1 Getting started

1.1 About this guide

This document describes the commands available in the MD-CLI that can be used to manage the router.

See the *7250 IXR, 7450 ESS, 7705 SAR Gen 2, 7750 SR, 7950 XRS, and VSR Acronyms Reference Guide* for expansions of acronyms used in this guide.

For a list of unsupported features by platform and chassis, see the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.

Note: This guide generically covers Release 26.*x*.R*x* content and may contain some content that will be released in later maintenance loads. See the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA, for information about features supported in each load of the Release 26.*x*.R*x* software. For a list of features and CLI commands that are present in SR OS but not supported on the 7705 SAR Gen 2 platforms, see "SR OS Features not Supported on SAR Gen 2" in the *SR OS R26.x.Rx Software Release Notes*.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode must be **mixed** or **model-driven**. For information about using the MD-CLI, see the *7705 SAR Gen 2 MD-CLI User Guide.*

1.2 Platforms and terminology

Note:
Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 1: Platforms and terminology

Platform	Collective platform designation
7705 SAR-Hx	7705 SAR Gen 2
7705 SAR-Mx	
7705 SAR-1	

1.3 Conventions

This section describes the general conventions used in this guide.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

1.3.1 Precautionary and information messages

The following information symbols are used in the documentation.

DANGER: Danger warns that the described activity or situation may result in serious personal injury or death. An electric shock hazard could exist. Before you begin work on this equipment, be aware of hazards involving electrical circuitry, be familiar with networking environments, and implement accident prevention procedures.

WARNING: Warning indicates that the described activity or situation may, or will, cause equipment damage, serious performance problems, or loss of data.

Caution: Caution indicates that the described activity or situation may reduce your component or system performance.

Note: Note provides additional operational information.

Tip: Tip provides suggestions for use or best practices.

1.3.2 Options or substeps in procedures and sequential workflows

Options in a procedure or a sequential workflow are indicated by a bulleted list. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform one of the listed options to complete the step.

Example: Options in a procedure

1. User must perform this step.
2. This step offers three options. User must perform one option to complete this step.
   - This is one option.
   - This is another option.
   - This is yet another option.

Substeps in a procedure or a sequential workflow are indicated by letters. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step.

Example: Substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
   a. This is one substep.
   b. This is another substep.

Nested substeps within a procedure or a sequential workflow are indicated by roman numerals. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step. At substep b, the user must perform two additional substeps (i. and ii.) to complete the step.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Example: Nested substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
   a. This is one substep.
   b. User must perform all nested substeps to complete this action.
      i. This is a nested substep.
      ii. This is another nested substep.

1.4 MD-CLI command reference

1.4.1 MD-CLI tree hierarchy

Table 2: Command syntax symbols

Symbol	Description
|	A vertical bar represents an "or" condition, indicating that only one of the parameters in the brackets or parentheses can be selected.
( )	Parentheses indicate that one of the parameters must be selected.
[ ]	Brackets indicate optional parameters.
Bold	Commands in **bold** indicate commands and keywords.
Italic	Commands in *italics* indicate that you must enter text for the parameter.

In the following examples, **location** and **graceful-shutdown** are command names. For the **location** command, *keyword* must be one of the keywords **cf1**, **cf2**, or **cf3**. For the **graceful-shutdown** command, *boolean* must be one of the keywords **true** or **false**, although explicitly using the keyword **true** is optional.

```
location keyword
keyword - (cf1 | cf2 | cf3)

graceful-shutdown boolean
boolean - ([true] | false)
```

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in the following figure.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 1: MD-CLI configuration tree example

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Commands are linked to their command descriptions in the configuration tree with some exceptions (for example, to reduce repeated content), including the **apply-groups**, **apply-groups-exclude**, and **groups** commands. These commands are used to direct the use of configuration templates called configuration groups in the configure region at all configuration levels. The **apply-groups** command applies a configuration group at a configuration level and the **apply-groups-exclude** command excludes a configuration group at a configuration level. See "Using configuration groups" in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

Some commands require one or more keys to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

```
- collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
```

The command description indicates the required syntax for each command. See MD-CLI command descriptions for more information.

collector [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)
- string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click the command or parameter name from the MD-CLI tree to be linked to the command description.

```
- summary-only boolean
- autonomous-system number
```

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a vertical bar (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

```
- indirect (ipv4-address-no-zone | ipv6-address-no-zone)
```

Allowed values in strings are printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotation marks. Double quotation marks within a string are not supported.

1.4.1.1 Context path

In the CLI tree section, a contextual path at the top of a page refers to the full context of the first command on the page, as shown in the following figure.

Figure 2: Command tree navigation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

1.4.2 MD-CLI command descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

```
    - log
        - accounting-policy number
```

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([ ]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

The following table describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 3: Command descriptions fields

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Synopsis	Summary description of the element
Context	Full path to the command (with links to parent commands)
Tree	Link to the command in the CLI tree. For key elements, the link is to the parent element.
Description	Detailed description of the element, as needed
String length	For string elements, the range of the number of characters allowed
String format	For string elements, the format of the characters in the string
Range/Max. range	For number elements, the range of allowed values. A maximum range may be overridden by a platform-specific range.
Units	Base unit type of the element

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Options	Enumerated values allowed for the element. Not all options are available on all platforms.
MD-CLI default	MD-CLI default value for the element
Default	YANG default value when there is no MD-CLI default. Platform-specific defaults are not displayed.
Reference	Reference to an element instance in the configuration or state datastore
Min./Max. instances	For lists and leaf-lists, the minimum or maximum number of instances for this element
Notes	Information about special attributes of the element, including whether the element is: • a key for an element • mandatory • ordered by the user (instead of by the system) • part of a choice of elements
Introduced	Release in which the element was introduced
Deprecated	Release in which the element was deprecated
Platforms	Hardware platforms on which the element is available. See Platforms and terminology for more information about the platforms. **Note:** Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA, for information about platform support.

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *7705 SAR Gen 2 MD-CLI User Guide*.

Note:
All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

2 Operational commands

This section lists the commands available at the operation level of the MD-CLI.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

2.1 admin commands

The **admin** commands are used to perform administrative functions, such as displaying configuration that is not subject to AAA, manually saving the configuration, clearing user sessions, and rebooting the system.

```
admin
   – clear
      – security
         – lockout
            – all
            – user named-item
         – password-history
            – all
            – user named-item
   – disconnect
      – address (ipv4-address-no-zone | ipv6-address-no-zone)
      – op-table-bypass boolean
      – session-id number
      – session-type keyword
      – username named-item
   – ipsec
      – show
         – key
            – gateway named-item
            – ip-tunnel interface-name
            – ipsec-tunnel named-item
            – peer-tunnel-ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
            – peer-tunnel-port number
            – type keyword
   – nat
      – save-deterministic-script
   – reboot
      – [card] keyword
      – hold
      – now
   – redundancy
      – force-switchover
         – now
      – synchronize
         – boot-environment
         – certificate
         – configuration
   – save
      – bof
      – cleartext
      – configure
      – debug
      – password string
      – [url] string
   – set
      – time
         – [system-time] date-and-time
   – show
      – configuration
         – bof
         – booted
         – cflash-id cflash-id
         – [cli-path] cli-path-type
         – configure
         – debug
         – depth number
```

2.1.1 admin command descriptions

admin

Synopsis	Enter the administrative context for system operations
Context	admin
Tree	admin
Introduced	25.3.R2
Platforms	SAR Gen 2

clear

Synopsis	Enter the **clear** context
Context	admin clear
Tree	clear
Introduced	25.3.R2
Platforms	SAR Gen 2

security

Synopsis	Enter the **security** context
Context	admin clear security
Tree	security
Introduced	25.3.R2
Platforms	SAR Gen 2

lockout

Synopsis	Reset the lockout timer
Context	admin clear security lockout
Tree	lockout
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Synopsis	Clear lockout of all users
Context	admin clear security lockout all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	25.3.R2
Platforms	SAR Gen 2

user *named-item*

Synopsis	User to be cleared of lockout
Context	admin clear security lockout user *named-item*
Tree	user
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	25.3.R2
Platforms	SAR Gen 2

password-history

Synopsis	Clear the password history
Context	admin clear security password-history
Tree	password-history
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Clear password history of all users
Context	admin clear security password-history all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

user *named-item*

Synopsis	User to be cleared of password history information
Context	admin clear security password-history user *named-item*
Tree	user
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	25.3.R2
Platforms	SAR Gen 2

disconnect

Synopsis	Disconnect a user session
Context	admin disconnect
Tree	disconnect
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the session to disconnect
Context	admin disconnect address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	25.3.R2
Platforms	SAR Gen 2

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin disconnect op-table-bypass *boolean*
Tree	op-table-bypass

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or **admin disconnect** is required.
Introduced	25.3.R2
Platforms	SAR Gen 2

session-id *number*

Synopsis	ID of the session to disconnect
Context	admin disconnect session-id *number*
Tree	session-id
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

session-type *keyword*

Synopsis	Type of session to disconnect
Context	admin disconnect session-type *keyword*
Tree	session-type
Options	console, telnet, ssh, ftp, netconf, grpc, cron-ehs
Introduced	25.3.R2
Platforms	SAR Gen 2

username *named-item*

Synopsis	Username to disconnect
Context	admin disconnect username *named-item*
Tree	username
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipsec

Synopsis	Enter the **ipsec** context
Context	admin ipsec
Tree	ipsec
Introduced	25.3.R2
Platforms	SAR Gen 2

show

Synopsis	Enter the **show** context
Context	admin ipsec show
Tree	show
Introduced	25.3.R2
Platforms	SAR Gen 2

key

Synopsis	Display IPsec key history
Context	admin ipsec show key
Tree	key
Introduced	25.3.R2
Platforms	SAR Gen 2

gateway *named-item*

Synopsis	IPsec gateway name
Context	admin ipsec show key gateway *named-item*
Tree	gateway
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-tunnel *interface-name*

Synopsis	IPsec transport mode IP tunnel name
Context	admin ipsec show key ip-tunnel *interface-name*
Tree	ip-tunnel
String length	1 to 32
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-tunnel *named-item*

Synopsis	IPsec tunnel name
Context	admin ipsec show key ipsec-tunnel *named-item*
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-tunnel-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Dynamic tunnel IP address
Context	admin ipsec show key peer-tunnel-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-tunnel-ip-address
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer-tunnel-port *number*

Synopsis	Dynamic tunnel port
Context	admin ipsec show key peer-tunnel-port *number*
Tree	peer-tunnel-port
Range	0 | 1 to 65535
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	25.3.R2
Platforms	SAR Gen 2

type *keyword*

Synopsis	Key type
Context	admin ipsec show key type *keyword*
Tree	type
Options	ike, child
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

nat

Synopsis	Enter the **nat** context
Context	admin nat
Tree	nat
Introduced	25.3.R2
Platforms	SAR Gen 2

save-deterministic-script

Synopsis	Save script that computes deterministic NAT map entries
Context	admin nat save-deterministic-script
Tree	save-deterministic-script
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

reboot

Synopsis	Reboot CPM or force an upgrade of system boot ROMs
Context	admin reboot
Tree	reboot
Introduced	25.3.R2
Platforms	SAR Gen 2

[**card**] *keyword*

Synopsis	Card to reboot
Context	admin reboot [card] *keyword*
Tree	[card]
Options	active, standby, upgrade
Introduced	25.3.R2
Platforms	SAR Gen 2

hold

Synopsis	Hold a rebooted standby CPM from coming back online
Context	admin reboot hold
Tree	hold
Introduced	25.3.R2
Platforms	SAR Gen 2

now

Synopsis	Reboot immediately without prompts or confirmation
Context	admin reboot now
Tree	now
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

redundancy

Synopsis	Enter the **redundancy** context
Context	admin redundancy
Tree	redundancy
Introduced	25.3.R2
Platforms	SAR Gen 2

force-switchover

Synopsis	Force a switchover to the standby CPM
Context	admin redundancy force-switchover
Tree	force-switchover
Introduced	25.3.R2
Platforms	SAR Gen 2

now

Synopsis	Force the switchover to the standby CPM immediately
Context	admin redundancy force-switchover now
Tree	now
Introduced	25.3.R2
Platforms	SAR Gen 2

synchronize

Synopsis	Synchronize the standby CPM
Context	admin redundancy synchronize
Tree	synchronize
Introduced	25.3.R2
Platforms	SAR Gen 2

boot-environment

Synopsis	Synchronize all files required for the boot process

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin redundancy synchronize boot-environment
Tree	boot-environment
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	25.3.R2
Platforms	SAR Gen 2

certificate

Synopsis	Synchronize the PKI certificate files
Context	admin redundancy synchronize certificate
Tree	certificate
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	25.3.R2
Platforms	SAR Gen 2

configuration

Synopsis	Synchronize the configuration files
Context	admin redundancy synchronize configuration
Tree	configuration
Description	When specified, the system synchronizes the primary, secondary, and tertiary configuration files.
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	25.3.R2
Platforms	SAR Gen 2

save

Synopsis	Perform configuration save operations
Context	admin save
Tree	save
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bof

Synopsis	Save the BOF region configuration
Context	admin save bof
Tree	bof
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	25.3.R2
Platforms	SAR Gen 2

cleartext

Synopsis	Force the configuration to save in cleartext
Context	admin save cleartext
Tree	cleartext
Description	When configured, the system saves the configuration in cleartext format. The system prompts the user to enter the OS security password or the BOF encryption key.
Introduced	25.3.R2
Platforms	SAR Gen 2

configure

Synopsis	Save the configure region configuration
Context	admin save configure
Tree	configure
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	25.3.R2
Platforms	SAR Gen 2

debug

Synopsis	Save the debug region configuration
Context	admin save debug
Tree	debug
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

password *string*

Synopsis	Password to force the configuration save in cleartext
Context	admin save password *string*
Tree	password
String length	8 to 32
Introduced	25.10.R1
Platforms	SAR Gen 2

[**url**] *string*

Synopsis	Location to save the configuration
Context	admin save [url] *string*
Tree	[url]
Introduced	25.3.R2
Platforms	SAR Gen 2

set

Synopsis	Enter the **set** context
Context	admin set
Tree	set
Introduced	25.3.R2
Platforms	SAR Gen 2

time

Synopsis	System date and time
Context	admin set time
Tree	time
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**system-time**] *date-and-time*

Synopsis	System date and time
Context	admin set time [system-time] *date-and-time*
Tree	[system-time]
Description	This command sets the system date and time. The time zone may optionally be specified. When the time zone is not specified, the system uses the configured system time zone.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

show

Synopsis	Enter the **show** context
Context	admin show
Tree	show
Description	The **admin show** commands display the same configuration as the **info** command but are not subject to command authorization and do not require configuration mode access.
Introduced	25.3.R2
Platforms	SAR Gen 2

configuration

Synopsis	Show the current configuration
Context	admin show configuration
Tree	configuration
Introduced	25.3.R2
Platforms	SAR Gen 2

bof

Synopsis	Show the BOF region configuration
Context	admin show configuration bof
Tree	bof

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	25.3.R2
Platforms	SAR Gen 2

booted

Synopsis	Show the booted BOF configuration
Context	admin show configuration booted
Tree	booted
Notes	The following elements are part of a choice: **booted** or **cflash-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

cflash-id *cflash-id*

Synopsis	Show the BOF configuration file on a compact flash
Context	admin show configuration cflash-id *cflash-id*
Tree	cflash-id
String length	4 to 6
String format	'cflash-id' must be cf1-4: or cf1-4-A-D: (e.g. cf1: or cf2-B:)
Notes	The following elements are part of a choice: **booted** or **cflash-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from '/'
Context	admin show configuration [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	SAR Gen 2

configure

Synopsis	Show the configure region configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin show configuration configure
Tree	configure
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	25.3.R2
Platforms	SAR Gen 2

debug

Synopsis	Show the debug region configuration
Context	admin show configuration debug
Tree	debug
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	25.3.R2
Platforms	SAR Gen 2

depth *number*

Synopsis	Depth limit from the pwc
Context	admin show configuration depth *number*
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2
Platforms	SAR Gen 2

detail

Synopsis	Include default and unconfigured values
Context	admin show configuration detail
Tree	detail
Introduced	25.3.R2
Platforms	SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin show configuration flat
Tree	flat
Notes	The following elements are part of a choice: **flat**, **full-context**, **json**, or **xml**.
Introduced	25.3.R2
Platforms	SAR Gen 2

full-context

Synopsis	Show the full context on each line
Context	admin show configuration full-context
Tree	full-context
Notes	The following elements are part of a choice: **flat**, **full-context**, **json**, or **xml**.
Introduced	25.3.R2
Platforms	SAR Gen 2

inheritance

Synopsis	Include configuration inherited from configuration groups
Context	admin show configuration inheritance
Tree	inheritance
Description	This option specifies the inclusion of configuration inherited from configuration groups in the output. This option should only be used in the **configure** region when configuration groups are used. The output with this option is the same as **admin show configuration** when used in other configuration regions.
Introduced	25.3.R2
Platforms	SAR Gen 2

intended

Synopsis	Show the intended configuration
Context	admin show configuration intended
Tree	intended
Notes	The following elements are part of a choice: **intended** or **running**.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

json

Synopsis	Show the output in indented JSON format
Context	admin show configuration json
Tree	json
Notes	The following elements are part of a choice: **flat**, **full-context**, **json**, or **xml**.
Introduced	25.3.R2
Platforms	SAR Gen 2

running

Synopsis	Show the running configuration
Context	admin show configuration running
Tree	running
Notes	The following elements are part of a choice: **intended** or **running**.
Introduced	25.3.R2
Platforms	SAR Gen 2

units

Synopsis	Include unit types for applicable elements
Context	admin show configuration units
Tree	units
Introduced	25.3.R2
Platforms	SAR Gen 2

xml

Synopsis	Show the output in indented XML format
Context	admin show configuration xml
Tree	xml
Notes	The following elements are part of a choice: **flat**, **full-context**, **json**, or **xml**.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

support-mode

Synopsis	Enable technical support commands
Context	admin support-mode
Tree	support-mode
Description	Commands in this context enable the **kernel**, **shell**, and **vmhost** commands used only by Nokia technical support for troubleshooting.
Introduced	25.3.R4
Platforms	SAR Gen 2

disable

Synopsis	Disable technical support commands
Context	admin support-mode disable
Tree	disable
Description	This command disables the **kernel**, **shell**, and **vmhost** commands used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: **disable**, **kernel**, or **shell**.
Introduced	25.3.R2
Platforms	SAR Gen 2

kernel

Synopsis	Enter the **kernel** context
Context	admin support-mode kernel
Tree	kernel
Description	This command allows Nokia technical support to access the **kernel** and **vmhost** commands. These commands are used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: **disable**, **kernel**, or **shell**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

password *encrypted-leaf*

Synopsis	Kernel command password
Context	admin support-mode kernel password *encrypted-leaf*
Tree	password
Description	This command specifies the password to access **kernel** and **vmhost** commands. These commands are used only by Nokia technical support for troubleshooting. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 254
Introduced	25.3.R2
Platforms	SAR Gen 2

token *string*

Synopsis	Kernel command token
Context	admin support-mode kernel token *string*
Tree	token
Description	This command specifies the token to access **kernel** and **vmhost** commands. These commands are used only by Nokia technical support for troubleshooting.
String length	1 to 1024
Introduced	25.10.R1
Platforms	SAR Gen 2

shell

Synopsis	Enter the **shell** context
Context	admin support-mode shell
Tree	shell
Description	This command allows Nokia technical support to access the **shell** commands. **shell** commands are used only by Nokia technical support for troubleshooting.
Notes	The following elements are part of a choice: **disable**, **kernel**, or **shell**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

password *encrypted-leaf*

Synopsis	Shell command password
Context	admin support-mode shell password *encrypted-leaf*
Tree	password
Description	This command specifies the password to access the **shell** commands. This command is used only by Nokia technical support for troubleshooting. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 254
Introduced	25.3.R2
Platforms	SAR Gen 2

token *string*

Synopsis	Shell command token
Context	admin support-mode shell token *string*
Tree	token
Description	This command specifies the token to access the **shell** command. This command is used only by Nokia technical support for troubleshooting.
String length	1 to 1024
Introduced	25.10.R1
Platforms	SAR Gen 2

system

Platforms	SAR Gen 2

delete-operation

Synopsis	Stop and remove an operation
Context	admin system management-interface operations delete-operation
Tree	delete-operation
Description	This command removes an operation and all status and data associated with it. If the operation was executing, it is stopped before removal.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**delete-id**] *number*

Synopsis	ID of the operation to remove
Context	admin system management-interface operations delete-operation [delete-id] *number*
Tree	[delete-id]
Range	1 to 10000
Notes	This element is mandatory.
Introduced	25.3.R1
Platforms	SAR Gen 2

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations delete-operation op-table-bypass *boolean*
Tree	op-table-bypass
Description	When configured to **true**, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or **admin disconnect** is required.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

stop-operation

Synopsis	Stop the execution of an operational command
Context	admin system management-interface operations stop-operation
Tree	stop-operation
Description	This command stops the execution of an operational command. An operation launched as "asynchronous" is not deleted from the system when it is stopped. Status and other data associated with the operation persist until the operation is explicitly deleted using the delete operation command or a retention timeout.
Introduced	25.3.R2
Platforms	SAR Gen 2

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations stop-operation op-table-bypass *boolean*
Tree	op-table-bypass
Description	When configured to **true**, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or **admin disconnect** is required.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**stop-id**] *number*

Synopsis	ID of the operation to stop
Context	admin system management-interface operations stop-operation [stop-id] *number*
Tree	[stop-id]
Range	1 to 10000
Notes	This element is mandatory.
Introduced	25.3.R1
Platforms	SAR Gen 2

© 2026 Nokia.

port-speed-mode

Synopsis	Set the port speed mode for the system
Context	admin system port-speed-mode
Tree	port-speed-mode
Description	When configured, the router allows the specified combination of Ethernet port speeds to be configured on SFP ports.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

force

Synopsis	Proceed without further prompting from the system
Context	admin system port-speed-mode force
Tree	force
Description	When configured, this command ignores additional prompts from the system. This command is required for non-interactive interfaces.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**mode**] *keyword*

Synopsis	Port speed combination allowed on the router
Context	admin system port-speed-mode [mode] *keyword*
Tree	[mode]
Options	c5-c12-1g/10g, c5-c10-10g+c11-c12-10g/25g
Notes	This element is mandatory.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

security

Synopsis	Enter the **security** context
Context	admin system security
Tree	security

© 2026 Nokia.

Introduced	25.3.R6
Platforms	SAR Gen 2

hash-control

Synopsis	Enter the **hash-control** context
Context	admin system security hash-control
Tree	hash-control
Introduced	25.3.R6
Platforms	SAR Gen 2

custom-hash

Synopsis	Custom encryption
Context	admin system security hash-control custom-hash
Tree	custom-hash
Introduced	25.3.R6
Platforms	SAR Gen 2

algorithm *keyword*

Synopsis	Algorithm for custom encryption
Context	admin system security hash-control custom-hash algorithm *keyword*
Tree	algorithm
Description	This command configures the algorithm for custom encryption. The encryption uses ECB mode, PKCS#7 padding, and Base64 encoding.
Options	3des – DES-EDE3-ECB with PKCS #5 padding aes128 – AES-128-ECB with PKCS #7 padding aes192 – AES-192-ECB with PKCS #7 padding aes256 – AES-256-ECB with PKCS #7 padding
Notes	This element is mandatory.
Introduced	25.3.R6
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

key *string*

Synopsis	Key for encryption algorithm
Context	admin system security hash-control custom-hash key *string*
Tree	key
String length	1 to 126
Notes	This element is mandatory.
Introduced	25.3.R6
Platforms	SAR Gen 2

remove-custom-hash

Synopsis	Remove the custom encryption
Context	admin system security hash-control remove-custom-hash
Tree	remove-custom-hash
Introduced	25.3.R2
Platforms	SAR Gen 2

os-security

Synopsis	Enter the **os-security** context
Context	admin system security os-security
Tree	os-security
Introduced	25.3.R2
Platforms	SAR Gen 2

activate-password

Synopsis	Activate the new password used to protect the system
Context	admin system security os-security activate-password
Tree	activate-password
Description	When configured, the system activates the new password, then reboots the system to encrypt the BOF or configuration using the new password. Anti-theft does not need to be deactivated to change the OS security password using this command.
Introduced	25.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

card *reference*

Synopsis	CPM slot to apply anti-theft settings
Context	admin system security os-security activate-password card *reference*
Tree	card
Reference	**state cpm** *cpm-card-slot*
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	SAR Gen 2

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security activate-password force
Tree	force
Description	When configured, this command ignores further prompts from the system. This command is required for non-interactive interfaces.
Introduced	25.10.R1
Platforms	SAR Gen 2

password *string*

Synopsis	Preconfigured anti-theft password
Context	admin system security os-security activate-password password *string*
Tree	password
Description	This command specifies the preconfigured anti-theft password. This command is required for non-interactive interfaces.
String length	12 to 32
Introduced	25.10.R1
Platforms	SAR Gen 2

© 2026 Nokia.

remove-password

Synopsis	Remove the OS security password
Context	admin system security os-security remove-password
Tree	remove-password
Description	When configured, this command removes the OS security password. Any applications using the password must first be disabled before removing the password. Anti-theft must be deactivated to remove the OS security password.
Introduced	25.3.R2
Platforms	SAR Gen 2

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security remove-password force
Tree	force
Description	When configured, this command ignores further prompts from the system. This command is required for non-interactive interfaces.
Introduced	25.3.R2
Platforms	SAR Gen 2

password *string*

Synopsis	Preconfigured anti-theft password
Context	admin system security os-security remove-password password *string*
Tree	password
Description	This command specifies the preconfigured anti-theft password. This command is required for non-interactive interfaces.
String length	12 to 32
Introduced	25.3.R2
Platforms	SAR Gen 2

set-password

Synopsis	Configure the password used to protect the system
Context	admin system security os-security set-password

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	set-password
Description	When configured, if there was no password previously configured, a new password must be configured using using the **new-password** command. If a password has already been configured, the user must enter the **current-password**.
Introduced	25.3.R2
Platforms	SAR Gen 2

current-password *anti-theft-password-cleartext*

Synopsis	Existing OS security password
Context	admin system security os-security set-password current-password *anti-theft-password-cleartext*
Tree	current-password
String length	12 to 32
Introduced	25.3.R2
Platforms	SAR Gen 2

force

Synopsis	Proceed without further prompting from the system
Context	admin system security os-security set-password force
Tree	force
Description	When configured, this command ignores the requirement to enter the **new-password** twice. Configuring this command is required for non-interactive interfaces.
Introduced	25.3.R2
Platforms	SAR Gen 2

new-password *anti-theft-password-cleartext*

Synopsis	New OS security password
Context	admin system security os-security set-password new-password *anti-theft-password-cleartext*
Tree	new-password
Description	This command configures the new OS security password. When configured, the user is prompted to reenter the new password.
String length	12 to 32
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

pki

Synopsis	Enter the **pki** context
Context	admin system security pki
Tree	pki
Description	Commands in this context specify options for public key infrastructure operations.
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-ocsp-cache

Synopsis	Clear the current OCSP response cache
Context	admin system security pki clear-ocsp-cache
Tree	clear-ocsp-cache
Introduced	25.3.R2
Platforms	SAR Gen 2

[**entry-id**] *number*

Synopsis	Local OCSP response cache entry ID to clear
Context	admin system security pki clear-ocsp-cache [entry-id] *number*
Tree	[entry-id]
Range	1 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

cmpv2

Synopsis	Enter the **cmpv2** context
Context	admin system security pki cmpv2
Tree	cmpv2
Description	Commands in this context specify options for Certificate Management Protocol v2 (CMPv2) operations.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

cert-request

Synopsis	Request an additional certificate
Context	admin system security pki cmpv2 cert-request
Tree	cert-request
Description	When specified, the system requests an additional certificate after the initial certificate has been obtained from the CA. The request is authenticated by a signature signed by the current key, along with the current certificate. CA may not return a certificate immediately, for example, if the request process requires manual intervention. The **poll** command can be used to poll the status of the request. The hash algorithm used for the signature depends on the key type: • DSA key - SHA1 • RSA key: MD5 | SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA1) • ECDSA key: SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA256)
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 cert-request ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

current-certificate *pki-file-name*

Synopsis	Existing imported certificate file to create request

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin system security pki cmpv2 cert-request current-certificate *pki-file-name*
Tree	current-certificate
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

current-key *pki-file-name*

Synopsis	Imported key file used to create the request
Context	admin system security pki cmpv2 cert-request current-key *pki-file-name*
Tree	current-key
Description	This command specifies the imported key file corresponding to the existing imported certificate file used to create the request.
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request domain-name *string*
Tree	domain-name
Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki cmpv2 cert-request hash-algorithm *keyword*
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	25.3.R2
Platforms	SAR Gen 2

new-key *pki-file-name*

Synopsis	New imported key file to create certificate request
Context	admin system security pki cmpv2 cert-request new-key *pki-file-name*
Tree	new-key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

save-as *cflash-url*

Synopsis	Full path to save the result certificate
Context	admin system security pki cmpv2 cert-request save-as *cflash-url*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	save-as
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

subject-dn *string*

Synopsis	Subject of the requesting certificate
Context	admin system security pki cmpv2 cert-request subject-dn *string*
Tree	subject-dn
Description	This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C | ST | O | OU | CN}.
String length	1 to 256
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-request

Synopsis	Clear pending CMPv2 requests
Context	admin system security pki cmpv2 clear-request
Tree	clear-request
Description	When specified, the system clears pending CMPv2 requests for the specified CA. If no requests are pending, the system clears the saved result of the previous request
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 clear-request ca-profile *reference*
Tree	ca-profile

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-registration

Synopsis	Request initial certificate using the CMPv2 protocol
Context	admin system security pki cmpv2 initial-registration
Tree	initial-registration
Description	When specified, the system requests the initial certificate from the CA using the CMPv2 initial registration procedure. The request is authenticated via one of the following methods: • A password and a reference number that was pre-distributed by CA via out-of-band means. The specified password and reference number are not necessarily in the key list configured in the corresponding CA profile. If the key list is not configured in the corresponding CA profile, the system uses the existing password to authenticate the CMPv2 packets from the server if it is password protected. If the key list is configured in the corresponding CA profile and the server does not send SenderKID, the system uses the lexicographical first key in the key list to authenticate the CMPv2 packets from the server in case it is password protected. • A signature signed by the **protection-key** or **key-to-certify**, optionally with the corresponding certificate. If the **protection-key** command is not specified, the system uses the **key-to-certify** configuration for message protection. The hash algorithm used for the signature depends on the key type. Optionally, the system may send a certificate or a chain of certificates in the extraCertsfield. The certificate is specified by the **certificate** command and must include the public key of the key used for message protection. Sending a chain is enabled by specifying the **send-chain** and **with-ca** commands. The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In such cases, the **poll** command can be used to poll the status of the request.
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-profile *reference*

Synopsis	PKI CA profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin system security pki cmpv2 initial-registration ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.

