item*

Synopsis Scheduler name

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [sap](#) [sap](#) [egress qos](#) [scheduler-policy overrides scheduler](#) *named-item*

Tree [scheduler](#)

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

parent

Synopsis	Enter the parent context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap egress qos scheduler-policy overrides scheduler <i>named-item</i> parent

scheduler [[scheduler-name](#)] *named-item*

Synopsis	Enter the scheduler list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[scheduler-name](#)] *named-item*

Synopsis	Scheduler name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ingress qos scheduler-policy overrides scheduler <i>named-item</i>
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the

policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the interval command.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ip-tunnel interface-name icmp6-generation
Tree	icmp6-generation
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ip-tunnel interface-name icmp6-generation packet-too-big
Tree	packet-too-big
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	configure service vpn <i>service-name</i> interface interface-name sap sap ip-tunnel interface-name icmp6-generation packet-too-big admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

number *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ip-tunnel</i> <i>interface-name</i> <i>icmp6-generation</i> <i>packet-too-big</i> number <i>number</i>
Tree	<i>number</i>
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

seconds *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ip-tunnel</i> <i>interface-name</i> <i>icmp6-generation</i> <i>packet-too-big</i> seconds <i>number</i>
Tree	<i>seconds</i>
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-mtu *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.</p> <p>When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.</p>
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transport-mode-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> ipsec-transport-mode-profile <i>reference</i>
Tree	ipsec-transport-mode-profile
Reference	configure ipsec ipsec-transport-mode-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-ip-address
Description	<p>This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).</p> <p>When this command specifies an IPv6 address, it must be a global unicast address.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pmtu-discovery-aging *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-tcp-mss-adjust *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the private side
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v4 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v6 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> propagate-pmtu-v6 <i>boolean</i>

Tree	propagate-pmtu-v6
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

reassemble (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap sap ip-tunnel <i>interface-name</i> reassemble (<i>number</i> <i>keyword</i>)
Tree	reassemble
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ip-tunnel <i>interface-name</i> remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-ip-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipsec-gateway [**name**] *named-item*

Synopsis	Enter the ipsec-gateway list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i>
Tree	ipsec-gateway
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *named-item*

Synopsis	IPsec gateway name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i>
Tree	ipsec-gateway
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis Administrative state of the IPsec gateway

Context **configure** [service vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert

Synopsis Enter the **cert** context

Context **configure** [service vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* **cert**

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert-profile *reference*

Synopsis Certificate profile name

Context **configure** [service vpn](#) *service-name* [interface](#) *interface-name* [sap](#) *sap* [ipsec-gateway](#) *named-item* **cert** **cert-profile** *reference*

Tree [cert-profile](#)

Reference **configure** [ipsec](#) **cert-profile** *named-item*

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

status-verify

Synopsis Enter the **status-verify** context

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> cert status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> cert status-verify primary <i>keyword</i>
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> cert status-verify secondary <i>keyword</i>

Tree	secondary
Options	none, cri, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

client-db

Synopsis	Enable the client-db context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db
Tree	client-db
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fallback *boolean*

Synopsis	Fall back to the default authentication policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db fallback <i>boolean</i>
Tree	fallback
Description	When configured to true , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.

When configured to **false** and the client database lookup fails to return a matched result, the system fails the tunnel setup.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

name *reference*

Synopsis	Client database name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> client-db name <i>reference</i>
Tree	name
Reference	configure ipsec client-db <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-secure-service

Synopsis	Enable the default-secure-service context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service
Tree	default-secure-service
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interface *interface-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> default-secure-service interface <i>interface-name</i>
Tree	interface
String length	1 to 32

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

service-name *service-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> default-secure-service service-name <i>service-name</i>
Tree	service-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-tunnel-template *reference*

Synopsis	Default tunnel policy template for the gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> default-tunnel-template <i>reference</i>
Tree	default-tunnel-template
Reference	configure ipsec tunnel-template <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-address-assignment

Synopsis	Enter the dhcp-address-assignment context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> dhcp-address-assignment
Tree	dhcp-address-assignment
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcpv4

Synopsis	Enable the dhcpv4 context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4
Tree	dhcpv4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

gi-address *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 gi-address <i>ipv4-unicast-address</i>
Tree	gi-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 send-release <i>boolean</i>
Tree	send-release
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> dhcp-address-assignment dhcpv4 server

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv4 context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-server *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 dhcp-server <i>named-item</i>
Tree	dhcp-server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 pool <i>named-item</i>
Tree	pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vpn-loose***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv4 router-instance <i>router-instance-base-vpn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary-pool *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	configure service vprn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> local address-assignment ipv4 secondary-pool <i>named-item</i>
Tree	secondary-pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv6 context
Context	configure service vprn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> local address-assignment ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dhcp-server *named-item***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	configure service vprn <i>service-name</i> interface interface-name sap sap ipsec-gateway <i>named-item</i> local address-assignment ipv6 dhcp-server <i>named-item</i>
Tree	dhcp-server

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool *named-item*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 pool <i>named-item</i>
Tree	pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

router-instance *router-instance-base-vpn-loose*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local address-assignment ipv6 router-instance <i>router-instance-base-vpn-loose</i>
Tree	router-instance
String length	1 to 64
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

gateway-address (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local gateway-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	gateway-address
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id

Synopsis	Enter the id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id
Tree	id
Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id auto
Tree	auto
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fqdn *fully-qualified-domain-name***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> local id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
----------	-----------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> local id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> max-history-key-records
Tree	max-history-key-records
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

esp number

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> max-history-key-records esp number
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike number

Synopsis	Maximum number of historical IKE keys recorded
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-gateway <i>named-item</i> max-history-key-records ike number
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

removed-tunnels *number*

Synopsis	Maximum number of removed tunnels to record keys
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> max-history-key-records removed-tunnels <i>number</i>
Tree	removed-tunnels
Description	This command configures the maximum number of removed tunnels on the IPsec gateway for which to record IKE and ESP keys. When the number of recorded tunnels reaches the configured limit, the system removes the oldest tunnel from the history to record the newest tunnel. If this command is modified to a lower limit than the current number of recorded tunnels, the system immediately removes as many of the oldest tunnels as needed to comply with the new limit.
Range	1 to 256
Introduced	26.10.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mixed-tunnel-mode**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the mixed-tunnel-mode context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> mixed-tunnel-mode
Tree	mixed-tunnel-mode
Description	Commands in this context configure the IPsec gateway to support both remote access and dynamic LAN-to-LAN tunnels. When unconfigured, support of both tunnel types is disabled.
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for the IPsec gateway
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> pre-shared-key <i>encrypted-leaf</i>
Tree	pre-shared-key

Description	This command specifies the pre-shared key for the IPsec gateway in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

radius

Synopsis	Enter the radius context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

accounting-policy reference

Synopsis	RADIUS accounting policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure ipsec radius accounting-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

authentication-policy reference

Synopsis	RADIUS authentication policy
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> radius authentication-policy <i>reference</i>
Tree	authentication-policy
Reference	configure ipsec radius authentication-policy <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-gateway <i>named-item</i> ts-list <i>reference</i>
Tree	ts-list
Reference	configure ipsec ts-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-tunnel [[name](#)] *named-item*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *named-item*

Synopsis	IPsec tunnel name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i>
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'name' must not start with a number (e.g. tunnel-1)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd
Tree	bfd
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-designate *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-designate <i>boolean</i>
Tree	bfd-designate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dest-ip ipv4-unicast-address

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-liveness dest-ip <i>ipv4-unicast-address</i>
Tree	dest-ip
String format	<p>'ipv4-address' must use only digits and dots (no %zone)</p> <p>'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)</p>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interface *interface-name***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-liveness interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

service-name *service-name***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> bfd bfd-liveness service-name <i>service-name</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

copy-traffic-class-upon-decapsulation *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> copy-traffic-class-upon-decapsulation <i>boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dest-ip [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for dest-ip
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Private IP address of the remote IP tunnel endpoint
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dest-ip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encapsulated-ip-mtu *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> encapsulated-ip-mtu <i>number</i>
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **icmp-generation** context

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *sap* *sap* *ipsec-tunnel* *named-item* **icmp-generation**

Tree **icmp-generation**

Description Commands in this context configure settings for ICMPv4 message generation.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **frag-required** context

Context **configure** *service* *vpn* *service-name* *interface* *interface-name* *sap* *sap* *ipsec-tunnel* *named-item* **icmp-generation** **frag-required**

Tree **frag-required**

Description Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
----------	--

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp6-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big
Tree	packet-too-big
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p>

The private MTU for the tunnel is configured via the **configure router interface ipsec ipsec-tunnel ip-mtu** command for the interface.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

interval *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> icmp6-generation packet-too-big interval <i>number</i>
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

message-count *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	configure service vprn <i>service-name</i> interface interface-name sap sap ipsec-tunnel <i>named-item icmp6-generation packet-too-big message-count</i> <i>number</i>
Tree	message-count
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ip-mtu *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	configure service vprn <i>service-name</i> interface interface-name sap sap ipsec-tunnel <i>named-item ip-mtu</i> <i>number</i>
Tree	ip-mtu
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

key-exchange

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-exchange context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange
Tree	key-exchange
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the dynamic context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic
Tree	dynamic
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish <i>boolean</i>
Tree	auto-establish
Description	When configured to true , the system automatically attempts to establish a phase 1 exchange.

The system automatically establishes phase 1 SA as soon as the tunnel is provisioned and enabled. This command should only be configured on one side of the tunnel.

Static routes that use the **auto-establish** tunnel as the next hop are brought down when the tunnel goes down.

When configured to **false**, the system does not automatically attempt to establish a phase 1 exchange.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

auto-establish-sustain *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable sustain mode for auto-establish tunnels
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic auto-establish-sustain <i>boolean</i>
Tree	auto-establish-sustain
Description	<p>When configured to true, the tunnel initiator keeps the IKE_SA and CHILD_SA up to prevent phase 2 expiry when there is no traffic, and starts a new exchange to establish a replacement when the peer deletes the SA.</p> <p>When configured to false, the tunnel initiator does not prevent the SA from expiring and does not establish a replacement when the peer deletes the SA.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cert context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert
Tree	cert

Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

status-verify

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the status-verify context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good

Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service vpn service-name interface interface-name sap sap ipsec-tunnel named-item key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure service vpn service-name interface interface-name sap sap ipsec-tunnel named-item key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service vpn service-name interface interface-name sap sap ipsec-tunnel named-item key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile

Reference	configure ipsec trust-anchor-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the id context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

fqdn *fully-qualified-domain-name***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the local ID IKE type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 *ipv4-unicast-address***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
----------	---------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ppk

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ppk context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

id reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk id <i>reference</i>
Tree	id
Reference	configure ipsec ppk-list <i>named-item</i> ppk <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

list reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPK list instance name
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic ppk list <i>reference</i>
Tree	list
Reference	configure ipsec ppk-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pre-shared-key *encrypted-leaf*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
----------	-----------------------------------

Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic pre-shared-key encrypted-leaf
Tree	pre-shared-key
Description	This command specifies the pre-shared key for authentication in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

reverse-route-injection

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the reverse-route-injection context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection
Tree	reverse-route-injection
Description	Commands in this context configure reverse route injection for IPsec tunnels. When reverse route injection is enabled, the system injects routes into the service based on the final TSr. One route is created for each TS in the TSr, with the prefix length as the longest number that covers the address range in the TS. The system removes the reverse route when the corresponding CHILD_SA is removed.
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

metric *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Metric to use for reverse route injection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection metric <i>number</i>
Tree	metric

Description	This command configures the metric for reverse routes installed by reverse route injection. The system uses the metric when selecting a route to install in the route table. If there are multiple reverse routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	0
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

preference *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference to use for reverse route injection
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange dynamic reverse-route-injection preference <i>number</i>
Tree	preference
Description	This command configures the route preference assigned to reverse routes installed by reverse route injection. The system uses this preference when selecting a route to install in the route table. The lower the preference value, the more the route is preferred by the system.
Range	0 to 255
Default	0
Introduced	26.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the manual context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual
Tree	manual

Notes	The following elements are part of a choice: dynamic or manual .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

keys [[security-association](#)] *number direction keyword*

Synopsis	Enter the keys list instance
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[security-association] *number*

Synopsis	SA entry ID
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

authentication-key *hex-string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>hex-string</i>
Tree	authentication-key
String length	1 to 130
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

encryption-key *hex-string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> encryption-key <i>hex-string</i>
Tree	encryption-key
String length	1 to 66
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipsec-transform *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
----------	------------------------------------

Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>ipsec-transform</i> <i>reference</i>
Tree	<i>ipsec-transform</i>
Reference	configure <i>ipsec</i> <i>ipsec-transform</i> <i>number</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

spi *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>key-exchange</i> <i>manual</i> <i>keys</i> <i>number</i> <i>direction</i> <i>keyword</i> <i>spi</i> <i>number</i>
Tree	<i>spi</i>
Description	<p>This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.</p> <p>The remote node can use the SPI to look up the instruction to verify and decrypt the packet.</p>
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure <i>service vpn</i> <i>service-name</i> <i>interface</i> <i>interface-name</i> <i>sap</i> <i>sap</i> <i>ipsec-tunnel</i> <i>named-item</i> <i>max-history-key-records</i>

Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

esp number

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ike number

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pmtu-discovery-aging *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

private-tcp-mss-adjust *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v4 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

propagate-pmtu-v6 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

public-tcp-mss-adjust (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

replay-window *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> sap <i>sap</i> ipsec-tunnel <i>named-item</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

security-policy

WARNING:

strict-match boolean

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> sap sap ipsec-tunnel <i>named-item</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p>

If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

tunnel-endpoint

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

static-tunnel-redundant-nexthop *ipv4-unicast-address*

Synopsis	Address for the static ISA tunnel redundant next-hop
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> static-tunnel-redundant-nexthop <i>ipv4-unicast-address</i>
Tree	static-tunnel-redundant-nexthop
Description	<p>This command configures a redundant next-hop address on a public or private IPsec interface (with a public or private tunnel SAP) for a static IPsec tunnel in 1:1 MC-IPsec. A standby node uses the specified next-hop address to shunt traffic to the master in case it receives traffic destined to a tunnel endpoint address. The standby tunnel group needs to be operationally up for the feature to work.</p> <p>The next-hop address is resolved in the routing table of the corresponding service.</p>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop) .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

advertise [**route-type**] *keyword*

Synopsis	Enter the advertise list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The learn-dynamic command must be set to false when using this functionality.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**route-type**] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic, evpn-local-es
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-less-routing

Synopsis	Enable the interface-less-routing context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> interface-less-routing
Tree	interface-less-routing
Description	Commands in this context enable the entries for advertisement in EVPN MAC/IP advertisement routes that include: <ul style="list-style-type: none"> the label1 and route target of the R-VPLS EVPN service the label2 value and route target of the EVPN interface-less instance in the linked VPRN
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-evpn-instance *number*

Synopsis	EVPN interface-less VPRN instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> interface-less-routing bgp-evpn-instance <i>number</i>
Tree	bgp-evpn-instance
Description	This command configures the EVPN interface-less BGP instance from which the label and route target are taken when advertising the entry in an EVPN MAC/IP advertisement route.
Range	1
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag

Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-local-es

Synopsis	Enter the evpn-local-es context
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp evpn-local-es
Tree	evpn-local-es
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

entry-type *keyword*

Synopsis	Type of EVPN entry
Context	configure service vpn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp evpn-local-es entry-type <i>keyword</i>
Tree	entry-type
Description	<p>This command configures the type of EVPN entry.</p> <p>When configured to evpn, received EVPN MAC/IP advertisement routes matching a local ESI to create an ARP or ND route of type EVPN are enabled.</p> <p>When configured to evpn-local-es, ARP or ND entries are classified as the EVPN local ES type. The EVPN local ES ARP or ND entries then trigger the local router to advertise corresponding MAC/IP advertisement routes with the proxy bit set if the advertise evpn-local-es command is configured.</p>
Options	evpn – Allow EVPN routes to be advertised evpn-local-es – Allow EVPN local ES routes to be advertised
Default	evpn
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Retention timer of the entry
----------	------------------------------

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp evpn-local-es retention-timer <i>number</i>
Tree	retention-timer
Description	The timer defines how long the EVPN local ES entry is retained. While the timer is active, the router sends ARP requests or neighbor solicitations for the entry to the local ES. If a response is received, the entry is converted into a dynamic entry. The command can only be set to a value different from 0 if the entry type is configured as EVPN local ES.
Range	0 to 65535
Units	seconds
Default	0
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

flood-garp-and-unknown-req *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp flood-garp-and-unknown-req <i>boolean</i>
Tree	flood-garp-and-unknown-req
Description	When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to false , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn arp learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nd

Synopsis	Enter the nd context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd
Tree	nd
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise [**route-type**] *keyword*

Synopsis	Enter the advertise list instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i>
Tree	advertise
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The learn-dynamic command must be set to false when using this functionality.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**route-type**] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i>
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic, evpn-local-es
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

interface-less-routing

Synopsis	Enable the interface-less-routing context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i> interface-less-routing
Tree	interface-less-routing
Description	Commands in this context enable the entries for advertisement in EVPN MAC/IP advertisement routes that include: <ul style="list-style-type: none"> the label1 and route target of the R-VPLS EVPN service the label2 value and route target of the EVPN interface-less instance in the linked VPRN
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-evpn-instance *number*

Synopsis	EVPN interface-less VPRN instance
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i> interface-less-routing bgp-evpn-instance <i>number</i>
Tree	bgp-evpn-instance
Description	This command configures the EVPN interface-less BGP instance from which the label and route target are taken when advertising the entry in an EVPN MAC/IP advertisement route.
Range	1
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
----------	---

Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-local-es

Synopsis	Enter the evpn-local-es context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd evpn-local-es
Tree	evpn-local-es
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

entry-type *keyword*

Synopsis	Type of EVPN entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd evpn-local-es entry-type <i>keyword</i>
Tree	entry-type
Description	<p>This command configures the type of EVPN entry.</p> <p>When configured to evpn, received EVPN MAC/IP advertisement routes matching a local ESI to create an ARP or ND route of type EVPN are enabled.</p> <p>When configured to evpn-local-es, ARP or ND entries are classified as the EVPN local ES type. The EVPN local ES ARP or ND entries then trigger the local router to advertise corresponding MAC/IP advertisement routes with the proxy bit set if the advertise evpn-local-es command is configured.</p>
Options	evpn – Allow EVPN routes to be advertised evpn-local-es – Allow EVPN local ES routes to be advertised
Default	evpn
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

retention-timer *number*

Synopsis	Retention timer of the entry
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd evpn-local-es retention-timer <i>number</i>
Tree	retention-timer
Description	The timer defines how long the EVPN local ES entry is retained. While the timer is active, the router sends ARP requests or neighbor solicitations for the entry to the local ES. If a response is received, the entry is converted into a dynamic entry. The command can only be set to a value different from 0 if the entry type is configured as EVPN local ES.
Range	0 to 65535
Units	seconds
Default	0
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn nd learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Description	When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to false , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

evpn-tunnel

Synopsis	Enable the evpn-tunnel context
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel
Tree	evpn-tunnel

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-bfd *boolean*

Synopsis	Allow BFD on the EVPN tunnel
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel allow-bfd <i>boolean</i>
Tree	allow-bfd
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-gateway-address *keyword*

Synopsis	Type of IPv6 gateway address
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel ipv6-gateway-address <i>keyword</i>
Tree	ipv6-gateway-address
Options	ip, mac
Default	ip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

supplementary-broadcast-domain *boolean*

Synopsis	Use the EVPN tunnel as a Supplementary Broadcast Domain
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> evpn-tunnel supplementary-broadcast-domain <i>boolean</i>
Tree	supplementary-broadcast-domain
Description	<p>When configured to true, this command allows the EVPN tunnel to be used as a Supplementary Broadcast Domain (SBD). The SBD is used in EVPN OISM to advertise the SMET routes and to receive the multicast traffic on egress PEs that are not attached to the source R-VPLS service.</p> <p>When configured to false, this command disables EVPN tunnel use as an SBD.</p>
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ingress

Synopsis Enter the **ingress** context

ip reference

Synopsis IPv4 filter policy name

Context **configure** [service vprn](#) *service-name* [interface](#) *interface-name* [vpls](#) *named-item-64* [ingress](#) [routed-override-filter](#) [ip](#) *reference*

Tree [ip](#)

Description This command specifies an IP filter that is applied to routed unicast ingress packets entering the VPLS service and destined to the R-VPLS interface MAC address.

The filter overrides any existing ingress IP filter applied to SAPs or SDP bindings for packets associated with the routing IP interface. The override filter is optional and when it is not defined or it is removed, the IP routed packets use the existing ingress IP filter configured on the VPLS endpoint.

Reference **configure** [filter ip-filter](#) *filter-name*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service vprn <i>service-name</i> interface <i>interface-name</i> vpls <i>named-item-64</i> ingress routed-override-filter ipv6 <i>reference</i>
Tree	ipv6
Description	<p>This command specifies an IPv6 filter that is applied to routed unicast ingress packets entering the VPLS service and destined to the R-VPLS interface MAC address.</p> <p>The filter overrides any existing ingress IP filter applied to SAPs or SDP bindings for packets associated with the routing IP interface. The override filter is optional and when it is not defined or it is removed, the IP routed packets use the existing ingress IP filter configured on the VPLS endpoint.</p>
Reference	configure filter ipv6-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-mirror-interface [[interface-name](#)] *interface-name*

Synopsis	Enter the ip-mirror-interface list instance
Context	configure service vprn <i>service-name</i> ip-mirror-interface <i>interface-name</i>

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

overlapping-reverse-route *boolean*

Synopsis Accept overlapping DL2L tunnel reverse routes

Context **configure service vprn** *service-name* **ipsec overlapping-reverse-route** *boolean*

Tree **overlapping-reverse-route**

Description When configured to **true**, the router accepts overlapping DL2L tunnel reverse routes from different tunnels and installs the routes based on the preference, metric, or ECMP configuration.

When configured to **false**, the router does not accept overlapping reverse routes and handles the overlapping route according to the **configure service vprn ipsec allow-reverse-route-override-type** command configuration.

This command is mutually exclusive with the **allow-reverse-route-override-type** command.

See the *7705 SAR Gen 2 Multiservice ISA and ESA Guide* for more information.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

security-policy [[id](#)] *number*

Synopsis	Enter the security-policy list instance
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i>
Tree	security-policy
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[id] *number*

Synopsis	IPsec security policy ID
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i>
Tree	security-policy
Range	1 to 32768
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[entry-id] *number*

Synopsis	IPsec security policy entry ID
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i>

Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-ip

Synopsis	Enter the local-ip context
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ip
Tree	local-ip
Description	<p>Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address *ipv4-prefix*

Synopsis	Destination IPv4 address of the aggregate route
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ip address <i>ipv4-prefix</i>
Tree	address
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

any *boolean*

Synopsis	Use any IP address
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ip any <i>boolean</i>
Tree	any
Default	false

Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

local-ipv6

Synopsis	Enter the local-ipv6 context
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6
Tree	local-ipv6
Description	<p>Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address *ipv6-prefix*

Synopsis	Destination IPv6 address of the aggregate route
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6 address <i>ipv6-prefix</i>
Tree	address
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

any *boolean*

Synopsis	Use any IP address
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6 any <i>boolean</i>
Tree	any
Default	false
Notes	The following elements are part of a choice: address or any .

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-ip

Synopsis	Enter the remote-ip context
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> remote-ip
Tree	remote-ip
Description	Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry. The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address *ipv4-prefix*

Synopsis	Destination IPv4 address of the aggregate route
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> remote-ip address <i>ipv4-prefix</i>
Tree	address
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

any *boolean*

Synopsis	Use any IP address
Context	configure service vpn <i>service-name</i> ipsec security-policy <i>number</i> entry <i>number</i> remote-ip any <i>boolean</i>
Tree	any
Default	false
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

remote-ipv6

Synopsis	Enter the remote-ipv6 context
Context	configure <i>service vpn service-name ipsec security-policy number entry number</i> remote-ipv6
Tree	remote-ipv6
Description	<p>Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address ipv6-prefix

Synopsis	Destination IPv6 address of the aggregate route
Context	configure <i>service vpn service-name ipsec security-policy number entry number</i> remote-ipv6 address ipv6-prefix
Tree	address
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

any boolean

Synopsis	Use any IP address
Context	configure <i>service vpn service-name ipsec security-policy number entry number</i> remote-ipv6 any boolean
Tree	any
Default	false
Notes	The following elements are part of a choice: address or any .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vprn <i>service-name</i> ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vprn <i>service-name</i> ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reachable-time *number*

Synopsis	Neighbor reachability detection timer
Context	configure service vprn <i>service-name</i> ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stale-time *number*

Synopsis	Neighbor discovery cache entry stale time
Context	configure service vprn <i>service-name</i> ipv6 neighbor-discovery stale-time <i>number</i>
Tree	stale-time
Range	60 to 65535
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-advertisement

Synopsis	Enter the router-advertisement context
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement
Tree	router-advertisement
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dns-options

Synopsis	Enable the dns-options context
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement dns-options
Tree	dns-options
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rdnss-lifetime (*keyword* | *number*)

Synopsis	Maximum time over which the RDNSS address is valid
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement dns-options rdnss-lifetime (<i>keyword</i> <i>number</i>)
Tree	rdnss-lifetime
Description	This command specifies the maximum time that the RDNSS address is used for name resolution by the client.
Range	0 4 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server *ipv6-address*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement dns-options server <i>ipv6-address</i>

Tree	server
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [\[ip-int-name\]](#) *reference*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-int-name] *reference*

Synopsis	VPN interface name
Context	configure service vpn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i>
Tree	interface
Reference	configure service vpn <i>service-name</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of router advertisement
Context	configure service vpn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

current-hop-limit *number*

Synopsis	Hop limit advertised in RA messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> current-hop-limit <i>number</i>
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dns-options

Synopsis	Enable the dns-options context
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options
Tree	dns-options
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-rdnss *boolean*

Synopsis	Include the RDNSS option in the RA
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options include-rdnss <i>boolean</i>
Tree	include-rdnss
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rdnss-lifetime (*number* | *keyword*)

Synopsis	Maximum time over which the RDNSS address 25 is valid
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> dns-options rdnss-lifetime (<i>number</i> <i>keyword</i>)
Tree	rdnss-lifetime

Range	0 4 to 3600
Units	seconds
Options	infinite
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server *ipv6-address*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference dns-options server <i>ipv6-address</i>
Tree	server
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

managed-configuration *boolean*

Synopsis	Set the managed address configuration flag
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference managed-configuration <i>boolean</i>
Tree	managed-configuration
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-advertisement-interval *number*

Synopsis	Maximum time between sending advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	4 to 1800
Units	seconds

Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-advertisement-interval *number*

Synopsis	Minimum interval between router advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	3 to 1350
Units	seconds
Default	200
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mtu *number*

Synopsis	MTU for sending packets to the router
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> mtu <i>number</i>
Tree	mtu
Range	1280 to 9800
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nd-router-preference *keyword*

Synopsis	Default router preference for Router Advertisements
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> nd-router-preference <i>keyword</i>
Tree	nd-router-preference
Description	<p>This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs.</p> <p>This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the</p>

connected host to assist in its selection of the most appropriate default gateway on a link.

This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.

Options	medium, high, low
Default	medium
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

other-stateful-configuration *boolean*

Synopsis	Set the other configuration flag
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> other-stateful-configuration <i>boolean</i>
Tree	other-stateful-configuration
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix [[ipv6-prefix](#)] *ipv6-prefix*

Synopsis	Enter the prefix list instance
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>ipv6-prefix</i>
Tree	prefix
Max. instances	254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-prefix] *ipv6-prefix*

Synopsis	IPv6 address prefix
----------	---------------------

Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> <i>prefix ipv6-prefix</i>
Tree	<i>prefix</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

autonomous *boolean*

Synopsis	Set the autonomous flag value
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> <i>prefix ipv6-prefix autonomous</i> <i>boolean</i>
Tree	<i>autonomous</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

on-link *boolean*

Synopsis	Use prefix for on-link determination
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> <i>prefix ipv6-prefix on-link</i> <i>boolean</i>
Tree	<i>on-link</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preferred-lifetime (*keyword* | *number*)

Synopsis	Remaining time that the prefix remains preferred
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> <i>prefix ipv6-prefix preferred-lifetime</i> (<i>keyword</i> <i>number</i>)
Tree	<i>preferred-lifetime</i>
Range	0 to 4294967294
Units	seconds
Options	infinite

Default	604800
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

valid-lifetime (*keyword* | *number*)

Synopsis	Remaining time in which the prefix is still valid
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> prefix ipv6-prefix valid-lifetime (<i>keyword</i> <i>number</i>)
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	2592000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reachable-time *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> reachable-time <i>number</i>
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-time *number*

Synopsis	Time to advertise neighbor advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface <i>reference</i> retransmit-time <i>number</i>
Tree	retransmit-time
Range	0 to 1800000

Units	milliseconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-lifetime *number*

Synopsis	Lifetime value in neighbor advertisement messages
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference router-lifetime <i>number</i>
Tree	router-lifetime
Range	0 4 to 9000
Units	seconds
Default	1800
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-virtual-mac *boolean*

Synopsis	Use VRRP virtual MAC address for advertisement message
Context	configure service vprn <i>service-name</i> ipv6 router-advertisement interface reference use-virtual-mac <i>boolean</i>
Tree	use-virtual-mac
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

isis [[isis-instance](#)] *number*

Synopsis	Enter the isis list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i>
Tree	isis
Description	Commands in this context create or configure the IS-IS protocol instance in the VPRN.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[isis-instance] *number*

Synopsis	IS-IS instance ID
Context	configure service vpn <i>service-name</i> isis <i>number</i>
Tree	isis
Range	0 to 127
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

additional-system-id *system-id-no-default*

Synopsis	Additional system ID
Context	configure service vpn <i>service-name</i> isis <i>number</i> additional-system-id <i>system-id-no-default</i>
Tree	additional-system-id
String length	14
String format	'system-id-no-default' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Max. instances	4
Notes	This element is ordered by the user.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the IS-IS instance
Context	configure service vpn <i>service-name</i> isis <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-passive-only *boolean*

Synopsis	Advertise prefixes that belong to passive interfaces
Context	configure service vpn <i>service-name</i> isis <i>number</i> advertise-passive-only <i>boolean</i>
Tree	advertise-passive-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *keyword*

Synopsis	Router capabilities advertisement to neighbors
Context	configure service vpn <i>service-name</i> isis <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	area, as
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

all-l1isis *mac-address*

Synopsis	Destination MAC address for all L1 IS-IS routers
Context	configure service vpn <i>service-name</i> isis <i>number</i> all-l1isis <i>mac-address</i>
Tree	all-l1isis
Default	01:80:C2:00:00:14
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

all-l2isis *mac-address*

Synopsis	Destination MAC address for all L2 IS-IS routers
Context	configure service vpn <i>service-name</i> isis <i>number</i> all-l2isis <i>mac-address</i>
Tree	all-l2isis
Default	01:80:C2:00:00:15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area-address *area-address*

Synopsis	Area address portion of the NSAP address
Context	configure service vprn <i>service-name</i> isis <i>number</i> area-address <i>area-address</i>
Tree	area-address
String length	2 to 38
String format	'area-address' must match NSAP area-address hex pattern (length 2..38)
Max. instances	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-check *boolean*

Synopsis	Perform authentication check to reject mismatch PDUs
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-check <i>boolean</i>
Tree	authentication-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key to verify PDUs sent from neighbors
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command specifies the authentication key to verify PDUs sent from neighbors in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 422
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type
Context	configure service vprn <i>service-name</i> isis <i>number</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

csnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	configure service vprn <i>service-name</i> isis <i>number</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

csnp-on-p2p *boolean*

Synopsis	Send periodic CSNP PDUs on point-to-point interfaces
Context	configure service vprn <i>service-name</i> isis <i>number</i> csnp-on-p2p <i>boolean</i>
Tree	csnp-on-p2p
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-route-tag *number*

Synopsis	Route tag for the default route
Context	configure service vprn <i>service-name</i> isis <i>number</i> default-route-tag <i>number</i>
Tree	default-route-tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> isis <i>number</i> export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure service vpn <i>service-name</i> isis <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-flooding

Synopsis	Enter the fast-flooding context
Context	configure service vpn <i>service-name</i> isis <i>number</i> fast-flooding
Tree	fast-flooding
Description	Commands in this context configure IS-IS fast flooding, as specified in RFC 9681. The configuration applies to interfaces that belong to the instance unless it is overridden under an interface.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-receiver

Synopsis	Enable the lsp-receiver context
Context	configure service vpn <i>service-name</i> isis <i>number</i> fast-flooding lsp-receiver
Tree	lsp-receiver

Description	Commands in this context configure how the router receives LSPs and how it acknowledges them. The router can also advertise its flooding values to neighbors.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

advertise-flooding-tlv *boolean*

Synopsis	Enable the advertise-flooding-tlv context
Context	configure service vprn <i>service-name</i> isis number fast-flooding lsp-receiver advertise-flooding-tlv <i>boolean</i>
Tree	advertise-flooding-tlv
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

burst-size *number*

Synopsis	Maximum number of LSPs receivable without an intervening delay
Context	configure service vprn <i>service-name</i> isis number fast-flooding lsp-receiver burst-size <i>number</i>
Tree	burst-size
Range	1 to 200
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-per-psnp *number*

Synopsis	Number of received LSPs that triggers the immediate sending of a PSNP
Context	configure service vprn <i>service-name</i> isis number fast-flooding lsp-receiver lsp-per-psnp <i>number</i>
Tree	lsp-per-psnp
Range	1 to 90
Default	15
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-transmit-interval *number*

Synopsis	Interval between LSP transmissions that can be sustained on reception
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding lsp-receiver lsp-transmit-interval <i>number</i>
Tree	lsp-transmit-interval
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

psnp-interval *number*

Synopsis	Interval between periodic transmissions of Partial Sequence Number PDUs (PSNPs)
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding lsp-receiver psnp-interval <i>number</i>
Tree	psnp-interval
Range	50 to 1000
Units	milliseconds
Default	200
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

receive-window *number*

Synopsis	Maximum receive window
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding lsp-receiver receive-window <i>number</i>
Tree	receive-window
Range	10 to 1000
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

Isp-sender

Synopsis	Enable the Isp-sender context
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding Isp-sender
Tree	Isp-sender
Description	Commands in this context configure how the router transmits LSPs. The sender can use flooding values received from a neighbor, PSNP acknowledgments, and locally configured defaults to control the number and rate of transmitted LSPs.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

enforce-burst-size *boolean*

Synopsis	Enforce to not exceed the advertised LSP burst size
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding Isp-sender enforce-burst-size <i>boolean</i>
Tree	enforce-burst-size
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

enforce-receive-window *boolean*

Synopsis	Enforce the advertised receive window
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding Isp-sender enforce-receive-window <i>boolean</i>
Tree	enforce-receive-window
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

local-defaults

Synopsis	Enter the local-defaults context
Context	configure service vprn <i>service-name</i> isis <i>number</i> fast-flooding Isp-sender local-defaults
Tree	local-defaults

Introduced	26.10.R1
Platforms	7705 SAR Gen 2

burst-size *number*

Synopsis	Default burst size
Context	configure service vprn service-name isis number fast-flooding lsp-sender local-defaults burst-size <i>number</i>
Tree	burst-size
Range	1 to 200
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-per-psnp *number*

Synopsis	Default number of LSPs per PSNP
Context	configure service vprn service-name isis number fast-flooding lsp-sender local-defaults lsp-per-psnp <i>number</i>
Tree	lsp-per-psnp
Range	1 to 90
Default	15
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-transmit-interval *number*

Synopsis	Default interval between LSP transmissions
Context	configure service vprn service-name isis number fast-flooding lsp-sender local-defaults lsp-transmit-interval <i>number</i>
Tree	lsp-transmit-interval
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	26.10.R1

Platforms 7705 SAR Gen 2

receive-window *number*

Synopsis Default receive window.

Context **configure** [service vprn](#) *service-name* [isis number](#) [fast-flooding](#) [lsp-sender](#) [local-defaults](#) [receive-window](#) *number*

Tree [receive-window](#)

Range 10 to 1000

Default 30

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

graceful-restart

Synopsis Enable the **graceful-restart** context

Context **configure** [service vprn](#) *service-name* [isis number](#) [graceful-restart](#)

Tree [graceful-restart](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

helper-mode *boolean*

Synopsis Enable the Graceful Restart helper for IS-IS

Context **configure** [service vprn](#) *service-name* [isis number](#) [graceful-restart](#) [helper-mode](#) *boolean*

Tree [helper-mode](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

Context **configure** [service vprn](#) *service-name* [isis number](#) [hello-authentication](#) *boolean*

Tree [hello-authentication](#)

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-padding *keyword*

Synopsis	IS-IS Hello message padding
Context	configure service vprn <i>service-name</i> isis <i>number</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-attached-bit *boolean*

Synopsis	Ignore attached bit on received Layer 1 LSPs
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-attached-bit <i>boolean</i>
Tree	ignore-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-lsp-errors *boolean*

Synopsis	Ignore LSP packets with errors
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-lsp-errors <i>boolean</i>
Tree	ignore-lsp-errors
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-narrow-metric *boolean*

Synopsis	Ignore links with narrow metrics
Context	configure service vprn <i>service-name</i> isis <i>number</i> ignore-narrow-metric <i>boolean</i>

Tree	ignore-narrow-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

iid-tlv *boolean*

Synopsis	Use IID TLVs with IS-IS multi-instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> iid-tlv <i>boolean</i>
Tree	iid-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> isis <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the IS-IS interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enable the ipv4 context
----------	--------------------------------

Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv4 include-bfd-tlv <i>boolean</i>
Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enable the ipv6 context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> bfd-liveness ipv6 include-bfd-tlv <i>boolean</i>
Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

csnp-interval *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> csnp-interval <i>number</i>
Tree	csnp-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-instance *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> default-instance <i>boolean</i>
Tree	default-instance
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fast-flooding

Synopsis	Enter the fast-flooding context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding
Tree	fast-flooding
Description	Commands in this context configure IS-IS fast flooding for the interface, as specified in RFC 9681. Values configured in this context override the corresponding instance-level configuration.
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-receiver

Synopsis	Enter the lsp-receiver context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver
Tree	lsp-receiver
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LSP receiver
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

advertise-flooding-tlv *boolean*

Synopsis	Enable the advertise-flooding-tlv context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver advertise-flooding-tlv <i>boolean</i>
Tree	advertise-flooding-tlv

Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

burst-size *number*

Synopsis	Maximum number of LSPs receivable without an intervening delay
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver burst-size <i>number</i>
Tree	burst-size
Range	1 to 200
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-per-psnp *number*

Synopsis	Number of received LSPs that triggers the immediate sending of a PSNP
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver lsp-per-psnp <i>number</i>
Tree	lsp-per-psnp
Range	1 to 90
Default	15
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-transmit-interval *number*

Synopsis	Interval between LSP transmissions that can be sustained on reception
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-receiver lsp-transmit-interval <i>number</i>
Tree	lsp-transmit-interval
Range	1 to 1000
Units	milliseconds
Default	100

Introduced	26.10.R1
Platforms	7705 SAR Gen 2

psnp-interval *number*

Synopsis	Interval between periodic transmissions of Partial Sequence Number PDUs (PSNPs)
Context	configure service vprn service-name isis number interface interface-name fast-flooding lsp-receiver psnp-interval <i>number</i>
Tree	psnp-interval
Range	50 to 1000
Units	milliseconds
Default	200
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

receive-window *number*

Synopsis	Maximum receive window
Context	configure service vprn service-name isis number interface interface-name fast-flooding lsp-receiver receive-window <i>number</i>
Tree	receive-window
Range	10 to 1000
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-sender

Synopsis	Enter the lsp-sender context
Context	configure service vprn service-name isis number interface interface-name fast-flooding lsp-sender
Tree	lsp-sender
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LSP sender
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

enforce-burst-size *boolean*

Synopsis	Enforce to not exceed the advertised LSP burst size
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender enforce-burst-size <i>boolean</i>
Tree	enforce-burst-size
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

enforce-receive-window *boolean*

Synopsis	Enforce the advertised receive window
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender enforce-receive-window <i>boolean</i>
Tree	enforce-receive-window
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

local-defaults

Synopsis	Enter the local-defaults context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender local-defaults
Tree	local-defaults

Introduced	26.10.R1
Platforms	7705 SAR Gen 2

burst-size *number*

Synopsis	Default burst size
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender local-defaults burst-size <i>number</i>
Tree	burst-size
Range	1 to 200
Default	30
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-per-psnp *number*

Synopsis	Default number of LSPs per PSNP
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender local-defaults lsp-per-psnp <i>number</i>
Tree	lsp-per-psnp
Range	1 to 90
Default	15
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

lsp-transmit-interval *number*

Synopsis	Default interval between LSP transmissions
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> fast-flooding lsp-sender local-defaults lsp-transmit-interval <i>number</i>
Tree	lsp-transmit-interval
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	26.10.R1

Platforms 7705 SAR Gen 2

receive-window *number*

Synopsis Default receive window.

Context **configure** [service vprn](#) *service-name* [isis number](#) [interface interface-name](#) [fast-flooding lsp-sender local-defaults](#) [receive-window number](#)

Tree [receive-window](#)

Range 10 to 1000

Default 30

Introduced 26.10.R1

Platforms 7705 SAR Gen 2

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

Context **configure** [service vprn](#) *service-name* [isis number](#) [interface interface-name](#) [hello-authentication boolean](#)

Tree [hello-authentication](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-authentication-key *encrypted-leaf*

Synopsis Authentication key or hash string for Hello PDUs

Context **configure** [service vprn](#) *service-name* [isis number](#) [interface interface-name](#) [hello-authentication-key encrypted-leaf](#)

Tree [hello-authentication-key](#)

Description This command specifies the authentication key or hash string for Hello PDUs in a protected format.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 422

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-authentication-type *keyword*

Synopsis	Hello authentication type
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-authentication-type <i>keyword</i>
Tree	hello-authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-type *keyword*

Synopsis	Interface type to broadcast, point-to-point, or to be default
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type

Options	point-to-point, broadcast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-multicast *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> ipv4-multicast <i>boolean</i>
Tree	ipv4-multicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-unicast *boolean*

Synopsis	Enable IPv6 unicast routing for the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> ipv6-unicast <i>boolean</i>
Tree	ipv6-unicast
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i>
Tree	level
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[level-number] keyword

Synopsis	ISIS protocol level number
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-authentication-key *encrypted-leaf*

Synopsis	Authentication key for Hello PDUs
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-key <i>encrypted-leaf</i>
Tree	hello-authentication-key
Description	<p>This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.</p> <p>If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 422
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

hello-authentication-type *keyword*

Synopsis Hello authentication enabled on the context

Context **configure** [service vprn](#) [service-name isis](#) [number](#) [interface](#) [interface-name](#) [level](#)
keyword [hello-authentication-type](#) *keyword*

Tree [hello-authentication-type](#)

Description This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello **authentication-key** statement must also be included.

Options password, message-digest

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-interval *number*

Synopsis Interval between Hello messages sent on this level

Context **configure** [service vprn](#) [service-name isis](#) [number](#) [interface](#) [interface-name](#) [level](#)
keyword [hello-interval](#) *number*

Tree [hello-interval](#)

Range 1 to 20000

Units seconds

Default 9

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-multiplier *number*

Synopsis Hello messages missed from neighbor before router declares adjacency down

Context **configure** [service vprn](#) [service-name isis](#) [number](#) [interface](#) [interface-name](#) [level](#)
keyword [hello-multiplier](#) *number*

Tree [hello-multiplier](#)

Range 2 to 100

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hello-padding *keyword*

Synopsis Padding on IS-IS Hello packets

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [interface](#) *interface-name* [level](#)
keyword [hello-padding](#) *keyword*

Tree [hello-padding](#)

Options adaptive, loose, strict, none

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv4-multicast-metric *number*

Synopsis IS-IS interface metric applied for IPv4 multicast

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [interface](#) *interface-name* [level](#)
keyword [ipv4-multicast-metric](#) *number*

Tree [ipv4-multicast-metric](#)

Range 1 to 16777215

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ipv6-unicast-metric *number*

Synopsis IS-IS interface metric applied for IPv6 unicast

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [interface](#) *interface-name* [level](#)
keyword [ipv6-unicast-metric](#) *number*

Tree [ipv6-unicast-metric](#)

Range 1 to 16777215

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

metric *number*

Synopsis IS-IS interface metric applied for IPv4 unicast

Context **configure** [service vprn](#) *service-name* [isis](#) *number* [interface](#) *interface-name* [level](#)
keyword [metric](#) *number*

Tree	metric
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

Synopsis	Passive interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Router to become the designated router on a multi-access network
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> priority <i>number</i>
Tree	priority
Range	0 to 127
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sd-offset *number*

Synopsis	Value of the signal degrade offset
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sd-offset <i>number</i>
Tree	sd-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sf-offset *number*

Synopsis	Value of the signal fail offset
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level <i>keyword</i> sf-offset <i>number</i>
Tree	sf-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level-capability *keyword*

Synopsis	IS-IS levels for this interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load balancing weight
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate

Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude *boolean*

Synopsis	Exclude Loopfree Alternative at the interface level
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-map

Synopsis	Enable the policy-map context
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> loopfree-alternate policy-map route-nh-template <i>reference</i>
Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy template <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-pacing-interval *number*

Synopsis	Interval for sending LSPs from interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mesh-group

Synopsis	Enable the mesh-group context
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group
Tree	mesh-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blocked

Synopsis	Prevent the interface from flooding LSPs
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group blocked
Tree	blocked
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	Mesh group for the interface
Context	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> mesh-group value <i>number</i>
Tree	value

Range	1 to 2000000000
Notes	The following elements are part of a choice: blocked or value .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

Synopsis	Passive interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 65535
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Route tag for IP address of interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-multicast-routing *keyword*

Synopsis	IS-IS topology for IPv4 multicast routing
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv4-multicast-routing <i>keyword</i>
Tree	ipv4-multicast-routing
Options	false, native, mt
Default	native
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-routing *boolean*

Synopsis	Support IPv4 routing for IS-IS instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv4-routing <i>boolean</i>
Tree	ipv4-routing
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-routing *keyword*

Synopsis	Routing topology for IPv6
Context	configure service vprn <i>service-name</i> isis <i>number</i> ipv6-routing <i>keyword</i>
Tree	ipv6-routing
Options	false, native, mt
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i>
Tree	level

Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[level-number] keyword

Synopsis	ISIS protocol level number
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability boolean

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key encrypted-leaf

Synopsis	Authentication key to verify PDUs sent on the interface
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.</p> <p>Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included.</p>

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length	1 to 422
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type to be used
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

csnp-authentication *boolean*

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	configure service vpn <i>service-name</i> isis <i>number</i> level <i>keyword</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-ipv4-multicast-metric *number*

Synopsis	Default metric for IPv4 unicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> default-ipv4-multicast-metric <i>number</i>
Tree	default-ipv4-multicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-ipv6-unicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> default-ipv6-unicast-metric <i>number</i>
Tree	default-ipv6-unicast-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-metric *number*

Synopsis	Default metric
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777215
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-preference *number*

Synopsis	External route preference for IS-IS level
----------	---

Context	configure service vpn <i>service-name isis number level keyword external-preference number</i>
Tree	external-preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure service vpn <i>service-name isis number level keyword hello-authentication boolean</i>
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure service vpn <i>service-name isis number level keyword hello-padding keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	configure service vpn <i>service-name isis number level keyword loopfree-alternate-exclude boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-mtu-size *number*

Synopsis	LSP MTU size
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9778
Units	bytes
Default	1492
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	External route preference at level
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

psnp-authentication *boolean*

Synopsis	Enable authentication on PSNP IS-IS protocol packets
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> psnp-authentication <i>boolean</i>
Tree	psnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

wide-metrics-only *boolean*

Synopsis	Use wide metrics advertisements in the LSPs
Context	configure service vprn <i>service-name</i> isis <i>number</i> level <i>keyword</i> wide-metrics-only <i>boolean</i>

Tree	wide-metrics-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level-capability *keyword*

Synopsis	Routing level for instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

link-group [[link-group-name](#)] *named-item*

Synopsis	Enter the link-group list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i>
Tree	link-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[link-group-name] *named-item*

Synopsis	Link group name for the IS-IS protocol
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i>
Tree	link-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *very-long-description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> description <i>very-long-description</i>
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i>
Tree	level
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[level-number] *keyword*

Synopsis	ISIS protocol level number
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-multicast-metric-offset *number*

Synopsis	Offset value for the IPv4 multicast address family
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> ipv4-multicast-metric-offset <i>number</i>

Tree	ipv4-multicast-metric-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-unicast-metric-offset *number*

Synopsis	Offset value for the IPv4 unicast address family
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> ipv4-unicast-metric-offset <i>number</i>
Tree	ipv4-unicast-metric-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-unicast-metric-offset *number*

Synopsis	Offset value for the IPv6 unicast address family
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> ipv6-unicast-metric-offset <i>number</i>
Tree	ipv6-unicast-metric-offset
Range	1 to 16777215
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

member [[interface-name](#)] *reference*

Synopsis	Add a list entry for member
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> member <i>reference</i>
Tree	member
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] reference

Synopsis	Interface name for the associated link group
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> member <i>reference</i>
Tree	member
Reference	configure service vprn <i>service-name</i> isis <i>number</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

oper-members *number*

Synopsis	Minimum number of operational links
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> oper-members <i>number</i>
Tree	oper-members
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

revert-members *number*

Synopsis	Minimum number of operational links to return link group to normal state and remove offsets
Context	configure service vprn <i>service-name</i> isis <i>number</i> link-group <i>named-item</i> level <i>keyword</i> revert-members <i>number</i>
Tree	revert-members
Range	1 to 8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure service vprn <i>service-name</i> isis <i>number</i> loopfree-alternate

Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude

Synopsis	Enter the exclude context
Context	configure service vpn <i>service-name</i> isis <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure service vpn <i>service-name</i> isis <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i>
Tree	prefix-policy
Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-lifetime *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid
Context	configure service vpn <i>service-name</i> isis <i>number</i> lsp-lifetime <i>number</i>

Tree	lsp-lifetime
Range	350 to 65535
Units	seconds
Default	1200
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-minimum-remaining-lifetime *number*

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	configure service vprn <i>service-name</i> isis <i>number</i> lsp-minimum-remaining-lifetime <i>number</i>
Tree	lsp-minimum-remaining-lifetime
Range	350 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-mtu-size *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP MTU size
Context	configure service vprn <i>service-name</i> isis <i>number</i> lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9778
Units	bytes
Default	1492
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-refresh

Synopsis	Enter the lsp-refresh context
----------	--------------------------------------

Context	configure service vprn <i>service-name isis number lsp-refresh</i>
Tree	lsp-refresh
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

half-lifetime *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
Context	configure service vprn <i>service-name isis number lsp-refresh half-lifetime boolean</i>
Tree	half-lifetime
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Refresh timer interval
Context	configure service vprn <i>service-name isis number lsp-refresh interval number</i>
Tree	interval
Range	150 to 65535
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multi-part-tlv

Synopsis	Enter the multi-part-tlv context
Context	configure service vprn <i>service-name isis number multi-part-tlv</i>
Tree	multi-part-tlv
Description	Commands in this context configure the behavior of the MP-TLV capability.
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

neighbor *boolean*

Synopsis	Enable origination of multi-part neighbor TLVs
Context	configure service vprn service-name isis number multi-part-tlv neighbor <i>boolean</i>
Tree	neighbor
Description	<p>When configured to true, the router splits neighbor TLVs (TLV 22 and TLV 222) that exceed the maximum size into MP-TLVs of the same type and key.</p> <p>When configured to false, the router truncates neighbor TLVs to fit the maximum size limit.</p>
Default	true
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

srlg *boolean*

Synopsis	Enable origination of multi-part SRLG TLVs
Context	configure service vprn service-name isis number multi-part-tlv srlg <i>boolean</i>
Tree	srlg
Description	<p>When configured to true, the router splits SRLG TLVs (TLV 138 and TLV 238) that exceed the maximum size into MP-TLVs of the same type and key.</p> <p>When configured to false, the router truncates SRLG TLVs to fit the maximum size limit.</p>
Default	true
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

multi-topology

Synopsis	Enable the multi-topology context
Context	configure service vprn service-name isis number multi-topology
Tree	multi-topology
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-multicast *boolean*

Synopsis	Support IPv4 topology (MT3)
----------	-----------------------------

Context	configure service vprn <i>service-name isis number multi-topology ipv4-multicast boolean</i>
Tree	ipv4-multicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-unicast *boolean*

Synopsis	Support multi-topology TLVs
Context	configure service vprn <i>service-name isis number multi-topology ipv6-unicast boolean</i>
Tree	ipv6-unicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-import

Synopsis	Enter the multicast-import context
Context	configure service vprn <i>service-name isis number multicast-import</i>
Tree	multicast-import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Submit IPv4 routes into the multicast RPF of the RTM
Context	configure service vprn <i>service-name isis number multicast-import ipv4 boolean</i>
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload

Synopsis	Enable the overload context
----------	------------------------------------

Context	configure service vprn <i>service-name isis number overload</i>
Tree	overload
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	configure service vprn <i>service-name isis number overload max-metric boolean</i>
Tree	max-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-export-external *boolean*

Synopsis	Advertise the external routes when router is in overloaded
Context	configure service vprn <i>service-name isis number overload-export-external boolean</i>
Tree	overload-export-external
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-export-interlevel *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	configure service vprn <i>service-name isis number overload-export-interlevel boolean</i>
Tree	overload-export-interlevel
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-fib-error-notify-only

Synopsis	Enable the overload-fib-error-notify-only context
----------	--

Context	configure <i>service vprn service-name isis number overload-fib-error-notify-only</i>
Tree	<i>overload-fib-error-notify-only</i>
Description	<p>Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP.</p> <p>Note: Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled.</p> <p>When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state.</p> <p>The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the retry command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information.</p> <p>When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry *number*

Synopsis	Time to retry programming failed entries in the FIB
Context	configure <i>service vprn service-name isis number overload-fib-error-notify-only retry number</i>
Tree	<i>retry</i>
Description	<p>This command configures the time the router uses to retry programming the failed entries in the FIB.</p> <p>The overload-fib-error-notify-only command must be configured to use the retry timer. The removal of the overload-fib-error-notify-only configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.</p>
Range	10 to 1800
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-on-boot

Synopsis	Enable the overload-on-boot context
Context	configure service vprn service-name isis number overload-on-boot
Tree	overload-on-boot
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	configure service vprn service-name isis number overload-on-boot max-metric <i>boolean</i>
Tree	max-metric
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time during which the router operates in overload state after reboot
Context	configure service vprn service-name isis number overload-on-boot timeout <i>number</i>
Tree	timeout
Range	60 to 1800
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

poi-tlv *boolean*

Synopsis	Purge Originator Identification TLV
Context	configure service vprn service-name isis number poi-tlv <i>boolean</i>
Tree	poi-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-attributes-tlv *boolean*

Synopsis	Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-attributes-tlv <i>boolean</i>
Tree	prefix-attributes-tlv
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-limit

Synopsis	Enable the prefix-limit context
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-limit
Tree	prefix-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit *number*

Synopsis	Maximum number of prefixes for IS-IS instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-limit limit <i>number</i>
Tree	limit
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Send warning message when the prefix limit is reached
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

overload-timeout (*number* | *keyword*)

Synopsis	Time in overload state when prefix limit is reached
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-limit overload-timeout (<i>number</i> <i>keyword</i>)
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

warning-threshold *number*

Synopsis	Threshold value to trigger a warning message to be sent
Context	configure service vprn <i>service-name</i> isis <i>number</i> prefix-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Units	percent
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

psnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Context	configure service vprn <i>service-name</i> isis <i>number</i> psnp-authentication <i>boolean</i>
Tree	psnp-authentication
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reference-bandwidth *number*

Synopsis	Reference bandwidth for bandwidth relative costing
Context	configure service vprn <i>service-name</i> isis <i>number</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority

Synopsis	Enter the rib-priority context
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

high

Synopsis	Enter the high context
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list *reference*

Synopsis	List used to select routes processed at higher priority through OSPF route calculation process
Context	configure service vprn <i>service-name</i> isis <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Notes	The following elements are part of a choice: prefix-list or tag .
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

tag *number*

Synopsis Tag value that is used to match IS-IS routes

Context **configure** *service* *vpn* *service-name* *isis* *number* *rib-priority* *high* **tag** *number*

Tree *tag*

Range 1 to 4294967295

Notes The following elements are part of a choice: **prefix-list** or **tag**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

router-id *router-id*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Unique router ID for the ISIS instance

Context **configure** *service* *vpn* *service-name* *isis* *number* **router-id** *router-id*

Tree *router-id*

String format 'ipv4-address' must use only digits and dots (no %zone)
 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

standard-multi-instance *boolean*

Synopsis Enable RFC standards compliant multi-instance behavior

Context **configure** *service* *vpn* *service-name* *isis* *number* **standard-multi-instance** *boolean*

Tree *standard-multi-instance*

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

strict-adjacency-check *boolean*

Synopsis	Enable strict checking of address families for IS-IS adjacencies
Context	configure service vprn <i>service-name</i> isis <i>number</i> strict-adjacency-check <i>boolean</i>
Tree	strict-adjacency-check
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summary-address [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the summary-address list instance
Context	configure service vprn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	summary-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for the summary address
Context	configure service vprn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	summary-address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

level-capability *keyword*

Synopsis	IS-IS level for the summary address
Context	configure service vprn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-tag *number*

Synopsis	Route tag assigned to the summary address
Context	configure service vpn <i>service-name</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-tag <i>number</i>
Tree	route-tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suppress-attached-bit *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	configure service vpn <i>service-name</i> isis <i>number</i> suppress-attached-bit <i>boolean</i>
Tree	suppress-attached-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-id *system-id*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System ID
Context	configure service vpn <i>service-name</i> isis <i>number</i> system-id <i>system-id</i>
Tree	system-id
String length	14
String format	'system-id' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Default	0000.0000.0000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enter the timers context
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-wait

Synopsis	Enter the lsp-wait context
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait
Tree	lsp-wait
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-initial-wait *number*

Synopsis	Initial LSP generation delay
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-initial-wait <i>number</i>
Tree	lsp-initial-wait
Range	10 to 100000
Units	milliseconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-max-wait *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-max-wait <i>number</i>
Tree	lsp-max-wait
Range	10 to 120000
Units	milliseconds
Default	5000

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

`lsp-second-wait` *number*

Synopsis	Delay between first and second LSP generation
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers lsp-wait lsp-second-wait <i>number</i>
Tree	lsp-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

`spf-wait`

Synopsis	Enter the spf-wait context
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

`spf-initial-wait` *number*

Synopsis	Initial SPF calculation delay after topology change
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-max-wait *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-second-wait *number*

Synopsis	Hold time between first and second SPF calculations
Context	configure service vprn <i>service-name</i> isis <i>number</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-import

Synopsis	Enter the unicast-import context
Context	configure service vprn <i>service-name</i> isis <i>number</i> unicast-import
Tree	unicast-import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Submit IPv4 routes into unicast RTM
Context	configure service vprn <i>service-name</i> isis <i>number</i> unicast-import ipv4 <i>boolean</i>

Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Submit IPv6 routes into unicast RTM
Context	configure service vprn <i>service-name</i> isis <i>number</i> unicast-import ipv6 <i>boolean</i>
Tree	ipv6
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

label-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allocation mode for VPRN service labels
Context	configure service vprn <i>service-name</i> label-mode <i>keyword</i>
Tree	label-mode
Options	vrf, next-hop
Default	vrf
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-routes-domain-id *domain-id*

Synopsis	Local routes domain ID
Context	configure service vprn <i>service-name</i> local-routes-domain-id <i>domain-id</i>
Tree	local-routes-domain-id
Description	This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.