Introduced	25.3.R2
Platforms	SAR Gen 2

new-key *pki-file-name*

Synopsis	Name of new imported key file used for the key update
Context	admin system security pki cmpv2 key-update new-key *pki-file-name*
Tree	new-key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

old-certificate *pki-file-name*

Synopsis	Name of the old certificate file to be replaced
Context	admin system security pki cmpv2 key-update old-certificate *pki-file-name*
Tree	old-certificate
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

old-key *pki-file-name*

Synopsis	Name of the old key file to be replaced
Context	admin system security pki cmpv2 key-update old-key *pki-file-name*
Tree	old-key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.

Introduced	25.3.R2
Platforms	SAR Gen 2

save-as *cflash-url*

Synopsis	Full path to save the result certificate file
Context	admin system security pki cmpv2 key-update save-as *cflash-url*
Tree	save-as
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

poll

Synopsis	Poll the CMPv2 server for pending request status
Context	admin system security pki cmpv2 poll
Tree	poll
Description	When specified, the system polls the status of the pending CMPv2 request toward the specified CA. If the response is ready, the system resumes the CMPv2 protocol exchange with the server. SR OS allows only one pending CMP request per CA; therefore, no new request is allowed when a pending request is present.
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 poll ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

convert-file

Synopsis	Convert imported file between secure and legacy format
Context	admin system security pki convert-file
Tree	convert-file
Introduced	25.3.R2
Platforms	SAR Gen 2

force

Synopsis	Force the conversion
Context	admin system security pki convert-file force
Tree	force
Description	When specified, the system forces the conversion of imported certificates and keys even if files with the same output names exist.
Introduced	25.3.R2
Platforms	SAR Gen 2

format *keyword*

Synopsis	File format to convert to
Context	admin system security pki convert-file format *keyword*
Tree	format
Options	secure, legacy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**input-file**] *pki-file-name*

Synopsis	Name of the file to be converted
Context	admin system security pki convert-file [input-file] *pki-file-name*
Tree	[input-file]
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**output-file**] *pki-file-name*

Synopsis	Output filename
Context	admin system security pki convert-file [output-file] *pki-file-name*
Tree	[output-file]
Description	This command specifies the output filename. If the filename already exists, the system prompts the user to proceed or aborts if the **force** command is unconfigured.
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

crl-update

Synopsis	Trigger the CRL update for the CA profile
Context	admin system security pki crl-update
Tree	crl-update
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki crl-update ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

est

Synopsis	Enter the **est** context
Context	admin system security pki est
Tree	est
Description	Commands in this context configure command options for Enrollment over Secure Transport (EST) protocol operations.
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-certificates

Synopsis	Download CA certificates from the EST server
Context	admin system security pki est ca-certificates
Tree	ca-certificates
Description	This command downloads a Certificate Authority (CA) certificate from an EST server specified by the profile name.
Introduced	25.3.R2
Platforms	SAR Gen 2

est-profile *string*

Synopsis	PKI EST profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin system security pki est ca-certificates est-profile *string*
Tree	est-profile
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

force

Synopsis	Force an overwrite of the result file
Context	admin system security pki est ca-certificates force
Tree	force
Introduced	25.3.R2
Platforms	SAR Gen 2

output-url *cflash-url*

Synopsis	Path to the result file
Context	admin system security pki est ca-certificates output-url *cflash-url*
Tree	output-url
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

enroll

Synopsis	Enroll a new certificate with CA with the EST protocol
Context	admin system security pki est enroll
Tree	enroll
Description	When specified, the system enrolls a new certificate with Certificate Authority (CA) by the EST protocol specified with the **est-profile** command with a imported private key specified by the **key** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The **est-profile** commad specifies the authentication between the system and EST server.

The **hash-alg**, **subject-dn**, **domain-name**, and **ip-address** commands are used to generate the Certificate Signing Request (CSR) in the EST request message. The **domain-name** and **ip-address** commands are used as subject alternative names.

If **validate-certificate-chain** is specified, the system validates the chain of result certificate before importing it. The certificate chain is the chain of all certificates from the result certificate to the issuing CA. The result certificate is the new certificate returned by the EST server.

The result certificate is imported and saved with the filename specified by the **output-file** command. If the **force** command is specified, the system overwrites the existing file with same name as the output file.

Introduced	25.3.R2
Platforms	SAR Gen 2

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki est enroll domain-name *string*
Tree	domain-name
Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	25.3.R2
Platforms	SAR Gen 2

est-profile *string*

Synopsis	PKI EST profile name
Context	admin system security pki est enroll est-profile *string*
Tree	est-profile
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

force

Synopsis	Force an overwrite of the result file
Context	admin system security pki est enroll force
Tree	force
Introduced	25.3.R2
Platforms	SAR Gen 2

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki est enroll hash-algorithm *keyword*
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki est enroll ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	25.3.R2
Platforms	SAR Gen 2

key *cflash-url*

Synopsis	Name of the imported the key file to enroll
Context	admin system security pki est enroll key *cflash-url*
Tree	key
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

output-file *pki-file-name*

Synopsis	Name of the result file
Context	admin system security pki est enroll output-file *pki-file-name*
Tree	output-file
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

subject-dn *string*

Synopsis	Subject of the requesting certificate
Context	admin system security pki est enroll subject-dn *string*
Tree	subject-dn
Description	This command specifies the subject DN attributes used in the certificate request. The format is a comma separated list with the format attr1=val1, attr2=val2, where attrN={C | ST | O | OU | CN}.
String length	1 to 256
Introduced	25.3.R2
Platforms	SAR Gen 2

validate-certificate-chain

Synopsis	Validate result certificate chain before importing
Context	admin system security pki est enroll validate-certificate-chain
Tree	validate-certificate-chain
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

renew

Synopsis	Renew a CA certificate using the EST protocol
Context	admin system security pki est renew
Tree	renew
Description	When specified, the system renews an imported certificate (specified by the **certificate** command) with a Certificate Authority (CA) using the EST protocol specified by the **est-profile** parameter, with an imported private key specified the **key** command. The key can be either the key of the certificate to be renewed or a new key. The authentication between system and EST server is specified by the **est-profile** parameter. The system uses the **hash-alg** command to generate the CSR in the EST request message.
Introduced	25.3.R2
Platforms	SAR Gen 2

certificate *cflash-url*

Synopsis	Name of the imported certificate file to renew
Context	admin system security pki est renew certificate *cflash-url*
Tree	certificate
String length	1 to 200

storage-encryption

Synopsis	Enter the **storage-encryption** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin system security storage-encryption
Tree	storage-encryption
Description	Commands in this context are used to manage storage encryption such as the primary secret for hash3 configuration shared secrets.
Introduced	26.7.R1
Platforms	SAR Gen 2

primary-secret

Synopsis	Enter the **primary-secret** context
Context	admin system security storage-encryption primary-secret
Tree	primary-secret
Description	Commands in this context manage the base secret used for encryption of items such as hash3 configuration shared secrets.
Introduced	26.7.R1
Platforms	SAR Gen 2

set-secret

Synopsis	Set or change the primary secret
Context	admin system security storage-encryption primary-secret set-secret
Tree	set-secret
Description	This command sets or changes the primary secret used as a base secret for encryption of items, such as hash3 configuration shared secrets. The user is prompted to enter the secret twice. If a primary secret is already set on this system, the user must enter the old secret to change it. Setting or changing the primary secret will cause the main configuration to be saved to disk. If the user is setting the primary secret on a replacement chassis as part of a chassis failure recovery, it is essential to run this command on the new chassis before copying the old configuration file from the failed chassis to the new chassis.
Introduced	26.7.R1
Platforms	SAR Gen 2

system-password

Synopsis	Change a local system password

2.2 environment commands

See “Environment commands” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

```
environment
   – command-alias
      – alias string
         – admin-state keyword
         – cli-command string
         – description string-not-all-spaces
         – mount-point (keyword | string)
         – python-script reference
   – command-completion
      – enter boolean
      – space boolean
      – tab boolean
   – commit-options
      – comment boolean
      – confirm boolean
   – console
      – length number
      – width number
   – history
      – recall boolean
      – size number
   – info-output
      – always-display
         – admin-state boolean
   – match-highlight
      – admin-state keyword
      – style keyword
   – message-severity-level
      – cli keyword
   – more boolean
   – progress-indicator
      – admin-state keyword
      – delay number
      – type keyword
   – prompt
      – context boolean
      – newline boolean
      – timestamp boolean
      – uncommitted-changes-indicator boolean
   – python
      – memory-reservation number
      – minimum-available-memory number
      – timeout number
   – time-display keyword
   – time-format keyword
```

2.2.1 environment command descriptions

environment

Synopsis	Configure the environment settings for this session
Context	environment
Tree	environment
Introduced	25.3.R2
Platforms	SAR Gen 2

command-alias

Synopsis	Enter the **command-alias** context
Context	environment command-alias
Tree	command-alias
Description	Commands in this context create aliases to existing MD-CLI commands or to Python scripts. Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.
Introduced	25.3.R2
Platforms	SAR Gen 2

alias [alias-name] *string*

Synopsis	Enter the **alias** list instance
Context	environment command-alias alias *string*
Tree	alias
Description	Commands in this context create aliases to existing MD-CLI commands or to Python applications. Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**alias-name**] *string*

Synopsis	Alias name
Context	environment command-alias alias *string*
Tree	alias
String length	1 to 64
String format	must only contain alpha-numeric characters, underscore or hyphen (not as the first character)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	environment command-alias alias *string* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the MD-CLI alias. MD-CLI aliases that are administratively disabled cannot be executed, do not autocomplete in operational mode, and do not appear in **?** help.
Options	enable, disable
Introduced	25.3.R2
Platforms	SAR Gen 2

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	environment command-alias alias *string* cli-command *string*
Tree	cli-command
String length	1 to 255
Notes	The following elements are part of a mandatory choice: **cli-command** or **python-script**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *string-not-all-spaces*

Synopsis	Text description
Context	environment command-alias alias *string* description *string-not-all-spaces*
Tree	description
String length	1 to 110
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

mount-point [path] *(keyword | string)*

Synopsis	Add a list entry for **mount-point**
Context	environment command-alias alias *string* mount-point *(keyword | string)*
Tree	mount-point
Min. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

[**path**] *(keyword | string)*

Synopsis	Mount point where the alias is available
Context	environment command-alias alias *string* mount-point *(keyword | string)*
Tree	mount-point
String length	1 to 255
Options	global
String format	must start with forward slash
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

python-script *reference*

Synopsis	Python script to run when executing the alias

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	environment command-alias alias *string* python-script *reference*
Tree	python-script
Reference	**state python python-script** *named-item*
Notes	The following elements are part of a mandatory choice: **cli-command** or **python-script**.
Introduced	26.7.R1
Platforms	SAR Gen 2

command-completion

Synopsis	Enter the **command-completion** context
Context	environment command-completion
Tree	command-completion
Introduced	25.3.R2
Platforms	SAR Gen 2

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	environment command-completion enter *boolean*
Tree	enter
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	environment command-completion space *boolean*
Tree	space
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	environment command-completion tab *boolean*
Tree	tab
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

commit-options

Synopsis	Enter the **commit-options** context
Context	environment commit-options
Tree	commit-options
Introduced	25.3.R2
Platforms	SAR Gen 2

comment *boolean*

Synopsis	Require a commit comment when committing configuration
Context	environment commit-options comment *boolean*
Tree	comment
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

confirm *boolean*

Synopsis	Require confirmed commit when committing configuration
Context	environment commit-options confirm *boolean*
Tree	confirm
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

console

Synopsis	Enter the **console** context
Context	environment console
Tree	console
Introduced	25.3.R2
Platforms	SAR Gen 2

length *number*

Synopsis	Number of lines displayed on the console
Context	environment console length *number*
Tree	length
Range	24 to 512
Default	24
Introduced	25.3.R2
Platforms	SAR Gen 2

width *number*

Synopsis	Number of columns displayed on the console
Context	environment console width *number*
Tree	width
Range	80 to 512
Default	80
Introduced	25.3.R2
Platforms	SAR Gen 2

history

Synopsis	Enter the **history** context
Context	environment history
Tree	history
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

recall *boolean*

Synopsis	Allow command history recall and search execution
Context	environment history recall *boolean*
Tree	recall
Description	When configured to **true**, the command history recall (**!**), substitution (**!$**), display (**:p**, **Esc+.**), and backward search (**Ctrl-R**) are enabled. When configured to **false**, the command history can be displayed using the **history** command, but commands in the history cannot be executed.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

size *number*

Synopsis	Command history size
Context	environment history size *number*
Tree	size
Description	This command specifies the maximum size of the command history. A value of 0 disables the command history.
Range	0 to 1000
Default	50
Introduced	25.3.R2
Platforms	SAR Gen 2

info-output

Synopsis	Enter the **info-output** context
Context	environment info-output
Tree	info-output
Introduced	25.3.R2
Platforms	SAR Gen 2

always-display

Synopsis	Enter the **always-display** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed, regardless of whether they are set to their default value.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	environment info-output always-display admin-state *boolean*
Tree	admin-state
Description	When configured to **true**, the values of the **admin-state** elements in **info** output (without the **detail** option) are always displayed, even if they are the default values.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

match-highlight

Synopsis	Enter the **match-highlight** context
Context	environment match-highlight
Tree	match-highlight
Introduced	26.3.R1
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of match highlighting
Context	environment match-highlight admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

style *keyword*

Synopsis	Match highlighting style
Context	environment match-highlight style *keyword*
Tree	style
Options	bold, underline, reverse
Max. instances	3
Introduced	26.3.R1
Platforms	SAR Gen 2

message-severity-level

Synopsis	Enter the **message-severity-level** context
Context	environment message-severity-level
Tree	message-severity-level
Introduced	25.3.R2
Platforms	SAR Gen 2

cli *keyword*

Synopsis	Message severity threshold for CLI messages
Context	environment message-severity-level cli *keyword*
Tree	cli
Options	warning, info
Default	info
Introduced	25.3.R2
Platforms	SAR Gen 2

more *boolean*

Synopsis	Activate the pager when output is longer than a screen
Context	environment more *boolean*
Tree	more
Default	true

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

progress-indicator

Synopsis	Enter the **progress-indicator** context
Context	environment progress-indicator
Tree	progress-indicator
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the progress indicator
Context	environment progress-indicator admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

delay *number*

Synopsis	Delay before the progress indicator is displayed
Context	environment progress-indicator delay *number*
Tree	delay
Range	0 to 10000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

type *keyword*

Synopsis	Progress indicator output style

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	environment progress-indicator type *keyword*
Tree	type
Options	dots
Default	dots
Introduced	25.3.R2
Platforms	SAR Gen 2

prompt

Synopsis	Enter the **prompt** context
Context	environment prompt
Tree	prompt
Introduced	25.3.R2
Platforms	SAR Gen 2

context *boolean*

Synopsis	Show the current command context in the prompt
Context	environment prompt context *boolean*
Tree	context
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	environment prompt newline *boolean*
Tree	newline
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	environment prompt timestamp *boolean*
Tree	timestamp
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	environment prompt uncommitted-changes-indicator *boolean*
Tree	uncommitted-changes-indicator
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

python

Synopsis	Enter the **python** context
Context	environment python
Tree	python
Introduced	25.3.R2
Platforms	SAR Gen 2

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	environment python memory-reservation *number*
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	environment python minimum-available-memory *number*
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	SAR Gen 2

time-display *keyword*

Synopsis	Time zone to display time
Context	environment time-display *keyword*
Tree	time-display
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

time-format *keyword*

Synopsis	Format to display the date and time
Context	environment time-format *keyword*
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

2.3 file commands

See “File management” in the *7705 SAR Gen 2 Basic System Configuration Guide* for more information.

```
file
   – change-directory
      – router-instance string
      – [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   – checksum
      – router-instance string
      – [type] keyword
      – [url] (ftp-tftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   – copy
      – client-tls-profile string
      – [destination-url] (ftp-tftp-url | http-url-loose | scp-url | sftp-url | sat-url |
 cflash-url | string-not-all-spaces)
      – direct-http
      – force
      – proxy http-url
      – recursive
      – router-instance string
      – [source-url] (ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url |
 string-not-all-spaces)
   – disable
      – active
      – cflash-id cflash-id
      – standby
   – edit
      – [url] (sat-url | cflash-url | string-not-all-spaces)
   – enable
      – active
      – cflash-id cflash-id
      – standby
   – format
      – [cflash-id] cflash-id
   – list
      – reverse
      – router-instance string
      – [sort-order] keyword
      – [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   – make-directory
      – router-instance string
      – [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   – move

2.3.1 file command descriptions

file

Synopsis	Perform file operations
Context	file
Tree	file
Description	Commands in this context execute file management operations.
Introduced	25.3.R2
Platforms	SAR Gen 2

change-directory

Synopsis	Change the working directory
Context	file change-directory
Tree	change-directory
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file change-directory router-instance *string*
Tree	router-instance
Introduced	25.10.R1
Platforms	SAR Gen 2

[**url**] *(ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	New working directory URL
Context	file change-directory [url] *(ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*
Tree	[url]
String length	1 to 180 (*ftp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	.
String format	'ftp-url' must not contain illegal characters 'ftp-url' must be ftp:// with optional user:pass@, hostname and path (e.g. ftp://user:pass@hostname.domain/path/file) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

checksum

Synopsis	Compute and display checksums
Context	file checksum
Tree	checksum
Description	This command computes and displays an image file or a checksum for a file.
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file checksum router-instance *string*
Tree	router-instance
Introduced	25.10.R1
Platforms	SAR Gen 2

[type] *keyword*

Synopsis	Checksum option type
Context	file checksum [type] *keyword*
Tree	[type]
Options	image, md5, sha256

Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**url**] *(ftp-tftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	File URL
Context	file checksum [url] *(ftp-tftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*
Tree	[url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

copy

Synopsis	Copy files
Context	file copy
Tree	copy
Introduced	25.3.R2
Platforms	SAR Gen 2

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file copy client-tls-profile *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	client-tls-profile
String length	1 to 32
Introduced	25.3.R2
Platforms	SAR Gen 2

[**destination-url**] *(ftp-tftp-url | http-url-loose | scp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Destination URL or '.' for the working directory
Context	file copy [destination-url] *(ftp-tftp-url | http-url-loose | scp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*
Tree	[destination-url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 180 (*http-url-loose*, *scp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'http-url-loose' must be http:// with host and optional port and path (e.g. http://hostname.domain/path) 'scp-url' must be scp:// with optional user:pass@, hostname and path (e.g. scp://user:pass@hostname.domain/path/file) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file copy direct-http
Tree	direct-http
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

force

Synopsis	Force copy without prompting before overwriting
Context	file copy force
Tree	force
Introduced	25.3.R2
Platforms	SAR Gen 2

proxy *http-url*

Synopsis	Connect over HTTP with a proxy
Context	file copy proxy *http-url*
Tree	proxy
String length	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

recursive

Synopsis	Copy sub-directories encountered at the source URL
Context	file copy recursive
Tree	recursive
Description	This command recursively copies files and directories. If files or directories already exist, the operator is prompted to overwrite them. When the **force** command is enabled, a positive response to the overwrite prompts is assumed, and the operator is not prompted for confirmation. The existing files or directories are overwritten.
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file copy router-instance *string*
Tree	router-instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**source-url**] *(ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Source URL
Context	file copy [source-url] *(ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-all-spaces)*
Tree	[source-url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 180 (*http-url-loose*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'http-url-loose' must be http:// with host and optional port and path (e.g. http://hostname.domain/path) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

disable

Synopsis	Disable storage devices
Context	file disable
Tree	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

active

Synopsis	Disable all devices on the active CPM
Context	file disable active
Tree	active
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	25.3.R2
Platforms	SAR Gen 2

cflash-id *cflash-id*

Synopsis	Disable the storage device
Context	file disable cflash-id *cflash-id*
Tree	cflash-id
String length	4 to 6
String format	'cflash-id' must be cf1-4: or cf1-4-A-D: (e.g. cf1: or cf2-B:)
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	25.3.R2
Platforms	SAR Gen 2

standby

Synopsis	Disable all devices on the standby CPM
Context	file disable standby
Tree	standby
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	25.3.R2
Platforms	SAR Gen 2

edit

Synopsis	Edit files with the text editor
Context	file edit
Tree	edit
Description	This command allows users to edit files with the text editor.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

See "Text editor" in the *7705 SAR Gen 2 Basic System Configuration Guide* for more information.

Introduced 25.3.R2

Platforms SAR Gen 2

[**url**] *(sat-url | cflash-url | string-not-all-spaces)*

Synopsis File URL

Context file edit [url] *(sat-url | cflash-url | string-not-all-spaces)*

Tree [url]

String length 1 to 200

String format 'sat-url' must start with sat: (e.g. sat:path/to/file)
'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path)
'cflash-url' must have each path segment at most 99 characters
'string-not-all-spaces' must contain at least one non-space character

Notes This element is mandatory.

Introduced 25.3.R2

Platforms SAR Gen 2

enable

Synopsis Enable storage devices

Context file enable

Tree enable

Introduced 25.3.R2

Platforms SAR Gen 2

active

Synopsis Enable all devices on the active CPM

Context file enable active

Tree active

Notes The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

cflash-id *cflash-id*

Synopsis	Enable the compact flash device
Context	file enable cflash-id *cflash-id*
Tree	cflash-id
String length	4 to 6
String format	'cflash-id' must be cf1-4: or cf1-4-A-D: (e.g. cf1: or cf2-B:)
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	25.3.R2
Platforms	SAR Gen 2

standby

Synopsis	Enable all devices on the standby CPM
Context	file enable standby
Tree	standby
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	25.3.R2
Platforms	SAR Gen 2

format

Synopsis	Format a storage device
Context	file format
Tree	format
Description	This command formats a storage device with a new file system without erasing the data. The device must be administratively disabled first.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**cflash-id**] *cflash-id*

Synopsis	Format a storage device
Context	file format [cflash-id] *cflash-id*
Tree	[cflash-id]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	4 to 6
String format	'cflash-id' must be cf1-4: or cf1-4-A-D: (e.g. cf1: or cf2-B:)
Introduced	25.3.R2
Platforms	SAR Gen 2

list

Synopsis	List directory contents
Context	file list
Tree	list
Introduced	25.3.R2
Platforms	SAR Gen 2

reverse

Synopsis	List files in reverse sort order
Context	file list reverse
Tree	reverse
Introduced	25.3.R2

[**destination-url**] *(sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Destination URL or '.' for the working directory
Context	file unzip [destination-url] *(sat-url | cflash-url | string-not-all-spaces)*
Tree	[destination-url]
String length	1 to 200
String format	'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

force

Synopsis	Force the unzip operation without prompting
Context	file unzip force
Tree	force
Description	When configured, files and directories that already exist in the destination URL are overwritten without prompting. The system does not automatically create directories explicitly specified by the destination URL. To allow the system to create new directories, use the **create-destination** command. When unconfigured, the system prompts the user before overwriting a file or directory.
Notes	The following elements are part of a choice: **force** or **list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

list

Synopsis	List the file contents without the unzip operation
Context	file unzip list
Tree	list

converted

Synopsis	Include converted third-party model configuration from the running datastore
Context	info *keyword* converted
Tree	converted
Description	This option specifies the inclusion of converted configuration values from third-party models in the output and is only available when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option should only be used in the **configure** region when third-party models are used. The output with this option is the same as **info** when used in other configuration regions. This option is not supported for **state** elements.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

depth *number*

Synopsis	Depth limit from the pwc
Context	info *keyword* depth *number*
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2

Context	info *keyword* detail
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

differences

Synopsis	Show the different values each model tries to set

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	info *keyword* differences
Tree	differences
Description	When specified, this command shows only the values that are different when multiple models try to set the same configuration element. This option is supported only with the **converted** option and is available only when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option is not supported for **state** elements.
Notes	The following elements are part of a choice: **differences**, **model**, or **values**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line
Context	info *keyword* flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: **flat**, **json**, or **xml**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

full-context

Synopsis	Show the full context on each line
Context	info *keyword* full-context
Tree	full-context
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

inheritance

Synopsis	Include configuration inherited from configuration groups
Context	info *keyword* inheritance
Tree	inheritance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This option specifies the inclusion of configuration inherited from configuration groups in the output. This option should only be used in the **configure** region when configuration groups are used. The output with this option is the same as **info** when used in other configuration regions. This option is not supported for **state** elements.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

json

Synopsis	Show the output in indented JSON IETF format
Context	info *keyword* json
Tree	json
Notes	The following elements are part of a choice: **flat**, **json**, or **xml**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

model *keyword*

Synopsis	Data model for which to display converted output
Context	info *keyword* model *keyword*
Tree	model
Description	This option specifies the data model for which to display the converted output. This option is supported only with the **converted** option and is available only when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option is not supported for **state** elements.
Options	all – All models openconfig – OpenConfig models
Default	all
Notes	The following elements are part of a choice: **differences**, **model**, or **values**.

mrinfo

Synopsis	Request multicast router information
Context	mrinfo
Tree	mrinfo
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

[**router**] *(ipv4-address* | *string-not-all-spaces)*

Synopsis	Router IPv4 address or DNS name
Context	mrinfo [router] *(ipv4-address* | *string-not-all-spaces)*
Tree	[router]
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mrinfo router-instance *string*
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mstat

Synopsis	Trace multicast path from a source to a receiver and display multicast packet rate and loss information (IGMP based)
Context	mstat
Tree	mstat

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination *(ipv4-address | string-not-all-spaces)*

Synopsis	Destination IPv4 address or DNS name
Context	mstat destination *(ipv4-address | string-not-all-spaces)*
Tree	destination
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group *(ipv4-multicast-address | string-not-all-spaces)*

Synopsis	Multicast group IPv4 address or DNS name
Context	mstat group *(ipv4-multicast-address | string-not-all-spaces)*
Tree	group
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mstat router-instance *string*
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source *(ipv4-address | string-not-all-spaces)*

Synopsis	Source IPv4 address or DNS name
Context	mstat source *(ipv4-address | string-not-all-spaces)*
Tree	source
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mstat ttl *number*
Tree	ttl
Range	1 to 255
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Wait time for the Mtrace Response packet
Context	mstat wait *number*
Tree	wait
Range	1 to 60
Units	seconds
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

mstat2

Synopsis	Show the multicast route taken from a source to a destination with packet rate and loss information (UDP-based)

Use subject to Terms available at: www.nokia.com/terms.

Context	mstat2
Tree	mstat2
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination *(ipv4-address | ipv6-address | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	mstat2 destination *(ipv4-address | ipv6-address | string-not-all-spaces)*
Tree	destination
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group *(ipv4-multicast-address | ipv6-multicast-address | string-not-all-spaces)*

Synopsis	Multicast group IPv4 address or DNS name
Context	mstat2 group *(ipv4-multicast-address | ipv6-multicast-address | string-not-all-spaces)*
Tree	group
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mstat2 router-instance *string*
Tree	router-instance
Default	Base
Introduced	25.10.R1

mtrace

Synopsis	Show the multicast route taken from a source to a destination (IGMP-based)
Context	mtrace
Tree	mtrace
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination *(ipv4-address | string-not-all-spaces)*

Synopsis	Destination IPv4 address or DNS name
Context	mtrace destination *(ipv4-address | string-not-all-spaces)*
Tree	destination
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group *(ipv4-multicast-address | string-not-all-spaces)*

Synopsis	Multicast group IPv4 address or DNS name
Context	mtrace group *(ipv4-multicast-address | string-not-all-spaces)*
Tree	group
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	mtrace router-instance *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

source *(ipv4-address | string-not-all-spaces)*

Synopsis	Source IPv4 address or DNS name
Context	mtrace source *(ipv4-address | string-not-all-spaces)*
Tree	source
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Time to Live (TTL) included in the Mtrace Query packet
Context	mtrace ttl *number*
Tree	ttl
Range	1 to 255
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Wait time for the Mtrace Response packet
Context	mtrace wait *number*
Tree	wait
Range	1 to 60
Units	seconds
Introduced	25.10.R1

Platforms	7705 SAR Gen 2

mtrace2

Synopsis	Show the multicast route taken from a source to a destination (UDP-based)
Context	mtrace2
Tree	mtrace2
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

destination *(ipv4-address | ipv6-address | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	mtrace2 destination *(ipv4-address | ipv6-address | string-not-all-spaces)*
Tree	destination
String length	1 to 128
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

group *(ipv4-multicast-address | ipv6-multicast-address | string-not-all-spaces)*

Synopsis	Multicast group IPv4 address or DNS name
Context	mtrace2 group *(ipv4-multicast-address | ipv6-multicast-address | string-not-all-spaces)*
Tree	group
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	mtrace2 router-instance *string*
Tree	router-instance
Default	Base
Introduced	25.10.R1
Platforms	7705 SAR Gen 2

source *(keyword | ipv4-address | ipv6-address | string-not-all-spaces)*

Synopsis	Source IP address or DNS name
Context	mtrace2 source *(keyword | ipv4-address | ipv6-address | string-not-all-spaces)*
Tree	source
String length	1 to 128
Options	starg – Use a static (*,G) address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.10.R1

lbm-padding *number*

Synopsis	Data portion size of the data TLV, no octet string
Context	oam eth-cfm loopback lbm-padding *number*
Tree	lbm-padding
Description	This command configures the size of the data portion of the data TLV which does not allow for an optional octet string. MSDU is not processed when this setting is in use. This command and **size** are mutually exclusive. A value of 0 means that no data TLV is added to the packet. This is specified with an octet string.
Range	0 | 3 to 9778
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm loopback ma-admin-name *reference*
Tree	ma-admin-name
Reference	**state eth-cfm domain** *admin-name* **association** *admin-name*
Notes	This element is mandatory.

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm loopback mep-id *number*
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm loopback priority *number*
Tree	priority
Range	0 to 7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of loopback messages to send
Context	oam eth-cfm loopback send-count *number*
Tree	send-count
Range	1 to 1024
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Data portion size of the data TLV, octet string allowed
Context	oam eth-cfm loopback size *number*
Tree	size

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the size of the data portion of the data TLV allowing for an optional octet string to be included. This command and **lbm-padding** are mutually exclusive. A value of 0 means that no data TLV is added to the packet.
Range	0 to 1500
Units	bytes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm loopback timeout *number*
Tree	timeout
Description	This command specifies the time the router waits for a message reply after sending a message request. After expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

one-way-delay-test

Synopsis	Initiate a one-way delay test
Context	oam eth-cfm one-way-delay-test
Tree	one-way-delay-test

two-way-slm-test

Synopsis	Initiate a two-way SLM test in SAA
Context	oam eth-cfm two-way-slm-test
Tree	two-way-slm-test
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] *(mac-unicast-address-no-zero* | *number)*

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm two-way-slm-test [destination] *(mac-unicast-address-no-zero* | *number)*
Tree	[destination]
Range	1 to 8191
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interval *(number* | *decimal-number)*

Synopsis	Time between probes within the test run
Context	oam eth-cfm two-way-slm-test interval *(number* | *decimal-number)*
Tree	interval
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2

Platforms	7705 SAR Gen 2

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm two-way-slm-test ma-admin-name *reference*
Tree	ma-admin-name
Reference	**state eth-cfm domain** *admin-name* **association** *admin-name*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-slm-test md-admin-name *reference*
Tree	md-admin-name
Reference	**state eth-cfm domain** *admin-name*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-slm-test mep-id *number*
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	oam eth-cfm two-way-slm-test priority *number*
Tree	priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

send-count *number*

Synopsis	Number of two-way SLM test messages to send
Context	oam eth-cfm two-way-slm-test send-count *number*
Tree	send-count
Range	1 to 1000
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Data portion size of the data TLV, octet string allowed
Context	oam eth-cfm two-way-slm-test size *number*
Tree	size
Description	This command specifies the size of the data portion of the Data TLV, allowing for an optional octet string to be included.
Range	0 to 1500
Units	bytes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm two-way-slm-test timeout *number*
Tree	timeout

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the time the router waits for a message reply after sending a message request. After the expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.
Range	1 to 10
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-ping

Synopsis	Perform a Label Switched Path (LSP) ping test
Context	oam lsp-ping
Tree	lsp-ping
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

bgp-label

Synopsis	Perform a BGP-label LSP trace test
Context	oam lsp-ping bgp-label
Tree	bgp-label
Description	This command option performs a Border Gateway Protocol (BGP-label) LSP trace test using Target FEC Stack code point "BGP labeled IPv4 prefix".
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

fc *keyword*

Synopsis	QoS forwarding class for the sent echo request packet

interval *number*

Synopsis	Minimum time to expire before next echo request is sent
Context	oam lsp-trace rsvp-te interval *number*
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lsp-name *reference*

Synopsis	Name of the LSP to test
Context	oam lsp-trace rsvp-te lsp-name *reference*
Tree	lsp-name
Reference	**state router** *named-item-64* **mpls lsp** *named-item-64*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum consecutive timeouts before terminating test
Context	oam lsp-trace rsvp-te max-fail *number*
Tree	max-fail
Range	1 to 255
Default	5
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-ttl *number*

Synopsis	Maximum TTL
Context	oam lsp-trace rsvp-te max-ttl *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	max-ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	Initial TTL for the test
Context	oam lsp-trace rsvp-te min-ttl *number*
Tree	min-ttl
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

output-format *keyword*

Synopsis	Output format for the result
Context	oam lsp-trace rsvp-te output-format *keyword*
Tree	output-format
Options	summary, detail
Default	summary
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

path *reference*

Synopsis	Name of the MPLS path to test
Context	oam lsp-trace rsvp-te path *reference*
Tree	path
Reference	**state router** *named-item-64* **mpls path** *named-item-64*
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of OAM trace probes to send per TTL
Context	oam lsp-trace rsvp-te probe-count *number*
Tree	probe-count
Range	1 to 10
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

profile *keyword*

Synopsis	QoS profile for the transmitted echo request packets
Context	oam lsp-trace rsvp-te profile *keyword*
Tree	profile
Options	in – In profile out – Out of profile
Default	out
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Echo request packet pad size
Context	oam lsp-trace rsvp-te size *number*
Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address

sr-ospf

Synopsis	Perform an LSP treetrace test for SR-OSPF
Context	oam lsp-treetrace sr-ospf
Tree	sr-ospf
Description	When specified, the router performs an LSP treetrace test for an IPv4 SR-OSPF node-SID tunnel. When the user runs this command, the sender node originates successive TTL incrementing LSP trace probes to discover the ECMP paths of an IPv4 SR-OSPF node-SID tunnel. The probes operate on the IPv4 SR-OSPF tunnel prefix in the specified OSPFv2 instance and on the node SID programmed in Segment Routing algorithm zero topology.
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

downstream-map-tlv *keyword*

Synopsis	Downstream Mapping TLV type in MPLS Echo Request PDU
Context	oam lsp-treetrace sr-ospf downstream-map-tlv *keyword*
Tree	downstream-map-tlv
Description	This command specifies the format of the Downstream Mapping TLV to use in the transmitted Echo Request packets.
Options	dsmap – Send a Downstream Mapping TLV ddmap – Send a Downstream Detailed Mapping TLV
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

fc *keyword*

Synopsis	QoS FC for the transmitted Echo Request packets
Context	oam lsp-treetrace sr-ospf fc *keyword*
Tree	fc
Description	This command specifies the command options used to indicate the forwarding class and profile of the MPLS Echo Request packet. When the CPM generates an MPLS Echo Request packet and forwards it to the outgoing interface, the packet is queued in the egress network queue corresponding to the specified FC and profile command options. The LSP-EXP mappings on the outgoing interface control the marking of the packet MPLS header EXP field.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the responding node receives the MPLS Echo Request packet, the LSP-EXP mappings of the incoming interface control the FC and profile command options.

When the CPM generates an MPLS Echo Reply packet and forwards it to the outgoing interface, the packet is queued in the egress network queue corresponding to the command option values. These values are derived from the classification of the Echo Request packet, which is being replied to, at the incoming interface. The LSP-EXP mappings on the outgoing interface control the marking of the EXP of the packet MPLS header EXP field. The ToS byte is not modified.

Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Default	be
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

igp-instance *number*

Synopsis	IGP instance for the SR-OSPF test
Context	oam lsp-treetrace sr-ospf igp-instance *number*
Tree	igp-instance
Description	This command specifies the IGP instance used to look up the node SID prefix.
Range	0 to 31
Default	0
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

max-fail *number*

Synopsis	Maximum number of consecutive timeouts allowed
Context	oam lsp-treetrace sr-ospf max-fail *number*
Tree	max-fail
Description	This command specifies the maximum number of consecutive timeouts allowed before terminating the test.
Range	1 to 255

Platforms	7705 SAR Gen 2

source-ip-address *ipv4-address*

Synopsis	Source IP address
Context	oam lsp-treetrace sr-ospf source-ip-address *ipv4-address*
Tree	source-ip-address
Description	This command specifies the source IP address. This command is used when an OAM packet must be generated from an address other than the system interface address of the node. The address must be from a prefix that is routable in the network.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	26.7.R1
Platforms	7705 SAR Gen 2

timeout *number*

Synopsis	Time router waits for reply after sending Echo Request
Context	oam lsp-treetrace sr-ospf timeout *number*
Tree	timeout
Description	This command specifies the time used to override the default timeout value and is the amount of time that the router waits for an Echo Reply message after sending the Echo Request message. After the expiration of the message timeout, the requesting router assumes that the Echo Reply message is not received. The system displays a Request Timeout message for each Echo Request message sent that expires. Any response Echo Reply message received after the request times out is silently discarded.
Range	1 to 60
Units	seconds
Default	3
Introduced	26.7.R1

pattern *(keyword | number)*

Synopsis	Pattern string to include in the packet
Context	ping pattern *(keyword | number)*
Tree	pattern
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	ping preference *number*
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the ping probe on.
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-owner *keyword*

Synopsis	Protocol owner
Context	ping protocol-owner *keyword*
Tree	protocol-owner
Description	This command specifies the protocol owner of the SRv6 policy candidate path to ping. The **bgp** option specifies a BGP SRv6 policy. The **static** option specifies a locally configured static SRv6 policy.
Options	bgp, static

ssh

Synopsis	SSH to an IP address or DNS name
Context	ssh
Tree	ssh
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	ssh [destination] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*
Tree	[destination]
String length	1 to 128
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

key-re-exchange

Synopsis	Enter the **key-re-exchange** context
Context	ssh key-re-exchange
Tree	key-re-exchange
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mbytes *(number | keyword)*

Synopsis	Maximum bytes before initiating key re-exchange
Context	ssh key-re-exchange mbytes *(number | keyword)*
Tree	mbytes
Description	This command specifies the number of bytes transmitted on an SSH session, after which the SSH client initiates the key re-exchange.
Range	1 to 64000
Units	megabytes
Options	infinite
Default	1024
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

minutes *(number | keyword)*

Synopsis	Time after which SSH client initiates key re-exchange
Context	ssh key-re-exchange minutes *(number | keyword)*
Tree	minutes
Range	1 to 1440
Units	minutes
Options	infinite
Default	60
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

login-name *string-not-all-spaces*

Synopsis	SSH login username
Context	ssh login-name *string-not-all-spaces*
Tree	login-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port *number*

Synopsis	TCP listening port on SSH client for SSH session
Context	ssh port *number*
Tree	port
Description	This command configures the listening port for the SR OS SSH client to establish the SSH session with the SSH server.
Range	1 to 65535
Default	22
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

private-key-file *string*

Synopsis	SSH private key file for public-key authentication
Context	ssh private-key-file *string*
Tree	private-key-file
Description	This command configures the name of the file containing the private key for public-key authentication on the SR OS SSH client, up to 255 characters. (The public key must be provided to the SSH server.) If the file containing the private key is encrypted, the system asks for the password to decrypt the file.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *(string | string)*

Synopsis	Router name or VPRN service name
Context	ssh router-instance *(string | string)*
Tree	router-instance
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

telnet

Synopsis	Telnet to an IP address or DNS name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	telnet
Tree	telnet
Description	This command opens a Telnet session to a remote host. In SR OS, the Telnet servers limit Telnet clients to three login attempts; if unsuccessful, the Telnet client session disconnects. The number is not user configurable.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	telnet [destination] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*
Tree	[destination]
Description	This command specifies the IP address or DNS name (if DNS name resolution is configured) of the remote host for the Telnet session.
String length	1 to 128
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

port *number*

Synopsis	Remote host TCP port for the Telnet connection
Context	telnet port *number*
Tree	port
Range	1 to 65535
Default	23
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-instance *(string | string)*

Synopsis	Router name or VPRN service name
Context	telnet router-instance *(string | string)*
Tree	router-instance
Default	Base
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address of the Telnet packets
Context	telnet source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

top

Synopsis	Move to the top level of the context
Context	top
Tree	top
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

traceroute

Synopsis	Show the route taken to an IP address or DNS name
Context	traceroute
Tree	traceroute
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

candidate-path

Synopsis	Trace route of the candidate path of the SRv6 policy
Context	traceroute candidate-path
Tree	candidate-path
Description	When configured, this command allows the user to specify a candidate path of the SRv6 policy to traceroute. The candidate path does not need to be the currently active candidate path.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

color *number*

Synopsis	Color ID of the SRv6 policy to trace
Context	traceroute color *number*
Tree	color
Description	This command launches a traceroute of an SRv6 policy that matches a specific color.
Max. range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

decode *keyword*

Synopsis	Perform original datagram parsing functions
Context	traceroute decode *keyword*
Tree	decode
Options	none, original-datagram
Default	none
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-port *number*

Synopsis	Transport protocol destination port number

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	traceroute dest-port *number*
Tree	dest-port
Range	1 to 65535
Default	33434
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

dest-port-udp-fixed

Synopsis	Avoid increment of destination port number for UDP test
Context	traceroute dest-port-udp-fixed
Tree	dest-port-udp-fixed
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**destination**] *(ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	traceroute [destination] *(ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces)*
Tree	[destination]
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

detail

Synopsis	Display MPLS label stack information or TCP port status
Context	traceroute detail
Tree	detail
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	traceroute distinguisher *number*
Tree	distinguisher
Description	This command specifies the distinguisher of the SRv6 policy candidate path to send the traceroute probe on. This command must be configured if the **protocol-owner** command is configured to **bgp**.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

endpoint *ipv6-unicast-or-zero-address*

Synopsis	Endpoint of the SRv6 policy to trace
Context	traceroute endpoint *ipv6-unicast-or-zero-address*
Tree	endpoint
Description	This command configures an IPv6 endpoint address for an SRv6 policy as the target of the traceroute.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

min-ttl *number*

Synopsis	First hop traceroute probes using the TTL value
Context	traceroute min-ttl *number*
Tree	min-ttl
Description	This command specifies the first hop traceroute probes, using the **ttl** value.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

numeric

Synopsis	Display IP addresses instead of DNS names
Context	traceroute numeric
Tree	numeric
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	traceroute preference *number*
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the traceroute probe on.
Max. range	0 to 4294967295
Default	100
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

probe-count *number*

Synopsis	Number of probes to send per hop
Context	traceroute probe-count *number*
Tree	probe-count
Range	1 to 10
Default	3
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol *keyword*

Synopsis	Packet type to send
Context	traceroute protocol *keyword*
Tree	protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command sets the transport protocol, UDP or TCP, for the traceroute packet. A targeted VPRN service silently discards TCP traceroutes and only responds to UDP traceroutes.
Options	udp, tcp
Default	udp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

protocol-owner *keyword*

Synopsis	Protocol owner
Context	traceroute protocol-owner *keyword*
Tree	protocol-owner
Description	This command specifies the protocol owner of the SRv6 policy candidate path to traceroute. The **bgp** option specifies a BGP SRv6 policy. The **static** option specifies a locally configured static SRv6 policy.
Options	bgp, static
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

router-instance *string*

Synopsis	Router name or VPRN service name
Context	traceroute router-instance *string*
Tree	router-instance
Default	Base
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

segment-list *number*

Synopsis	SR IPv6 segment list to trace
Context	traceroute segment-list *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	segment-list
Description	This command configures the traceroute probe to target a specific segment list of an SRv6 policy. When the segment list is not specified, the traceroute probe is sent on the lowest available segment list.
Range	1 to 32
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

size *number*

Synopsis	Number of pad bytes in each transmitted packet
Context	traceroute size *number*
Tree	size
Range	0 to 9786
Units	bytes
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source address of the probe packets
Context	traceroute source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Description	This command specifies the source address of the probe packets. If the IP address is not one of the interfaces of the device, the system returns an error.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

srv6-policy

Synopsis	Trace an SRv6 policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	traceroute srv6-policy
Tree	srv6-policy
Description	This command launches a traceroute of a Segment Routing IPv6 (SRv6) policy.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tos *number*

Synopsis	Type of Service (ToS) bits in the IP header
Context	traceroute tos *number*
Tree	tos
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ttl *number*

Synopsis	Maximum number of hops (TTL) to probe
Context	traceroute ttl *number*
Tree	ttl
Range	1 to 255
Default	30
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

wait *number*

Synopsis	Time to wait for a response to the probe
Context	traceroute wait *number*
Tree	wait
Range	10 to 60000
Units	milliseconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	5000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

tree

Synopsis	Show the command tree under the present working context
Context	tree
Tree	tree
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**path-format**] *keyword*

Synopsis	Alternative format to display the path
Context	tree [path-format] *keyword*
Tree	[path-format]
Description	This option outputs the tree information in alternative YANG formats for use in external tools, such as pySROS, gNMI, or the Network Services Platform (NSP).
Options	model-path – YANG-modeled format for RESTCONF gnmi-path – gNMI format for streaming telemetry json-instance-path – YANG-modeled format for pySROS
Notes	The following elements are part of a choice: (**detail** and **flat**) or **path-format**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

2.5 Output modifier commands

See “Using output modifiers in the MD-CLI” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

```
– |
   – count
   – match string
      – ignore-case boolean
      – invert-match boolean
      – max-count number
      – post-lines number
      – pre-lines number
   – no-more
   – pyexec (string | reference)
      – [argument-01] string
      – [argument-02] string
      – [argument-03] string
      – [argument-04] string
      – [argument-05] string
      – [argument-06] string
      – [argument-07] string
      – [argument-08] string
      – [argument-09] string
      – [argument-10] string
      – [argument-11] string
      – [argument-12] string
      – [argument-13] string
      – [argument-14] string
      – [argument-15] string
      – [argument-16] string
      – [argument-17] string
      – [argument-18] string
      – [argument-19] string
      – [argument-20] string
   – repeat
      – count number
      – [interval] number
      – timestamp
   – reverse-dns
– > (cflash-url | ftp-tftp-url)
– >> cflash-url

2.5.1 Output modifier command descriptions

|

Synopsis	Apply an output modifier
Context	|
Tree	|
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

count

Synopsis	Show the line count of the output
Context	| count
Tree	count
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

match [pattern] *string*

Synopsis	Match on a string (") or regular expression (')
Context	| match *string*
Tree	match
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[pattern] *string*

Synopsis	String (") or regular expression (') pattern to match
Context	| match *string*
Tree	match
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ignore-case *boolean*

Synopsis	Ignore case in pattern match
Context	| match *string* ignore-case *boolean*
Tree	ignore-case
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

invert-match *boolean*

Synopsis	Invert the pattern match selection
Context	| match *string* invert-match *boolean*
Tree	invert-match
Default	false
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

max-count *number*

Synopsis	Maximum number of displayed matches
Context	| match *string* max-count *number*
Tree	max-count
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

post-lines *number*

Synopsis	Number of lines to display following the matched line
Context	| match *string* post-lines *number*
Tree	post-lines
Range	0 to 4294967295
Default	0
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR Gen 2

pre-lines *number*

Synopsis	Number of lines to display preceding the matched line
Context	| match *string* pre-lines *number*
Tree	pre-lines
Range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

no-more

Synopsis	Prevent pagination for the displayed output
Context	| no-more
Tree	no-more
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

pyexec [url] *(string | reference)*

Synopsis	Execute a Python application
Context	| pyexec *(string | reference)*
Tree	pyexec
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**url**] *(string | reference)*

Synopsis	Location of the script to be executed
Context	| pyexec *(string | reference)*
Tree	pyexec
Reference	**state python python-script name**
Notes	This element is part of a list key.

[**argument-20**] *string*

Synopsis	Twentieth argument
Context	| pyexec *(string* | *reference)* [argument-20] *string*
Tree	[argument-20]
Introduced	25.7.R1
Platforms	7705 SAR Gen 2

repeat

Synopsis	Repeat the command
Context	| repeat
Tree	repeat
Description	Commands in this context configure the command to repeat.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

count *number*

Synopsis	Command repetition count
Context	| repeat count *number*
Tree	count
Range	1 to 65535
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**interval**] *number*

Synopsis	Command repetition interval
Context	| repeat [interval] *number*
Tree	[interval]
Description	This command configures the command repetition interval. If this command is not specified, the command repeats until interrupted with Ctrl-C.
Range	10 to 86400000
Units	milliseconds
Default	1000
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

timestamp

Synopsis	Display the timestamp before each repetition
Context	| repeat timestamp
Tree	timestamp
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

reverse-dns

Synopsis	Resolve IP addresses to DNS names in input
Context	| reverse-dns
Tree	reverse-dns

2.6 perform commands

The **perform** commands are YANG-modeled versions of the **tools perform** commands and are available in MD-CLI and NETCONF interfaces. The **perform** commands execute actions in the router, such as:

- force a LAG subgroup to become active
- set an IS-IS overload condition
- terminate a Python script

```
perform
   – card number
      – power-cycle
   – chassis reference chassis-number reference
      – check-backplane-eprom
   – filter
      – ip-filter reference
         – entry reference
            – activate-primary-action
      – ipv6-filter reference
         – entry reference
            – activate-primary-action
      – redirect-policy reference
         – activate-best-dest
   – gnss
      – restart-position-survey
         – all
         – port
            – [port] reference
   – lag
      – clear-force
         – lag
            – [lag-name] reference
            – sub-group number
         – multi-chassis
            – all
            – peer
               – [ip-address] reference
      – force-active
         – lag
            – [lag-name] reference
            – sub-group number
         – multi-chassis
            – all
            – peer
               – [ip-address] reference
      – force-standby
         – lag
            – [lag-name] reference
            – sub-group number
         – multi-chassis
            – all
            – peer
               – [ip-address] reference
      – load-balance
         – class number
         – [lag-name] reference
   – log
      – custom-event
         – [event-number] number
         – message-string string
```

redirect-policy [redirect-policy-name] *reference*

Synopsis	Enter the **redirect-policy** list instance
Context	perform filter redirect-policy *reference*
Tree	redirect-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

[**redirect-policy-name**] *reference*

Synopsis	Name of the redirect policy
Context	perform filter redirect-policy *reference*
Tree	redirect-policy
Reference	**state filter redirect-policy** *named-item*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

activate-best-dest

Synopsis	Activate the current best destination
Context	perform filter redirect-policy *reference* activate-best-dest
Tree	activate-best-dest
Description	This command forces a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If the **configure filter redirect sticky-dest** command is configured, the timer expires.
Introduced	25.3.R2
Platforms	SAR Gen 2

gnss

Synopsis	Enter the **gnss** context
Context	perform gnss
Tree	gnss
Introduced	26.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR-Hx, 7705 SAR-Mx

restart-position-survey

Synopsis	Enter the **restart-position-survey** context
Context	perform gnss restart-position-survey
Tree	restart-position-survey
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

all

Synopsis	Restart the GNSS position survey on all GNSS ports
Context	perform gnss restart-position-survey all
Tree	all
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

port

Synopsis	Restart the position survey on the specified GNSS port
Context	perform gnss restart-position-survey port
Tree	port
Description	This command performs a restart of the GNSS position survey on the specified GNSS port.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**port**] *reference*

Synopsis	GNSS port for the GNSS position survey
Context	perform gnss restart-position-survey port [port] *reference*
Tree	[port]
Reference	**state port** *port*
Notes	This element is mandatory.

log

Synopsis	Enter the **log** context
Context	perform log
Tree	log
Introduced	25.3.R2
Platforms	SAR Gen 2

custom-event

Synopsis	Send a custom generic log event
Context	perform log custom-event
Tree	custom-event
Description	When specified, the system sends a custom generic log event. The total length of the message string and all parameter strings must be less than or equal to 2400 characters.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**event-number**] *number*

Synopsis	Custom event to send
Context	perform log custom-event [event-number] *number*
Tree	[event-number]
Range	1 to 6
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

message-string *string*

Synopsis	Message for the log event

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	perform log custom-event message-string *string*
Tree	message-string
Description	This command specifies the string for the message field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	1 to 2000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter1 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter1 *string*
Tree	parameter1
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter2 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter2 *string*
Tree	parameter2
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

parameter3 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter3 *string*
Tree	parameter3
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter4 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter4 *string*
Tree	parameter4
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter5 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter5 *string*
Tree	parameter5
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

parameter6 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter6 *string*
Tree	parameter6
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter7 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter7 *string*
Tree	parameter7
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

parameter8 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter8 *string*
Tree	parameter8
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	0 to 2000
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

subject *string*

Synopsis	Subject of the log event
Context	perform log custom-event subject *string*
Tree	subject
Description	This command specifies the string in the subject field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

test-event

Synopsis	Send a test log event
Context	perform log test-event
Tree	test-event
Introduced	25.3.R2
Platforms	SAR Gen 2

custom-text *string*

Synopsis	Custom text of the test event message field
Context	perform log test-event custom-text *string*
Tree	custom-text
Description	This command specifies custom text for the message section of the test log event. Embedded double quotes are not supported in the custom-text string. There is no special treatment for or \r sequences. For example, in the custom-text string is output as the backslash character (\) and "n" (the equivalent of ASCII 0x5C and 0x6e).
String length	0 to 800
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

mda

Synopsis	Enter the **mda** context
Context	perform mda
Tree	mda
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

card-slot [slot-number] *reference*

Synopsis	Enter the **card-slot** list instance
Context	perform mda card-slot *reference*
Tree	card-slot
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**slot-number**] *reference*

Synopsis	Card slot number
Context	perform mda card-slot *reference*
Tree	card-slot
Reference	**state card** *number*
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

mda-slot [mda] *reference*

Synopsis	Enter the **mda-slot** list instance
Context	perform mda card-slot *reference* mda-slot *reference*
Tree	mda-slot
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**mda**] *reference*

Synopsis	Card MDA slot
Context	perform mda card-slot *reference* mda-slot *reference*
Tree	mda-slot
Reference	**state card** *number* **mda** *number*
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ptp-reset

Synopsis	Reset the PTP timing on the specified MDA
Context	perform mda card-slot *reference* mda-slot *reference* ptp-reset
Tree	ptp-reset
Description	This command resets the PTP timing subsystem on the specified MDA. When a PTP timeReceiver port indicates abnormal or extreme values for the offset FromMaster or the meanPathDelay, it may be because of the PTP timing subsystem of the MDA on the timeTransmitter or the timeReceiver. This command can be used to reinitialize the timing subsystem on an MDA without impacting traffic. **Note:** While this command can be used to remedy such a situation, Nokia recommends to first capture any relevant debug files for Nokia investigation.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

pcap [session-name] *reference*

Synopsis	Enter the **pcap** list instance
Context	perform pcap *reference*
Tree	pcap
Description	Commands in this context configure a PCAP instance used for packet capture.
Introduced	25.7.R1
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**session-name**] *reference*

Synopsis	PCAP session name for the packet capture
Context	perform pcap *reference*
Tree	pcap
Reference	**state mirror mirror-dest** *service-name* **pcap** *named-item*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	SAR Gen 2

capture

Synopsis	Enter the **capture** context
Context	perform pcap *reference* capture
Tree	capture
Description	Commands in this context configure the packet capture process for a specified PCAP session.
Introduced	25.7.R1
Platforms	SAR Gen 2

start

Synopsis	Start PCAP capture
Context	perform pcap *reference* capture start
Tree	start
Description	When specified, the system starts the packet capture process and also starts the FTP or TFTP session. If the FTP or TFTP server is unreachable, the command prompt rejects further input until the retry mechanism times out after 24 seconds (four attempts of about six seconds each). If the filename (configured using the **configure mirror mirror-dest pcap** command) is unchanged between captures, this command overwrites the file content. To avoid this, configure the **url-suffix** option, the **timestamp** option, or both, to create a new filename when starting a capture.
Introduced	25.7.R1
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timestamp *boolean*

Synopsis	Add a timestamp to the PCAP capture filename
Context	perform pcap *reference* capture start timestamp *boolean*
Tree	timestamp
Default	false
Introduced	25.7.R1
Platforms	SAR Gen 2

url-suffix *string*

Synopsis	pcap capture file-url suffix string.
Context	perform pcap *reference* capture start url-suffix *string*
Tree	url-suffix
String length	1 to 19
Introduced	25.7.R1
Platforms	SAR Gen 2

stop

Synopsis	Stop PCAP capture
Context	perform pcap *reference* capture stop
Tree	stop
Description	When specified, the system stops the packet capture process and also stops the FTP or TFTP session. If the FTP or TFTP server is unreachable, the command prompt rejects further input until the retry mechanism times out after 24 seconds (four attempts of about six seconds each).
Introduced	25.7.R1
Platforms	SAR Gen 2

port [port-id] *reference*

Synopsis	Enter the **port** list instance
Context	perform port *reference*
Tree	port
Introduced	26.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**port-id**] *reference*

Tree	summary
Notes	The following elements are part of a choice: **card**, **pair-id**, or **summary**.
Introduced	25.3.R2
Platforms	SAR Gen 2

pim

Synopsis	Enter the **pim** context
Context	perform router *string* pim
Tree	pim
Description	Commands in this context enable tools to perform PIM tasks.
Introduced	25.3.R2
Platforms	SAR Gen 2

mc-ecmp-rebalance

Synopsis	Perform multicast ECMP rebalance
Context	perform router *string* pim mc-ecmp-rebalance
Tree	mc-ecmp-rebalance
Introduced	25.3.R2
Platforms	SAR Gen 2

threshold *number*

Synopsis	ECMP preference level threshold
Context	perform router *string* pim mc-ecmp-rebalance threshold *number*
Tree	threshold
Description	This command configures a threshold level to force a rebalance of all multicast streams with a priority of less than or equal to the specified value. Selecting the highest value forces the rebalance of all multicast streams.
Range	1 to 7
Introduced	25.3.R2
Platforms	SAR Gen 2

show

Synopsis	Enter the **show** context
Context	perform router *string* pim show
Tree	show
Introduced	25.3.R2
Platforms	SAR Gen 2

iom-failures

Synopsis	Display IOM failures
Context	perform router *string* pim show iom-failures
Tree	iom-failures
Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Display IOM failure details
Context	perform router *string* pim show iom-failures detail *boolean*
Tree	detail
Introduced	25.3.R2
Platforms	SAR Gen 2

service

Synopsis	Enter the **service** context
Context	perform service
Tree	service
Introduced	25.10.R1
Platforms	SAR Gen 2

cpipe [service-name] *reference*

Synopsis	Enter the **cpipe** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	perform service cpipe *reference*
Tree	cpipe
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**service-name**] *reference*

Synopsis	Name of Cpipe service to perform actions on
Context	perform service cpipe *reference*
Tree	cpipe
Reference	**state service cpipe** *service-name*
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

sap [sap-id] *reference*

Synopsis	Enter the **sap** list instance
Context	perform service cpipe *reference* sap *reference*
Tree	sap
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**sap-id**] *reference*

Synopsis	SAP ID
Context	perform service cpipe *reference* sap *reference*
Tree	sap
Reference	**state service cpipe** *service-name* **sap** *sap*
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

cem

Synopsis	Enter the **cem** context
Context	perform service cpipe *reference* sap *reference* cem
Tree	cem
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

asym-delay-adjust

Synopsis	Perform asym-delay-adjustment action
Context	perform service cpipe *reference* sap *reference* cem asym-delay-adjust
Tree	asym-delay-adjust
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ies [service-name] *reference*

Synopsis	Enter the **ies** list instance
Context	perform service ies *reference*
Tree	ies
Introduced	25.10.R1
Platforms	SAR Gen 2

[**service-name**] *reference*

Synopsis	IES service to perform actions on
Context	perform service ies *reference*
Tree	ies
Reference	**state service ies** *service-name*
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	SAR Gen 2

ip-transport [ipt-id] *reference*

Synopsis	Enter the **ip-transport** list instance
Context	perform service ies *reference* ip-transport *reference*
Tree	ip-transport
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**ipt-id**] *reference*