The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

String format 'domain-id' must be global-field:local-field (uint32:uint16 range)
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

log

Synopsis Enter the **log** context
 Context **configure** [service vprn](#) *service-name* **log**
 Tree [log](#)
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

filter [[filter-name](#)] *log-filter-name*

Synopsis Enter the **filter** list instance
 Context **configure** [service vprn](#) *service-name* **log filter** *log-filter-name*
 Tree [filter](#)
 Max. 1500
 instances
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[\[filter-name\]](#) *log-filter-name*

Synopsis Filter ID
 Context **configure** [service vprn](#) *service-name* **log filter** *log-filter-name*
 Tree [filter](#)
 String length 1 to 64
 String format 'log-filter-name' must be numeric 1..1500 or alphanumeric not starting with underscore and without trailing spaces

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-action *keyword*

Synopsis	Default action for the event filter
Context	configure service vpn <i>service-name</i> log filter <i>log-filter-name</i> default-action <i>keyword</i>
Tree	default-action
Options	drop, forward
Default	forward
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> log filter <i>log-filter-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

named-entry [[entry-name](#)] *log-filter-entry-name*

Synopsis	Enter the named-entry list instance
Context	configure service vpn <i>service-name</i> log filter <i>log-filter-name</i> named-entry <i>log-filter-entry-name</i>
Tree	named-entry
Description	Commands in this context create or edit an event filter entry.
Max. instances	999
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[entry-name] *log-filter-entry-name*

Synopsis Entry name

Context **configure** [service vprn](#) *service-name* **log filter** *log-filter-name* [named-entry](#) *log-filter-entry-name*

Tree [named-entry](#)

String length 1 to 64

String format 'log-filter-entry-name' must be numeric 1..999 or alphanumeric not starting with underscore and without trailing spaces

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

action *keyword*

Synopsis Action for this event filter entry

netconf

Synopsis	Enable the netconf context
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> destination netconf
Tree	netconf
Notes	The following elements are part of a choice: netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in the NETCONF log
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> destination netconf max-entries <i>number</i>
Tree	max-entries
Range	50 to 3000
Default	100

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp

Synopsis	Enable the snmp context
Context	configure service vprn <i>service-name</i> log log-id li-log-name destination snmp
Tree	snmp
Notes	The following elements are part of a choice: netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in the memory log
Context	configure service vprn <i>service-name</i> log log-id li-log-name destination snmp max-entries <i>number</i>
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

syslog *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Index with the information to format event messages sent to a specific SYSLOG collector
Context	configure service vprn <i>service-name</i> log log-id li-log-name destination syslog <i>reference</i>
Tree	syslog

Reference	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Notes	The following elements are part of a choice: netconf , snmp , or syslog .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

filter *reference*

Synopsis	Event filter policy with the log destination
Context	configure service vprn <i>service-name</i> log log-id li-log-name filter <i>reference</i>
Tree	filter
Reference	configure service vprn <i>service-name</i> log filter <i>log-filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf-stream *named-item*

Synopsis	Destination NETCONF stream name
Context	configure service vprn <i>service-name</i> log log-id li-log-name netconf-stream <i>named-item</i>
Tree	netconf-stream
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source

Synopsis	Enter the source context
Context	configure service vprn <i>service-name</i> log log-id li-log-name source
Tree	source
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

change *boolean*

Synopsis	Collect log events from the change event stream
----------	---

Context	configure service vprn <i>service-name</i> log log-id li-log-name source change <i>boolean</i>
Tree	change
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

debug *boolean*

Synopsis	Collect log events from the debug event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source debug <i>boolean</i>
Tree	debug
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

main *boolean*

Synopsis	Collect log events from the main event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source main <i>boolean</i>
Tree	main
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

security *boolean*

Synopsis	Collect log events from the security event stream
Context	configure service vprn <i>service-name</i> log log-id li-log-name source security <i>boolean</i>
Tree	security
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

time-format *keyword*

Synopsis	Time zone output for file log contents and syslog
Context	configure service vprn <i>service-name</i> log log-id <i>li-log-name</i> time-format <i>keyword</i>
Tree	time-format
Options	utc, local
Default	utc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp-trap-group [[log-name](#)] *svc-vprn-snmp-trap-group-name*

Synopsis	Enter the snmp-trap-group list instance
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i>
Tree	snmp-trap-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[log-name] *svc-vprn-snmp-trap-group-name*

Synopsis	Log ID
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i>
Tree	snmp-trap-group
String length	1 to 17
String format	'svc-vprn-snmp-trap-group-name' must be numeric 1..100 or alphanumeric not starting with underscore and without trailing spaces
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trap-target [*name*] *string*

Synopsis	Enter the trap-target list instance
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
Max. instances	25
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *string*

Synopsis	Trap target name
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i>
Tree	trap-target
String length	1 to 28
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the trap receiver
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

notify-community *string*

Synopsis	SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> notify-community <i>string</i>
Tree	notify-community
String length	1 to 31
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	UDP port number to send messages to this remote SNMP notification collector
Context	configure service vprn <i>service-name</i> log snmp-trap-group <i>svc-vprn-snmp-trap-group-name</i> trap-target <i>string</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	162
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

replay *boolean*

Synopsis Retransmit missed notifications

Context **configure** [service vprn](#) *service-name* [log snmp-trap-group](#) *svc-vprn-snmp-trap-group-name* [trap-target](#) *string* **replay** *boolean*

Tree [replay](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

security-level *keyword*

Synopsis Security level at which SNMP notification messages are sent to SNMP notification collector

Context **configure** [service vprn](#) *service-name* [log snmp-trap-group](#) *svc-vprn-snmp-trap-group-name* [trap-target](#) *string* **security-level** *keyword*

Tree [security-level](#)

Options no-auth-no-privacy, auth-no-privacy, privacy

Default no-auth-no-privacy

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

version *keyword*

Synopsis SNMP version to format notification messages sent to this SNMP notification collector

Context **configure** [service vprn](#) *service-name* [log snmp-trap-group](#) *svc-vprn-snmp-trap-group-name* [trap-target](#) *string* **version** *keyword*

Tree [version](#)

Options snmpv1, snmpv2c, snmpv3

Default snmpv3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

syslog [[syslog-name](#)] *log-vprn-syslog-name*

Synopsis	Enter the syslog list instance
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Tree	syslog
Max. instances	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[syslog-name] *log-vprn-syslog-name*

Synopsis	Syslog name
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i>
Tree	syslog
String length	1 to 64
String format	'log-vprn-syslog-name' must be numeric 1..30 or alphanumeric not starting with underscore and without trailing spaces
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Synopsis	IP address or FQDN of the Syslog target host
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>)
Tree	address
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure service vpn <i>service-name</i> log syslog <i>log-vpn-syslog-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

facility *keyword*

Synopsis	Facility code for messages
Context	configure service vpn <i>service-name</i> log syslog <i>log-vpn-syslog-name</i> facility <i>keyword</i>
Tree	facility
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hostname

Synopsis	Enter the hostname context
Context	configure service vpn <i>service-name</i> log syslog <i>log-vpn-syslog-name</i> hostname
Tree	hostname
Description	<p>Commands in this context control how the HOSTNAME field of syslog messages is populated.</p> <p>If no command option is configured, the HOSTNAME is populated with an IP address.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-system-name

Synopsis	Enable the use-system-name context
Context	configure service vpn <i>service-name</i> log syslog <i>log-vpn-syslog-name</i> hostname use-system-name
Tree	use-system-name

Description	Commands in this context configure the system to use the system name configured with the configure system name command as the HOSTNAME field of syslog messages. Do not use any spaces in the system name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-vprn-name

Synopsis	Enable the use-vprn-name context
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> hostname use-vprn-name
Tree	use-vprn-name
Description	Commands in this context configure the system to use the VPRN service name configured with the configure service vprn service-name command as the HOSTNAME field of syslog messages sent in this VPRN. Do not use any spaces in the VPRN name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *named-item-255*

Synopsis	Syslog HOSTNAME field value
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> hostname value named-item-255
Tree	value
Description	This command configures a string as the HOSTNAME field of syslog messages. Do not use any spaces in the string used for the syslog HOSTNAME.
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: use-system-name , use-vprn-name , or value .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-prefix (*keyword* | *string*)

Synopsis	Prefix string to log message sent to target syslog host
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> log-prefix (<i>keyword</i> <i>string</i>)
Tree	log-prefix
String length	1 to 32
String format	'log-prefix' must contain only printable characters between 33 and 126 ASCII except '.' and '='
Options	no-prefix
Default	TMNX
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	Destination port when sending syslog over UDP
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	514
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-version *keyword*

Synopsis	Version of the syslog protocol to use
Context	configure service vprn <i>service-name</i> log syslog <i>log-vprn-syslog-name</i> protocol-version <i>keyword</i>
Tree	protocol-version
Description	<p>This command configures the version of the syslog protocol to use for sending syslog messages to a collector.</p> <p>The timestamp-format command is ignored when this command is configured to rfc5424.</p>
Options	rfc3164, rfc5424
Default	rfc3164

Introduced 26.10.R1
 Platforms 7705 SAR Gen 2

severity *keyword*

Synopsis Severity level threshold for the syslog message
 Context **configure** [service vprn](#) *service-name* [log syslog](#) *log-vprn-syslog-name* [severity](#) *keyword*
 Tree [severity](#)
 Options emergency, alert, critical, error, warning, notice, info, debug
 Default info
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

timestamp-format *keyword*

Synopsis Syslog timestamp format
 Context **configure** [service vprn](#) *service-name* [log syslog](#) *log-vprn-syslog-name* [timestamp-format](#) *keyword*
 Tree [timestamp-format](#)
 Options millisecond – Set timestamp format to milliseconds
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

tls-client-profile *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis TLS client profile used to encrypt syslog communication
 Context **configure** [service vprn](#) *service-name* [log syslog](#) *log-vprn-syslog-name* [tls-client-profile](#) *reference*
 Tree [tls-client-profile](#)
 Description This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.
 Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.

When this command is unconfigured, the syslog messages are sent over UDP.

Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

management

Synopsis	Enable the management context
Context	configure service vprn <i>service-name</i> management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the VPRN router instance. For SNMP control, see the configure service vprn snmp access command.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	configure service vprn <i>service-name</i> management allow-ftp <i>boolean</i>
Tree	allow-ftp
Description	When configured to true , this command allows FTP access to the SR OS router via the VPRN router instance. When configured to false , this command disallows access to the SR OS FTP server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	configure service vprn <i>service-name</i> management allow-grpc <i>boolean</i>
Tree	allow-grpc
Description	When configured to true , this command allows access to the gRPC server via the VPRN router instance. When configured to false , this command disallows gRPC server access.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
Context	configure service vprn <i>service-name</i> management allow-netconf <i>boolean</i>
Tree	allow-netconf
Description	When configured to true , this command allows NETCONF server access to the SR OS router via the VPRN router instance. When configured to false , this command disallows access to the NETCONF server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	configure service vprn <i>service-name</i> management allow-ssh <i>boolean</i>
Tree	allow-ssh
Description	When configured to true , this command allows SSH server access to the SR OS router via the VPRN router instance. When configured to false , this command disallows SSH server access.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	configure service vprn <i>service-name</i> management allow-telnet <i>boolean</i>
Tree	allow-telnet
Description	When configured to true , this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance.

	When configured to false , this command disallows access to the IPv4 Telnet server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	configure service vprn <i>service-name</i> management allow-telnet6 <i>boolean</i>
Tree	allow-telnet6
Description	When configured to true , this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance. When configured to false , this command removes access to the IPv6 Telnet server.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-ipv4-routes

Synopsis	Enter the maximum-ipv4-routes context
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes
Tree	maximum-ipv4-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	configure service vprn <i>service-name</i> maximum-ipv4-routes value <i>number</i>
Tree	value
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-ipv6-routes

Synopsis	Enter the maximum-ipv6-routes context
Context	configure service vprn <i>service-name</i> maximum-ipv6-routes
Tree	maximum-ipv6-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	configure service vprn <i>service-name</i> maximum-ipv6-routes log-only <i>boolean</i>
Tree	log-only

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	configure service vprn <i>service-name</i> maximum-ipv6-routes threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	configure service vprn <i>service-name</i> maximum-ipv6-routes value <i>number</i>
Tree	value
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mc-maximum-routes

Synopsis	Enter the mc-maximum-routes context
Context	configure service vprn <i>service-name</i> mc-maximum-routes
Tree	mc-maximum-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Log and allow learning of new multicast routes
Context	configure service vprn <i>service-name</i> mc-maximum-routes log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	Maximum multicast routes which the VRF holds
Context	configure service vprn <i>service-name</i> mc-maximum-routes threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

value *number*

Synopsis	Maximum multicast routes configured on virtual router
Context	configure service vprn <i>service-name</i> mc-maximum-routes value <i>number</i>
Tree	value
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mld

Synopsis	Enable the mld context
Context	configure service vprn <i>service-name</i> mld
Tree	mld
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of MLD
Context	configure service vpn <i>service-name</i> mld admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-if-query-source-address *ipv6-unicast-or-linklocal-address*

Synopsis	Source address in queries for group interfaces when not configured at group interface level
Context	configure service vpn <i>service-name</i> mld group-if-query-source-address <i>ipv6-unicast-or-linklocal-address</i>
Tree	group-if-query-source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[ip-interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the MLD interface
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy to filter MLD packets
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

maximum-number-groups *number*

Synopsis Maximum number of groups for this interface

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [maximum-number-groups](#) *number*

Tree [maximum-number-groups](#)

Range 1 to 16000

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

maximum-number-sources *number*

Synopsis Maximum number of sources that are allowed per group

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [maximum-number-sources](#) *number*

Tree [maximum-number-sources](#)

Range 1 to 1000

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-interval *number*

Synopsis Time between two consecutive host-query messages

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [query-interval](#) *number*

Tree [query-interval](#)

Range 2 to 1024

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

query-last-member-interval *number*

Synopsis Time between group-specific query messages

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [query-last-member-interval](#) *number*

Tree	query-last-member-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [start](#) *ipv6-multicast-address* [end](#) *ipv6-multicast-address*

Synopsis	Enter the group-range list instance
----------	--

Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *ipv6-multicast-address*

Synopsis	Lower bound of the group range
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv6-multicast-address*

Synopsis	Upper bound of the group range
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [*source-address*] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] ipv6-unicast-address

Synopsis	Source IP address
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [group-address] ipv6-multicast-address

Synopsis	Enter the group list instance
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i>
Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-address] ipv6-multicast-address

Synopsis	Group address of multicast channel
Context	configure service vpn <i>service-name</i> mld interface <i>interface-name</i> static group <i>ipv6-multicast-address</i>
Tree	group
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

source [\[source-address\]](#) *ipv6-unicast-address*

Synopsis Add a list entry for **source**

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [static group](#) *ipv6-multicast-address* [source](#) *ipv6-unicast-address*

Tree [source](#)

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[source-address] *ipv6-unicast-address*

Synopsis Source IP address

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [static group](#) *ipv6-multicast-address* [source](#) *ipv6-unicast-address*

Tree [source](#)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

starg

Synopsis any source address (*,G)

Context **configure** [service vprn](#) *service-name* [mld interface](#) *interface-name* [static group](#) *ipv6-multicast-address* [starg](#)

Tree [starg](#)

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

group-range [start](#) *ipv6-multicast-address* [end](#) *ipv6-multicast-address* [step](#) *ipv6-address*

Synopsis Enter the **group-range** list instance

Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *ipv6-multicast-address*

Synopsis	Lower bound of the static multicast group
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv6-multicast-address*

Synopsis	Upper bound of the static multicast group
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

step *ipv6-address*

Synopsis	Step interval for the group-range addresses
Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> static group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> step <i>ipv6-address</i>
Tree	group-range
MD-CLI default	::1
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

source [source-address] *ipv6-unicast-address*

Synopsis Add a list entry for **source**

Context **configure** *service vprn* *service-name* *mld interface interface-name* *static group-range* *start ipv6-multicast-address* *end ipv6-multicast-address* *step ipv6-address* **source** *ipv6-unicast-address*

Tree **source**

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[source-address] *ipv6-unicast-address*

Synopsis Source IP address

Context **configure** *service vprn* *service-name* *mld interface interface-name* *static group-range* *start ipv6-multicast-address* *end ipv6-multicast-address* *step ipv6-address* **source** *ipv6-unicast-address*

Tree **source**

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

starg

Synopsis any source address (*,G)

Context **configure** *service vprn* *service-name* *mld interface interface-name* *static group-range* *start ipv6-multicast-address* *end ipv6-multicast-address* *step ipv6-address* **starg**

Tree **starg**

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

version *keyword*

Synopsis MLD protocol version

Context	configure service vprn <i>service-name</i> mld interface <i>interface-name</i> version <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vprn <i>service-name</i> mld query-interval <i>number</i>
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vprn <i>service-name</i> mld query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 1023
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vprn <i>service-name</i> mld query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023

Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vprn <i>service-name</i> mld robust-count <i>number</i>
Tree	robust-count
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-translate

Synopsis	Enter the ssm-translate context
Context	configure service vprn <i>service-name</i> mld ssm-translate
Tree	ssm-translate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [start](#) *ipv6-multicast-address* [end](#) *ipv6-multicast-address*

Synopsis	Enter the group-range list instance
Context	configure service vprn <i>service-name</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *ipv6-multicast-address*

Synopsis	Lower bound of the group range
----------	--------------------------------

Context	configure service vprn <i>service-name</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *ipv6-multicast-address*

Synopsis	Upper bound of the group range
Context	configure service vprn <i>service-name</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source [[source-address](#)] *ipv6-unicast-address*

Synopsis	Add a list entry for source
Context	configure service vprn <i>service-name</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[source-address] *ipv6-unicast-address*

Synopsis	Source IP address
Context	configure service vprn <i>service-name</i> mld ssm-translate group-range start <i>ipv6-multicast-address</i> end <i>ipv6-multicast-address</i> source <i>ipv6-unicast-address</i>
Tree	source
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

mss-adjust

Synopsis Enable the **mss-adjust** context

Context **configure** [service vprn](#) *service-name* **mss-adjust**

Tree [mss-adjust](#)

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-group *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis NAT group used for TCP-MSS adjustment

Context **configure** [service vprn](#) *service-name* **mss-adjust** [nat-group](#) *number*

Tree [nat-group](#)

Max. range 0 to 4294967295

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

segment-size *number*

Synopsis TCP-MSS option value in transmitted TCP SYN requests

Context **configure** [service vprn](#) *service-name* **mss-adjust** [segment-size](#) *number*

Tree [segment-size](#)

Range 160 to 10240

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mvpn

Synopsis	Enter the mvpn context
Context	configure service vprn <i>service-name</i> mvpn
Tree	mvpn
Description	Commands in this context configure MVPN-related command options for IP VPN.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-discovery

Synopsis	Enter the auto-discovery context
Context	configure service vprn <i>service-name</i> mvpn auto-discovery
Tree	auto-discovery
Description	Commands in this context enable MVPN membership auto-discovery through BGP. When auto-discovery is enabled, PIM peering on the inclusive provider tunnel is disabled. The VPRN instance must be administratively disabled to change the auto-discovery configuration.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address *ipv4-address*

 **WARNING:**
This element is deprecated and will be removed in a future release.

Synopsis	IPv4 source address
Context	configure service vprn <i>service-name</i> mvpn auto-discovery source-address <i>ipv4-address</i>
Tree	source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Default	0.0.0.0
Introduced	25.3.R2
Deprecated	26.10.R1
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Status of multicast VPN membership auto-discovery
Context	configure service vpn <i>service-name</i> mvpn auto-discovery type <i>keyword</i>
Tree	type
Options	bgp, mdt-safi
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

c-mcast-signaling keyword

Synopsis	Protocol for PE-to-PE signaling of CE multicast states
Context	configure service vpn <i>service-name</i> mvpn c-mcast-signaling <i>keyword</i>
Tree	c-mcast-signaling
Options	bgp, pim
Default	pim
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

intersite-shared

Synopsis	Enter the intersite-shared context
Context	configure service vpn <i>service-name</i> mvpn intersite-shared
Tree	intersite-shared
Description	Commands in this context configure whether to use inter-site shared C-trees. Optional parameters allow enabling additional intersite shared functionality. Not specifying an optional parameter when executing the command disables that parameter.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state keyword

Synopsis	Administrative state of inter-site shared C-trees use
Context	configure service vpn <i>service-name</i> mvpn intersite-shared admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

kat-type5-advertisement-withdraw *boolean*

Synopsis	Enable KATs on source PEs for ng-MVPN deployments
Context	configure service vpn <i>service-name</i> mvpn intersite-shared kat-type5-advertisement-withdraw <i>boolean</i>
Tree	kat-type5-advertisement-withdraw
Description	When configured to true , this command specifies that the MVPN Type-5 “Source Active AD routes” are not removed even if all receivers are removed from the tree.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

persistent-type5-advertisement *boolean*

Synopsis	Ensure Type-5 S-A routes are generated for MCAST source
Context	configure service vpn <i>service-name</i> mvpn intersite-shared persistent-type5-advertisement <i>boolean</i>
Tree	persistent-type5-advertisement
Description	When configured to true , this command removes the MVPN Type-5 “Source Active AD routes” even if receivers are present but the keepalive timer (KAT) has timed out because of no traffic.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mdt-type *keyword*

Synopsis	MVPN instance type per PE node
Context	configure service vpn <i>service-name</i> mvpn mdt-type <i>keyword</i>
Tree	mdt-type
Options	sender-only, receiver-only, sender-receiver

Default	sender-receiver
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

provider-tunnel

Synopsis	Enter the provider-tunnel context
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel
Tree	provider-tunnel
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inclusive

Synopsis	Enter the inclusive context
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel inclusive
Tree	inclusive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bsr keyword

Synopsis	BSR signaling type
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel inclusive bsr <i>keyword</i>
Tree	bsr
Options	unicast, spmsi
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pim

Synopsis	Enable the pim context
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel inclusive pim
Tree	pim
Notes	The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp .

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM use for provider tunnels
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel inclusive pim admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-address *ipv4-multicast-address*

Synopsis	Multicast group address
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel inclusive pim group-address ipv4-multicast-address
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Frequency at which PIM Hello messages are transmitted
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel inclusive pim hello-interval number
Tree	hello-interval
Range	0 to 255
Default	30
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

hello-multiplier *number*

Synopsis Multiplier to determine the holdtime for a PIM neighbor

Context **configure** [service vprn](#) *service-name* [mvpn provider-tunnel inclusive pim](#) [hello-multiplier number](#)

Tree [hello-multiplier](#)

Range 20 to 100

Default 35

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

improved-assert *boolean*

Synopsis Enable the improved assert procedure

Context **configure** [service vprn](#) *service-name* [mvpn provider-tunnel inclusive pim](#) [improved-assert boolean](#)

Tree [improved-assert](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mode *keyword*

Synopsis PIM mode for the inclusive provider tunnel

Context **configure** [service vprn](#) *service-name* [mvpn provider-tunnel inclusive pim](#) [mode keyword](#)

Tree [mode](#)

Options asm, ssm

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

three-way-hello *boolean*

Synopsis Enable PIM three-way hello

Context	configure service vprn <i>service-name mvpn provider-tunnel inclusive pim three-way-hello</i> <i>boolean</i>
Tree	three-way-hello
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tracking-support *boolean*

Synopsis	Enable the T bit in the LAN Prune Delay option
Context	configure service vprn <i>service-name mvpn provider-tunnel inclusive pim tracking-support</i> <i>boolean</i>
Tree	tracking-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suppress-ipmsi *boolean*

Synopsis	Suppress advertisement of I-PMSI
Context	configure service vprn <i>service-name mvpn provider-tunnel inclusive suppress-ipmsi</i> <i>boolean</i>
Tree	suppress-ipmsi
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

wildcard-spmsi *boolean*

Synopsis	Enable RFC 6625 S-PMSI functionality for NG-MVPN
Context	configure service vprn <i>service-name mvpn provider-tunnel inclusive wildcard-spmsi</i> <i>boolean</i>
Tree	wildcard-spmsi
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

selective

Synopsis	Enter the selective context
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel selective
Tree	selective
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asm-mdt *boolean*

Synopsis	Enable Data MDT with PIM-ASM mode on receiver PE node
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel selective asm-mdt <i>boolean</i>
Tree	asm-mdt
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-discovery *boolean*

Synopsis	Enable C-trees to P-tunnel binding auto-discovery
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel selective auto-discovery <i>boolean</i>
Tree	auto-discovery
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

data-delay-interval *number*

Synopsis	Interval a PE switches from inclusive to selective
Context	configure service vprn <i>service-name</i> mvpn provider-tunnel selective data-delay-interval <i>number</i>
Tree	data-delay-interval
Range	3 to 180
Default	3

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

data-threshold

Synopsis	Enter the data-threshold context
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold
Tree	data-threshold
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the group-prefix list instance
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IPv4 or IPv6 multicast group address and prefix
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pe-threshold-add *number*

Synopsis	PE add threshold
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-add <i>number</i>
Tree	pe-threshold-add

Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pe-threshold-delete *number*

Synopsis	PE delete threshold
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-delete <i>number</i>
Tree	pe-threshold-delete
Range	2 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold *number*

Synopsis	S-PMSI threshold
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) threshold <i>number</i>
Tree	threshold
Range	0 to 4294967294
Units	kilobps
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

join-tlv-packing *boolean*

Synopsis	Enable packing of MDT join TLVs into a single PDU
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective join-tlv-packing <i>boolean</i>
Tree	join-tlv-packing
Default	true

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multistream-spmsi [[multistream-id](#)] *number*

Synopsis	Enter the multistream-spmsi list instance
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
Tree	multistream-spmsi
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[multistream-id] *number*

Synopsis	Multistream spmsi id
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
Tree	multistream-spmsi
Range	1 to 1024
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of multi-stream S-PMSI
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [source-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for group-prefix
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IPv4 or IPv6 multicast group address and prefix
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IPv4 or IPv6 unicast source address and prefix
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-template *reference*

Synopsis	RSVP-TE LSP template for S-PMSI
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> lsp-template <i>reference</i>
Tree	lsp-template

Reference	configure router <i>named-item-64</i> mpls lsp-template <i>named-item</i>
Notes	The following elements are part of a choice: lsp-template , p2mp-sr , or pim .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pim

Synopsis	Enable the pim context
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim
Tree	pim
Notes	The following elements are part of a choice: lsp-template , p2mp-sr , or pim .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-address *ipv4-multicast-address*

Synopsis	Group address of the data MDT
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim group-address <i>ipv4-multicast-address</i>
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	PIM mode for the selective provider tunnel
Context	configure service vpn <i>service-name</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim mode <i>keyword</i>
Tree	mode
Options	asm, ssm
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

pim

Synopsis Enable the **pim** context

Context **configure** [service vpn](#) *service-name* [mvpn](#) [provider-tunnel](#) [selective](#) [pim](#)

Tree [pim](#)

Notes The following elements are part of a choice: **bier**, **mldp**, **p2mp-sr**, **pim**, or **rsvp**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

group-prefix *ipv4-multicast-prefix*

Synopsis Multicast group address and netmask length

Context **configure** [service vpn](#) *service-name* [mvpn](#) [provider-tunnel](#) [selective](#) [pim](#) [group-prefix](#) *ipv4-multicast-prefix*

Tree [group-prefix](#)

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mode *keyword*

Synopsis PIM mode

Context **configure** [service vpn](#) *service-name* [mvpn](#) [provider-tunnel](#) [selective](#) [pim](#) [mode](#) *keyword*

Tree [mode](#)

Options asm, ssm

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

redundant-source-list

Synopsis Enter the **redundant-source-list** context

Context **configure** [service vpn](#) *service-name* [mvpn](#) [redundant-source-list](#)

Tree	redundant-source-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for source-prefix
Context	configure service vprn <i>service-name</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	source-prefix
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Unicast address prefix and mask
Context	configure service vprn <i>service-name</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	source-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rpf-select

Synopsis	Enter the rpf-select context
Context	configure service vprn <i>service-name</i> mvpn rpf-select
Tree	rpf-select
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

core-mvpn [[core-mvpn-service-name](#)] *reference*

Synopsis	Enter the core-mvpn list instance
----------	--

Context	configure service vpn <i>service-name</i> mvpn rpf-select core-mvpn <i>reference</i>
Tree	core-mvpn
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[core-mvpn-service-name] reference

Synopsis	Core MVPN service name
Context	configure service vpn <i>service-name</i> mvpn rpf-select core-mvpn <i>reference</i>
Tree	core-mvpn
Reference	configure service vpn <i>service-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-prefix [\[ip-group-prefix\]](#) *ipv4-multicast-prefix*

Synopsis	Enter the group-prefix list instance
Context	configure service vpn <i>service-name</i> mvpn rpf-select core-mvpn <i>reference</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-group-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 multicast address prefix and mask
Context	configure service vpn <i>service-name</i> mvpn rpf-select core-mvpn <i>reference</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

starg *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Starg flag
Context	configure service vprn <i>service-name</i> mvpn rpf-select core-mvpn reference group-prefix ipv4-multicast-prefix starg <i>boolean</i>
Tree	starg
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

umh-pe-backup

Synopsis	Enter the umh-pe-backup context
Context	configure service vprn <i>service-name</i> mvpn umh-pe-backup
Tree	umh-pe-backup
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

umh-pe [[ip-address](#)] *ipv4-unicast-address*

Synopsis	Enter the umh-pe list instance
Context	configure service vprn <i>service-name</i> mvpn umh-pe-backup umh-pe <i>ipv4-unicast-address</i>
Tree	umh-pe
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] *ipv4-unicast-address*

Synopsis	IP address for the standby PE
Context	configure service vprn <i>service-name</i> mvpn umh-pe-backup umh-pe <i>ipv4-unicast-address</i>
Tree	umh-pe

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby *ipv4-unicast-address*

Synopsis	IP address
Context	configure service vprn <i>service-name</i> mvpn umh-pe-backup umh-pe <i>ipv4-unicast-address</i> standby <i>ipv4-unicast-address</i>
Tree	standby
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

umh-selection *keyword*

Synopsis	UMH selection mechanism
Context	configure service vprn <i>service-name</i> mvpn umh-selection <i>keyword</i>
Tree	umh-selection
Options	highest-ip, hash-based, tunnel-status, unicast-rt-pref
Default	highest-ip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-export

Synopsis	Enter the vrf-export context
Context	configure service vprn <i>service-name</i> mvpn vrf-export
Tree	vrf-export
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	configure service vprn <i>service-name</i> mvpn vrf-export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	This command specifies the route policy name. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes.
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	The following elements are part of a choice: policy or unicast . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast *boolean*

Synopsis	Enable the unicast VRF export policy for the MVPN
Context	configure service vprn <i>service-name</i> mvpn vrf-export unicast <i>boolean</i>
Tree	unicast
Default	false
Notes	The following elements are part of a choice: policy or unicast .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-import

Synopsis	Enter the vrf-import context
Context	configure service vprn <i>service-name</i> mvpn vrf-import
Tree	vrf-import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>mvpn</i> <i>vrf-import</i> policy (<i>policy-expr-string</i> <i>string</i>)
Tree	<i>policy</i>
Description	This command specifies the route policy name. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes.
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	The following elements are part of a choice: policy or unicast . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast *boolean*

Synopsis	Enable the unicast VRF import policy for the MVPN
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>mvpn</i> <i>vrf-import</i> unicast <i>boolean</i>
Tree	<i>unicast</i>
Default	false
Notes	The following elements are part of a choice: policy or unicast .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vrf-target

Synopsis	Enter the vrf-target context
Context	configure <i>service</i> <i>vprn</i> <i>service-name</i> <i>mvpn</i> vrf-target
Tree	<i>vrf-target</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *route-target*

Synopsis	Extended community name for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target community <i>route-target</i>
Tree	community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export

Synopsis	Enter the export context
Context	configure service vpn <i>service-name</i> mvpn vrf-target export
Tree	export
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *route-target*

Synopsis	Extended community name for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target export community <i>route-target</i>
Tree	community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast *boolean*

Synopsis	Enable the unicast vrf-target for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target export unicast <i>boolean</i>
Tree	unicast
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import

Synopsis	Enter the import context
Context	configure service vpn <i>service-name</i> mvpn vrf-target import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *route-target*

Synopsis	Extended community name for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target import community <i>route-target</i>
Tree	community
String length	10 to 28
String format	'route-target-32' must be target:(IPv4:comm AS pairs IEEE MAC) per ext-community rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast *boolean*

Synopsis	Enable the unicast vrf-target for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target import unicast <i>boolean</i>
Tree	unicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast *boolean*

Synopsis	Enable unicast vrf-target for the MVPN
Context	configure service vpn <i>service-name</i> mvpn vrf-target unicast <i>boolean</i>

Tree	unicast
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nat

Synopsis	Enable the nat context
Context	configure service vprn <i>service-name</i> nat
Tree	nat
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

inside

Synopsis	Enter the inside context
Context	configure service vprn <i>service-name</i> nat inside
Tree	inside
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

large-scale

Synopsis	Enter the large-scale context
Context	configure service vprn <i>service-name</i> nat inside large-scale
Tree	large-scale
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-policy *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name for LSN
Context	configure service vprn <i>service-name</i> nat inside large-scale nat-policy <i>reference</i>

Tree	nat-policy
Reference	configure service nat nat-policy <i>external-named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat44

Synopsis	Enter the nat44 context
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44
Tree	nat44
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

destination-prefix [[ip-prefix-length](#)] *ipv4-unicast-prefix*

Synopsis	Enter the destination-prefix list instance
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 destination-prefix <i>ipv4-unicast-prefix</i>
Tree	destination-prefix
Max. instances	6144
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[\[ip-prefix-length\]](#) *ipv4-unicast-prefix*

Synopsis	IP prefix for the destination address
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 destination-prefix <i>ipv4-unicast-prefix</i>
Tree	destination-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-policy reference

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 destination-prefix ipv4-unicast-prefix nat-policy reference
Tree	nat-policy
Reference	configure service nat nat-policy <i>external-named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

deterministic

Synopsis	Enter the deterministic context
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic
Tree	deterministic
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address-map [\[from\] ipv4-address to ipv4-address nat-policy reference](#)

Synopsis	Enter the address-map list instance
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic address-map ipv4-address to ipv4-address nat-policy reference
Tree	address-map
Description	<p>Commands in this context map inside IPv4 addresses of deterministic NAT44 subscribers to the outside IPv4 addresses in a NAT pool.</p> <p>This context is only applicable to deterministic NAT44 with a single ESA-VM in a NAT-group. The number of subscribers per outside IPv4 address is flexible and not restricted to a discrete range governed by the 2^n rule.</p>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[from] ipv4-address

Synopsis	First IP address of inside IP NAT range
Context	configure service vpn <i>service-name</i> nat inside large-scale nat44 deterministic address-map <i>ipv4-address</i> to ipv4-address nat-policy <i>reference</i>
Tree	address-map
Description	This command specifies the starting IPv4 address, IPv6 address, or IPv6 prefix on the inside IP address range.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

to ipv4-address

Synopsis	Ending IP address of inside IP NAT range
Context	configure service vpn <i>service-name</i> nat inside large-scale nat44 deterministic address-map <i>ipv4-address</i> to ipv4-address nat-policy <i>reference</i>
Tree	address-map
Description	This command specifies the ending IPv4 address, IPv6 address, or IPv6 prefix on the inside IP address range.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-policy reference

Synopsis	NAT policy name for LSN
Context	configure service vpn <i>service-name</i> nat inside large-scale nat44 deterministic address-map <i>ipv4-address</i> to ipv4-address nat-policy <i>reference</i>
Tree	address-map
Reference	configure service nat nat-policy <i>external-named-item</i>
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of address map
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic address-map <i>ipv4-address</i> to <i>ipv4-address</i> nat-policy <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

outside-range *ipv4-address*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	First outside IP address in NAT pool
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic address-map <i>ipv4-address</i> to <i>ipv4-address</i> nat-policy <i>reference</i> outside-range <i>ipv4-address</i>
Tree	outside-range
Description	This command specifies the first outside IP address in the NAT pool. The last outside IP address is determined by the number of subscribers mapped to an outside IP address via the configure router nat outside pool large-scale subscriber-limit and configure service vprn nat outside pool large-scale subscriber-limit commands.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

prefix-map [[source-prefix](#)] *ipv4-unicast-prefix* [nat-policy](#) *reference*

Synopsis	Enter the prefix-map list instance
----------	---

Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic prefix-map <i>ipv4-unicast-prefix nat-policy reference</i>
Tree	prefix-map
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[source-prefix] *ipv4-unicast-prefix*

Synopsis	Traffic sent from sources within this prefix will be NATed
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic prefix-map <i>ipv4-unicast-prefix nat-policy reference</i>
Tree	prefix-map
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-policy *reference*

Synopsis	NAT policy
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic prefix-map <i>ipv4-unicast-prefix nat-policy reference</i>
Tree	prefix-map
Reference	configure service nat nat-policy <i>external-named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state *keyword*

Synopsis	Administrative state of the prefix
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic prefix-map <i>ipv4-unicast-prefix nat-policy reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

map [**from**] *ipv4-address* **to** *ipv4-address*

Synopsis Enter the **map** list instance

Context **configure service vpn service-name nat inside large-scale nat44 deterministic prefix-map ipv4-unicast-prefix nat-policy reference map ipv4-address to ipv4-address**

Tree **map**

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[from] *ipv4-address*

Synopsis First IP address of inside IP NAT range

Context **configure service vpn service-name nat inside large-scale nat44 deterministic prefix-map ipv4-unicast-prefix nat-policy reference map ipv4-address to ipv4-address**

Tree **map**

Description This command specifies the starting IPv4 address, IPv6 address, or IPv6 prefix on the inside IP address range.

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

to *ipv4-address*

Synopsis Ending IP address of inside IP NAT range

Context **configure service vpn service-name nat inside large-scale nat44 deterministic prefix-map ipv4-unicast-prefix nat-policy reference map ipv4-address to ipv4-address**

Tree **map**

Description This command specifies the ending IPv4 address, IPv6 address, or IPv6 prefix on the inside IP address range.

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

first-outside-address *ipv4-address*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outside IP address mapped to inside IP address range
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 deterministic prefix-map <i>ipv4-unicast-prefix</i> nat-policy <i>reference</i> map <i>ipv4-address</i> to <i>ipv4-address</i> first-outside-address <i>ipv4-address</i>
Tree	first-outside-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

max-subscriber-limit *number*

**WARNING:**
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Ingress hashing for load distribution across ESA-VMs
Context	configure service vprn <i>service-name</i> nat inside large-scale nat44 max-subscriber-limit <i>number</i>
Tree	max-subscriber-limit
Description	This command configures the maximum number of classic LSN subscribers within a consecutive range of IP addresses that are processed by the same ESA-VM. It directly defines the granularity of upstream traffic distribution across ESA-VMs within the scope of an inside routing context. The ingress hashing mechanism used for traffic distribution is based on source IPv4 addresses or prefixes.
Range	1 2 4 8 16 32 64 128 256 512 1024 2048 4096 8192 16384 32768 65536
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

outside

Synopsis	Enter the outside context
Context	configure service vpn <i>service-name</i> nat outside
Tree	outside
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

filters

Synopsis	Enter the filters context
Context	configure service vpn <i>service-name</i> nat outside filters
Tree	filters
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

downstream

Synopsis	Enter the downstream context
Context	configure service vpn <i>service-name</i> nat outside filters downstream
Tree	downstream
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 reference

Synopsis	IPv4 filter policy name
Context	configure service vpn <i>service-name</i> nat outside filters downstream ipv4 <i>reference</i>
Tree	ipv4
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

upstream

Synopsis	Enter the upstream context
Context	configure service vprn <i>service-name</i> nat outside filters upstream
Tree	upstream
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ipv4 reference

Synopsis	IPv4 filter policy name
Context	configure service vprn <i>service-name</i> nat outside filters upstream ipv4 reference
Tree	ipv4
Reference	configure filter ip-filter <i>filter-name</i>
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mtu number

Synopsis	MTU for downstream traffic
Context	configure service vprn <i>service-name</i> nat outside mtu number
Tree	mtu
Range	512 to 9000
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

pool [[name](#)] *named-item*

Synopsis	Enter the pool list instance
Context	configure service vprn <i>service-name</i> nat outside pool named-item
Tree	pool
Max. instances	4096
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[name] *named-item*

Synopsis	NAT pool name
Context	configure <i>service vprn</i> <i>service-name</i> nat outside pool <i>named-item</i>
Tree	<i>pool</i>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

address-range [**start**] *ipv4-unicast-address* **end** *ipv4-unicast-address*

Synopsis	Enter the address-range list instance
Context	configure <i>service vprn</i> <i>service-name</i> nat outside pool <i>named-item</i> address-range <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	<i>address-range</i>
Max. instances	4096
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[start] *ipv4-unicast-address*

Synopsis	Lower bound of the NAT address range
Context	configure <i>service vprn</i> <i>service-name</i> nat outside pool <i>named-item</i> address-range <i>ipv4-unicast-address</i> end <i>ipv4-unicast-address</i>
Tree	<i>address-range</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

end ipv4-unicast-address

Synopsis	Upper bound of the NAT address range
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> address-range ipv4-unicast-address end ipv4-unicast-address
Tree	address-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description description

Synopsis	Text description

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

drain boolean

Synopsis	Start or stop draining this NAT address range
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> address-range ipv4-unicast-address end ipv4-unicast-address drain <i>boolean</i>
Tree	drain
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

admin-state keyword

Synopsis	Administrative state of the outside routing NAT pool
----------	--

Context	configure service vpn <i>service-name nat outside pool named-item admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

applications

Synopsis	Enter the applications context
Context	configure service vpn <i>service-name nat outside pool named-item applications</i>
Tree	applications
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

agnostic *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool to create in the outside routing context
Context	configure service vpn <i>service-name nat outside pool named-item applications agnostic boolean</i>
Tree	agnostic
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

use-interface-ip *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use an IPv4 interface for NAT
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> applications use-interface-ip <i>boolean</i>
Tree	use-interface-ip
Description	When configured to true , the router uses the IPv4 address of a NAT enabled local interface as the public IP address, within the same outside (public) routing context. Only one such NAT'd interface can be defined per outside routing context.
Default	false
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

description *description*

Synopsis	Text description
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> icmp-echo-reply <i>boolean</i>
Tree	icmp-echo-reply
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use. In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it. In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.

	In LSN, the reply from an outside IP address is generated regardless if a binding is present.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

large-scale

Synopsis	Enter the large-scale context
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> large-scale
Tree	large-scale
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

subscriber-limit *number*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of subscribers per IP address
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> large-scale subscriber-limit <i>number</i>
Tree	subscriber-limit
Range	1 to 65535 4294967295
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

use-interface-ip

Synopsis	Enter the use-interface-ip context
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> large-scale use-interface-ip
Tree	use-interface-ip
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

cpm-reserved-ports *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per protocol reserved for CPM traffic
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> large-scale use-interface-ip cpm-reserved-ports <i>number</i>
Tree	cpm-reserved-ports
Description	This command configures the router to reserve ports specifically for local (CPM) traffic. On the public IPv4 address of a NAT interface, the ports are shared between CPM traffic and transit traffic passing through the node. This reservation ensures that NAT traffic destined for the local node (CPM traffic) is guaranteed a minimum number of available ports, even if the public IPv4 port pool becomes exhausted.
Range	0 to 65535
Default	10
Introduced	25.7.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

use-well-known-ports *boolean*

Synopsis	Enable dynamic allocation of well-known ports
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> large-scale use-interface-ip use-well-known-ports <i>boolean</i>
Tree	use-well-known-ports
Description	<p>When configured to true, the router configures the dynamic allocation of well-known ports for interface-based NAT.</p> <p>When configured to false, well-known ports are not dynamically allocated for either transit traffic or traffic initiated from the control plane.</p> <p>This command can only be configured when the configure service vprn nat outside pool application use-interface-ip is set to true.</p> <p>Ports within the well-known range (0-1023) can still be allocated statically using static port forwarding.</p>
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Mode of operation of this NAT address pool
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> mode <i>keyword</i>
Tree	mode
Options	auto, napt, one-to-one
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

nat-group *reference***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a NAT group
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> nat-group <i>reference</i>
Tree	nat-group
Reference	configure isa nat-group <i>number</i>
Notes	The following elements are part of a mandatory choice: nat-group or wlan-gw-group .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-forwarding

Synopsis	Enter the port-forwarding context
Context	configure service vpn <i>service-name</i> nat outside pool <i>named-item</i> port-forwarding

Tree	port-forwarding
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

dynamic-block-reservation *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	configure service vprn service-name nat outside pool named-item port-forwarding dynamic-block-reservation <i>boolean</i>
Tree	dynamic-block-reservation
Description	<p>When configured to true, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> <p>When configured to false, dynamic port blocks are not reserved when the first port forward for the subscriber is created.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

range-end *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
----------	---

Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> port-forwarding range-end <i>number</i>
Tree	range-end
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0 1023 to 65535
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-reservation

Synopsis	Enter the port-reservation context
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> port-reservation
Tree	port-reservation
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-blocks *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> port-reservation port-blocks <i>number</i>
Tree	port-blocks
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.

For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the **l2-aware port-block-extension** hierarchy in the NAT pool.

Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ports *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	configure service vprn <i>service-name</i> nat outside pool <i>named-item</i> port-reservation ports <i>number</i>
Tree	ports
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2 aware subscriber must be explicitly enabled under the l2-aware port-block-extension hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p> <p>For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

type *keyword*

- **WARNING:**

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier

Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive number

Synopsis	Receive interval
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd receive number
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmit-interval number

Synopsis	Transmit interval
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 bfd transmit-interval number
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp

Synopsis	Enter the icmp context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp

Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

param-problem

Synopsis	Enter the param-problem context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redirects

Synopsis	Enter the redirects context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
----------	---

Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp ttl-expired seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unreachables

Synopsis	Enter the unreachables context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables number <i>number</i>

Tree	number
Range	10 to 2000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 icmp unreachables seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-timer *number*

Synopsis	ARP retry interval
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 neighbor-discovery retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 300
Units	deciseconds
Default	50

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

static-neighbor [*ipv4-address*] *ipv4-address*

Synopsis Enter the **static-neighbor** list instance
Context **configure** *service vprn* *service-name* *network-interface* *interface-name* *ipv4 neighbor-discovery static-neighbor* *ipv4-address*
Tree *static-neighbor*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[ipv4-address] *ipv4-address*

Synopsis IPv4 address that corresponds to the physical address
Context **configure** *service vprn* *service-name* *network-interface* *interface-name* *ipv4 neighbor-discovery static-neighbor* *ipv4-address*
Tree *static-neighbor*
String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mac-address *mac-address*

Synopsis MAC address for the static neighbor
Context **configure** *service vprn* *service-name* *network-interface* *interface-name* *ipv4 neighbor-discovery static-neighbor* *ipv4-address* *mac-address* *mac-address*
Tree *mac-address*
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary

Synopsis	Enable the primary context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secondary [[address](#)] *ipv4-unicast-address*

Synopsis	Enter the secondary list instance
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>
Tree	secondary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis	Secondary IPv4 address assigned to the interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary <i>ipv4-unicast-address</i>

Tree	secondary
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address broadcast <i>keyword</i>
Tree	broadcast
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

igp-inhibit *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address igp-inhibit <i>boolean</i>
Tree	igp-inhibit
Description	When configured to true , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 secondary ipv4-unicast-address prefix-length <i>number</i>
Tree	prefix-length

Range	0 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size for the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 tcp-mss <i>number</i>
Tree	tcp-mss
Range	384 to 9746
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check ignore-default <i>boolean</i>
Tree	ignore-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mode *keyword*

Synopsis	Unicast RPF check mode
----------	------------------------

Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lag

Synopsis	Enter the lag context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> lag
Tree	lag
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> load-balancing
Tree	load-balancing
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip

Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsr-load-balancing *keyword*

Synopsis	LSR load-balancing algorithm
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> load-balancing lsr-load-balancing <i>keyword</i>
Tree	lsr-load-balancing
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopback

Synopsis	Use interface as a loopback interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> loopback
Tree	loopback
Notes	The following elements are part of a choice: loopback or port .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address*

Synopsis	MAC address for the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> mac <i>mac-unicast-address</i>
Tree	mac
Description	This command assigns a specific MAC address to an IP interface.
String format	'ieeee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *port-and-encap*

Synopsis	Port to bind the interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> port <i>port-and-encap</i>
Tree	port
String length	1 to 45
Notes	The following elements are part of a choice: loopback or port .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

qos

Synopsis	Enter the qos context
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> qos
Tree	qos
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	configure service vpn <i>service-name</i> network-interface <i>interface-name</i> qos egress-instance <i>number</i>
Tree	egress-instance
Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

egress-port-redirect-group *reference*

Synopsis	QoS queue group name
----------	----------------------

Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> qos egress-port-redirect-group <i>reference</i>
Tree	egress-port-redirect-group
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.
Reference	configure qos queue-group-templates egress queue-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress-fp-redirect-group *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> qos ingress-fp-redirect-group <i>reference</i>
Tree	ingress-fp-redirect-group
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	configure qos queue-group-templates ingress queue-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ingress-instance *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> qos ingress-instance <i>number</i>
Tree	ingress-instance
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

network-policy *reference*

Synopsis	Network policy name associated with a network interface
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> qos network-policy reference
Tree	network-policy
Description	This command associates an existing network policy name with the IP interface.
Reference	configure qos network <i>network-policy-name</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure service vprn <i>service-name</i> network-interface <i>interface-name</i> tos-marking-state keyword
Tree	tos-marking-state
Options	trusted, untrusted
Default	trusted
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp

Synopsis	Enable the ntp context
Context	configure service vprn <i>service-name</i> ntp
Tree	ntp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of NTP execution
Context	configure service vprn <i>service-name</i> ntp admin-state keyword
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authenticate *boolean*

Synopsis	Authentication of NTP PDUs when acting as a server
Context	configure service vprn <i>service-name</i> ntp authenticate <i>boolean</i>
Tree	authenticate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-check *boolean*

Synopsis	Authenticate NTP PDUs and reject mismatches
Context	configure service vprn <i>service-name</i> ntp authentication-check <i>boolean</i>
Tree	authentication-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key [[key-id](#)] *number*

Synopsis	Enter the authentication-key list instance
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i>
Tree	authentication-key
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[key-id] *number*

Synopsis	Authentication key ID used for NTP packets
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i>

Tree	authentication-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key *encrypted-leaf*

Synopsis	Key to authenticate NTP packets
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i> key <i>encrypted-leaf</i>
Tree	key
Description	This command specifies the key to authenticate NTP packets in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 126
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Authentication method to authenticate NTP packet
Context	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i> type <i>keyword</i>
Tree	type
Options	des, message-digest
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Authentication keychain for unsolicited traffic
Context	configure service vprn <i>service-name</i> ntp authentication-keychain <i>reference</i>
Tree	authentication-keychain

Description	<p>This command configures the authentication keychain used to handle unsolicited NTP requests.</p> <p>If a request is received with a key ID that matches both a configured key and the keychain, the MAC is checked first using the key information. If the authentication fails, the MAC is checked using the information from the keychain.</p>
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast [[interface-name](#)] *reference*

Synopsis	Enter the broadcast list instance
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i>
Tree	broadcast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *reference*

Synopsis	Local interface used to transmit NTP broadcast packets
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i>
Tree	broadcast
Reference	configure service vpn <i>service-name</i> interface <i>interface-name</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	configure service vpn <i>service-name</i> ntp broadcast <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the keychain used to authenticate messages sent by this node.</p> <p>The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is</p>

received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.