Synopsis	The id of the ip-transport to perform actions on
Context	perform service ies *reference* ip-transport *reference*
Tree	ip-transport
Reference	**state service ies** *service-name* **ip-transport** *port*
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

remote-host [remote-host-id] *reference*

Synopsis	Enter the **remote-host** list instance
Context	perform service ies *reference* ip-transport *reference* remote-host *reference*
Tree	remote-host
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**remote-host-id**] *reference*

Synopsis	The id of the remote-host to perform actions on
Context	perform service ies *reference* ip-transport *reference* remote-host *reference*
Tree	remote-host
Reference	**state service ies** *service-name* **ip-transport** *port* **remote-host** *number*
Notes	This element is part of a list key.
Introduced	26.3.R1

reload

Synopsis	Reload customized proto file
Context	perform system grpc custom-proto *reference* reload
Tree	reload
Introduced	26.7.R1
Platforms	SAR Gen 2

script-control

Synopsis	Enter the **script-control** context
Context	perform system script-control
Tree	script-control
Introduced	25.3.R2
Platforms	SAR Gen 2

script-policy

Synopsis	Enter the **script-policy** context
Context	perform system script-control script-policy
Tree	script-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

stop

Synopsis	Stop the execution of scripts
Context	perform system script-control script-policy stop
Tree	stop
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Stop script execution for all script policies

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	perform system script-control script-policy stop all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**owner** and **policy-name**).
Introduced	25.3.R2
Platforms	SAR Gen 2

owner *reference*

Synopsis	Stop script execution for a specific owner
Context	perform system script-control script-policy stop owner *reference*
Tree	owner
Default	TiMOS CLI
Reference	**state system script-control script-policy** *named-item* **owner** *named-item*
Notes	The following elements are part of a mandatory choice: **all** or (**owner** and **policy-name**).
Introduced	25.3.R2
Platforms	SAR Gen 2

policy-name *reference*

Synopsis	Stop script execution for a specific policy
Context	perform system script-control script-policy stop policy-name *reference*
Tree	policy-name
Reference	**state system script-control script-policy** *named-item* **owner** *named-item*
Notes	The following elements are part of a mandatory choice: **all** or (**owner** and **policy-name**).
Introduced	25.3.R2
Platforms	SAR Gen 2

security

Synopsis	Enter the **security** context
Context	perform system security
Tree	security

ssh

Synopsis	Enter the **ssh** context
Context	perform system ssh
Tree	ssh
Introduced	25.3.R2
Platforms	SAR Gen 2

generate-keypair

Synopsis	Generate SSH authentication key pair
Context	perform system ssh generate-keypair
Tree	generate-keypair
Introduced	25.3.R2
Platforms	SAR Gen 2

ecdsa-curve *keyword*

Synopsis	Elliptic curve of the ECDSA key to be generated
Context	perform system ssh generate-keypair ecdsa-curve *keyword*
Tree	ecdsa-curve
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ed25519

Synopsis	Generate an ed25519 key
Context	perform system ssh generate-keypair ed25519
Tree	ed25519
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

rsa-key-size *number*

Synopsis	Length in bits of the RSA key to be generated
Context	perform system ssh generate-keypair rsa-key-size *number*
Tree	rsa-key-size
Range	2048 to 4096
Default	3072
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**save-path**] *cflash-url*

Synopsis	Path to save the result key file
Context	perform system ssh generate-keypair [save-path] *cflash-url*
Tree	[save-path]
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

2.7 reset commands

The **reset** commands are YANG-modeled versions of the **clear** commands and are available in MD-CLI and NETCONF interfaces. The **reset** commands are primarily used to:

- set statistics in a specific area back to a value of zero
- reset specific hardware assemblies, for example, cards
- delete temporary operational state data, for example, contents of a log in memory

```
reset
   – card reference
      – fp reference
         – distributed-cpu-protection
            – information
         – forward-engine-drop-reason
            – statistics
         – ingress
            – per-egress-fp-statistics
            – queue-group
               – statistics
                  – instance number
                  – mode keyword
                  – queue-group-name string
      – reinitialize
         – hard-reset-unsupported-mdas
         – soft
   – filter
      – ip-exception
         – direction keyword
         – entry reference
         – [filter-name] reference
      – ip-filter
         – direction keyword
         – entry reference
         – [filter-name] reference
      – ipv6-exception
         – direction keyword
         – entry reference
         – [filter-name] reference
      – ipv6-filter
         – direction keyword
         – entry reference
         – [filter-name] reference
      – log
         – [log-id] reference
      – policer reference
         – instance
            – all
               – direction keyword
            – filter
               – ip
                  – direction keyword
                  – [name] reference
               – ipv6
                  – direction keyword
                  – [name] reference
            – system
               – direction keyword
   – lag reference
      – aggregate-queue-statistics
```

2.7.1 reset command descriptions

reset

Synopsis	Clear statistics or reset operational state
Context	reset
Tree	reset
Description	Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).
Introduced	25.3.R2
Platforms	SAR Gen 2

card [slot-number] *reference*

Synopsis	Enter the **card** list instance
Context	reset card *reference*
Tree	card
Description	Commands in this context perform reset operations on a specific card.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**slot-number**] *reference*

Synopsis	Slot number
Context	reset card *reference*
Tree	card
Reference	**state card** *number*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

fp [fp-number] *reference*

Synopsis	Enter the **fp** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset card *reference* fp *reference*
Tree	fp
Description	Commands in this context display information for the specified forwarding plane (FP).
Introduced	25.3.R2
Platforms	SAR Gen 2

[**fp-number**] *reference*

Synopsis	FP number
Context	reset card *reference* fp *reference*
Tree	fp
Reference	**state card** *number* **fp** *number*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

distributed-cpu-protection

Synopsis	Enter the **distributed-cpu-protection** context
Context	reset card *reference* fp *reference* distributed-cpu-protection
Tree	distributed-cpu-protection
Description	Commands in this context reset the distributed CPU protection information.
Introduced	25.3.R2
Platforms	SAR Gen 2

information

Synopsis	Reset distributed CPU protection information
Context	reset card *reference* fp *reference* distributed-cpu-protection information
Tree	information
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

forward-engine-drop-reason

Synopsis	Enter the **forward-engine-drop-reason** context
Context	reset card *reference* fp *reference* forward-engine-drop-reason
Tree	forward-engine-drop-reason
Introduced	25.3.R2
Platforms	SAR Gen 2

statistics

Synopsis	Reset forwarding engine drop reason statistics
Context	reset card *reference* fp *reference* forward-engine-drop-reason statistics
Tree	statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress

Synopsis	Enter the **ingress** context
Context	reset card *reference* fp *reference* ingress
Tree	ingress
Description	Commands in this context reset the ingress information.
Introduced	25.3.R2
Platforms	SAR Gen 2

per-egress-fp-statistics

Synopsis	Reset per egress FP statistics
Context	reset card *reference* fp *reference* ingress per-egress-fp-statistics
Tree	per-egress-fp-statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

queue-group

Synopsis	Enter the **queue-group** context
Context	reset card *reference* fp *reference* ingress queue-group
Tree	queue-group
Introduced	25.3.R2
Platforms	SAR Gen 2

statistics

Synopsis	Reset the queue group statistics
Context	reset card *reference* fp *reference* ingress queue-group statistics
Tree	statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

instance *number*

Synopsis	Queue group instance ID
Context	reset card *reference* fp *reference* ingress queue-group statistics instance *number*
Tree	instance
Max. range	0 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Queue group statistics mode
Context	reset card *reference* fp *reference* ingress queue-group statistics mode *keyword*
Tree	mode
Options	access, network
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

queue-group-name *string*

Synopsis	Queue group name
Context	reset card *reference* fp *reference* ingress queue-group statistics queue-group-name *string*
Tree	queue-group-name
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

reinitialize

Synopsis	Reset the specified card
Context	reset card *reference* reinitialize
Tree	reinitialize
Introduced	25.3.R2
Platforms	SAR Gen 2

hard-reset-unsupported-mdas

Synopsis	Perform a hard reset on MDAs incapable of soft reset
Context	reset card *reference* reinitialize hard-reset-unsupported-mdas
Tree	hard-reset-unsupported-mdas
Description	This command allows a soft reset operation when some of the MDAs cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset, and a hard reset is performed on MDAs that do not support soft resets.
Introduced	25.3.R2
Platforms	SAR Gen 2

soft

Synopsis	Perform a soft reset on the card
Context	reset card *reference* reinitialize soft
Tree	soft
Introduced	25.3.R2
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

log

Synopsis	Enter the **log** context
Context	reset log
Tree	log
Description	Commands in this context provide reset operations for events, logs, and the event handling system (EHS).
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

event-handling

Synopsis	Enter the **event-handling** context
Context	reset log event-handling
Tree	event-handling
Description	Commands in this context provide reset operations for the EHS.
Introduced	25.3.R2
Platforms	SAR Gen 2

handlers

Synopsis	Enter the **handlers** context
Context	reset log event-handling handlers
Tree	handlers
Description	Commands in this context reset statistics related to EHS handlers.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Reset statistics for all EHS handlers
Context	reset log event-handling handlers all
Tree	all
Description	This command resets all statistics for all handlers in the **state log event-handling handler** context and in the output of the **show log event-handling handler** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

handler

Synopsis	Reset statistics for a specified EHS handler
Context	reset log event-handling handlers handler
Tree	handler
Description	This command resets all statistics for the specified handler in the **state log event-handling handler** context and in the output of the **show log event-handling handler** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *reference*

Synopsis	Handler name to reset
Context	reset log event-handling handlers handler [name] *reference*
Tree	[name]
Reference	**state log event-handling handler** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

information

Synopsis	Reset general EHS operational data
Context	reset log event-handling information
Tree	information
Description	This command resets all data in the **state log event-handling summary-statistics** context and in the output of the **show log event-handling information** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

log-events

Synopsis	Enter the **log-events** context
Context	reset log log-events
Tree	log-events
Description	Commands in this context reset the operational state related to log events.
Introduced	25.3.R2
Platforms	SAR Gen 2

repeating-events

Synopsis	Enter the **repeating-events** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset log log-events repeating-events
Tree	repeating-events
Description	Commands in this context reset the operational state related to repeating log events.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Reset operation for all repeating log events
Context	reset log log-events repeating-events all
Tree	all
Description	This command cancels the repetition of all log events that are currently repeating. All repeating log events stop repeating.
Introduced	25.3.R2
Platforms	SAR Gen 2

log-id

Synopsis	Reset the specified event log
Context	reset log log-id
Tree	log-id
Description	This command reinitializes or rolls over the specified memory or file event log. Memory logs are reinitialized and cleared of contents. File logs are manually rolled over by this command. This command is applicable only to event logs that are directed to file destinations and memory destinations. This command does not affect SNMP, syslog, console, CLI, or session logs.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *reference*

Synopsis	Name of the event log to reset
Context	reset log log-id [name] *reference*
Tree	[name]

Tree	soft-inbound
Introduced	25.3.R2
Platforms	SAR Gen 2

soft-route-refresh

Synopsis	Reset a session by sending messages to the peer
Context	reset router *string* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone | keyword)* soft-route-refresh
Tree	soft-route-refresh
Description	When configured, the router sends one or more Route Refresh messages to the peer, but the session remains up. If this command is configured and an address family is not provided, the session remains established, and one Route Refresh message is transmitted to the peer for each address family active on the session. If this command is configured and an address family is also provided, the session remains established and a single Route Refresh message is transmitted to the peer requesting that it resend only its routes belonging to that one address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

family *keyword*

Synopsis	Address family
Context	reset router *string* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone | keyword)* soft-route-refresh family *keyword*
Tree	family
Description	This command configures the address family encoded in the Route Refresh request sent to the peer.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Introduced	25.3.R2
Platforms	SAR Gen 2

statistics

statistics

Synopsis	Reset DHCPv4 server statistics
Context	reset router *string* dhcp-server dhcpv4 *named-item* statistics
Tree	statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

sticky-leases

Synopsis	Enter the **sticky-leases** context
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases
Tree	sticky-leases
Description	Commands in this context delete sticky leases.
Introduced	25.3.R2
Platforms	SAR Gen 2

host-name

Synopsis	Delete the sticky lease associated with the hostname
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name
Tree	host-name
Introduced	25.3.R2
Platforms	SAR Gen 2

[**host-name**] *named-item*

Synopsis	Hostname
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name [host-name] *named-item*
Tree	[host-name]
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2

Platforms	SAR Gen 2

host-name-prefix

Synopsis	Delete sticky leases associated with hostnames containing the prefix
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name-prefix
Tree	host-name-prefix
Introduced	25.3.R2
Platforms	SAR Gen 2

[**host-name-prefix**] *named-item*

Synopsis	Hostname prefix
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name-prefix [host-name-prefix] *named-item*
Tree	[host-name-prefix]
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

subnet-extended-statistics

Synopsis	Enter the **subnet-extended-statistics** context
Context	reset router *string* dhcp-server dhcpv4 *named-item* subnet-extended-statistics
Tree	subnet-extended-statistics
Description	Commands in this context reset the per subnet extended statistics peak values.
Introduced	25.3.R2
Platforms	SAR Gen 2

pool

Synopsis	Reset extended statistics peak values for all subnets in the pool
Context	reset router *string* dhcp-server dhcpv4 *named-item* subnet-extended-statistics pool

© 2026 Nokia.

Context	reset router *string* interface *interface-name*
Tree	interface
Description	Commands in this context reset IP interface statistics.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	reset router *string* interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-time

Synopsis	Reset the IP interface activation hold timers
Context	reset router *string* interface *interface-name* hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	SAR Gen 2

mac

Synopsis	Enter the **mac** context
Context	reset router *string* interface *interface-name* mac
Tree	mac
Introduced	25.3.R2
Platforms	SAR Gen 2

address

Synopsis	Reset specified MAC address from associated interface
Context	reset router *string* interface *interface-name* mac address
Tree	address
Introduced	25.3.R2
Platforms	SAR Gen 2

[**mac-address**] *mac-address*

Synopsis	MAC address
Context	reset router *string* interface *interface-name* mac address [mac-address] *mac-address*
Tree	[mac-address]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Reset all MAC addresses for the specified interface
Context	reset router *string* interface *interface-name* mac all
Tree	all
Introduced	25.3.R2
Platforms	SAR Gen 2

statistics

Synopsis	Reset the interface traffic statistics
Context	reset router *string* interface *interface-name* statistics
Tree	statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

urpf-statistics

Synopsis	Reset the interface uRPF statistics
Context	reset router *string* interface *interface-name* urpf-statistics
Tree	urpf-statistics
Introduced	25.3.R2
Platforms	SAR Gen 2

isis [isis-instance] *reference*

Synopsis	Enter the **isis** list instance
Context	reset router *string* isis *reference*
Tree	isis
Description	Commands in this context reset the IS-IS protocol entities.
Introduced	25.3.R2
Platforms	SAR Gen 2

[isis-instance] *reference*

Synopsis	IS-IS instance
Context	reset router *string* isis *reference*
Tree	isis
MD-CLI default	0
Reference	**state router** *named-item-64* **isis** *number*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

adjacency

Synopsis	Enter the **adjacency** context
Context	reset router *string* isis *reference* adjacency
Tree	adjacency
Description	Commands in this context reset the entries from the IS-IS adjacency database.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

all-adjacencies

Synopsis	Reset all IS-IS adjacencies
Context	reset router *string* isis *reference* adjacency all-adjacencies
Tree	all-adjacencies
Introduced	25.3.R2
Platforms	SAR Gen 2

system-id

Synopsis	Reset the IS-IS adjacency to a node
Context	reset router *string* isis *reference* adjacency system-id
Tree	system-id
Introduced	25.3.R2
Platforms	SAR Gen 2

[**system-id**] *system-id*

Synopsis	System ID for a specific node
Context	reset router *string* isis *reference* adjacency system-id [system-id] *system-id*
Tree	[system-id]
String length	14
Default	0000.0000.0000
String format	'system-id' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

database

Synopsis	Enter the **database** context
Context	reset router *string* isis *reference* database

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	database
Description	Commands in this context reset the entries from the IS-IS link-state database.
Introduced	25.3.R2
Platforms	SAR Gen 2

all-databases

Synopsis	Reset all IS-IS databases system wide
Context	reset router *string* isis *reference* database all-databases
Tree	all-databases
Introduced	25.3.R2
Platforms	SAR Gen 2

system-id

Synopsis	Reset the IS-IS database for a node
Context	reset router *string* isis *reference* database system-id
Tree	system-id
Introduced	25.3.R2
Platforms	SAR Gen 2

[**system-id**] *system-id*

Synopsis	System ID for a specific node
Context	reset router *string* isis *reference* database system-id [system-id] *system-id*
Tree	[system-id]
String length	14
Default	0000.0000.0000
String format	'system-id' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

export

Synopsis	Reset and re-evaluate IS-IS route policies
Context	reset router *string* isis *reference* export
Tree	export
Description	When configured, the system re-evaluates route policies participating in the export mechanism, either as importers or exporters of routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

overload

Synopsis	Reset the IS-IS overload
Context	reset router *string* isis *reference* overload
Tree	overload
Introduced	25.3.R2
Platforms	SAR Gen 2

[**overload-type**] *keyword*

Synopsis	Overload type
Context	reset router *string* isis *reference* overload [overload-type] *keyword*
Tree	[overload-type]
Options	fib, rtm, prefix-limit
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

sid-egress-stats

Synopsis	Enter the **sid-egress-stats** context
Context	reset router *string* isis *reference* sid-egress-stats
Tree	sid-egress-stats
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

fec-type *keyword*

Synopsis	Overload FEC type
Context	reset router *string* ldp session fec-type *keyword*
Tree	fec-type
Description	This command specifies the overload Forwarding Equivalence Class (FEC) type.
Options	p2mp, prefixes, svc-fec128, svc-fec129
Notes	The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced	25.10.R1
Platforms	SAR Gen 2

overload

Synopsis	Reset resource overload status
Context	reset router *string* ldp session overload
Tree	overload
Notes	The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced	25.10.R1
Platforms	SAR Gen 2

[**peer-lsr-id**] *reference*

Synopsis	Peer LSR ID
Context	reset router *string* ldp session [peer-lsr-id] *reference*
Tree	[peer-lsr-id]
Reference	**state router** *named-item-64* **ldp session** *lsr-id*
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	SAR Gen 2

statistics

Synopsis	Reset LDP session statistics

© 2026 Nokia.

Context	reset router *string* ldp session statistics
Tree	statistics
Notes	The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced	25.10.R1
Platforms	SAR Gen 2

sub-type *keyword*

Synopsis	Overload FEC subtype for P2MP or prefixes
Context	reset router *string* ldp session sub-type *keyword*
Tree	sub-type
Options	ipv4, ipv6
Notes	The following elements are part of a choice: (**fec-type**, **overload**, and **sub-type**) or **statistics**.
Introduced	25.10.R1
Platforms	SAR Gen 2

statistics

Synopsis	Reset LDP statistics
Context	reset router *string* ldp statistics
Tree	statistics
Introduced	25.10.R1
Platforms	SAR Gen 2

targeted-auto-rx

Synopsis	Reset LDP auto-rx
Context	reset router *string* ldp targeted-auto-rx
Tree	targeted-auto-rx
Description	When specified, the system resets unneeded automatic T-LDP sessions on all applicable nodes.
Introduced	25.10.R1
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hold-time *number*

Synopsis	Hold-time where auto-rx targeted peers do not generate
Context	reset router *string* ldp targeted-auto-rx hold-time *number*
Tree	hold-time
Range	1 to 65535
Units	seconds
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	SAR Gen 2

mld

Synopsis	Enter the **mld** context
Context	reset router *string* mld
Tree	mld
Description	Commands in this context perform reset operations on Multicast Listener Discovery (MLD) entities.
Introduced	25.3.R2
Platforms	SAR Gen 2

database

Synopsis	Enter the **database** context
Context	reset router *string* mld database
Tree	database
Description	Commands in this context reset MLD database entities.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Reset database for all interfaces, groups, and hosts
Context	reset router *string* mld database all
Tree	all

© 2026 Nokia.

group-address *ipv4-multicast-address*

Synopsis	Group address
Context	reset router *string* msdp cache group-address *ipv4-multicast-address*
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	25.3.R2
Platforms	SAR Gen 2

origin-rp-address *ipv4-unicast-address*

Synopsis	Origin RP address
Context	reset router *string* msdp cache origin-rp-address *ipv4-unicast-address*
Tree	origin-rp-address
Description	This command specifies the origin Rendezvous Point (RP) address type of the source-active (SA) entry to reset.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-address *ipv4-unicast-address*

Synopsis	Peer address
Context	reset router *string* msdp cache peer-address *ipv4-unicast-address*
Tree	peer-address
Description	This command specifies the peer address of the cache of the IP address for the peer where MSDP SA requests for groups matching the group range for this entry were sent.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

peer-address *ipv4-unicast-address*

Synopsis	Peer address
Context	reset router *string* msdp statistics peer-address *ipv4-unicast-address*
Tree	peer-address
Description	This command specifies the peer address for resetting statistics where MSDP SA requests for groups matching the group range for this entry were sent.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

neighbor

Synopsis	Enter the **neighbor** context
Context	reset router *string* neighbor
Tree	neighbor
Description	Commands in this context reset neighbor information.

Tree	all
Introduced	25.3.R2
Platforms	SAR Gen 2

md

Synopsis	Reset the MD
Context	reset router *string* pim s-pmsi md
Tree	md
Description	This command specifies the source address used for the Multicast Distribution Tree (MDT) to reset.
Introduced	25.3.R2
Platforms	SAR Gen 2

group *ipv4-multicast-address*

Synopsis	Group address
Context	reset router *string* pim s-pmsi md group *ipv4-multicast-address*
Tree	group
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	25.3.R2
Platforms	SAR Gen 2

source *ipv4-unicast-address*

Synopsis	Source address
Context	reset router *string* pim s-pmsi md source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

Context	reset system
Tree	system
Introduced	25.3.R2
Platforms	SAR Gen 2

management-interface

Synopsis	Enter the **management-interface** context
Context	reset system management-interface
Tree	management-interface
Introduced	25.3.R2
Platforms	SAR Gen 2

netconf

Synopsis	Enter the **netconf** context
Context	reset system management-interface netconf
Tree	netconf
Introduced	25.7.R1
Platforms	SAR Gen 2

call-home

Synopsis	Enter the **call-home** context
Context	reset system management-interface netconf call-home
Tree	call-home
Introduced	25.7.R1
Platforms	SAR Gen 2

all-client

Synopsis	Enter the **all-client** context
Context	reset system management-interface netconf call-home all-client
Tree	all-client
Introduced	25.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

statistics

Synopsis	Reset statistics of all NETCONF call-home clients
Context	reset system management-interface netconf call-home all-client statistics
Tree	statistics
Introduced	25.7.R1
Platforms	SAR Gen 2

netconf-client [netconf-client] *reference*

Synopsis	Enter the **netconf-client** list instance
Context	reset system management-interface netconf call-home netconf-client *reference*
Tree	netconf-client
Description	Commands in this context reset operations for NETCONF call-home clients.
Introduced	25.7.R1
Platforms	SAR Gen 2

[**netconf-client**] *reference*

Synopsis	NETCONF client
Context	reset system management-interface netconf call-home netconf-client *reference*
Tree	netconf-client
Reference	**state system management-interface netconf call-home netconf-client** *named-item*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	SAR Gen 2

statistics

ptp

Synopsis	Enter the **ptp** context
Context	reset system ptp
Tree	ptp
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

clock-recovery

Synopsis	Reset PTP clock recovery algorithm
Context	reset system ptp clock-recovery
Tree	clock-recovery
Description	This command resets the algorithms involved in PTP frequency and time recovery to initial conditions. This clears out any previous history and can be used to ensure a consistent starting state for a test or can be used to clear any unexpected behavior in the algorithm.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

reboot-required

Synopsis	Clear the reboot required state
Context	reset system reboot-required
Tree	reboot-required
Description	This command clears the reboot required information. Use this command after a configuration triggers the reboot required state, but the configuration is removed.
Introduced	25.3.R2
Platforms	SAR Gen 2

script-control

Synopsis	Enter the **script-control** context
Context	reset system script-control
Tree	script-control
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

script-policy

Synopsis	Enter the **script-policy** context
Context	reset system script-control script-policy
Tree	script-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

completed

Synopsis	Enter the **completed** context
Context	reset system script-control script-policy completed
Tree	completed
Description	Commands in this context delete completed script run history entries.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Delete script run entries for all script policies
Context	reset system script-control script-policy completed all
Tree	all
Introduced	25.3.R2
Platforms	SAR Gen 2

policy

Synopsis	Delete script run entries for specific policies
Context	reset system script-control script-policy completed policy
Tree	policy
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

owner *reference*

Synopsis	Script-policy owner for run history deletion
Context	reset system script-control script-policy completed policy owner *reference*
Tree	owner
Description	This command specifies the script policy owner for run history deletion. The system only deletes run history entries for script policies with this owner and the specified policy name.
Default	TiMOS CLI
Reference	**state system script-control script-policy** *named-item* **owner** *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

[**policy-name**] *reference*

Synopsis	Script-policy name for run history deletion
Context	reset system script-control script-policy completed policy [policy-name] *reference*
Tree	[policy-name]
Reference	**state system script-control script-policy** *named-item* **owner** *named-item*
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

security

Synopsis	Enter the **security** context
Context	reset system security
Tree	security
Introduced	25.3.R2
Platforms	SAR Gen 2

management-access-filter

Synopsis	Enter the **management-access-filter** context
Context	reset system security management-access-filter

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	management-access-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-filter

Synopsis	Reset operation on the specified IP filter
Context	reset system security management-access-filter ip-filter
Tree	ip-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

entry *reference*

Synopsis	Entry ID for the IP filter
Context	reset system security management-access-filter ip-filter entry *reference*
Tree	entry
Reference	**state system security management-access-filter ip-filter entry** *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6-filter

Synopsis	Reset operation on the specified IPv6 filter
Context	reset system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

entry *reference*

Synopsis	Entry ID for the IPv6 filter
Context	reset system security management-access-filter ipv6-filter entry *reference*
Tree	entry
Reference	**state system security management-access-filter ipv6-filter entry** *number*

© 2026 Nokia.