Reference	configure system security keychains keychain <i>named-item</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-id reference

Synopsis	Authentication key and type used by the node
Context	configure service vprn <i>service-name</i> ntp broadcast <i>reference</i> key-id <i>reference</i>
Tree	key-id
Reference	configure service vprn <i>service-name</i> ntp authentication-key <i>number</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl number

Synopsis	TTL of messages transmitted by the broadcast address
Context	configure service vprn <i>service-name</i> ntp broadcast <i>reference</i> ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	127
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version number

Synopsis	NTP version number generated by the node
Context	configure service vprn <i>service-name</i> ntp broadcast <i>reference</i> version <i>number</i>
Tree	version

Range	2 to 4
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ospf [*ospf-instance*] *number*

Synopsis	Enter the ospf list instance
Context	configure <i>service vprn</i> <i>service-name ospf</i> <i>number</i>
Tree	<i>ospf</i>
Description	Commands in this context configure an OSPF protocol instance.
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ospf-instance] *number*

Synopsis	OSPF instance
Context	configure <i>service vprn</i> <i>service-name ospf</i> <i>number</i>
Tree	<i>ospf</i>
Range	0
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF instance
Context	configure <i>service vprn</i> <i>service-name ospf</i> <i>number</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *keyword*

Synopsis	Allow router advertisement capabilities
Context	configure service vprn <i>service-name</i> ospf <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	false, link, area, as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area [[area-id](#)] *ipv4-address*

Synopsis	Enter the area list instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[area-id] *ipv4-address*

Synopsis	Area-ID attribute
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i>
Tree	area
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-ne-profile *reference*

Synopsis	Network element profile to be advertised
----------	--

Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> advertise-ne-profile <i>reference</i>
Tree	advertise-ne-profile
Reference	configure system network-element-discovery profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area-range [[ip-prefix-mask](#)] *ipv4-unicast-prefix*

Synopsis	Enter the area-range list instance
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix-mask] *ipv4-unicast-prefix*

Synopsis	IPv4 unicast address prefix and mask
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> area-range <i>ipv4-unicast-prefix</i> advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole-aggregate *boolean*

Synopsis	Install a low priority blackhole route to avoid loops
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> blackhole-aggregate <i>boolean</i>
Tree	blackhole-aggregate
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Route imported as Summary Type 3/Inter-Area-Prefix-LSA
----------	--

Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-subnet *boolean*

Synopsis	Advertise point-to-point interfaces as subnet routes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> advertise-subnet <i>boolean</i>
Tree	advertise-subnet
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command specifies the authentication key in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 94

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session
Context **configure** [service](#) [vpn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [interface](#) *interface-name* [authentication-keychain](#) *reference*
Tree [authentication-keychain](#)
Reference **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

authentication-type *keyword*

Synopsis Authentication type used on OSPF interface
Context **configure** [service](#) [vpn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [interface](#) *interface-name* [authentication-type](#) *keyword*
Tree [authentication-type](#)
Options password, message-digest
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

bfd-liveness

Synopsis Enable the **bfd-liveness** context
Context **configure** [service](#) [vpn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [interface](#) *interface-name* [bfd-liveness](#)
Tree [bfd-liveness](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

remain-down-on-failure *boolean*

Synopsis Force adjacency down on failure until session returns

Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict boolean

Synopsis	Enable BFD strict mode
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	<p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-mode-holddown number

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict-mode-holddown <i>number</i>
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> conditional-advertise-prefix <i>reference</i>
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds

Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> interface-type <i>keyword</i>
Tree	interface-type
Description	<p>This command specifies the interface type.</p> <p>broadcast - Broadcast network</p> <p>To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.</p> <p>non-broadcast - Non-broadcast network</p> <p>point-to-point - Point-to-point link</p> <p>Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.</p> <p>p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support</p> <p>No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.</p> <p>secondary - Multiple secondary adjacencies allowed</p> <p>A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p>
Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load-balancing weight
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address interface interface-name load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address interface interface-name loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address interface interface-name loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-map

Synopsis	Enable the policy-map context
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address interface interface-name loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

route-nh-template *reference*

Synopsis Route next hop policy template name

Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) [loopfree-alternate policy-map route-nh-template](#) *reference*

Tree [route-nh-template](#)

Reference **configure** [routing-options route-next-hop-policy template](#) *named-item*

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

lsa-filter-out *keyword*

Synopsis LSA flooding reduction

Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) [lsa-filter-out](#) *keyword*

Tree [lsa-filter-out](#)

Options none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults

Default none

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

message-digest-key [[key-id](#)] *number*

Synopsis Enter the **message-digest-key** list instance

Context **configure** [service vprn](#) *service-name* [ospf number area ipv4-address](#) [interface interface-name](#) [message-digest-key](#) *number*

Tree [message-digest-key](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[key-id] *number*

Synopsis Message digest index

Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md5 encrypted-leaf

Synopsis	MD5 hash key
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> message-digest-key <i>number</i> md5 encrypted-leaf
Tree	md5
Description	This command specifies the MD5 hash key in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 102
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric number

Synopsis	Route cost metric for the interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> metric <i>number</i>
Tree	metric
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mtu number

Synopsis	MTU for the OSPF to use on the interface
----------	--

Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [**address**] *ipv4-unicast-address*

Synopsis	Add a list entry for neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor <i>ipv4-unicast-address</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis	IPv4 address of the OSPFv2 neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor <i>ipv4-unicast-address</i>
Tree	neighbor
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

poll-interval *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> poll-interval <i>number</i>
Tree	poll-interval
Max. range	0 to 4294967295
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Interface priority in the DR election on the subnet
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Range	0 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority *keyword*

Synopsis	RIB priority for OSPF
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> rib-priority <i>keyword</i>
Tree	rib-priority
Options	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nssa

Synopsis	Enable the nssa context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> nssa

Tree	nssa
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area-range [\[ip-prefix-mask\]](#) *ipv4-unicast-prefix*

Synopsis	Enter the area-range list instance
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix-mask] *ipv4-unicast-prefix*

Synopsis	IPv4 unicast address prefix and mask
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa area-range <i>ipv4-unicast-prefix</i>
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	configure service vprn <i>service-name</i> ospf number area <i>ipv4-address</i> nssa area-range <i>ipv4-unicast-prefix</i> advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

originate-default-route

Synopsis	Enable the originate-default-route context
----------	---

Context	configure service vpn <i>service-name ospf number area ipv4-address nssa originate-default-route</i>
Tree	originate-default-route
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adjacency-check *boolean*

Synopsis	Perform adjacency checks before originating a default route
Context	configure service vpn <i>service-name ospf number area ipv4-address nssa originate-default-route adjacency-check boolean</i>
Tree	adjacency-check
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type-nssa *boolean*

Synopsis	Generate a default route using NSSA-LSA type
Context	configure service vpn <i>service-name ospf number area ipv4-address nssa originate-default-route type-nssa boolean</i>
Tree	type-nssa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redistribute-external *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	configure service vpn <i>service-name ospf number area ipv4-address nssa redistribute-external boolean</i>
Tree	redistribute-external
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> nssa summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sham-link [[interface](#)] *interface-name* [ip-address](#) *ipv4-unicast-address*

Synopsis	Enter the sham-link list instance
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i>
Tree	sham-link
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface] *interface-name*

Synopsis	Local interface name used for the sham-link
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i>
Tree	sham-link
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address *ipv4-unicast-address*

Synopsis	IP address of the sham-link neighbor
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> sham-link <i>interface-name</i> ip-address <i>ipv4-unicast-address</i>
Tree	sham-link

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	configure service vpn service-name ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key to send and receive OSPF packets
Context	configure service vpn service-name ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command specifies the authentication key to send and receive OSPF packets in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 94
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vpn service-name ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address authentication-keychain <i>reference</i>

Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type to be used
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link interface-name ip-address ipv4-unicast-address hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

message-digest-key [[key-id](#)] *number*

Synopsis Enter the **message-digest-key** list instance

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [sham-link](#) *interface-name* [ip-address](#) *ipv4-unicast-address* [message-digest-key](#) *number*

Tree [message-digest-key](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[key-id] *number*

Synopsis Message digest index

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [sham-link](#) *interface-name* [ip-address](#) *ipv4-unicast-address* [message-digest-key](#) *number*

Tree [message-digest-key](#)

Range 1 to 255

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

md5 *encrypted-leaf*

Synopsis MD5 key or hash key

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [area](#) *ipv4-address* [sham-link](#) *interface-name* [ip-address](#) *ipv4-unicast-address* [message-digest-key](#) *number* [md5](#) *encrypted-leaf*

Tree [md5](#)

Description This command specifies the MD5 key or hash key in a protected format.
The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 102

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

metric number

Synopsis	Explicit route cost metric that is applied to the sham link
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address metric <i>number</i>
Tree	metric
Range	1 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval number

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-delay number

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address sham-link <i>interface-name</i> ip-address ipv4-unicast-address transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

stub

Synopsis	Enable the stub context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> stub
Tree	stub
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-metric *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> stub default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777214
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summaries *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> stub summaries <i>boolean</i>
Tree	summaries
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

virtual-link [*router-id*] *ipv4-address* [transit-area](#) *reference*

Synopsis	Enter the virtual-link list instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i>
Tree	virtual-link
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[router-id] *ipv4-address*

Synopsis Router identity of the virtual link neighbor

Context **configure** [service vprn](#) *service-name* [ospf number area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area reference](#)

Tree [virtual-link](#)

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

transit-area *reference*

Synopsis Transit area that links backbone area to area without physical connection with the backbone

Context **configure** [service vprn](#) *service-name* [ospf number area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area reference](#)

Tree [virtual-link](#)

Reference **configure** [service vprn](#) *service-name* [ospf number area](#) *ipv4-address*

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the OSPF interface

Context **configure** [service vprn](#) *service-name* [ospf number area](#) *ipv4-address* [virtual-link](#) *ipv4-address* [transit-area reference](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command specifies the authentication key in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 94
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type used on OSPF interface
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-digest-key [[key-id](#)] *number*

Synopsis	Enter the message-digest-key list instance
Context	configure service vpn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[key-id] *number*

Synopsis	Message digest index
----------	----------------------

Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i>
Tree	message-digest-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md5 encrypted-leaf

Synopsis	MD5 hash key
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> message-digest-key <i>number</i> md5 <i>encrypted-leaf</i>
Tree	md5
Description	This command specifies the MD5 hash key in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 102
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf number area ipv4-address virtual-link ipv4-address transit-area reference transit-delay number
Tree	transit-delay
Range	1 to 1800
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

compatible-rfc1583 *boolean*

Synopsis	OSPF summary and external route calculations
Context	configure service vprn <i>service-name</i> ospf number compatible-rfc1583 <i>boolean</i>
Tree	compatible-rfc1583
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> ospf number export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> ospf number export-limit log-percent number
Tree	log-percent
Range	1 to 100

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure <i>service vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> <i>export-limit</i> <i>number</i> <i>number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure <i>service vpn</i> <i>service-name</i> <i>ospf</i> <i>number</i> <i>export-policy</i> <i>reference</i>
Tree	<i>export-policy</i>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure <i>policy-options</i> <i>policy-statement</i> <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow
Tree	external-db-overflow
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit
Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255

Default	150
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure service vpn <i>service-name</i> ospf <i>number</i> graceful-restart
Tree	graceful-restart
Description	<p>Commands in this context enable OSPF graceful restart (GR) to minimize service interruption.</p> <p>When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	configure service vpn <i>service-name</i> ospf <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Description	<p>When configured to true, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval.</p> <p>When configured to false, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-resync-timeout *number*

Synopsis	Maximum resynchronization period
----------	----------------------------------

Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart helper-resync-timeout <i>number</i>
Tree	helper-resync-timeout
Description	This command configures the maximum resynchronization period. If the resynchronization takes longer than the configured value, the graceful restart process stops, and the OSPF neighbor session falls back to the ExStart state for normal adjacency establishment.
Range	120 to 900
Units	seconds
Default	120
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

protocol

Synopsis	Enter the protocol context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart protocol
Tree	protocol
Description	Commands in this context configure which RFC is used for OSPF graceful restart signaling. If both protocols are enabled, the OSPF interface automatically uses the method indicated by the first received graceful restart signaling packet on that interface.
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

lls-restart-signaling *boolean*

Synopsis	Enable LLS restart signaling protocol
Context	configure service vprn <i>service-name</i> ospf <i>number</i> graceful-restart protocol lls-restart-signaling <i>boolean</i>
Tree	lls-restart-signaling
Description	When configured to true , the system enables support for RFC 4811 and RFC 4812. When configured to false , the system disables support for RFC 4811 and RFC 4812.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

standard *boolean*

Synopsis	Enable standard protocol for restart signaling
Context	configure service vprn <i>service-name</i> ospf number graceful-restart protocol standard <i>boolean</i>
Tree	standard
Description	When configured to true , the system enables support for RFC 3623. When configured to false , the system disables support for RFC 3623.
Default	true
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure service vprn <i>service-name</i> ospf number graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-dn-bit *boolean*

Synopsis	Ignore the DN bit for OSPF LSA packets for the instance
Context	configure service vprn <i>service-name</i> ospf number ignore-dn-bit <i>boolean</i>
Tree	ignore-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> ospf number import-policy <i>reference</i>

Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Description	<p>Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance.</p> <p>When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude

Synopsis	Enter the exclude context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i>
Tree	prefix-policy

Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure service vprn <i>service-name</i> ospf <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload *boolean*

Synopsis	Change local router state to appear overloaded
Context	configure service vprn <i>service-name</i> ospf <i>number</i> overload <i>boolean</i>
Tree	overload
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-include-ext-1 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> overload-include-ext-1 <i>boolean</i>
Tree	overload-include-ext-1
Default	false

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload-include-ext-2 *boolean*

Synopsis Advertise routes with maximum metric value for overload
Context **configure** *service vprn* *service-name ospf* *number* **overload-include-ext-2** *boolean*
Tree [overload-include-ext-2](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload-include-stub *boolean*

Synopsis Advertise all stub interfaces with max metric value
Context **configure** *service vprn* *service-name ospf* *number* **overload-include-stub** *boolean*
Tree [overload-include-stub](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

overload-on-boot

Synopsis Enable the **overload-on-boot** context
Context **configure** *service vprn* *service-name ospf* *number* **overload-on-boot**
Tree [overload-on-boot](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time during which the router operates in overload state before reestablishing normal operations
Context **configure** *service vprn* *service-name ospf* *number* **overload-on-boot** **timeout** *number*
Tree [timeout](#)

Range	60 to 1800
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Preference for OSPF internal routes
Context	configure service vprn <i>service-name</i> ospf <i>number</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reference-bandwidth *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	configure service vprn <i>service-name</i> ospf <i>number</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority

Synopsis	Enter the rib-priority context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

high

Synopsis	Enter the high context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-id *router-id*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	configure service vprn <i>service-name</i> ospf <i>number</i> router-id <i>router-id</i>
Tree	router-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rtr-adv-lsa-limit

Synopsis	Enable the rtr-adv-lsa-limit context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit
Tree	rtr-adv-lsa-limit

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Log the event without triggering overload
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit max-lsa-count <i>number</i>
Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-timeout (*number* | *keyword*)

Synopsis	Maximum time in overload after LSA limit is reached
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit overload-timeout (<i>number</i> <i>keyword</i>)
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	configure service vprn <i>service-name</i> ospf <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Units	percent
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

super-backbone *boolean*

Synopsis	Enable super backbone functionality
Context	configure service vprn <i>service-name</i> ospf <i>number</i> super-backbone <i>boolean</i>
Tree	super-backbone
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suppress-dn-bit *boolean*

Synopsis	Suppress the DN bit setting for OSPF LSA packets
Context	configure service vprn <i>service-name</i> ospf <i>number</i> suppress-dn-bit <i>boolean</i>
Tree	suppress-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enter the timers context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers
Tree	timers

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers incremental-spf-wait <i>number</i>
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-accumulate <i>number</i>
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-arrival <i>number</i>
Tree	lsa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

Isa-generate

Synopsis Enter the **Isa-generate** context

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [timers](#) **Isa-generate**

Tree [Isa-generate](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

Isa-initial-wait *number*

Synopsis First wait period between OSPF LSA generation

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [timers](#) **Isa-generate** **Isa-initial-wait** *number*

Tree [Isa-initial-wait](#)

Range 10 to 600000

Units milliseconds

Default 5000

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

Isa-second-wait *number*

Synopsis Hold time between the first and second LSA generation

Context **configure** [service vprn](#) *service-name* [ospf](#) *number* [timers](#) **Isa-generate** **Isa-second-wait** *number*

Tree [Isa-second-wait](#)

Range 10 to 600000

Units milliseconds

Default 5000

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers lsa-generate max-lsa-wait <i>number</i>
Tree	max-lsa-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers redistribute-delay <i>number</i>
Tree	redistribute-delay
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-wait

Synopsis	Enter the spf-wait context
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-initial-wait <i>number</i>

Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation
Context	configure service vprn <i>service-name</i> ospf <i>number</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	configure service vprn <i>service-name</i> ospf <i>number</i> unicast-import <i>boolean</i>
Tree	unicast-import

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpn-domain

Synopsis	Enable the vpn-domain context
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-domain
Tree	vpn-domain
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

id *system-id*

Synopsis	OSPF VPN domain ID
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-domain id <i>system-id</i>
Tree	id
Description	This command specifies the OSPF VPN domain. This is exchanged using BGP in the Extended Community attribute associated with a prefix.
String length	14
String format	'system-id' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Default	0000.0000.0000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	VPN domain type
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-domain type <i>keyword</i>
Tree	type
Options	0005, 0105, 0205, 8005
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpn-tag *number*

Synopsis	OSPF VPN tag
Context	configure service vpn <i>service-name</i> ospf <i>number</i> vpn-tag <i>number</i>
Tree	vpn-tag
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ospf3 [[ospf-instance](#)] *number*

Synopsis	Enter the ospf3 list instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i>
Tree	ospf3
Description	Commands in this context create an OSPFv3 routing instance and configure associated command options.
Max. instances	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ospf-instance] *number*

Synopsis	OSPF instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i>
Tree	ospf3
Range	0 to 31 64 to 95
MD-CLI default	0
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the OSPF instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *keyword*

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> advertise-router-capability <i>keyword</i>
Tree	advertise-router-capability
Options	false, link, area, as
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area [[area-id](#)] *ipv4-address*

Synopsis	Enter the area list instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i>
Tree	area
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[area-id] *ipv4-address*

Synopsis	Area-ID attribute
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i>
Tree	area
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

area-range [[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the area-range list instance
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Address ranges to create on an ABR for route summarization or suppression
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
----------	--

Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

blackhole-aggregate *boolean*

Synopsis	Install a low priority blackhole route to avoid loops
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> blackhole-aggregate <i>boolean</i>
Tree	blackhole-aggregate
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness remain-down-on-failure <i>boolean</i>
Tree	remain-down-on-failure
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict *boolean*

Synopsis	Enable BFD strict mode
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> bfd-liveness strict <i>boolean</i>
Tree	strict
Description	When configured to true , the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true , the router uses Link-Local Signaling (LLS)

with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	configure service vprn service-name ospf3 number area ipv4-address interface interface-name bfd-liveness strict-mode-holddown number
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	configure service vprn service-name ospf3 number area ipv4-address interface interface-name conditional-advertise-prefix reference
Tree	conditional-advertise-prefix
Description	<p>This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met.</p> <p>The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.</p>
Reference	configure policy-options policy-statement named-item-64
Introduced	25.10.R1

Platforms 7705 SAR Gen 2

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> dead-interval <i>number</i>
Tree	<i>dead-interval</i>
Range	2 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Time between OSPF Hellos of this interface
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> hello-interval <i>number</i>
Tree	<i>hello-interval</i>
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-type *keyword*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>ipv4-address</i> <i>interface</i> <i>interface-name</i> interface-type <i>keyword</i>
Tree	<i>interface-type</i>
Description	This command specifies the interface type. broadcast - Broadcast network

To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.

non-broadcast - Non-broadcast network

point-to-point - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load-balancing weight
Context	configure service vprn service-name ospf3 number area ipv4-address interface interface-name load-balancing-weight number
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure service vprn service-name ospf3 number area ipv4-address interface interface-name loopfree-alternate
Tree	loopfree-alternate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy-map

Synopsis	Enable the policy-map context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> loopfree-alternate policy-map route-nh-template <i>reference</i>
Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy template <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsa-filter-out *keyword*

Synopsis	LSA flooding reduction
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> lsa-filter-out <i>keyword</i>
Tree	lsa-filter-out

Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Route cost metric for the interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> metric <i>number</i>
Tree	metric
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mtu *number*

Synopsis	MTU for the OSPF to use on the interface
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9786
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for neighbor
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv6 link local address of the OSPFv3 neighbor
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> neighbor (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	neighbor
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

passive *boolean*

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> passive <i>boolean</i>
Tree	passive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

poll-interval *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> poll-interval <i>number</i>
Tree	poll-interval
Max. range	0 to 4294967295
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Interface priority in the DR election on the subnet
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> priority <i>number</i>

Tree	priority
Range	0 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority *keyword*

Synopsis	RIB priority for OSPF
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> rib-priority <i>keyword</i>
Tree	rib-priority
Options	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit-delay *number*

Synopsis	Required LSA transmit time
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> interface <i>interface-name</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Units	seconds

Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-rollover-interval *number*

Synopsis	Key rollover interval
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> key-rollover-interval <i>number</i>
Tree	key-rollover-interval
Range	10 to 300
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nssa

Synopsis	Enable the nssa context

retransmit-interval *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> area <i>ipv4-address</i> virtual-link <i>ipv4-address</i> transit-area <i>reference</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Units	seconds
Default	5
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

transit-delay *number*

Synopsis Required LSA transmit time

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [area ipv4-address](#) [virtual-link ipv4-address](#) [transit-area](#) *reference* [transit-delay](#) *number*

Tree [transit-delay](#)

Range 1 to 1800

Units seconds

Default 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

export-limit

Synopsis Enable the **export-limit** context

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [export-limit](#)

Tree [export-limit](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

log-percent *number*

Synopsis Export limit before warning and SNMP notification sent

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [export-limit](#) [log-percent](#) *number*

Tree [log-percent](#)

Range 1 to 100

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

number *number*

Synopsis Maximum routes or prefixes exported from route table

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [export-limit](#) [number](#) *number*

Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-db-overflow

Synopsis	Enable the external-db-overflow context
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> external-db-overflow
Tree	external-db-overflow
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time during which the router operates in overload
Context	configure service vprn <i>service-name ospf3</i> <i>number</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	configure service vprn <i>service-name ospf3</i> <i>number</i> external-db-overflow limit <i>number</i>
Tree	limit
Range	0 to 2147483647
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	configure service vprn <i>service-name ospf3</i> <i>number</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Default	150
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-restart

Synopsis	Enable the graceful-restart context
----------	--

Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart
Tree	graceful-restart
Description	<p>Commands in this context enable OSPF graceful restart (GR) to minimize service interruption.</p> <p>When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Description	<p>When configured to true, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval.</p> <p>When configured to false, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-dn-bit *boolean*

Synopsis	Ignore the DN bit for OSPF LSA packets for the instance
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> ignore-dn-bit <i>boolean</i>
Tree	ignore-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Description	<p>Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance.</p> <p>When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exclude

Synopsis	Enter the exclude context
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate exclude
Tree	exclude
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i>
Tree	prefix-policy
Description	<p>This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.</p> <p>An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-import *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	configure service vpn <i>service-name</i> ospf3 <i>number</i> multicast-import <i>boolean</i>
Tree	multicast-import
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload *boolean*

Synopsis	Change local router state to appear overloaded
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> overload <i>boolean</i>
Tree	overload
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-include-ext-1 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> overload-include-ext-1 <i>boolean</i>
Tree	overload-include-ext-1
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-include-ext-2 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> overload-include-ext-2 <i>boolean</i>
Tree	overload-include-ext-2
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-include-stub *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> overload-include-stub <i>boolean</i>
Tree	overload-include-stub
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

overload-on-boot

Synopsis Enable the **overload-on-boot** context

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [overload-on-boot](#)

Tree [overload-on-boot](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

timeout *number*

Synopsis Time during which the router operates in overload state before reestablishing normal operations

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [overload-on-boot](#) [timeout](#) *number*

Tree [timeout](#)

Range 60 to 1800

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

preference *number*

Synopsis Preference for OSPF internal routes

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [preference](#) *number*

Tree [preference](#)

Range 1 to 255

Default 10

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

reference-bandwidth *number*

Synopsis Bandwidth to reference default costing of interfaces

Context **configure** [service vprn](#) *service-name* [ospf3](#) *number* [reference-bandwidth](#) *number*

Tree	reference-bandwidth
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rib-priority

Synopsis	Enter the rib-priority context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rib-priority
Tree	rib-priority
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

high

Synopsis	Enter the high context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rib-priority high
Tree	high
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rib-priority high prefix-list <i>reference</i>
Tree	prefix-list
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-id *router-id***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>router-id</i> <i>router-id</i>
Tree	<i>router-id</i>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rtr-adv-lsa-limit

Synopsis	Enable the rtr-adv-lsa-limit context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>rtr-adv-lsa-limit</i>
Tree	<i>rtr-adv-lsa-limit</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-only *boolean*

Synopsis	Log the event without triggering overload
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>rtr-adv-lsa-limit</i> <i>log-only</i> <i>boolean</i>
Tree	<i>log-only</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>ospf3</i> <i>number</i> <i>rtr-adv-lsa-limit</i> <i>max-lsa-count</i> <i>number</i>

Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

overload-timeout (*number* | *keyword*)

Synopsis	Maximum time in overload after LSA limit is reached
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rtr-adv-lsa-limit overload-timeout (<i>number</i> <i>keyword</i>)
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Units	percent
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suppress-dn-bit *boolean*

Synopsis	Suppress the DN bit setting for OSPF LSA packets
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> suppress-dn-bit <i>boolean</i>

Tree	suppress-dn-bit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enter the timers context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers incremental-spf-wait <i>number</i>
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers lsa-accumulate <i>number</i>
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Isa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers Isa-arrival <i>number</i>
Tree	Isa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Isa-generate

Synopsis	Enter the Isa-generate context
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers Isa-generate
Tree	Isa-generate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Isa-initial-wait *number*

Synopsis	First wait period between OSPF LSA generation
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> timers Isa-generate Isa-initial-wait <i>number</i>
Tree	Isa-initial-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Isa-second-wait *number*

Synopsis	Hold time between the first and second LSA generation
----------	---

Context	configure service vprn <i>service-name ospf3 number timers lsa-generate lsa-second-wait number</i>
Tree	lsa-second-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	configure service vprn <i>service-name ospf3 number timers lsa-generate max-lsa-wait number</i>
Tree	max-lsa-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	configure service vprn <i>service-name ospf3 number timers redistribute-delay number</i>
Tree	redistribute-delay
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-wait

Synopsis	Enter the spf-wait context
----------	-----------------------------------

Context	configure service vprn service-name ospf3 number timers spf-wait
Tree	spf-wait
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure service vprn service-name ospf3 number timers spf-wait spf-initial-wait number
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure service vprn service-name ospf3 number timers spf-wait spf-max-wait number
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation
Context	configure service vprn service-name ospf3 number timers spf-wait spf-second-wait number
Tree	spf-second-wait
Range	10 to 100000

Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	configure service vprn <i>service-name</i> ospf3 <i>number</i> unicast-import <i>boolean</i>
Tree	unicast-import
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pim

Synopsis	Enable the pim context
Context	configure service vprn <i>service-name</i> pim
Tree	pim
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM
Context	configure service vprn <i>service-name</i> pim admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

apply-to *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
----------	---

Context	configure service vpn <i>service-name</i> pim apply-to <i>keyword</i>
Tree	apply-to
Options	all, none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-nh-override *boolean*

Synopsis	Disable VRF import EC support for next-hop resolution
Context	configure service vpn <i>service-name</i> pim bgp-nh-override <i>boolean</i>
Tree	bgp-nh-override
Description	When configured to true , the RPF check is performed using IPv4 VPN AF next-hop instead of IPv4 AF VRF import extended community (EC). When configured to false , the RPF check is performed using IPv4 AF VRF import EC.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import

Synopsis	Enter the import context
Context	configure service vpn <i>service-name</i> pim import
Tree	import
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

join-policy *reference*

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> pim import join-policy <i>reference</i>
Tree	join-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5

Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

register-policy *reference*

Synopsis	Policy name
Context	configure service vpn <i>service-name</i> pim import register-policy <i>reference</i>
Tree	register-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface [[interface-name](#)] *interface-name*

Synopsis	Enter the interface list instance
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i>
Tree	interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	Interface name
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i>
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the PIM interface
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

assert-period *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> assert-period <i>number</i>
Tree	assert-period
Range	1 to 300
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *boolean*

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness ipv4 <i>boolean</i>
Tree	ipv4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *boolean*

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bfd-liveness ipv6 boolean
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bsm-check-rtr-alert *boolean*

Synopsis	Check router alert option in bootstrap messages received
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> bsm-check-rtr-alert boolean
Tree	bsm-check-rtr-alert
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-interval *number*

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> hello-interval number
Tree	hello-interval
Range	0 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hello-multiplier *number*

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	20 to 100
Default	35
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

improved-assert *boolean*

Synopsis	Allow improved assert processing on interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> improved-assert <i>boolean</i>
Tree	improved-assert
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

instant-prune-echo *boolean*

Synopsis	Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> instant-prune-echo <i>boolean</i>
Tree	instant-prune-echo
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> ipv4

Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group
Tree	monitor-oper-group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Operational group identifier
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv4 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
----------	--

Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>monitor-oper-group</i> <i>priority-delta</i> <i>number</i>
Tree	<i>priority-delta</i>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> <i>interface</i> <i>interface-name</i> <i>ipv4</i> <i>multicast</i> <i>boolean</i>
Tree	<i>multicast</i>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i>
Tree	<i>ipv6</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> <i>interface</i> <i>interface-name</i> <i>ipv6</i> <i>monitor-oper-group</i>
Tree	<i>monitor-oper-group</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *reference*

Synopsis	Operational group identifier
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group name <i>reference</i>
Tree	name
Reference	configure service oper-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

operation *keyword*

Synopsis	Operation performed when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group operation <i>keyword</i>
Tree	operation
Options	add, subtract, set
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority-delta *number*

Synopsis	Delta priority with operation when operational group is active
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 monitor-oper-group priority-delta <i>number</i>
Tree	priority-delta
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast *boolean*

Synopsis	Enable PIM interface operation
Context	configure service vpn <i>service-name</i> pim interface <i>interface-name</i> ipv6 multicast <i>boolean</i>
Tree	multicast

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-groups *number*

Synopsis	Maximum number of groups for the interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> max-groups <i>number</i>
Tree	max-groups
Range	0 1 to 16000
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-senders *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> multicast-senders <i>keyword</i>
Tree	multicast-senders
Options	auto, always, never
Default	auto
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	DR election priority for this interface
Context	configure service vprn <i>service-name</i> pim interface <i>interface-name</i> priority <i>number</i>
Tree	priority
Description	This command sets the priority value to elect the DR. The DR election priority is a 32-bit unsigned number and the numerically larger priority is always preferred.
Range	1 to 4294967295
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

sticky-dr

Synopsis Enable the **sticky-dr** context

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **sticky-dr**

Tree [sticky-dr](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

priority *number*

Synopsis DR election priority for this interface

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **sticky-dr** **priority** *number*

Tree [priority](#)

Range 1 to 4294967295

Default 1024

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

three-way-hello *boolean*

Synopsis Allow three-way hello compatibility mode

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **three-way-hello** *boolean*

Tree [three-way-hello](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

tracking-support *boolean*

Synopsis Allow upstream routers to explicitly track join membership

Context **configure** [service vprn](#) *service-name* [pim interface](#) *interface-name* **tracking-support** *boolean*

Tree	tracking-support
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> pim ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	configure service vprn <i>service-name</i> pim ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rpf-table *keyword*

Synopsis	Route table for RPF lookup
Context	configure service vprn <i>service-name</i> pim ipv4 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address

Synopsis	Enter the source-address context
Context	configure service vpn <i>service-name</i> pim ipv4 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

register-message *ipv4-unicast-address*

Synopsis	Source IPv4 address for PIM register messages
Context	configure service vpn <i>service-name</i> pim ipv4 source-address register-message <i>ipv4-unicast-address</i>
Tree	register-message
Description	<p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-assert-compatible-mode *boolean*

Synopsis	Enable SSM assert compatible mode
Context	configure service vpn <i>service-name</i> pim ipv4 ssm-assert-compatible-mode <i>boolean</i>
Tree	ssm-assert-compatible-mode
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-default-range *boolean*

Synopsis	SSM default range
Context	configure service vprn <i>service-name</i> pim ipv4 ssm-default-range <i>boolean</i>
Tree	ssm-default-range
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure service vprn <i>service-name</i> pim ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	configure service vprn <i>service-name</i> pim ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rpf-table *keyword*

Synopsis	Route table for RPF lookup
Context	configure service vprn <i>service-name</i> pim ipv6 rpf-table <i>keyword</i>
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

source-address

Synopsis Enter the **source-address** context

Context **configure** [service vpn](#) *service-name* [pim ipv6 source-address](#)

Tree [source-address](#)

Description Commands in this context configure the source IP address for PIM messages.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

register-message *ipv6-unicast-address*

Synopsis Source IPv6 address for PIM register messages

Context **configure** [service vpn](#) *service-name* [pim ipv6 source-address](#) [register-message](#) *ipv6-unicast-address*

Tree [register-message](#)

Description This command configures the source IPv6 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.

When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ssm-default-range *boolean*

Synopsis SSM default range

Context **configure** [service vpn](#) *service-name* [pim ipv6 ssm-default-range](#) *boolean*

Tree [ssm-default-range](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mtu-over-head *number*

Synopsis	MVPN tunnel MTU size reduction to allow for BIER header
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> mtu-over-head <i>number</i>
Tree	<i>mtu-over-head</i>
Description	This command subtracts the specified value from the MVPN tunnel MTU to allow a BIER header to be added without exceeding the network MTU.
Range	0 44 76 140 268 536
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

non-dr-attract-traffic *boolean*

Synopsis	Attract traffic when the router is not the designated one
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> non-dr-attract-traffic <i>boolean</i>
Tree	<i>non-dr-attract-traffic</i>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp

Synopsis	Enter the rp context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> rp
Tree	<i>rp</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bootstrap

Synopsis	Enter the bootstrap context
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>pim</i> <i>rp</i> bootstrap
Tree	<i>bootstrap</i>
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

export reference

Synopsis	Export policy to control the flow of bootstrap messages
Context	configure service vprn <i>service-name</i> pim rp bootstrap export <i>reference</i>
Tree	export
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import reference

Synopsis	Import policy to control the flow of bootstrap messages
Context	configure service vprn <i>service-name</i> pim rp bootstrap import <i>reference</i>
Tree	import
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure service vprn <i>service-name</i> pim rp ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

anycast [[ipv4-address](#)] *ipv4-unicast-address* [rp-set-peer](#) *ipv4-unicast-address*

Synopsis	Add a list entry for anycast
Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[ipv4-address](#)] *ipv4-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp-set-peer *ipv4-unicast-address*

Synopsis	Peer in the anycast RP-set
Context	configure service vprn <i>service-name</i> pim rp ipv4 anycast <i>ipv4-unicast-address</i> rp-set-peer <i>ipv4-unicast-address</i>
Tree	anycast
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-rp-discovery *boolean*

Synopsis	Enable auto-RP discovery mode and auto-RP listener
----------	--

Context	configure service vprn <i>service-name</i> pim rp ipv4 auto-rp-discovery <i>boolean</i>
Tree	auto-rp-discovery
Description	When configured to true , the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate address <i>ipv4-unicast-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure service vprn <i>service-name</i> pim rp ipv4 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

hash-mask-len *number*

Synopsis Length for bootstrap hash mask

Context **configure** *service vprn service-name pim rp ipv4 bsr-candidate hash-mask-len number*

Tree *hash-mask-len*

Range 0 to 32

Default 30

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

priority *number*

Synopsis Bootstrap priority of the router

Context **configure** *service vprn service-name pim rp ipv4 bsr-candidate priority number*

Tree *priority*

Range 0 to 255

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

candidate *boolean*

Synopsis Enable auto-RP to advertise candidate RP information

Context **configure** *service vprn service-name pim rp ipv4 candidate boolean*

Tree *candidate*

Description When configured to **true**, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.

When configured to **false**, the candidate RP information is not specified.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mapping-agent *boolean*

Synopsis	Enable the mapping agent on the node
Context	configure <i>service vpn service-name pim rp ipv4 mapping-agent boolean</i>
Tree	<i>mapping-agent</i>
Description	When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp-candidate

Synopsis	Enter the rp-candidate context
Context	configure <i>service vpn service-name pim rp ipv4 rp-candidate</i>
Tree	<i>rp-candidate</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Local RP address
Context	configure <i>service vpn service-name pim rp ipv4 rp-candidate address ipv4-unicast-address</i>
Tree	<i>address</i>
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
----------	--

Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [**ipv4-prefix**] *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate group-range <i>ipv4-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure service vprn <i>service-name</i> pim rp ipv4 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

priority *number*

Synopsis Candidate RP priority

Context **configure** *service vprn service-name pim rp ipv4 rp-candidate* *priority number*

Tree *priority*

Range 0 to 255

Default 192

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

static

Synopsis Enter the **static** context

Context **configure** *service vprn service-name pim rp ipv4 static*

Tree *static*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

address [*ipv4-address*] *ipv4-unicast-address*

Synopsis Enter the **address** list instance

Context **configure** *service vprn service-name pim rp ipv4 static address ipv4-unicast-address*

Tree *address*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[ipv4-address] *ipv4-unicast-address*

Synopsis IPv4 address for the static RP

Context **configure** *service vprn service-name pim rp ipv4 static address ipv4-unicast-address*

Tree *address*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-prefix [[ipv4-prefix](#)] *ipv4-multicast-prefix*

Synopsis	Add a list entry for group-prefix
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv4-prefix] *ipv4-multicast-prefix*

Synopsis	IPv4 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> group-prefix <i>ipv4-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure service vprn <i>service-name</i> pim rp ipv4 static address <i>ipv4-unicast-address</i> override <i>boolean</i>
Tree	override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
----------	-------------------------------

Context	configure service vprn <i>service-name</i> pim rp ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

anycast [[ipv6-address](#)] *ipv6-unicast-address* [rp-set-peer](#) *ipv6-unicast-address*

Synopsis	Add a list entry for anycast
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-address] *ipv6-unicast-address*

Synopsis	Loopback IP address shared by routes in RP set
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp-set-peer *ipv6-unicast-address*

Synopsis	Peer in the anycast RP set
Context	configure service vprn <i>service-name</i> pim rp ipv6 anycast <i>ipv6-unicast-address</i> rp-set-peer <i>ipv6-unicast-address</i>
Tree	anycast
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bsr-candidate

Synopsis	Enter the bsr-candidate context
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate
Tree	bsr-candidate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv6-unicast-address*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	configure service vprn <i>service-name</i> pim rp ipv6 bsr-candidate hash-mask-len <i>number</i>
Tree	hash-mask-len
Range	0 to 128
Default	126
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

priority *number*

Synopsis Bootstrap priority of the router

Context **configure** [service vprn](#) *service-name* [pim rp ipv6 bsr-candidate](#) *priority number*

Tree [priority](#)

Range 0 to 255

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

embedded-rp

Synopsis Enable the **embedded-rp** context

Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp](#)

Tree [embedded-rp](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of embedded RP

Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis Add a list entry for **group-range**

Context **configure** [service vprn](#) *service-name* [pim rp ipv6 embedded-rp group-range](#) *ipv6-multicast-prefix*

Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**ipv6-prefix**] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv6 embedded-rp group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rp-candidate

Synopsis	Enter the rp-candidate context
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate
Tree	rp-candidate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv6-unicast-address*

Synopsis	Local RP address
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-range
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-prefix] *ipv6-multicast-prefix*

Synopsis	IPv6 address and prefix length
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate group-range <i>ipv6-multicast-prefix</i>
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

holdtime *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate holdtime <i>number</i>
Tree	holdtime
Range	5 to 255
Units	seconds
Default	150
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Candidate RP priority
Context	configure service vprn <i>service-name</i> pim rp ipv6 rp-candidate <i>priority</i> <i>number</i>
Tree	priority
Range	0 to 255
Default	192
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure service vprn <i>service-name</i> pim rp ipv6 static
Tree	static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address [[ipv6-address](#)] *ipv6-unicast-address*

Synopsis	Enter the address list instance
Context	configure service vprn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i>
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ipv6-address] *ipv6-unicast-address*

Synopsis	Static IP address of the RP
Context	configure service vprn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i>
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-prefix [[ipv6-prefix](#)] *ipv6-multicast-prefix*

Synopsis	Add a list entry for group-prefix
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> group-prefix <i>ipv6-multicast-prefix</i>
Tree	group-prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Synopsis	IPv6 address and prefix length
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> group-prefix <i>ipv6-multicast-prefix</i>
Tree	group-prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

override *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	configure service vpn <i>service-name</i> pim rp ipv6 static address <i>ipv6-unicast-address</i> override <i>boolean</i>
Tree	override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

spt-switchover [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the spt-switchover list instance
Context	configure service vpn <i>service-name</i> pim spt-switchover (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	spt-switchover
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	configure service vprn <i>service-name</i> pim spt-switchover (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	spt-switchover
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

threshold (*number* | *keyword*)

Synopsis	SPT switchover threshold
Context	configure service vprn <i>service-name</i> pim spt-switchover (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) threshold (<i>number</i> <i>keyword</i>)
Tree	threshold
Range	1 to 4294967294
Units	kilobps
Options	infinity
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssm-groups

Synopsis	Enter the ssm-groups context
Context	configure service vprn <i>service-name</i> pim ssm-groups
Tree	ssm-groups
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-range [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for group-range
Context	configure service vprn <i>service-name</i> pim ssm-groups group-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	group-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP address and mask length
Context	configure service vprn <i>service-name</i> pim ssm-groups group-range (<i>ipv4-prefix ipv6-prefix</i>)
Tree	group-range
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius

Synopsis	Enter the radius context
Context	configure service vprn <i>service-name</i> radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[name](#)] *named-item*

Synopsis	Enter the server list instance
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i>
Tree	server
Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	External RADIUS server name
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i>

Tree	server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i> accept-coa <i>boolean</i>
Tree	accept-coa
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i> acct-port <i>number</i>
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure service vprn <i>service-name</i> radius server <i>named-item</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>radius server</i> <i>named-item</i> auth-port <i>number</i>
Tree	<i>auth-port</i>
Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>radius server</i> <i>named-item</i> description <i>description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

insert-message-authenticator *boolean*

Synopsis	Insert Message-Authenticator in Access-Request
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>radius server</i> <i>named-item</i> insert-message-authenticator <i>boolean</i>
Tree	<i>insert-message-authenticator</i>
Description	When configured to true , the router inserts a Message-Authenticator attribute as the first attribute in Access-Request messages.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
----------	---

Context	configure service vpn <i>service-name</i> radius server <i>named-item</i> pending-requests-limit <i>number</i>
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

require-message-authenticator *boolean*

Synopsis	Require Message-Authenticator in Access-Request reply
Context	configure service vpn <i>service-name</i> radius server <i>named-item</i> require-message-authenticator <i>boolean</i>
Tree	require-message-authenticator
Description	When configured to true , the router silently drops responses to Access-Requests without a Message-Authenticator attribute.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

secret *encrypted-leaf*

Synopsis	Secret key associated with this RADIUS server
Context	configure service vpn <i>service-name</i> radius server <i>named-item</i> secret <i>encrypted-leaf</i>
Tree	secret
Description	<p>This command specifies the secret key associated with this RADIUS server in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 166
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	Use the TLS client profile for RADIUS over TLS
Context	configure service vpn <i>service-name</i> radius server <i>named-item</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Description	When configured, the router uses the TLS client profile to encrypt RADIUS communication and RADIUS messages are sent using TLS.
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

rip

Synopsis	Enable the rip context
Context	configure service vpn <i>service-name</i> rip
Tree	rip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RIP instance
Context	configure service vpn <i>service-name</i> rip admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure service vpn <i>service-name</i> rip authentication-key <i>encrypted-leaf</i>
Tree	authentication-key

Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure <i>service vpn</i> <i>service-name</i> <i>rip</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure <i>service vpn</i> <i>service-name</i> <i>rip</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure service vprn <i>service-name</i> rip check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> rip description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-limit

Synopsis	Enable the export-limit context
Context	configure service vprn <i>service-name</i> rip export-limit
Tree	export-limit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure service vprn <i>service-name</i> rip export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure service vprn <i>service-name</i> rip export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure service vprn <i>service-name</i> rip export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group [[group-name](#)] *named-item*

Synopsis	Enter the group list instance
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i>

Tree	group
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group-name] *named-item*

Synopsis	RIP group name
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i>
Tree	group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RIP neighbor interface group
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p>

When unconfigured, the authentication password is removed from the configuration and authentication is disabled.

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 102
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

authentication-type *keyword*

Synopsis Authentication type
Context **configure** *service vpn service-name rip group named-item authentication-type keyword*
Tree *authentication-type*
Description This command configures the type of authentication to be used.
The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.
When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Options none, password, md5, md20
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis Enable BFD to control the state of protocol adjacency
Context **configure** *service vpn service-name rip group named-item bfd-liveness boolean*
Tree *bfd-liveness*
Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.
When configured to **false**, this command removes BFD from the associated protocol adjacency.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes per RIP update message
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neighbor [[interface-name](#)] *interface-name*

Synopsis	Enter the neighbor list instance
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[interface-name] *interface-name*

Synopsis	IP interface name
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i>
Tree	neighbor
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> check-zero <i>boolean</i>
Tree	check-zero
Description	<p>When configured to true, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to false, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command specifies the export route policies used to determine which routes are exported to RIP.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes per RIP update message
----------	---

Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> message-size <i>number</i>
Tree	message-size
Range	25 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive keyword

Synopsis	Accepted version on received packets
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> receive <i>keyword</i>
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send keyword

Synopsis	RIP version and method used to send RIP updates
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> send <i>keyword</i>
Tree	send
Options	none, version-1, broadcast, multicast, unicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure service vpn <i>service-name</i> rip group <i>named-item</i> neighbor <i>interface-name</i> timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

update *number*

Synopsis Timer that controls the frequency of updates

Context **configure** *service vprn* *service-name rip* *group named-item neighbor* *interface-name timers update number*

Tree *update*

Range 1 to 600

Units seconds

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

unicast-address [*address*] *ipv4-unicast-address*

Synopsis Add a list entry for **unicast-address**

Context **configure** *service vprn* *service-name rip* *group named-item neighbor* *interface-name unicast-address ipv4-unicast-address*

Tree *unicast-address*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[address] *ipv4-unicast-address*

Synopsis Unicast IPv6 address for the neighbor

Context **configure** *service vprn* *service-name rip* *group named-item neighbor* *interface-name unicast-address ipv4-unicast-address*

Tree *unicast-address*

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> receive <i>keyword</i>
Tree	receive
Options	version-1, version-2, both, none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> send <i>keyword</i>
Tree	send
Options	none, version-1, broadcast, multicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timers

Synopsis Enable the **timers** context
Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [timers](#)
Tree [timers](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

flush number

Synopsis RIP flush timer
Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [timers](#) [flush](#) *number*
Tree [flush](#)
Description This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range 1 to 1200
Units seconds
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

timeout number

Synopsis RIP timeout timer
Context **configure** [service vprn](#) *service-name* [rip group](#) *named-item* [timers](#) [timeout](#) *number*
Tree [timeout](#)
Description This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure service vprn <i>service-name</i> rip group <i>named-item</i> timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

import-policy *reference*

Synopsis	Import policies to decide routes for routing table
Context	configure service vprn <i>service-name</i> rip import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>named-item-64</i>
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-size *number*

Synopsis	Maximum number of routes in the RIP message
Context	configure service vprn <i>service-name</i> rip message-size <i>number</i>
Tree	message-size
Range	25 to 255

Default	25
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-in *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	configure service vprn <i>service-name</i> rip metric-in <i>number</i>
Tree	metric-in
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric-out *number*

Synopsis	Metric added to routes exported into RIP
Context	configure service vprn <i>service-name</i> rip metric-out <i>number</i>
Tree	metric-out
Range	1 to 16
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Route preference
Context	configure service vprn <i>service-name</i> rip preference <i>number</i>
Tree	preference
Range	1 to 255
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

propagate-metric *boolean*

Synopsis	Enable the BGP MED used to configure the RIP metric
Context	configure <i>service vprn service-name rip propagate-metric boolean</i>
Tree	<i>propagate-metric</i>
Description	<p>When configured to true, this command enables the BGP MED to be used to configure the RIP metric at the BGP to RIP transition on egress routers.</p> <p>When configured to false, this command sets the RIP metric to the optional value configured with the metric-out command plus one.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive *keyword*

Synopsis	Accepted version on received packets
Context	configure <i>service vprn service-name rip receive keyword</i>
Tree	<i>receive</i>
Options	version-1, version-2, both, none
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	configure <i>service vprn service-name rip send keyword</i>
Tree	<i>send</i>
Options	none, version-1, broadcast, multicast
Default	broadcast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure service vprn <i>service-name</i> rip split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

split-horizon boolean

Synopsis	Enable split horizon and poison reverse
Context	configure service vprn <i>service-name</i> ripng split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timers

Synopsis	Enable the timers context
Context	configure service vprn <i>service-name</i> ripng timers
Tree	timers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flush *number*

Synopsis	RIP flush timer
Context	configure service vprn <i>service-name</i> ripng timers flush <i>number</i>
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	RIP timeout timer
Context	configure service vprn <i>service-name</i> ripng timers timeout <i>number</i>
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update *number*

Synopsis	Timer that controls the frequency of updates
Context	configure service vprn <i>service-name</i> ripng timers update <i>number</i>
Tree	update
Range	1 to 600
Units	seconds

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-id *router-id*

Synopsis	Unique router ID for the router in the AS
Context	configure service <i>vpn</i> <i>service-name</i> router-id <i>router-id</i>
Tree	router-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure service <i>vpn</i> <i>service-name</i> service-id <i>number</i>
Tree	service-id
Range	1 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sfm-overload

Synopsis	Enable the sfm-overload context
Context	configure service <i>vpn</i> <i>service-name</i> sfm-overload
Tree	sfm-overload
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

holdoff-time *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	configure service vprn <i>service-name</i> sfm-overload holdoff-time <i>number</i>
Tree	holdoff-time
Range	1 to 600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sgt-qos

Synopsis	Enter the sgt-qos context
Context	configure service vprn <i>service-name</i> sgt-qos
Tree	sgt-qos
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dot1p

Synopsis	Enter the dot1p context
Context	configure service vprn <i>service-name</i> sgt-qos dot1p
Tree	dot1p
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

application [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[dot1p-app-name] keyword

Synopsis	Dot1p application ID that generates control traffic
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Options	arp, isis, pppoe
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dot1p (keyword | number)

Synopsis	Dot1p value to the traffic generated by this application
Context	configure service vprn <i>service-name</i> sgt-qos dot1p application <i>keyword dot1p (keyword number)</i>
Tree	dot1p
Range	0 to 7
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp

Synopsis	Enter the dscp context
Context	configure service vprn <i>service-name</i> sgt-qos dscp
Tree	dscp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

application [**dscp-app-name**] *keyword*

Synopsis	Enter the application list instance
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Description	<p>Commands in this context configure DSCP remarking for self-generated application traffic.</p> <p>All packets generated by the configured application instance use the value configured for the DSCP name or value. The instance can be Base, router, VPRN, or management.</p> <p>The system uses the DSCP value configured in this instance to:</p> <ul style="list-style-type: none"> • set the DSCP bits in the IP packet • signal from the CPM to the egress FC QoS policy to set the Ethernet 802.1p and MPLS EXP bits including, PPPoE, and IS-IS packets that do not carry DSCP bits • configure the DSCP value in the egress IP header (which the egress QoS policy does not overwrite)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[dscp-app-name] *keyword*

Synopsis	DSCP application ID that generates control traffic
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i>
Tree	application
Description	This command configures the DSCP application ID that generates control traffic.
Options	bgp, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, gtp, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, pfcp, ibcp, bfd
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	configure service vprn <i>service-name</i> sgt-qos dscp application <i>keyword</i> dscp (<i>keyword</i> <i>number</i>)
Tree	dscp

Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dscp-map [[dscp-name](#)] *keyword*

Synopsis	Enter the dscp-map list instance
Context	configure service vpn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[dscp-name] *keyword*

Synopsis	DSCP name mapped to forwarding class
Context	configure service vpn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc *keyword*

Synopsis	Value for the forwarding class for this mapping
Context	configure service vpn <i>service-name</i> sgt-qos dscp dscp-map <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort)

	af – Assured Forwarding (assured)
	l1 – Low 1 (assured)
	h2 – High 2 (high priority)
	ef – Expedited Forwarding (high priority)
	h1 – High 1 (high priority)
	nc – Network Control (high priority)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp

Synopsis	Enter the snmp context
Context	configure service vprn <i>service-name</i> snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access *boolean*

Synopsis	Enable SNMP access for the VPRN service
Context	configure service vprn <i>service-name</i> snmp access <i>boolean</i>
Tree	access
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community [[community-string](#)] *encrypted-leaf*

Synopsis	Enter the community list instance
Context	configure service vprn <i>service-name</i> snmp community <i>encrypted-leaf</i>
Tree	community
Description	<p>Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.</p> <p>VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are</p>

automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).

The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[community-string] *encrypted-leaf*

Synopsis SNMP v1/v2c community name associated with the VPRN

Context **configure** [service vprn](#) *service-name* [snmp community](#) *encrypted-leaf*

Tree [community](#)

Description This command specifies the SNMP v1/v2c community name associated with the VPRN in a protected format.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 166

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

access-permissions *keyword*

Synopsis Access permissions to MIB objects

Context **configure** [service vprn](#) *service-name* [snmp community](#) *encrypted-leaf* [access-permissions](#) *keyword*

Tree [access-permissions](#)

Options r, rw

Notes This element is mandatory.

Introduced 25.3.R2

static-routes

Synopsis	Enter the static-routes context
Context	configure service vprn <i>service-name</i> static-routes
Tree	static-routes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-down

Synopsis	Enable the hold-down context
Context	configure service vprn <i>service-name</i> static-routes hold-down
Tree	hold-down
Description	<p>Commands in this context enable the hold-down time feature globally for static routes in the system.</p> <p>The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap.</p> <p>The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial number

Synopsis	Value for the initial hold-down time
Context	configure service vpn <i>service-name</i> static-routes hold-down initial <i>number</i>
Tree	initial
Description	<p>This command specifies the initial value of the hold-down time globally for static routes in the system.</p> <p>When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.</p>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-value number

Synopsis	Maximum value of the hold-down time
Context	configure service vpn <i>service-name</i> static-routes hold-down max-value <i>number</i>
Tree	max-value
Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multiplier number

Synopsis	Multiplier of the previous hold-down time
Context	configure service vpn <i>service-name</i> static-routes hold-down multiplier <i>number</i>
Tree	multiplier
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*) *route-type* *keyword*

Synopsis	Enter the route list instance
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>static-routes</i> <i>route</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>route-type</i> <i>keyword</i>
Tree	<i>route</i>
Description	<p>Commands in this context create a static route entry. A prefix and netmask must be specified.</p> <p>After the static route context for the specified prefix and netmask has been created, additional options associated with the static route or routes may be specified through the inclusion of additional static route commands.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>static-routes</i> <i>route</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>route-type</i> <i>keyword</i>
Tree	<i>route</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-type *keyword*

Synopsis	Static route type
Context	configure <i>service</i> <i>vpn</i> <i>service-name</i> <i>static-routes</i> <i>route</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>route-type</i> <i>keyword</i>
Tree	<i>route</i>
Options	unicast, multicast
Notes	This element is part of a list key.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

blackhole

Synopsis Enable the **blackhole** context

Context **configure** **service** **vpn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole**

Tree **blackhole**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the static route operation

Context **configure** **service** **vpn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole** **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

community *community*

Synopsis Community ID associated with the static route

Context **configure** **service** **vpn** *service-name* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole** **community** *community*

Tree **community**

Description This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.

If at least one community is specified at the prefix level of the static route entry, this command is ignored.

String length 1 to 72

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole description <i>description-allow-all-white-spaces</i>

String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

generate-icmp *boolean*

Synopsis	Send ICMP unreachable messages when received packets match a static route with black-hole next-hop
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Static route metric
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword blackhole metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list

Synopsis	Enter the prefix-list context
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole prefix-list

cpe-check [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check

Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p>
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device

Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> community <i>community</i>
Tree	community
Description	<p>This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route.</p> <p>If at least one community is specified at the prefix level of the static route entry, this command is ignored.</p>
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> description <i>description-allow-all-white-spaces</i>
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Static route metric
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>named-item</i> tag <i>number</i>
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295

Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

next-hop [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis Enter the **next-hop** list instance

Context **configure** [service](#) [vpn](#) *service-name* [static-routes](#) [route](#) (*ipv4-prefix* | *ipv6-prefix*) [route-type](#) *keyword* [next-hop](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [next-hop](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

bfd-liveness *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness boolean
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

community *community*

Synopsis	Community ID associated with the static route
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) community community
Tree	community
Description	This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route. If at least one community is specified at the prefix level of the static route entry, this command is ignored.
String length	1 to 72
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpe-check [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	cpe-check
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) log <i>boolean</i>
Tree	log
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description-allow-all-white-spaces*

Synopsis	Text description

Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing-weight *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

metric *number*

Synopsis	Static route metric
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) metric <i>number</i>
Tree	metric
Description	This command configures the cost metric for the static route, expressed as a decimal integer. If there are multiple static routes with the same preference but different metrics, the lower cost (metric) route is installed.
Range	0 to 65535
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	Priority of static route over different route sources
Context	configure service vpn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	This command specifies the route preference to be assigned to the associated static route. The lower the preference value the more preferred the route is considered.
Range	1 to 255
Default	5

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-list

Synopsis	Enter the prefix-list context
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list
Tree	prefix-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flag keyword

Synopsis	Static route match condition from prefix list
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list flag <i>keyword</i>
Tree	flag
Options	any, all, none
Default	any
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name reference

Synopsis	Prefix list name
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list name <i>reference</i>
Tree	name
Reference	configure policy-options prefix-list <i>named-item-64</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router instance used for matching prefix list
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-list router-instance <i>string</i>
Tree	router-instance
Description	<p>This command configures the router instance used for matching against the prefix list. If the conditional static route is configured in a VPRN and the router instance is configured as "Base", the activation of the static route is dependent on the existence of routes in the Base router and the evaluation of the prefix list and flag is done in that context.</p> <p>By default there is no configured value for this command option, and the conditional static route is dependent on the existence of routes in the same router instance as the static route itself, subject to the details of the prefix list and the flag setting.</p> <p>Entries in a referenced prefix list that are not match type 'exact' are interpreted as though they are 'exact'.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tag <i>number</i>
Tree	tag
Description	<p>This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols.</p> <p>If a tag is specified at the prefix level of the static route entry, this command is ignored.</p>
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

validate-next-hop *boolean*

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) validate-next-hop <i>boolean</i>
Tree	validate-next-hop

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tag *number*

Synopsis	Static route tag
Context	configure service vprn <i>service-name</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-propagate

Synopsis	Enter the ttl-propagate context
Context	configure service vprn <i>service-name</i> ttl-propagate
Tree	ttl-propagate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local *keyword*

Synopsis	Local TTL propagation control for the VPRN
Context	configure service vprn <i>service-name</i> ttl-propagate local <i>keyword</i>
Tree	local
Description	This command specifies the local TTL propagation control for the VPRN and overrides the global configuration of the TTL propagation for locally generated packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transit keyword

Synopsis	Transit TTL propagation control for the VPRN
Context	configure service vprn <i>service-name</i> ttl-propagate transit <i>keyword</i>
Tree	transit
Description	This command overrides the global configuration of the TTL propagation for in transit packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

twamp-light

Synopsis	Enter the twamp-light context
Context	configure service vprn <i>service-name</i> twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light parameters.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reflector

Synopsis	Enable the reflector context
Context	configure service vprn <i>service-name</i> twamp-light reflector
Tree	reflector
Description	Commands in this context configure TWAMP Light session reflector options and enable TWAMP Light functionality.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state keyword

Synopsis	Administrative state of the TWAMP Light reflector
Context	configure service vprn <i>service-name</i> twamp-light reflector admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure service vprn <i>service-name</i> twamp-light reflector allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	allow-ipv6-udp-checksum-zero
Description	<p>When configured to true, the router processes IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.</p> <p>When configured to false, the router discards IPv6 packets that arrive with a UDP checksum of zero.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> twamp-light reflector description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure service vprn <i>service-name</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Description	Commands in this context configure which TWAMP Light packet prefixes the reflector processes.
Max. instances	50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Source prefix for the TWAMP-Light reflector
Context	configure service vprn <i>service-name</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure service vprn <i>service-name</i> twamp-light reflector prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Processing behavior type for the reflector
Context	configure <i>service vprn service-name twamp-light reflector type keyword</i>
Tree	<i>type</i>
Description	<p>This command configures the processing behavior of the TWAMP Light reflector.</p> <p>When the value is twamp-light the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is stamp, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to stamp. When the reflector is operating in stamp mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp – Reflector finds and processes supported STAMP TLVs twamp-light – Reflector does not check received PDU
Default	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

udp-port number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	configure <i>service vprn service-name twamp-light reflector udp-port number</i>
Tree	<i>udp-port</i>
Range	862 64364 to 64373
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn-type keyword

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VPRN type
Context	configure service vprn <i>service-name</i> vprn-type <i>keyword</i>
Tree	vprn-type
Options	regular, hub, spoke, subscriber-split-horizon
Default	regular
Introduced	25.3.R2

Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as hexadecimal string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification circuit-id hex-string <i>hex-string</i>
Tree	hex-string

String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duid-en

Synopsis	Enter the duid-en context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification duid-en
Tree	duid-en
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID of type duid-en as a hexadecimal string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification duid-en hex-string <i>hex-string</i>
Tree	hex-string
Description	This command configures the hexadecimal value for use in matching against the concatenation of the enterprise number and identifier fields of the DHCPv6 option CLIENTID (1) with DUID type = 2 (assigned by the vendor based on the enterprise number) in the DHCPv6 client message.
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duid-II-III *mac-unicast-address-no-zero***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address of the Client ID type duid-II or duid-III
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification duid-II-III <i>mac-unicast-address-no-zero</i>
Tree	duid-II-III
Description	This command configures the value for use in matching against the link-layer address field of the DHCPv6 option CLIENTID (1) with DUID type = 3 (based on the link-layer address) or DUID type = 1 (based on the link-layer address plus time) and hardware type = 1 (Ethernet) in the DHCPv6 client message. For DUID type = 1, the time field is ignored.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac *mac-unicast-address-no-zero***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification mac <i>mac-unicast-address-no-zero</i>
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option60

Synopsis	Enter the option60 context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> host-identification option60
Tree	option60

Introduced25.3.R2

Platforms7705 SAR Gen 2

ascii-string *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Tree	system-id
String length	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enter the ipv4 context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address

Synopsis	Enter the address context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address
Tree	address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gi-address *keyword*

Synopsis	Use gi-address to select a pool with the given scope
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address gi-address <i>keyword</i>
Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-address *ipv4-unicast-address*

Synopsis	Fixed IPv4 address of the host
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address ip-address <i>ipv4-unicast-address</i>
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pool

Synopsis	Enable the pool context
----------	--------------------------------

Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool delimiter <i>string</i>
Tree	delimiter
String length	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary *named-item*

Synopsis	Primary pool name
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool primary <i>named-item</i>
Tree	primary
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secondary *named-item*

Synopsis	Secondary pool name
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address pool secondary <i>named-item</i>
Tree	secondary

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-pool-from-client

Synopsis	Enable the use-pool-from-client context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: gi-address , ip-address , pool , or use-pool-from-client .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 address use-pool-from-client delimiter <i>string</i>
Tree	delimiter
String length	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gi-address *ipv4-unicast-address*

Synopsis	GI addresses based on the host entry in the LUDB
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 gi-address ipv4-unicast-address
Tree	gi-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option [[number](#)] (*number* | *keyword*)

Synopsis	Enter the option list instance
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>)
Tree	option
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[number] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>)
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) ascii-string <i>string-not-all-spaces</i>
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

duration *number*

Synopsis	DHCP option as time duration
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

empty

Synopsis	Remove DHCP option configuration
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) empty
Tree	empty
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) hex-string <i>hex-string</i>
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) ipv4-address <i>ipv4-address</i>
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe host <i>named-item</i> ipv4 option (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i>
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask [type](#) *keyword*

Synopsis	Enter the mask list instance
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i>
Tree	mask
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Matching type to identify a host
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i>
Tree	mask
Description	This command configures the data type that represents the type of matching performed to identify a DHCP host.
Options	circuit-id, remote-id, sap-id, string, system-id, option60, duid-en, duid-II-Ilt
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix

Synopsis	Enable the prefix context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> prefix
Tree	prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

length number

Synopsis	PPP mask prefix length
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> prefix length <i>number</i>
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

string string

Synopsis	Prefix string
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> prefix string <i>string</i>

Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

suffix

Synopsis	Enable the suffix context
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix
Tree	suffix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

length *number*

Synopsis	PPP mask suffix length
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix length <i>number</i>
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

string *string*

Synopsis	Suffix substring
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe mask type <i>keyword</i> suffix string <i>string</i>
Tree	string
Description	This command specifies a substring that is stripped off the end of the incoming circuit ID before it is matched against the value configured in the circuit ID.
String length	1 to 127
String format	'string' must not start with * (suffix length 1..127)

Notes	The following elements are part of a mandatory choice: length or string .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match-list *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE host match type
Context	configure subscriber-mgmt local-user-db <i>named-item</i> ipoe match-list <i>keyword</i>
Tree	match-list
Description	This command specifies the type of matching done to identify a host. There are different match-types for IPoE hosts.
Options	circuit-id, mac, remote-id, sap-id, service-id, string, system-id, option60, encap-tag-range, dual-stack-remote-id, derived-id, ip, encap-tag-separate-range, duid-en, duid-ll-llt
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rip-policy [[name](#)] *named-item*

Synopsis	Enter the rip-policy list instance
Context	configure subscriber-mgmt rip-policy <i>named-item</i>
Tree	rip-policy
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	RIP policy name
----------	-----------------

Context	configure subscriber-mgmt rip-policy <i>named-item</i>
Tree	rip-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	configure subscriber-mgmt rip-policy <i>named-item</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command specifies the authentication key in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 102
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure subscriber-mgmt rip-policy <i>named-item</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest, message-digest-20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure subscriber-mgmt rip-policy <i>named-item</i> description <i>description</i>
Tree	description

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

4.29.1 system command descriptions

system

Synopsis	Enter the system context
Context	configure system
Tree	system
Description	Commands in this context enable the configuration of general system level functions and router management protocols.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm-contact-input [[input-pin-number](#)] *number*

Synopsis	Enter the alarm-contact-input list instance
Context	configure system alarm-contact-input <i>number</i>
Tree	alarm-contact-input
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[\[input-pin-number\]](#) *number*

Synopsis	Alarm contact input number
Context	configure system alarm-contact-input <i>number</i>
Tree	alarm-contact-input
Range	1 to 4
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the alarm contact input
Context	configure system alarm-contact-input <i>number</i> admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

clear-message *description*

Synopsis	Text message sent in the log event when an alarm clears
Context	configure system alarm-contact-input <i>number</i> clear-message <i>description</i>
Tree	clear-message
Description	<p>This command configures a text message to be included in the log event that is sent when the system clears an alarm.</p> <p>The system generates the default "Alarm Input Cleared" message if no message is configured. The clear-message string is included in the log event when the pin changes to the normal state.</p>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	Alarm Input Cleared
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

description *long-description*

Synopsis	Text description
Context	configure system alarm-contact-input <i>number</i> description <i>long-description</i>
Tree	description
String length	1 to 160
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

normal-state *keyword*

Synopsis	Normal state associated with the alarm contact input
Context	configure system alarm-contact-input <i>number</i> normal-state <i>keyword</i>
Tree	normal-state

Options	open, closed
Default	open
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

trigger-message *description*

Synopsis	Text message sent in the log event when input changes
Context	configure system alarm-contact-input <i>number</i> trigger-message <i>description</i>
Tree	trigger-message
Description	<p>This command configures a text message to be included in the log event that is sent when the system generates an alarm.</p> <p>The system generates the default message "Alarm Input Triggered" if no message is configured. This command's message string is included in the log event when the pin changes from the normal state.</p>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	Alarm Input Triggered
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

alarms

Synopsis	Enter the alarms context
Context	configure system alarms
Tree	alarms
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the system alarm
Context	configure system alarms admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-cleared *number*

Synopsis	Maximum number of cleared alarms
Context	configure system alarms max-cleared <i>number</i>
Tree	max-cleared
Range	0 to 500
Default	500
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-boot-license-violations *boolean*

Synopsis	Allow boot license violations in boot-up configuration
Context	configure system allow-boot-license-violations <i>boolean</i>
Tree	allow-boot-license-violations
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

boot-bad-exec *url*

Synopsis	CLI script file to execute following a failed boot
Context	configure system boot-bad-exec <i>url</i>
Tree	boot-bad-exec
Description	<p>This command configures the name of the CLI script file to be run following the failure of a boot configuration.</p> <p>Note: This command has no effect in model-driven mode.</p>
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

boot-good-exec *url*

Synopsis	CLI script file to execute following successful boot
Context	configure system boot-good-exec <i>url</i>
Tree	boot-good-exec
Description	This command configures a URL for a CLI script to exec following the success of a boot configuration. Related Commands exec - This command executes the contents of a text file as if they were CLI commands entered at the console.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

central-frequency-clock

Synopsis	Enter the central-frequency-clock context
Context	configure system central-frequency-clock
Tree	central-frequency-clock
Description	Commands in this context configure synchronous interface timing.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

gnss

Synopsis	Enter the gnss context
Context	configure system central-frequency-clock gnss
Tree	gnss
Description	Commands in this context configure system timing using GNSS on platforms that support one or more embedded GNSS receivers.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the GNSS timing reference
----------	---

Context	configure system central-frequency-clock gnss admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-override *keyword*

Synopsis	Quality level override for a timing reference
Context	configure system central-frequency-clock gnss ql-override <i>keyword</i>
Tree	ql-override
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eeec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ptp

Synopsis	Enter the ptp context
Context	configure system central-frequency-clock ptp
Tree	ptp
Description	Commands in this context configure system timing using IEEE 1588-2008, PTP.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state keyword

Synopsis	Administrative state of the PTP timing reference
Context	configure system central-frequency-clock ptp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-override keyword

Synopsis	Quality level override of a timing reference
Context	configure system central-frequency-clock ptp ql-override <i>keyword</i>
Tree	ql-override
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable prc – SDH Primary Reference Clock traceable ssua – SDH primary level Synchronization Supply Unit traceable ssub – SDH second Level Synchronization Supply Unit traceable sec – SDH Synchronous Equipment Clock traceable eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eeec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-minimum keyword

Synopsis	Minimum signal QL for system timing module
Context	configure system central-frequency-clock ql-minimum <i>keyword</i>
Tree	ql-minimum

Description	This command configures the minimum acceptable QL value for a signal to be considered for selection by the system timing module.
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable prc – SDH Primary Reference Clock traceable ssua – SDH primary level Synchronization Supply Unit traceable ssub – SDH second Level Synchronization Supply Unit traceable sec – SDH Synchronous Equipment Clock traceable eec1 – SDH Ethernet Equipment Clock eec2 – SONET Ethernet Equipment Clock eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eeec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-selection *boolean*

Synopsis	Consider QL in system and BITS output timing
Context	configure system central-frequency-clock ql-selection <i>boolean</i>
Tree	ql-selection
Description	When configured to true , the router considers the QL when selecting the system timing reference and BITS output timing reference. The QL is conveyed via the SSM or forced using the ql-override command.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ref-order

Synopsis	Enter the ref-order context
Context	configure system central-frequency-clock ref-order
Tree	ref-order

Description	Commands in this context specify the priority order of the synchronous equipment timing subsystem. If a reference source is disabled, this command defines the next reference source for the clock. If all reference sources are disabled, clocking is derived from a local oscillator. If a timing reference is linked to a source port that is operationally down, the port is no longer a qualified, valid reference.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

first keyword

Synopsis	First preferred timing reference source
Context	configure system central-frequency-clock ref-order first <i>keyword</i>
Tree	first
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

fourth keyword

Synopsis	Fourth preferred timing reference source
Context	configure system central-frequency-clock ref-order fourth <i>keyword</i>
Tree	fourth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

second keyword

Synopsis	Second preferred timing reference source
Context	configure system central-frequency-clock ref-order second <i>keyword</i>
Tree	second
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

third keyword

Synopsis	Third preferred timing reference source
Context	configure system central-frequency-clock ref-order third <i>keyword</i>
Tree	third
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ref1

Synopsis	Enter the ref1 context
Context	configure system central-frequency-clock ref1
Tree	ref1
Description	Commands in this context configure the first timing reference. [
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state keyword

Synopsis	Administrative state of the first timing reference
Context	configure system central-frequency-clock ref1 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-override keyword

Synopsis	Quality level override of a timing reference
Context	configure system central-frequency-clock ref1 ql-override <i>keyword</i>
Tree	ql-override

Description	This command configures the QL value used for the reference for SETS input selection. This value overrides any value received by the referenced SSM process.
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable prc – SDH Primary Reference Clock traceable ssua – SDH primary level Synchronization Supply Unit traceable ssub – SDH second Level Synchronization Supply Unit traceable sec – SDH Synchronous Equipment Clock traceable eec1 – SDH Ethernet Equipment Clock eec2 – SONET Ethernet Equipment Clock eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eeec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

source-port *port*

Synopsis	Source port for the first timing reference
Context	configure system central-frequency-clock ref1 source-port <i>port</i>
Tree	source-port
Description	<p>This command configures the source port for timing reference ref1. If the port is unavailable or the link is down, the reference sources are reevaluated according to the reference order configured in the ref-order command.</p> <p>There are platform-based restrictions on the location for the source port locations for ref1. See the <i>7705 SAR Gen 2 Basic System Configuration Guide</i> for more information.</p>
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ref2

Synopsis	Enter the ref2 context
Context	configure system central-frequency-clock ref2
Tree	ref2

Description	Commands in this context configure the second timing reference.
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the second timing reference
Context	configure system central-frequency-clock ref2 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ql-override *keyword*

Synopsis	Quality level override of a timing reference
Context	configure system central-frequency-clock ref2 ql-override <i>keyword</i>
Tree	ql-override
Description	This command configures the QL value used for the reference for SETS input selection. This value overrides any value received by the referenced SSM process.
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable prc – SDH Primary Reference Clock traceable ssua – SDH primary level Synchronization Supply Unit traceable ssub – SDH second Level Synchronization Supply Unit traceable sec – SDH Synchronous Equipment Clock traceable eec1 – SDH Ethernet Equipment Clock eec2 – SONET Ethernet Equipment Clock eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

source-port *port*

Synopsis Source port for the second timing reference

Context **configure** **system** **central-frequency-clock** **ref2** **source-port** *port*

Tree **source-port**

Description This command configures the source port for timing reference **ref2**. If the port is unavailable or the link is down, the reference sources are reevaluated according to the reference order configured in the **ref-order** command.

There are platform-based restrictions on the location for the source port locations for **ref2**. See the *7705 SAR Gen 2 Basic System Configuration Guide* for more information.

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

revert *boolean*

Synopsis Revert to higher-priority reference source

Context **configure** **system** **central-frequency-clock** **revert** *boolean*

Tree **revert**

Description When configured to **true**, the router operates in revertive mode, allowing the clock to revert to a higher priority reference if the current reference goes offline or becomes unstable. When the failed reference becomes operational, it is eligible for selection.

When configured to **false**, the router does not allow a failed clocked source to be selected again.

Default false

Introduced 25.3.R2

Platforms 7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

wait-to-restore *number*

Synopsis Time to revalidate a previously failed input reference

Context **configure** **system** **central-frequency-clock** **wait-to-restore** *number*

Tree **wait-to-restore**

Description This command configures the time for the Wait to Restore timer. A previously failed input reference must be valid for the specified time before it can be used for either the BITS output or the central clock input reference.

Range	1 to 12
Units	minutes
Introduced	25.3.R2
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

cli-code *cli-description*

Synopsis	CLLI code value for the system
Context	configure system cli-code <i>cli-description</i>
Tree	cli-code
String length	11
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

congestion-management *boolean*

Synopsis	Enable Virtual Service Router congestion management
Context	configure system congestion-management <i>boolean</i>
Tree	congestion-management
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

contact *description*

Synopsis	Contact information for the managed node
Context	configure system contact <i>description</i>
Tree	contact
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

coordinates *description*

Synopsis	GPS coordinates for the system location
Context	configure system coordinates <i>description</i>
Tree	coordinates
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cron

Synopsis	Enter the cron context
Context	configure system cron
Tree	cron
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

schedule [[schedule-name](#)] *named-item* [owner](#) *named-item*

Synopsis	Enter the schedule list instance
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
Max. instances	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[schedule-name] *named-item*

Synopsis	Schedule name
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *named-item*

Synopsis	Schedule owner
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i>
Tree	schedule
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
MD-CLI default	TIMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the CRON schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count *number*

Synopsis	Number of times to repeat a periodic schedule run
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> count <i>number</i>
Tree	count
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

day-of-month *number*

Synopsis	Days in a month when a schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> day-of-month <i>number</i>
Tree	day-of-month
Range	-31 to -1 1 to 31
Max. instances	62
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end-time

Synopsis	Enter the end-time context
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time
Tree	end-time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

date-and-time *date-and-time*

Synopsis	Date and time to stop triggering the schedule
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> end-time date-and-time <i>date-and-time</i>
Tree	date-and-time
Notes	The following elements are part of a choice: date-and-time or (day and time).

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

day *keyword*

Synopsis Day to stop triggering the schedule
Context **configure** [system cron schedule](#) *named-item* [owner](#) *named-item* [end-time](#) [day](#) *keyword*
Tree [day](#)
Options sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes The following elements are part of a choice: **date-and-time** or (**day** and **time**).
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

time *hours-minutes-twenty-four*

Synopsis Time to stop triggering the schedule
Context **configure** [system cron schedule](#) *named-item* [owner](#) *named-item* [end-time](#) [time](#) *hours-minutes-twenty-four*
Tree [time](#)
String length 5
String format 'hours-minutes-twenty-four' must be hh:mm, hours 00-23, minutes 00-59 (e.g. 14:30)
Notes The following elements are part of a choice: **date-and-time** or (**day** and **time**).
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

hour *number*

Synopsis Hours within a day when the schedule runs
Context **configure** [system cron schedule](#) *named-item* [owner](#) *named-item* [hour](#) *number*
Tree [hour](#)
Range 0 to 23
Max. instances 24
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

interval *number*

Synopsis	Time between each periodic schedule run
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> interval <i>number</i>
Tree	interval
Range	30 to 42949672
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minute *number*

Synopsis	Minutes in an hour when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> minute <i>number</i>
Tree	minute
Range	0 to 59
Max. instances	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

month (*keyword* | *number*)

Synopsis	Months when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> month (<i>keyword</i> <i>number</i>)
Tree	month
Range	1 to 12
Options	january, february, march, april, may, june, july, august, september, october, november, december
Max. instances	12
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

script-policy

Synopsis	Enter the script-policy context
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy
Tree	script-policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *named-item*

Synopsis	CLI script policy name
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy name <i>named-item</i>
Tree	name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *named-item*

Synopsis	Script policy owner
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> script-policy owner <i>named-item</i>
Tree	owner
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Schedule type
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> type <i>keyword</i>
Tree	type
Options	periodic, calendar, oneshot

Default	periodic
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weekday (*keyword | number*)

Synopsis	Weekdays when the schedule runs
Context	configure system cron schedule <i>named-item</i> owner <i>named-item</i> weekday (<i>keyword number</i>)
Tree	weekday
Range	1 to 7
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure system dhcp6
Tree	dhcp6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

adv-noaddrs-global *keyword*

Synopsis	Applications to send NoAddrsAvail in Advertise messages
Context	configure system dhcp6 adv-noaddrs-global <i>keyword</i>
Tree	adv-noaddrs-global
Options	esm-relay, server
Max. instances	2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dns

Synopsis	Enter the dns context
Context	configure system dns
Tree	dns
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address-pref *keyword*

Synopsis	Preference in DNS address resolving order
Context	configure system dns address-pref <i>keyword</i>
Tree	address-pref
Options	ipv4-only, ipv6-first
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dnssec

Synopsis	Enter the dnssec context
Context	configure system dns dnssec
Tree	dnssec
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ad-validation *keyword*

Synopsis	Validation of AD-bit presence in DNS server responses
Context	configure system dns dnssec ad-validation <i>keyword</i>
Tree	ad-validation
Options	fall-through – Allow non-DNSSEC responses to fall-through to permit resolution in case of validation failure drop – Drop non-DNSSEC responses in case of validation failure
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure system eth-cfm
Tree	eth-cfm
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-auto-id

Synopsis	Enter the md-auto-id context
Context	configure system eth-cfm md-auto-id
Tree	md-auto-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-index-range

Synopsis	Enable the ma-index-range context
Context	configure system eth-cfm md-auto-id ma-index-range
Tree	ma-index-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the range
Context	configure system eth-cfm md-auto-id ma-index-range end <i>number</i>
Tree	end
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

start *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the range
Context	configure system eth-cfm md-auto-id ma-index-range start <i>number</i>
Tree	start
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-index-range

Synopsis	Enable the md-index-range context
Context	configure system eth-cfm md-auto-id md-index-range
Tree	md-index-range
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the range
Context	configure system eth-cfm md-auto-id md-index-range end <i>number</i>
Tree	end
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

start *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the range
Context	configure system eth-cfm md-auto-id md-index-range start <i>number</i>
Tree	start
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

named-display *boolean*

Synopsis	Enable administrative name display in CLI show outputs
Context	configure system eth-cfm named-display <i>boolean</i>
Tree	named-display
Description	<p>When configured to true, the system displays the administrative names for domains, associations, and bridge-identifiers in show eth-cfm command outputs in addition to the numerical maintenance domain (MD) index, maintenance association (MA) index, and bridge ID values. The administrative names are displayed underneath the numerical values, each on a separate row.</p> <p>When configured to false, the system only displays the numerical MD index, MA index, and bridge ID values in show eth-cfm command outputs.</p>
Default	false
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

redundancy

Synopsis	Enter the redundancy context
Context	configure system eth-cfm redundancy
Tree	redundancy

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mc-lag

Synopsis	Enter the mc-lag context
Context	configure system eth-cfm redundancy mc-lag
Tree	mc-lag
Description	Commands in this context configure the MC-LAG specific ETH-CFM redundancy options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

propagate-hold-time (*number* | *keyword*)

Synopsis	Delay timer value for the fault propagation
Context	configure system eth-cfm redundancy mc-lag propagate-hold-time (<i>number</i> <i>keyword</i>)
Tree	propagate-hold-time
Description	This command configures the delay for fault propagation because of port or MC-LAG state changes. This provides the amount of time for system stabilization during a port state change that may be protected by MC-LAG.
Range	1 to 60
Units	seconds
Options	none
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standby-mep *boolean*

Synopsis	Allow standby MC-LAG MEPs to act administratively down
Context	configure system eth-cfm redundancy mc-lag standby-mep <i>boolean</i>
Tree	standby-mep
Description	This command, which is system wide, configures MEPs to track the state of MC-LAG. This allows MEPs on the standby MC-LAG to act administratively down.
Default	false

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

slm

Synopsis	Enter the slm context
Context	configure system eth-cfm slm
Tree	slm
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inactivity-timer *number*

Synopsis	SLR inactivity timer to maintain the stale test data
Context	configure system eth-cfm slm inactivity-timer <i>number</i>
Tree	inactivity-timer
Description	This command configures the time that the responder keeps a test active. If the time between packets exceeds this value within a test, the responder marks the previous test as complete. It treats any new packets from a peer with the same test ID, source MAC, and MEP-ID as a new test responding with the sequence number one.
Range	10 to 100
Units	seconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grpc

Synopsis	Enter the grpc context
Context	configure system grpc
Tree	grpc
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the gRPC server
Context	configure system grpc admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	configure system grpc allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, the system allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-server-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

custom-proto [\[name\]](#) *named-item*

Synopsis	Enter the custom-proto list instance
Context	configure system grpc custom-proto <i>named-item</i>
Tree	custom-proto
Max. instances	1
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Custom proto name
Context	configure system grpc custom-proto <i>named-item</i>

Tree	custom-proto
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of customized proto
Context	configure system grpc custom-proto <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system grpc custom-proto <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

python-script *reference*

Synopsis	Python script name handling RPC from proto file
Context	configure system grpc custom-proto <i>named-item</i> python-script <i>reference</i>
Tree	python-script
Reference	configure python python-script <i>named-item</i>
Introduced	26.7.R1

Platforms 7705 SAR Gen 2

urls *cflash-url*

Synopsis Locations of compiled proto file

Context **configure** [system](#) [grpc](#) [custom-proto](#) *named-item* [urls](#) *cflash-url*

Tree [urls](#)

String length 1 to 200

String format 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path)
'cflash-url' must have each path segment at most 99 characters

Max. instances 3

Notes This element is ordered by the user.

Introduced 26.7.R1

Platforms 7705 SAR Gen 2

delay-on-boot *number*

Synopsis Delay for gRPC connections after system boot

Context **configure** [system](#) [grpc](#) [delay-on-boot](#) *number*

Tree [delay-on-boot](#)

Description This command configures the delay timer for gRPC connections. When the timer expires, gRPC becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging.

When no delay is configured, connections are accepted after the system boots and gRPC becomes operational.

Range 1 to 3600

Units seconds

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

gnmi

Synopsis Enter the **gnmi** context

Context **configure** [system](#) [grpc](#) [gnmi](#)

Tree [gnmi](#)

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the gNMI service
Context	configure system grpc gnmi admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	configure system grpc gnmi auto-config-save <i>boolean</i>
Tree	auto-config-save
Description	When configured to true , the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

proto-version *keyword*

Synopsis	gnmi.proto version
Context	configure system grpc gnmi proto-version <i>keyword</i>
Tree	proto-version
Description	This command sets the gnmi.proto version that the gRPC server should use for all gNMI RPCs. Only use options other than latest for backward compatibility with legacy collectors.
Options	latest – Latest version 0.8.0 v070 – Version 0.7.0
Default	latest
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

gnoi

Synopsis Enter the **gnoi** context
Context **configure** [system grpc gnoi](#)
Tree [gnoi](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

cert-mgmt

Synopsis Enter the **cert-mgmt** context
Context **configure** [system grpc gnoi cert-mgmt](#)
Tree [cert-mgmt](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of gNOI CertificateManagement
Context **configure** [system grpc gnoi cert-mgmt admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

file

Synopsis Enter the **file** context
Context **configure** [system grpc gnoi file](#)
Tree [file](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the gNOI File service
Context	configure system grpc gnoi file admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system

Synopsis	Enter the system context
Context	configure system grpc gnoi system
Tree	system
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the gNOI System service
Context	configure system grpc gnoi system admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

listening-port *number*

Synopsis	Listening port for the gRPC server
Context	configure system grpc listening-port <i>number</i>
Tree	listening-port
Range	1024 to 49151 57400
Default	57400

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-msg-size *number*

Synopsis	Maximum size of received message
Context	configure system grpc max-msg-size <i>number</i>
Tree	max-msg-size
Range	1 to 1024
Units	megabytes
Default	512
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-keepalive

Synopsis	Enter the tcp-keepalive context
Context	configure system grpc tcp-keepalive
Tree	tcp-keepalive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	configure system grpc tcp-keepalive admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
----------	--

Context	configure system grpc tcp-keepalive idle-time <i>number</i>
Tree	idle-time
Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	configure system grpc tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system grpc tcp-keepalive retries <i>number</i>
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-server-profile *reference*

Synopsis	Preferred TLS server profile
Context	configure system grpc tls-server-profile <i>reference</i>
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-server-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grpc-tunnel

Synopsis	Enter the grpc-tunnel context
Context	configure system grpc-tunnel
Tree	grpc-tunnel
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-on-boot *number*

Synopsis	Delay for gRPC tunnels after system boot
Context	configure system grpc-tunnel delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for gRPC tunnels. When the timer expires, gRPC tunnels become operational and connections are accepted. This delay prevents the system from trying to initiate gRPC tunnels while it is still converging.</p> <p>When no delay is configured, gRPC tunnels are initiated after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination-group [[name](#)] *named-item*

Synopsis	Enter the destination-group list instance
Context	configure system grpc-tunnel destination-group <i>named-item</i>
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Destination group name
Context	configure system grpc-tunnel destination-group <i>named-item</i>
Tree	destination-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-unsecure-connection

Synopsis	Allow unsecured operation of gRPC connections
Context	configure system grpc-tunnel destination-group <i>named-item</i> allow-unsecure-connection
Tree	allow-unsecure-connection
Description	This command allows a gRPC tunnel to run without a secured transport protocol. Data is transferred in unencrypted form.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system grpc-tunnel destination-group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*) **port** *number*

Synopsis	Enter the destination list instance
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Synopsis	Address of the destination within the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port number

Synopsis	TCP port number for the destination
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number
Tree	destination
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Local IP address of packets sent from the source
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number local-source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

originated-qos-marking *keyword*

Synopsis	QoS marking used for gRPC tunnel packets
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port number originated-qos-marking <i>keyword</i>
Tree	originated-qos-marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router instance for the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-keepalive

Synopsis	Enter the tcp-keepalive context
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive
Tree	tcp-keepalive
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive idle-time <i>number</i>
Tree	idle-time

Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system grpc-tunnel destination-group <i>named-item</i> tcp-keepalive retries <i>number</i>
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	configure system grpc-tunnel destination-group <i>named-item</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tunnel [[name](#)] *named-item*

Synopsis	Enter the tunnel list instance
Context	configure system grpc-tunnel tunnel <i>named-item</i>
Tree	tunnel
Description	Commands in this context configure gRPC-tunnel-related parameters.
Max. instances	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Tunnel name
Context	configure system grpc-tunnel tunnel <i>named-item</i>
Tree	tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the tunnel
Context	configure system grpc-tunnel tunnel <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system grpc-tunnel tunnel <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination-group *reference*

Synopsis	Destination group used in the tunnel
Context	configure system grpc-tunnel tunnel <i>named-item</i> destination-group <i>reference</i>
Tree	destination-group
Reference	configure system grpc-tunnel destination-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

handler [[name](#)] *named-item*

Synopsis	Enter the handler list instance
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i>
Tree	handler

Description	Commands in this context configure handler parameters for this instance. Multiple handlers can be created for any tunnel.
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Handler name
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i>
Tree	handler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the handler
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP port number the handler listens to internally
Context	configure system grpc-tunnel tunnel <i>named-item</i> handler <i>named-item</i> port <i>number</i>
Tree	port
Range	1 to 65535
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

target-type

Synopsis Enter the **target-type** context

Context **configure** **system** **grpc-tunnel** **tunnel** *named-item* **handler** *named-item* **target-type**

Tree **target-type**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

custom-type *string*

Synopsis Custom string for target type

Context **configure** **system** **grpc-tunnel** **tunnel** *named-item* **handler** *named-item* **target-type** **custom-type** *string*

Tree **custom-type**

Description This command configures a custom string for the target type. This string can correspond to specific values used by the gRPC tunnel protocol, such as GNMI_GNOI or SSH. If a custom string is defined, the gRPC tunnel client must specify the string to request a session for that handler. The string must be unique within a tunnel.

String length 1 to 64

String format 'custom-type' must contain only uppercase letters, digits or underscores

Notes The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

grpc-server

Synopsis Target type set to GNMI_GNOI

Context **configure** **system** **grpc-tunnel** **tunnel** *named-item* **handler** *named-item* **target-type** **grpc-server**

Tree **grpc-server**

Description When configured, this command assigns the gRPC server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of GNMI_GNOI.

Notes The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ssh-server

Synopsis Target type is SSH

Context **configure** [system](#) [grpc-tunnel tunnel](#) *named-item* [handler](#) *named-item* [target-type ssh-server](#)

Tree [ssh-server](#)

Description When configured, this command assigns the SSH server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of SSH.

Notes The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

target-name

Synopsis Enter the **target-name** context

Context **configure** [system](#) [grpc-tunnel tunnel](#) *named-item* [target-name](#)

Tree [target-name](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

custom-string *named-item-64*

Synopsis Custom target name

Context **configure** [system](#) [grpc-tunnel tunnel](#) *named-item* [target-name](#) [custom-string](#) *named-item-64*

Tree [custom-string](#)

String length 1 to 64

String format 'string-not-all-spaces' must contain at least one non-space character

Notes The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

node-name

Synopsis	Set the node name as target name
Context	configure system grpc-tunnel tunnel <i>named-item</i> target-name node-name
Tree	node-name
Description	When configured, this command uses the node name as the target name. The node name is configured by the configure system name command.
Notes	The following elements are part of a choice: custom-string , node-name , or user-agent .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-agent

Synopsis	Set the user agent as the target name
Context	configure system grpc-tunnel tunnel <i>named-item</i> target-name user-agent
Tree	user-agent
Description	When configured, this command uses the user agent as the target name. The agent is a string consisting of <i>node-name:vendor:model:software-version</i> .
Notes	The following elements are part of a choice: custom-string , node-name , or user-agent .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp-vse *boolean*

Synopsis	Enable vendor-specific extensions to ICMP
Context	configure system icmp-vse <i>boolean</i>
Tree	icmp-vse
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip

Synopsis	Enter the ip context
----------	-----------------------------

Context	configure system ip
Tree	ip
Description	Commands in this context configure system-wide IP router options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

buffer-unresolved-packets *boolean*

Synopsis	Buffer unresolved packets during ARP
Context	configure system ip buffer-unresolved-packets <i>boolean</i>
Tree	buffer-unresolved-packets
Description	<p>When configured to true, the system buffers IPv4 and IPv6 packets waiting for the address resolution process (ARP) or neighbor discovery (ND) reply.</p> <p>When configured to false, the system discards packets during the address resolution process. The system discards IPv4 and IPv6 traffic needing a destination resolution that is buffered while waiting for a response to avoid any potential of out-of-order delivery of packets to the resolved destination. As a result, after the ARP or ND entry is populated, the system delivers only newly received packets in order.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-unique-if-index *boolean*

Synopsis	Force creation of globally unique IP interface indexes
Context	configure system ip enforce-unique-if-index <i>boolean</i>
Tree	enforce-unique-if-index
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forward-6in4 *boolean*

Synopsis	Allow forwarding of IPv6 over IPv4 to system IP address
Context	configure system ip forward-6in4 <i>boolean</i>
Tree	forward-6in4

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

forward-ip-over-gre *boolean*

Synopsis	Allow forwarding of IP over GRE to system IP address
Context	configure system ip forward-ip-over-gre <i>boolean</i>
Tree	forward-ip-over-gre
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-eh *keyword*

Synopsis	Number of IPv6 extension headers parsed in line cards
Context	configure system ip ipv6-eh <i>keyword</i>
Tree	ipv6-eh
Options	max, limited
Default	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lACP

Synopsis	Enter the lACP context
Context	configure system lACP
Tree	lACP
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-priority *number*

Synopsis	LACP system priority on aggregated Ethernet interfaces
Context	configure system lACP system-priority <i>number</i>

Tree	system-priority
Range	1 to 65535
Default	32768
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lldp

Synopsis	Enter the lldp context
Context	configure system lldp
Tree	lldp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of LLDP
Context	configure system lldp admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message-fast-tx *number*

Synopsis	Interval at which LLDP frames are transmitted
Context	configure system lldp message-fast-tx number
Tree	message-fast-tx
Description	This command configures the interval at which LLDP frames are transmitted on behalf of the LLDP during a fast transmission period.
Range	1 to 3600
Units	seconds
Default	1
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

message-fast-tx-init *number*

Synopsis PDUs to transmit during the fast transmission period

Context **configure** [system lldp message-fast-tx-init](#) *number*

Tree [message-fast-tx-init](#)

Range 1 to 8

Default 4

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

notification-interval *number*

Synopsis Minimum interval between change notifications

Context **configure** [system lldp notification-interval](#) *number*

Tree [notification-interval](#)

Range 5 to 3600

Units seconds

Default 5

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

reinit-delay *number*

Synopsis Time required before re-initializing LLDP on a port

Context **configure** [system lldp reinit-delay](#) *number*

Tree [reinit-delay](#)

Range 1 to 10

Units seconds

Default 2

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

tx-credit-max *number*

Synopsis	Maximum consecutive LLDPDUs that can be transmitted
Context	configure system lldp tx-credit-max <i>number</i>
Tree	tx-credit-max
Range	1 to 100
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tx-hold-multiplier *number*

Synopsis	Transmit interval multiplier
Context	configure system lldp tx-hold-multiplier <i>number</i>
Tree	tx-hold-multiplier
Range	2 to 10
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tx-interval *number*

Synopsis	LLDP transmit interval
Context	configure system lldp tx-interval <i>number</i>
Tree	tx-interval
Range	5 to 32768
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load-balancing

Synopsis	Enter the load-balancing context
Context	configure system load-balancing

Tree	load-balancing
Description	<p>Commands in this context configure the interface per-flow load-balancing options that apply to traffic entering this interface and egressing over a LAG or ECMP on system egress. This setting is per interface.</p> <p>Load-balancing options configured at the interface level overwrite load-balancing options configured at the system level.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

l4-load-balancing *boolean*

Synopsis	Use load balancing based on Layer 4 fields
Context	configure system load-balancing l4-load-balancing <i>boolean</i>
Tree	l4-load-balancing
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsr-load-balancing *keyword*

Synopsis	Algorithm for system-wide LSR load balancing
Context	configure system load-balancing lsr-load-balancing <i>keyword</i>
Tree	lsr-load-balancing
Description	<p>This command configures system-wide LSR load balancing. Hashing can be enabled on the label stack, IP header, or both. The hashing can be at an LSR for spraying labeled IP packets over multiple equal-cost paths, or over multiple links of a LAG group.</p> <p>The LSR hash routine operates on the label stack and the IP header, if a packet is IPv4. An LSR considers a packet to be IPv4 if the first nibble following the bottom of the label stack is 4. The hash on the label stack and IPv4 and IPv6 headers can be enabled or disabled at the system level or incoming network IP interface level.</p> <p>lbl-ip-l4-teid - Specifies that the hashing applies as follows for Layer 2 and Layer 3 encapsulated traffic:</p> <ul style="list-style-type: none"> • If an IPv4 or IPv6 header is found immediately after the MPLS label stack, the hashing includes label stack, source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. • If an IPv4 or IPv6 header is not found immediately after the MPLS label stack, the data plane searches for a valid Ethertype value for the IPv4 and IPv6 payload. If a valid Ethertype value is found and an IP header follows the Ethernet header, hashing includes the source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values.

eth-encap-ip - Specifies that the hash algorithm parses down the label stack and after it reaches the bottom, the stack assumes the Ethernet II non-tagged, dot1q, or QinQ header follows. At the expected Ethertype offset location, the algorithm checks whether the value present is IPv4/IPv6 (0x0800/0x86DD). If the check passes, the hash algorithm checks the first nibble at the expected IP header location for IPv4/IPv6 (0x0100/0x0110). If the secondary check passes, the algorithm performs the hash using the IP SA/DA fields in the expected IP header. If any of the checks fail, the label-stack hash is performed.

Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid, lbl-eth-ip-l4-teid, lbl-ip-or-teid
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-id-lag-hashing *boolean*

Synopsis	Enable enhanced VLL LAG service ID hashing
Context	configure system load-balancing service-id-lag-hashing <i>boolean</i>
Tree	service-id-lag-hashing
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

location *description*

Synopsis	Site location of the system
Context	configure system location <i>description</i>
Tree	location
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-control

Synopsis	Enter the login-control context
Context	configure system login-control
Tree	login-control
Description	Commands in this context configure the session control for console, Telnet, SSH, and FTP sessions.

	(none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exponential-backoff *boolean*

Synopsis	Enable exponential-backoff of the login prompt
Context	configure system login-control exponential-backoff <i>boolean</i>
Tree	exponential-backoff
Description	When configured to true , the router enables exponential backoff for the login prompt. The exponential-backoff command is used to deter dictionary attacks, when a malicious user can gain access to the CLI by using a script to attempt to log in to the admin account with any conceivable password. (none)
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ftp

Synopsis	Enter the ftp context
Context	configure system login-control ftp
Tree	ftp
Description	Commands in this context configure FTP login control command options. (none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound FTP sessions
Context	configure system login-control ftp inbound-max-sessions <i>number</i>
Tree	inbound-max-sessions
Description	This command configures the maximum number of concurrent inbound FTP sessions. This value is the combined total of inbound and outbound sessions. (none)

Range	0 to 5
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-timeout (*keyword* | *number*)

Synopsis	Idle timeout for console, FTP, Telnet, and SSH sessions
Context	configure system login-control idle-timeout (<i>keyword</i> <i>number</i>)
Tree	idle-timeout
Range	1 to 1440
Units	minutes
Options	none
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-banner *boolean*

Synopsis	Display the SR OS login banner
Context	configure system login-control login-banner <i>boolean</i>
Tree	login-banner
Description	When configured to true , the system displays the SR OS login banner. The login banner contains the SR OS copyright and build date information. false , the system only displays the configured pre-login message and the login prompt. (none)
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-scripts

Synopsis	Enter the login-scripts context
Context	configure system login-control login-scripts
Tree	login-scripts

Description	Commands in this context configure CLI scripts that execute when a user (authenticated via any method including local user database, TACACS+, or RADIUS) first logs into a CLI session. (none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

global-script *string-not-all-spaces*

Synopsis	URL of the global CLI login script
Context	configure system login-control login-scripts global-script <i>string-not-all-spaces</i>
Tree	global-script
Description	<p>This command specifies a common CLI script that executes when any user logs into a CLI session. This login exec script is executed when any user (authenticated by any means including local user database, TACACS+, or RADIUS) opens a CLI session. This allows a user, for example, to define a common set of CLI aliases that are made available on the router for all users. This global login exec script is executed before any user-specific login exec files that may be configured.</p> <p>This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.</p> <p>(none)</p>
String length	1 to 180
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

per-user-script

Synopsis	Enter the per-user-script context
Context	configure system login-control login-scripts per-user-script
Tree	per-user-script
Description	<p>Commands in this context allow users to define their own login scripts that can be executed each time they first login to a CLI session. The command executes the script "<i>file-url / username / file-name</i>" when the user <i>username</i> logs into a CLI session (authenticated by any means including local user database, TACACS+, or RADIUS).</p> <p>For example:</p> <p>per-user user-directory "cf1:/local/users" file-name "login-script.txt"</p> <p>would search for the following script when user "admin" logs in and authenticates via RADIUS:</p>

cf1:/local/users/admin/login-script.txt

The per user login script is executed after any global script executes and before any login-exec script configured against a local user is executed. This allows users, for example, who are authenticated via TACACS+ or RADIUS to define their own login scripts.

This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.

(none)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

file-name *filename*

Synopsis File name of the per-user login script

Context **configure** **system** **login-control** **login-scripts** **per-user-script** **file-name** *filename*

Tree **file-name**

Description This command specifies the name of the file (located in the **configure system login-control login-scripts per-user-script user-directory** directory) including the extension.

(none)

String length 1 to 180

String format 'filename' must not contain / or \ (no path separators)
'filename' must not be all spaces

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

user-directory *string-not-all-spaces*

Synopsis Directory name of user-defined login script

Context **configure** **system** **login-control** **login-scripts** **per-user-script** **user-directory** *string-not-all-spaces*

Tree **user-directory**

String length 1 to 180

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

motd

Synopsis	Enter the motd context
Context	configure system login-control motd
Tree	motd
Description	Commands in this context configure the message of the day that is displayed after a successful login. (none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

text *string-not-all-spaces*

Synopsis	Message of the day displayed after a succesfull login
Context	configure system login-control motd text <i>string-not-all-spaces</i>
Tree	text
String length	1 to 900
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: text or url .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

url *string-not-all-spaces*

Synopsis	Location of the message of the day
Context	configure system login-control motd url <i>string-not-all-spaces</i>
Tree	url
String length	1 to 180
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: text or url .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pre-login-message

Synopsis	Enter the pre-login-message context
Context	configure system login-control pre-login-message
Tree	pre-login-message
Description	<p>Commands in this context configure a message to display before logging in to the router.</p> <p>Only one message can be configured. If a new pre-login message is configured, the new message overwrites the previous message.</p> <p>The pre-login message is displayed on both active and standby CPMs.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

message *string-not-all-spaces*

Synopsis	Pre-login message displayed before the login prompt
Context	configure system login-control pre-login-message message <i>string-not-all-spaces</i>
Tree	message
Description	<p>This command configures the pre-login message.</p> <p>Any printable, 7-bit ASCII characters can be used. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Some special characters can be used to format the message text. Use the newline () character to create multiline messages. A newline () character in the message moves to the beginning of the next line by sending ASCII/UTF-8 characters 0xA (LF) and 0xD (CR) to the client terminal. A carriage return () character in the message sends the ASCII/UTF-8 character 0xD (CR) to the client terminal.</p>
String length	1 to 900
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *boolean*

Synopsis	Display the system name after the pre-login message
Context	configure system login-control pre-login-message name <i>boolean</i>
Tree	name
Description	When configured to true , the system displays a space followed by the system name after the pre-login message before the login prompt.

	When configured to false , the system only displays the configured pre-login message and the login prompt.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssh

Synopsis	Enter the ssh context
Context	configure system login-control ssh
Tree	ssh
Description	Commands in this context configure the SSH command options. (none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of SSH sessions
Context	configure system login-control ssh graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	configure system login-control ssh inbound-max-sessions <i>number</i>
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-channels-per-connection *number*

Synopsis	Maximum number of channels per SSH connection
Context	configure system login-control ssh max-channels-per-connection <i>number</i>
Tree	max-channels-per-connection
Range	1 to 50
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	configure system login-control ssh outbound-max-sessions <i>number</i>
Tree	outbound-max-sessions
Description	This command configures the maximum number of outbound Telnet and SSH sessions. The local serial port cannot be disabled. (none)
Range	0 to 15
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	configure system login-control ssh ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures TTL security command options for incoming packets. When the feature is enabled, LDP accepts incoming IP packets from a peer only if the TTL value in the packet is greater than or equal to the minimum TTL value configured for that peer. Per-peer-queueing must be enabled in order for TTL protection to operate. (none)
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet

Synopsis	Enter the telnet context
Context	configure system login-control telnet
Tree	telnet
Description	Commands in this context configure the Telnet command options. (none)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of Telnet sessions
Context	configure system login-control telnet graceful-shutdown <i>boolean</i>
Tree	graceful-shutdown
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	configure system login-control telnet inbound-max-sessions <i>number</i>
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	configure system login-control telnet outbound-max-sessions <i>number</i>
Tree	outbound-max-sessions

Description	This command configures the maximum number of outbound Telnet and SSH sessions. The local serial port cannot be disabled. (none)
Range	0 to 15
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	configure system login-control telnet ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures TTL security command options for incoming packets. When the feature is enabled, LDP accepts incoming IP packets from a peer only if the TTL value in the packet is greater than or equal to the minimum TTL value configured for that peer. Per-peer-queueing must be enabled in order for TTL protection to operate. (none)
Range	1 to 255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

management-interface

Synopsis	Enter the management-interface context
Context	configure system management-interface
Tree	management-interface
Description	Commands in this context configure the capabilities of router management interfaces such as the CLI and NETCONF.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli

Synopsis	Enter the cli context
Context	configure system management-interface cli

Tree	cli
Description	Commands in this context configure the CLI management interfaces.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

classic-cli

Synopsis	Enter the classic-cli context
Context	configure system management-interface cli classic-cli
Tree	classic-cli
Description	Commands in this context configure the classic CLI management interface.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-immediate *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	configure system management-interface cli classic-cli allow-immediate <i>boolean</i>
Tree	allow-immediate
Description	<p>When configured to true, this command enables write access in the classic CLI configuration branch without having to use the classic CLI candidate edit functionality.</p> <p>When configured to false, this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI candidate edit functionality, including candidate commit, to modify the router configuration, instead of allowing immediate line-by-line configuration changes.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rollback

Synopsis	Enter the rollback context
Context	configure system management-interface cli classic-cli rollback
Tree	rollback
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration

rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-checkpoints *number*

Synopsis	Maximum number of rollback files on local storage
Context	configure system management-interface cli classic-cli rollback local-checkpoints <i>number</i>
Tree	local-checkpoints
Range	1 to 50
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

location *url*

Synopsis	Path and filename prefix for rollback checkpoint files
Context	configure system management-interface cli classic-cli rollback location <i>url</i>
Tree	location
Description	This command configures the local (for example, compact flash) or remote location and name of the classic CLI rollback checkpoint files. The filename must not contain a suffix. The suffixes for rollback checkpoint files are, for example, .rb, .rb.1, .rb.2, and so on. The suffixes are automatically appended to rollback checkpoint files.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-checkpoints *number*

Synopsis	Maximum rollback files saved at a remote location
Context	configure system management-interface cli classic-cli rollback remote-checkpoints <i>number</i>
Tree	remote-checkpoints
Range	1 to 200
Default	10

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rescue

Synopsis	Enter the rescue context
Context	configure system management-interface cli classic-cli rollback rescue
Tree	rescue
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

location *url*

Synopsis	Location of the rescue configuration file
Context	configure system management-interface cli classic-cli rollback rescue location <i>url</i>
Tree	location
Description	This command configures the local or remote location and filename of the classic CLI rescue configuration file. The suffix (.rc) is automatically appended to the filename when a rescue configuration file is saved. Trivial FTP (TFTP) is not supported for remote locations.
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-engine *keyword*

Synopsis	System-wide CLI engine access
Context	configure system management-interface cli cli-engine <i>keyword</i>
Tree	cli-engine
Description	This command configures the system-wide CLI engine. The operator can configure one or both engines. For the configuration to take effect, exit the running CLI session and start a new session after committing the new value.
Options	classic-cli, md-cli
Max. instances	2
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

md-cli

Synopsis Enter the **md-cli** context

Context **configure** [system management-interface cli md-cli](#)

Tree [md-cli](#)

Description Commands in this context configure the MD-CLI management interface.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

auto-config-save *boolean*

Synopsis Automatically save configuration as part of commit

Context **configure** [system management-interface cli md-cli auto-config-save](#) *boolean*

Tree [auto-config-save](#)

Description When configured to **true**, the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

environment

Synopsis Enter the **environment** context

Context **configure** [system management-interface cli md-cli environment](#)

Tree [environment](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

command-alias

Synopsis Enter the **command-alias** context

Context **configure** [system management-interface cli md-cli environment command-alias](#)

Tree [command-alias](#)

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

alias [[alias-name](#)] *string*

Synopsis Enter the **alias** list instance

Context **configure** [system](#) [management-interface](#) [cli](#) [md-cli](#) [environment](#) [command-alias](#) [alias](#) *string*

Tree [alias](#)

Description Commands in this context create aliases to existing MD-CLI commands or to Python applications.

Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[alias-name] *string*

Synopsis Alias name

Context **configure** [system](#) [management-interface](#) [cli](#) [md-cli](#) [environment](#) [command-alias](#) [alias](#) *string*

Tree [alias](#)

String length 1 to 64

String format must only contain alpha-numeric characters, underscore or hyphen (not as the first character)

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the alias

Context **configure** [system](#) [management-interface](#) [cli](#) [md-cli](#) [environment](#) [command-alias](#) [alias](#) *string* [admin-state](#) *keyword*

Tree [admin-state](#)

Description This command controls the administrative state of the MD-CLI alias.

MD-CLI aliases that are administratively disabled cannot be executed, are not displayed in command completion, and do not appear in `? help`.

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> cli-command <i>string</i>
Tree	cli-command
String length	1 to 255
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *string-not-all-spaces*

Synopsis	Alias description
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> description <i>string-not-all-spaces</i>
Tree	description
String length	1 to 110
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mount-point [[path](#)] (*keyword* | *string*)

Synopsis	Add a list entry for mount-point
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point

Min. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[path] (*keyword* | *string*)

Synopsis	Mount point where the alias is available
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
String length	1 to 255
String format	must start with forward slash
Options	global
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

python-script *reference*

Synopsis	Python script to run when executing the alias
Context	configure system management-interface cli md-cli environment command-alias alias <i>string</i> python-script <i>reference</i>
Tree	python-script
Reference	configure python python-script <i>named-item</i>
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

command-completion

Synopsis	Enter the command-completion context
Context	configure system management-interface cli md-cli environment command-completion
Tree	command-completion
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

enter *boolean*

Synopsis Complete the command when the Enter key is pressed

Context **configure** [system management-interface cli md-cli environment command-completion](#)
[enter](#) *boolean*

Tree [enter](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

space *boolean*

Synopsis Complete the command when the Space key is pressed

Context **configure** [system management-interface cli md-cli environment command-completion](#)
[space](#) *boolean*

Tree [space](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

tab *boolean*

Synopsis Complete the command when the Tab key is pressed

Context **configure** [system management-interface cli md-cli environment command-completion](#)
[tab](#) *boolean*

Tree [tab](#)

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

commit-options

Synopsis Enter the **commit-options** context

Context **configure** [system management-interface cli md-cli environment commit-options](#)

Tree	commit-options
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

comment *boolean*

Synopsis	Require a commit comment when committing configuration
Context	configure system management-interface cli md-cli environment commit-options comment <i>boolean</i>
Tree	comment
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

confirm *boolean*

Synopsis	Require confirmed commit when committing configuration
Context	configure system management-interface cli md-cli environment commit-options confirm <i>boolean</i>
Tree	confirm
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

console

Synopsis	Enter the console context
Context	configure system management-interface cli md-cli environment console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

length *number*

Synopsis	Number of lines displayed on the console
Context	configure system management-interface cli md-cli environment console length <i>number</i>

Tree	length
Range	24 to 512
Default	24
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

width *number*

Synopsis	Number of columns displayed on the console
Context	configure system management-interface cli md-cli environment console width <i>number</i>
Tree	width
Range	80 to 512
Default	80
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

history

Synopsis	Enter the history context
Context	configure system management-interface cli md-cli environment history
Tree	history
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

recall *boolean*

Synopsis	Allow command history recall and search execution
Context	configure system management-interface cli md-cli environment history recall <i>boolean</i>
Tree	recall
Description	<p>When configured to true, the command history recall (!), substitution (!\$), display (:p, Esc+.), and backward search (Ctrl-R) are enabled.</p> <p>When configured to false, the command history can be displayed using the history command, but commands in the history cannot be executed.</p>
Default	true
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

size *number*

Synopsis Command history size

Context **configure** [system management-interface cli md-cli environment history size](#) *number*

Tree [size](#)

Description This command specifies the maximum size of the command history. A value of 0 disables the command history.