3 Configuration mode commands

This section lists the commands available in MD-CLI configuration modes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

3.1 Configuration mode commands

See “Editing configuration” in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

```
- annotate comment-text-type
   - [cli-path] cli-path-type
- commit
   - comment string
   - confirmed
      - accept
      - cancel
      - comment string
      - persist-id string
      - [timeout] number
- compare string [to] string
   - [cli-path] cli-path-type
   - flat
   - full-context
   - lines number
   - netconf-rpc
   - summary
- copy
   - [cli-path] cli-path-type
   - to cli-path-type
- discard
   - [cli-path] cli-path-type
- insert instance-id
   - after
      - [cli-path] instance-id
   - before
      - [cli-path] instance-id
   - beginning
   - end
- load keyword
   - encryption-key string
   - interactive
   - [url] string
- rename
   - [cli-path] cli-path-type
   - to cli-path-type
- replace string with string
   - [cli-path] cli-path-type
   - continue-on-error
   - depth number
   - ignore-case
- rollback
   - commit-id number
   - [rollback-id] (keyword | number)
- update
   - /configure
   - /bof
   - check
   - /debug
   - /li
- validate
```

3.1.1 Configuration mode command descriptions

annotate [comment-text] *comment-text-type*

Synopsis	Annotate a configuration element with a comment
Context	annotate *comment-text-type*
Tree	annotate
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**comment-text**] *comment-text-type*

Synopsis	Comment for the configuration element
Context	annotate *comment-text-type*
Tree	annotate
String length	0 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	annotate *comment-text-type* [cli-path] *cli-path-type*
Tree	[cli-path]
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

commit

Synopsis	Commit the candidate configuration
Context	commit
Tree	commit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	7705 SAR Gen 2

comment *string*

Synopsis	Comment associated with the commit
Context	commit comment *string*
Tree	comment
String length	1 to 2048
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

confirmed

Synopsis	Enter the **confirmed** context
Context	commit confirmed
Tree	confirmed
Description	This context is not supported for the BOF or debug configuration regions.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

accept

Synopsis	Accept commit confirmed and cancel automatic rollback
Context	commit confirmed accept
Tree	accept
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

cancel

Synopsis	Cancel commit confirmed and roll back changes
Context	commit confirmed cancel

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cancel
Description	When specified, the router rolls back the configuration and returns the changes to the candidate.
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

comment *string*

Synopsis	Comment associated with the commit
Context	commit confirmed comment *string*
Tree	comment
String length	1 to 2048
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

persist-id *string*

Synopsis	Persistent confirmed commit ID
Context	commit confirmed persist-id *string*
Tree	persist-id
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**timeout**] *number*

Synopsis	Confirmed commit expiration timeout interval
Context	commit confirmed [timeout] *number*
Tree	[timeout]
Range	1 to 65535
Units	minutes
Default	10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

compare [from] *string* to *string*

Synopsis	Compare changes between datastores
Context	compare *string* [to] *string*
Tree	compare
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**from**] *string*

Synopsis	Source configuration from which to compare
Context	compare *string* [to] *string*
Tree	compare
MD-CLI default	baseline
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**to**] *string*

Synopsis	Configuration to compare against source configuration
Context	compare *string* [to] *string*
Tree	compare
MD-CLI default	candidate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	compare *string* [to] *string* [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

flat

Synopsis	Show the context from the pwc on each line
Context	compare *string* [to] *string* flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

full-context

Synopsis	Show the full context on each line
Context	compare *string* [to] *string* full-context
Tree	full-context
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

lines *number*

Synopsis	Number of lines of context to display before and after
Context	compare *string* [to] *string* lines *number*
Tree	lines
Description	This command specifies the number of lines of context to display before and after changed elements. The context is evaluated separately at each container. If the parameter value is larger than the available context, the maximum available context up to the container boundary is displayed.
Max. range	0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	0
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

netconf-rpc

Synopsis	Display changes in NETCONF <edit-config> RPC format
Context	compare *string* [to] *string* netconf-rpc
Tree	netconf-rpc
Description	This option specifies the display of changes in NETCONF <edit-config> RPC format. This option is only supported with the **summary** option.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

summary

Synopsis	Suppress specific differences and display a summary
Context	compare *string* [to] *string* summary
Tree	summary
Description	This command allows the suppression of specific differences and displays a summarized comparison. The summarized differences in elements under the highest level container that was deleted is displayed with { ... }. A tilde (~) character is displayed to indicate the new value of an element that has changed.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

copy

Synopsis	Copy a configuration element to another
Context	copy
Tree	copy
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	copy [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

to *cli-path-type*

Synopsis	Destination path, or 'pwc'
Context	copy to *cli-path-type*
Tree	to
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

discard

Synopsis	Discard changes in the candidate configuration
Context	discard
Tree	discard
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	discard [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

insert [new-entry] *instance-id*

Synopsis	Insert an element into a user-ordered list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	insert *instance-id*
Tree	insert
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**new-entry**] *instance-id*

Synopsis	Identification of the new entry
Context	insert *instance-id*
Tree	insert
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

after

Synopsis	Insert an entry after the specified entry
Context	insert *instance-id* after
Tree	after
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**cli-path**] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert *instance-id* after [cli-path] *instance-id*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

before

Synopsis	Insert an entry before the specified entry
Context	insert *instance-id* before

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	before
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**cli-path**] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert *instance-id* before [cli-path] *instance-id*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

beginning

Synopsis	Insert the new entry at the beginning of the list
Context	insert *instance-id* beginning
Tree	beginning
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

end

Synopsis	Insert the new entry at the end of the list
Context	insert *instance-id* end
Tree	end
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

load [mode] *keyword*

Synopsis	Load configuration into the candidate configuration
Context	load *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	load
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**mode**] *keyword*

Synopsis	Load mode
Context	load *keyword*
Tree	load
Options	merge – Merge with the candidate configuration full-replace – Replace the candidate configuration
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

encryption-key *string*

Synopsis	Encryption key of the file to be loaded
Context	load *keyword* encryption-key *string*
Tree	encryption-key
String length	8 to 32
Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

interactive

Synopsis	Load the configuration interactively
Context	load *keyword* interactive
Tree	interactive
Description	This command allows the user to enter configuration commands directly in an interactive session. This command is available with the **merge** option of the **load** command. See "Loading configuration interactively" in the *7705 SAR Gen 2 MD-CLI User Guide* for more information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**url**] *string*

Synopsis	Location of the file to be loaded
Context	load *keyword* [url] *string*
Tree	[url]
String length	1 to 255
Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

rename

Synopsis	Rename a list element
Context	rename
Tree	rename
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**cli-path**] *cli-path-type*

Synopsis	Source element path to the list, or 'pwc'
Context	rename [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

to *cli-path-type*

Synopsis	Destination key name
Context	rename to *cli-path-type*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	to
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

replace [pattern] *string* with *string*

Synopsis	Match and replace values in the candidate configuration
Context	replace *string* with *string*
Tree	replace
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**pattern**] *string*

Synopsis	String (") or regular expression (') pattern to match
Context	replace *string* with *string*
Tree	replace
Description	This command configures a text string or regular expression that defines the values to match.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

with *string*

Synopsis	String (") or regular expression (') pattern to replace
Context	replace *string* with *string*
Tree	replace
String length	0 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	replace *string* with *string* [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

continue-on-error

Synopsis	Continue the replace operation upon errors
Context	replace *string* with *string* continue-on-error
Tree	continue-on-error
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

depth *number*

Synopsis	Replace operation depth from the pwc
Context	replace *string* with *string* depth *number*
Tree	depth
Range	1 to 4294967040
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

ignore-case

Synopsis	Ignore case in pattern match
Context	replace *string* with *string* ignore-case
Tree	ignore-case
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rollback

Synopsis	Roll back to a previous configuration
Context	rollback
Tree	rollback
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

commit-id *number*

Synopsis	Commit ID to roll back to
Context	rollback commit-id *number*
Tree	commit-id
Range	1 to 4294967295
Notes	The following elements are part of a choice: **commit-id** or **rollback-id**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

[**rollback-id**] *(keyword | number)*

Synopsis	Previous configuration to roll back to
Context	rollback [rollback-id] *(keyword | number)*
Tree	[rollback-id]
Range	0 to 200
Options	startup – Configuration loaded when the system boots
Notes	The following elements are part of a choice: **commit-id** or **rollback-id**.
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

update

Synopsis	Update the candidate baseline
Context	update
Tree	update
Introduced	25.3.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR Gen 2

/configure

Synopsis	Update the entire candidate
Context	update /configure
Tree	/configure
Introduced	25.3.R4
Platforms	7705 SAR Gen 2

/bof

Synopsis	Update the entire BOF candidate
Context	update /bof
Tree	/bof
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

check

Synopsis	Perform dry-run update report without an actual update
Context	update check
Tree	check
Introduced	25.3.R4
Platforms	7705 SAR Gen 2

/debug

Synopsis	Update the entire debug candidate
Context	update /debug
Tree	/debug
Introduced	25.3.R2
Platforms	7705 SAR Gen 2

4 Configuration commands

This section lists MD-CLI configuration commands.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.1 aaa commands

```
configure
   – aaa
      – apply-groups reference
      – apply-groups-exclude reference
      – radius
         – coa-port number
         – server-policy named-item
            – acct-on-off
               – apply-groups reference
               – apply-groups-exclude reference
               – oper-state-change
            – apply-groups reference
            – apply-groups-exclude reference
            – description description
            – servers
               – access-algorithm keyword
               – buffering
                  – acct-interim
                     – lifetime number
                     – max number
                     – min number
                  – acct-start
                     – lifetime number
                     – max number
                     – min number
                  – acct-stop
                     – lifetime number
                     – max number
                     – min number
               – hold-down-time number
               – ipv6-source-address ipv6-address
               – retry-count number
               – router-instance string
               – server number
                  – apply-groups reference
                  – apply-groups-exclude reference
                  – server-name named-item
               – source-address ipv4-address
               – stickiness boolean
               – timeout number
```

4.1.1 aaa command descriptions

aaa

Synopsis	Enter the **aaa** context
Context	**configure** aaa
Tree	aaa
Description	Commands in this context configure authentication, authorization, and accounting. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

radius

Synopsis	Enter the **radius** context
Context	**configure** aaa radius
Tree	radius
Introduced	25.3.R2
Platforms	SAR Gen 2

coa-port *number*

Synopsis	RADIUS listening port for CoA and Disconnect messages
Context	**configure** aaa radius coa-port *number*
Tree	coa-port
Description	This command configures the system-wide UDP port number that RADIUS is listening on for CoA and Disconnect messages. (none)
Range	1647 | 1700 | 1812 | 3799
Default	3799
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server-policy [name] *named-item*

Synopsis	Enter the **server-policy** list instance
Context	**configure** aaa radius server-policy *named-item*
Tree	server-policy
Description	Commands in this context create a RADIUS server policy. A RADIUS server policy can be used in: • radius-proxy, for applications like EAP authentication for WIFI access • authentication policy, for Enhanced Subscriber Management authentication • RADIUS accounting policy, for Enhanced Subscriber Management accounting • dynamic data service RADIUS accounting • AAA route downloader (none)
Max. instances	32
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	RADIUS server policy name
Context	**configure** aaa radius server-policy *named-item*
Tree	server-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

acct-on-off

Synopsis	Enable the **acct-on-off** context
Context	**configure** aaa radius server-policy *named-item* acct-on-off
Tree	acct-on-off
Description	Commands in this context control the sending of Accounting-On and Accounting-Off messages and the acct-on-off oper-state of the radius-server-policy:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **acct-on-off**: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is always not blocked.
- **acct-on-off oper-state-change**: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is function of the Accounting-response received for the Accounting-On and Accounting-Off. Optionally, sets the acct-on-off oper-state of the acct-on-off-group.
- **acct-on-off monitor**: no Accounting-On and Accounting-Off messages are sent for this radius-server-policy. The acct-on-off oper-state is inherited from the acct-on-off-group.

(none)

Introduced 25.3.R2

Platforms SAR Gen 2

oper-state-change

Synopsis Enable the **oper-state-change** context

Context **configure** aaa radius server-policy *named-item* acct-on-off oper-state-change

Tree oper-state-change

Notes The following elements are part of a choice: **monitor** or **oper-state-change**.

Introduced 25.3.R2

Platforms SAR Gen 2

description *description*

Synopsis Text description

Context **configure** aaa radius server-policy *named-item* description *description*

Tree description

String length 1 to 80

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 25.3.R2

Platforms SAR Gen 2

servers

Synopsis Enter the **servers** context

Context **configure** aaa radius server-policy *named-item* servers

Tree servers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure RADIUS server policy command options.
	(none)
Introduced	25.3.R2
Platforms	SAR Gen 2

access-algorithm *keyword*

Synopsis	Algorithm to select a RADIUS server from the pool
Context	**configure** aaa radius server-policy *named-item* servers access-algorithm *keyword*
Tree	access-algorithm
Options	direct, round-robin, hash-based
Default	direct
Introduced	25.3.R2
Platforms	SAR Gen 2

buffering

Synopsis	Enter the **buffering** context
Context	**configure** aaa radius server-policy *named-item* servers buffering
Tree	buffering
Introduced	25.3.R2
Platforms	SAR Gen 2

acct-interim

Synopsis	Enable the **acct-interim** context
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-interim
Tree	acct-interim
Description	Commands in this context enable RADIUS accounting interim update message buffering.

1. The message is stored in the buffer, a lifetime timer is started and the message is sent to the RADIUS server
2. If after retry*timeout seconds no RADIUS accounting response is received for the interim update then a new attempt to send the message is started after minimum[(min-val*2n), max-val] seconds.
3. Repeat step 2 until one of the following occurs:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- a RADIUS accounting response is received
- the lifetime of the buffered message expires
- a new RADIUS accounting interim-update or a RADIUS accounting stop for the same accounting session ID and radius-server-policy is stored in the buffer
- the message is manually purged from the message buffer via a **clear** command
- The message is purged from the buffer.

(none)

Introduced	25.3.R2
Platforms	SAR Gen 2

lifetime *number*

Synopsis	Time accounting message can be in retransmission buffer
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-interim lifetime *number*
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

max *number*

Synopsis	Maximum time between accounting message resend attempts
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-interim max *number*
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

min *number*

Synopsis	Minimum time between accounting message resend attempts
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-interim min *number*
Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

acct-start

Synopsis	Enable the **acct-start** context
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-start
Tree	acct-start
Introduced	25.3.R2
Platforms	SAR Gen 2

lifetime *number*

Synopsis	Time accounting message can be in retransmission buffer
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-start lifetime *number*
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

max *number*

Synopsis	Maximum time between accounting message resend attempts

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius server-policy *named-item* servers buffering acct-start max *number*
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

min *number*

Synopsis	Minimum time between accounting message resend attempts
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-start min *number*
Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

acct-stop

Synopsis	Enable the **acct-stop** context
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-stop
Tree	acct-stop
Description	Commands in this context enable RADIUS accounting stop message buffering.

1. The message is stored in the buffer, a lifetime timer is started and the message is sent to the RADIUS server
2. If after retry*timeout seconds no RADIUS accounting response is received for the accounting stop, then a new attempt to send the message is started after minimum[(min-val*2n), max-val] seconds.
3. Repeat step 2 until one of the following occurs:

- a RADIUS accounting response is received
- the lifetime of the buffered message expires
- The message is manually purged from the message buffer via a **clear** command.
- The message is purged from the buffer.

(none)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

hold-down-time *number*

Synopsis	Hold time before reusing a RADIUS server that was down
Context	**configure** aaa radius server-policy *named-item* servers hold-down-time *number*
Tree	hold-down-time
Description	This command configures the interval during which no new communication attempts are made to a RADIUS server that is marked down to prevent immediately overloading the server when it is starting up. The only exception is when all servers in the authentication policy are marked down; in that case, they will all be used again to prevent failures on new client connections. (none)
Range	30 to 86400
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6-source-address *ipv6-address*

Synopsis	Source address for IPv6 RADIUS datagrams
Context	**configure** aaa radius server-policy *named-item* servers ipv6-source-address *ipv6-address*
Tree	ipv6-source-address
Description	This command configures the source address of an IPv6 RADIUS packet. When **ipv6-source-address** is unconfigured, the system IPv6 address (inband RADIUS server connection) or Boot Option File (BOF) IPv6 address (outband RADIUS server connection) must be configured in order for the RADIUS client to work with an IPv6 RADIUS server. This address is also used in the NAS-IPv6-Address attribute. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

retry-count *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	**configure** aaa radius server-policy *named-item* servers retry-count *number*
Tree	retry-count
Description	This command configures the number of times the router attempts to contact the RADIUS server, if not successful the first time. (none)
Range	1 to 256
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

Synopsis	RADIUS routing instance
Context	**configure** aaa radius server-policy *named-item* servers router-instance *string*
Tree	router-instance
Description	This command specifies the virtual router instance applicable for the set of configured RADIUS servers. This value cannot be changed once a RADIUS server is configured for this policy. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

server [server-index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** aaa radius server-policy *named-item* servers server *number*
Tree	server
Max. instances	32
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**server-index**] *number*

Synopsis	RADIUS server index
Context	**configure** aaa radius server-policy *named-item* servers server *number*
Tree	server
Range	1 to 16
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

server-name *named-item*

Synopsis	RADIUS server name
Context	**configure** aaa radius server-policy *named-item* servers server *number* server-name *named-item*
Tree	server-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

source-address *ipv4-address*

Synopsis	Source address of RADIUS messages
Context	**configure** aaa radius server-policy *named-item* servers source-address *ipv4-address*
Tree	source-address
Description	This command configures the source address of the RADIUS packet. The system IP address must be configured in order for the RADIUS client to work. The system IP address must only be configured if the source-address is not specified. When the no **source-address** command is executed, the source address is determined at the moment the request is sent. This address is also used in the NAS-IP-Address attribute; over there it is set to the system IP address if no source-address was given. (none)
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

stickiness *boolean*

Synopsis	Allow stickiness in a multi-server application
Context	**configure** aaa radius server-policy *named-item* servers stickiness *boolean*
Tree	stickiness
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Time until the next retry to the RADIUS server
Context	**configure** aaa radius server-policy *named-item* servers timeout *number*
Tree	timeout
Range	1 to 340
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

4.3.1 bof command descriptions

bof

Synopsis	Configure system boot options
Context	bof
Tree	bof
Description	This command creates or edits the boot option file (BOF) for the specified local storage device. A BOF file specifies where the system searches for runtime images, configuration files, and other operational parameters during system initialization. BOF parameters can be modified. Changes can be saved to a specified compact flash. The BOF must be located in the root directory of either an internal or external compact flash local to the system and have the mandatory filename of bof.cfg. When modifications are made to in-memory parameters that are currently in use or operating, the changes are effective immediately. For example, if the IP address of the management port is changed, the change takes place immediately. Only one entry of the BOF configuration command statement can be saved once the statement has been found to be syntactically correct. When opening an existing BOF that is not the BOF used in the most recent boot, a message is issued notifying the user that the parameters will not affect the operation of the node. No default boot option file exists. The router boots with the factory default boot sequence and options.
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-boot

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **auto-boot** context
Context	bof auto-boot
Tree	auto-boot
Description	Commands in this context enable the **auto-boot** flag in the BOF and configures the **auto-boot** options for ZTP. When modifying **auto-boot** options using CLI, all required options must be explicitly configured as the default cases will no longer be used. (none)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **dhcp** context
Context	bof auto-boot dhcp
Tree	dhcp
Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer. (none)
Notes	The following elements are part of a choice: **dhcp** or **ospf**.
Introduced	25.3.R2
Platforms	SAR Gen 2

client-id *(keyword | hex-string | string)*

Note:
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-boot dhcp client-id *(keyword | hex-string | string)*
Tree	client-id
Description	This command specifies the client ID for IPv4 Option 61 for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number. (none)
String length	3 to 118 (*hex-string*) 1 to 58 (*string*)
Options	use-chassis-mac-address
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inband

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **inband** context
Context	bof auto-boot dhcp inband
Tree	inband
Description	Commands in this context enable in-band management through an Ethernet port for ZTP. Unless the **vlan-discovery** command is used, the **inband** command disables VLAN discovery. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

disabled *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Do not use in-band ports
Context	bof auto-boot dhcp inband disabled *boolean*
Tree	disabled
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	25.3.R2
Platforms	SAR Gen 2

null-encapsulation *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use null encapsulation
Context	bof auto-boot dhcp inband null-encapsulation *boolean*
Tree	null-encapsulation

include-user-class *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Include user class in auto boot provisioning
Context	bof auto-boot dhcp include-user-class *boolean*
Tree	include-user-class
Description	When configured to **true**, the router includes Option 77 in DHCP messages. (none)
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv4
Context	bof auto-boot dhcp ipv4 *boolean*
Tree	ipv4
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv6
Context	bof auto-boot dhcp ipv6 *boolean*
Tree	ipv6
Default	true
Introduced	25.3.R2

Platforms	SAR Gen 2

management-port *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot on the management port
Context	bof auto-boot dhcp management-port *boolean*
Tree	management-port
Description	When configured to **true**, the out-of-band management port is used for ZTP. (none)
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ospf

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **ospf** context
Context	bof auto-boot ospf
Tree	ospf
Description	Commands in this context configure OSPF auto-discovery. (none)
Notes	The following elements are part of a choice: **dhcp** or **ospf**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mtu *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	OSPF MTU

© 2026 Nokia.

Context	bof auto-boot ospf mtu *number*
Tree	mtu
Range	512 to 9786
Units	bytes
Default	1500
Introduced	25.3.R2
Platforms	SAR Gen 2

neid *hex-string*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element ID
Context	bof auto-boot ospf neid *hex-string*
Tree	neid
Description	This command specifies a hexadecimal network element identification string. (none)
String length	3
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2
Platforms	SAR Gen 2

neip-ipv4 *ipv4-unicast-address*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv4 address
Context	bof auto-boot ospf neip-ipv4 *ipv4-unicast-address*
Tree	neip-ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

neip-ipv6 *ipv6-address*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv6 address
Context	bof auto-boot ospf neip-ipv6 *ipv6-address*
Tree	neip-ipv6
Introduced	25.3.R2
Platforms	SAR Gen 2

vendor-id *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Vendor ID
Context	bof auto-boot ospf vendor-id *number*
Tree	vendor-id
Description	This command specifies the vendor identification number. The number 140 corresponds to "Nokia". (none)
Range	1 to 254
Default	140
Introduced	25.3.R2
Platforms	SAR Gen 2

port-mtu *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Port MTU setting
Context	bof auto-boot port-mtu *number*
Tree	port-mtu
Range	512 to 9800
Units	bytes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	ZTP timeout
Context	bof auto-boot timeout *number*
Tree	timeout
Description	This command configures the Zero Touch Provisioning timeout, which is the total time allowed for the ZTP process to execute successfully. If the ZTP process is unsuccessful (in the case of auto-boot using OSPF, if no OSPF adjacency is found), the node is first rebooted, then the ZTP process is retried.
Range	30 to 1440
Units	minutes
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-configure

Synopsis	Enter the **auto-configure** context
Context	bof auto-configure
Tree	auto-configure
Description	Commands in this context autoconfigure the IP address for the BOF. The IPv4 DHCP client, IPv6 DHCP client, and NDP/RA can be configured on the management interface. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	bof auto-configure ipv4
Tree	ipv4
Description	Commands in this context autoconfigure the IPv4 DHCP client.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	(none)
Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **dhcp** context
Context	bof auto-configure ipv4 dhcp
Tree	dhcp
Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer. (none)
Introduced	25.3.R2
Platforms	SAR Gen 2

client-id *(hex-string | string)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Note:
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-configure ipv4 dhcp client-id *(hex-string | string)*
Tree	client-id
Description	This command configures the client ID for IPv4 Option 61 for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number. (none)
String length	3 to 256 (*hex-string*) 1 to 127 (*string*)
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	25.3.R2

configuration

Synopsis	Enter the **configuration** context
Context	bof configuration
Tree	configuration
Introduced	25.3.R2
Platforms	SAR Gen 2

encrypt *boolean*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Enable encryption of BOF configuration files
Context	bof configuration encrypt *boolean*
Tree	encrypt
Description	When configured to **true**, this command enables encryption of the BOF using AES256 and SHA256. When the BOF is encrypted on the compact flash, it is still reachable using the BOF interactive menu during node startup, and fields can be modified using the BOF interactive menu.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

encryption-key *bof-static-encrypted-leaf*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secret key for encryption of configuration files
Context	bof configuration encryption-key *bof-static-encrypted-leaf*
Tree	encryption-key
Description	This command creates a key to be used for AES256 encryption of the configuration file. This key is used for all configuration files (primary, secondary, and tertiary). After creating or deleting a key, save the configuration file so that it is encrypted with the latest key. The output of the encryption key is always in a protected format. Plaintext keys must be 8 to 32 characters in length.
String length	1 to 126
Introduced	25.3.R2
Platforms	SAR Gen 2

password *hashed-leaf*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Password for boot-time modification of boot options
Context	bof configuration password *hashed-leaf*
Tree	password
Description	This command configures the password to access the BOF interactive menu at startup. If a password is configured, the BOF interactive menu is accessible only when the correct password is entered. If the correct password is not entered in 30 seconds, the node reboots. The output of the password is always in a protected format. This command accepts a cleartext format of 8 to 32 characters or a protected pbkdf2-sha3-512 format.

4.4.1 card command descriptions

card [slot-number] *number*

Synopsis	Enter the **card** list instance
Context	**configure** card *number*
Tree	card
Description	Commands in this context cover attributes for specific chassis slots for physical cards. On 7705 SAR Gen 2 platforms, the card is provisioned permanently and cannot be modified or removed. See the *7705 SAR Gen 2 Interface Configuration Guide* for more information.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**slot-number**] *number*

Synopsis	Slot number within the chassis
Context	**configure** card *number*
Tree	card
Description	This command configures a unique value that identifies the card slot within a chassis in the system.
Range	1 to 20
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the card
Context	**configure** card *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

card-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Card type

Context **configure** card *number* card-type *keyword*

Tree card-type

Description This command adds an IOM, IMM, XCM to the device configuration for the slot.

The card type can be pre-provisioned, meaning that the card does not need to be installed in the chassis.

A card must be provisioned before any contained object can be configured: MDA, XIOM, XMA, MDA-s, connector, or port. A card can only be provisioned in a slot if the card type is allowed in the slot. An error message is generated if an attempt is made to provision a card type that is not allowed.

If a card is inserted that does not match the configured card type for the slot, a log event and facility alarm is raised. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event and facility alarm are raised if an administratively enabled card is removed from the chassis. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event is issued when a card is removed that is administratively disabled.

Because IMMs do not have the capability to install separate MDAs, the configuration of the MDAs is automatic. This configuration only includes the default options such as default buffer policies. Commands to manage the MDA remain in the MDA configuration context.

Some card hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two card types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the card occurs when switching between the two provisioned types.

An appropriate alarm is raised if a partial or complete card failure is detected. The alarm is cleared when the error condition ceases.

On 7705 SAR Gen 2 platforms, the card is provisioned permanently and cannot be modified or removed. See the *7705 SAR Gen 2 Interface Configuration Guide* for more information.

Platforms SAR Gen 2

fail-on-error *boolean*

Synopsis Set operational state of the card to Failed upon error

Context **configure** card *number* fail-on-error *boolean*

Tree fail-on-error

Description When configured to **true**, this command controls the behavior of the card when any one of a specific set of card level errors is encountered in the system.

When this command is set to **true**, and any one (or more) of the specific errors is detected, the operational state of the card is set to failed. This failed state persists until the **clear card** command is issued (reset) or the card is removed and reinserted (reseated). If the condition persists after reseating the card, contact Nokia support to investigate more.

Nokia only recommends configuring this command to **true** when the network is designed to be able to route traffic around a failed card (redundant cards, nodes, or other paths exist).

The list of specific errors includes the following:

CHASSIS event ID# 2063 - tmnxEqCardPChipMemoryEvent

CHASSIS event ID# 2076 - tmnxEqCardPChipCamEvent

CHASSIS event ID# 2059 - tmnxEqCardPChipError (for ingress Ethernet only)

CHASSIS event ID# 2098 - tmnxEqCardQChipBufMemoryEvent

CHASSIS event ID# 2099 - tmnxEqCardQChipStatsMemoryEvent

CHASSIS event ID# 2101 - tmnxEqCardQChipIntMemoryEvent

CHASSIS event ID# 2103 - tmnxEqCardChipIfCellEvent

On platforms with integrated CPM and IOM, IMM, or XCM, the node is rebooted if this command is set to **true** and one of the card level errors is encountered. The tmnx EqCardPChipError is only considered as a trigger for this command for ingress FCS errors (not egress FCS errors).

Note: On the detection of the event or error in the system, the reporting of the event (logs) and the fail-on-error behavior of the card are independent. Log event control configuration determines whether the events are reported in logs (or SNMP traps, and so on) and the fail-on-error configuration determines the behavior of the card. This implies that the card can be configured to fail-on-error even if the events are suppressed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

(some may be suppressed in the system by default). To facilitate post-failure analysis, Nokia recommends reporting the specific events or errors and that **configure log log-events** be enabled when this command is set to **true**.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

fp [fp-number] *number*

Synopsis	Enter the **fp** list instance
Context	**configure** card *number* fp *number*
Tree	fp
Description	Commands in this context configure forwarding plane (FP) specific options on the card.
Introduced	25.3.R2
Platforms	SAR Gen 2

accounting-policy *reference*

Synopsis	Accounting policy for the FP ingress queue group
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* accounting-policy *reference*
Tree	accounting-policy
Description	This command configures an accounting policy for the FP ingress queue group. You can only apply accounting policies associated with service billing to SAPs. Only associate the accounting policy with one interface at a time.
Reference	**configure** log accounting-policy *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

collect-stats *boolean*

Synopsis	Collect statistics on FP ingress queue group
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* collect-stats *boolean*
Tree	collect-stats
Description	When configured to **true**, the system collects accounting and statistical data for the queue group on the FP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the system still accumulates the statistics; however, the CPU does not obtain the results and write them to the billing file.

If this command is set to **true** (after it had previously been set to **false**), the counters written to the billing file include the traffic collected when the command was set to **false**.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

max-rate *(number | keyword)*

Synopsis	Maximum rate override
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*
Tree	max-rate
Description	This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer. For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state. Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet. If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	SAR Gen 2

priority-mbs-thresholds

Synopsis	Enter the **priority-mbs-thresholds** context
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds
Tree	priority-mbs-thresholds
Description	Commands in this context configure the derivative for the shared portion and fair portion for each priority level.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.

Introduced 25.3.R2

Platforms SAR Gen 2

min-threshold-separation *(number | keyword)*

Description	Commands in this context configure specific overrides to one or more policers created on the SAP through SAP ingress QoS policies.
Introduced	25.3.R2
Platforms	SAR Gen 2

policer [policer-id] *reference*

Synopsis	Enter the **policer** list instance
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference*
Tree	policer
Description	Commands in this context create, modify, or delete a policer. Policers are created and used in a similar manner to queues. Unlike queues that have dedicated counters, policers allow various stat-mode settings that define the counters to be associated with the policer. Packet byte offset provides a policer with the ability to modify the size of each packet based on a defined number of bytes. All policers must be created within the QoS policies. After a policer is created, it cannot be deleted from the QoS policy unless all forwarding classes mapped to the policer are first moved to other policers or queues. The system allows a policer to be created on a SAP QoS policy regardless of the ability to support policers on objects where the policy is currently applied. The system only scans the current objects for policer support and sufficient resources to create the policer when a forwarding class is first mapped to the policer ID. If the policer cannot be created because one or more instances of the policy do not support policing or have insufficient resources to create the policer, the forwarding class mapping fails.

cbs *(number | keyword)*

Synopsis	CBS tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* cbs *(number | keyword)*
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2

packet-byte-offset *number*

Synopsis Packet size adjustment

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*

Tree packet-byte-offset

Description This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.

Use this command to add downstream frame encapsulation or remove portions of packet headers.

When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.

Range -32 to 31

Introduced 25.3.R2

Platforms SAR Gen 2

rate

Synopsis Enter the **rate** context

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate

Tree rate

Description Commands in this context configure the metering and optional profiling rates of the policer.

The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.

Introduced 25.3.R2

Platforms SAR Gen 2

cir *(number | keyword)*

Synopsis CIR for the policer

© 2026 Nokia.

dynamic-enforcement-policer-pool *number*

Synopsis	Number of policers reserved as enforcement policers use
Context	**configure** card *number* fp *number* ingress dist-cpu-protection dynamic-enforcement-policer-pool *number*
Tree	dynamic-enforcement-policer-pool
Description	This command reserves a set of policers for use as dynamic enforcement policers for the Distributed CPU Protection (DCP) feature. Policers are allocated from this pool and instantiated as per-object per-protocol dynamic enforcement policers after a local monitor is triggered for an object, such as a SAP or network interface. A change to this configured value automatically clears the high water mark, timestamp, and failed allocation count. If the command is configured to a value below the currently used or allocated number, all dynamic policers are returned to the free pool (and traffic returns to the local monitors).
Range	1000 to 32000
Introduced	25.3.R2
Platforms	SAR Gen 2

max-rate *(number | keyword)*

Synopsis	Maximum rate override
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*
Tree	max-rate
Description	This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer. For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.

If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2

Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

packet-byte-offset *number*

Synopsis	Packet size adjustment
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*
Tree	packet-byte-offset
Description	This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed. Use this command to add downstream frame encapsulation or remove portions of packet headers. When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.
Range	-32 to 31

event [type] *keyword*

Synopsis	Enter the **event** list instance
Context	**configure** card *number* mda *number* event *keyword*
Tree	event
Description	Commands in this context allow the user to control the action taken when a specific hardware error event is raised against the target MDA. If no event action has been created for a specific event type, the management plane of the router ignores the hardware errors related to that event type. The log event raised for any event type (such as soft-error or memory-error) is tmnx EqHwEventDetected.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**type**] *keyword*

Synopsis	MDA event type being monitored
Context	**configure** card *number* mda *number* event *keyword*
Tree	event
Description	This command configures the type of event to be acted upon. • soft-error — Defines the action to take when soft errors are detected on the MDA. • internal-frame-loss — Provides system detected frame loss in the traffic transiting the MDA. • memory-error — Provides the user options to handle MDA memory error events on MDAs. This feature is supported on FP2- and FP3-based Ethernet MDAs and IMMs. • data-link-error — Provides the user options to handle datapath link errors on an MDA.
Options	soft-error, internal-frame-loss, memory-error, datapath-link-error
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

action *keyword*

Synopsis	Action when a specific hardware error event is raised
Context	**configure** card *number* mda *number* event *keyword* action *keyword*
Tree	action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description This command defines the action taken when a specific hardware error event is detected on the target MDA.

When no event action is specified for an event type, the hardware errors related to the event type are ignored by the management plane of the router.

Actions include the following:

- log-only — Pass the log event to log management. No other action is taken.
- reset-mda — Reset the MDA.
- fail-mda — Set the operational state of the MDA to Failed. This Failed state persists until the clear mda command is issued (reset) or the MDA is removed and reinserted (re-seated).