Range 0 to 1000

Default 50

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

info-output

Synopsis Enter the **info-output** context

Context **configure** [system management-interface cli md-cli environment info-output](#)

Tree [info-output](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

always-display

Synopsis Enter the **always-display** context

Context **configure** [system management-interface cli md-cli environment info-output always-display](#)

Tree [always-display](#)

Description Commands in this context specify elements that are always displayed in the **info** output, regardless of whether the **detail** option is used.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *boolean*

Synopsis Always display admin-state elements

Context	configure system management-interface cli md-cli environment info-output always-display admin-state <i>boolean</i>
Tree	admin-state
Description	When configured to true , the values of the admin-state elements in info output (without the detail option) are always displayed, even if they are the default values.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match-highlight

Synopsis	Enter the match-highlight context
Context	configure system management-interface cli md-cli environment match-highlight
Tree	match-highlight
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of match highlighting
Context	configure system management-interface cli md-cli environment match-highlight admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

style *keyword*

Synopsis	Match highlighting style
Context	configure system management-interface cli md-cli environment match-highlight style <i>keyword</i>
Tree	style
Options	bold, underline, reverse

Max. instances	3
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

message-severity-level

Synopsis	Enter the message-severity-level context
Context	configure system management-interface cli md-cli environment message-severity-level
Tree	message-severity-level
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli keyword

Synopsis	Message severity threshold for CLI messages
Context	configure system management-interface cli md-cli environment message-severity-level cli keyword
Tree	cli
Options	warning, info
Default	info
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

more boolean

Synopsis	Activate the pager when output is longer than a screen
Context	configure system management-interface cli md-cli environment more <i>boolean</i>
Tree	more
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

progress-indicator

Synopsis	Enter the progress-indicator context
----------	---

Context	configure system management-interface cli md-cli environment progress-indicator
Tree	progress-indicator
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the progress indicator
Context	configure system management-interface cli md-cli environment progress-indicator admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay *number*

Synopsis	Delay before the progress indicator is displayed
Context	configure system management-interface cli md-cli environment progress-indicator delay <i>number</i>
Tree	delay
Range	0 to 10000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type *keyword*

Synopsis	Progress indicator output style
Context	configure system management-interface cli md-cli environment progress-indicator type <i>keyword</i>
Tree	type
Options	dots
Default	dots

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prompt

Synopsis	Enter the prompt context
Context	configure system management-interface cli md-cli environment prompt
Tree	prompt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

context *boolean*

Synopsis	Show the current command context in the prompt
Context	configure system management-interface cli md-cli environment prompt context <i>boolean</i>
Tree	context
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	configure system management-interface cli md-cli environment prompt newline <i>boolean</i>
Tree	newline
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	configure system management-interface cli md-cli environment prompt timestamp <i>boolean</i>
Tree	timestamp

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	configure system management-interface cli md-cli environment prompt uncommitted-changes-indicator <i>boolean</i>
Tree	uncommitted-changes-indicator
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

python

Synopsis	Enter the python context
Context	configure system management-interface cli md-cli environment python
Tree	python
Description	Commands in this context customize Python settings used with the Python 3 interpreter in MD-CLI applications such as pyexec, command aliases, EHS, and CRON.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	configure system management-interface cli md-cli environment python memory-reservation <i>number</i>
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	configure system management-interface cli md-cli environment python minimum-available-memory <i>number</i>
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	configure system management-interface cli md-cli environment python timeout <i>number</i>
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

time-display *keyword*

Synopsis	Time zone to display time
Context	configure system management-interface cli md-cli environment time-display <i>keyword</i>
Tree	time-display
Description	<p>This command configures the time zone for a timestamp displayed in outputs, such as event logs and show commands for the current CLI session.</p> <p>In event logs, the selected time is used to control the timestamps in the CLI output of show log log-id and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF).</p> <p>Also see the configure log log-id time-format command.</p>
Options	local, utc
Default	local
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

time-format *keyword*

Synopsis Format to display the date and time

Context **configure** [system management-interface cli md-cli environment time-format](#) *keyword*

Tree [time-format](#)

Description This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.

Options iso-8601, rfc-1123, rfc-3339

Default rfc-3339

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

commit-history *number*

Synopsis Number of commit history IDs to store

Context **configure** [system management-interface commit-history](#) *number*

Tree [commit-history](#)

Description This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.

Range 0 to 200

Default 50

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

commit-management

Synopsis Enter the **commit-management** context

Context **configure** [system management-interface commit-management](#)

Tree [commit-management](#)

Introduced 25.10.R1

Platforms 7705 SAR Gen 2

python-scripts

Synopsis	Enter the python-scripts context
Context	configure system management-interface commit-management python-scripts
Tree	python-scripts
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

gnmi-trigger *boolean*

Synopsis	Trigger commit scripts from gNMI
Context	configure system management-interface commit-management python-scripts gnmi-trigger <i>boolean</i>
Tree	gnmi-trigger
Default	true
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

md-cli-trigger *boolean*

Synopsis	Trigger commit scripts from the MD-CLI
Context	configure system management-interface commit-management python-scripts md-cli-trigger <i>boolean</i>
Tree	md-cli-trigger
Default	true
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

netconf-trigger *boolean*

Synopsis	Trigger commit scripts from NETCONF
Context	configure system management-interface commit-management python-scripts netconf-trigger <i>boolean</i>
Tree	netconf-trigger
Default	true
Introduced	25.10.R1

Platforms 7705 SAR Gen 2

post-commit-python-script *reference*

Synopsis Python script to use for the post-commit script

Context **configure** [system management-interface](#) [commit-management](#) [python-scripts](#) [post-commit-python-script](#) *reference*

Tree [post-commit-python-script](#)

Reference **configure** [python](#) [python-script](#) *named-item*

Introduced 26.7.R1

Platforms 7705 SAR Gen 2

pre-commit-python-script *reference*

Synopsis Python script to use for the pre-commit script

Context **configure** [system management-interface](#) [commit-management](#) [python-scripts](#) [pre-commit-python-script](#) *reference*

Tree [pre-commit-python-script](#)

Reference **configure** [python](#) [python-script](#) *named-item*

Introduced 26.7.R1

Platforms 7705 SAR Gen 2

configuration-mode *keyword*

Synopsis Management interfaces allowed to edit the configuration

Context **configure** [system management-interface](#) [configuration-mode](#) *keyword*

Tree [configuration-mode](#)

Description This command controls which of the classic or model-driven management interfaces can modify the configuration of the router.

Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.

Options classic, model-driven, mixed

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

configuration-save

Synopsis	Enter the configuration-save context
Context	configure system management-interface configuration-save
Tree	configuration-save
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

configuration-backups *number*

Synopsis	Maximum number of configuration versions maintained
Context	configure system management-interface configuration-save configuration-backups <i>number</i>
Tree	configuration-backups
Description	<p>This command configures the maximum number of saved configuration file versions the router maintains.</p> <p>When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version.</p> <p>Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.</p>
Range	1 to 200
Default	50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

incremental-saves *boolean*

Synopsis	Use incremental saved configuration files
Context	configure system management-interface configuration-save incremental-saves <i>boolean</i>
Tree	incremental-saves
Description	When configured to true , the system saves each commit to the configure configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf

Synopsis	Enter the netconf context
Context	configure system management-interface netconf
Tree	netconf
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	configure system management-interface netconf auto-config-save <i>boolean</i>
Tree	auto-config-save
Description	When configured to true , the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

call-home

Synopsis	Enter the call-home context
Context	configure system management-interface netconf call-home
Tree	call-home
Description	Commands in this context configure NETCONF Call Home, which enables an SR OS node to trigger a NETCONF client to start a connection.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

device-labels

Synopsis	Enter the device-labels context
Context	configure system management-interface netconf call-home device-labels
Tree	device-labels
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-operating-system *boolean*

Synopsis	Advertise the network operating system
Context	configure system management-interface netconf call-home device-labels advertise-operating-system <i>boolean</i>
Tree	advertise-operating-system
Description	When configured to true , the network operating system is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-software-version *boolean*

Synopsis	Advertise the software version
Context	configure system management-interface netconf call-home device-labels advertise-software-version <i>boolean</i>
Tree	advertise-software-version
Description	When configured to true , the software version is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

advertise-system-name *boolean*

Synopsis	Advertise the system name
Context	configure system management-interface netconf call-home device-labels advertise-system-name <i>boolean</i>

Tree	advertise-system-name
Description	When configured to true , the system name is encoded as a NETCONF capability.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

device-label *string*

Synopsis	Device label
Context	configure system management-interface netconf call-home device-labels device-label string
Tree	device-label
Description	This command encodes the device label as a NETCONF capability.
String length	1 to 16
String format	'device-label' must contain only letters, digits or underscores
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf-client [[name](#)] *named-item*

Synopsis	Enter the netconf-client list instance
Context	configure system management-interface netconf call-home netconf-client named-item
Tree	netconf-client
Description	Commands in this context configure the list of NETCONF clients with which the NETCONF server maintains simultaneous Call Home connections.
Max. instances	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Remote NETCONF client name
Context	configure system management-interface netconf call-home netconf-client named-item
Tree	netconf-client

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the NETCONF Call Home endpoint
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

connection-type *keyword*

Synopsis	Call Home connection type
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> connection-type <i>keyword</i>
Tree	connection-type
Options	persistent – Enable persistent connection mode
Default	persistent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-on-boot *number*

Synopsis	Delay for Call Home connections after system boot
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> delay-on-boot <i>number</i>
Tree	delay-on-boot
Range	1 to 3600
Units	seconds

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item*
[description](#) *description*
Tree [description](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

idle-timeout *number*

Synopsis NETCONF idle timeout for sessions
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item*
[idle-timeout](#) *number*
Tree [idle-timeout](#)
Description This command configures the idle timeout for sessions. If no messages are received during the configured idle timeout period, the session is terminated.
Range 1 to 10080
Units minutes
Introduced 26.3.R1
Platforms 7705 SAR Gen 2

remote-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the NETCONF client
Context **configure** [system](#) [management-interface](#) [netconf](#) [call-home](#) [netconf-client](#) *named-item*
[remote-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
Tree [remote-address](#)
Notes This element is mandatory.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

remote-port *number*

Synopsis	Port that the NETCONF client is listening on
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> remote-port <i>number</i>
Tree	remote-port
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router instance or VPRN service name
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-server-profile *reference*

Synopsis	TLS server profile used for NETCONF call-home sessions
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> tls-server-profile <i>reference</i>
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>named-item</i>
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

transport *keyword*

Synopsis	Transport type
Context	configure system management-interface netconf call-home netconf-client <i>named-item</i> transport <i>keyword</i>
Tree	transport
Options	ssh – SSH transport type tls – TLS transport type

Default	ssh
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

capabilities

Synopsis	Enter the capabilities context
Context	configure system management-interface netconf capabilities
Tree	capabilities
Description	Commands in this context configure explicit capabilities for the NETCONF server.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

candidate *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore
Context	configure system management-interface netconf capabilities candidate boolean
Tree	candidate
Description	<p>When configured to true, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to true also enables using commit and discard-changes.</p> <p>When configure system management-interface configuration-mode is set to classic, the candidate capability is disabled, even if this command is configured to true.</p> <p>When configured to false, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

listen

Synopsis	Enter the listen context
Context	configure system management-interface netconf listen

Tree	listen
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of NETCONF server in listen mode
Context	configure system management-interface netconf listen admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-on-boot *number*

Synopsis	Delay before NETCONF server is operational after boot
Context	configure system management-interface netconf listen delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for NETCONF connections. When the timer expires, NETCONF becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging.</p> <p>When no delay is configured, connections are accepted after the system boots and NETCONF becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

idle-timeout *number*

Synopsis	NETCONF idle timeout for sessions
Context	configure system management-interface netconf listen idle-timeout <i>number</i>
Tree	idle-timeout
Description	This command configures the idle timeout for sessions. If no messages are received during the configured idle timeout period, the session is terminated.

Range	1 to 10080
Units	minutes
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

port number

Synopsis	Port on which NETCONF server listens for connections
Context	configure system management-interface netconf listen port number
Tree	port
Description	<p>This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management.</p> <p>The configured port applies to both non-VRN and VRN management. New NETCONF connections are able to use the configured port.</p> <p>For NETCONF connections not using VRN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VRN management, active NETCONF connections are disconnected if the connection port changes.</p>
Range	22 830 1024 to 49151
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-server-profile reference

Synopsis	TLS server profile used for NETCONF listen sessions
Context	configure system management-interface netconf listen tls-server-profile reference
Tree	tls-server-profile
Reference	configure system security tls server-tls-profile named-item
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

transport keyword

Synopsis	Transport type
Context	configure system management-interface netconf listen transport keyword
Tree	transport

Options	ssh – SSH transport type tls – TLS transport type
Default	ssh
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

tls-client-identity

Synopsis	Enter the tls-client-identity context
Context	configure system management-interface netconf tls-client-identity
Tree	tls-client-identity
Description	Commands in this context configure NETCONF client identities used to authenticate client connections over TLS.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

client [[id](#)] *number*

Synopsis	Enter the client list instance
Context	configure system management-interface netconf tls-client-identity client <i>number</i>
Tree	client
Description	Commands in this context configure client identities for NETCONF access, which consist of TLS client certificates mapped to local users in the SR OS database.
Max. instances	16
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

[[id](#)] *number*

Synopsis	Client ID
Context	configure system management-interface netconf tls-client-identity client <i>number</i>
Tree	client
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	26.7.R1

Platforms 7705 SAR Gen 2

fingerprint *key-fingerprint-sha256*

Synopsis Certificate fingerprint

Context **configure** [system management-interface netconf](#) [tls-client-identity client](#) *number fingerprint key-fingerprint-sha256*

Tree [fingerprint](#)

Description This command configures the client certificate fingerprint. The fingerprint string is hashed using SHA-256 and encoded using Base64.

String length 43

String format 'fingerprint' must be Base64 with trimmed padding (43 chars)

Notes This element is mandatory.

Introduced 26.7.R1

Platforms 7705 SAR Gen 2

map-type *keyword*

Synopsis Mapping method for TLS certificate to username

Context **configure** [system management-interface netconf](#) [tls-client-identity client](#) *number map-type keyword*

Tree [map-type](#)

Description This command configures the method used by the router to determine the username in the SR OS database that matches to the client fingerprint in the TLS certificate.

Options specified – Use the username explicitly configured in the database
san-ip-address – Use the client IP address to derive the username

Notes This element is mandatory.

Introduced 26.7.R1

Platforms 7705 SAR Gen 2

user-name *reference*

Synopsis Username for the provided fingerprint

Context **configure** [system management-interface netconf](#) [tls-client-identity client](#) *number user-name reference*

Tree [user-name](#)

Description	This command assigns a username to the fingerprint for NETCONF client identity. This command applies only to client identities configured to use an explicitly configured username in the database.
Reference	configure system security user-params local-user user <i>named-item</i>
Notes	This element is mandatory.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

default-client

Synopsis	Enter the default-client context
Context	configure system management-interface netconf tls-client-identity default-client
Tree	default-client
Description	Commands in this context configure the default NETCONF client identity used when the client fingerprint does not match any entry in the database.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

user-name *reference*

Synopsis	Default username to use when no fingerprint matches
Context	configure system management-interface netconf tls-client-identity default-client user-name <i>reference</i>
Tree	user-name
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

operations

Synopsis	Enter the operations context
Context	configure system management-interface operations
Tree	operations
Description	Commands in this context configure parameters associated with operational commands in model-driven interfaces.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

global-timeouts

Synopsis	Enter the global-timeouts context
Context	configure system management-interface operations global-timeouts
Tree	global-timeouts
Description	<p>Commands in this context configure system timeout parameters for operational commands.</p> <p>Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asynchronous-execution (*number* | *keyword*)

Synopsis	Timeout for asynchronous operation execution
Context	configure system management-interface operations global-timeouts asynchronous-execution (<i>number</i> <i>keyword</i>)
Tree	asynchronous-execution
Description	<p>This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS.</p> <p>An asynchronous operation is not deleted from the system when it is stopped. See the asynchronous-retention command.</p> <p>If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.</p> <p>Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the ping operation also has its own timeout parameter).</p>
Range	1 to 604800
Units	seconds
Options	never
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

asynchronous-retention (*number* | *keyword*)

Synopsis	Timeout for asynchronous operation data retention
Context	configure system management-interface operations global-timeouts asynchronous-retention (<i>number</i> <i>keyword</i>)
Tree	asynchronous-retention
Description	<p>This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data.</p> <p>If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.</p>
Range	1 to 604800
Units	seconds
Options	never
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

synchronous-execution (*number* | *keyword*)

Synopsis	Timeout for synchronous operation execution
Context	configure system management-interface operations global-timeouts synchronous-execution (<i>number</i> <i>keyword</i>)
Tree	synchronous-execution
Description	<p>This command configures the period of time that operations launched as “synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted.</p> <p>If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies.</p> <p>Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the ping operation also has its own timeout parameter).</p> <p>Caution: If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value. This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, ping, file dir, and so on).</p>
Range	1 to 604800
Units	seconds

Options	never
Default	never
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

schema-path *url*

Synopsis	Schema path URL
Context	configure system management-interface schema-path <i>url</i>
Tree	schema-path
Description	<p>This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a <get-schema> request. Nokia recommends that the URL string not exceed 135 characters for the <get-schema> request to work correctly with all schema files.</p> <p>If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.</p>
String length	1 to 180
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp

Synopsis	Enter the snmp context
Context	configure system management-interface snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the SNMP agent
Context	configure system management-interface snmp admin-state <i>keyword</i>
Tree	admin-state
Description	This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations.

In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the **bof system persistent-indices** command is set to **true**. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

engine-id *engine-id-as-string*

Synopsis	SNMP engine ID that identifies the SNMPv3 node
Context	configure system management-interface snmp engine-id <i>engine-id-as-string</i>
Tree	engine-id
Description	<p>This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node.</p> <p>If unconfigured, the system uses an engine ID based on the information from the system backplane.</p> <p>If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID.</p> <p>Note: Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable.</p> <p>When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router.</p> <p>Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.</p>
String length	10 to 64
String format	'engine-id-as-string' must be hexadecimal digits only (length 10..64)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

general-port *number*

Synopsis	Port number used to send general SNMP messages
Context	configure system management-interface snmp general-port <i>number</i>
Tree	general-port

Description	This command configures the port number used to receive SNMP request messages and send replies. For the port used for SNMP notifications, configure the configure log snmp-trap-group trap-target port command.
Range	0 1 to 65535
Default	161
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-bulk-duration *number*

Synopsis	Maximum process duration before responses are returned
Context	configure system management-interface snmp max-bulk-duration <i>number</i>
Tree	max-bulk-duration
Description	This command sets the maximum duration to process an SNMP request before bulk responses are returned to avoid a timeout on the management system when a lot of information is returned in the response.
Range	100 to 5000
Units	milliseconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packet-size *number*

Synopsis	Maximum SNMP packet size generated by the node
Context	configure system management-interface snmp packet-size <i>number</i>
Tree	packet-size
Range	484 to 9216
Default	1500
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

streaming

Synopsis	Enter the streaming context
Context	configure system management-interface snmp streaming

Tree	streaming
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of SNMP streaming
Context	configure system management-interface snmp streaming admin-state <i>keyword</i>
Tree	admin-state
Description	This command enables or disables the proprietary SNMP request and response bundling as well as the TCP-based transport mechanism for optimizing network management of the router nodes. In higher latency networks, synchronizing router MIBs from network management using streaming takes less time than synchronizing using classic SNMP UDP requests. Streaming operates on TCP port 1491 and runs over IPv4 or IPv6.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transport *keyword*

Synopsis	Transport protocol used by the SNMP agent
Context	configure system management-interface snmp transport <i>keyword</i>
Tree	transport
Options	udp – UDP only tcp – TCP only both – TCP and UDP
Default	udp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

yang-modules

Synopsis	Enter the yang-modules context
Context	configure system management-interface yang-modules
Tree	yang-modules

Description	<p>Commands in this context determine the system support of the Nokia YANG models.</p> <p>The settings affect the data sent in a NETCONF <hello>, data populated in the RFC 6022 /netconf-state/schemas list, data returned in a <get-schema> request, and data populated in the RFC 8525 /yang-library.</p> <p>See "NETCONF monitoring" and "YANG library" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nmda

Synopsis	Enter the nmda context
Context	configure system management-interface yang-modules nmda
Tree	nmda
Description	Commands in this context configure the attributes for the Network Management Datastores Architecture (NMDA).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nmda-support *boolean*

Synopsis	Advertise NMDA support over NETCONF
Context	configure system management-interface yang-modules nmda nmda-support <i>boolean</i>
Tree	nmda-support
Description	<p>When configured to true, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1.</p> <p>When configured to false, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-combined-modules *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	configure system management-interface yang-modules nokia-combined-modules <i>boolean</i>

Tree	nokia-combined-modules
Description	<p>When configured to true, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server.</p> <p>When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to true.</p> <p>When configured to false, access to the combined Nokia YANG files is not supported.</p> <p>This command and the nokia-submodules command cannot both be set to true at the same time.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-submodules *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	configure system management-interface yang-modules nokia-submodules <i>boolean</i>
Tree	nokia-submodules
Description	<p>When configured to true, the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server.</p> <p>When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to true.</p> <p>When configured to false, access to the submodule-based packaging of the Nokia YANG files is not supported.</p> <p>This command and the nokia-combined-modules command cannot both be set to true at the same time.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *named-item-64*

Synopsis	Administrative name assigned to the system
Context	configure system name <i>named-item-64</i>
Tree	name
String length	1 to 64

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

network-element-discovery

Synopsis Enter the **network-element-discovery** context

Context **configure** [system](#) [network-element-discovery](#)

Tree [network-element-discovery](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

generate-traps *boolean*

Synopsis Generate NE discovery traps

Context **configure** [system](#) [network-element-discovery](#) [generate-traps](#) *boolean*

Tree [generate-traps](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile [[name](#)] *named-item*

Synopsis Enter the **profile** list instance

Context **configure** [system](#) [network-element-discovery](#) [profile](#) *named-item*

Tree [profile](#)

Max. instances 1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[name] *named-item*

Synopsis Profile name

Context **configure** [system](#) [network-element-discovery](#) [profile](#) *named-item*

Tree	profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neid string

Synopsis	Network element ID of the advertised node
Context	configure system network-element-discovery profile <i>named-item</i> neid string
Tree	neid
String length	7 to 8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

neip

Synopsis	Enter the neip context
Context	configure system network-element-discovery profile <i>named-item</i> neip
Tree	neip
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-generate

Synopsis	Enter the auto-generate context
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate
Tree	auto-generate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4

Synopsis	Enable the ipv4 context
----------	--------------------------------

Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vendor-id-value *number*

Synopsis	Most significant byte if the NE IPv4 address
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv4 vendor-id-value <i>number</i>
Tree	vendor-id-value
Range	1 to 255
Default	140
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enable the ipv6 context
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vendor-id-value *number*

Synopsis	Most significant byte of the NE IPv6 address
Context	configure system network-element-discovery profile <i>named-item</i> neip auto-generate ipv6 vendor-id-value <i>number</i>
Tree	vendor-id-value
Range	1 to 255
Default	140
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *ipv4-unicast-address*

Synopsis	NEIP IPv4 address
Context	configure system network-element-discovery profile <i>named-item</i> neip ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 *ipv6-address*

Synopsis	NEIP IPv6 address
Context	configure system network-element-discovery profile <i>named-item</i> neip ipv6 <i>ipv6-address</i>
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

platform-type *named-item-255*

Synopsis	Platform name and chassis type to be advertised
Context	configure system network-element-discovery profile <i>named-item</i> platform-type <i>named-item-255</i>
Tree	platform-type
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

system-mac *mac-unicast-address-no-zero*

Synopsis	MAC address of the advertised node
Context	configure system network-element-discovery profile <i>named-item</i> system-mac <i>mac-unicast-address-no-zero</i>
Tree	system-mac

String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vendor-id *named-item-255*

Synopsis	Vendor ID to be advertised
Context	configure system network-element-discovery profile <i>named-item</i> vendor-id <i>named-item-255</i>
Tree	vendor-id
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Default	Nokia
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ospf-dynamic-hostnames *boolean*

Synopsis	Process received OSPF dynamic hostname information
Context	configure system ospf-dynamic-hostnames <i>boolean</i>
Tree	ospf-dynamic-hostnames
Description	<p>When configured to true, OSPF dynamic hostnames are enabled. The router receiving the new dynamic hostname within the OSPF Router Information (RI) LSA is instructed to process the received dynamic hostname information.</p> <p>When configured to false, dynamic hostname information is not processed.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

persistence

Synopsis	Enter the persistence context
Context	configure system persistence
Tree	persistence
Description	Commands in this context configure persistence on the system.

The persistence feature enables the system to retain state information learned through DHCP snooping across reboots. This information includes data such as the IP address and MAC binding information, lease-length information, and ingress SAP information (required for VPLS snooping to identify the ingress interface).

If persistence is enabled when there are no DHCP relay or snooping commands enabled, the system creates an empty file.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ancp

Synopsis	Enter the ancp context
Context	configure system persistence ancp
Tree	ancp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system persistence ancp description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Options	cf1, cf2, cf3
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

ptp

Synopsis	Enter the ptp context
Context	configure system ptp
Tree	ptp
Description	Commands in this context configure PTP command options based on IEEE 1588-2008, Precision Time Protocol. The context is only supported on control assemblies that support 1588.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of PTP
Context	configure system ptp admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

alternate-profile [[name](#)] *named-item-64*

Synopsis	Enter the alternate-profile list instance
Context	configure system ptp alternate-profile <i>named-item-64</i>
Tree	alternate-profile
Description	<p>Commands in this context create an alternate profile configuration for use in PTP messaging.</p> <p>The alternate profile can be used at the edge of a network to provide PTP time or frequency distribution outward to external PTP clocks.</p> <p>The alternate profile cannot be deleted if it is configured as the profile under a PTP port.</p>
Max. instances	6
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[name] *named-item-64*

Synopsis	Alternate profile name
Context	configure system ptp alternate-profile <i>named-item-64</i>
Tree	alternate-profile
Description	<p>This command configures an alternate profile name.</p> <p>The strings "Primary" and "primary" cannot be used for the alternate-profile name.</p>
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the alternate PTP profile
----------	---

Context	configure system ptp alternate-profile <i>named-item-64</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

domain *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Alternate profile PTP domain number
Context	configure system ptp alternate-profile <i>named-item-64</i> domain <i>number</i>
Tree	domain
Range	0 to 255
Default	24
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

log-announce-interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP announce message interval in log form
Context	configure system ptp alternate-profile <i>named-item-64</i> log-announce-interval <i>number</i>
Tree	log-announce-interval
Description	<p>This command configures the announce message interval used for multicast messages within the alternate profile.</p> <p>For multicast messages used on PTP Ethernet ports, this command configures the message interval used for announce messages transmitted by the local node.</p> <p>This value has no impact on the interval used for the BTCA, which is controlled by the value defined for the primary profile.</p>
Range	-3 to 4

Default	-3
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

profile *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Standard based profile used within an alternate profile
Context	configure system ptp alternate-profile <i>named-item-64</i> profile <i>keyword</i>
Tree	profile
Description	<p>This command specifies the standard based profile that is used as the basis for the alternate profile.</p> <p>This setting controls the contents of PTP messages sent on ports and peers using this alternate profile.</p>
Options	g8265dot1-2010 – ITU-T G.8265.1 specification ieee1588-2008 – 2008 version of IEEE 1588 standard g8275dot1-2014 – 2014 version of ITU-T G.8275.1 specification g8275dot2-2016 – 2016 version of ITU-T G.8275.2 specification iec-61850-9-3-2016 – 2016 version of IEC/IEEE 61850-9-3 standard c37dot238-2017 – 2017 version of C37.238 specification
Default	g8275dot1-2014
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

announce-receipt-timeout *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Expired intervals count before timeout event declared
Context	configure system ptp announce-receipt-timeout <i>number</i>
Tree	announce-receipt-timeout
Description	This command configures the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_RECEIPT_TIMEOUT event.

Range	2 to 10
Default	3
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

clock-type *keyword*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.
- **WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Clock type
Context	configure system ptp clock-type <i>keyword</i>
Tree	clock-type
Options	slave-only, master-only, boundary
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

domain *number*

- **WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP domain
Context	configure system ptp domain <i>number</i>
Tree	domain
Description	<p>This command configures the PTP domain. The default and valid range of the domain depend on the configured PTP profile.</p> <ul style="list-style-type: none">• IEEE 1588-2008 - domain range of 0 to 255 (default 0)• G.8265.1 - domain range of 0 to 255 (default 4)• G.8275.1 - domain range of 24 to 43 (default 24)• G.8275.2 - domain range of 0 to 255 (default 44)• IEC/IEEE 61850-9-3 - domain range of 0 to 255 (default 0)

- C37.238 - domain range of 0 to 255 (default 254)

Range	0 to 255
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

initial-time-inaccuracy *number*

Synopsis	Total time inaccuracy from grandmaster to local clock
Context	configure system ptp initial-time-inaccuracy <i>number</i>
Tree	initial-time-inaccuracy
Description	<p>This command configures the time inaccuracy value, representing the total time inaccuracy from the grandmaster clock to the parent clock. This value is added to the mandatory IEEE_C37_238 TLV.</p> <p>This command is applicable only when the alternate profile is configured as c37dot238-2017.</p>
Range	0 to 100000000
Units	nanoseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

local-priority *number*

Synopsis	PTP clock local priority
Context	configure system ptp local-priority <i>number</i>
Tree	local-priority
Description	<p>This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile.</p> <p>For G.8275.1 or G.8275.2, this command configures the localPriority command option associated with the local clock (ptp context). See the ITU-T G.8275.1 or G.8275.2 standard for detailed information.</p>
Range	1 to 255
Default	128
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

log-announce-interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Announce message interval in log form
Context	configure system ptp log-announce-interval <i>number</i>
Tree	log-announce-interval
Description	<p>This command configures the Announce message interval used for both unicast and multicast messages.</p> <p>For unicast messages, the Announce message interval is requested during unicast negotiation to any peer. This controls the Announce message rate sent from remote peers to the local node. It does not affect the announce message rate that may be sent from the local node to remote peers. Remote peers may request an Announce message rate within the acceptable grant range.</p> <p>For multicast messages used on PTP Ethernet ports, this command specifies the message interval used for Announce messages transmitted by the local node.</p> <p>This value also defines the interval between executions of the BTCA within the node.</p> <p>To minimize BTCA-driven reconfigurations, IEEE recommends that the Announce interval should be consistent across the entire 1588 network.</p>
Range	-3 to 4
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

max-steps-removed *number*

Synopsis	Threshold for steps removed in Announce messages
Context	configure system ptp max-steps-removed <i>number</i>
Tree	max-steps-removed
Description	<p>This command configures a maximum limit for the stepsRemoved field in PTP Announce messages. When a user configures a value for the maximum steps removed, the PTP clock disqualifies and drops any incoming Announce messages where the stepsRemoved field in the PTP header is equal to or greater than the configured maximum steps removed value.</p> <p>This command effectively limits the maximum number of hops a potential parent clock can be from the GM clock. This command is crucial for maintaining the integrity and performance of the PTP synchronized network by preventing clocks that are too far removed from the GM from being selected as parent clocks.</p>
Range	1 to 255

Default	255
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

network-type *keyword*

Synopsis	PTP network type
Context	configure system ptp network-type <i>keyword</i>
Tree	network-type
Description	<p>This command configures the codeset to be used for the encoding of QL values into PTP clockClass values and vice versa when the profile is configured for G.8265.1 or G.8275.2.</p> <p>This setting only applies to the range of values observed in the clockClass values transmitted out of the node in Announce messages. The router supports the reception of any valid value in Table 1/G.8265.1 and Table2/G.8275.2.</p>
Options	sonet, sdh
Default	sdh
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

port [[port-id](#)] *reference*

Synopsis	Enter the port list instance
Context	configure system ptp port <i>reference</i>
Tree	port
Description	<p>Commands in this context configure PTP over Ethernet on the physical port. The PTP process transmits and receives PTP messages through the port using Ethernet encapsulation (as opposed to UDP/IPv4 encapsulation).</p> <p>Frames are transmitted with no VLAN tags, even if the port is configured for dot1q or qinq modes for encap-type. The received frames from the external PTP clock must also be untagged.</p> <p>Two reserved multicast addresses are allocated for PTP messages (see Annex F IEEE Std 1588-2008). Either address can be configured for the PTP messages sent through the port.</p> <p>A PTP port cannot be created if the PTP profile is configured for G.8265.1.</p> <p>If the port supports 1588 port-based timestamping, Synchronous Ethernet must be enabled on the MDA when PTP over Ethernet is enabled.</p> <p>De-provisioning of the card or MDA containing the specified port is not permitted while the port is configured within PTP.</p>

Changing the encapsulation or the port type of the Ethernet port is not permitted when PTP Ethernet Multicast operation is configured on the port.

To allocate an Ethernet satellite client port as a PTP port, the Ethernet satellite must first be enabled for the transparent clock function. For more information, see the **configure satellite ethernet-satellite ptp-tc** command.

The SyncE/1588 ports of the CPM and CCMs can be specified as PTP ports. These use the 'A/3' and 'B/3' designation and both must be specified as two PTP ports if both are used. The active CPM sends and receives messages on both ports if they are specified and enabled.

Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[port-id] *reference*

Synopsis	Ethernet PTP port ID
Context	configure system ptp port <i>reference</i>
Tree	port
Reference	configure port <i>port</i>
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

address *mac-address*

Synopsis	Destination MAC address of the transmitted PTP messages
Context	configure system ptp port <i>reference</i> address <i>mac-address</i>
Tree	address
Description	<p>This command specifies the destination MAC address of the transmitted PTP messages. IEEE Std 1588-2008 Annex F defines two reserved addresses for 1588 messages, which include:</p> <ul style="list-style-type: none"> • 01-1B-19-00-00-00 — all except the peer delay mechanism messages • 01-80-C2-00-00-0E — peer delay mechanism messages <p>Both addresses are supported for reception, independent of the address configured by this command.</p>
Default	01:1B:19:00:00:00
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the PTP port
Context	configure system ptp port <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

alternate-profile *reference*

Synopsis	Alternate profile for the PTP port
Context	configure system ptp port <i>reference</i> alternate-profile <i>reference</i>
Tree	alternate-profile
Description	This command creates the alternate profile that is used in communications with the port or peer. If no alternate profile is specified, the primary profile is used.
Reference	configure system ptp alternate-profile <i>named-item-64</i>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

delay-resp-receipt-timeout *number*

Synopsis	Number of Delay_Resp intervals before PTSF-LOTM
Context	configure system ptp port <i>reference</i> delay-resp-receipt-timeout <i>number</i>
Tree	delay-resp-receipt-timeout
Description	<p>This command configures the number of Delay_Resp message intervals that can pass without receiving a message from a neighbor before the router declares the PTSF-LOTM condition for that neighbor. A neighbor in this condition is excluded from the BTCA. The condition clears when Delay_Resp message reception resumes.</p> <p>This command applies only to PTP profiles that support the PTSF-LOTM condition.</p>
Range	3 to 65535
Introduced	26.10.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

local-priority *number*

Synopsis	PTP port local priority
Context	configure system ptp port <i>reference</i> local-priority <i>number</i>
Tree	local-priority
Description	<p>This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile.</p> <p>For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (ptp port context). See G.8275.1 or G.8275.2 for detailed information.</p>
Range	1 to 255
Default	128
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

log-delay-interval *number*

Synopsis	Minimum interval for Delay_Req messages in log form
Context	configure system ptp port <i>reference</i> log-delay-interval <i>number</i>
Tree	log-delay-interval
Description	<p>This command configures the minimum interval used for multicast Delay_Req messages for the port. For ports in a slave state, the interval is used, unless the parent port indicates a longer interval. For a port in master state, the interval is advertised to external slave ports as the minimum acceptable interval for Delay_Req messages from the slave ports.</p> <p>The router supports the 1588 standard requirement for a port in slave state to check the logMessageInterval field of received multicast Delay_Resp messages. If the value of the logMessageInterval field of the messages is greater than the value configured locally for the generation of Delay_Req messages, the slave must use the longer interval for the generation of Delay_Req messages.</p> <p>The interval value is specified as the logarithm to the base 2.</p>
Range	-6 to 0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

log-sync-interval *number*

Synopsis	Interval for transmission of Sync messages in log form
Context	configure system ptp port <i>reference</i> log-sync-interval <i>number</i>
Tree	log-sync-interval
Description	<p>This command configures the interval used for Sync messages transmitted by the local node when the port is in master state.</p> <p>The interval value is specified as the logarithm to the base 2.</p>
Range	-6 to 0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

master-only *boolean*

Synopsis	Restrict the local port to master state
Context	configure system ptp port <i>reference</i> master-only <i>boolean</i>
Tree	master-only
Description	<p>When configured to true, the local port is restricted to master state only, ensuring that the system does not obtain synchronization from attached external devices.</p> <p>This command is supported only when the PTP profile is set for G.8275.1 or G.8275.2.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

monitor-receiver *boolean*

Synopsis	Enable the PTP port as a monitor-receiver
Context	configure system ptp port <i>reference</i> monitor-receiver <i>boolean</i>
Tree	monitor-receiver
Description	<p>When configured to true, the router enables the PTP port as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2.</p> <p>When configured to false, monitoring is disabled.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

monitor-sender *boolean*

Synopsis	Enable the PTP port as a monitor-sender
Context	configure system ptp port <i>reference</i> monitor-sender <i>boolean</i>
Tree	monitor-sender
Description	<p>When configured to true, the router enables the PTP port as a monitorSender for PTP. When not in TimeTransmitter mode, the PTP port sends Announce, Sync, and Delay_Resp messages with the alternateMasterFlag set to TRUE for PTP monitoring at the remote clock. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2.</p> <p>When configured to false, monitoring is disabled.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	configure system ptp port <i>reference</i> not-master <i>boolean</i>
Tree	not-master
Description	When configured to true , the router blocks the port from entering the timeTransmitter state.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

sync-receipt-timeout *number*

Synopsis	Number of Sync intervals before PTSF-LOTM
Context	configure system ptp port <i>reference</i> sync-receipt-timeout <i>number</i>
Tree	sync-receipt-timeout
Description	<p>This command configures the number of Sync message intervals, including the Follow_Up messages of a two-step clock, that can pass without receiving a message from a neighbor before the router declares the PTSF-LOTM condition for that neighbor. A neighbor in this condition is excluded from the BTCA. The condition clears when Sync message reception resumes.</p> <p>This command applies only to PTP profiles that support the PTSF-LOTM condition.</p>
Range	3 to 65535

Introduced	26.10.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

priority1 *number*

Synopsis	Priority1 of the local clock
Context	configure system ptp priority1 <i>number</i>
Tree	priority1
Description	<p>This command configures the priority1 parameter of the local clock. The setting is used when the profile is configured for IEEE 1588-2008.</p> <p>This value is used by the Best Master Clock Algorithm to determine which clock should provide timing for the network and is advertised in Announce messages.</p>
Range	0 to 255
Default	128
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

priority2 *number*

Synopsis	Priority2 of the local clock
Context	configure system ptp priority2 <i>number</i>
Tree	priority2
Description	<p>This command configures the priority2 parameter of the local clock. The setting is used when the profile is configured for IEEE 1588-2008, G.8275.1, or G.8275.2.</p> <p>This value is used by the Best Master Clock algorithm to determine which clock should provide timing for the network and is advertised in Announce messages.</p>
Range	0 to 255
Default	128
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

profile *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PTP profile
Context	configure system ptp profile <i>keyword</i>
Tree	profile
Description	<p>This command configures the profile to be used for the internal PTP clock. It defines the Best timeTransmitter Clock Algorithm (BTCA) behavior.</p> <p>Profile changes may affect the settings of other configuration elements, such as the clock type and default settings for the delay interval, announce interval, and the Sync interval.</p> <p>The following clock types are supported for the indicated profiles:</p> <ul style="list-style-type: none"> • G.8265.1: slave only, master only • IEEE 1588 2008: slave only, master only, boundary • G.8275.1: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver) • G.8275.2: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver) • IEC/IEEE 61850-9-3: slave only, master only, boundary • C37.238: slave only, master only, boundary
Options	g8265dot1-2010 – ITU-T G.8265.1 specification ieee1588-2008 – 2008 version of IEEE 1588 standard g8275dot1-2014 – 2014 version of ITU-T G.8275.1 specification g8275dot2-2016 – 2016 version of ITU-T G.8275.2 specification iec-61850-9-3-2016 – 2016 version of IEC/IEEE 61850-9-3 standard c37dot238-2017 – 2017 version of C37.238 specification
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

ptsf

Synopsis	Enter the ptsf context
Context	configure system ptp ptsf
Tree	ptsf
Description	Commands in this context configure the attributes of Packet Timing Signal Fail (PTSF).
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

monitor-ptsf-unusable

Synopsis	Enter the monitor-ptsf-unusable context
Context	configure system ptp ptsf monitor-ptsf-unusable
Tree	monitor-ptsf-unusable
Description	<p>Commands in this context configure monitoring of neighbor clocks for the PTSF-unusable state (condition) when the profile is set to g8275dot1-2014.</p> <p>When administratively enabled, the local clock monitors the noise level of PTP event messages between external neighbor PTP ports and the local clock. If it detects a high variation in the network path between the external neighbor port and the local port, it considers the neighbor port unusable. Announce messages from the neighbor are discarded and excluded from the BTCA and the port cannot be selected as the parent clock. The unusable condition must be manually cleared.</p> <p>When administratively disabled, the monitor PTSF function of the PTP clock clears PTSF-unusable states from all neighbor PTP ports. If no PTP messages are received from a neighbor for 15 minutes, the neighbor information is purged and the PTSF-unusable state is cleared.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of PTSF unusable monitoring
Context	configure system ptp ptsf monitor-ptsf-unusable admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

router [[router-instance](#)] *string*

Synopsis	Enter the router list instance
Context	configure system ptp router <i>string</i>
Tree	router
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[router-instance] string

Synopsis	Router name or VPRN service name
Context	configure system ptp router <i>string</i>
Tree	router
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state keyword

Synopsis	Administrative state of PTP on the router instance
Context	configure system ptp router <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

peer [ip-address] (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	Enter the peer list instance
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Description	Commands in this context configure a remote PTP peer.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

[ip-address] (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	IP address of the remote PTP peer
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer

Description	This command specifies the IP address of the remote PTP peer.
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of the PTP peer
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

delay-resp-receipt-timeout *number*

Synopsis	Number of Delay_Resp intervals before PTSF-LOTM
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) delay-resp-receipt-timeout <i>number</i>
Tree	delay-resp-receipt-timeout
Description	<p>This command configures the number of Delay_Resp message intervals that can pass without receiving a message from this peer before the router declares the PTSF-LOTM condition for the peer. A peer in this condition is excluded from the BTCA. The condition clears when Delay_Resp message reception resumes.</p> <p>This command applies only to PTP profiles that support the PTSF-LOTM condition.</p>
Range	3 to 65535
Introduced	26.10.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

local-priority *number*

Synopsis	PTP peer local priority
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) local-priority <i>number</i>
Tree	local-priority

Description	<p>This command configures the local priority for the peer, which is used to choose between PTP timeTransmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is configured for G.8265.1, G.8275.1, or G.8275.2 and is ignored for any other profile.</p> <p>For G.8265.1, this command configures the priority used to choose between time Transmitter clocks with the same quality (see G.8265.1 for more details).</p> <p>For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (ptp router peer context). See G.8275.1 or G.8275.2 for detailed information.</p>
Range	1 to 255
Default	128
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

log-sync-interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP peer interval for Sync messages in log form
Context	configure system ptp router <i>string peer (ipv4-address-no-zone ipv6-address-no-zone) log-sync-interval number</i>
Tree	log-sync-interval
Description	<p>This command configures the message interval used for Sync and Delay_Resp messages that are requested during unicast negotiation to the peer. The setting controls messages sent from remote peers to the local node but the packet rate from the local node to remote peers is not affected. Remote peers may request a packet rate within the acceptable range.</p> <p>The interval value is specified as the logarithm to the base 2.</p>
Range	-6 to 0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

monitor-receiver *boolean*

Synopsis	Enable the PTP peer as a monitor-receiver
Context	configure system ptp router <i>string peer (ipv4-address-no-zone ipv6-address-no-zone) monitor-receiver boolean</i>

Tree	monitor-receiver
Description	<p>When configured to true, the router enables the PTP peer as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is only supported when the PTP profile is set to G.8275.1 or G.8275.2.</p> <p>When configured to false, monitoring is disabled.</p>
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) not-master <i>boolean</i>
Tree	not-master
Description	When configured to true , the router blocks the port associated with the peer from entering the timeTransmitter state.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

sync-receipt-timeout *number*

Synopsis	Number of Sync intervals before PTSF-LOTM
Context	configure system ptp router <i>string</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync-receipt-timeout <i>number</i>
Tree	sync-receipt-timeout
Description	<p>This command configures the number of Sync message intervals, including the Follow_Up messages of a two-step clock, that can pass without receiving a message from this peer before the router declares the PTSF-LOTM condition for the peer. A peer in this condition is excluded from the BTCA. The condition clears when Sync message reception resumes.</p> <p>This command applies only to PTP profiles that support the PTSF-LOTM condition.</p>
Range	3 to 65535
Introduced	26.10.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

peer-limit *number*

Synopsis	Number of discovered peers allowed for routing instance
Context	configure system ptp router <i>string</i> peer-limit <i>number</i>
Tree	peer-limit
Description	<p>This command specifies the maximum number of discovered peers permitted within the routing instance. This ensures that a routing instance does not consume all the possible discovered peers and prevents the routing instance from blocking discovered peers in other routing instances.</p> <p>The sum of all peer limit values for all routing instances cannot exceed the maximum number of discovered peers supported by the system.</p>
Range	0 to 1600
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

time-inaccuracy *number*

Synopsis	Time inaccuracy value override
Context	configure system ptp time-inaccuracy <i>number</i>
Tree	time-inaccuracy
Description	<p>This command overrides the system-generated time inaccuracy value for the PTP clock with a specified value. The clock's time inaccuracy value is added to the total time inaccuracy value in IEEE_C37_238 TLVs sent to downstream clocks in Announce messages.</p> <p>This command is applicable only for boundary clocks and only when the profile is configured as c37dot238-2017.</p>
Range	0 to 10000000
Units	nanoseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

tx-path-trace *boolean*

Synopsis	Include PATH TRACE TLV in Announce messages
Context	configure system ptp tx-path-trace <i>boolean</i>
Tree	tx-path-trace

Default	false
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

tx-while-sync-uncertain *boolean*

Synopsis	Send Announce messages while clock is unsynchronized
Context	configure system ptp tx-while-sync-uncertain <i>boolean</i>
Tree	tx-while-sync-uncertain
Description	<p>When configured to true, the local PTP clock transmits Announce messages to downstream clocks to indicate it has not yet stabilized on the recovered synchronization source (upstream clocks or GM clock). While the PTP clock is unsynchronized, the Sync Uncertain state is true.</p> <p>When configured to false, the local PTP clock does not send Announce messages to downstream clocks to indicate it is not synchronized to a valid timing source. If the Sync Uncertain state of the clock is true while this command is configured to false, unicast negotiation grant requests are not granted and current grants are canceled.</p>
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

within-holdover-spec-timer *number*

Synopsis	Duration for local clock to specify the holdover state
Context	configure system ptp within-holdover-spec-timer <i>number</i>
Tree	within-holdover-spec-timer
Description	This command configures the duration for which the local clock sets its clock class to a value that indicates it is in holdover, within specification, following the loss of the primary reference time source.
Range	0 to 3600
Units	seconds
Default	600
Introduced	26.3.R1
Platforms	7705 SAR-10x, 7705 SAR-Hx, 7705 SAR-Mx

script-control

Synopsis	Enter the script-control context
Context	configure system script-control
Tree	script-control
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

script [[script-name](#)] *named-item* [owner](#) *named-item*

Synopsis	Enter the script list instance
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i>
Tree	script
Max. instances	1500
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[script-name] *named-item*

Synopsis	Script name
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i>
Tree	script
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *named-item*

Synopsis	Script owner
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i>
Tree	script
Description	This command configures the owner to be associated with the script. The owner is optional and "TiMOS CLI" is used if an owner is not specified.

The owner is an arbitrary name and not necessarily a user name. Commands in the scripts are not authorized against the owner. The **configure system security cli-script authorization x cli-user** command determines the user context against which commands in the scripts are authorized.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
MD-CLI default	TIMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the script
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

location *string-not-all-spaces*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Script location
Context	configure system script-control script <i>named-item</i> owner <i>named-item</i> location <i>string-not-all-spaces</i>
Tree	location
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

script-policy [**policy-name**] *named-item* **owner** *named-item*

Synopsis	Enter the script-policy list instance
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i>
Tree	script-policy
Max. instances	1500
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**policy-name**] *named-item*

Synopsis	Script policy name
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i>
Tree	script-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *named-item*

Synopsis	Script policy owner
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i>
Tree	script-policy
Description	<p>This command configures the owner to be associated with the script policy. The owner is optional and "TiMOS CLI" is used if an owner is not specified.</p> <p>The owner is an arbitrary name and not necessarily a user name. Commands in the scripts are not authorized against the owner. The configure system security cli-script authorization x cli-user command determines the user context against which commands in the scripts are authorized.</p>
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
MD-CLI default	TiMOS CLI
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the script policy
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

expire-time (*number* | *keyword*)

Synopsis	Maximum amount of time to keep a run history status
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> expire-time (<i>number</i> <i>keyword</i>)
Tree	expire-time
Range	0 to 21474836

Units	seconds
Options	forever
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lifetime (*number* | *keyword*)

Synopsis	Maximum amount of time the script may run
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> lifetime (<i>number</i> <i>keyword</i>)
Tree	lifetime
Range	0 to 21474836
Units	seconds
Options	forever
Default	3600
Notes	The following elements are part of a choice: (lifetime and script) or (python-lifetime and python-script).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lock-override *boolean*

Synopsis	Allow EHS/CRON script to break database explicit lock
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> lock-override <i>boolean</i>
Tree	lock-override
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-completed *number*

Synopsis	Maximum number of script history status entries kept
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> max-completed <i>number</i>

Tree	max-completed
Range	1 to 1500
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

python-lifetime *number*

Synopsis	Maximum time the Python application can run
Context	configure system script-control script-policy <i>named-item</i> owner <i>named-item</i> python-lifetime <i>number</i>
Tree	python-lifetime
Range	30 to 86400
Units	seconds
Notes	The following elements are part of a choice: (lifetime and script) or (python-lifetime and python-script).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

health-check (*number* | *keyword*)

Synopsis	Polling interval of LDAP, RADIUS, and TACACS+ servers
Context	configure system security aaa health-check (<i>number</i> <i>keyword</i>)
Tree	health-check
Description	This command configures the polling interval for health check monitoring of the LDAP, RADIUS, and TACACS+ servers. The servers send requests at regular intervals. If a

response is not received, the operational status of the server is changed to down. The operational status is changed to up when responses are received.

When RADIUS over TLS is configured, Status-Server packets are sent at 30-second intervals as specified in RFC 3539, regardless of whether health checks are enabled.

When this command is configured to **none**, health check monitoring of LDAP, RADIUS, and TACACS+ servers is disabled and the operational status for the server is up if a response to the last request was received.

Range	6 to 1500
Units	seconds
Options	none
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-profiles

Synopsis	Enter the local-profiles context
Context	configure system security aaa local-profiles
Tree	local-profiles
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile [[user-profile-name](#)] *named-item*

Synopsis	Enter the profile list instance
Context	configure system security aaa local-profiles profile <i>named-item</i>
Tree	profile
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[user-profile-name](#)] *named-item*

Synopsis	User profile name
Context	configure system security aaa local-profiles profile <i>named-item</i>
Tree	profile

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'user-profile-name' must not contain spaces
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-session-group *reference*

Synopsis	CLI session group to which the profile belongs
Context	configure system security aaa local-profiles profile <i>named-item</i> cli-session-group <i>reference</i>
Tree	cli-session-group
Reference	configure system security aaa cli-session-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

combined-max-sessions *number*

Synopsis	Maximum number of concurrent SSH and Telnet sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> combined-max-sessions <i>number</i>
Tree	combined-max-sessions
Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-action *keyword*

Synopsis	Action for non-matching entry
Context	configure system security aaa local-profiles profile <i>named-item</i> default-action <i>keyword</i>
Tree	default-action
Description	<p>This command specifies the default action to be applied when no match conditions are met in the list of profile entry match commands. It does not apply to other parts of the profile such as grpc rpc-authorization or netconf base-op-authorization.</p> <p>When a user is a member of multiple profiles, profiles are evaluated in the order that they are configured. Evaluation stops if there is a match, or when the default action</p>

of the profile is **deny-all**, **permit-all**, or **read-only-all**. When the profile default action is none and if no match conditions are met in the profile, the next profile is evaluated. When the default action of the last profile is none and no explicit match is found, the command is denied.

Options	deny-all – Deny access to all commands permit-all – Allow access to all commands none – No action; evaluate the next profile read-only-all – Allow read-only access to all commands
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entry *[entry-id] number*

Synopsis	Enter the entry list instance
Context	configure system security aaa local-profiles profile <i>named-item</i> entry <i>number</i>

Options permit, deny

Default permit

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

gnoi-system-reboot *keyword*

Synopsis gNOI System Reboot RPC authorization

Context **configure** [system](#) [security](#) [aaa](#) [local-profiles](#) [profile](#) *named-item* [grpc](#) [rpc-authorization](#) [gnoi-system-reboot](#) *keyword*

Tree [gnoi-system-reboot](#)

Options permit, deny

Default deny
permit

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

gnoi-system-rebootstatus *keyword*

Synopsis	gNOI System RebootStatus RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-rebootstatus <i>keyword</i>
Tree	gnoi-system-rebootstatus
Options	permit, deny
Default	deny permit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gnoi-system-setpackage *keyword*

Synopsis	gNOI System SetPackage RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-setpackage <i>keyword</i>
Tree	gnoi-system-setpackage
Options	permit, deny
Default	deny permit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gnoi-system-switchcontrolprocessor *keyword*

Synopsis	gNOI System SwitchControlProcessor RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-switchcontrolprocessor <i>keyword</i>
Tree	gnoi-system-switchcontrolprocessor
Options	permit, deny
Default	deny permit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gnoi-system-time *keyword*

Synopsis	gNOI System Time RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-time <i>keyword</i>
Tree	gnoi-system-time
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gnoi-system-traceroute *keyword*

Synopsis	gNOI System Traceroute RPC authorization
Context	configure system security aaa local-profiles profile <i>named-item</i> grpc rpc-authorization gnoi-system-traceroute <i>keyword</i>
Tree	gnoi-system-traceroute
Options	permit, deny
Default	permit
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf

Synopsis	Enter the netconf context
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf
Tree	netconf
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

base-op-authorization

Synopsis	Enter the base-op-authorization context
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization
Tree	base-op-authorization

Description	Commands in this context configure the permission to use NETCONF operations at the base operation level for the specified profile. The NETCONF operations are authorized by default in the built-in system-generated administrative profile.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action *boolean*

Synopsis	Allow the NETCONF <action> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization action <i>boolean</i>
Tree	action
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cancel-commit *boolean*

Synopsis	Allow the NETCONF <cancel-commit> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization cancel-commit <i>boolean</i>
Tree	cancel-commit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

close-session *boolean*

Synopsis	Allow the NETCONF <close-session> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization close-session <i>boolean</i>
Tree	close-session
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

commit *boolean*

Synopsis	Allow the NETCONF <commit> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization commit <i>boolean</i>
Tree	commit
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

copy-config *boolean*

Synopsis	Allow the NETCONF <copy-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization copy-config <i>boolean</i>
Tree	copy-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

create-subscription *boolean*

Synopsis	Allow the NETCONF <create-subscription> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization create-subscription <i>boolean</i>
Tree	create-subscription
Description	<p>When configured to true, the system enables the NETCONF create-subscription operation in the default profile.</p> <p>The configuration of this command is checked only at the time of the initial subscription. Configuration changes to this command do not cancel any in-progress subscriptions, and users who successfully subscribed initially continue to receive messages.</p> <p>The operation is enabled by default in the built-in system-generated administrative profile.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delete-config *boolean*

Synopsis	Allow the NETCONF <delete-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization delete-config <i>boolean</i>
Tree	delete-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard-changes *boolean*

Synopsis	Allow the NETCONF <discard-changes> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization discard-changes <i>boolean</i>
Tree	discard-changes
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

edit-config *boolean*

Synopsis	Allow the NETCONF <edit-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization edit-config <i>boolean</i>
Tree	edit-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

get *boolean*

Synopsis	Allow the NETCONF <get> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization get <i>boolean</i>
Tree	get

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

get-config *boolean*

Synopsis	Allow the NETCONF <get-config> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization get-config <i>boolean</i>
Tree	get-config
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

get-data *boolean*

Synopsis	Allow the NETCONF <get-data> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization get-data <i>boolean</i>
Tree	get-data
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

get-schema *boolean*

Synopsis	Allow the NETCONF <get-schema> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization get-schema <i>boolean</i>
Tree	get-schema
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

kill-session *boolean*

Synopsis	Allow the NETCONF <kill-session> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization kill-session <i>boolean</i>
Tree	kill-session
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lock *boolean*

Synopsis	Allow the NETCONF <lock> and <unlock> RPCs
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization lock <i>boolean</i>
Tree	lock
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

validate *boolean*

Synopsis	Allow the NETCONF <validate> RPC
Context	configure system security aaa local-profiles profile <i>named-item</i> netconf base-op-authorization validate <i>boolean</i>
Tree	validate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssh-max-sessions *number*

Synopsis	Maximum number of concurrent SSH sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> ssh-max-sessions <i>number</i>
Tree	ssh-max-sessions

Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet-max-sessions *number*

Synopsis	Maximum number of concurrent Telnet sessions
Context	configure system security aaa local-profiles profile <i>named-item</i> telnet-max-sessions <i>number</i>
Tree	telnet-max-sessions
Range	0 to 50
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

management-interface

Synopsis	Enter the management-interface context
Context	configure system security aaa management-interface
Tree	management-interface
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grpc

Synopsis	Enter the grpc context
Context	configure system security aaa management-interface grpc
Tree	grpc
Description	Commands in this context configure gRPC TLS authentication options.
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

tls-authentication

Synopsis	Enter the tls-authentication context
Context	configure system security aaa management-interface grpc tls-authentication

Tree	tls-authentication
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of mTLS authentication
Context	configure system security aaa management-interface grpc tls-authentication admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

default-user *reference*

Synopsis	Local user to display with mTLS authentication
Context	configure system security aaa management-interface grpc tls-authentication default-user <i>reference</i>
Tree	default-user
Description	<p>This command configures the local user to display for gRPC sessions authenticated using mTLS when the username metadata is not sent during authentication. The configured local user is associated with every session that authenticates with mTLS without a username. This username is displayed in several places, for example, in the command output for the show users command, YANG state, log messages, and debug messages.</p> <p>The local user must be configured but is not used in mTLS authentication.</p>
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

md-cli

Synopsis	Enter the md-cli context
Context	configure system security aaa management-interface md-cli
Tree	md-cli

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

command-accounting-during-load *boolean*

Synopsis	Perform file command accounting for load or rollback
Context	configure system security aaa management-interface md-cli command-accounting-during-load <i>boolean</i>
Tree	command-accounting-during-load
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-authorization

Synopsis	Enter the output-authorization context
Context	configure system security aaa management-interface output-authorization
Tree	output-authorization
Description	<p>Commands in this context configure output authorization for model-driven interfaces and telemetry.</p> <p>When output authorization is performed, commands that display configuration or state output must authorize every element in the output. If a remote AAA server is configured, there may be delays in displaying output while the output is authorized. The remote AAA server may receive a large volume of authorization requests when substantial output displays are needed, such as for system configuration details.</p> <p>Input to edit the configuration is always authorized, and is not affected by commands in this context.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-interfaces *boolean*

Synopsis	Authorize output in model-driven interfaces
Context	configure system security aaa management-interface output-authorization md-interfaces <i>boolean</i>
Tree	md-interfaces
Description	<p>When configured to true, output is authorized for the following:</p> <ul style="list-style-type: none">• MD-CLI info and compare commands

- MD-CLI command completion of list key values
- NETCONF <get> and <get-config> RPC
- gRPC/gNMI Get RPCs

Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telemetry-data *boolean*

Synopsis	Authorize dial-in telemetry output
Context	configure system security aaa management-interface output-authorization telemetry-data <i>boolean</i>
Tree	telemetry-data
Description	When configured to true , the system authorizes telemetry data in gNMI Subscriber RPC responses for dial-in telemetry. When configured to false , telemetry data is not authorized.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telemetry-default-user *reference*

Synopsis	Local user for dial-out telemetry output authorization
Context	configure system security aaa management-interface output-authorization telemetry-default-user <i>reference</i>
Tree	telemetry-default-user
Description	This command specifies the local user for telemetry data authorization in gNMI Publish RPCs for dial-out telemetry. The administrator must configure the local user to ensure the subscription is operational.
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

remote-servers

Synopsis	Enter the remote-servers context
----------	---

Context	configure system security aaa remote-servers
Tree	remote-servers
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ldap

Synopsis	Enter the ldap context
Context	configure system security aaa remote-servers ldap
Tree	ldap
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LDAP operation protocol
Context	configure system security aaa remote-servers ldap admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

public-key-authentication *boolean*

Synopsis	Allow SSH public key authentication from LDAP server
Context	configure system security aaa remote-servers ldap public-key-authentication <i>boolean</i>
Tree	public-key-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
----------	--

Context	configure system security aaa remote-servers ldap route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.
Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers ldap server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	LDAP server ID
Context	configure system security aaa remote-servers ldap server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the address list instance
Context	configure system security aaa remote-servers ldap server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)

Tree	address
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	LDAP server address
Context	configure system security aaa remote-servers ldap server <i>number</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	Port number on which to contact the LDAP server
Context	configure system security aaa remote-servers ldap server <i>number</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port <i>number</i>
Tree	port
Range	1 to 65535
Default	389
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LDAP server
Context	configure system security aaa remote-servers ldap server <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

bind-authentication

Synopsis Enter the **bind-authentication** context

Context **configure** [system security aaa remote-servers ldap server number bind-authentication](#)

Tree [bind-authentication](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

password *encrypted-leaf*

Synopsis Password used for authentication with the LDAP server

Context **configure** [system security aaa remote-servers ldap server number bind-authentication password encrypted-leaf](#)

Tree [password](#)

Description This command specifies the password used for authentication with the LDAP server in a protected format.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 254

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

root-dn *string-not-all-spaces*

Synopsis Root domain used for authentication with LDAP server

Context **configure** [system security aaa remote-servers ldap server number bind-authentication root-dn string-not-all-spaces](#)

Tree [root-dn](#)

String length 1 to 512

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

search

Synopsis	Enter the search context
Context	configure system security aaa remote-servers ldap server <i>number</i> search
Tree	search
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

base-dn *string-not-all-spaces*

Synopsis	LDAP server search base domain name
Context	configure system security aaa remote-servers ldap server <i>number</i> search base-dn <i>string-not-all-spaces</i>
Tree	base-dn
String length	1 to 512
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-name *named-item*

Synopsis	LDAP server name
Context	configure system security aaa remote-servers ldap server <i>number</i> server-name <i>named-item</i>
Tree	server-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-profile *reference*

Synopsis	TLS client profile used to encrypt the LDAP connection
Context	configure system security aaa remote-servers ldap server <i>number</i> tls-profile <i>reference</i>
Tree	tls-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-retry *number*

Synopsis	Number of attempts to retry contacting the LDAP server
Context	configure system security aaa remote-servers ldap server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-timeout *number*

Synopsis	Timeout for a response from the LDAP server
Context	configure system security aaa remote-servers ldap server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-default-template *boolean*

Synopsis	Apply the default template to LDAP
Context	configure system security aaa remote-servers ldap use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

radius

Synopsis	Enter the radius context
Context	configure system security aaa remote-servers radius
Tree	radius
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access-algorithm *keyword*

Synopsis	Algorithm used to access the set of RADIUS servers
Context	configure system security aaa remote-servers radius access-algorithm keyword
Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting *boolean*

Synopsis	Enable RADIUS command accounting
Context	configure system security aaa remote-servers radius accounting boolean
Tree	accounting
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting-port *number*

Synopsis	Port number on RADIUS server for accounting requests
Context	configure system security aaa remote-servers radius accounting-port number
Tree	accounting-port
Range	1 to 65535
Default	1813
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the authentication server

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [radius](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

authorization *boolean*

Synopsis Enable RADIUS authorization

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [radius](#) [authorization](#) *boolean*

Tree [authorization](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interactive-authentication *boolean*

Synopsis Enable RADIUS interactive authentication

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [radius](#) [interactive-authentication](#) *boolean*

Tree [interactive-authentication](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

port *number*

Synopsis UDP port to communicate with the RADIUS server

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [radius](#) [port](#) *number*

Tree [port](#)

Range	1 to 65535
Default	1812
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
Context	configure system security aaa remote-servers radius route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.
Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers radius server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	RADIUS server ID
Context	configure system security aaa remote-servers radius server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authenticator *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	configure system security aaa remote-servers radius server <i>number</i> authenticator <i>keyword</i>
Tree	authenticator
Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secret *encrypted-leaf*

Synopsis	Secret key for RADIUS over UDP
Context	configure system security aaa remote-servers radius server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
Description	This command specifies the secret key and enables RADIUS over UDP for the RADIUS server.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7505 SAR Gen 2 System Management Guide* for more information.

String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS profile for RADIUS over TLS
Context	configure system security aaa remote-servers radius server number tls-client-profile reference
Tree	tls-client-profile
Description	<p>This command specifies the TLS profile and enables RADIUS over TLS for the RADIUS server.</p> <p>When a TLS profile is assigned to a RADIUS server, the communication automatically switches from UDP to TCP, if a secret key is also configured. When a TLS profile is removed from a RADIUS server, the communication automatically switches from TCP to UDP, if a secret key is also configured. In both cases, the server is not recreated internally, so statistics are preserved.</p>
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-retry *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	configure system security aaa remote-servers radius server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-timeout *number*

Synopsis	Time to wait for a response from the RADIUS server
----------	--

Context	configure system security aaa remote-servers radius server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-default-template *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
Context	configure system security aaa remote-servers radius use-default-template <i>boolean</i>
Tree	use-default-template
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tacplus

Synopsis	Enter the tacplus context
Context	configure system security aaa remote-servers tacplus
Tree	tacplus
Description	Commands in this context configure TACACS+ at the system level.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accounting

Synopsis	Enable the accounting context
Context	configure system security aaa remote-servers tacplus accounting
Tree	accounting
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	configure system security aaa remote-servers tacplus accounting record-type <i>keyword</i>
Tree	record-type
Options	start-stop, stop-only
Default	stop-only
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-control

Synopsis	Enter the admin-control context
Context	configure system security aaa remote-servers tacplus admin-control
Tree	admin-control
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tacplus-map-to-priv-lvl *number*

Synopsis	Interactive authentication from node to TACACS+ server
Context	configure system security aaa remote-servers tacplus admin-control tacplus-map-to-priv-lvl <i>number</i>
Tree	tacplus-map-to-priv-lvl
Range	0 to 15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	configure system security aaa remote-servers tacplus admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authorization

Synopsis	Enable the authorization context
Context	configure system security aaa remote-servers tacplus authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

request-format

Synopsis	Enter the request-format context
Context	configure system security aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	configure system security aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i>
Tree	access-operation-cmd
Description	<p>This command sends an operation argument in authorization requests.</p> <p>In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.</p>
Options	delete
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	configure system security aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i>
Tree	use-priv-lvl
Description	<p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	configure system security aaa remote-servers tacplus ignore-unknown-mandatory-vsas <i>boolean</i>
Tree	ignore-unknown-mandatory-vsas
Description	<p>When configured to true, the system ignores unknown mandatory VSAs and authentication succeeds.</p> <p>When configured to false, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	configure system security aaa remote-servers tacplus interactive-authentication <i>boolean</i>

Tree	interactive-authentication
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priv-lvl-map

Synopsis	Enter the priv-lvl-map context
Context	configure system security aaa remote-servers tacplus priv-lvl-map
Tree	priv-lvl-map
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priv-lvl [[level](#)] *number*

Synopsis	Enter the priv-lvl list instance
Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[level] *number*

Synopsis	Privilege level for the mapping
Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Range	0 to 15
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-profile-name *reference*

Synopsis	User profile for the mapping
----------	------------------------------

Context	configure system security aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> user-profile-name <i>reference</i>
Tree	user-profile-name
Reference	configure system security aaa local-profiles profile <i>named-item</i>
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-preference *keyword*

Synopsis	Route preference to reach the AAA server
Context	configure system security aaa remote-servers tacplus route-preference <i>keyword</i>
Tree	route-preference
Description	This command specifies the routing preference to reach the AAA server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the Base routing instance are used to reach the server before the in-band routes in the management routing instance.
Options	both, inband, outband
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure system security aaa remote-servers tacplus server <i>number</i>
Tree	server
Max. instances	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	TACACS+ server ID
Context	configure system security aaa remote-servers tacplus server <i>number</i>

Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP port to communicate with the TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> port <i>number</i>
Tree	port
Range	0 1 to 65535
Default	49
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secret *encrypted-leaf*

Synopsis	Secret key to access the TACACS+ server
Context	configure system security aaa remote-servers tacplus server <i>number</i> secret <i>encrypted-leaf</i>
Tree	secret
Description	This command specifies the secret key to access the TACACS+ server in a protected format.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length	0 to 254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-connection

Synopsis	Enter the tls-connection context
Context	configure system security aaa remote-servers tacplus server <i>number</i> tls-connection
Tree	tls-connection
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

sni

Synopsis	Enter the sni context
Context	configure system security aaa remote-servers tacplus server <i>number</i> tls-connection sni
Tree	sni
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

host-name *fully-qualified-domain-name*

Synopsis	Server DNS host name sent as TLS SNi when connecting to the TACACS+ server.
Context	configure system security aaa remote-servers tacplus server <i>number</i> tls-connection sni host-name <i>fully-qualified-domain-name</i>
Tree	host-name
String length	1 to 253
String format	'host-name' must contain valid lowercase 1 to 63 character DNS labels
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS client profile for the TACACS+ server TLS connection.
Context	configure system security aaa remote-servers tacplus server <i>number</i> tls-connection tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

tls-port *number*

Synopsis	TCP port for the TLS connection to the TACACS+ server.
Context	configure system security aaa remote-servers tacplus server <i>number</i> tls-connection tls-port <i>number</i>
Tree	tls-port
Range	0 1 to 65535
Default	300
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

server-retry-timeout (*number* | *keyword*)

Synopsis	Time before retrying requests when health checks are disabled
Context	configure system security aaa remote-servers tacplus server-retry-timeout (<i>number</i> <i>keyword</i>)
Tree	server-retry-timeout
Description	This command configures the maximum timeout before retrying requests when health checks are disabled and all TACACS+ servers are operationally down. Set the value of this timer to a lower value or disable it to increase the interactive responsiveness of AAA requests after the servers become unreachable.
Range	1 to 300
Units	seconds
Options	none – Disable retry timeout and send requests immediately
Default	300
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

server-timeout *number*

Synopsis Time to wait for a response from the TACACS+ server

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [tacplus](#) [server-timeout](#) *number*

Tree [server-timeout](#)

Range 1 to 90

Units seconds

Default 3

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

service-request

Synopsis Enter the **service-request** context

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [tacplus](#) [service-request](#)

Tree [service-request](#)

Description Commands in this context enable Nokia services to be requested from the TACACS+ server when a user authenticates.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

nokia-grpc-rpc-authorization *boolean*

Synopsis Request nokia-grpc-rpc-authorization service VSAs

Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [tacplus](#) [service-request](#) [nokia-grpc-rpc-authorization](#) *boolean*

Tree [nokia-grpc-rpc-authorization](#)

Description When configured to **true**, the nokia-grpc-rpc-authorization service is requested from the TACACS+ server after successful authentication.

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

nokia-netconf-base-op-authorization *boolean*

Synopsis	Request nokia-netconf-base-op-authorization service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-netconf-base-op-authorization <i>boolean</i>
Tree	nokia-netconf-base-op-authorization
Description	When configured to true , the nokia-netconf-base-op-authorization service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-user *boolean*

Synopsis	Request nokia-user service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-user <i>boolean</i>
Tree	nokia-user
Description	When configured to true , the nokia-user service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

nokia-user-profile *boolean*

Synopsis	Request nokia-user-profile service VSAs
Context	configure system security aaa remote-servers tacplus service-request nokia-user-profile <i>boolean</i>
Tree	nokia-user-profile
Description	When configured to true , the nokia-user-profile service is requested from the TACACS+ server after successful authentication.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

single-connection *boolean*

Synopsis	Enable TACACS+ single connection mode
Context	configure system security aaa remote-servers tacplus single-connection <i>boolean</i>
Tree	single-connection
Description	When configured to true , the router maintains a persistent TCP connection open to the server to reduce the communication overhead for each request. When configured to false , the router opens a new TCP connection for each request.
Default	false
Introduced	26.10.R1
Platforms	7705 SAR Gen 2

use-default-template *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	configure system security aaa remote-servers tacplus use-default-template <i>boolean</i>
Tree	use-default-template
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vpnr-server

Synopsis	Enter the vpnr-server context
Context	configure system security aaa remote-servers vpnr-server
Tree	vpnr-server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inband *reference*

Synopsis	VPNR service used for AAA by in-band sessions
Context	configure system security aaa remote-servers vpnr-server inband <i>reference</i>
Tree	inband

Description	This command configures TACACS+ or RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions in the Base routing instance.
Reference	configure service vprn service-name
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

outband *reference*

Synopsis	VPRN service used for AAA by out-of-band sessions
Context	configure system security aaa remote-servers vprn-server outband <i>reference</i>
Tree	outband
Description	This command configures TACACS+ and RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions on the console or out-of-band (OOB) Ethernet ports.
Reference	configure service vprn service-name
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn *reference*

Synopsis	VPRN used for AAA in VPRNs without a AAA server
Context	configure system security aaa remote-servers vprn-server vprn <i>reference</i>
Tree	vprn
Description	This command configures TACACS+ or RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions in VPRNs without a AAA server configured.
Reference	configure service vprn service-name
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user-template [[user-template-name](#)] *keyword*

Synopsis	Enter the user-template list instance
Context	configure system security aaa user-template <i>keyword</i>
Tree	user-template
Description	Commands in this context configure templates for remote users.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

[user-template-name] *keyword*

Synopsis Default user template applied to the remote user

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword*

Tree [user-template](#)

Options ldap-default – Default LDAP user template
radius-default – Default RADIUS user template
tacplus-default – Default TACACS+ user template

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

access

Synopsis Enter the **access** context

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [access](#)

Tree [access](#)

Description Commands in this context grant a user access to the router management access methods. If a user requires access to more than one method, multiple methods can be specified.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

console *boolean*

Synopsis Allow console port, SCP/SFTP, SSH, and Telnet access

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [access](#) [console](#) *boolean*

Tree [console](#)

Description When configured to **true**, the system allows this access method to take precedence over other access methods in all cases.

Default true

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

console-port-cli *boolean*

Synopsis	Allow console port CLI access
Context	configure system security aaa user-template <i>keyword</i> access console-port-cli <i>boolean</i>
Tree	console-port-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ftp *boolean*

Synopsis	Allow FTP access
Context	configure system security aaa user-template <i>keyword</i> access ftp <i>boolean</i>
Tree	ftp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grpc *boolean*

Synopsis	Allow gRPC access
Context	configure system security aaa user-template <i>keyword</i> access grpc <i>boolean</i>
Tree	grpc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf *boolean*

Synopsis	Allow NETCONF access
Context	configure system security aaa user-template <i>keyword</i> access netconf <i>boolean</i>
Tree	netconf
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

scp-sftp *boolean*

Synopsis Allow SCP/SFTP access

Context **configure** [system security aaa user-template](#) *keyword* [access scp-sftp](#) *boolean*

Tree [scp-sftp](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

ssh-cli *boolean*

Synopsis Allow SSH CLI access

Context **configure** [system security aaa user-template](#) *keyword* [access ssh-cli](#) *boolean*

Tree [ssh-cli](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

telnet-cli *boolean*

Synopsis Allow Telnet CLI access

Context **configure** [system security aaa user-template](#) *keyword* [access telnet-cli](#) *boolean*

Tree [telnet-cli](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

console

Synopsis Enter the **console** context

Context **configure** [system security aaa user-template](#) *keyword* [console](#)

Tree [console](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

login-exec *string-not-all-spaces*

Synopsis File to execute when the user logs in

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [console](#) [login-exec](#) *string-not-all-spaces*

Tree [login-exec](#)

String length 1 to 200

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

home-directory *cflash-without-slot-url*

Synopsis User local home directory based on the template

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [home-directory](#) *cflash-without-slot-url*

Tree [home-directory](#)

Description This command configures the home directory of the user for file access. Files can be accessed locally by CLI **file** commands and output modifiers such as > (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in.

When **restricted-to-home** is configured, file access is denied unless the **home-directory** is configured and the directory is created by an administrator.

String length 1 to 200

String format 'cflash-without-slot-url' must be cf1-4: followed by path (e.g. cf1:/path)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

profile *named-item*

Synopsis User profile based on the template

Context **configure** [system](#) [security](#) [aaa](#) [user-template](#) *keyword* [profile](#) *named-item*

Tree [profile](#)

String length 1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

	'profile' must not contain spaces
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	configure system security aaa user-template <i>keyword</i> restricted-to-home <i>boolean</i>
Tree	restricted-to-home
Description	<p>When configured to true, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect). The system denies all configuration save operations (such as admin save) via any management interface (such as CLI and NETCONF) unless save-when-restricted is enabled.</p> <p>File access is denied unless a home directory is configured and the directory is created by an administrator.</p> <p>When configured to false, the router permits the user to access all files on the system and to remote files.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	configure system security aaa user-template <i>keyword</i> save-when-restricted <i>boolean</i>
Tree	save-when-restricted
Description	<p>When configured to true, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if restricted-to-home is enabled.</p> <p>The configuration for each region can be saved with admin save CLI commands or when committed over NETCONF and gRPC.</p> <p>When configured to false, the system denies saving the configuration when restricted-to-home is enabled, unless the home directory of the user includes the location of the saved configuration file.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-script

Synopsis	Enter the cli-script context
Context	configure system security cli-script
Tree	cli-script
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authorization

Synopsis	Enter the authorization context
Context	configure system security cli-script authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cron

Synopsis	Enter the cron context
Context	configure system security cli-script authorization cron
Tree	cron
Description	Commands in this context configure authorization for the cron job scheduler.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-user reference

Synopsis	User profile name for CLI command script authorization
Context	configure system security cli-script authorization cron cli-user reference
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event-handler

Synopsis	Enter the event-handler context
Context	configure system security cli-script authorization event-handler
Tree	event-handler
Description	Commands in this context configure authorization for the Event Handling System (EHS). EHS allows user-controlled programmatic exception handling by allowing a CLI script to be executed upon the detection of a log event.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-user reference

Synopsis	User profile name for CLI command script authorization
Context	configure system security cli-script authorization event-handler cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

console-login boolean

Synopsis	Enable logins on the serial console port of the CPM
Context	configure system security console-login <i>boolean</i>
Tree	console-login
Description	<p>When configured to true, the system enables logins on the serial console port of the active CPM.</p> <p>When configured to false, the system disables logins on the serial console port of the active CPM. Boot messages and the pre-login-message, if configured, are displayed, but the login prompt is not displayed.</p> <p>Note: In-band or out-of-band management access must be configured before console logins are disabled so that users can log in to the system.</p>
Default	true
Introduced	25.10.R3
Platforms	7705 SAR Gen 2

dist-cpu-protection

Synopsis	Enter the dist-cpu-protection context
Context	configure system security dist-cpu-protection
Tree	dist-cpu-protection
Description	Commands in this context configure distributed CPU protection (DCP) attributes.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy [[policy-name](#)] *named-item*

Synopsis	Enter the policy list instance
Context	configure system security dist-cpu-protection policy <i>named-item</i>
Tree	policy
Description	Commands in this context configure the attributes of DCP policies. These policies can be applied to objects such as SAPs, network interfaces or ports
Max. instances	130
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[policy-name] *named-item*

Synopsis	Policy name
Context	configure system security dist-cpu-protection policy <i>named-item</i>
Tree	policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure system security dist-cpu-protection policy <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-monitoring-policer [[policer-name](#)] *named-item*

Synopsis	Enter the local-monitoring-policer list instance
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i>
Tree	local-monitoring-policer
Max. instances	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[policer-name] *named-item*

Synopsis	Local monitoring policer name
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i>
Tree	local-monitoring-policer
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> description <i>description</i>
Tree	description

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exceed-action *keyword*

Synopsis	Action taken when policer rates are exceeded
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> exceed-action <i>keyword</i>
Tree	exceed-action
Description	This command specifies the action taken on the extracted control packets when the configured policer rates are exceeded.
Options	discard, low-priority, none
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-events *keyword*

Synopsis	Control of log events creation for status and activity
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> log-events <i>keyword</i>
Tree	log-events
Description	This command controls the creation of log events related to the status and activity of the local monitoring policer.
Options	false, true, verbose
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rate

Synopsis	Enter the rate context
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate

Tree	rate
Description	<p>Commands in this context specify the rate and burst tolerance for the policer.</p> <p>The actual hardware may not be able to perfectly rate limit to the exact configured parameters. In this case, the configured parameters will be adapted to the closest supported rate.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

kbps

Synopsis	Enter the kbps context
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate kbps
Tree	kbps
Notes	The following elements are part of a choice: kbps or packets .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit (*keyword* | *number*)

Synopsis	Rate limit
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate kbps limit (<i>keyword</i> <i>number</i>)
Tree	limit
Range	1 to 20000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbs *number*

Synopsis	Tolerance for the rate
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate kbps mbs <i>number</i>

Tree	mbs
Range	0 to 4194304
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packets

Synopsis	Enter the packets context
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate packets
Tree	packets
Notes	The following elements are part of a choice: kbits or packets .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-delay *number*

Synopsis	Additional packets allowed in an initial burst
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate packets initial-delay <i>number</i>
Tree	initial-delay
Description	This command specifies the number of packets allowed in an initial burst (or a burst after the policer bucket has drained to zero) in addition to the packets per interval limit. The typical setting would be a value equal to the number of received packets in several full handshakes or negotiations of the protocol.
Range	0 to 255
Units	packets
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit (*keyword* | *number*)

Synopsis	Packets per interval limit
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate packets limit (<i>keyword</i> <i>number</i>)

Tree	limit
Range	0 to 8000
Units	packets per interval
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

within *number*

Synopsis	Measurement interval for packets rate
Context	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i> rate packets within <i>number</i>
Tree	within
Range	1 to 32767
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol [[protocol-name](#)] *keyword*

Synopsis	Enter the protocol list instance
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i>
Tree	protocol
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[protocol-name] *keyword*

Synopsis	Protocol name
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i>
Tree	protocol
Options	arp, dhcp, http-redirect, icmp, igmp, mld, ndis, pppoe-pppoa, all-unspecified, mpls-ttl, bfd-cpm, bgp, eth-cfm, isis, ldp, ospf, pim, rsvp, icmp-ping-check, lacp, vrrp, multi-chassis, multi-chassis-sync, bfd, ftp, icmp-v4, icmp-v6, l3-to-my-ipv4,

	l3-to-my-ipv6, lsp-ping, mc-lag, mcast-snooping, radius, rip, sbfd-reflector, snmp, ssh, stp, tacacs, telnet, tftp, twamp, needs-icmp, mka-over-udp
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-parameters

Synopsis	Enter the dynamic-parameters context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters
Tree	dynamic-parameters
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detection-time *number*

Synopsis	Minimum time the dynamic policer remains allocated
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters detection-time <i>number</i>
Tree	detection-time
Range	1 to 128000
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exceed-action

Synopsis	Enter the exceed-action context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters exceed-action
Tree	exceed-action
Description	Commands in this context specify the settings for the scenario when the configured policer rates are exceeded.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

action *keyword*

Synopsis Action taken on control packets when rates are exceeded

Context **configure** [system security dist-cpu-protection policy](#) *named-item* [protocol](#) *keyword*
[dynamic-parameters exceed-action action](#) *keyword*

Tree [action](#)

Options discard, low-priority, none

Default none

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hold-down (*keyword* | *number*)

Synopsis Hold down behavior

Context **configure** [system security dist-cpu-protection policy](#) *named-item* [protocol](#) *keyword*
[dynamic-parameters exceed-action hold-down](#) (*keyword* | *number*)

Tree [hold-down](#)

Description This command specifies the behavior when the system detects that an enforcement policer has marked or discarded one or more packets and there is no action specified for the scenario when the rates are exceeded.

The hold time condition is cleared after the specified time has expired. The detection time (the minimum time that the policer remains allocated) begins after the hold down is complete. The hold down behavior is not applicable to a local monitoring policer.

An indefinite hold down behavior must be cleared using the **tools perform security dist-cpu-protection release-hold-down** command.

Range 1 to 10080

Units seconds

Options indefinite, none

Default none

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

log-events *keyword*

Synopsis Control of log events creation for status and activity

Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters log-events <i>keyword</i>
Tree	log-events
Description	This command controls the creation of log events related to the status and activity of the local monitoring policer.
Options	false, true, verbose
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rate

Synopsis	Enter the rate context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate
Tree	rate
Description	Commands in this context specify the rate and burst tolerance for the policer. The actual hardware may not be able to perfectly rate limit to the exact configured parameters. In this case, the configured parameters will be adapted to the closest supported rate.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

kbps

Synopsis	Enter the kbits context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate kbps
Tree	kbps
Notes	The following elements are part of a choice: kbits or packets .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit (*keyword* | *number*)

Synopsis	Rate limit
----------	------------

Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate kbps limit (<i>keyword</i> <i>number</i>)
Tree	limit
Range	1 to 20000000
Units	kilobps
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mbs *number*

Synopsis	Tolerance for the rate
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate kbps mbs <i>number</i>
Tree	mbs
Range	0 to 4194304
Units	bytes
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

packets

Synopsis	Enter the packets context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate packets
Tree	packets
Notes	The following elements are part of a choice: kbps or packets .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

initial-delay *number*

Synopsis	Additional packets allowed in an initial burst
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate packets initial-delay <i>number</i>

Tree	initial-delay
Description	This command specifies the number of packets allowed in an initial burst (or a burst after the policer bucket has drained to zero) in addition to the packets per interval limit. The typical setting would be a value equal to the number of received packets in several full handshakes or negotiations of the protocol.
Range	0 to 255
Units	packets
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

limit (*keyword* | *number*)

Synopsis	Packets per interval limit
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate packets limit (<i>keyword</i> <i>number</i>)
Tree	limit
Range	0 to 8000
Units	packets per interval
Options	max
Default	max
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

within *number*

Synopsis	Measurement interval for packets rate
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> dynamic-parameters rate packets within <i>number</i>
Tree	within
Range	1 to 32767

enforcement

Synopsis	Enter the enforcement context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> enforcement
Tree	enforcement
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic

Synopsis	Enter the dynamic context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> enforcement dynamic
Tree	dynamic
Notes	The following elements are part of a choice: dynamic , dynamic-local-mon-bypass , shared , or static .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mon-policer-name *reference*

Synopsis	Dynamic enforcement policer for the protocol
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> enforcement dynamic mon-policer-name <i>reference</i>
Tree	mon-policer-name
Description	This command specifies the dynamic enforcement policer that is instantiated when the associated local monitoring policer is determined to be in a nonconforming state (at the end of a minimum monitoring time of 60 seconds to reduce thrashing).
Reference	configure system security dist-cpu-protection policy <i>named-item</i> local-monitoring-policer <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-local-mon-bypass

Synopsis	Do not include packets in the local monitoring function
----------	---

Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> enforcement dynamic-local-mon-bypass
Tree	dynamic-local-mon-bypass
Description	When configured, packets from the protocol are not included in the local monitoring function and the dynamic enforcement policer is not instantiated for the protocol.
Notes	The following elements are part of a choice: dynamic , dynamic-local-mon-bypass , shared , or static .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

static

Synopsis	Enter the static context
Context	configure system security dist-cpu-protection policy <i>named-item</i> protocol <i>keyword</i> enforcement static
Tree	static
Notes	The following elements are part of a choice: dynamic , dynamic-local-mon-bypass , shared , or static .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policer-name *reference*

Synopsis	Static policer enforced by the protocol

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

algorithm keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encryption algorithm used by the keychain key
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> algorithm <i>keyword</i>
Tree	algorithm
Options	aes-128-cmac-96, hmac-sha-1-96, password, message-digest, hmac-md5, hmac-sha-1, hmac-sha-256, aes-128-gcm-16, aes-128-cmac-128, hmac-sha-256-96, hmac-sha-256-128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key encrypted-leaf**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Authentication key used by the encryption algorithm
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	<p>This command configures the authentication key used by the encryption algorithm to sign and authenticate the protocol packet.</p> <p>If the algorithm is based on AES and the specified key is not the exact length required by the associated algorithm, the following steps are taken, depending on the protocol:</p> <ul style="list-style-type: none"> • For protocols using TCP-AO (BGP, LDP, and PCEP), the key is processed as described in RFC 4615. All key lengths are valid. • For all other protocols (OSPF, IS-IS, RSVP, NTP, and MACsec), if the key is shorter than the required length, the key is padded with zeros; if it is longer, it is truncated. <p>For algorithms based on AES-128, the required key length is 16 bytes.</p> <p>For algorithms based on AES-256, the required key length is 32 bytes.</p> <p>In all other cases, all key lengths are valid and the specified key is not padded nor truncated.</p>

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length	1 to 110
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

begin-time *date-and-time*

Synopsis	Calendar date and time to start using the key
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> begin-time <i>date-and-time</i>
Tree	begin-time
Description	This command specifies the calendar date and time which this specific key entry becomes active and creates an MKA session. If no date and time is set, the begin-time is represented by a date and time string with all NULLs and the key is not valid.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

option *keyword*

Synopsis	Keychain key option
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> option <i>keyword</i>
Tree	option
Options	none, basic, isis-enhanced
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tolerance (*number* | *keyword*)

Synopsis	Time eligible receive key overlaps with active send key
Context	configure system security keychains keychain <i>named-item</i> bidirectional entry <i>number</i> tolerance (<i>number</i> <i>keyword</i>)
Tree	tolerance

Range	0 to 4294967294
Units	seconds
Options	infinite
Default	300
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security keychains keychain <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

macsec

Synopsis	Enter the macsec context
Context	configure system security keychains keychain <i>named-item</i> macsec
Tree	macsec
Description	Commands in this context configure the key entries for the MACsec keychain.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

entry [[keychain-entry-index](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i>
Tree	entry
Description	Commands in this context configure a specific key entry in the keychain. Entries are defined by an entry ID. Each MACsec key entry creates a dedicated MKA for that key entry. MKA uses the key entry's CAK and its encryption algorithm to secure the SAK between peers.

The MACsec key entry with an ID of 0 can be configured with a tolerance of forever and can be used as a backup key entry. If at the begin time of any key entry there is a problem with establishing MKA, the keychain may fallback to the backup key entry.

Introduced 25.10.R1
Platforms 7705 SAR Gen 2

[keychain-entry-index] *number*

Synopsis Keychain ID
Context **configure** [system](#) [security](#) [keychains](#) [keychain](#) *named-item* [macsec](#) [entry](#) *number*

Options	aes-128-cmac-128 – Algorithm based on AES-CMAC and key size of 128 bits aes-256-cmac-256 – Algorithm based on AES-CMAC and key size of 256 bits
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

begin-time *date-and-time*

Synopsis	Calendar date and time to start using the key
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i> begin-time <i>date-and-time</i>
Tree	begin-time
Description	This command specifies the calendar date and time which this specific key entry becomes active and creates an MKA session. If no date and time is set, the begin-time is represented by a date and time string with all NULLs and the key is not valid.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

cak *encrypted-leaf-hex-without-prefix*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	CAK used by the encryption algorithm
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i> cak <i>encrypted-leaf-hex-without-prefix</i>
Tree	cak
Description	This command configures the CAK to be used by the encryption algorithm.
String length	1 to 126
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

cak-name *cak-name*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	CAK name
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i> cak-name <i>cak-name</i>
Tree	cak-name
String length	1 to 64
String format	'cak-name' must be even-length hex up to 64 characters (e.g. 0a1b2c)
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

tolerance (*number* | *keyword*)

Synopsis	Time a receive key should overlap with active send key
Context	configure system security keychains keychain <i>named-item</i> macsec entry <i>number</i> tolerance (<i>number</i> <i>keyword</i>)
Tree	tolerance
Description	This command configures the amount of time that the key entry MKA session can overlap with the newly active key entry MKA session. The current key entry MKA session is established up to the tolerance time but is not the principle (encrypting) MKA if the new key entry MKA session is established.
Range	20 to 4294967294
Units	seconds
Options	infinite
Default	300
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

receive

authentication-key *encrypted-leaf***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Authentication key used by the encryption algorithm
Context	configure system security keychains keychain <i>named-item</i> send entry <i>number</i> authentication-key <i>encrypted-leaf</i>
Tree	authentication-key
Description	This command configures the authentication key used by the encryption algorithm to sign and authenticate the protocol packet.

If the algorithm is based on AES and the specified key is not the exact length required by the associated algorithm, the following steps are taken, depending on the protocol:

- For protocols using TCP-AO (BGP, LDP, and PCEP), the key is processed as described in RFC 4615. All key lengths are valid.
- For all other protocols (OSPF, IS-IS, RSVP, NTP, and MACsec), if the key is shorter than the required length, the key is padded with zeros; if it is longer, it is truncated.

For algorithms based on AES-128, the required key length is 16 bytes.

For algorithms based on AES-256, the required key length is 32 bytes.

In all other cases, all key lengths are valid and the specified key is not padded nor truncated.

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length	1 to 110
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

begin-time *date-and-time*

Synopsis	Calendar date and time to start using the key
Context	configure system security keychains keychain <i>named-item</i> send entry <i>number</i> begin-time <i>date-and-time</i>
Tree	begin-time
Description	<p>This command specifies the calendar date and time which this specific key entry becomes active and creates an MKA session.</p> <p>If no date and time is set, the begin-time is represented by a date and time string with all NULLs and the key is not valid.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tcp-option-number

Synopsis	Enter the tcp-option-number context
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number
Tree	tcp-option-number
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

receive keyword

Synopsis	TCP option accepted in received TCP packets
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number receive keyword
Tree	receive
Options	option-253, option-254, both, tcp-ao
Default	option-254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send keyword

Synopsis	TCP option accepted in sent TCP packets
Context	configure system security keychains keychain <i>named-item</i> tcp-option-number send keyword
Tree	send
Options	option-253, option-254, tcp-ao
Default	option-254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

management

Synopsis	Enter the management context
Context	configure system security management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the 'Base' and 'management' router instances.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ftp boolean

Synopsis	Allow access to the FTP server
Context	configure system security management allow-ftp <i>boolean</i>

Tree	allow-ftp
Description	When configured to true , this command allows FTP access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , this command disallows access to the SR OS FTP server.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	configure system security management allow-grpc <i>boolean</i>
Tree	allow-grpc
Description	When configured to true , the system allows access to the gRPC server via the 'Base' and 'management' router instances.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
Context	configure system security management allow-netconf <i>boolean</i>
Tree	allow-netconf
Description	When configured to true , the system allows NETCONF server access to the SR OS router via the 'Base' and 'management' router instances.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	configure system security management allow-ssh <i>boolean</i>
Tree	allow-ssh

Description	When configured to true , this command allows SSH server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , this command disallows SSH server access.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	configure system security management allow-telnet <i>boolean</i>
Tree	allow-telnet
Description	When configured to true , the system allows IPv4 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , access to the IPv4 Telnet server is not allowed.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	configure system security management allow-telnet6 <i>boolean</i>
Tree	allow-telnet6
Description	When configured to true , the system allows IPv6 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to false , the system prevents access to the IPv6 Telnet server.
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

management-access-filter

Synopsis	Enter the management-access-filter context
Context	configure system security management-access-filter

Tree	management-access-filter
Description	<p>Commands in this context configure the attributes for management access filters.</p> <p>Management access filters control all traffic in and out of the CPM. The filters can be used to restrict management of the router by other nodes outside of specific networks (or sub-networks) or through designated ports.</p> <p>Management filters are enforced by the system software.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-filter

Synopsis	Enter the ip-filter context
Context	configure system security management-access-filter ip-filter
Tree	ip-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	configure system security management-access-filter ip-filter admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter ip-filter default-action keyword
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entry [**entry-id**] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter ip-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter ip-filter entry <i>number</i>
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter ip-filter entry <i>number</i> action <i>keyword</i>
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry. If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop, reject
Default	ignore-match

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

description *description*

Synopsis Text description
Context **configure** [system security management-access-filter ip-filter entry number description](#)
Tree [description](#)
String length 1 to 80
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

log-events *boolean*

Synopsis Enable match logging
Context **configure** [system security management-access-filter ip-filter entry number log-events boolean](#)
Tree [log-events](#)
Description When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised.
When configured to **false**, match logging is disabled.
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

match

Synopsis Enter the **match** context
Context **configure** [system security management-access-filter ip-filter entry number match](#)
Tree [match](#)
Description Commands in this context specify match criteria for the entry.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

dst-port

Synopsis	Enable the dst-port context
Context	configure system security management-access-filter ip-filter entry <i>number</i> match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match dst-port mask <i>number</i>
Tree	mask
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match dst-port port <i>number</i>
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mgmt-port

Synopsis	Enter the mgmt-port context
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port

Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lag *lag-interface*

Synopsis	LAG ID as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port lag <i>lag-interface</i>
Tree	lag
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-id *port*

Synopsis	Port ID as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match mgmt-port port-id <i>port</i>
Tree	port-id
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

protocol (*number* | *keyword*)

Synopsis IP protocol as the match criterion

Context **configure** [system security management-access-filter ip-filter entry](#) *number* [match protocol](#) (*number* | *keyword*)

Tree [protocol](#)

Range 0 to 255

Options tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

router-instance *string*

Synopsis Router instance as the match criterion

Context **configure** [system security management-access-filter ip-filter entry](#) *number* [match router-instance](#) *string*

Tree [router-instance](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

src-ip

Synopsis Enter the **src-ip** context

Context **configure** [system security management-access-filter ip-filter entry](#) *number* [match src-ip](#)

Tree [src-ip](#)

Description Commands in this context specify match criteria based on the source IP address.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

address (*ipv4-prefix* | *ipv4-address*)

Synopsis IP address or IP prefix as the match criterion

Context	configure system security management-access-filter ip-filter entry number match src-ip address (<i>ipv4-prefix ipv4-address</i>)
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ip-prefix-list *reference*

Synopsis	IP prefix list as the match criterion
Context	configure system security management-access-filter ip-filter entry number match src-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure filter match-list ip-prefix-list named-item
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *ipv4-address*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ip-filter entry number match src-ip mask ipv4-address
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-port

Synopsis	Enable the src-port context
----------	------------------------------------

Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-port
Tree	src-port
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-port mask <i>number</i>
Tree	mask
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	configure system security management-access-filter ip-filter entry <i>number</i> match src-port port <i>number</i>
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-filter

Synopsis	Enter the ipv6-filter context
Context	configure system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	configure system security management-access-filter ipv6-filter admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter ipv6-filter default-action <i>keyword</i>
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter ipv6-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter ipv6-filter entry <i>number</i>
Tree	entry

Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> action <i>keyword</i>
Tree	action
Description	<p>This command specifies the action associated with the management access filter match criteria entry.</p> <p>If the packet does not meet any of the match criteria, the configured default action is applied.</p>
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-events *boolean*

Synopsis	Enable match logging
Context	configure system security management-access-filter ipv6-filter entry number log-events <i>boolean</i>
Tree	log-events
Description	When configured to true , this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to false , match logging is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match

Synopsis	Enter the match context
Context	configure system security management-access-filter ipv6-filter entry number match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dst-port

Synopsis	Enable the dst-port context
Context	configure system security management-access-filter ipv6-filter entry number match dst-port
Tree	dst-port
Description	Commands in this context specify match criteria based on the destination port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	IP address mask as the match criterion
----------	--

Context	configure system security management-access-filter ipv6-filter entry <i>number match dst-port mask number</i>
Tree	mask
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port number

Synopsis	TCP or UDP port number as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match dst-port port number</i>
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flow-label number

Synopsis	Flow identifier used to discriminate traffic flows
Context	configure system security management-access-filter ipv6-filter entry <i>number match flow-label number</i>
Tree	flow-label
Range	0 to 1048575
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mgmt-port

Synopsis	Enter the mgmt-port context
Context	configure system security management-access-filter ipv6-filter entry <i>number match mgmt-port</i>
Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lag *lag-interface*

Synopsis	LAG ID as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port lag <i>lag-interface</i>
Tree	lag
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port-id *port*

Synopsis	Port ID as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match mgmt-port port-id <i>port</i>
Tree	port-id
Notes	The following elements are part of a choice: cpm , (lag and lag-id), or port-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router instance as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-ip

Synopsis	Enter the src-ip context
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv6-prefix* | *ipv6-address*)

Synopsis	IPv6 address or IPv6 prefix to match
Context	configure system security management-access-filter ipv6-filter entry <i>number</i> match src-ip address (<i>ipv6-prefix</i> <i>ipv6-address</i>)

Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match src-ip ipv6-prefix-list reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>named-item</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *ipv6-address*

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match src-ip mask ipv6-address</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-port

Synopsis	Enable the src-port context
Context	configure system security management-access-filter ipv6-filter entry <i>number match src-port</i>
Tree	src-port
Description	Commands in this context specify match criteria based on the source port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask number

Synopsis	IP address mask as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match src-port mask number</i>
Tree	mask
Range	1 to 65535
Default	65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port number

Synopsis	TCP or UDP port number as the match criterion
Context	configure system security management-access-filter ipv6-filter entry <i>number match src-port port number</i>
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mac-filter

Synopsis	Enter the mac-filter context
Context	configure system security management-access-filter mac-filter
Tree	mac-filter
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state keyword

Synopsis	Administrative state of management access MAC filter
Context	configure system security management-access-filter mac-filter admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-action *keyword*

Synopsis	Default action for the management access filter
Context	configure system security management-access-filter mac-filter default-action <i>keyword</i>
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure system security management-access-filter mac-filter entry <i>number</i>
Tree	entry
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[entry-id] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	configure system security management-access-filter mac-filter entry <i>number</i>
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

action *keyword*

Synopsis	Action associated with the management access filter
Context	configure system security management-access-filter mac-filter entry <i>number</i> action keyword
Tree	action
Description	<p>This command specifies the action associated with the management access filter match criteria entry.</p> <p>If the packet does not meet any of the match criteria, the configured default action is applied.</p>
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security management-access-filter mac-filter entry <i>number</i> description description
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

log-events *boolean*

Synopsis	Enable match logging
Context	configure system security management-access-filter mac-filter entry <i>number</i> log-events boolean
Tree	log-events
Description	When configured to true , this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised.

	When configured to false , match logging is disabled.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match

Synopsis	Enter the match context
Context	configure system security management-access-filter mac-filter entry number match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cfm-opcode

Synopsis	Enter the cfm-opcode context
Context	configure system security management-access-filter mac-filter entry number match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

eq number

Synopsis	Equal to comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry number match cfm-opcode eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

gt number

Synopsis	Greater than comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode gt <i>number</i>
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lt number

Synopsis	Less than comparison operator for the CFM opcode
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode lt <i>number</i>
Tree	lt
Range	1 to 255
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

range

Synopsis	Enable the range context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end number

Synopsis	Upper bound of the range for the OpCode to match
----------	--

Context	configure system security management-access-filter mac-filter entry <i>number match cfm-opcode range end</i> <i>number</i>
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start *number*

Synopsis	Lower bound of the range for the OpCode to match
Context	configure system security management-access-filter mac-filter entry <i>number match cfm-opcode range start</i> <i>number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dot1p

Synopsis	Enable the dot1p context
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p</i>
Tree	dot1p
Description	Commands in this context specify match criteria based on the IEEE 802.1p value.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	3-bit mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p mask</i> <i>number</i>
Tree	mask
Range	1 to 7

Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	IEEE 802.1p value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dot1p priority number</i>
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dst-mac

Synopsis	Enable the dst-mac context
Context	configure system security management-access-filter mac-filter entry <i>number match dst-mac</i>
Tree	dst-mac
Description	Commands in this context specify match criteria based on the destination MAC.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match dst-mac address mac-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match dst-mac mask <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

etype *etype-value*

Synopsis	Ethernet type II Ethertype value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match etype <i>etype-value</i>
Tree	etype
Description	<p>This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion.</p> <p>The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.</p>
String length	5 to 6
String format	'etype-value' must be 0x0600-0xFFFF (e-type range)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match frame-type <i>keyword</i>
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Default	802dot3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

llc-dsap

Synopsis	Enable the llc-dsap context
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap dsap <i>number</i>
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match llc-dsap mask <i>number</i>
Tree	mask
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

llc-ssap

Synopsis	Enable the llc-ssap context
----------	------------------------------------

Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap</i>
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap mask</i> <i>number</i>
Tree	mask
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number match llc-ssap ssap</i> <i>number</i>
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service *service-name*

Synopsis	Service ID used as the match condition
Context	configure system security management-access-filter mac-filter entry <i>number match service</i> <i>service-name</i>
Tree	service

String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snap-oui *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	configure system security management-access-filter mac-filter entry <i>number match snap-oui keyword</i>
Tree	snap-oui
Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snap-pid *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	configure system security management-access-filter mac-filter entry <i>number match snap-pid number</i>
Tree	snap-pid
Description	<p>This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion.</p> <p>The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.</p>
Range	0 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

src-mac

Synopsis	Enable the src-mac context
Context	configure system security management-access-filter mac-filter entry <i>number match src-mac</i>

Tree	src-mac
Description	Commands in this context specify match criteria based on the source MAC.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match src-mac address <i>mac-address</i>
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	configure system security management-access-filter mac-filter entry <i>number</i> match src-mac mask <i>mac-address</i>
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pki

Synopsis	Enter the pki context
Context	configure system security pki
Tree	pki
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ca-profile [[ca-profile-name](#)] *named-item*

Synopsis	Enter the ca-profile list instance
----------	---

Context	configure system security pki ca-profile <i>named-item</i>
Tree	ca-profile
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ca-profile-name] *named-item*

Synopsis	CA profile name
Context	configure system security pki ca-profile <i>named-item</i>
Tree	ca-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the CA profile
Context	configure system security pki ca-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

auto-crl-update

Synopsis	Enable the auto-crl-update context
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update
Tree	auto-crl-update
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the automatic CRL update
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crl-urls**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the crl-urls context
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls
Tree	crl-urls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

url-entry [[entry-id](#)] *number*

Synopsis	Enter the url-entry list instance
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i>
Tree	url-entry
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[entry-id] *number*

Synopsis	URL on this system
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i>

Tree	url-entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmission-profile *reference*

Synopsis	File transmission profile to update CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i> transmission-profile <i>reference</i>
Tree	transmission-profile
Reference	configure system transmission-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

url *http-url-path-loose*

Synopsis	Location of updated CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update crl-urls url-entry <i>number</i> url <i>http-url-path-loose</i>
Tree	url
String length	1 to 180
String format	'http-url-loose' must be http:// with host and optional port and path (e.g. http://hostname.domain/path) 'http-url-path-loose' must include path after host (e.g. http://host/path)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

periodic-update-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval between two consecutive CRL updates
----------	--

Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update periodic-update-interval <i>number</i>
Tree	periodic-update-interval
Range	3600 to 31622400
Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pre-update-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time prior to the next update time of the current CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update pre-update-time <i>number</i>
Tree	pre-update-time
Range	0 to 31622400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval before retrying to update CRL
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update retry-interval <i>number</i>
Tree	retry-interval
Range	0 to 31622400
Units	seconds

Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

schedule-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time scheduler type for an automated CRL update
Context	configure system security pki ca-profile <i>named-item</i> auto-crl-update schedule-type <i>keyword</i>
Tree	schedule-type
Options	next-update-based, periodic
Default	next-update-based
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cert-file *pki-file-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate file name
Context	configure system security pki ca-profile <i>named-item</i> cert-file pki-file-name
Tree	cert-file
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cmpv2

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the cmpv2 context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2
Tree	cmpv2
Description	Commands in this context configure CMPv2 options.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept-unprotected-message

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the accept-unprotected-message context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 accept-unprotected-message
Tree	accept-unprotected-message
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

error-message *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept unprotected error messages
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 accept-unprotected-message error-message <i>boolean</i>
Tree	error-message
Default	false
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

pkiconf-message *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept unprotected PKI confirmation messages
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 accept-unprotected-message pkiconf-message <i>boolean</i>
Tree	pkiconf-message
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

always-set-sender-for-ir *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Set subject name in CMPv2 header for all IR messages
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 always-set-sender-for-ir <i>boolean</i>
Tree	always-set-sender-for-ir
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

http

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the http context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 http

Tree	http
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

response-timeout *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	HTTP response timeout
Context	configure system security pki ca-profile <i>named-item cmpv2 http response-timeout number</i>
Tree	response-timeout
Range	1 to 3600
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	HTTP version for CMPv2 messages
Context	configure system security pki ca-profile <i>named-item cmpv2 http version keyword</i>
Tree	version
Options	1.0, 1.1
Default	1.1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-list

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the key-list context
Context	configure system security pki ca-profile <i>named-item cmpv2</i> key-list
Tree	key-list
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key [[reference-number](#)] *display-string*

Synopsis	Enter the key list instance
Context	configure system security pki ca-profile <i>named-item cmpv2</i> key-list key <i>display-string</i>
Tree	key
Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[reference-number](#)] *display-string*

Synopsis	Unique identifier for the CA initial authentication key
Context	configure system security pki ca-profile <i>named-item cmpv2</i> key-list key <i>display-string</i>
Tree	key
String length	1 to 64
String format	'reference-number' must not be all spaces
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

password *encrypted-leaf*

Synopsis	Shared secret for this CA initial authentication key
----------	--

Context	configure system security pki ca-profile <i>named-item</i> cmpv2 key-list key display-string password <i>encrypted-leaf</i>
Tree	password
Description	This command specifies the shared secret for this CA initial authentication key in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

recipient-subject *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DN attributes for recipient subject of CMPv2 requests
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 recipient-subject <i>string</i>
Tree	recipient-subject
String length	1 to 256
Notes	The following elements are part of a choice: recipient-subject or use-ca-subject .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

response-signing-cert *pki-file-name*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	File name of the certificate to verify CMPv2 responses
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 response-signing-cert <i>pki-file-name</i>
Tree	response-signing-cert
Description	This command specifies an imported certificate used to verify the CMP response message that they are protected by signature.

	When unconfigured, CA's certificate is used.
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	The following elements are part of a choice: response-signing-cert or response-signing-use-extracert .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

response-signing-use-extracert

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use extraCerts certificate to verify response signature
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 response-signing-use-extracert
Tree	response-signing-use-extracert
Notes	The following elements are part of a choice: response-signing-cert or response-signing-use-extracert .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

same-recipient-nonce-for-poll-request *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use same recipNonce as last CMPv2 response
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 same-recipient-nonce-for-poll-request <i>boolean</i>
Tree	same-recipient-nonce-for-poll-request
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signing-cert-subject *string*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Subject DN attributes to identify signing certificate
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 signing-cert-subject <i>string</i>
Tree	signing-cert-subject
String length	1 to 256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

url

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the url context
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url
Tree	url
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-name *service-name*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 url service-name <i>service-name</i>
Tree	service-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	The following elements are part of a choice: service-name or transmission-profile .

Introduced25.3.R2

Platforms7705 SAR Gen 2

transmission-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisTransmission profile for CMPv2

Context**configure** **system** **security** **pki** **ca-profile** *named-item* **cmpv2** **url** **transmission-profile** *reference*

Tree**transmission-profile**

Reference**configure** **system** **transmission-profile** *named-item*

NotesThe following elements are part of a choice: **service-name** or **transmission-profile**.

Introduced25.3.R2

Platforms7705 SAR Gen 2

url-string *http-optional-url-loose*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

SynopsisURL for CMPv2

Context**configure** **system** **security** **pki** **ca-profile** *named-item* **cmpv2** **url** **url-string** *http-optional-url-loose*

Tree**url-string**

String length1 to 180

String format'http-optional-url-loose' must be http:// or host-only, with optional port and path (e.g. http://hostname.domain/path)

Introduced25.3.R2

Platforms7705 SAR Gen 2

use-ca-subject

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use subject DN in CA certificate as CMPv2 request recipient
Context	configure system security pki ca-profile <i>named-item</i> cmpv2 use-ca-subject
Tree	use-ca-subject
Notes	The following elements are part of a choice: recipient-subject or use-ca-subject .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crl-file *pki-file-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate Revocation List (CRL) file name
Context	configure system security pki ca-profile <i>named-item</i> crl-file pki-file-name
Tree	crl-file
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security pki ca-profile <i>named-item</i> description description
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ocsp

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the ocsp context
Context	configure system security pki ca-profile <i>named-item</i> ocsp
Tree	ocsp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

responder-url *http-optional-url-loose*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	HTTP URL of the OCSP responder for the CA
Context	configure system security pki ca-profile <i>named-item</i> ocsp responder-url <i>http-optional-url-loose</i>
Tree	responder-url
String length	1 to 180
String format	'http-optional-url-loose' must be http:// or host-only, with optional port and path (e.g. http://hostname.domain/path)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

service-name *service-name*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure system security pki ca-profile <i>named-item</i> ocsp service-name <i>service-name</i>
Tree	service-name
String length	1 to 64

String format 'service-name' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

transmission-profile *reference*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Transmission profile for the OCSP

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* [ocsp](#) **transmission-profile** *reference*

Tree [transmission-profile](#)

Reference **configure** [system](#) [transmission-profile](#) *named-item*

Introduced 25.3.R2

revocation-check *keyword*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Revocation method to check status of CA certificates

Context **configure** [system](#) [security](#) [pki](#) [ca-profile](#) *named-item* **revocation-check** *keyword*

Tree [revocation-check](#)

Description This command specifies the revocation method the system uses to check the revocation status of certificate issued by the CA.

Note: The **crl-optional** command option makes configuration of a valid CRL in a **ca-profile** optional. However, from a security point of view, it is important to always verify the revocation status of a certificate.

Options [crl](#), [crl-optional](#)

Default [crl](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

certificate-auto-update [[certificate-file-name](#)] *pki-file-name*

Synopsis	Enter the certificate-auto-update list instance
Context	configure system security pki certificate-auto-update <i>pki-file-name</i>
Tree	certificate-auto-update
Description	Commands in this context configure automatic certificate update associations.
Max. instances	256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[certificate-file-name] *pki-file-name*

Synopsis	Certificate file name
Context	configure system security pki certificate-auto-update <i>pki-file-name</i>
Tree	certificate-auto-update
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-file-name *pki-file-name*

Synopsis	Imported key filename
Context	configure system security pki certificate-auto-update <i>pki-file-name</i> key-file-name <i>pki-file-name</i>
Tree	key-file-name
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *reference*

Synopsis	Certificate update profile name
Context	configure system security pki certificate-auto-update <i>pki-file-name</i> profile <i>reference</i>
Tree	profile
Reference	configure system security pki certificate-update-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

certificate-display-format *keyword*

Synopsis	Display format for Certificates and CRLs
Context	configure system security pki certificate-display-format <i>keyword</i>
Tree	certificate-display-format
Options	ascii, utf8
Default	ascii
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

certificate-expiration-warning

Synopsis	Enter the certificate-expiration-warning context
Context	configure system security pki certificate-expiration-warning
Tree	certificate-expiration-warning
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hours *number*

Synopsis	Time before system generates certificate warning trap
Context	configure system security pki certificate-expiration-warning hours <i>number</i>
Tree	hours
Range	0 to 8760
Units	hours
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

repeat-hours *number*

Synopsis Time system repeats certificate expiration warning trap

Context **configure** [system](#) [security](#) [pki](#) [certificate-expiration-warning](#) **repeat-hours** *number*

Tree [repeat-hours](#)

Range 0 to 8760

Units hours

Default 0

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

certificate-update-profile [[name](#)] *named-item*

Synopsis Enter the **certificate-update-profile** list instance

Context **configure** [system](#) [security](#) [pki](#) [certificate-update-profile](#) *named-item*

Tree [certificate-update-profile](#)

Description Commands in this context configure a certificate update profile that specifies the behavior of the automatic update certificate.