Options none, log-only, reset, fail

Introduced 25.3.R2

Platforms SAR Gen 2

fail-on-error *boolean*

Synopsis Set operational state to Failed if an error is detected

Context **configure** card *number* mda *number* fail-on-error *boolean*

Tree fail-on-error

Description When configured to **true**, the fail-on-error feature is enabled on the MDA. When a defined rate of egress or ingress XPL errors occur on an MDA within a specified time interval, the MDA is placed in the Failed state. This can force an APS switchover or traffic to be rerouted.

The purpose of this feature is to avoid situations where traffic is forced to use a physical link that suffers from errors but is still technically operational. The feature uses values configured in the **configure card mda egress-xpl** and **configure card mda ingress-xpl** contexts.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

Synopsis MDA type for the slot

Context **configure** card *number* mda *number* mda-type *keyword*

Tree mda-type

Description This command provisions a specific MDA type to the device configuration for the slot. The MDA can be pre-provisioned and an MDA must be provisioned before connectors or ports can be configured.

A maximum of two MDAs can be provisioned on an IOM or XCM. XMAs are provisioned using MDA commands.

A medium severity alarm is generated if an MDA is inserted that does not match the MDA type configured for the slot. This alarm is cleared when the correct MDA is inserted or the configuration is modified. A high severity alarm is raised when an administratively enabled MDA is removed from the chassis. This alarm is cleared if either the correct MDA type is inserted or the configuration is modified. A low severity alarm is issued if an MDA is removed that is administratively disabled.

An MDA can only be provisioned in a slot if the MDA type is allowed in the MDA slot. An error message is generated when an MDA is provisioned in a slot where it is not allowed.

Some MDA hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two MDA types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the MDA occurs when switching between the two provisioned types.

An alarm is raised if partial or complete MDA failure is detected. The alarm is cleared when the error condition ceases.

New generations of XMAs include variants controlled through hardware and software licensing. For these XMAs, the license level must be provisioned in addition to the MDA type. An XMA cannot become operational unless the provisioned license level matches the license level of the XMA installed into the slot.

The set of license levels varies by MDA type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress queues and egress policers. Changes to the provisioned license level may be blocked if configuration that would not be permitted with the new target license level exists. If the license level is not specified, the level is set to the highest license level for that XMA.

On the 7705 SAR-1, the MDA in slot 1 is auto-equipped and autoprovisioned by default during startup, and cannot be modified or removed. Slots 3 and 4 are reserved for virtual ISA MDAs.

On the 7705 SAR-Hx and 7705 SAR-Mx, Ethernet and T1/E1 MDAs can be provisioned only in slot 1. The MDA in slot 2 is auto-equipped and autoprovisioned by default during startup, and cannot be modified or removed. Slots 3 and 4 are reserved for virtual ISA MDAs.

For more information about MDA types, see the "Port types" section in the *7705 SAR Gen 2 Interface Configuration Guide*.

4.7.1 debug command descriptions

debug

Synopsis	Configure application or protocol tracing
Context	debug
Tree	debug
Description	Commands in this context enable detailed debugging information for various protocols and router functions.
Introduced	25.3.R2
Platforms	SAR Gen 2

certificate

Synopsis	Enter the **certificate** context
Context	debug certificate
Tree	certificate
Description	Commands in this context configure debugging for certificates.
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-certificate-update [filename] *pki-file-name*

Synopsis	Add a list entry for **auto-certificate-update**
Context	debug certificate auto-certificate-update *pki-file-name*
Tree	auto-certificate-update
Max. instances	256
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filename**] *pki-file-name*

Synopsis	Certificate filename
Context	debug certificate auto-certificate-update *pki-file-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	auto-certificate-update
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-crl-update [ca-profile-name] *named-item*

Synopsis	Add a list entry for **auto-crl-update**
Context	debug certificate auto-crl-update *named-item*
Tree	auto-crl-update
Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ca-profile-name**] *named-item*

Synopsis	Certificate Authority (CA) profile name
Context	debug certificate auto-crl-update *named-item*
Tree	auto-crl-update
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

cmpv2 [ca-profile-name] *named-item*

Synopsis	Add a list entry for **cmpv2**
Context	debug certificate cmpv2 *named-item*
Tree	cmpv2
Description	This command adds a list entry for a CA profile to debug Certificate Management Protocol version 2 (CMPv2).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ca-profile-name**] *named-item*

Synopsis	CA profile name
Context	debug certificate cmpv2 *named-item*
Tree	cmpv2
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

est [est-profile-name] *named-item*

Synopsis	Add a list entry for **est**
Context	debug certificate est *named-item*
Tree	est
Description	This command adds a list entry for debugging Enrollment over Secure Transport Protocol (EST).
Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**est-profile-name**] *named-item*

Synopsis	EST profile name
Context	debug certificate est *named-item*
Tree	est
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

ocsp [ca-profile-name] *named-item*

Synopsis	Add a list entry for **ocsp**
Context	debug certificate ocsp *named-item*
Tree	ocsp
Description	This command adds a list entry for a CA profile to debug the Online Certificate Status Protocol (OCSP).
Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ca-profile-name**] *named-item*

Synopsis	CA profile name
Context	debug certificate ocsp *named-item*
Tree	ocsp
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec

Synopsis	Enter the **ipsec** context
Context	debug ipsec
Tree	ipsec
Description	Commands in this context configure debugging for IP security (IPsec) functionality.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

certificate [filename] *pki-file-name*

Synopsis	Add a list entry for **certificate**
Context	debug ipsec certificate *pki-file-name*
Tree	certificate
Description	This command adds a list entry for debugging certificate chain computation in the certificate profile.
Max. instances	200
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filename**] *pki-file-name*

Synopsis	Imported IPsec certificate filename
Context	debug ipsec certificate *pki-file-name*
Tree	certificate
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

client-db [name] *named-item*

Synopsis	Add a list entry for **client-db**
Context	debug ipsec client-db *named-item*
Tree	client-db
Description	This command adds a list entry for debugging the specified IPsec client database.
Max. instances	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	IPsec client database name
Context	debug ipsec client-db *named-item*
Tree	client-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

gateway [name] *named-item*

Synopsis	Enter the **gateway** list instance
Context	debug ipsec gateway *named-item*
Tree	gateway
Description	Commands in this context configure debugging for dynamic IPsec tunnels that terminate on the specified IPsec gateway. Specify the tunnel to debug using either its source address or source subnet, by using the **debug ipsec gateway tunnel** command. If a subnet is specified, the system enables debugging for all tunnels with source addresses in the specified subnet.
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	IPsec gateway name
Context	debug ipsec gateway *named-item*
Tree	gateway
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **tunnel** list instance
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	tunnel
Description	Commands in this context configure debugging for the specified IPsec gateway tunnel.
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Gateway tunnel remote IP address
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	tunnel
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

port *number*

Synopsis	Gateway tunnel remote port
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	tunnel
Range	1 to 65535
MD-CLI default	500
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail *boolean*

Synopsis	Display detailed debug information
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

display-keys *boolean*

Synopsis	Display keys in the debug output
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* display-keys *boolean*
Tree	display-keys
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

suppress-dpd-debug *boolean*

Synopsis	Display debug output without DPD information
Context	debug ipsec gateway *named-item* tunnel *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* suppress-dpd-debug *boolean*
Tree	suppress-dpd-debug
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nat [ip-address] *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number*

Synopsis	Enter the **tunnel-nat** list instance
Context	debug ipsec gateway *named-item* tunnel-nat *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tunnel-nat
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-address**] *ipv4-unicast-address*

Synopsis	Gateway tunnel remote IP address
Context	debug ipsec gateway *named-item* tunnel-nat *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number*
Tree	tunnel-nat
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

port *number*

Synopsis	Gateway tunnel remote port
Context	debug ipsec gateway *named-item* tunnel-nat *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number*
Tree	tunnel-nat
Range	1 to 65535
MD-CLI default	500
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

pre-nat-ip-address *ipv4-unicast-address*

Synopsis	Gateway tunnel peer pre-NAT IP address
Context	debug ipsec gateway *named-item* tunnel-nat *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number*
Tree	tunnel-nat

Introduced	25.3.R2
Platforms	SAR Gen 2

suppress-dpd-debug *boolean*

Synopsis	Display debug output without DPD information
Context	debug ipsec gateway *named-item* tunnel-nat *ipv4-unicast-address* port *number* pre-nat-ip-address *ipv4-unicast-address* pre-nat-port *number* suppress-dpd-debug *boolean*
Tree	suppress-dpd-debug
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-subnet [ip-prefix] *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)*

Synopsis	Enter the **tunnel-subnet** list instance
Context	debug ipsec gateway *named-item* tunnel-subnet *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)*
Tree	tunnel-subnet
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Gateway tunnel remote IP prefix
Context	debug ipsec gateway *named-item* tunnel-subnet *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)*
Tree	tunnel-subnet
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port *(keyword | number)*

Synopsis	Gateway tunnel remote port
Context	debug ipsec gateway *named-item* tunnel-subnet *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)*
Tree	tunnel-subnet
Range	1 to 65535
Options	any
MD-CLI default	any
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Display detailed debug information
Context	debug ipsec gateway *named-item* tunnel-subnet *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)* detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

display-keys *boolean*

Synopsis	Display keys in the debug output
Context	debug ipsec gateway *named-item* tunnel-subnet *(ipv4-prefix | ipv6-prefix)* port *(keyword | number)* display-keys *boolean*

Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Display detailed debug information
Context	debug ipsec transport-mode ip-tunnel *interface-name* detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

display-keys *boolean*

Synopsis	Display keys in the debug output
Context	debug ipsec transport-mode ip-tunnel *interface-name* display-keys *boolean*
Tree	display-keys
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

suppress-dpd-debug *boolean*

Synopsis	Display debug output without DPD information
Context	debug ipsec transport-mode ip-tunnel *interface-name* suppress-dpd-debug *boolean*
Tree	suppress-dpd-debug
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel [name] *named-item*

Synopsis	Enter the **tunnel** list instance
Context	debug ipsec tunnel *named-item*
Tree	tunnel

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure debugging for the specified IPsec tunnel.
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	IPsec tunnel name
Context	debug ipsec tunnel *named-item*
Tree	tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Display detailed debug information
Context	debug ipsec tunnel *named-item* detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

display-keys *boolean*

Synopsis	Display keys in the debug output
Context	debug ipsec tunnel *named-item* display-keys *boolean*
Tree	display-keys
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

suppress-dpd-debug *boolean*

Synopsis	Display debug output without DPD information
Context	debug ipsec tunnel *named-item* suppress-dpd-debug *boolean*
Tree	suppress-dpd-debug
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	debug lag *lag-interface*
Tree	lag
Description	Commands in this context configure debugging for Link Aggregation Group (LAG).
Introduced	25.3.R2
Platforms	SAR Gen 2

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	debug lag *lag-interface*
Tree	lag
Description	This command specifies the LAG name. In model-driven interfaces, the LAG name is used for configuration references and **show** commands. A service provider or administrator can use the defined LAG name to identify and manage LAGs within the SR OS platforms. The LAG name must always start with "lag-".
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

adaptive-loadbalancing *boolean*

Synopsis	Enable debugging for adaptive load balancing
Context	debug lag *lag-interface* adaptive-loadbalancing *boolean*
Tree	adaptive-loadbalancing
Default	false
Introduced	25.10.R1
Platforms	SAR Gen 2

bfd *boolean*

Synopsis	Enable debugging for BFD
Context	debug lag *lag-interface* bfd *boolean*
Tree	bfd
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

config *boolean*

Synopsis	Enable debugging for configuration changes
Context	debug lag *lag-interface* config *boolean*
Tree	config
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

iom-updates *boolean*

Synopsis	Enable debugging for IOM updates
Context	debug lag *lag-interface* iom-updates *boolean*
Tree	iom-updates
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

lacp-packets *boolean*

Synopsis	Enable debugging for LACP packets
Context	debug lag *lag-interface* lacp-packets *boolean*
Tree	lacp-packets
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-chassis *boolean*

Synopsis	Enable debugging for multi-chassis LAG
Context	debug lag *lag-interface* multi-chassis *boolean*
Tree	multi-chassis
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-chassis-packets *boolean*

Synopsis	Enable debugging for multi-chassis packets
Context	debug lag *lag-interface* multi-chassis-packets *boolean*
Tree	multi-chassis-packets
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

port [port-id] *port*

Synopsis	Enter the **port** list instance
Context	debug lag *lag-interface* port *port*
Tree	port
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

[**port-id**] *port*

Synopsis	Unique identifier for the port in the LAG
Context	debug lag *lag-interface* port *port*
Tree	port
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd *boolean*

Synopsis	Enable debugging for BFD
Context	debug lag *lag-interface* port *port* bfd *boolean*
Tree	bfd
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

config *boolean*

Synopsis	Enable debugging for configuration changes
Context	debug lag *lag-interface* port *port* config *boolean*
Tree	config
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

lacp-packets *boolean*

Synopsis	Enable debugging for LACP packets
Context	debug lag *lag-interface* port *port* lacp-packets *boolean*
Tree	lacp-packets
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

multi-chassis *boolean*

Synopsis	Enable debugging for multi-chassis LAG
Context	debug lag *lag-interface* port *port* multi-chassis *boolean*
Tree	multi-chassis
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

port-states *boolean*

Synopsis	Enable debugging for port-state changes
Context	debug lag *lag-interface* port *port* port-states *boolean*
Tree	port-states
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

redundancy *boolean*

Synopsis	Enable debugging for redundancy
Context	debug lag *lag-interface* port *port* redundancy *boolean*
Tree	redundancy
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

selection-logic *boolean*

Synopsis	Enable debugging for selection logic
Context	debug lag *lag-interface* port *port* selection-logic *boolean*
Tree	selection-logic

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

state-machine *boolean*

Synopsis	Enable debugging for state-machine changes
Context	debug lag *lag-interface* port *port* state-machine *boolean*
Tree	state-machine
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

timers *boolean*

Synopsis	Enable debugging for timers
Context	debug lag *lag-interface* port *port* timers *boolean*
Tree	timers
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

port-states *boolean*

Synopsis	Enable debugging for port-state changes
Context	debug lag *lag-interface* port-states *boolean*
Tree	port-states
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

redundancy *boolean*

Synopsis	Enable debugging for redundancy
Context	debug lag *lag-interface* redundancy *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	redundancy
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

selection-logic *boolean*

Synopsis	Enable debugging for selection logic
Context	debug lag *lag-interface* selection-logic *boolean*
Tree	selection-logic
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

state-machine *boolean*

Synopsis	Enable debugging for state-machine changes
Context	debug lag *lag-interface* state-machine *boolean*
Tree	state-machine
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

timers *boolean*

Synopsis	Enable debugging for timers
Context	debug lag *lag-interface* timers *boolean*
Tree	timers
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

multicast-management

Synopsis	Enter the **multicast-management** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug multicast-management
Tree	multicast-management
Description	Commands in this context debug multicast path management.
Introduced	25.3.R2
Platforms	SAR Gen 2

multicast-reporting-destination [name] *named-item*

Synopsis	Enter the **multicast-reporting-destination** list instance
Context	debug multicast-management multicast-reporting-destination *named-item*
Tree	multicast-reporting-destination
Description	Commands in this context debug multicast path management reporting destinations.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Multicast reporting destination name
Context	debug multicast-management multicast-reporting-destination *named-item*
Tree	multicast-reporting-destination
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

detail-level *keyword*

Synopsis	Detail level of the debug output
Context	debug multicast-management multicast-reporting-destination *named-item* detail-level *keyword*
Tree	detail-level
Options	low, medium, high
Default	medium
Introduced	25.3.R2

Platforms	SAR Gen 2

egress *boolean*

Synopsis	Enable tracing for outgoing messages
Context	debug multicast-management multicast-reporting-destination *named-item* egress *boolean*
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

group-address *ipv4-multicast-address*

Synopsis	Group address
Context	debug multicast-management multicast-reporting-destination *named-item* group-address *ipv4-multicast-address*
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	25.3.R2
Platforms	SAR Gen 2

host-address *ipv4-unicast-address*

Synopsis	Host address
Context	debug multicast-management multicast-reporting-destination *named-item* host-address *ipv4-unicast-address*
Tree	host-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

python

Synopsis	Enter the **python** context
Context	debug python
Tree	python
Introduced	26.7.R1
Platforms	SAR Gen 2

python-script [name] *named-item*

Synopsis	Enter the **python-script** list instance
Context	debug python python-script *named-item*
Tree	python-script
Max. instances	8
Introduced	26.7.R1
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Python script name
Context	debug python python-script *named-item*
Tree	python-script
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	SAR Gen 2

script-all-info

Synopsis	All script information
Context	debug python python-script *named-item* script-all-info
Tree	script-all-info

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	SAR Gen 2

script-compile-error

Synopsis	Log information on compile errors
Context	debug python python-script *named-item* script-compile-error
Tree	script-compile-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	SAR Gen 2

script-export-variables

Synopsis	Export variables on successful script completion
Context	debug python python-script *named-item* script-export-variables
Tree	script-export-variables
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	SAR Gen 2

script-output

Synopsis	Log information with script output data
Context	debug python python-script *named-item* script-output
Tree	script-output
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

script-output-on-error

Synopsis	Log information with unsuccessful script output data
Context	debug python python-script *named-item* script-output-on-error
Tree	script-output-on-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	SAR Gen 2

script-runtime-error

Synopsis	Log information on detecting script runtime error
Context	debug python python-script *named-item* script-runtime-error
Tree	script-runtime-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	SAR Gen 2

router [router-instance] *string*

Synopsis	Enter the **router** list instance
Context	debug router *string*
Tree	router
Introduced	25.3.R2
Platforms	SAR Gen 2

[**router-instance**] *string*

Synopsis	Router name or VPRN service name
Context	debug router *string*

© 2026 Nokia.

Tree	router
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp

Synopsis	Enter the **dhcp** context
Context	debug router *string* dhcp
Tree	dhcp
Description	Commands in this context enable DHCP debug for all packets in the specified routing instance or VPRN service, or for specific packets matching the specific MAC addresses, SAP identifiers, or interface names. When a DHCP packet matches a specified filter and is conforming the configured debug mode for that filter, the packet debug is available in the specified detail level. DHCP debug filter criteria are applied in the following order: **1.** MAC address **2.** SAP identifier **3.** interface names **4.** all packets Up to 8 MAC address filters, 8 SAP identifier filters, 4 interface name filters, and 4 all-packet filters can be specified simultaneously across all routing instances and VPRN services.
Introduced	25.3.R2
Platforms	SAR Gen 2

all-packets

Synopsis	Enable the **all-packets** context
Context	debug router *string* dhcp all-packets
Tree	all-packets
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router *string* dhcp all-packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router *string* dhcp all-packets mode *keyword*
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	25.3.R2
Platforms	SAR Gen 2

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	debug router *string* dhcp interface *interface-name*
Tree	interface
Introduced	25.3.R2
Platforms	SAR Gen 2

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	debug router *string* dhcp interface *interface-name*

Introduced	25.3.R2
Platforms	SAR Gen 2

all-origins

Synopsis	Trace all origins
Context	debug router *string* igmp packet all-origins
Tree	all-origins
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	25.3.R2
Platforms	SAR Gen 2

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	debug router *string* igmp packet dropped *boolean*
Tree	dropped
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug router *string* igmp packet egress *boolean*
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

host-ip-address *ipv4-address*

Synopsis	Address of the host to trace
Context	debug router *string* igmp packet host-ip-address *ipv4-address*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	host-ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug router *string* igmp packet ingress *boolean*
Tree	ingress
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

interface-ip-address *ipv4-address*

Synopsis	Source address of the packet to trace
Context	debug router *string* igmp packet interface-ip-address *ipv4-address*
Tree	interface-ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	25.3.R2
Platforms	SAR Gen 2

interface-name *interface-name*

Synopsis	Interface name
Context	debug router *string* igmp packet interface-name *interface-name*
Tree	interface-name
String length	1 to 32

Tree	leak
Description	Commands in this context configure debugging for OSPF3 tunnel-endpoint leaks.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Debug OSPF3 leaked tunnels for all tunnel endpoints
Context	debug router *string* ospf3 *number* tunnel-endpoint leak all
Tree	all
Notes	The following elements are part of a choice: **all** or **tunnel-endpoint**.
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	OSPF3 leaked tunnel endpoint
Context	debug router *string* ospf3 *number* tunnel-endpoint leak tunnel-endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	tunnel-endpoint
Notes	The following elements are part of a choice: **all** or **tunnel-endpoint**.
Introduced	25.3.R2
Platforms	SAR Gen 2

spf

Synopsis	Enable the **spf** context
Context	debug router *string* ospf3 *number* tunnel-endpoint spf
Tree	spf
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Debug SPF for all tunnel-endpoint destination addresses
Context	debug router *string* ospf3 *number* tunnel-endpoint spf all
Tree	all
Notes	The following elements are part of a choice: **all** or **spf-endpoint**.
Introduced	25.3.R2
Platforms	SAR Gen 2

spf-endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	SPF tunnel-endpoint destination address
Context	debug router *string* ospf3 *number* tunnel-endpoint spf spf-endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	spf-endpoint
Notes	The following elements are part of a choice: **all** or **spf-endpoint**.
Introduced	25.3.R2
Platforms	SAR Gen 2

virtual-neighbor

Synopsis	Enable the **virtual-neighbor** context
Context	debug router *string* ospf3 *number* virtual-neighbor
Tree	virtual-neighbor
Description	Commands in this context configure debugging for an OSPF3 virtual neighbor.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Synopsis	Debug the virtual neighbor for all router IDs
Context	debug router *string* ospf3 *number* virtual-neighbor all
Tree	all
Notes	The following elements are part of a choice: **all** or **neighbor-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

neighbor-id *ipv4-address*

Synopsis	Virtual neighbor router ID
Context	debug router *string* ospf3 *number* virtual-neighbor neighbor-id *ipv4-address*
Tree	neighbor-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **all** or **neighbor-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

pim

Synopsis	Enter the **pim** context
Context	debug router *string* pim
Tree	pim
Introduced	25.3.R2
Platforms	SAR Gen 2

events

Synopsis	Enable the **events** context
Context	debug router *string* pim events
Tree	events
Introduced	25.3.R2
Platforms	SAR Gen 2

adjacency

Synopsis	Enable the **adjacency** context
Context	debug router *string* pim events adjacency
Tree	adjacency
Notes	The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.
Introduced	25.3.R2
Platforms	SAR Gen 2

all

Synopsis	Enable the **all** context
Context	debug router *string* pim events all
Tree	all
Notes	The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.
Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router *string* pim events all detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

group-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP multicast group address used to trace events
Context	debug router *string* pim events all group-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router *string* pim events rtm detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

s-pmsi

Synopsis	Enable the **s-pmsi** context
Context	debug router *string* pim events s-pmsi
Tree	s-pmsi
Description	Commands in this context enable debugging for the PIM selective provider multicast service interface.
Notes	The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrib**, **msg**, **mvpn-rtcache**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.
Introduced	25.3.R2
Platforms	SAR Gen 2

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router *string* pim events s-pmsi detail *boolean*
Tree	detail
Default	false
Introduced	25.3.R2

all-vrids

Synopsis	Enable the **all-vrids** context
Context	debug router *string* vrrp packet interface *interface-name* all-vrids
Tree	all-vrids
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	debug router *string* vrrp packet interface *interface-name* ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	SAR Gen 2

vrid [virtual-router-id] *number*

Synopsis	Add a list entry for **vrid**
Context	debug router *string* vrrp packet interface *interface-name* ipv4 vrid *number*
Tree	vrid
Max. instances	4
Introduced	25.3.R2
Platforms	SAR Gen 2

[**virtual-router-id**] *number*

Synopsis	Virtual router ID to debug
Context	debug router *string* vrrp packet interface *interface-name* ipv4 vrid *number*
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6

Synopsis	Enter the **ipv6** context
Context	debug router *string* vrrp packet interface *interface-name* ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	SAR Gen 2

vrid [virtual-router-id] *number*

Synopsis	Add a list entry for **vrid**
Context	debug router *string* vrrp packet interface *interface-name* ipv6 vrid *number*
Tree	vrid
Max. instances	4
Introduced	25.3.R2
Platforms	SAR Gen 2

[**virtual-router-id**] *number*

Synopsis	Virtual router ID to debug
Context	debug router *string* vrrp packet interface *interface-name* ipv6 vrid *number*
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

service

Synopsis	Enter the **service** context
Context	debug service
Tree	service
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vpls [service-name] *service-name*

Synopsis	Enter the **vpls** list instance
Context	debug service vpls *service-name*
Tree	vpls
Introduced	25.3.R2
Platforms	SAR Gen 2

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	debug service vpls *service-name*
Tree	vpls
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

igmp-snooping

Synopsis	Enter the **igmp-snooping** context
Context	debug service vpls *service-name* igmp-snooping
Tree	igmp-snooping
Introduced	25.3.R2
Platforms	SAR Gen 2

packet

Synopsis	Enable the **packet** context
Context	debug service vpls *service-name* igmp-snooping packet
Tree	packet
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail *keyword*

Synopsis	Detail level of the debug output
Context	debug service vpls *service-name* igmp-snooping packet detail *keyword*
Tree	detail
Options	low, medium, high
Default	medium
Introduced	25.3.R2
Platforms	SAR Gen 2

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	debug service vpls *service-name* igmp-snooping packet dropped *boolean*
Tree	dropped
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug service vpls *service-name* igmp-snooping packet egress *boolean*
Tree	egress
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn-mpls *boolean*

Synopsis	Allow debugging for EVPN-MPLS destinations
Context	debug service vpls *service-name* igmp-snooping packet evpn-mpls *boolean*
Tree	evpn-mpls
Default	false
Introduced	25.3.R2

Platforms	SAR Gen 2

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug service vpls *service-name* igmp-snooping packet ingress *boolean*
Tree	ingress
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

mac [mac-address] *mac-address*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *service-name* igmp-snooping packet mac *mac-address*
Tree	mac
Max. instances	8
Introduced	25.3.R2
Platforms	SAR Gen 2

[**mac-address**] *mac-address*

Synopsis	MAC address
Context	debug service vpls *service-name* igmp-snooping packet mac *mac-address*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* igmp-snooping packet sap *sap*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sap
Max. instances	8
Introduced	25.3.R2
Platforms	SAR Gen 2

[**sap-id**] *sap*

Synopsis	SAP ID
Context	debug service vpls *service-name* igmp-snooping packet sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

sdp-bind [sdp-bind-id] *sdp-bind-id*

Synopsis	Add a list entry for **sdp-bind**
Context	debug service vpls *service-name* igmp-snooping packet sdp-bind *sdp-bind-id*
Tree	sdp-bind
Max. instances	8
Introduced	25.3.R2
Platforms	SAR Gen 2

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	SDP bind ID
Context	debug service vpls *service-name* igmp-snooping packet sdp-bind *sdp-bind-id*
Tree	sdp-bind
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	25.3.R2

4.8.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	25.3.R2
Platforms	SAR Gen 2

domain [md-admin-name] *admin-name*

Synopsis	Enter the **domain** list instance
Context	**configure** eth-cfm domain *admin-name*
Tree	domain
Description	Commands in this context configure CFM domain command options.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**md-admin-name**] *admin-name*

Synopsis	Maintenance Domain (MD) name
Context	**configure** eth-cfm domain *admin-name*
Tree	domain
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

association [ma-admin-name] *admin-name*

Synopsis	Enter the **association** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
Description	Commands in this context configure the Maintenance Association (MA) for the domain.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ma-admin-name**] *admin-name*

Synopsis	Domain association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-mep-discovery *boolean*

Synopsis	Allow remote MEP automatic discovery
Context	**configure** eth-cfm domain *admin-name* association *admin-name* auto-mep-discovery *boolean*
Tree	auto-mep-discovery
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bridge-identifier [bridge-name] *service-name*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
Description	Commands in this context configure the cross-reference required to link the CFM function with the service context. The link is created when the *bridge-id*, or *bridge-name* matches the *service-id*, or *service-name*, respectively.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

[**bridge-name**] *service-name*

Synopsis	Bridge name that links to the service
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ccm-interval *keyword*

Synopsis	CCM transmission interval for all MEPs in association
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-interval *keyword*
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	25.3.R2
Platforms	SAR Gen 2

icc-based *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* icc-based *string*
Tree	icc-based

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	8 to 13
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

integer *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* integer *number*
Tree	integer
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ma-index *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ma-index *number*
Tree	ma-index
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

remote-mep [mep-id] *number*

Synopsis	Enter the **remote-mep** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep
Description	Commands in this context configure the remote MEP ID. Optionally, the user can configure a unicast MAC address associated with the remote MEP. This unicast value replaces the default Layer 2 class 1 multicast address that is typically associated with ETH-CC packets. **Note:** This command is not supported with subsecond CCM intervals. The unicast address may only be configured when a single remote MEP exists in the association.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**mep-id**] *number*

Synopsis	Remote MEP ID
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

string *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in raw ASCII string format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* string *string*
Tree	string
String length	1 to 45
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vid *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Primary VLAN ID for the Maintenance Association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name* vid *number*
Tree	vid
Range	0 to 4094
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-id *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN ID for the Maintenance Association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name* vpn-id *string*
Tree	vpn-id
String length	0 to 15
String format	'vpn-id' must be 6 uppercase hex digits, colon, 8 uppercase hex digits for OUI and VPN index (e.g. AABBCC:11223344)
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	25.3.R2
Platforms	SAR Gen 2

dns *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

4.9.1 filter command descriptions

filter

Synopsis	Enter the **filter** context
Context	**configure** filter
Tree	filter
Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp-filter [filter-id] *number*

Synopsis	Enter the **dhcp-filter** list instance
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filter-id**] *number*

Synopsis	DHCP filter policy ID
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Description	This command specifies the DHCP filter policy ID expressed as a decimal integer.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp-filter *number* default-action
Tree	default-action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter dhcp-filter *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry
Max. instances	10
Introduced	25.3.R2
Platforms	SAR Gen 2

[**entry-id**] *number*

Synopsis	DHCP filter entry ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp-filter *number* entry *number* action
Tree	action
Introduced	25.3.R2
Platforms	SAR Gen 2

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	25.3.R2
Platforms	SAR Gen 2

option

Synopsis	Enable the **option** context
Context	**configure** filter dhcp-filter *number* entry *number* option
Tree	option
Introduced	25.3.R2
Platforms	SAR Gen 2

absent

Synopsis	Require the absence of related option

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number* option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	25.3.R2
Platforms	SAR Gen 2

match

Synopsis	Enable the **match** context
Context	**configure** filter dhcp-filter *number* entry *number* option match
Tree	match
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	25.3.R2
Platforms	SAR Gen 2