Max. instances 256

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[name] *named-item*

Synopsis Certificate update profile name

Context **configure** [system](#) [security](#) [pki](#) [certificate-update-profile](#) *named-item*

Tree [certificate-update-profile](#)

Description This command configures the certificate update profile name.

String length 1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

after-issue *number*

Synopsis Time for scheduler updates after certificate issuance

Context **configure** [system security pki certificate-update-profile](#) *named-item* [after-issue](#) *number*

Tree [after-issue](#)

Description This command configures the time for scheduler updates after the certificate issue time.

Range 864000 to 157680000

Units seconds

Notes The following elements are part of a choice: **after-issue** or **before-expiry**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

before-expiry *number*

Synopsis Time scheduler updates before certificate expiry

Context **configure** [system security pki certificate-update-profile](#) *named-item* [before-expiry](#) *number*

Tree [before-expiry](#)

Description This command configures the time that the scheduler updates before the certificate expiration time.

Range 3600 to 157680000

Units seconds

Default 86400

Notes The following elements are part of a choice: **after-issue** or **before-expiry**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

cmpv2

Synopsis Enter the **cmpv2** context

Context **configure** [system security pki certificate-update-profile](#) *named-item* [cmpv2](#)

Tree [cmpv2](#)

Notes The following elements are part of a choice: **cmpv2** or **est**.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ca-profile *reference*

Synopsis	CA profile name
Context	configure system security pki certificate-update-profile <i>named-item</i> cmpv2 ca-profile reference
Tree	ca-profile
Description	This command specifies the use of CMPv2 as the protocol to update the certificate. The CMPv2 configuration is derived from the referenced CA profile.
Reference	configure system security pki ca-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dsa

Synopsis	Enter the dsa context
Context	configure system security pki certificate-update-profile <i>named-item</i> dsa
Tree	dsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-size *number*

Synopsis	Length of the generated DSA key
Context	configure system security pki certificate-update-profile <i>named-item</i> dsa key-size number
Tree	key-size
Description	This command specifies that the newly generated key is an DSA key with the specified key length in bits.
Range	512 to 8192
Default	2048
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecdsa

Synopsis	Enter the ecdsa context
Context	configure system security pki certificate-update-profile <i>named-item</i> ecdsa
Tree	ecdsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

curve keyword

Synopsis	Elliptic curve to be used in ECDSA key generation
Context	configure system security pki certificate-update-profile <i>named-item</i> ecdsa curve <i>keyword</i>
Tree	curve
Description	This command specifies that the newly generated key is an ECDSA key with the specified curve.
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

est

Synopsis	Enter the est context
Context	configure system security pki certificate-update-profile <i>named-item</i> est
Tree	est
Notes	The following elements are part of a choice: cmpv2 or est .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

est-profile reference

Synopsis	EST profile name
Context	configure system security pki certificate-update-profile <i>named-item</i> est est-profile <i>reference</i>

Tree	est-profile
Description	This command specifies the use of EST as the protocol to update the certificate. The EST configuration is derived from the referenced EST profile.
Reference	configure system security pki est-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hash-algorithm *keyword*

Synopsis	Hash algorithm for a certificate request
Context	configure system security pki certificate-update-profile <i>named-item</i> hash-algorithm <i>keyword</i>
Tree	hash-algorithm
Description	This command specifies the hash algorithm used to generate a certificate request.
Options	md5, sha1, sha224, sha256, sha384, sha512
Default	sha256
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retry-interval *number*

Synopsis	Retry interval after a failed update
Context	configure system security pki certificate-update-profile <i>named-item</i> retry-interval <i>number</i>
Tree	retry-interval
Description	This command configures the retry interval after the update fails.
Range	60 to 36000
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsa

Synopsis	Enter the rsa context
----------	------------------------------

Context	configure system security pki certificate-update-profile <i>named-item</i> rsa
Tree	rsa
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-size *number*

Synopsis	Length of the generated RSA key
Context	configure system security pki certificate-update-profile <i>named-item</i> rsa key-size <i>number</i>
Tree	key-size
Description	This command specifies that the newly generated key is a RSA key with the specified key length in bits.
Range	512 to 8192
Default	2048
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

same-as-existing-key

Synopsis	Generate the new key to same type and key length
Context	configure system security pki certificate-update-profile <i>named-item</i> same-as-existing-key
Tree	same-as-existing-key
Description	When configured, this command specifies that the newly generated key is the same type and key length as the existing key.
Notes	The following elements are part of a choice: dsa , ecdsa , rsa , or same-as-existing-key .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

common-name-list [[cn-list-name](#)] *named-item*

Synopsis	Enter the common-name-list list instance
Context	configure system security pki common-name-list <i>named-item</i>
Tree	common-name-list

Max. instances	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cn-list-name] *named-item*

Synopsis	CN list name
Context	configure system security pki common-name-list <i>named-item</i>
Tree	common-name-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

common-name [[cn-index](#)] *number*

Synopsis	Enter the common-name list instance
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i>
Tree	common-name
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cn-index] *number*

Synopsis	Common name index
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i>
Tree	common-name
Range	1 to 128
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cn-type *keyword*

Synopsis	Common name type
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i> cn-type <i>keyword</i>
Tree	cn-type
Options	ip-address, domain-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cn-value *regular-expression-not-all-spaces*

Synopsis	Common name value
Context	configure system security pki common-name-list <i>named-item</i> common-name <i>number</i> cn-value <i>regular-expression-not-all-spaces</i>
Tree	cn-value
String length	1 to 255
String format	'regular-expression-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

crl-expiration-warning

Synopsis	Enter the crl-expiration-warning context
Context	configure system security pki crl-expiration-warning
Tree	crl-expiration-warning
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hours *number*

Synopsis	Time before system generates CRL expiration warning trap
Context	configure system security pki crl-expiration-warning hours <i>number</i>

Tree	hours
Range	0 to 8760
Units	hours
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

repeat-hours *number*

Synopsis	Time system repeats CRL expiration warning trap
Context	configure system security pki crl-expiration-warning repeat-hours <i>number</i>
Tree	repeat-hours
Range	0 to 8760
Units	hours
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dynamic-ca *boolean*

Synopsis	Enable the dynamic sub-CA support for IPsec
Context	configure system security pki dynamic-ca <i>boolean</i>
Tree	dynamic-ca
Description	When configured to true , the system may authenticate the IPsec peer using a certificate without provisioning the peer's sub-CAs locally, if the peer sends sub-CA certificates during IKEv2 exchanges.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

est-profile [[name](#)] *named-item*

Synopsis	Enter the est-profile list instance
Context	configure system security pki est-profile <i>named-item</i>
Tree	est-profile
Description	Commands in this context configure an Enrollment over Secure Transport (EST) profile.

Max. instances	128
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Enrollment over Secured Transport profile name
Context	configure system security pki est-profile <i>named-item</i>
Tree	est-profile
Description	This command configures the EST profile name.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check-id-kp-cmcra-only *boolean*

Synopsis	Check id-kp-cmcra in the EST certificate
Context	configure system security pki est-profile <i>named-item</i> check-id-kp-cmcra-only <i>boolean</i>
Tree	check-id-kp-cmcra-only
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-tls-profile *named-item*

Synopsis	TLS client profile assigned to applications
Context	configure system security pki est-profile <i>named-item</i> client-tls-profile <i>named-item</i>
Tree	client-tls-profile
Description	This command specifies the TLS client profile to be assigned to applications for encryption. The profile creates the TLS connection to the EST server.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

http-authentication

Synopsis	Enter the http-authentication context
Context	configure system security pki est-profile <i>named-item</i> http-authentication
Tree	http-authentication
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

password *encrypted-leaf*

Synopsis	Password for EST authentication
Context	configure system security pki est-profile <i>named-item</i> http-authentication password <i>encrypted-leaf</i>
Tree	password
Description	This command specifies the password for EST authentication in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

username *string*

Synopsis	Username for the EST authentication
Context	configure system security pki est-profile <i>named-item</i> http-authentication username <i>string</i>
Tree	username
String length	1 to 32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server

Synopsis	Enter the server context
Context	configure system security pki est-profile <i>named-item</i> server
Tree	server
Description	Commands in this context configure EST server parameters.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fqdn *fully-qualified-domain-name*

Synopsis	Fully Qualified Domain Name (FQDN) of the EST server
Context	configure system security pki est-profile <i>named-item</i> server fqdn <i>fully-qualified-domain-name</i>
Tree	fqdn
Description	This command specifies to use the FQDN of the EST server.
String length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 address of the EST server
Context	configure system security pki est-profile <i>named-item</i> server ipv4 <i>ipv4-unicast-address</i>
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv6 address of the EST server
----------	--------------------------------

Context	configure system security pki est-profile <i>named-item</i> server ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path

Synopsis	Enter the path context
Context	configure system security pki est-profile <i>named-item</i> server path
Tree	path
Description	Commands in this context configure URL paths for EST request messages.
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

cacerts *string*

Synopsis	Server path to request CA certificates
Context	configure system security pki est-profile <i>named-item</i> server path cacerts <i>string</i>
Tree	cacerts
String length	1 to 255
String format	'cacerts' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

simpleenroll *string*

Synopsis	Server path to request simple certificate enrollment
Context	configure system security pki est-profile <i>named-item</i> server path simpleenroll <i>string</i>
Tree	simpleenroll
String length	1 to 255
String format	'simpleenroll' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

simplereenroll *string*

Synopsis	Server path for the reenrollment of clients
Context	configure system security pki est-profile <i>named-item</i> server path simplereenroll <i>string</i>
Tree	simplereenroll
String length	1 to 255
String format	'simplereenroll' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	7705 SAR Gen 2

port *number*

Synopsis	Port number of the EST server
Context	configure system security pki est-profile <i>named-item</i> server port <i>number</i>
Tree	port
Range	1 to 65535
Default	443
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

transmission-profile *named-item*

Synopsis	Transmission profile name for EST
Context	configure system security pki est-profile <i>named-item</i> transmission-profile <i>named-item</i>
Tree	transmission-profile
Description	This command associates a file transmission profile to the EST profile. The transmission profile defines transport parameters for protocol such as HTTP, include routing instance, source address, timeout value, and so on.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

imported-format *keyword*

Synopsis	The supported encrypted file formats
Context	configure system security pki imported-format <i>keyword</i>
Tree	imported-format
Options	any, secure
Default	any
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-cert-chain-depth *number*

Synopsis	Maximum depth of certificate chain verification
Context	configure system security pki maximum-cert-chain-depth <i>number</i>
Tree	maximum-cert-chain-depth
Range	1 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

python-script

Synopsis	Enter the python-script context
Context	configure system security python-script
Tree	python-script
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authorization

Synopsis	Enter the authorization context
Context	configure system security python-script authorization
Tree	authorization
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cron

Synopsis	Enter the cron context
Context	configure system security python-script authorization cron
Tree	cron
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization cron cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event-handler

Synopsis	Enter the event-handler context
Context	configure system security python-script authorization event-handler
Tree	event-handler
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization event-handler cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

subscriber-mgmt

Synopsis	Enter the subscriber-mgmt context
Context	configure system security python-script authorization subscriber-mgmt
Tree	subscriber-mgmt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	configure system security python-script authorization subscriber-mgmt cli-user <i>reference</i>
Tree	cli-user
Reference	configure system security user-params local-user user <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp

Synopsis	Enter the snmp context
Context	configure system security snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access [[group](#)] *named-item* [context](#) *named-item-or-empty* [security-model](#) *keyword* [security-level](#) *keyword*

Synopsis	Enter the access list instance
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[group] *named-item*

Synopsis	Group name
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

context *named-item-or-empty*

Synopsis	String to match context name for access rights
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
String length	0 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

security-model *keyword*

Synopsis	Security model
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Options	snmpv1, snmpv2c, usm
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

security-level keyword

Synopsis	Minimum security level required to gain access rights
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i>
Tree	access
Options	no-auth-no-privacy, auth-no-privacy, privacy
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

notify named-item

Synopsis	SNMP view for notification access
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> notify <i>named-item</i>
Tree	notify
Description	This command specifies the SNMP view used to control which MIB objects can be accessed for notifications.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix-match keyword

Synopsis	Match type for the context
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> prefix-match <i>keyword</i>
Tree	prefix-match
Options	exact, prefix
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

read *named-item*

Synopsis	SNMP view for read access
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> read <i>named-item</i>
Tree	read
Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a read (get) operation.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

write *named-item*

Synopsis	SNMP view for write access
Context	configure system security snmp access <i>named-item</i> context <i>named-item-or-empty</i> security-model <i>keyword</i> security-level <i>keyword</i> write <i>named-item</i>
Tree	write
Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a write (set) operation.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

attempts

Synopsis	Enter the attempts context
Context	configure system security snmp attempts
Tree	attempts
Description	Commands in this context configure settings for SNMPv2 or SNMPv3 connection attempts. The command settings are used to counter Denial of Service (DOS) attacks through SNMP. If the threshold is exceeded, the host is locked out for the lockout time period.
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

count *number*

Synopsis Unsuccessful attempts allowed within time period

Context **configure** [system security snmp attempts count](#) *number*

Tree [count](#)

Range 1 to 64

Default 20

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

lockout *number*

Synopsis Lockout period during which the host cannot log in

Context **configure** [system security snmp attempts lockout](#) *number*

Tree [lockout](#)

Description This command configures the time period during which the host cannot log in. When the host exceeds the attempted counts setting, the host is locked out from further login attempts for the configured time period.

Range 0 to 1440

Units minutes

Default 10

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

time *number*

Synopsis Time before host lockout after unsuccessful attempts

Context **configure** [system security snmp attempts time](#) *number*

Tree [time](#)

Range 0 to 60

Units minutes

Default 5

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

community [[community-string](#)] *encrypted-leaf*

Synopsis Enter the **community** list instance

Context **configure** [system](#) [security snmp community](#) *encrypted-leaf*

Tree [community](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[community-string] *encrypted-leaf*

Synopsis SNMPv1 or SNMPv2c community string

Context **configure** [system](#) [security snmp community](#) *encrypted-leaf*

Tree [community](#)

Description This command specifies the SNMPv1 or SNMPv2c community string in a protected format.

The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 166

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

access-permissions *keyword*

Synopsis Access permissions for objects in the MIB

Context **configure** [system](#) [security snmp community](#) *encrypted-leaf* [access-permissions](#) *keyword*

Tree [access-permissions](#)

Options r, rw, rwa, mgmt, vpls-mgmt

Notes This element is mandatory.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

source-access-list *reference*

Synopsis	Source access list to validate received SNMP requests
Context	configure system security snmp community <i>encrypted-leaf</i> source-access-list <i>reference</i>
Tree	source-access-list
Reference	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *keyword*

Synopsis	SNMP version
Context	configure system security snmp community <i>encrypted-leaf</i> version <i>keyword</i>
Tree	version
Options	v1, v2c, both
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-access-list [[list-name](#)] *string-not-all-spaces*

Synopsis	Enter the source-access-list list instance
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Tree	source-access-list
Description	Commands in this context configure SNMP source access lists. SNMP source access lists are used to validate the source IP address of received SNMP requests. Multiple community (VPRN or Base router) and USM community instances can reference the same SNMP source access list.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[list-name] *string-not-all-spaces*

Synopsis	Source access list name
----------	-------------------------

Context	configure system security snmp source-access-list <i>string-not-all-spaces</i>
Tree	source-access-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'list-name' must start with a letter (e.g. myList)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-host [[host-name](#)] *named-item*

Synopsis	Enter the source-host list instance
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i>
Tree	source-host
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[host-name] *named-item*

Synopsis	Source host entry name
Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i>
Tree	source-host
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address entry used to validate SNMP requests
----------	--

Context	configure system security snmp source-access-list <i>string-not-all-spaces</i> source-host <i>named-item</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

usm-community [[community-string](#)] *encrypted-leaf*

Synopsis	Enter the usm-community list instance
Context	configure system security snmp usm-community <i>encrypted-leaf</i>
Tree	usm-community
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[community-string] *encrypted-leaf*

Synopsis	Community string associated with SNMPv3 access group
Context	configure system security snmp usm-community <i>encrypted-leaf</i>
Tree	usm-community
Description	<p>This command specifies the community string associated with SNMPv3 access group in a protected format.</p> <p>The specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 166
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group *named-item*

Synopsis	Group to manage access rights of the community string
Context	configure system security snmp usm-community <i>encrypted-leaf</i> group <i>named-item</i>
Tree	group
String length	1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

source-access-list *reference*

Synopsis Source access list to validate received SNMP requests

Context **configure** [system](#) [security snmp](#) [usm-community](#) *encrypted-leaf* [source-access-list](#) *reference*

Tree [source-access-list](#)

Reference **configure** [system](#) [security snmp](#) [source-access-list](#) *string-not-all-spaces*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

view [[view-name](#)] *named-item subtree string*

Synopsis Enter the **view** list instance

Context **configure** [system](#) [security snmp](#) [view](#) *named-item subtree string*

Tree [view](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[view-name] *named-item*

Synopsis View name

Context **configure** [system](#) [security snmp](#) [view](#) *named-item subtree string*

Tree [view](#)

String length 1 to 32

String format 'string-not-all-spaces' must contain at least one non-space character

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

subtree string

Synopsis	Object Identifier (OID) value
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i>
Tree	view
String length	1 to 256
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mask string

Synopsis	Mask value as binary value, or hex value
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i> mask <i>string</i>
Tree	mask
String length	1 to 16
String format	'mask' must be even-length hex (e.g. 0a1b)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Type of SNMP security view mask
Context	configure system security snmp view <i>named-item</i> subtree <i>string</i> type <i>keyword</i>
Tree	type
Options	included, excluded
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address

Synopsis	Enter the source-address context
Context	configure system security source-address
Tree	source-address

Description	<p>Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications.</p> <p>This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet.</p> <p>When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4 [[application](#)] *keyword*

Synopsis	Enter the ipv4 list instance
Context	configure system security source-address ipv4 <i>keyword</i>
Tree	ipv4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[application] *keyword*

Synopsis	Application that sets the source IPv4 address
Context	configure system security source-address ipv4 <i>keyword</i>
Tree	ipv4
Options	telnet – Telnet packets ftp – FTP packets ssh – SSH packets radius – RADIUS packets tacplus – TACACS+ packets snmptrap – SNMP trap packets syslog – Syslog packets ping – ICMP Echo Reply messages traceroute – Traceroute reply messages dns – DNS packets sntp – SNTP packets ntp – NTP packets cflowd – Cflowd packets ptp – PTP packets

	mcreporter – IGMP Host Report messages
	sflow – Sflow packets
	icmp-error – ICMP error messages
	ldap – LDAP packets
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

address *ipv4-address*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 source address for the application
Context	configure system security source-address ipv4 <i>keyword</i> address <i>ipv4-address</i>
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a mandatory choice: address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP interface name
Context	configure system security source-address ipv4 <i>keyword</i> interface-name <i>interface-name</i>
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a mandatory choice: address or interface-name .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6 [[application](#)] *keyword*

Synopsis	Enter the ipv6 list instance
Context	configure system security source-address ipv6 <i>keyword</i>
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[application] *keyword*

Synopsis	Application that sets the source IPv6 address
Context	configure system security source-address ipv6 <i>keyword</i>
Tree	ipv6
Options	telnet – Telnet packets ftp – FTP packets radius – RADIUS packets tacplus – TACACS+ packets snmptrap – SNMP trap packets syslog – Syslog packets ping – ICMPv6 Echo Reply messages traceroute – Traceroute reply messages dns – DNS packets cflowd – Cflowd packets ntp – NTP packets sflow – Sflow packets icmp6-error – ICMPv6 error messages ldap – LDAP packets ssh – SSH packets ptp – PTP packets
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server-kex-list-v2

Synopsis	Enter the server-kex-list-v2 context
Context	configure system security ssh server-kex-list-v2
Tree	server-kex-list-v2
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

kex [index] *number*

Synopsis	Enter the kex list instance
Context	configure system security ssh server-kex-list-v2 kex <i>number</i>
Tree	kex
Description	Commands in this context configure SSH KEX algorithms for SR OS as a server.

If a list is configured, SSH uses the user-configured list with the lowest index algorithm having the highest priority, and so on.

By default, the server list is empty. When the list is unconfigured, SSH uses the default list hard-coded in SR OS, which contains the following algorithms:

- mlkem768x25519-sha256
- ecdh-sha2-nistp512
- ecdh-sha2-nistp384
- ecdh-sha2-nistp256
- diffie-hellman-group16-sha512
- diffie-hellman-group14-sha256
- diffie-hellman-group14-sha1
- diffie-hellman-group-exchange-sha1
- diffie-hellman-group1-sha1

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[index] *number*

system-passwords

Synopsis	Enter the system-passwords context
Context	configure system security system-passwords
Tree	system-passwords
Description	This command enters the context to configure system passwords.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-password *hashed-leaf*

Synopsis	Administrative password for the enable command
Context	configure system security system-passwords admin-password <i>hashed-leaf</i>
Tree	admin-password
Description	<p>This command allows a user with administrative permissions to configure a password that enables a user to become an administrator.</p> <p>This password is valid only for one session. When enabled, no authorization to TACACS + or RADIUS is performed and the user is locally regarded as an administrative user.</p> <p>If the admin-password is configured in the configure system security system-passwords admin-password context, any user can enter the special mode by entering the enable command.</p> <p>enable is in the default profile. By default, all users are given access to this command.</p> <p>After the enable command is entered, the user is prompted for a password. If the password matches, the user is given unrestricted access to all commands.</p> <p>The minimum length of the password is determined by the minimum-length command. The complexity requirements for the password are determined by the complexity command.</p> <p>Note: This command applies to a local user, in addition to users on RADIUS, TACACS, and LDAP.</p> <p>(none)</p>

String length	3 to 136
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tech-support

Synopsis	Enter the tech-support context
Context	configure system security tech-support
Tree	tech-support
Description	Commands in this context configure the default file location for technical support file generation.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ts-location (*ts-sat-url* | *cflash-url* | *string*)

Synopsis	Default file path for generated tech-support files
Context	configure system security tech-support ts-location (<i>ts-sat-url</i> <i>cflash-url</i> <i>string</i>)
Tree	ts-location
Description	<p>This command configures the directory where technical support files are saved when no file URL is specified with the admin tech-support command. When no directory is configured, the user must specify a file URL with the admin tech-support command.</p> <p>The directory specified must be manually created by the administrator.</p> <p>See the admin tech-support command for more details about the filename generated by the system.</p>
String length	1 to 180
String format	<p>'ts-sat-url' must start with sat: (e.g. sat:path/to/file)</p> <p>'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path)</p> <p>'cflash-url' must have each path segment at most 99 characters</p> <p>'ts-url-string' must contain at least one non-space character</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

Platforms	7705 SAR Gen 2

certificate-file *string-not-all-spaces*

Synopsis	Certificate file name
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> certificate-file <i>string-not-all-spaces</i>
Tree	certificate-file
String length	1 to 95
String format	'string-not-all-spaces' must contain at least one non-space character 'certificate-file' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-file *string-not-all-spaces*

Synopsis	Key file name
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> key-file <i>string-not-all-spaces</i>
Tree	key-file
String length	1 to 95
String format	'string-not-all-spaces' must contain at least one non-space character 'key-file' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-chain

Synopsis	Enter the send-chain context
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> send-chain
Tree	send-chain
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ca-profile [[ca-profile-name](#)] *reference*

Synopsis	Add a list entry for ca-profile
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> send-chain ca-profile <i>reference</i>
Tree	ca-profile
Max. instances	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ca-profile-name] *reference*

Synopsis	CA profile name
Context	configure system security tls cert-profile <i>named-item</i> entry <i>number</i> send-chain ca-profile <i>reference</i>
Tree	ca-profile

Reference	configure system security pki ca-profile <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-cipher-list [[client-cipher-list-name](#)] *named-item*

Synopsis	Enter the client-cipher-list list instance
Context	configure system security tls client-cipher-list <i>named-item</i>
Tree	client-cipher-list
Description	Commands in this context create a cipher list the client sends to the server in the client Hello message. It consists of a list of ciphers supported and preferred by SR OS for use in the TLS session. The server matches this client list against the server cipher list. The most preferred cipher found in both lists is chosen.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[client-cipher-list-name] *named-item*

Synopsis	Client cipher list name
Context	configure system security tls client-cipher-list <i>named-item</i>
Tree	client-cipher-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls12-cipher [[index](#)] *number*

Synopsis	Enter the tls12-cipher list instance
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i>
Tree	tls12-cipher

Description	Commands in this context configure the cipher suite that is negotiated by the server and client.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	Index of the cipher
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i>
Tree	tls12-cipher
Description	This command configures the index number of the cipher. The index number provides the location of the cipher in the negotiation list; the lower index numbers are higher in the list, and the higher index numbers are lower in the list.
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *keyword*

Synopsis	Cipher suite code
Context	configure system security tls client-cipher-list <i>named-item</i> tls12-cipher <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-rsa-with3des-edc-cbc-sha, tls-rsa-with-aes128-cbc-sha, tls-rsa-with-aes256-cbc-sha, tls-rsa-with-aes128-cbc-sha256, tls-rsa-with-aes256-cbc-sha256, tls-rsa-with-aes128-gcm-sha256, tls-rsa-with-aes256-gcm-sha384, tls-ecdhc-ecdsa-aes128-gcm-sha256, tls-ecdhc-ecdsa-aes256-gcm-sha384, tls-ecdhc-rsa-aes128-gcm-sha256, tls-ecdhc-rsa-aes256-gcm-sha384
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls13-cipher [index] *number*

Synopsis	Enter the tls13-cipher list instance
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i>

Tree	tls13-cipher
Description	Commands in this context configure the TLS 1.3-supported ciphers used by the client.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	Index number of the TLS 1.3 cipher
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i>
Tree	tls13-cipher
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *keyword*

Synopsis	Name of the TLS 1.3 cipher suite code
Context	configure system security tls client-cipher-list <i>named-item</i> tls13-cipher <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-aes128-gcm-sha256 , tls-aes256-gcm-sha384 , tls-chacha20-poly1305-sha256 , tls-aes128-ccm-sha256
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-group-list [[client-group-list-name](#)] *named-item*

Synopsis	Enter the client-group-list list instance
Context	configure system security tls client-group-list <i>named-item</i>
Tree	client-group-list
Description	Commands in this context configure the list of TLS 1.3-supported group suite codes that the client sends in a client Hello message.
Max. instances	16

Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[client-group-list-name] *named-item*

Synopsis Name of the TLS client group list
 Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item*
 Tree [client-group-list](#)
 String length 1 to 32
 String format 'string-not-all-spaces' must contain at least one non-space character
 Notes This element is part of a list key.
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

tls13-group [[index](#)] *number*

Synopsis Enter the **tls13-group** list instance
 Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item* [tls13-group](#) *number*
 Tree [tls13-group](#)
 Description Commands in this context configure the TLS 1.3-supported group suite codes sent by the client in its Hello messages.
 SR OS supports the use of Elliptic-Curve Diffie-Hellman Ephemeral (ECDHE) groups.
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

[[index](#)] *number*

Synopsis Index number of the TLS 1.3 group
 Context **configure** [system](#) [security](#) [tls](#) [client-group-list](#) *named-item* [tls13-group](#) *number*
 Tree [tls13-group](#)
 Range 1 to 255
 Notes This element is part of a list key.
 Introduced 25.3.R2
 Platforms 7705 SAR Gen 2

name *keyword*

Synopsis	Name of the TLS 1.3 group suite code
Context	configure system security tls client-group-list <i>named-item</i> tls13-group <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-ecdhe-256 , tls-ecdhe-384 , tls-ecdhe-521 , tls-x25519 , tls-x448 , tls-ml-kem1024
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-signature-list [[client-signature-list-name](#)] *named-item*

Synopsis	Enter the client-signature-list list instance
Context	configure system security tls client-signature-list <i>named-item</i>
Tree	client-signature-list
Description	Commands in this context configure the list of TLS 1.3-supported signature suite codes that the client sends in a client Hello message.
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[client-signature-list-name] *named-item*

Synopsis	Name of the TLS 1.3 client signature list
Context	configure system security tls client-signature-list <i>named-item</i>
Tree	client-signature-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls13-signature [[index](#)] *number*

Synopsis	Enter the tls13-signature list instance
Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature
Description	Commands in this context configure the TLS 1.3-supported signature suite codes sent by the client in its Hello messages.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[index] *number*

Synopsis	Index number of the TLS 1.3 signature
Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i>
Tree	tls13-signature
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *keyword*

Synopsis	Name of the TLS 1.3 signature suite code
Context	configure system security tls client-signature-list <i>named-item</i> tls13-signature <i>number</i> name <i>keyword</i>
Tree	name
Options	tls-eccdsa-secp256r1-sha256, tls-eccdsa-secp384r1-sha384, tls-eccdsa-secp521r1-sha512, tls-rsa-pss-rsae-sha256, tls-rsa-pss-rsae-sha384, tls-rsa-pss-rsae-sha512, tls-ed25519, tls-ed448, tls-rsa-pss-pss-sha256, tls-rsa-pss-pss-sha384, tls-rsa-pss-pss-sha512, tls-ml-dsa87
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

client-tls-profile [[client-profile-name](#)] *named-item*

Synopsis	Enter the client-tls-profile list instance
Context	configure system security tls client-tls-profile <i>named-item</i>
Tree	client-tls-profile
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[client-profile-name] *named-item*

Synopsis	Client TLS profile name
Context	configure system security tls client-tls-profile <i>named-item</i>
Tree	client-tls-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the client TLS profile
Context	configure system security tls client-tls-profile <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cert-profile *reference*

Synopsis	Certificate profile ID
Context	configure system security tls client-tls-profile <i>named-item</i> cert-profile <i>reference</i>

Tree	cert-profile
Reference	configure system security tls cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cipher-list *reference*

Synopsis	Cipher list for negotiation in the client Hello message
Context	configure system security tls client-tls-profile <i>named-item</i> cipher-list <i>reference</i>
Tree	cipher-list
Reference	configure system security tls client-cipher-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-list *reference*

Synopsis	Name of the list of supported group suite codes
Context	configure system security tls client-tls-profile <i>named-item</i> group-list <i>reference</i>
Tree	group-list
Description	This command assigns an existing TLS 1.3 group list to the TLS client profile.
Reference	configure system security tls client-group-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-version *keyword*

Synopsis	TLS protocol version used by the TLS client profile
Context	configure system security tls client-tls-profile <i>named-item</i> protocol-version <i>keyword</i>
Tree	protocol-version
Description	<p>This command configures the TLS version to be negotiated between the client and the server.</p> <p>The client adds the specified version as a supported version in its Hello message to the server.</p>
Options	tls-version-all , tls-version-12 , tls-version-13
Default	tls-version-12

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signature-list *reference*

Synopsis	Name of the list of supported signature suite codes
Context	configure system security tls client-tls-profile <i>named-item</i> signature-list <i>reference</i>
Tree	signature-list
Description	This command assigns an existing TLS 1.3 signature list to the TLS client profile.
Reference	configure system security tls client-signature-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

status-verify

Synopsis	Enter the status-verify context
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS client.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify default-result <i>keyword</i>
Tree	default-result
Description	<p>This command configures the default result of the entity certificate verification in the TLS client profile. This command overwrites the EE certificate revocation verification for the TLS client profile.</p> <p>By default the router checks the certification revocation status, but if this command is set to good, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate.</p> <p>If this command is set to revoked, the router returns the actual revocation status of the end-entity certificate.</p>

Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ee-revocation

Synopsis	Enter the ee-revocation context
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify ee-revocation
Tree	ee-revocation
Description	Commands in this context configure the methods used to verify the end entity certificate revocation status for the TLS client profile.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary *keyword*

Synopsis	Primary method used to verify certificate revocation
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify ee-revocation primary <i>keyword</i>
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure system security tls client-tls-profile <i>named-item</i> status-verify ee-revocation secondary <i>keyword</i>
Tree	secondary
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

trust-anchor-profile *reference*

Synopsis Trust anchor profile

Context **configure** [system security tls client-tls-profile](#) *named-item* **trust-anchor-profile** *reference*

Tree [trust-anchor-profile](#)

Reference **configure** [system security tls trust-anchor-profile](#) *named-item*

Introduced 25.3.R2

Synopsis	Certificate profile ID
Context	configure system security tls server-tls-profile <i>named-item</i> cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure system security tls cert-profile <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cipher-list *reference*

Synopsis	Cipher list used by the TLS server profile
----------	--

Context	configure system security tls server-tls-profile <i>named-item</i> cipher-list <i>reference</i>
Tree	cipher-list
Reference	configure system security tls server-cipher-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

group-list *reference*

Synopsis	Name of the list of supported group suite codes
Context	configure system security tls server-tls-profile <i>named-item</i> group-list <i>reference</i>
Tree	group-list
Description	This command assigns an existing TLS 1.3 group list to the TLS server profile.
Reference	configure system security tls server-group-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-version *keyword*

Synopsis	TLS protocol version used by the TLS server profile
Context	configure system security tls server-tls-profile <i>named-item</i> protocol-version <i>keyword</i>
Tree	protocol-version
Description	<p>This command configures the TLS version to be negotiated between the server and the client.</p> <p>The server adds the specified version as a supported version in its Hello message to the client.</p>
Options	tls-version-all , tls-version-12 , tls-version-13
Default	tls-version-12
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

signature-list *reference*

Synopsis	Name of the list of supported signature suite codes
Context	configure system security tls server-tls-profile <i>named-item</i> signature-list <i>reference</i>
Tree	signature-list

Description	This command assigns an existing TLS 1.3 signature list to the TLS server profile.
Reference	configure system security tls server-signature-list <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

status-verify

Synopsis	Enter the status-verify context
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS server.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify default-result <i>keyword</i>
Tree	default-result
Description	<p>This command configures the default result of the entity certificate verification in the TLS server profile. This command overwrites the EE certificate revocation verification for the TLS server profile.</p> <p>By default the router checks the certification revocation status, but if this command is set to good, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate.</p> <p>If this command is set to revoked, the router returns the actual revocation status of the end-entity certificate.</p>
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ee-revocation

Synopsis	Enter the ee-revocation context
----------	--

Context	configure system security tls server-tls-profile <i>named-item</i> status-verify ee-revocation
Tree	ee-revocation
Description	Commands in this context configure the methods used to verify the end entity certificate revocation status for the TLS server profile.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

primary *keyword*

Synopsis	Primary method used to verify certificate revocation
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify ee-revocation primary <i>keyword</i>
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure system security tls server-tls-profile <i>named-item</i> status-verify ee-revocation secondary <i>keyword</i>
Tree	secondary
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-re-negotiate-timer *number*

Synopsis	TLS HELLO request timer
Context	configure system security tls server-tls-profile <i>named-item</i> tls-re-negotiate-timer <i>number</i>
Tree	tls-re-negotiate-timer
Range	0 to 65000

Units	minutes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trust-anchor-profile [[trust-anchor-profile-name](#)] *named-item*

Synopsis	Enter the trust-anchor-profile list instance
Context	configure system security tls trust-anchor-profile <i>named-item</i>
Tree	trust-anchor-profile
Max. instances	16
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[trust-anchor-profile-name] *named-item*

Synopsis	Trust anchor profile name
Context	configure system security tls trust-anchor-profile <i>named-item</i>
Tree	trust-anchor-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

trust-anchor [[ca-profile-name](#)] *reference*

Synopsis	Add a list entry for trust-anchor
Context	configure system security tls trust-anchor-profile <i>named-item</i> trust-anchor <i>reference</i>
Tree	trust-anchor
Max. instances	8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ca-profile-name] reference

Synopsis	Trusted CA profile name
Context	configure system security tls trust-anchor-profile <i>named-item</i> trust-anchor <i>reference</i>
Tree	trust-anchor
Reference	configure system security pki ca-profile <i>named-item</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

use-pqc-only boolean

Synopsis	Negotiate only PQC ciphers, groups, and signatures
Context	configure system security tls use-pqc-only <i>boolean</i>
Tree	use-pqc-only
Description	<p>When configured to true, the router only uses PQC algorithms.</p> <p>When configured to true, the system requires that the signature, cipher, and group lists must each have at least one PQC algorithm configured. If this condition is not met, the system does not allow the list to be assigned to an administratively enabled server or client TLS profile. In addition, with this command enabled, TLS 1.3 only advertises PQC algorithms within each list in the TLS handshake and ignores any non-PQC algorithms, if they are present in the list.</p> <p>This is a system-wide token and, when enabled, it affects all TLS sessions. Consequently, it cannot be enabled if any server or client TLS profiles contain existing lists that do not support PQC algorithms. To enable this command, the user must first add a PQC algorithm to all lists that are assigned to administratively enabled profiles.</p> <p>When configured to false, the router allows both non-PQC and PQC algorithms to be negotiated.</p>
Default	false
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

user-params

Synopsis	Enter the user-params context
Context	configure system security user-params
Tree	user-params

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

attempts

Synopsis	Enter the attempts context
Context	configure system security user-params attempts
Tree	attempts
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count *number*

Synopsis	Number of unsuccessful login attempts
Context	configure system security user-params attempts count <i>number</i>
Tree	count
Range	1 to 64
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lockout *number*

Synopsis	Lockout period after unsuccessful login attempts
Context	configure system security user-params attempts lockout <i>number</i>
Tree	lockout
Range	0 to 1440
Units	minutes
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

time *number*

Synopsis	Time frame of unsuccessful login attempts
----------	---

Context	configure <i>system security user-params attempts time number</i>
Tree	<i>time</i>
Range	0 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-order

Synopsis	Enter the authentication-order context
Context	configure <i>system security user-params authentication-order</i>
Tree	<i>authentication-order</i>
Description	<p>Commands in this context configure the sequence in which the system attempts authentication and authorization among the local user database, RADIUS servers, TACACS+ servers, and LDAP servers.</p> <p>Configure the order from the most preferred method to the least preferred. The presence of all methods in the command line does not guarantee they are all operational. Specifying options that are not available delays user authentication.</p> <p>If all operational methods are attempted and no authentication for a particular login has been granted, an entry in the security log records the failed attempt. Both the attempted login identification and originating IP address are logged with a timestamp.</p> <p>The default order is [radius tacplus ldap local].</p> <p>The order is not applicable to SNMPv3. SNMPv3 messages ignore the configured order and are authorized using the locally configured users only. TACACS+, RADIUS, and LDAP are not supported for SNMPv3 authentication.</p> <p>Note: This command applies to a local user, in addition to users on RADIUS, TACACS+, and LDAP.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

exit-on-reject *boolean*

Synopsis	Ignore subsequent AAA methods after a reject
Context	configure <i>system security user-params authentication-order exit-on-reject boolean</i>
Tree	<i>exit-on-reject</i>
Description	When configured to true , the router stops authentication if one of the AAA methods configured in the authentication order sends a rejection.

When configured to **false**, the router attempts the next AAA method if a AAA method sends a rejection. If all AAA methods are exhausted, authentication and authorization is rejected.

If the order specifies **local** as the first method, the following actions apply:

- If this command is set to **true** and the user does not exist, the user is not authenticated.
- If the user can be authenticated locally, other methods, if configured, are used for authorization and accounting.
- If the user is configured locally but without console access, login is denied.

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

order keyword

Synopsis	Authentication and authorization order
Context	configure system security user-params authentication-order order <i>keyword</i>
Tree	order
Description	This command specifies the order of authentication and authorization. The default order is [radius tacplus ldap local]
Options	local, radius, tacplus, ldap
Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

local-user

Synopsis	Enter the local-user context
Context	configure system security user-params local-user
Tree	local-user
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

password

Synopsis	Enter the password context
Context	configure system security user-params local-user password
Tree	password
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

aging *number*

Synopsis	Maximum time during which a user password is valid
Context	configure system security user-params local-user password aging <i>number</i>
Tree	aging
Range	1 to 500
Units	days
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

complexity-rules

Synopsis	Enter the complexity-rules context
Context	configure system security user-params local-user password complexity-rules
Tree	complexity-rules
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-user-name *boolean*

Synopsis	Allow the username to be used as part of the password
Context	configure system security user-params local-user password complexity-rules allow-user-name <i>boolean</i>
Tree	allow-user-name
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

credits

Synopsis	Enter the credits context
Context	configure system security user-params local-user password complexity-rules credits
Tree	credits
Notes	The following elements are part of a choice: credits or required .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lowercase *number*

Synopsis	Maximum credits for the use of lowercase letters
Context	configure system security user-params local-user password complexity-rules credits lowercase <i>number</i>
Tree	lowercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

numeric *number*

Synopsis	Maximum credits for the use of numeric characters
Context	configure system security user-params local-user password complexity-rules credits numeric <i>number</i>
Tree	numeric
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

special-character *number*

Synopsis	Maximum credits for the use of special characters
Context	configure system security user-params local-user password complexity-rules credits special-character <i>number</i>
Tree	special-character
Range	1 to 10

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

uppercase *number*

Synopsis	Maximum credits for the use of uppercase letters
Context	configure system security user-params local-user password complexity-rules credits uppercase <i>number</i>
Tree	uppercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

disallow-sequence-keys *number*

Synopsis	Minimum length of disallowed sequential characters
Context	configure system security user-params local-user password complexity-rules disallow-sequence-keys <i>number</i>
Tree	disallow-sequence-keys
Description	<p>This command configures the number of consecutive characters that are not allowed to be entered as part of the password on a U.S. English or Korean keyboard. These characters can be lowercase or uppercase letters, or numbers. Special characters are not taken into account. These consecutive characters can be horizontal (left to right) or (right to left) or diagonal (up to bottom or bottom to top). If the number of consecutive characters is equal to or larger than the configured value, the password is disallowed.</p> <p>For example, if the user attempts to use the password "dsalkjhgfdsa", with this command configured to 8, the system rejects the password because the first consecutive sequence "dsa" is 3 lowercase letters, which passes the check, but the second consecutive sequence is "lkjhgfdsa", which consists of 9 consecutive lowercase letters and this does not pass the check.</p>
Range	2 to 8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-classes *number*

Synopsis	Minimum number of different character classes to use
Context	configure system security user-params local-user password complexity-rules minimum-classes <i>number</i>

Tree	minimum-classes
Range	2 to 4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-length *number*

Synopsis	Minimum length required for local passwords
Context	configure system security user-params local-user password complexity-rules minimum-length <i>number</i>
Tree	minimum-length
Description	<p>This command configures the minimum number of characters required for locally administered passwords, bcrypt and PBKDF2 configured in the system security context.</p> <p>If this command is entered multiple times, each command overwrites the previously entered command.</p> <p>The maximum plaintext password length depends on the configured password hash type in the configure system security user-params local-user password hashing context.</p> <ul style="list-style-type: none">• bcrypt - up to 72 characters• sha2-pbkdf2 and sha3-pbkdf2 - up to 128 characters
Range	6 to 128
Default	6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

repeated-characters *number*

Synopsis	Number of times same character can repeat consecutively
Context	configure system security user-params local-user password complexity-rules repeated-characters <i>number</i>
Tree	repeated-characters
Range	2 to 8
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

required

Synopsis	Enter the required context
Context	configure system security user-params local-user password complexity-rules required
Tree	required
Notes	The following elements are part of a choice: credits or required .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lowercase *number*

Synopsis	Number of lowercase letters required
Context	configure system security user-params local-user password complexity-rules required lowercase <i>number</i>
Tree	lowercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

numeric *number*

Synopsis	Number of numeric characters required
Context	configure system security user-params local-user password complexity-rules required numeric <i>number</i>
Tree	numeric
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

special-character *number*

Synopsis	Number of special characters required
Context	configure system security user-params local-user password complexity-rules required special-character <i>number</i>
Tree	special-character
Range	1 to 10

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

uppercase *number*

Synopsis	Number of uppercase letters required
Context	configure system security user-params local-user password complexity-rules required uppercase <i>number</i>
Tree	uppercase
Range	1 to 10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hashing *keyword*

Synopsis	Hashing algorithm for user passwords
Context	configure system security user-params local-user password hashing <i>keyword</i>
Tree	hashing
Options	bcrypt, sha2-pbkdf2, sha3-pbkdf2
Default	bcrypt
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

history-size *number*

Synopsis	Number of previous passwords to compare against
Context	configure system security user-params local-user password history-size <i>number</i>
Tree	history-size
Range	0 to 20
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-age *number*

Synopsis	Minimum age required for a password before changing it
----------	--

Context	configure system security user-params local-user password minimum-age <i>number</i>
Tree	minimum-age
Range	0 to 86400
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minimum-change *number*

Synopsis	Minimum character differences between passwords
Context	configure system security user-params local-user password minimum-change <i>number</i>
Tree	minimum-change
Range	1 to 20
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

user [[user-name](#)] *named-item*

Synopsis	Enter the user list instance
Context	configure system security user-params local-user user <i>named-item</i>
Tree	user
Description	Commands in this context configure local users.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[user-name] *named-item*

Synopsis	Local user name
Context	configure system security user-params local-user user <i>named-item</i>
Tree	user
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

access

Synopsis	Enter the access context
Context	configure system security user-params local-user user <i>named-item</i> access
Tree	access
Description	Commands in this context grant a user access to the router management access methods. If a user requires access to more than one method, multiple methods can be specified.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

console *boolean*

Synopsis	Allow console port, SCP/SFTP, SSH, and Telnet access
Context	configure system security user-params local-user user <i>named-item</i> access console <i>boolean</i>
Tree	console
Description	When configured to true , the system allows this access method to take precedence over other access methods in all cases.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

console-port-cli *boolean*

Synopsis	Allow console port CLI access
Context	configure system security user-params local-user user <i>named-item</i> access console-port-cli <i>boolean</i>
Tree	console-port-cli
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ftp boolean

Synopsis	Allow FTP access
Context	configure system security user-params local-user user <i>named-item</i> access ftp <i>boolean</i>
Tree	ftp
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

grpc boolean

Synopsis	Allow gRPC access
Context	configure system security user-params local-user user <i>named-item</i> access grpc <i>boolean</i>
Tree	grpc
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf boolean

Synopsis	Allow NETCONF access
Context	configure system security user-params local-user user <i>named-item</i> access netconf <i>boolean</i>
Tree	netconf
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

scp-sftp boolean

Synopsis	Allow SCP/SFTP access
Context	configure system security user-params local-user user <i>named-item</i> access scp-sftp <i>boolean</i>
Tree	scp-sftp
Default	false

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

snmp *boolean*

Synopsis Allow SNMP access
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [access snmp](#)
boolean
Tree [snmp](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ssh-cli *boolean*

Synopsis Allow SSH CLI access
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [access ssh-cli](#)
boolean
Tree [ssh-cli](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

telnet-cli *boolean*

Synopsis Allow Telnet CLI access
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [access telnet-cli](#)
boolean
Tree [telnet-cli](#)
Default false
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

cli-engine *keyword*

Synopsis User level override for CLI engine access

Context	configure system security user-params local-user user <i>named-item</i> cli-engine <i>keyword</i>
Tree	cli-engine
Options	classic-cli, md-cli
Max. instances	2
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

console

Synopsis	Enter the console context
Context	configure system security user-params local-user user <i>named-item</i> console
Tree	console
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cannot-change-password *boolean*

Synopsis	Change password privileges
Context	configure system security user-params local-user user <i>named-item</i> console cannot-change-password <i>boolean</i>
Tree	cannot-change-password
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-exec *string-not-all-spaces*

Synopsis	File to execute when the user logs in
Context	configure system security user-params local-user user <i>named-item</i> console login-exec <i>string-not-all-spaces</i>
Tree	login-exec
String length	1 to 200
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

member *reference*

Synopsis User profiles for this user

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [console](#) [member](#) *reference*

Tree [member](#)

Reference **configure** [system](#) [security](#) [aaa](#) [local-profiles](#) [profile](#) *named-item*

Max. instances 8

Notes This element is ordered by the user.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

new-password-at-login *boolean*

Synopsis Prompt the user to change their password at next login

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [console](#) [new-password-at-login](#) *boolean*

Tree [new-password-at-login](#)

Default false

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

home-directory *cflash-without-slot-url*

Synopsis Home directory for the user

Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [home-directory](#) *cflash-without-slot-url*

Tree [home-directory](#)

Description This command configures the home directory of the user for file access. Files can be accessed locally by CLI **file** commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in.

When **restricted-to-home** is configured, file access is denied unless the **home-directory** is configured and the directory is created by an administrator.

String length	1 to 200
String format	'cf1-without-slot-url' must be cf1-4: followed by path (e.g. cf1:/path)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

password *hashed-leaf*

Synopsis	User password
Context	configure system security user-params local-user user <i>named-item</i> password <i>hashed-leaf</i>
Tree	password
String length	3 to 136
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

public-keys

Synopsis	Enter the public-keys context
Context	configure system security user-params local-user user <i>named-item</i> public-keys
Tree	public-keys
Description	Commands in this context configure public keys for SSH.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecdsa

Synopsis	Enter the ecdsa context
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa
Tree	ecdsa
Description	Commands in this context configure Elliptic Curve Digital Signature Algorithm (ECDSA) public keys.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ecdsa-key [[ecdsa-public-key-id](#)] *number*

Synopsis	Enter the ecdsa-key list instance
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i>
Tree	ecdsa-key
Description	Commands in this context configure an ECDSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ecdsa-public-key-id] *number*

Synopsis	ECDSA public key identifier
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i>
Tree	ecdsa-key
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-value *string-not-all-spaces*

Synopsis	ECDSA public key value
Context	configure system security user-params local-user user <i>named-item</i> public-keys ecdsa ecdsa-key <i>number</i> key-value <i>string-not-all-spaces</i>
Tree	key-value
Description	This command configures a value for the ECDSA public key. The public key must be enclosed in quotation marks. For ECDSA, the key is between 1 and 1024 bits.
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ed25519

Synopsis	Enter the ed25519 context
Context	configure system security user-params local-user user <i>named-item</i> public-keys ed25519
Tree	ed25519
Description	Commands in this context configure Edwards-curve Digital Signature Algorithm (EdDSA) Curve25519 (Ed25519) public keys.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

ed25519-key [[ed25519-public-key-id](#)] *number*

Synopsis	Enter the ed25519-key list instance
Context	configure system security user-params local-user user <i>named-item</i> public-keys ed25519 ed25519-key <i>number</i>
Tree	ed25519-key
Description	Commands in this context configure an Ed25519 public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

[ed25519-public-key-id] *number*

Synopsis	Ed25519 public key identifier
Context	configure system security user-params local-user user named-item public-keys ed25519 ed25519-key <i>number</i>
Tree	ed25519-key
Range	1 to 32
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

description *description*

Platforms	7705 SAR Gen 2

key-value *string-not-all-spaces*

Synopsis	Ed25519 public key value
Context	configure system security user-params local-user user named-item public-keys ed25519 ed25519-key <i>number</i> key-value <i>string-not-all-spaces</i>
Tree	key-value
Description	This command configures a value for the Ed25519 public key. The public key must be enclosed in quotation marks. For Ed25519, the key is between 8 and 544 bits.
String length	1 to 68
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

rsa

Synopsis	Enter the rsa context
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa
Tree	rsa
Description	Commands in this context configure RSA public keys.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rsa-key [[rsa-public-key-id](#)] *number*

Synopsis	Enter the rsa-key list instance
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa rsa-key <i>number</i>
Tree	rsa-key
Description	Commands in this context configure an RSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[rsa-public-key-id] *number*

Synopsis	RSA public key identifier
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa rsa-key <i>number</i>
Tree	rsa-key
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
----------	------------------

Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa rsa-key <i>number</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-value *string-not-all-spaces*

Synopsis	RSA public key value
Context	configure system security user-params local-user user <i>named-item</i> public-keys rsa rsa-key <i>number</i> key-value <i>string-not-all-spaces</i>
Tree	key-value
Description	This command configures a value for the RSA public key. The public key must be enclosed in quotation marks. For RSA, the key is between 768 and 4096 bits.
String length	1 to 800
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	configure system security user-params local-user user <i>named-item</i> restricted-to-home <i>boolean</i>
Tree	restricted-to-home
Description	<p>When configured to true, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as > (file redirect). The system denies all configuration save operations (such as admin save) via any management interface (such as CLI and NETCONF) unless save-when-restricted is enabled.</p> <p>File access is denied unless a home directory is configured and the directory is created by an administrator.</p> <p>When configured to false, the router permits the user to access all files on the system and to remote files.</p>
Default	true
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	configure system security user-params local-user user <i>named-item</i> save-when-restricted <i>boolean</i>
Tree	save-when-restricted
Description	<p>When configured to true, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if restricted-to-home is enabled.</p> <p>The configuration for each region can be saved with admin save CLI commands or when committed over NETCONF and gRPC.</p> <p>When configured to false, the system denies saving the configuration when restricted-to-home is enabled, unless the home directory of the user includes the location of the saved configuration file.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

snmp

Synopsis	Enter the snmp context
Context	configure system security user-params local-user user <i>named-item</i> snmp
Tree	snmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication

Synopsis	Enable the authentication context
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication
Tree	authentication
Description	Commands in this context configure the SNMPv3 authentication and privacy protocols for the user to communicate with the router. The keys are stored in an encrypted format in the configuration.

The keys configured with these commands must be localized keys, which are a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate localized authentication and privacy keys.

If authentication is not configured, only the username is required to allow and authenticate SNMPv3 operations.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

authentication-key *encrypted-leaf-hex-without-prefix*

Synopsis Localized authentication key

Context **configure** system security user-params local-user user *named-item* snmp authentication authentication-key *encrypted-leaf-hex-without-prefix*

Tree authentication-key

Description This command specifies the authentication key for the authentication protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized authentication key.

This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.

String length 1 to 166

String format 'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

authentication-protocol *keyword*

Synopsis Authentication protocol

Context **configure** system security user-params local-user user *named-item* snmp authentication authentication-protocol *keyword*

Tree authentication-protocol

Options hmac-md5-96, hmac-sha1-96, hmac-sha2-224, hmac-sha2-256, hmac-sha2-384, hmac-sha2-512

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

privacy

Synopsis	Enable the privacy context
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication privacy
Tree	privacy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

privacy-key *encrypted-leaf-hex-without-prefix*

Synopsis	Localized privacy key
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication privacy privacy-key <i>encrypted-leaf-hex-without-prefix</i>
Tree	privacy-key
Description	<p>This command specifies the privacy key for the privacy protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the tools perform system management-interface snmp generate-key command to generate a localized privacy key.</p> <p>This command uses a protected format where the specific format is indicated by the hash, hash2, hash3, or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.</p>
String length	1 to 126
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

privacy-protocol *keyword*

Synopsis	Privacy protocol
Context	configure system security user-params local-user user <i>named-item</i> snmp authentication privacy privacy-protocol <i>keyword</i>
Tree	privacy-protocol
Options	cbc-des, cfb128-aes-128, cfb128-aes-192, cfb128-aes-256
Notes	This element is mandatory.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

group *named-item*

Synopsis User to associate with a group name
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [snmp](#) [group](#) *named-item*
Tree [group](#)
String length 1 to 32
String format 'string-not-all-spaces' must contain at least one non-space character
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

ssh-authentication-method

Synopsis Enter the **ssh-authentication-method** context
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [ssh-authentication-method](#)
Tree [ssh-authentication-method](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

client

Synopsis Enter the **client** context
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [ssh-authentication-method](#) [client](#)
Tree [client](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

public-key-only *keyword*

Synopsis Public key only SSH authentication for this user
Context **configure** [system](#) [security](#) [user-params](#) [local-user](#) [user](#) *named-item* [ssh-authentication-method](#) [client](#) [public-key-only](#) *keyword*

Tree	public-key-only
Description	<p>This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the configure system security ssh authentication-method public-key-only command.</p> <p>When unconfigured, the command inherits the setting from the system level command.</p> <p>The command options are:</p> <ul style="list-style-type: none"> • true — accept only public key client authentication for the SSH server • false — accept public key or password client authentication for the SSH server. If interactive-authentication is configured to true in the configure system security aaa remote-servers radius or configure system security aaa remote-servers tacplus context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server

Synopsis	Enter the server context
Context	configure system security user-params local-user user named-item ssh-authentication-method server
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

public-key-only keyword

Synopsis	Public key only SSH authentication for this user
Context	configure system security user-params local-user user named-item ssh-authentication-method server public-key-only keyword
Tree	public-key-only
Description	<p>This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the configure system security ssh authentication-method public-key-only command.</p> <p>When unconfigured, the command inherits the setting from the system level command.</p> <p>The command options are:</p> <ul style="list-style-type: none"> • true — accept only public key client authentication for the SSH server

- **false** — accept public key or password client authentication for the SSH server. If **interactive-authentication** is configured to **true** in the **configure system security aaa remote-servers radius** or **configure system security aaa remote-servers tacplus** context, the system also accepts interactive keyboard authentication.

Options	false, true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

vprn-network-exceptions

Synopsis	Enable the vprn-network-exceptions context
Context	configure system security vprn-network-exceptions
Tree	vprn-network-exceptions
Description	<p>Commands in this context configure the rate limiting attributes for processing packets with label TTL expiry received within an LSP shortcut or VPRN instances in the system and from all network IP interfaces. This includes labeled user and control plan packets, ping, and traceroute packets within GRT and VPRN, and ICMP replies.</p> <p>These commands do not rate limit MPLS or service OAM packets.</p>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count *number*

Synopsis	Limit of exception messages received
Context	configure system security vprn-network-exceptions count <i>number</i>
Tree	count
Description	This command specifies the threshold limit of exception messages. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

window *number*

Synopsis	Time interval to measure exception messages
Context	configure system security vprn-network-exceptions window <i>number</i>

Tree	window
Description	This command configures the time interval within which exception messages are counted. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telemetry

Synopsis	Enter the telemetry context
Context	configure system telemetry
Tree	telemetry
Description	Commands in this context configure the parameters for the dial-out telemetry functionality.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination-group [[name](#)] *named-item*

Synopsis	Enter the destination-group list instance
Context	configure system telemetry destination-group <i>named-item</i>
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. instances	225
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[[name](#)] *named-item*

Synopsis	Destination group name
Context	configure system telemetry destination-group <i>named-item</i>
Tree	destination-group

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	configure system telemetry destination-group <i>named-item</i> allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, this command allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system telemetry destination-group <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

destination [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*) [port](#) *number*

Synopsis	Enter the destination list instance
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination

Max. instances	4
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *fully-qualified-domain-name*)

Synopsis	Address of the destination within the destination group
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	TCP port number for the destination
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i>
Tree	destination
Range	0 1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	configure system telemetry destination-group <i>named-item</i> destination (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>fully-qualified-domain-name</i>) port <i>number</i> router-instance <i>string</i>
Tree	router-instance
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

tcp-keepalive

Synopsis Enter the **tcp-keepalive** context

Context **configure** [system telemetry destination-group named-item tcp-keepalive](#)

Tree [tcp-keepalive](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the TCP keep-alive algorithm

Context **configure** [system telemetry destination-group named-item tcp-keepalive admin-state keyword](#)

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

idle-time *number*

Synopsis Time until the first TCP keepalive probe is sent

Context **configure** [system telemetry destination-group named-item tcp-keepalive idle-time number](#)

Tree [idle-time](#)

Range 1 to 100000

Units seconds

Default 600

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

interval *number*

Synopsis Time between TCP keepalive probes

Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive interval <i>number</i>
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	configure system telemetry destination-group <i>named-item</i> tcp-keepalive retries <i>number</i>
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	configure system telemetry destination-group <i>named-item</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>named-item</i>
Notes	The following elements are part of a choice: allow-unsecure-connection or tls-client-profile .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

notification-bundling

Synopsis	Enter the notification-bundling context
----------	--

Context	configure system telemetry notification-bundling
Tree	notification-bundling
Description	Commands in this context configure the bundling of multiple notifications into one telemetry message.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of notification bundling
Context	configure system telemetry notification-bundling admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-msg-count *number*

Synopsis	Maximum notifications count in telemetry message bundle
Context	configure system telemetry notification-bundling max-msg-count <i>number</i>
Tree	max-msg-count
Range	2 to 1000
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-time-granularity *number*

Synopsis	Maximum interval when bundling of notifications occurs
Context	configure system telemetry notification-bundling max-time-granularity <i>number</i>
Tree	max-time-granularity
Description	This command sets the maximum time interval during which telemetry notifications are bundled. All bundled notifications have the same timestamp, which is the timestamp of the bundle.

Range	1 to 1000
Units	milliseconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

persistent-subscriptions

Synopsis	Enter the persistent-subscriptions context
Context	configure system telemetry persistent-subscriptions
Tree	persistent-subscriptions
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delay-on-boot *number*

Synopsis	Delay for persistent subscriptions after system boot
Context	configure system telemetry persistent-subscriptions delay-on-boot <i>number</i>
Tree	delay-on-boot
Description	<p>This command configures the delay timer for gRPC telemetry persistent subscriptions. When the timer expires, gRPC telemetry persistent subscriptions become operational and connections are initiated. This delay prevents the system from trying to establish gRPC persistent subscriptions while it is still converging.</p> <p>When no delay is configured, gRPC telemetry persistent subscriptions are initiated after the system boots and gRPC becomes operational.</p>
Range	1 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

subscription [[name](#)] *named-item*

Synopsis	Enter the subscription list instance
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i>
Tree	subscription

Max. instances	225
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Persistent subscription name
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i>
Tree	subscription
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the persistent subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

destination-group *reference*

Synopsis Name of the destination group used in the subscription

Context **configure** [system](#) [telemetry](#) [persistent-subscriptions](#) [subscription](#) *named-item* [destination-group](#) *reference*

Tree [destination-group](#)

Reference **configure** [system](#) [telemetry](#) [destination-group](#) *named-item*

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

encoding *keyword*

Synopsis Encoding used for telemetry notifications

Context **configure** [system](#) [telemetry](#) [persistent-subscriptions](#) [subscription](#) *named-item* [encoding](#) *keyword*

Tree [encoding](#)

Description This command specifies the encoding used for telemetry notifications as defined by the gNMI OpenConfig standard.

Options
 json – JSON encoded text
 bytes – Encoded according to gnmi.schemas
 proto – Encoded with scalar TypedValue values
 json-ietf – JSON encoded text as per RFC 7951

Default json

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

local-source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Local IP address of packets sent from the source

Context **configure** [system](#) [telemetry](#) [persistent-subscriptions](#) [subscription](#) *named-item* [local-source-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [local-source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

mode *keyword*

Synopsis	Mode for telemetry notifications
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> mode <i>keyword</i>
Tree	mode
Description	This command specifies the subscription path mode for telemetry notifications sent out for the persistent subscription.
Options	target-defined, on-change, sample
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

originated-qos-marking *keyword*

Synopsis	QoS marking used for telemetry notification packets
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> originated-qos-marking <i>keyword</i>
Tree	originated-qos-marking
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sample-interval *number*

Synopsis	Sampling interval for the persistent subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> sample-interval <i>number</i>
Tree	sample-interval
Description	This command configures the sampling interval for the persistent subscription. The interval applies only in sampling or target-defined modes.
Range	1000 to 18446744073709551615
Units	milliseconds
Default	10000

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sensor-group *reference*

Synopsis	Sensor group used in the persistent subscription
Context	configure system telemetry persistent-subscriptions subscription <i>named-item</i> sensor-group <i>reference</i>
Tree	sensor-group
Description	This command specifies the sensor group to be used in the persistent subscription. If no valid paths exist in the sensor group, the configuration is accepted, however, no gRPC connection is established when persistent subscription is activated.
Reference	configure system telemetry sensor-groups sensor-group <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sensor-groups

Synopsis	Enter the sensor-groups context
Context	configure system telemetry sensor-groups
Tree	sensor-groups
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sensor-group [[name](#)] *named-item*

Synopsis	Enter the sensor-group list instance
Context	configure system telemetry sensor-groups sensor-group <i>named-item</i>
Tree	sensor-group
Max. instances	225
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	Sensor group name
Context	configure system telemetry sensor-groups sensor-group <i>named-item</i>
Tree	sensor-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure system telemetry sensor-groups sensor-group <i>named-item</i> description
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path [[xpath](#)] *string*

Synopsis	Add a list entry for path
Context	configure system telemetry sensor-groups sensor-group <i>named-item</i> path <i>string</i>
Tree	path
Max. instances	4500
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[xpath] *string*

Synopsis	gNMI path to be streamed
Context	configure system telemetry sensor-groups sensor-group <i>named-item</i> path <i>string</i>

Tree	path
Description	This command configures a path for the specified sensor group. Multiple paths can be defined for a single sensor group. Streamed data includes all descendants of the tree indicated by the path. The path is defined in the form of an XML Path (XPath) syntax that refers to single or multiple objects within the YANG model. The path must be enclosed in quotation marks (") when it includes a list key, for example, <code>"/state/router[router-name=Base]"</code> .
String length	1 to 512
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

thresholds

Synopsis	Enter the thresholds context
Context	configure system thresholds
Tree	thresholds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cflash-cap-alarm-percent [[cflash-id](#)] *thresholds-cflash-url*

Synopsis	Enter the cflash-cap-alarm-percent list instance
Context	configure system thresholds cflash-cap-alarm-percent <i>thresholds-cflash-url</i>
Tree	cflash-cap-alarm-percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cflash-id] *thresholds-cflash-url*

Synopsis	cflash device name monitored for capacity
Context	configure system thresholds cflash-cap-alarm-percent <i>thresholds-cflash-url</i>
Tree	cflash-cap-alarm-percent
String length	1 to 200
String format	'thresholds-cflash-url' must be cf1-4 with slot A-D (e.g. cf1-A:)
Notes	This element is part of a list key.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

falling-threshold *number*

Synopsis	Falling threshold for the sampled statistic
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url falling-threshold <i>number</i>
Tree	falling-threshold
Description	<p>This command specifies a falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single threshold-crossing event is generated. A single threshold-crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated startup-alarm command is equal to the falling or either values.</p> <p>After a falling threshold-crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the rising-threshold command.</p>
Range	0 to 100
Units	percent
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url interval <i>number</i>
Tree	interval
Description	This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds.
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rising-threshold *number*

Synopsis	Rising threshold for the sampled statistic
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url rising-threshold <i>number</i>
Tree	rising-threshold
Description	<p>This command specifies a rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single threshold-crossing event is generated. A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated startup-alarm command is equal to the rising or either values.</p> <p>After a rising threshold-crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the falling-threshold command.</p>
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rmon-event-type *keyword*

Synopsis	Notification type specifying action when event occurs
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url rmon-event-type <i>keyword</i>
Tree	rmon-event-type
Options	none, log, trap, both
Default	both
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-alarm *keyword*

Synopsis	Alarm type when the alarm is first created
Context	configure system thresholds cflash-cap-alarm-percent thresholds-cflash-url startup-alarm <i>keyword</i>
Tree	startup-alarm

Description	<p>This command specifies the alarm type that may be sent when this alarm is first created.</p> <p>If the first sample is greater than or equal to the rising threshold value and startup-alarm is equal to rising or either, a single rising threshold crossing event is generated.</p> <p>If the first sample is less than or equal to the falling threshold value and startup-alarm is equal to falling or either, a single falling threshold crossing event is generated.</p>
Options	<p>rising – Raise TCA if threshold is crossed in upward direction</p> <p>falling – Raise TCA if threshold is crossed in downward direction</p> <p>either – Raise TCA if threshold is crossed from either direction</p>
Default	either
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cflash-cap-warn-percent [**cflash-id**] *thresholds-cflash-url*

Synopsis	Enter the cflash-cap-warn-percent list instance
Context	configure system thresholds cflash-cap-warn-percent <i>thresholds-cflash-url</i>
Tree	cflash-cap-warn-percent
Description	Commands in this context configure the capacity monitoring of the compact flash. The usage is monitored as a percentage of the capacity of the compact flash. The severity level is warning. Both a rising and falling threshold can be specified.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[cflash-id] *thresholds-cflash-url*

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

alarm [[rmon-alarm-id](#)] *number*

Synopsis	Enter the alarm list instance
Context	configure system thresholds rmon alarm <i>number</i>
Tree	alarm
Description	Commands in this context configure an entry in the RMON-MIB alarmTable and controls the monitoring and triggering of threshold crossing events.

At least one associated **configure system thresholds rmon event** command must be configured to trigger the notification or logging of a threshold crossing event.

The agent periodically takes statistical sample values from the MIB variable specified for monitoring and compares them to thresholds configured with this command. This command configures the MIB variable for monitoring, the polling period (interval), the sampling type (absolute or delta value), and the rising and falling threshold commands. If a sample has crossed a threshold value, the associated event is generated.

Max. instances	1200
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[rmon-alarm-id] *number*

Synopsis	RMON alarm identifier
Context	configure system thresholds rmon alarm <i>number</i>
Tree	alarm
Range	0 to 65400
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

falling-event *number*

Synopsis	RMON event ID for falling threshold crossing event
Context	configure system thresholds rmon alarm <i>number</i> falling-event <i>number</i>
Tree	falling-event
Range	0 to 65400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

falling-threshold *number*

Synopsis	Threshold for the falling sampled statistic
Context	configure system thresholds rmon alarm <i>number</i> falling-threshold <i>number</i>
Tree	falling-threshold

Description	<p>This command configures the router to create a threshold event when the current sampled value is less than or equal to this threshold value, and the value at the last sampling interval was greater than this threshold.</p> <p>A single threshold crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated startup-alarm is equal to falling or either.</p> <p>After a falling threshold crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the rising-threshold value.</p>
Range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	configure system thresholds rmon alarm <i>number</i> interval <i>number</i>
Tree	interval
Description	<p>This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds.</p> <p>When setting this interval value, take care in the case of delta type sampling, set the interval short enough that the sampled variable is very unlikely to increase or decrease by more than 2147483647 - 1 during a single sampling interval. Take care to avoid setting the interval value too low, to avoid creating unnecessary processing overhead.</p>
Range	1 to 2147483647
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner *string-not-all-spaces*

Synopsis	Owner that created this entry and uses the resources
Context	configure system thresholds rmon alarm <i>number</i> owner <i>string-not-all-spaces</i>
Tree	owner
Description	<p>This command configures the owner of the alarm.</p> <p>This command allows entries created in the RMON-MIB alarmTable by remote SNMP managers to save and reload in a CLI configuration file. CLI users do not normally configure the owner.</p>

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	TIMOS CLI
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rising-event *number*

Synopsis	RMON event ID for rising threshold crossing event
Context	configure system thresholds rmon alarm <i>number</i> rising-event <i>number</i>
Tree	rising-event
Range	0 to 65400
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rising-threshold *number*

Synopsis	Threshold for the rising sampled statistic
Context	configure system thresholds rmon alarm <i>number</i> rising-threshold <i>number</i>
Tree	rising-threshold
Description	<p>This command configures the router to create a single threshold crossing event when the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold.</p> <p>A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated startup-alarm is equal to rising or either.</p> <p>After a rising threshold crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the falling-threshold value.</p>
Range	-2147483648 to 2147483647
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sample-type *keyword*

Synopsis	Sampling type for value comparison with thresholds
Context	configure system thresholds rmon alarm <i>number</i> sample-type <i>keyword</i>

Tree	sample-type
Options	absolute – Value compared with end sampling interval thresholds delta – Selected minus current and compared with thresholds
Default	absolute
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

startup-alarm *keyword*

Synopsis	TCA type eligible to be raised on the test's first poll
Context	configure system thresholds rmon alarm <i>number</i> startup-alarm <i>keyword</i>
Tree	startup-alarm
Options	rising – Raise TCA if threshold is crossed in upward direction falling – Raise TCA if threshold is crossed in downward direction either – Raise TCA if threshold is crossed from either direction
Default	either
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

variable-oid *string*

Synopsis	Object identifier to sample the specific variable
Context	configure system thresholds rmon alarm <i>number</i> variable-oid <i>string</i>
Tree	variable-oid
Description	This command configures the SNMP object identifier of the particular variable for sampling. Only SNMP variables that resolve to an ASN.1 primitive type of integer (Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled. The <i>oid-string</i> may be expressed using either the dotted string notation or as object name plus dotted instance identifier. For example, "1.3.6.1.2.1.2.2.1.10.184582144" or "ifInOctets.184582144".
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event [*rmon-event-id*] *number*

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

owner string-not-all-spaces

Synopsis	Owner that created this entry and uses the resources
Context	configure system thresholds rmon event <i>number</i> owner <i>string-not-all-spaces</i>
Tree	owner
Description	This command configures the owner of the alarm. This command allows entries created in the RMON-MIB alarmTable by remote SNMP managers to save and reload in a CLI configuration file. CLI users do not normally configure the owner.
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	TIMOS CLI
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hc-alarm [**rmon-hc-alarm-id**] *number*

Synopsis	Enter the hc-alarm list instance
Context	configure system thresholds rmon hc-alarm <i>number</i>
Tree	hc-alarm
Description	Commands in this context configure an entry in the HC-ALARM-MIB hcAlarmTable and controls the monitoring and triggering of threshold crossing events. At least one associated configure system thresholds rmon event command must be configured to trigger the notification or logging of a threshold crossing event. The agent periodically takes statistical sample values from the MIB variable specified for monitoring and compares them to thresholds configured with this command. This command configures the MIB variable for monitoring, the polling period (interval), the sampling type (absolute or delta value), and the rising and falling threshold commands. If a sample has crossed a threshold value, the associated event is generated.
Max. instances	1200
Introduced	25.10.R1

Platforms 7705 SAR Gen 2

[rmon-hc-alarm-id] *number*

Synopsis	RMON high capacity alarm identifier
Context	configure system thresholds rmon hc-alarm <i>number</i>
Tree	hc-alarm
Range	1 to 65400
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

falling-event *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	RMON event ID for falling threshold crossing event
Context	configure system thresholds rmon hc-alarm <i>number</i> falling-event <i>number</i>

falling-threshold *number*

**WARNING:**
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Threshold for the falling sampled statistic
Context	configure system thresholds rmon hc-alarm <i>number</i> falling-threshold <i>number</i>
Tree	falling-threshold
Description	This command configures the router to create a threshold event when the current sampled value is less than or equal to this threshold value, and the value at the last sampling interval was greater than this threshold.

A single threshold crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated **startup-alarm** is equal to **falling** or **either**.

After a falling threshold crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the **rising-threshold** value.

Range	-9223372036854775806 to 9223372036854775807
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

Options	absolute – Value compared with end sampling interval thresholds delta – Selected minus current and compared with thresholds
Default	absolute
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

startup-alarm keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TCA type eligible to be raised on the test's first poll
Context	configure system thresholds rmon hc-alarm number startup-alarm <i>keyword</i>
Tree	startup-alarm
Options	rising – Raise TCA if threshold is crossed in upward direction falling – Raise TCA if threshold is crossed in downward direction either – Raise TCA if threshold is crossed from either direction
Default	either
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

variable-oid *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Object identifier to sample the specific variable
Context	configure system thresholds rmon hc-alarm <i>number</i> variable-oid <i>string</i>
Tree	variable-oid
Description	<p>This command configures the SNMP object identifier of the particular variable for sampling.</p> <p>Only SNMP variables that resolve to an ASN.1 primitive type of integer (Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled. The <i>oid-string</i> may be expressed using either the dotted string notation or as object name plus dotted instance identifier. For example, "1.3.6.1.2.1.2.2.1.10.184582144" or "ifInOctets.184582144".</p>
String length	1 to 255
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

time

Synopsis	Enter the time context
Context	configure system time
Tree	time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

daylight-saving-time-zone

Synopsis	Enter the daylight-saving-time-zone context
Context	configure system time daylight-saving-time-zone
Tree	daylight-saving-time-zone
Description	<p>Commands in this context configure the start and end dates and offset for summer time (or Daylight Savings Time [DST]).</p> <p>A daylight savings time zone can be specified using a standard name or a non-standard name. The parameters (start day, end day, and offset) for a standard name zone are well defined and not configurable. The parameters for a nonstandard name zone are</p>

configurable. The time is adjusted by adding the offset when summer time starts and subtracting the offset when summer time ends.

If no summer (daylight savings) time is supplied, the system assumes no summer time adjustment is required.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

non-standard

Synopsis Enter the **non-standard** context

Context **configure** [system time daylight-saving-time-zone non-standard](#)

Tree [non-standard](#)

Notes The following elements are part of a choice: **non-standard** or **standard**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

end

Synopsis Enter the **end** context

Context **configure** [system time daylight-saving-time-zone non-standard end](#)

Tree [end](#)

Description Commands in this context configure the end of summer time settings.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

day keyword

Synopsis Day of the week when summer time ends

Context **configure** [system time daylight-saving-time-zone non-standard end day](#) *keyword*

Tree [day](#)

Options sunday, monday, tuesday, wednesday, thursday, friday, saturday

Default sunday

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

hours-minutes *hours-minutes-twenty-four*

Synopsis	Time when summer time ends, in hh:mm format
Context	configure system time daylight-saving-time-zone non-standard end hours-minutes hours-minutes-twenty-four
Tree	hours-minutes
String length	5
String format	'hours-minutes-twenty-four' must be hh:mm, hours 00-23, minutes 00-59 (e.g. 14:30)
Default	00:00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

month *keyword*

Synopsis	Month when summer time ends
Context	configure system time daylight-saving-time-zone non-standard end month <i>keyword</i>
Tree	month
Options	january, february, march, april, may, june, july, august, september, october, november, december
Default	january
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

week *keyword*

Synopsis	Week of the month when summer time ends
Context	configure system time daylight-saving-time-zone non-standard end week <i>keyword</i>
Tree	week
Options	first, second, third, fourth, last
Default	first
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *string*

Synopsis	Nonstandard summer time zone name
Context	configure system time daylight-saving-time-zone non-standard <i>name string</i>
Tree	name
String length	1 to 5
String format	'name' must contain only lowercase letters and digits (e.g. utc5)
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

offset *number*

Synopsis	Summer time offset
Context	configure system time daylight-saving-time-zone non-standard <i>offset number</i>
Tree	offset
Description	This command configures the number of minutes that are added to the time when summer time takes effect. The same number of minutes are subtracted from the time when summer time ends.
Range	0 to 60
Units	minutes
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

start

Synopsis	Enter the start context
Context	configure system time daylight-saving-time-zone non-standard <i>start</i>
Tree	start
Description	Commands in this context configure the start of summer time settings.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

day keyword

Synopsis	Day of the week when summer time starts
Context	configure system time daylight-saving-time-zone non-standard start day <i>keyword</i>
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Default	sunday
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hours-minutes *hours-minutes-twenty-four*

Synopsis	Time when summer time starts, in hh:mm format
Context	configure system time daylight-saving-time-zone non-standard start hours-minutes <i>hours-minutes-twenty-four</i>
Tree	hours-minutes
String length	5
String format	'hours-minutes-twenty-four' must be hh:mm, hours 00-23, minutes 00-59 (e.g. 14:30)
Default	00:00
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

month keyword

Synopsis	Month when summer time starts
Context	configure system time daylight-saving-time-zone non-standard start month <i>keyword</i>
Tree	month
Options	january, february, march, april, may, june, july, august, september, october, november, december
Default	january
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

week keyword

Synopsis	Week of the month when summer time starts
Context	configure system time daylight-saving-time-zone non-standard start week <i>keyword</i>
Tree	week
Options	first, second, third, fourth, last
Default	first
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

standard

Synopsis	Enter the standard context
Context	configure system time daylight-saving-time-zone standard
Tree	standard
Notes	The following elements are part of a choice: non-standard or standard .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name keyword

Synopsis	Standard time zone name
Context	configure system time daylight-saving-time-zone standard name <i>keyword</i>
Tree	name
Options	adt – Atlantic Daylight Time ndt – Newfoundland Daylight Time akdt – Alaska Daylight Time cdt – Central Daylight Time cest – Central European Summer Time edt – Eastern Daylight Time eest – Eastern European Summer Time mdt – Mountain Daylight Time nzdt – New Zealand Daylight Time pdt – Pacific Daylight Time west – Western European Summer Time
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ntp

Synopsis	Enable the ntp context
Context	configure system time ntp
Tree	ntp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of NTP execution
Context	configure system time ntp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-check *boolean*

Synopsis	Authenticate NTP PDUs and reject mismatches
Context	configure system time ntp authentication-check <i>boolean</i>
Tree	authentication-check
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-key [[key-id](#)] *number*

Synopsis	Enter the authentication-key list instance
Context	configure system time ntp authentication-key <i>number</i>
Tree	authentication-key
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[key-id] number

Synopsis	Authentication key ID used for NTP packets
Context	configure system time ntp authentication-key <i>number</i>
Tree	authentication-key
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key encrypted-leaf

Synopsis	Key to authenticate NTP packets
Context	configure system time ntp authentication-key <i>number</i> key <i>encrypted-leaf</i>
Tree	key
Description	This command specifies the key to authenticate NTP packets in a protected format. The specific format is indicated by the hash , hash2 , hash3 , or custom suffix. See "Configuration secrets" in the <i>7705 SAR Gen 2 System Management Guide</i> for more information.
String length	1 to 126
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

type keyword

Synopsis	Authentication method to authenticate NTP packet
Context	configure system time ntp authentication-key <i>number</i> type <i>keyword</i>
Tree	type
Options	des, message-digest
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Authentication keychain for unsolicited traffic
Context	configure system time ntp authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the authentication keychain used to handle unsolicited NTP requests.</p> <p>If a request is received with a key ID that matches both a configured key and the keychain, the MAC is checked first using the key information. If the authentication fails, the MAC is checked using the information from the keychain.</p>
Reference	configure system security keychains keychain <i>named-item</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast [[router-instance](#)] *reference* [interface-name](#) *interface-name*

Synopsis	Enter the broadcast list instance
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i>
Tree	broadcast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[router-instance] *reference*

Synopsis	Router name
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i>
Tree	broadcast
Reference	configure router <i>named-item-64</i>
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

Synopsis	Interface to transmit or receive NTP broadcast packets
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i>

Tree	broadcast
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the keychain used to authenticate messages sent by this node.</p> <p>The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.</p>
Reference	configure system security keychains keychain <i>named-item</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-id *reference*

Synopsis	Authentication key and type used by the node
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i> key-id <i>reference</i>
Tree	key-id
Reference	configure system time ntp authentication-key <i>number</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	TTL of messages transmitted by the broadcast address
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i> ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	127
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *number*

Synopsis	NTP version number generated by the node
Context	configure system time ntp broadcast <i>reference</i> interface-name <i>interface-name</i> version <i>number</i>
Tree	version
Range	2 to 4
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

broadcast-client [[router-instance](#)] *string* [interface-name](#) *interface-name*

Synopsis	Enter the broadcast-client list instance
Context	configure system time ntp broadcast-client <i>string</i> interface-name <i>interface-name</i>
Tree	broadcast-client
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[router-instance] *string*

Synopsis	Router name or VPRN service name
Context	configure system time ntp broadcast-client <i>string</i> interface-name <i>interface-name</i>
Tree	broadcast-client

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interface-name *interface-name*

Synopsis	Interface to transmit or receive NTP broadcast packets
Context	configure system time ntp broadcast-client <i>string</i> interface-name <i>interface-name</i>
Tree	broadcast-client
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authenticate *boolean*

Synopsis	Enforce authentication of NTP PDUs
Context	configure system time ntp broadcast-client <i>string</i> interface-name <i>interface-name</i> authenticate <i>boolean</i>
Tree	authenticate
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-poll *number*

Synopsis	Value for the maximum polling interval as a power of 2
Context	configure system time ntp max-poll <i>number</i>
Tree	max-poll
Description	<p>This command configures the value used to calculate the maximum polling interval set for the server. The poll interval set by NTP may be as high as the configured number to the power of 2. For example, if 6 is configured, 2 to the power of 6 (2^6) equals 64.</p> <p>If the value is set to a number lower than the configure system time ntp min-poll value, the system rejects the change request.</p>
Range	4 to 10
Default	6

Introduced	26.7.R1
Platforms	7705 SAR Gen 2

min-poll *number*

Synopsis	Value for the minimum polling interval as a power of 2
Context	configure system time ntp min-poll <i>number</i>
Tree	min-poll
Description	<p>This command configures the value used to calculate the minimum polling interval set for the server. The poll interval set by NTP may be as low as the configured number to the power of 2. For example, if 6 is configured, 2 to the power of 6 (2^6) equals 64.</p> <p>If the value is set to a number higher than the configure system time ntp max-poll, the system rejects the change request.</p>
Range	4 to 10
Default	6
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

multicast

Synopsis	Enable the multicast context
Context	configure system time ntp multicast
Tree	multicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	configure system time ntp multicast authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	<p>This command configures the keychain used to authenticate messages sent by this node.</p> <p>The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain</p>

entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.

Reference	configure system security keychains keychain <i>named-item</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-id reference

Synopsis	Authentication key and type used by the node
Context	configure system time ntp multicast key-id <i>reference</i>
Tree	key-id
Reference	configure system time ntp authentication-key <i>number</i>
Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version number

Synopsis	NTP version number generated by the node
Context	configure system time ntp multicast version <i>number</i>
Tree	version
Description	This command specifies the NTP version number that is generated by the node. This command does not need to be configured when in client mode, in which case all three versions are accepted.
Range	2 to 4
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

multicast-client

Synopsis	Enable the multicast-client context
Context	configure system time ntp multicast-client
Tree	multicast-client

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

authenticate *boolean*

Synopsis Enforce authentication of NTP PDUs
Context **configure** [system](#) [time](#) [ntp](#) [multicast-client](#) [authenticate](#) *boolean*
Tree [authenticate](#)

Notes	The following elements are part of a choice: authentication-keychain or key-id .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefer *boolean*

Synopsis	Set NTP server as preferred to receive time
----------	---

Context	configure system time ntp server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>keyword</i>) router-instance <i>string</i> prefer <i>boolean</i>
Tree	prefer
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version number

Synopsis	NTP version number generated by the node
Context	configure system time ntp server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>keyword</i>) router-instance <i>string</i> version <i>number</i>
Tree	version
Description	This command specifies the NTP version number that is generated by the node. This command does not need to be configured when in client mode, in which case all three versions are accepted.
Range	2 to 4
Default	4
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefer-local-time boolean

Synopsis	Use local time over UTC time in the system
Context	configure system time prefer-local-time <i>boolean</i>
Tree	prefer-local-time
Description	<p>When configured to true, the system uses local time. This preference is applied to objects such as log file names, created and completed times reported in log files, NETCONF and gRPC date-and-time leafs, and rollback times displayed in show command outputs.</p> <p>When configured to false, the system uses UTC time.</p> <p>Note: The timezone used for show command outputs during a CLI session can be controlled using the environment time-display command.</p> <p>Note: The format used for the date-time strings may change, depending on the command setting. For example, when this command is set to true, all date-time strings include a suffix of three to five characters that indicates the timezone used.</p> <p>Note: The time format for timestamps on log events is controlled on a per-log basis, using the configure log log-id time-format command.</p>

Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sntp

Synopsis	Enter the sntp context
Context	configure system time sntp
Tree	sntp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of SNTP
Context	configure system time sntp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

server [[ip-address](#)] *ipv4-address*

Synopsis	Enter the server list instance
Context	configure system time sntp server <i>ipv4-address</i>
Tree	server
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] *ipv4-address*

Synopsis	IP address of the SNTP server
Context	configure system time sntp server <i>ipv4-address</i>
Tree	server

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *number*

Synopsis	Frequency of querying the server
Context	configure system time ntp server ipv4-address interval <i>number</i>
Tree	interval
Range	64 to 1024
Units	seconds
Default	64
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefer *boolean*

Synopsis	Preference value for this SNTP server
Context	configure system time ntp server ipv4-address prefer <i>boolean</i>
Tree	prefer
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

version *number*

Synopsis	SNTP version supported by this server
Context	configure system time ntp server ipv4-address version <i>number</i>
Tree	version
Range	1 to 3
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

sntp-state *keyword*

Synopsis	Mode for Simple Network Time Protocol (SNTP)
Context	configure system time sntp sntp-state <i>keyword</i>
Tree	sntp-state
Options	unicast, broadcast
Default	unicast
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

zone

Synopsis	Enter the zone context
Context	configure system time zone
Tree	zone
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

non-standard

Synopsis	Enter the non-standard context
Context	configure system time zone non-standard
Tree	non-standard
Notes	The following elements are part of a choice: non-standard or standard .
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

name *string*

Synopsis	Non-standard time zone name
Context	configure system time zone non-standard name <i>string</i>
Tree	name
String length	1 to 5
String format	'name' must contain only lowercase letters and digits (e.g. utc5)
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

offset *hours-minutes-with-range*

Synopsis Offset from UTC

Context **configure** [system time zone non-standard offset](#) *hours-minutes-with-range*

Tree [offset](#)

String length 5 to 6

String format 'hours-minutes-with-range' must be hh:mm; hours -11 to 12, minutes 00-59, and if the hour is 12, the minutes must be 00 (max value 12:00)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

standard

Synopsis Enter the **standard** context

Context **configure** [system time zone standard](#)

Tree [standard](#)

Notes The following elements are part of a choice: **non-standard** or **standard**.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

name *keyword*

Synopsis Standard time zone name

Context **configure** [system time zone standard name](#) *keyword*

Tree [name](#)

Options hst, akst, pst, mst, cst, est, ast, nst, utc, gmt, wet, cet, eet, msk, msd, awst, acst, aest, nzst

Default utc

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

transmission-profile [[name](#)] *named-item*

Synopsis Enter the **transmission-profile** list instance

Context	configure system transmission-profile <i>named-item</i>
Tree	transmission-profile
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[name] *named-item*

Synopsis	File transmission profile name
Context	configure system transmission-profile <i>named-item</i>
Tree	transmission-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

http-version *keyword*

Synopsis	HTTP version
Context	configure system transmission-profile <i>named-item</i> http-version <i>keyword</i>
Tree	http-version
Options	1.0, 1.1
Default	1.1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv4-source-address *ipv4-unicast-address*

Synopsis	IPv4 source address used for the transport protocol
Context	configure system transmission-profile <i>named-item</i> ipv4-source-address <i>ipv4-unicast-address</i>
Tree	ipv4-source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

ipv6-source-address *ipv6-address*

Synopsis IPv6 source address used for the transport protocol

Context **configure** [system](#) [transmission-profile](#) *named-item* [ipv6-source-address](#) *ipv6-address*

Tree [ipv6-source-address](#)

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

redirection *number*

Synopsis Maximum level of redirection

Context **configure** [system](#) [transmission-profile](#) *named-item* [redirection](#) *number*

Tree [redirection](#)

Range 1 to 8

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

retry *number*

Synopsis Number of attempts to reconnecting to the server

Context **configure** [system](#) [transmission-profile](#) *named-item* [retry](#) *number*

Tree [retry](#)

Range 1 to 256

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

router-instance *router-instance-base-management-vprn-loose*

Synopsis Router instance used by the transport protocol

Context **configure** [system](#) [transmission-profile](#) *named-item* [router-instance](#) *router-instance-base-management-vprn-loose*

Tree [router-instance](#)

String length 1 to 64

Default	Base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Timeout for a response from the server
Context	configure system transmission-profile <i>named-item</i> timeout <i>number</i>
Tree	timeout
Range	1 to 3600
Units	seconds
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

usb [[usb-cflash](#)] *keyword*

Synopsis	Enter the usb list instance
Context	configure system usb <i>keyword</i>
Tree	usb
Description	Commands in this context configure the operational state of the USB port.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[usb-cflash] *keyword*

Synopsis	Specifies the compact flash ID
Context	configure system usb <i>keyword</i>
Tree	usb
Options	cf2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the USB port
Context	configure <i>system usb keyword admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

4.30 test-oam commands

```

configure
- test-oam
  - apply-groups reference
  - apply-groups-exclude reference
  - icmp
    - ipv6
      - apply-groups reference
      - apply-groups-exclude reference
      - length-field boolean
      - maximum-original-datagram boolean
  - mpls
    - apply-groups reference
    - apply-groups-exclude reference
    - echo-request-downstream-map keyword
    - timestamp-format keyword
  - twamp
    - apply-groups reference
    - apply-groups-exclude reference
    - server
      - admin-state keyword
      - allow-ipv6-udp-checksum-zero boolean
      - apply-groups reference
      - apply-groups-exclude reference
      - enforce-test-session-start-time boolean
      - inactivity-timeout number
      - max-connections number
      - max-sessions number
      - prefix (ipv4-prefix | ipv6-prefix)
        - apply-groups reference
        - apply-groups-exclude reference
        - description description
        - max-connections number
        - max-sessions number
    - twamp-light
      - apply-groups reference
      - apply-groups-exclude reference
      - inactivity-timeout number

```

4.30.1 test-oam command descriptions

test-oam

Synopsis	Enter the test-oam context
Context	configure test-oam
Tree	test-oam
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

icmp

Synopsis	Enter the icmp context
Context	configure test-oam icmp
Tree	icmp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ipv6

Synopsis	Enter the ipv6 context
Context	configure test-oam icmp ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	configure test-oam icmp ipv6 length-field boolean
Tree	length-field
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

maximum-original-datagram *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	configure test-oam icmp ipv6 maximum-original-datagram <i>boolean</i>
Tree	maximum-original-datagram
Description	When configured to true , this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes. When configured to false , the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mpls

Synopsis	Enter the mpls context
Context	configure test-oam mpls
Tree	mpls
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

echo-request-downstream-map *keyword*

Synopsis	Format of the downstream mapping TLV
Context	configure test-oam mpls echo-request-downstream-map <i>keyword</i>
Tree	echo-request-downstream-map
Description	This command specifies the format of the downstream mapping TLV to use in all LSP trace packets and LDP tree trace packets originated on this node. The following downstream mapping TLVs are supported: the original Downstream Mapping (DSMAP) TLV, defined in RFC 4379 (obsoleted by RFC 8029) and the Downstream Detailed Mapping (DDMAP) TLV, defined in RFC 6424. See the "DDMAP TLV" section in the <i>7705 SAR Gen 2 OAM and Diagnostics Guide</i> for more information.
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV
Default	dsmap
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

timestamp-format *keyword*

Synopsis Timestamp format for MPLS ping request and reply PDUs

Context **configure** [test-oam mpls timestamp-format](#) *keyword*

Tree [timestamp-format](#)

Options rfc4379 – 1900-based timestamp (standard)
unix – 1970-based timestamp

Default unix

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

twamp

Synopsis Enter the **twamp** context

Context **configure** [test-oam twamp](#)

Tree [twamp](#)

Description Commands in this context configure the TWAMP functionality.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

server

Synopsis Enter the **server** context

Context **configure** [test-oam twamp server](#)

Tree [server](#)

Description Commands in this context configure the node for TWAMP server functionality.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

admin-state *keyword*

Synopsis Administrative state of the TWAMP server

Context **configure** [test-oam twamp server admin-state](#) *keyword*

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure test-oam twamp server allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	allow-ipv6-udp-checksum-zero
Description	<p>When configured to true, the router accepts IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x0000 arriving packets are discarded.</p> <p>When configured to false, the router discards packets that arrive with an IPv6 UDP checksum of 0x0000.</p>
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

enforce-test-session-start-time *boolean*

Synopsis	Discard TWAMP packets before test-session start time
Context	configure test-oam twamp server enforce-test-session-start-time <i>boolean</i>
Tree	enforce-test-session-start-time
Description	<p>When configured to true, the router checks the signalled test-session start time against the server time and discards TWAMP test packets that arrive before the negotiated test-session start time.</p> <p>When configured to false, the router processes all TWAMP test packets without checking the test-session start time against the server time.</p>
Default	true
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inactivity-timeout *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Inactivity time-out for TWAMP control connections
Context	configure test-oam twamp server inactivity-timeout <i>number</i>
Tree	inactivity-timeout
Description	This command configures the inactivity time-out for all TWAMP-control connections. If no TWAMP control message is exchanged over the TCP connection for this duration of time the connection is closed and all in-progress tests are terminated.
Range	60 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-connections *number*

**WARNING:**
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TWAMP server control connections limit
Context	configure test-oam twamp server max-connections <i>number</i>
Tree	max-connections
Description	This command configures the maximum number of TWAMP control connections from all TWAMP clients. The system rejects a new control connection if accepting it causes either this limit or a prefix limit (prefix max-connections) to be exceeded.
Range	0 to 64
Default	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-sessions *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of concurrent TWAMP server test sessions
Context	configure test-oam twamp server max-sessions <i>number</i>
Tree	max-sessions
Description	This command configures the maximum number of concurrent TWAMP-Test sessions across all allowed clients. The system rejects a new test session (described by a Request-TW-Session message) if accepting it causes either the limit defined by this command or a prefix limit (prefix max-sessions) to be exceeded.
Range	0 to 128
Default	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Description	Commands in this context configure an IP address prefix containing one or more TWAMP clients. For a TWAMP client to connect to the TWAMP server (and subsequently conduct tests) it must establish the control connection using an IP address that is part of a configured prefix.
Max. instances	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Prefix to match against TWAMP client address
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>description</i>
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-connections *number*

Synopsis	Maximum number of control connections for TWAMP prefix
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) max-connections <i>number</i>
Tree	max-connections
Description	This command configures the maximum number of control connections by clients with an IP address in a specific prefix. The system rejects a new control connection if accepting it causes either the prefix limit defined by this command or the server limit (server max-connections) to be exceeded.
Range	0 to 64
Default	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-sessions *number*

Synopsis	Maximum concurrent TWAMP test sessions based on prefix
Context	configure test-oam twamp server prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) max-sessions <i>number</i>
Tree	max-sessions
Description	This command configures the maximum number of concurrent TWAMP-Test sessions by clients with an IP address in a specific prefix. The system rejects a new test session

(described by a Request-TW-Session message) if accepting it causes either the limit defined by this command or the server limit (**server max-sessions**) to be exceeded.

Range	0 to 128
Default	32
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

twamp-light

Synopsis	Enter the twamp-light context
Context	configure test-oam twamp twamp-light
Tree	twamp-light
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inactivity-timeout *number*

Synopsis	Time to maintain stale state on the session reflector
Context	configure test-oam twamp twamp-light inactivity-timeout <i>number</i>
Tree	inactivity-timeout
Range	10 to 100
Units	seconds
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

4.31.1 vrrp command descriptions

vrrp

Synopsis	Enter the vrrp context
Context	configure vrrp
Tree	vrrp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

policy [[policy-id](#)] *number*

Synopsis	Enter the policy list instance
Context	configure vrrp policy <i>number</i>
Tree	policy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[policy-id] *number*

Synopsis	Policy ID
Context	configure vrrp policy <i>number</i>
Tree	policy
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of VRRP priority control policy
Context	configure vrrp policy <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	enable
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

context *service-name*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service name to which this policy applies
Context	configure <i>vrp policy number context service-name</i>
Tree	<i>context</i>
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

delta-in-use-limit *number*

Synopsis	Limit on the delta priority control events
Context	configure <i>vrp policy number delta-in-use-limit number</i>
Tree	<i>delta-in-use-limit</i>
Range	1 to 254
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

description *description*

Synopsis	Text description
Context	configure <i>vrp policy number description description</i>
Tree	<i>description</i>
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

priority-event

Synopsis Enter the **priority-event** context

Context **configure** *vrrp policy number* **priority-event**

Tree **priority-event**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

host-unreachable [*ip-address*] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis Enter the **host-unreachable** list instance

Context **configure** *vrrp policy number* **priority-event** **host-unreachable** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree **host-unreachable**

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

[*ip-address*] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis Host IP address that receives a constant ping probe

Context **configure** *vrrp policy number* **priority-event** **host-unreachable** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree **host-unreachable**

Description This command configures the host IP address for which the specific host unreachable priority event monitors connectivity with a continuous ICMP echo request (ping) probe.

String format 'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id
'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id

Notes This element is part of a list key.

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

drop-count *number*

Synopsis Threshold for consecutive message send attempts

Context	configure <i>vrrp policy number priority-event host-unreachable</i> (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) <i>drop-count number</i>
Tree	<i>drop-count</i>
Range	1 to 60
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure <i>vrrp policy number priority-event host-unreachable</i> (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) <i>hold-clear number</i>
Tree	<i>hold-clear</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure <i>vrrp policy number priority-event host-unreachable</i> (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) <i>hold-set number</i>
Tree	<i>hold-set</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

padding-size *number*

Synopsis	Packet length padding of the ICMP packet
Context	configure <i>vrrp policy number priority-event host-unreachable</i> (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) <i>padding-size number</i>
Tree	<i>padding-size</i>

Range	0 to 16384
Units	bytes
Default	56
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority

Synopsis	Enter the priority context
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) priority
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) priority event-type <i>keyword</i>
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) priority priority-level <i>number</i>
Tree	priority-level
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

request-interval *number*

Synopsis	Time interval between consecutive ICMP echo requests
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) request-interval <i>number</i>
Tree	request-interval
Range	1 to 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Timeout for ICMP echo request messages
Context	configure vrrp policy <i>number</i> priority-event host-unreachable (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timeout <i>number</i>
Tree	timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lag-port-down [**lag-name**] *lag-interface*

Synopsis	Enter the lag-port-down list instance
Context	configure vrrp policy <i>number</i> priority-event lag-port-down <i>lag-interface</i>
Tree	lag-port-down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[lag-name] *lag-interface*

Synopsis	LAG name
----------	----------

Context	configure vrrp policy <i>number</i> priority-event lag-port-down lag-interface
Tree	lag-port-down
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure vrrp policy <i>number</i> priority-event lag-port-down lag-interface hold-clear <i>number</i>
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure vrrp policy <i>number</i> priority-event lag-port-down lag-interface hold-set <i>number</i>
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

number-down [[number-of-lag-ports-down](#)] *number*

Synopsis	Enter the number-down list instance
Context	configure vrrp policy <i>number</i> priority-event lag-port-down lag-interface number-down <i>number</i>
Tree	number-down

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

[number-of-lag-ports-down] *number*

Synopsis Threshold of down LAG ports that create a set event
Context **configure** [vrrp policy number](#) [priority-event lag-port-down](#) [lag-interface number-down number](#)
Tree [number-down](#)
Range 1 to 64
Notes This element is part of a list key.
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority

Synopsis Enter the **priority** context
Context **configure** [vrrp policy number](#) [priority-event lag-port-down](#) [lag-interface number-down number](#) [priority](#)
Tree [priority](#)
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

event-type *keyword*

Synopsis Effect of priority-level value on base priority value
Context **configure** [vrrp policy number](#) [priority-event lag-port-down](#) [lag-interface number-down number](#) [priority](#) [event-type keyword](#)
Tree [event-type](#)
Options delta, explicit
Default delta
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure <i>vrrp policy number priority-event lag-port-down lag-interface number-down number priority priority-level number</i>
Tree	<i>priority-level</i>
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

weight-down [*lag-ports-down-weight*] *number*

Synopsis	Enter the weight-down list instance
Context	configure <i>vrrp policy number priority-event lag-port-down lag-interface weight-down number</i>
Tree	<i>weight-down</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[lag-ports-down-weight] *number*

Synopsis	LAG name for the reduced LAG ports
Context	configure <i>vrrp policy number priority-event lag-port-down lag-interface weight-down number</i>
Tree	<i>weight-down</i>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority

Synopsis	Enter the priority context
Context	configure <i>vrrp policy number priority-event lag-port-down lag-interface weight-down number priority</i>
Tree	<i>priority</i>

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

event-type *keyword*

Synopsis Effect of priority-level value on base priority value
Context **configure** [vrrp policy number](#) [priority-event lag-port-down lag-interface weight-down number](#) [priority event-type keyword](#)
Tree [event-type](#)
Options delta, explicit
Default delta
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority-level *number*

Synopsis Priority level associated with this event
Context **configure** [vrrp policy number](#) [priority-event lag-port-down lag-interface weight-down number](#) [priority priority-level number](#)
Tree [priority-level](#)
Range 1 to 254
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

mc-ipsec-non-forwarding [[tunnel-group-id](#)] *number*

Synopsis Enter the **mc-ipsec-non-forwarding** list instance
Context **configure** [vrrp policy number](#) [priority-event mc-ipsec-non-forwarding number](#)
Tree [mc-ipsec-non-forwarding](#)
Introduced 25.3.R2
Platforms 7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

[tunnel-group-id] *number*

Synopsis IPSEC tunnel group monitored by priority control event
Context **configure** [vrrp policy number](#) [priority-event mc-ipsec-non-forwarding number](#)

Tree	mc-ipsec-non-forwarding
Range	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i> hold-clear <i>number</i>
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i> hold-set <i>number</i>
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

priority

Synopsis	Enter the priority context
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i> priority
Tree	priority
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

event-type *keyword*

Synopsis	Event type
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i> priority event-type <i>keyword</i>
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure vrrp policy <i>number</i> priority-event mc-ipsec-non-forwarding <i>number</i> priority priority-level <i>number</i>
Tree	priority-level
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx, 7705 SAR-1

port-down [[port-id](#)] *port-named*

Synopsis	Enter the port-down list instance
Context	configure vrrp policy <i>number</i> priority-event port-down <i>port-named</i>
Tree	port-down
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[port-id] *port-named*

Synopsis	Port ID for the reduced LAG ports
Context	configure vrrp policy <i>number</i> priority-event port-down <i>port-named</i>
Tree	port-down
Notes	This element is part of a list key.

Introduced 25.3.R2
Platforms 7705 SAR Gen 2

hold-clear *number*

Synopsis Delay time for a cleared event on the router instance
Context **configure** *vrrp policy number priority-event port-down port-named hold-clear number*
Tree *hold-clear*
Range 1 to 86400
Units seconds
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

hold-set *number*

Synopsis Hold time before transitioning to cleared state
Context **configure** *vrrp policy number priority-event port-down port-named hold-set number*
Tree *hold-set*
Range 1 to 86400
Units seconds
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

priority

Synopsis Enter the **priority** context
Context **configure** *vrrp policy number priority-event port-down port-named priority*
Tree *priority*
Introduced 25.3.R2
Platforms 7705 SAR Gen 2

event-type *keyword*

Synopsis Effect of priority-level value on base priority value
Context **configure** *vrrp policy number priority-event port-down port-named priority event-type keyword*

Tree	event-type
Options	delta, explicit
Default	delta
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority-level *number*

Synopsis	Priority level associated with this event
Context	configure vrrp policy <i>number</i> priority-event port-down <i>port-named</i> priority priority-level <i>number</i>
Tree	priority-level
Range	1 to 254
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

route-unknown [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the route-unknown list instance
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	route-unknown
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix of route monitored by priority control event
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	route-unknown
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	configure <i>vrrp policy number priority-event route-unknown</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>hold-clear number</i>
Tree	<i>hold-clear</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	configure <i>vrrp policy number priority-event route-unknown</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>hold-set number</i>
Tree	<i>hold-set</i>
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

less-specific

Synopsis	Enable the less-specific context
Context	configure <i>vrrp policy number priority-event route-unknown</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>less-specific</i>
Tree	<i>less-specific</i>
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

allow-default *boolean*

Synopsis	Match on default route
Context	configure <i>vrrp policy number priority-event route-unknown</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>less-specific allow-default boolean</i>

Tree	allow-default
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

next-hop [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Add a list entry for next-hop
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Next-hop IP address for a returned route prefix
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Description	This command configures the next-hop IP address used to match the route prefix being monitored by the priority control event with the results of a route table lookup.
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority

Synopsis	Enter the priority context
Context	configure vrrp policy <i>number</i> priority-event route-unknown (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) priority
Tree	priority
Introduced	25.3.R2

Platforms 7705 SAR Gen 2

event-type *keyword*

Synopsis Effect of priority-level value on base priority value

Context **configure** **vrrp policy** *number* **priority-event** **route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **priority event-type** *keyword*

Tree **event-type**

Options delta, explicit

Default delta

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

priority-level *number*

Synopsis Priority level associated with this event

Context **configure** **vrrp policy** *number* **priority-event** **route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **priority priority-level** *number*

Tree **priority-level**

Range 1 to 254

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

protocol *keyword*

Synopsis Routing protocol as match criterion

Context **configure** **vrrp policy** *number* **priority-event** **route-unknown** (*ipv4-prefix* | *ipv6-prefix*) **protocol** *keyword*

Tree **protocol**

Options bgp, ospf, isis, rip, static, bgp-vpn

Max. instances 6

Introduced 25.3.R2

Platforms 7705 SAR Gen 2

5 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

5.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.1.1 26.10.R1

service commands:

- configure service vpn mvpn auto-discovery source-address

5.2 Obsolete commands

This chapter provides a list of commands that are marked as “status obsolete” in the Nokia YANG models and the MD-CLI. These commands can no longer be used and are considered invalid. Only releases in which commands are initially obsoleted are included in this section. If applicable, the equivalent configuration groups command is also obsoleted (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.2.1 26.3.R1

filter commands:

- configure filter ip-filter embed openflow
- configure filter ip-filter embed openflow admin-state
- configure filter ip-filter embed openflow apply-groups
- configure filter ip-filter embed openflow grt
- configure filter ip-filter embed openflow of-switch
- configure filter ip-filter embed openflow offset
- configure filter ip-filter embed openflow sap
- configure filter ip-filter embed openflow system
- configure filter ip-filter embed openflow vpls
- configure filter ip-filter embed openflow vprn
- configure filter ip-filter entry action forward esi-l2
- configure filter ip-filter entry action forward esi-l2 esi-value
- configure filter ip-filter entry action forward esi-l2 vpls
- configure filter ip-filter entry action forward esi-l3
- configure filter ip-filter entry action forward esi-l3 esi-value
- configure filter ip-filter entry action forward esi-l3 sf-ip
- configure filter ip-filter entry action forward esi-l3 vas-interface
- configure filter ip-filter entry action forward esi-l3 vprn
- configure filter ipv6-filter embed openflow
- configure filter ipv6-filter embed openflow admin-state
- configure filter ipv6-filter embed openflow apply-groups
- configure filter ipv6-filter embed openflow grt
- configure filter ipv6-filter embed openflow of-switch
- configure filter ipv6-filter embed openflow offset
- configure filter ipv6-filter embed openflow sap
- configure filter ipv6-filter embed openflow system

- configure filter ipv6-filter embed openflow vpls
- configure filter ipv6-filter embed openflow vprn
- configure filter ipv6-filter entry action forward esi-l2
- configure filter ipv6-filter entry action forward esi-l2 esi-value
- configure filter ipv6-filter entry action forward esi-l2 vpls
- configure filter ipv6-filter entry action forward esi-l3
- configure filter ipv6-filter entry action forward esi-l3 esi-value
- configure filter ipv6-filter entry action forward esi-l3 sf-ip
- configure filter ipv6-filter entry action forward esi-l3 vas-interface
- configure filter ipv6-filter entry action forward esi-l3 vprn
- configure filter mac-filter entry action forward esi-l2
- configure filter mac-filter entry action forward esi-l2 esi-value
- configure filter mac-filter entry action forward esi-l2 vpls

macsec commands:

- configure macsec connectivity-association static-cak mka-hello-interval
- configure macsec connectivity-association static-cak mka-key-server-priority

router commands:

- configure router interface gre-termination
- configure router nat outside dnat-only
- configure router nat outside dnat-only route-limit

service commands:

- configure service vprn nat outside dnat-only
- configure service vprn nat outside dnat-only route-limit

system commands:

- configure system bluetooth
- configure system bluetooth admin-state
- configure system bluetooth advertising-timeout
- configure system bluetooth apply-groups
- configure system bluetooth device
- configure system bluetooth device apply-groups
- configure system bluetooth device description
- configure system bluetooth device mac-address
- configure system bluetooth module
- configure system bluetooth module apply-groups
- configure system bluetooth module cpm-slot
- configure system bluetooth module provisioned-identifier

- configure system bluetooth pairing-button
- configure system bluetooth passkey
- configure system bluetooth power-mode
- configure system grpc md-cli
- configure system grpc md-cli admin-state
- configure system management-interface remote-management
- configure system management-interface remote-management admin-state
- configure system management-interface remote-management allow-unsecure-connection
- configure system management-interface remote-management apply-groups
- configure system management-interface remote-management apply-groups-exclude
- configure system management-interface remote-management client-tls-profile
- configure system management-interface remote-management connection-timeout
- configure system management-interface remote-management delay-on-boot
- configure system management-interface remote-management device-label
- configure system management-interface remote-management device-name
- configure system management-interface remote-management hello-interval
- configure system management-interface remote-management manager
- configure system management-interface remote-management manager admin-state
- configure system management-interface remote-management manager allow-unsecure-connection
- configure system management-interface remote-management manager apply-groups
- configure system management-interface remote-management manager apply-groups-exclude
- configure system management-interface remote-management manager client-tls-profile
- configure system management-interface remote-management manager connection-timeout
- configure system management-interface remote-management manager description
- configure system management-interface remote-management manager device-label
- configure system management-interface remote-management manager device-name
- configure system management-interface remote-management manager manager-address
- configure system management-interface remote-management manager manager-name
- configure system management-interface remote-management manager manager-port
- configure system management-interface remote-management manager router-instance
- configure system management-interface remote-management manager source-address
- configure system management-interface remote-management manager source-port
- configure system management-interface remote-management router-instance
- configure system management-interface remote-management source-address
- configure system management-interface remote-management source-port
- configure system security aaa local-profiles profile grpc rpc-authorization md-cli-session

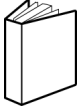

- configure system security aaa user-template access bluetooth
- configure system security user-params local-user user access bluetooth

5.2.2 26.10.R1

mirror commands:

- configure mirror mirror-dest pcap file-url