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
Context	**configure** filter dhcp-filter *number* entry *number* option match exact *boolean*
Tree	exact
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

hex *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match hex *string*
Tree	hex
String length	1 to 256
String format	'hex' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

invert *boolean*

Synopsis	Invert (partial) matching criteria
Context	**configure** filter dhcp-filter *number* entry *number* option match invert *boolean*
Tree	invert
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

string *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match string *string*
Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	25.3.R2
Platforms	SAR Gen 2

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	**configure** filter dhcp-filter *number* entry *number* option number *number*
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

present

Synopsis	Require the presence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option present
Tree	present
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp6-filter [filter-id] *number*

Synopsis	Enter the **dhcp6-filter** list instance
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filter-id**] *number*

Synopsis	DHCP filter policy ID
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Description	This command specifies the DHCP filter policy ID expressed as a decimal integer.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp6-filter *number* default-action
Tree	default-action
Description	Commands in this context enable the default action for DHCP6 filters when no entries match.
Introduced	25.3.R2
Platforms	SAR Gen 2

drop

Synopsis	Drop DHCPv6 message (do not process)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp6-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter dhcp6-filter *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter dhcp6-filter *number* entry *number*
Tree	entry
Max. instances	10
Introduced	25.3.R2
Platforms	SAR Gen 2

[**entry-id**] *number*

Synopsis	DHCP filter entry ID
Context	**configure** filter dhcp6-filter *number* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	25.3.R2

Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp6-filter *number* entry *number* action
Tree	action
Description	Commands in this context enable the action to take on DHCP6 host creation when the filter entry matches.
Introduced	25.3.R2
Platforms	SAR Gen 2

drop

Synopsis	Drop DHCPv6 message (do not process)
Context	**configure** filter dhcp6-filter *number* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.
Introduced	25.3.R2
Platforms	SAR Gen 2

option

Synopsis	Enable the **option** context
Context	**configure** filter dhcp6-filter *number* entry *number* option
Tree	option
Introduced	25.3.R2
Platforms	SAR Gen 2

absent

Synopsis	Require the absence of related option
Context	**configure** filter dhcp6-filter *number* entry *number* option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

match

Synopsis	Enable the **match** context
Context	**configure** filter dhcp6-filter *number* entry *number* option match
Tree	match
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	25.3.R2
Platforms	SAR Gen 2

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
Context	**configure** filter dhcp6-filter *number* entry *number* option match exact *boolean*
Tree	exact
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

hex *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp6-filter *number* entry *number* option match hex *string*
Tree	hex
String length	1 to 256
String format	'hex' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	25.3.R2
Platforms	SAR Gen 2

invert *boolean*

Synopsis	Invert (partial) matching criteria

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp6-filter *number* entry *number* option match invert *boolean*
Tree	invert
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

string *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp6-filter *number* entry *number* option match string *string*
Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	25.3.R2
Platforms	SAR Gen 2

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	**configure** filter dhcp6-filter *number* entry *number* option number *number*
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

present

Synopsis	Require the presence of related option
Context	**configure** filter dhcp6-filter *number* entry *number* option present
Tree	present
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-exception [filter-name] *filter-name*

Synopsis	Enter the **ip-exception** list instance
Context	**configure** filter ip-exception *filter-name*
Tree	ip-exception
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filter-name**] *filter-name*

Synopsis	Filter name
Context	**configure** filter ip-exception *filter-name*
Tree	ip-exception
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter ip-exception *filter-name* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter ip-exception *filter-name* entry *number*
Tree	entry
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**entry-id**] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	**configure** filter ip-exception *filter-name* entry *number*
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter ip-exception *filter-name* entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

match

Synopsis	Enter the **match** context
Context	**configure** filter ip-exception *filter-name* entry *number* match
Tree	match
Introduced	25.3.R2
Platforms	SAR Gen 2

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-ip
Tree	dst-ip
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IP address to match
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *ipv4-address*

Synopsis	Mask applied as an AND to the IP address
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port
Tree	dst-port
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Exact match criterion
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

gt *number*

Synopsis	Greater than match criterion for the port number
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

lt *number*

Synopsis	Less than match criterion for the port
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

end *number*

Synopsis	Upper bound of the port range to match
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

start *number*

Synopsis	Lower bound of the port range to match
Context	**configure** filter ip-exception *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp
Tree	icmp
Introduced	25.3.R2
Platforms	SAR Gen 2

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

protocol *(number | keyword)*

Synopsis	IP protocol as the match criterion
Context	**configure** filter ip-exception *filter-name* entry *number* match protocol *(number | keyword)*
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	25.3.R2
Platforms	SAR Gen 2

Use subject to Terms available at: www.nokia.com/terms.

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** filter ip-exception *filter-name* entry *number* match src-ip
Tree	src-ip
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IP address to match
Context	**configure** filter ip-exception *filter-name* entry *number* match src-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *ipv4-address*

Synopsis	Mask applied as an AND to the IP address
Context	**configure** filter ip-exception *filter-name* entry *number* match src-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

src-port

Synopsis	Enter the **src-port** context
Context	**configure** filter ip-exception *filter-name* entry *number* match src-port
Tree	src-port
Introduced	25.3.R2

© 2026 Nokia.

Range	1 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-filter [filter-name] *filter-name*

Synopsis	Enter the **ip-filter** list instance
Context	**configure** filter ip-filter *filter-name*
Tree	ip-filter
Introduced	25.3.R2
Platforms	SAR Gen 2

[**filter-name**] *filter-name*

Synopsis	Filter name
Context	**configure** filter ip-filter *filter-name*
Tree	ip-filter
String length	1 to 64
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

chain-to-system-filter *boolean*

Synopsis	Chain filter policy to the active IPvX system filter policy
Context	**configure** filter ip-filter *filter-name* chain-to-system-filter *boolean*
Tree	chain-to-system-filter
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

default-action *keyword*

Synopsis	Action for packets that do not match any entry
Context	**configure** filter ip-filter *filter-name* default-action *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	default-action
Options	drop, accept
Default	drop
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter ip-filter *filter-name* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

embed

Synopsis	Enter the **embed** context
Context	**configure** filter ip-filter *filter-name* embed
Tree	embed
Description	Commands in this context configure filter policy embedding. A previously defined IPv4 embedded filter policy or Hybrid OpenFlow switch instance can be embedded into an exclusive, template, or system filter policy at the specified offset value. Rules derived from BGP FlowSpec can also be embedded into template filter policies only.
Introduced	25.3.R2
Platforms	SAR Gen 2

filter [name] *reference* offset *number*

Synopsis	Enter the **filter** list instance
Context	**configure** filter ip-filter *filter-name* embed filter *reference* offset *number*
Tree	filter
Description	Commands in this context embed a previously defined IPv4 filter policy into the filter policy at the specified offset value.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *reference*

Synopsis	IPv4 policy to be embedded in the filter
Context	**configure** filter ip-filter *filter-name* embed filter *reference* offset *number*
Tree	filter
Reference	**configure** filter ip-filter *filter-name*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

offset *number*

Synopsis	Offset of the embedded filter policy
Context	**configure** filter ip-filter *filter-name* embed filter *reference* offset *number*
Tree	filter
Description	This command configures the offset of the embedded filter policy. The embedded filter entry X has an entry X + offset in the embedding filter.
Range	0 to 2097150
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the embedded filter
Context	**configure** filter ip-filter *filter-name* embed filter *reference* offset *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

address *ipv4-address*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf address *ipv4-address*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf indirect *boolean*
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter ip-filter *filter-name* entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

egress-pbr *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBR that has an effect when this filter is applied on egress
Context	**configure** filter ip-filter *filter-name* entry *number* egress-pbr *keyword*
Tree	egress-pbr
Options	true, true-with-l4lb
Introduced	25.3.R2
Platforms	SAR Gen 2

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	**configure** filter ip-filter *filter-name* entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

match

Synopsis	Enter the **match** context
Context	**configure** filter ip-filter *filter-name* entry *number* match
Tree	match
Description	Commands in this context configure match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	25.3.R2
Platforms	SAR Gen 2

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	25.3.R2
Platforms	SAR Gen 2

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

fragment *keyword*

Synopsis	Match criterion for fragmented packets
Context	**configure** filter ip-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IP filter match criteria.
Introduced	25.3.R2
Platforms	SAR Gen 2

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-option

Synopsis	Enable the **ip-option** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option
Tree	ip-option
Description	Commands in this context configure matching packets with a specific IP option, or a range of IP options, in the first option of the IP header as an IP filter match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *number*

Synopsis	Mask used with the IP option value in the packet header
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option mask *number*
Tree	mask
Description	This command specifies an optional value that can be used when specifying a range of option numbers to use as the match criteria.
Range	1 to 255
Default	255
Introduced	25.3.R2
Platforms	SAR Gen 2

type *number*

Synopsis	IP option to match
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option type *number*
Tree	type
Description	This command specifies the 8-bit option type in decimal integer, binary, or hexadecimal format. The mask is applied as an AND to the option byte, and the result is compared with the option value. The decimal value entered for the match should be a combined value of the 8-bit option type field and not only the option number. For example, to match IP packets that contain the Router Alert option (option number = 20), enter the option type of 148 (10010100).
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

multiple-option *boolean*

Synopsis	Match based on presence of multiple options in header
Context	**configure** filter ip-filter *filter-name* entry *number* match multiple-option *boolean*
Tree	multiple-option
Introduced	25.3.R2
Platforms	SAR Gen 2

option-present *boolean*

Synopsis	Match on any IP option present in the packet
Context	**configure** filter ip-filter *filter-name* entry *number* match option-present *boolean*
Tree	option-present
Description	When configured to **true**, the router matches on IP packets that contain any IP option in the IP header. An option field of zero is considered as no option present. When configured to **false**, the router matches on IP packets that do not have an IP option present in the IP header.
Introduced	25.3.R2
Platforms	SAR Gen 2

port

Synopsis	Enter the **port** context
Context	**configure** filter ip-filter *filter-name* entry *number* match port
Tree	port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match port eq *number*
Tree	eq
Range	0 to 65535

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack
Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2

Platforms	SAR Gen 2

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

ns *boolean*

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ns *boolean*
Tree	ns
Description	When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

psh *boolean*

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags psh *boolean*
Tree	psh
Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms SAR Gen 2

rst *boolean*

Synopsis Use RST TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags rst *boolean*

Tree rst

Description When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms SAR Gen 2

syn *boolean*

Synopsis Use SYN TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags syn *boolean*

Tree syn

Description When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 25.3.R2

Platforms SAR Gen 2

urg *boolean*

Synopsis Use URG TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags urg *boolean*

Tree urg

Description When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced	25.3.R2
Platforms	SAR Gen 2

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ip-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	25.3.R2
Platforms	SAR Gen 2

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ip-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	25.3.R2
Platforms	SAR Gen 2

filter-id *number*

WARNING:

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255

[**entry-id**] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	**configure** filter ipv6-filter *filter-name* entry *number*
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

action

Synopsis	Enable the **action** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	action
Introduced	25.3.R2
Platforms	SAR Gen 2

accept

Synopsis	Accept regular routing to forward a matching packet
Context	**configure** filter ipv6-filter *filter-name* entry *number* action accept
Tree	accept
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	25.3.R2
Platforms	SAR Gen 2

drop

Synopsis	Drop a packet matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	25.3.R2
Platforms	SAR Gen 2

drop-when

Synopsis	Enable the **drop-when** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when
Tree	drop-when
Introduced	25.3.R2
Platforms	SAR Gen 2

extracted-traffic

Synopsis	Drop traffic extracted to CPM
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when extracted-traffic

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	extracted-traffic
Introduced	25.3.R2
Platforms	SAR Gen 2

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

start *number*

Synopsis	Lower bound of the range

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

payload-length

Synopsis	Enable the **payload-length** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length
Tree	payload-length
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length gt *number*
Tree	gt
Range	0 to 65534

start *number*

Synopsis	Lower bound of the length range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

forward

Synopsis	Enter the **forward** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop

Synopsis	Enable the **next-hop** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	25.3.R2
Platforms	SAR Gen 2

nh-ip

Synopsis	Enable the **nh-ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nh-ip
Notes	The following elements are part of a mandatory choice: **nh-ip** or **nh-ip-vrf**.
Introduced	25.3.R2
Platforms	SAR Gen 2

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip address *ipv6-address*
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip indirect *boolean*
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nh-ip-vrf

Synopsis	Enable the **nh-ip-vrf** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	The following elements are part of a mandatory choice: **nh-ip** or **nh-ip-vrf**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip-vrf address *ipv6-address*
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip-vrf indirect *boolean*
Tree	indirect
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip-vrf router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

redirect-policy *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop or forward next hop router that forwards a packet that matches this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward redirect-policy *reference*
Tree	redirect-policy
Reference	**configure** filter redirect-policy *named-item*
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward router-instance *string*
Tree	router-instance
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action ignore-match
Tree	ignore-match

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	25.3.R2
Platforms	SAR Gen 2

rate-limit

Synopsis	Enable the **rate-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit
Tree	rate-limit
Description	Commands in this context configure the rate-limit action for traffic that matches this filter entry.
Introduced	25.3.R2
Platforms	SAR Gen 2

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header
Tree	extension-header
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

ah *boolean*

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header ah *boolean*
Tree	ah
Introduced	25.3.R2
Platforms	SAR Gen 2

esp *boolean*

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header esp *boolean*
Tree	esp
Introduced	25.3.R2
Platforms	SAR Gen 2

hop-by-hop *boolean*

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Introduced	25.3.R2
Platforms	SAR Gen 2

routing-type0 *boolean*

Synopsis	Match a packet as per the existence of a routing Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type0 *boolean*
Tree	routing-type0
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

flow-label

Synopsis	Enable the **flow-label** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label
Tree	flow-label
Description	Commands in this context configure the flow label and optional mask match condition.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *number*

Synopsis	Flow label mask for the IPv6 filter entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label mask *number*
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575
Introduced	25.3.R2
Platforms	SAR Gen 2

value *number*

Synopsis	Flow label as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label value *number*
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fragment *keyword*

Synopsis	Match criterion for fragmented packages
Context	**configure** filter ipv6-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IPv6 filter match criteria.
Introduced	25.3.R2
Platforms	SAR Gen 2

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
String format	'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128 'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **next-header** or **next-header-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

next-header-list *reference*

Synopsis	Name of the protocol list as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match next-header-list *reference*
Tree	next-header-list
Reference	**configure** filter match-list protocol-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: **next-header** or **next-header-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

port

Synopsis	Enter the **port** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port
Tree	port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	25.3.R2
Platforms	SAR Gen 2

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port gt *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	1
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	25.3.R2

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match src-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	25.3.R2
Platforms	SAR Gen 2

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ack *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ack
Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

ns *boolean*

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ns *boolean*
Tree	ns
Description	When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

psh *boolean*

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags psh *boolean*
Tree	psh
Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

rst *boolean*

Synopsis	Use RST TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags rst *boolean*
Tree	rst
Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	25.3.R2
Platforms	SAR Gen 2

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced	25.3.R2
Platforms	SAR Gen 2

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ipv6-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	25.3.R2
Platforms	SAR Gen 2

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ipv6-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	25.3.R2
Platforms	SAR Gen 2

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 filter identifier

Introduced	25.3.R2
Platforms	SAR Gen 2

summary

Synopsis	Enter the **summary** context
Context	**configure** filter log *number* destination syslog summary
Tree	summary
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of filter log summarization
Context	**configure** filter log *number* destination syslog summary admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

summary-crit *keyword*

Synopsis	Summary for filter log entries
Context	**configure** filter log *number* destination syslog summary summary-crit *keyword*
Tree	summary-crit
Options	src-addr, dst-addr
Default	src-addr
Introduced	25.3.R2
Platforms	SAR Gen 2

match-list

Synopsis	Enter the **match-list** context
Context	**configure** filter match-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	match-list
Description	Commands in this context configure match lists to be used in filter policies (IOM/FP and CPM).
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-prefix-list [prefix-list-name] *named-item*

Synopsis	Enter the **ip-prefix-list** list instance
Context	**configure** filter match-list ip-prefix-list *named-item*
Tree	ip-prefix-list
Description	Commands in this context configure a list of IPv4 prefixes for match criteria in IPv4 ACL and CPM filter policies.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**prefix-list-name**] *named-item*

Synopsis	IP prefix list name
Context	**configure** filter match-list ip-prefix-list *named-item*
Tree	ip-prefix-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

apply-path

Synopsis	Enter the **apply-path** context
Context	**configure** filter match-list ip-prefix-list *named-item* apply-path
Tree	apply-path
Description	Commands in this context configure the autogeneration of address prefixes for IPv4 address prefix match lists.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

bgp-peers [criterion-index] *number*

Synopsis	Enter the **bgp-peers** list instance
Context	**configure** filter match-list ip-prefix-list *named-item* apply-path bgp-peers *number*
Tree	bgp-peers
Description	Commands in this context configure the unique index for BGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**criterion-index**] *number*

Synopsis	Index defining BGP peers for prefix autogeneration
Context	**configure** filter match-list ip-prefix-list *named-item* apply-path bgp-peers *number*
Tree	bgp-peers
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

group *regular-expression-not-all-spaces*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance group configuration
Context	**configure** filter match-list ip-prefix-list *named-item* apply-path bgp-peers *number* group *regular-expression-not-all-spaces*
Tree	group
String length	1 to 255
String format	'regular-expression-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

Platforms	SAR Gen 2

pir *number*

Synopsis	Peak information rate
Context	**configure** filter policer *named-item* pir *number*
Tree	pir

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 2000000000
Units	kilobps
Notes	The following elements are part of a choice: (**mbs** and **pir**) or **pps-pir**.
Introduced	25.3.R2
Platforms	SAR Gen 2

scope *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Policer scope
Context	**configure** filter policer *named-item* scope *keyword*
Tree	scope
Description	This command configures the scope for the policer object. When the **system** scope is configured, it creates an instance of the policer for each direction immediately after the policer is configured and shares the instance with all filter entries that reference that policer name applied in the same direction. When the **filter** scope is configured, it configures the policer instance to be shared by rate-limit entries that are part of the same filter policy and are applied in the same direction.
Options	filter – Policer shared by entries in same filter policer system – Single policer shared by the system
Default	filter
Introduced	25.3.R2
Platforms	SAR Gen 2

redirect-policy [redirect-policy-name] *named-item*

Synopsis	Enter the **redirect-policy** list instance
Context	**configure** filter redirect-policy *named-item*
Tree	redirect-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**redirect-policy-name**] *named-item*

Synopsis	Redirect policy name
Context	**configure** filter redirect-policy *named-item*
Tree	redirect-policy
Description	This command specifies the redirect policy name. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the redirect policy
Context	**configure** filter redirect-policy *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** filter redirect-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

ping-test

Synopsis	Enable the **ping-test** context
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test
Tree	ping-test
Introduced	25.3.R2
Platforms	SAR Gen 2

drop-count *number*

Synopsis	Number of consecutive requests that fail before destination is declared unreachable
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test drop-count *number*
Tree	drop-count
Range	1 to 60
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-down *number*

Synopsis	Time for the system to be held down if this test has marked it unreachable
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test hold-down *number*
Tree	hold-down
Range	0 to 86400
Units	seconds
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

Synopsis	Time between consecutive requests which are sent to the far end host
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source address to use in the IP packet of the ping test
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Time required to receive a response from the far end host
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priority *number*

Synopsis	Priority for this destination
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* priority *number*
Tree	priority
Range	1 to 255
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

unicast-rt-test

Synopsis	Enable the **unicast-rt-test** context
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* unicast-rt-test
Tree	unicast-rt-test
Introduced	25.3.R2
Platforms	SAR Gen 2

notify-dest-change *boolean*

Synopsis	Send notifications when the active destination changes
Context	**configure** filter redirect-policy *named-item* notify-dest-change *boolean*
Tree	notify-dest-change
Description	When configured to **true**, notifications (such as Log and SNMP) are sent when the active destination of a redirect policy changes. No notification is sent when there are no more active destinations (as this scenario is covered by another notification). When configured to **false**, the notification generation is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

router-instance *string*

Synopsis	Routing context to use for route lookup

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter redirect-policy *named-item* router-instance *string*
Tree	router-instance
Introduced	25.3.R2
Platforms	SAR Gen 2

sticky-dest *(number | keyword)*

Synopsis	Time required by system before applying the current best destination as active destination
Context	**configure** filter redirect-policy *named-item* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	25.3.R2
Platforms	SAR Gen 2

redirect-policy-binding [binding-name] *named-item*

Synopsis	Enter the **redirect-policy-binding** list instance
Context	**configure** filter redirect-policy-binding *named-item*
Tree	redirect-policy-binding
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**binding-name**] *named-item*

Synopsis	Binding name
Context	**configure** filter redirect-policy-binding *named-item*
Tree	redirect-policy-binding
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

4.11.1 ipsec command descriptions

ipsec

Synopsis	Enter the **ipsec** context
Context	**configure** ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	25.3.R2
Platforms	SAR Gen 2

cert-profile [name] *named-item*

Synopsis	Enter the **cert-profile** list instance
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. instances	10200
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Certificate profile name
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the certificate profile
Context	**configure** ipsec cert-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. instances	8
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	Certificate profile entry ID
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

cert *pki-file-name*

Synopsis	File name of the imported certificate for the entry
Context	**configure** ipsec cert-profile *named-item* entry *number* cert *pki-file-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cert
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	SAR Gen 2

compare-chain-include *reference*

Synopsis	CA profile to include in the compare-chain
Context	**configure** ipsec cert-profile *named-item* entry *number* compare-chain-include *reference*
Tree	compare-chain-include
Description	This command specifies the Certificate Authority (CA) that needs to be included in the compare-chain for the entry. This configuration is required in instances where the configured root CA is cross-signed by another CA.
Reference	**configure** system security pki ca-profile *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

key *pki-file-name*

Synopsis	File name of the imported key used for authentication
Context	**configure** ipsec cert-profile *named-item* entry *number* key *pki-file-name*
Tree	key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	25.3.R2
Platforms	SAR Gen 2

rsa-signature *keyword*

Synopsis	Signature scheme for the RSA key
Context	**configure** ipsec cert-profile *named-item* entry *number* rsa-signature *keyword*
Tree	rsa-signature
Options	pkcs1, pss

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	pkcs1
Introduced	25.3.R2
Platforms	SAR Gen 2

send-chain

Synopsis	Enter the **send-chain** context
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain
Tree	send-chain
Description	Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the **cert** command in the same entry.
Introduced	25.3.R2
Platforms	SAR Gen 2

ca-profile *reference*

Synopsis	CA certificate to send to the peer
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain ca-profile *reference*
Tree	ca-profile
Reference	**configure** system security pki ca-profile *named-item*
Max. instances	7
Introduced	25.3.R2
Platforms	SAR Gen 2

client-db [name] *named-item*

Synopsis	Enter the **client-db** list instance
Context	**configure** ipsec client-db *named-item*
Tree	client-db
Max. instances	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	IPsec client database name
Context	**configure** ipsec client-db *named-item*
Tree	client-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	**configure** ipsec client-db *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

client [id] *number*

Synopsis	Enter the **client** list instance
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Description	Commands in this context configure the IPsec client entry in the client database.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	Client ID
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8000
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

action *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec client action
Context	**configure** ipsec client-db *named-item* client *number* action *keyword*
Tree	action
Options	accept – Accept the IPsec client reject – Reject the IPsec client
Default	accept
Introduced	25.7.R1
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the database client
Context	**configure** ipsec client-db *named-item* client *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

cert

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **cert** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec client-db *named-item* client *number* cert
Tree	cert
Introduced	26.7.R1
Platforms	SAR Gen 2

cert-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate Profile name associated with this client
Context	**configure** ipsec client-db *named-item* client *number* cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*
Introduced	26.7.R1
Platforms	SAR Gen 2

status-verify

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the **status-verify** context
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify
Tree	status-verify
Introduced	26.7.R1
Platforms	SAR Gen 2

default-result *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The default result of Certificate Status Verification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec client-db *named-item* client *number* cert status-verify default-result *keyword*
Tree	default-result
Options	revoked, good
Default	revoked
Introduced	26.7.R1
Platforms	SAR Gen 2

primary *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The primary method used to verify the peer certificate's revocation status
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify primary *keyword*
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	26.7.R1
Platforms	SAR Gen 2

secondary *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The secondary method used to verify the peer certificate's revocation status
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify secondary *keyword*
Tree	secondary
Options	none, crl, ocsp
Default	none
Introduced	26.7.R1
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

pre-shared-key *encrypted-leaf-hex-without-prefix*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key used to authenticate peers
Context	**configure** ipsec client-db *named-item* client *number* credential pre-shared-key *encrypted-leaf-hex-without-prefix*
Tree	pre-shared-key
Description	This command specifies the pre-shared key used to authenticate peers in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Introduced	25.3.R2
Platforms	SAR Gen 2

identification

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

dpd

Synopsis	Enable the **dpd** context
Context	**configure** ipsec ike-policy *number* dpd

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dpd
Description	Commands in this context configure the dead peer detection mechanism.
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

Synopsis	DPD interval
Context	**configure** ipsec ike-policy *number* dpd interval *number*
Tree	interval
Description	This command specifies the DPD interval. Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.
Range	10 to 300
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	**configure** ipsec ike-policy *number* dpd max-retries *number*
Tree	max-retries
Range	2 to 5
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	**configure** ipsec ike-policy *number* dpd reply-only *boolean*
Tree	reply-only

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-transform *reference*
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.
Reference	**configure** ipsec ike-transform *number*
Max. instances	4
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-version-1

Synopsis	Enable the **ike-version-1** context
Context	**configure** ipsec ike-policy *number* ike-version-1
Tree	ike-version-1
Description	Commands in this context configure the IKE version 1 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	25.3.R2
Platforms	SAR Gen 2

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-1 auth-method *keyword*
Tree	auth-method
Options	psk, plain-psk-xauth

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	psk
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-mode *keyword*

Synopsis	Mode of operation
Context	**configure** ipsec ike-policy *number* ike-version-1 ike-mode *keyword*
Tree	ike-mode
Options	main, aggressive
Default	main
Introduced	25.3.R2
Platforms	SAR Gen 2

own-auth-method *keyword*

Synopsis	Authentication method used with policy on its own side
Context	**configure** ipsec ike-policy *number* ike-version-1 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric
Default	symmetric
Introduced	25.3.R2
Platforms	SAR Gen 2

ph1-responder-delete-notify *boolean*

Synopsis	Send delete notification for IKEv1 phase 1 removal
Context	**configure** ipsec ike-policy *number* ike-version-1 ph1-responder-delete-notify *boolean*
Tree	ph1-responder-delete-notify
Description	When configured to **true**, a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder. When configured to **false**, no notification is sent.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ike-version-2

Synopsis	Enter the **ike-version-2** context
Context	**configure** ipsec ike-policy *number* ike-version-2
Tree	ike-version-2
Description	Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	25.3.R2
Platforms	SAR Gen 2

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-2 auth-method *keyword*
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap, psk-or-cert
Default	psk
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	**configure** ipsec ike-policy *number* ike-version-2 auto-eap-method *keyword*
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ikev2-fragment

Synopsis	Enable the **ikev2-fragment** context
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment
Tree	ikev2-fragment
Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	25.3.R2
Platforms	SAR Gen 2

mtu *number*

Synopsis	Maximum size of the IKEv2 packet
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment mtu *number*
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	25.3.R2
Platforms	SAR Gen 2

reassembly-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment reassembly-timeout *number*
Tree	reassembly-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	25.3.R2
Platforms	SAR Gen 2

own-auth-method *keyword*

Synopsis	Authentication method for IKE policy on its own side

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* ike-version-2 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only, follow-peer
Default	symmetric
Introduced	25.3.R2
Platforms	SAR Gen 2

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auto-eap-method *keyword*
Tree	own-auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	25.3.R2
Platforms	SAR Gen 2

ppk-required *boolean*

Synopsis	Force the use of PPK
Context	**configure** ipsec ike-policy *number* ike-version-2 ppk-required *boolean*
Tree	ppk-required
Description	When configured to **true**, the router is forced to use PPKs for the IKEv2 key derivation process. When configured to **false**, PPK use is optional, and the router can fall back to derive keys without PPK.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	**configure** ipsec ike-policy *number* ike-version-2 send-idr-after-eap-success *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	send-idr-after-eap-success
Description	When configured to **true**, the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to **false**, the IDr payload is not included in the last IKE.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	**configure** ipsec ike-policy *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	SAR Gen 2

limit-init-exchange

Synopsis	Enter the **limit-init-exchange** context
Context	**configure** ipsec ike-policy *number* limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
Context	**configure** ipsec ike-policy *number* limit-init-exchange admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

reduced-max-exchange-timeout *(number | keyword)*

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	**configure** ipsec ike-policy *number* limit-init-exchange reduced-max-exchange-timeout *(number | keyword)*
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this specified value. If the **none** option is configured for this command, the timeout value remains unchanged.
Range	2 to 60
Units	seconds
Options	none
Default	2
Introduced	25.3.R2
Platforms	SAR Gen 2

lockout

Synopsis	Enable the **lockout** context
Context	**configure** ipsec ike-policy *number* lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	25.3.R2
Platforms	SAR Gen 2

block *(number | keyword)*

Synopsis	Time a client is blocked for failed authentications
Context	**configure** ipsec ike-policy *number* lockout block *(number | keyword)*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

duration *number*

Synopsis	Time interval for failed attempts threshold
Context	**configure** ipsec ike-policy *number* lockout duration *number*
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	**configure** ipsec ike-policy *number* lockout failed-attempts *number*
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	**configure** ipsec ike-policy *number* lockout max-port-per-ip *number*
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	25.3.R2
Platforms	SAR Gen 2

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication
Context	**configure** ipsec ike-policy *number* match-peer-id-to-cert *boolean*
Tree	match-peer-id-to-cert
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nat-traversal

Synopsis	Enable the **nat-traversal** context
Context	**configure** ipsec ike-policy *number* nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	25.3.R2
Platforms	SAR Gen 2

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	**configure** ipsec ike-policy *number* nat-traversal force *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	force
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	**configure** ipsec ike-policy *number* nat-traversal force-keep-alive *boolean*
Tree	force-keep-alive
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	**configure** ipsec ike-policy *number* nat-traversal keep-alive-interval *number*
Tree	keep-alive-interval
Range	120 to 600
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

pfs

Synopsis	Enable the **pfs** context
Context	**configure** ipsec ike-policy *number* pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy (PFS) on the IPsec tunnel using the policy. PFS provides for a new key exchange each time the Security Association (SA) key is renegotiated.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-policy *number* pfs dh-group *keyword*
Tree	dh-group
Description	This command configures which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-14
Introduced	25.3.R2
Platforms	SAR Gen 2

relay-unsolicited-cfg-attribute

Synopsis	Enter the **relay-unsolicited-cfg-attribute** context
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	25.3.R2
Platforms	SAR Gen 2

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-address *boolean*
Tree	internal-ip4-address
Description	When configured to **true**, the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-dns *boolean*
Tree	internal-ip4-dns
Description	When configured to **true**, the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-netmask *boolean*
Tree	internal-ip4-netmask
Description	When configured to **true**, the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-address *boolean*
Tree	internal-ip6-address
Description	When configured to **true**, the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-dns *boolean*
Tree	internal-ip6-dns
Description	When configured to **true**, the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-transform [id] *number*

Synopsis	Enter the **ike-transform** list instance
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Max. instances	4096
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	IKE transform instance ID
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dh-group *keyword*

Synopsis	Key exchange group to derive IKE_SA and CHILD_SA keys
Context	**configure** ipsec ike-transform *number* dh-group *keyword*
Tree	dh-group
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-14
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-auth-algorithm *keyword*

Synopsis	IKE authentication algorithm for IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-auth-algorithm *keyword*
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-256
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-encryption-algorithm *keyword*
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-prf-algorithm *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ike-prf-algorithm
Description	This command specifies the pseudo-random function algorithm used for IKE security association. If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, **same-as-auth** cannot be used for the IKE PRF algorithm.
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	25.3.R2
Platforms	SAR Gen 2

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	**configure** ipsec ike-transform *number* isakmp-lifetime *number*
Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-transform [id] *number*

Synopsis	Enter the **ipsec-transform** list instance
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Description	Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.
Max. instances	2048
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *number*

Synopsis	IPsec transform policy ID
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	**configure** ipsec ipsec-transform *number* esp-auth-algorithm *keyword*
Tree	esp-auth-algorithm
Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-256
Introduced	25.3.R2
Platforms	SAR Gen 2

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* esp-encryption-algorithm *keyword*
Tree	esp-encryption-algorithm
Description	This command configures the encryption used for the CHILD_SA. Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state. When AES-GCM or AES-GMAC is configured: • the authentication encryption must be set to **auth-encryption** • the system does not include the authentication algorithm in the ESP proposal of the SA payload • IPsec transform cannot be used for manual keying

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Default	aes-128
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	**configure** ipsec ipsec-transform *number* extended-sequence-number *boolean*
Tree	extended-sequence-number
Description	When configured to **true**, the router supports 64-bit extended sequence numbering. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around. When configured to **false**, the router only supports 32-bit sequence numbering.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transform *number* pfs-dh-group *keyword*
Tree	pfs-dh-group
Description	This command configures the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-transport-mode-profile [name] *named-item*

Synopsis	Enter the **ipsec-transport-mode-profile** list instance
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	IPsec transport mode profile name string
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	This command specifies the name of the IPsec transport mode profile.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* description *description*

© 2026 Nokia.

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

key-exchange

Synopsis	Enter the **key-exchange** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange
Tree	key-exchange
Description	Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.
Introduced	25.3.R2
Platforms	SAR Gen 2

dynamic

Synopsis	Enter the **dynamic** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic
Tree	dynamic
Description	Commands in this context configure dynamic keying for the transport mode profile.
Introduced	25.3.R2
Platforms	SAR Gen 2

auto-establish *boolean*

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic auto-establish *boolean*
Tree	auto-establish
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cert

Synopsis	Enter the **cert** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	25.3.R2
Platforms	SAR Gen 2

cert-profile *reference*

Synopsis	Certificate profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	25.3.R2
Platforms	SAR Gen 2

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify default-result *keyword*
Tree	default-result

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	25.3.R2
Platforms	SAR Gen 2

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify primary *keyword*
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	25.3.R2
Platforms	SAR Gen 2

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify secondary *keyword*
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert trust-anchor-profile *reference*
Tree	trust-anchor-profile
Reference	**configure** ipsec trust-anchor-profile *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

id

Synopsis	Enter the **id** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	25.3.R2
Platforms	SAR Gen 2

fqdn *fully-qualified-domain-name*

Synopsis	FQDN used as the local ID IKE type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 as the local ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv4 *ipv4-unicast-address*
Tree	ipv4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 used as the local IKE ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ike-policy *reference*

Synopsis	IKE policy ID
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ike-policy *reference*
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The **ipsec-transport-mode-profile** configuration only supports IKEv2.
Reference	**configure** ipsec ike-policy *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ipsec-transform *reference*
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	**configure** ipsec ipsec-transform *number*

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for IKE authentication
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic pre-shared-key *encrypted-leaf*
Tree	pre-shared-key
Description	This command specifies the pre-shared key for IKE authentication in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	SAR Gen 2

max-history-key-records

Synopsis	Enter the **max-history-key-records** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	25.3.R2
Platforms	SAR Gen 2

esp *number*

Synopsis	Maximum number of recent records
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records esp *number*
Tree	esp
Range	1 to 48
Introduced	25.3.R2
Platforms	SAR Gen 2

ike *number*

Synopsis	Maximum number of historical IKE key records

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records ike *number*
Tree	ike
Range	1 to 3
Introduced	25.3.R2
Platforms	SAR Gen 2

replay-window *number*

Synopsis	Anti-replay window size
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* replay-window *number*
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 | 64 | 128 | 256 | 512
Units	packets
Introduced	25.3.R2
Platforms	SAR Gen 2

ppk-list [name] *named-item*

Synopsis	Enter the **ppk-list** list instance
Context	**configure** ipsec ppk-list *named-item*
Tree	ppk-list
Description	Commands in this context configure the list of Post-quantum Preshared Keys (PPKs) to use for IKEv2 key derivation, as described in RFC 8784.
Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	PPK list instance name
Context	**configure** ipsec ppk-list *named-item*
Tree	ppk-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ppk [ppk-id] *named-item-64*

Synopsis	Enter the **ppk** list instance
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
Description	Commands in this context configure the attributes for a PPK within the list.
Max. instances	128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ppk-id**] *named-item-64*

Synopsis	PPK ID
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

value

Synopsis	Enable the **value** context
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value
Tree	value
Description	Commands in this context configure the values for the specified PPK.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

ascii *encrypted-leaf*

Synopsis	PPK value as an ASCII string
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value ascii *encrypted-leaf*
Tree	ascii
Description	This command specifies the PPK value as an ASCII string in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 166
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	25.3.R2
Platforms	SAR Gen 2

hex *encrypted-leaf-hex*

Synopsis	PPK value as a hexadecimal string with prefix 0x
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value hex *encrypted-leaf-hex*
Tree	hex
Description	This command specifies the PPK value as a hexadecimal string with prefix 0x in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex' must have clear text in hex with prefix 0x or end with hash/hash2/hash3/custom
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	25.3.R2
Platforms	SAR Gen 2

radius

Synopsis	Enter the **radius** context
Context	**configure** ipsec radius

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	radius
Introduced	25.3.R2
Platforms	SAR Gen 2

accounting-policy [name] *named-item*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. instances	100
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute acct-stats *boolean*
Tree	acct-stats
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ip-addr *boolean*
Tree	framed-ip-addr
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius accounting-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** ipsec radius accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	25.3.R2
Platforms	SAR Gen 2

jitter *number*

Synopsis	Jitter interval for sending each interim-update packet
Context	**configure** ipsec radius accounting-policy *named-item* update-interval jitter *number*
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the system uses 10% of the update interval value.

Range	0 to 3600
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

value *number*

Synopsis	Update interval of the RADIUS accounting data
Context	**configure** ipsec radius accounting-policy *named-item* update-interval value *number*
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 | 5 to 259200
Units	minutes
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-policy [name] *named-item*

Synopsis	Enter the **authentication-policy** list instance
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. instances	100
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	25.3.R2
Platforms	SAR Gen 2

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

client-cert-subject-key-id *boolean*

Synopsis	Include the Subject Key Identifier
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute client-cert-subject-key-id *boolean*
Tree	client-cert-subject-key-id
Description	When configured to **true**, the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

password *encrypted-leaf*

Synopsis	Password used in RADIUS access requests
Context	**configure** ipsec radius authentication-policy *named-item* password *encrypted-leaf*
Tree	password
Description	This command specifies the password used in RADIUS access requests in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 166
Introduced	25.3.R2
Platforms	SAR Gen 2

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

show-ipsec-keys *boolean*

Synopsis	Show IPsec IKE and ESP keys in the output
Context	**configure** ipsec show-ipsec-keys *boolean*
Tree	show-ipsec-keys

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command allows IPsec keys to be (optionally) included in the display output of certain **debug** and **admin** commands. When configured to **false**, the key display is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

static-sa [name] *named-item*

Synopsis	Enter the **static-sa** list instance
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
Max. instances	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Static SA name
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication

Synopsis	Enable the **authentication** context
Context	**configure** ipsec static-sa *named-item* authentication
Tree	authentication
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	**configure** ipsec static-sa *named-item* authentication algorithm *keyword*
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

key *encrypted-leaf*

Synopsis	Key used for the authentication algorithm
Context	**configure** ipsec static-sa *named-item* authentication key *encrypted-leaf*
Tree	key
Description	This command specifies the key used for the authentication algorithm in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 110
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *named-item*

Synopsis	Text description
Context	**configure** ipsec static-sa *named-item* description *named-item*
Tree	description
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

direction *keyword*

Synopsis	Direction to which the static SA entry can be applied
Context	**configure** ipsec static-sa *named-item* direction *keyword*
Tree	direction
Options	inbound, outbound, bidirectional
Default	bidirectional
Introduced	25.3.R2
Platforms	SAR Gen 2

protocol *keyword*

Synopsis	IPsec protocol used with the static SA
Context	**configure** ipsec static-sa *named-item* protocol *keyword*
Tree	protocol
Options	ah, esp
Default	esp
Introduced	25.3.R2
Platforms	SAR Gen 2

spi *number*

Synopsis	Security Parameter Index (SPI) for the static SA
Context	**configure** ipsec static-sa *named-item* spi *number*
Tree	spi
Description	This command specifies the SPI for the static SA. When the **direction** command is set to **inbound**, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the **direction** command is set to **outbound**, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet. When unconfigured, the static SA cannot be used.
Range	256 to 16383
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

trust-anchor-profile [name] *named-item*

Synopsis	Enter the **trust-anchor-profile** list instance
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
Max. instances	10128
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Trust anchor profile name for IPsec tunnel or gateway
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

trust-anchor [ca-profile] *reference*

Synopsis	Add a list entry for **trust-anchor**
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Description	Commands in this context configure a CA profile as a trust anchor CA.
Max. instances	8
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ca-profile**] *reference*

Synopsis	Name of the CA profile as a trust anchor profile

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Reference	**configure** system security pki ca-profile *named-item*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ts-list [name] *named-item*

Synopsis	Enter the **ts-list** list instance
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. instances	32768
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Traffic Selector (TS) list name
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

local

Synopsis	Enter the **local** context
Context	**configure** ipsec ts-list *named-item* local
Tree	local

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	TS list entry ID
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

address

Synopsis	Enable the **address** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address
Tree	address
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	**configure** ipsec ts-list *named-item* local entry *number* address prefix *(ipv4-prefix | ipv6-prefix)*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	prefix
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

range

Synopsis	Enable the **range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address range
Tree	range
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

begin *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Lower bound of the IP address range for the entry
Context	**configure** ipsec ts-list *named-item* local entry *number* address range begin *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	begin
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Upper bound of the IP address range
Context	**configure** ipsec ts-list *named-item* local entry *number* address range end *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	end
Notes	This element is mandatory.

Platforms	SAR Gen 2

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp6

Synopsis	Enter the **icmp6** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	25.3.R2
Platforms	SAR Gen 2

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	25.3.R2
Platforms	SAR Gen 2

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range begin-icmp-code *number*

Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** ipsec tunnel-template *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	**configure** ipsec tunnel-template *number* encapsulated-ip-mtu *number*
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp-generation

Synopsis	Enter the **icmp-generation** context
Context	**configure** ipsec tunnel-template *number* icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

frag-required

Synopsis	Enter the **frag-required** context
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required admin-state *keyword*
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

Synopsis	Interval for sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required interval *number*
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required message-count *number*
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp6-generation

Synopsis	Enter the **icmp6-generation** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation
Tree	icmp6-generation
Introduced	25.3.R2
Platforms	SAR Gen 2

pkt-too-big

Synopsis	Enter the **pkt-too-big** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big message-count *number*
Tree	message-count
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi
Context	**configure** ipsec tunnel-template *number* ignore-default-route *boolean*
Tree	ignore-default-route
Description	When configured to **true**, any full range traffic selector is ignored when creating a reverse route. When configured to **false**, no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	**configure** ipsec tunnel-template *number* ip-mtu *number*
Tree	ip-mtu
Range	512 to 9000
Units	octets
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	**configure** ipsec tunnel-template *number* ipsec-transform *reference*
Tree	ipsec-transform
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	**configure** ipsec tunnel-template *number* pmtu-discovery-aging *number*
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	25.3.R2
Platforms	SAR Gen 2

ppk-list *reference*

Synopsis	PPK list to use in the tunnel template
Context	**configure** ipsec tunnel-template *number* ppk-list *reference*
Tree	ppk-list
Description	This command specifies the PPK list to use in the tunnel template, which represents a list of PPKs available for the IPsec gateway. The actual PPK to use depends on the tunnel initiator.
Reference	**configure** ipsec ppk-list *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	**configure** ipsec tunnel-template *number* private-tcp-mss-adjust *number*
Tree	private-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side. When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.
Range	512 to 9000
Units	octets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v4 *boolean*
Tree	propagate-pmtu-v4
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v6 *boolean*
Tree	propagate-pmtu-v6
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

public-tcp-mss-adjust *(number | keyword)*

Synopsis	New TCP MSS value on the public side
Context	**configure** ipsec tunnel-template *number* public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet. When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.
Range	512 to 9000
Units	octets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	**configure** ipsec tunnel-template *number* replay-window *number*
Tree	replay-window
Range	32 | 64 | 128 | 256 | 512
Introduced	25.3.R2
Platforms	SAR Gen 2

reverse-route

Synopsis	Enter the **reverse-route** context
Context	**configure** ipsec tunnel-template *number* reverse-route
Tree	reverse-route
Description	Commands in this context configure the dynamic LAN-to-LAN (DL2L) tunnel reverse-route options for the tunnel template.
Introduced	25.3.R2
Platforms	SAR Gen 2

metric *number*

Synopsis	Metric used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route metric *number*
Tree	metric
Description	This command configures the metric for reverse routes. The system uses the metric when selecting a route to install in the route table.
Range	0 to 65535
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

preference *number*

Synopsis	Preference used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route preference *number*
Tree	preference
Description	This command specifies the route preference assigned to the DL2L tunnel reverse route. The system uses the preference when selecting a route to install in the route table.
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	**configure** ipsec tunnel-template *number* sp-reverse-route *keyword*
Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

active-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active ESA-VM or ISA members in the NAT group
Context	**configure** isa nat-group *number* redundancy active-mda-limit *number*
Tree	active-mda-limit
Description	This command configures the number of active ESA-VM or ISA members in a NAT group. The system automatically selects which ESA-VMs or ISAs are active. In active/standby (A/S) redundancy mode, the correlation between ESA-VM or ISA members is direct, meaning each ESA-VM or ISA equates to one member. In active/active (A/A) redundancy mode, an individual ESA-VM or ISA may be associated with multiple members. For A/S redundancy, any surplus ESA-VMs or ISAs beyond the configured active threshold automatically transition to standby. These standby units remain idle until an active unit fails, at which point a standby unit takes over, handling traffic from only one failed active unit. This setup allows for the configuration of multiple standby units to provide resilience against several concurrent failures. In A/A redundancy, the combination of this command and the **failed-mda-limit** command guides the distribution of resources among ESA-VMs or ISAs, essentially defining how the members are structured. In both A/S and A/A modes, the system strives to maintain the configured number of active members as outlined by the active MDA limit, drawing from the pool of available spare resources to compensate for any failures. If the actual number of active members drops below this limit because of a lack of available spares, the NAT group status changes to degraded. In this state, traffic intended for the missing ESA-VM or ISA members (up to the active MDA limit) is blackholed. In Layer 2-aware NAT this condition can be circumvented where traffic can bypass NAT altogether and be directly routed within the internal network that may have an alternate path to a backup NAT system.
Range	1 to 28
Introduced	25.3.R2
Platforms	SAR Gen 2

intra-chassis

Synopsis	Enter the **intra-chassis** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa nat-group *number* redundancy intra-chassis
Tree	intra-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	25.3.R2
Platforms	SAR Gen 2

active-standby

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Active-standby intra-chassis NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis active-standby
Tree	active-standby
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-group [id] *number*

Synopsis	Enter the **tunnel-group** list instance
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Description	Commands in this context create or edit a tunnel group. A tunnel group is a set of one or more MS-ISAs that support the origination and termination of IPsec and IP/GRE tunnels.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	Tunnel group ID
Context	**configure** isa tunnel-group *number*

© 2026 Nokia.

4.13.1 lag command descriptions

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	**configure** lag *lag-interface*
Tree	lag
Description	Commands in this context configure the Link Aggregation Group (LAG) attributes.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	**configure** lag *lag-interface*
Tree	lag
Description	This command configures a LAG name or ID. The LAG name or ID must start with "lag-" followed by the lag name or ID, for example, lag-*newyork-to-boston* or lag-*700*.
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

access

Synopsis	Enter the **access** context
Context	**configure** lag *lag-interface* access
Tree	access
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

adapt-qos

Synopsis	Enter the **adapt-qos** context
Context	**configure** lag *lag-interface* access adapt-qos
Tree	adapt-qos
Introduced	25.3.R2
Platforms	SAR Gen 2

include-egr-hash-cfg *boolean*

Synopsis	Factor egress hashing into buffer and rate distribution
Context	**configure** lag *lag-interface* access adapt-qos include-egr-hash-cfg *boolean*
Tree	include-egr-hash-cfg
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	QoS adaptation mode
Context	**configure** lag *lag-interface* access adapt-qos mode *keyword*
Tree	mode
Options	link, distribute, port-fair
Introduced	25.3.R2
Platforms	SAR Gen 2

bandwidth *number*

Synopsis	Administrative bandwidth applied to this LAG
Context	**configure** lag *lag-interface* access bandwidth *number*
Tree	bandwidth
Range	1 to 6400000000
Units	bps
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

booking-factor *number*

Synopsis	Booking factor against the administrative bandwidth
Context	**configure** lag *lag-interface* access booking-factor *number*
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LAG
Context	**configure** lag *lag-interface* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

bandwidth-threshold

Synopsis	Enter the **bandwidth-threshold** context
Context	**configure** lag *lag-interface* bandwidth-threshold
Tree	bandwidth-threshold
Description	Commands in this context configure the behavior for the LAG when the number of operational links changes so that the usable bandwidth of the LAG is equal to or below the bandwidth-threshold level.
Introduced	26.7.R1
Platforms	SAR Gen 2

action *keyword*

Synopsis	Action to be taken when LAG operational state changes
Context	**configure** lag *lag-interface* bandwidth-threshold action *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	action
Description	This command specifies the action that the system takes if the usable bandwidth of the LAG is at or below the threshold value.
Options	down – Specifies the LAG is brought down at threshold dynamic-cost – Specifies dynamic costing is activated static-cost – Specifies static costing is activated
Default	down
Introduced	26.7.R1
Platforms	SAR Gen 2

cost *number*

Synopsis	Static cost of the LAG
Context	**configure** lag *lag-interface* bandwidth-threshold cost *number*
Tree	cost
Description	This command specifies the decimal integer static cost of the LAG.
Range	1 to 16777215
Introduced	26.7.R1
Platforms	SAR Gen 2

value *number*

Synopsis	Integer bandwidth threshold value
Context	**configure** lag *lag-interface* bandwidth-threshold value *number*
Tree	value
Description	This command specifies the bandwidth threshold as a percentage of the total bandwidth for the LAG. When the usable bandwidth is equal to or below the threshold, the system invokes the configured action. If the usable bandwidth exceeds the bandwidth threshold, any action taken for being below the threshold value ceases.
Range	1 to 100
Introduced	26.7.R1
Platforms	SAR Gen 2

description *very-long-description*

Synopsis	Text description

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

dynamic-cost *boolean*

Synopsis	Allow LAG costing using operational aggregate bandwidth
Context	**configure** lag *lag-interface* dynamic-cost *boolean*
Tree	dynamic-cost
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

encap-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encapsulation type
Context	**configure** lag *lag-interface* encap-type *keyword*
Tree	encap-type
Options	null, dot1q, qinq
Introduced	25.3.R2
Platforms	SAR Gen 2

hash-weight-threshold

Synopsis	Enter the **hash-weight-threshold** context
Context	**configure** lag *lag-interface* hash-weight-threshold

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hash-weight-threshold
Introduced	25.3.R2
Platforms	SAR Gen 2

action *keyword*

Synopsis	Action when the sum of the hash weight is not exceeded
Context	**configure** lag *lag-interface* hash-weight-threshold action *keyword*
Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	25.3.R2
Platforms	SAR Gen 2

cost *number*

Synopsis	Static cost of the LAG
Context	**configure** lag *lag-interface* hash-weight-threshold cost *number*
Tree	cost
Range	1 to 16777215
Introduced	25.3.R2
Platforms	SAR Gen 2

value *number*

Synopsis	Sum of the hash weight values of all active LAG ports
Context	**configure** lag *lag-interface* hash-weight-threshold value *number*
Tree	value
Range	1 to 6400000
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-time-down *number*

Synopsis	Delay time for reporting the LAG is down

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* hold-time-down *number*
Tree	hold-time-down
Range	1 to 2000
Units	deciseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

lacp

Synopsis	Enable the **lacp** context
Context	**configure** lag *lag-interface* lacp
Tree	lacp
Introduced	25.3.R2
Platforms	SAR Gen 2

administrative-key *number*

Synopsis	Key to identify the channel group on each LACP port
Context	**configure** lag *lag-interface* lacp administrative-key *number*
Tree	administrative-key
Description	This command configures the administrative key that identifies the channel group on each port configured to use LACP. In an MC-LAG configuration, both redundant nodes must be configured with the same key values. In any other case, the key is only locally significant.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

fallback

Synopsis	Enable the **fallback** context
Context	**configure** lag *lag-interface* lacp fallback
Tree	fallback
Description	Commands in this context enable LACP fallback. LACP fallback allows one or more designated links of an LACP-controlled LAG to go into forwarding mode if LACP is not

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	yet operational after a configured timeout period. Links capable of forwarding traffic assume the Ethernet and IP characteristics configured for the LAG.
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	LACP fallback mode
Context	**configure** lag *lag-interface* lacp fallback mode *keyword*
Tree	mode
Description	This command configures the LACP fallback mode. The **static** mode enables a single member to forward traffic during fallback.
Options	static
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	LACP fallback timeout interval
Context	**configure** lag *lag-interface* lacp fallback timeout *number*
Tree	timeout
Description	This command configures the duration after which a link becomes active if no LACP PDUs are received within this timeout period. **Note:** The user must first configure this command to a timeout interval of 90 before the **configure lag lacp-xmit-interval** command can change from **fast** to **slow**.
Range	4 to 3600
Units	seconds
Default	4
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Mode in which LACP operates
Context	**configure** lag *lag-interface* lacp mode *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mode
Options	passive, active
Default	passive
Introduced	25.3.R2
Platforms	SAR Gen 2

system-id *mac-address*

Synopsis	System ID
Context	**configure** lag *lag-interface* lacp system-id *mac-address*
Tree	system-id
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	SAR Gen 2

system-priority *number*

Synopsis	System priority value
Context	**configure** lag *lag-interface* lacp system-priority *number*
Tree	system-priority
Range	0 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

lacp-mux-control *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MUX machine control for LACP LAG in active/passive mode
Context	**configure** lag *lag-interface* lacp-mux-control *keyword*
Tree	lacp-mux-control
Options	coupled, independent
Default	coupled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

lacp-xmit-interval *keyword*

Synopsis	Time for periodic transmission
Context	**configure** lag *lag-interface* lacp-xmit-interval *keyword*
Tree	lacp-xmit-interval
Options	slow, fast
Default	fast
Introduced	25.3.R2
Platforms	SAR Gen 2

lacp-xmit-stdby *boolean*

Synopsis	Allow LACP message transmission on standby links
Context	**configure** lag *lag-interface* lacp-xmit-stdby *boolean*
Tree	lacp-xmit-stdby
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

lldp-member-template

Synopsis	Enter the **lldp-member-template** context
Context	**configure** lag *lag-interface* lldp-member-template
Tree	lldp-member-template
Introduced	25.3.R2
Platforms	SAR Gen 2

dest-mac [mac-type] *keyword*

Synopsis	Enter the **dest-mac** list instance
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword*
Tree	dest-mac

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**mac-type**] *keyword*

Synopsis	Destination MAC address type
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword*
Tree	dest-mac
Options	nearest-bridge – Use the nearest bridge nearest-non-tpmr – Use nearest non-Two-Port MAC Relay (TPMR) nearest-customer – Use the nearest customer
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

notification *boolean*

Synopsis	Enable LLDP notifications
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* notification *boolean*
Tree	notification
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

port-id-subtype *keyword*

Synopsis	Encoding of the Port ID TLV transmitted to the peer
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* port-id-subtype *keyword*
Tree	port-id-subtype
Description	This command configures how to encode the Port ID TLV transmitted to the peer. The default setting **tx-local** (ifindex value) is required by some versions of the NSP NSM-P to properly build the Layer 2 topology map using LLDP. Changing this value to transmit the ifName (**tx-if-name**) or ifAlias (**tx-if-alias**) in place of the ifIndex (**tx-local**) may affect the ability of the NSP NFM-P to build the Layer 2 topology map using LLDP.
Options	tx-if-alias – Transmit the ifAlias String (subtype 1) tx-if-name – Transmit the ifName string (subtype 5)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	tx-local – Transmit the interface ifIndex value (subtype 7)
Default	tx-local
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Enable LLDP received frame handling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* receive *boolean*
Tree	receive
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

transmit *boolean*

Synopsis	Enable LLDP transmitted frame handling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* transmit *boolean*
Tree	transmit
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nearest-bridge *boolean*

Synopsis	Enable nearest bridge tunneling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-bridge *boolean*
Tree	tunnel-nearest-bridge
Description	When configured to **true**, this command enables nearest bridge tunneling. This command allows LLDP packets received on the port with the destination address of the nearest bridge to be tunneled without being intercepted on the local port. The **dest-mac mac-type nearest-bridge** must be disabled for tunneling to occur. This is applicable to NULL SAP Epipe and VPLS services only. When configured to **false**, nearest bridge tunneling is disabled.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nearest-customer *boolean*

Synopsis	Enable nearest customer tunneling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-customer *boolean*
Tree	tunnel-nearest-customer
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest customer to be tunneled without being intercepted on the local port. When configured to **false**, the system disables nearest customer tunneling.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nearest-non-tpmr *boolean*

Synopsis	Enable the nearest non-TPMR tunneling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-non-tpmr *boolean*
Tree	tunnel-nearest-non-tpmr
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest non-TPMR to be tunneled without being intercepted on the local port. When configured to **false**, the system disables nearest non-TPMR tunneling.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

tx-mgmt-address [mgmt-address-system-type] *keyword*

Synopsis	Enter the **tx-mgmt-address** list instance
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-mgmt-address *keyword*
Tree	tx-mgmt-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**mgmt-address-system-type**] *keyword*

Synopsis	Management address to transmit
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-mgmt-address *keyword*
Tree	tx-mgmt-address
Description	This command configures the management address to transmit. The user can choose to send the following addresses, or any combination of these: • system IPv4 address • system IPv6 address • out-of-band IPv4 address • out-of-band IPv6 address The system address is sent only once. The address must be configured for the specific version of the protocol to send the management address.
Options	oob – Transmit out-of-band IPv4 address for active CPM system – Transmit the system IP address system-ipv6 – Transmit the system IPv6 address oob-ipv6 – Transmit the out-of-band IPv6 address for active CPM
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of management address transmission
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-mgmt-address *keyword* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tx-tlvs

Synopsis	Enter the **tx-tlvs** context
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs
Tree	tx-tlvs
Description	Commands in this context configure which LLDP TLVs to transmit. The TX TLVs, defined as a bitmap, include the basic set of LLDP TLVs whose transmission is allowed on the local LLDP agent by network management. Each bit in the bitmap corresponds to a TLV type associated with a specific optional TLV. Organizationally-specific TLVs are excluded from this bitmap. There is no bit reserved for the management address TLV type because transmission of management address TLVs are controlled by another object.
Introduced	25.3.R2
Platforms	SAR Gen 2

port-desc *boolean*

Synopsis	Transmit port description TLVs
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs port-desc *boolean*
Tree	port-desc
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sys-cap *boolean*

Synopsis	Transmit system capabilities TLVs
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs sys-cap *boolean*
Tree	sys-cap
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sys-desc *boolean*

Synopsis	Transmit system description TLVs
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs sys-desc *boolean*
Tree	sys-desc
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sys-name *boolean*

Synopsis	Transmit system name TLVs
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs sys-name *boolean*
Tree	sys-name
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address of the LAG
Context	**configure** lag *lag-interface* mac-address *mac-address*
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	SAR Gen 2

max-ports *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ports allowed in the LAG

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* max-ports *number*
Tree	max-ports
Description	This command configures the maximum number of ports allowed in the LAG. This command must be configured to 64 when the LAG name is a numeric identifier in the range of 1 to 64. If the LAG name is a numeric identifier in the range of 65 to 800, this command must be configured to 32.
Range	32 | 64
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operation mode of the LAG
Context	**configure** lag *lag-interface* mode *keyword*
Tree	mode
Options	access, network, hybrid
Default	network
Introduced	25.3.R2
Platforms	SAR Gen 2

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	**configure** lag *lag-interface* monitor-oper-group *reference*
Tree	monitor-oper-group
Reference	**configure** service oper-group *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port [port-id] *reference*

Synopsis	Enter the **port** list instance
Context	**configure** lag *lag-interface* port *reference*
Tree	port
Introduced	25.3.R2
Platforms	SAR Gen 2

[**port-id**] *reference*

Synopsis	Identifier to uniquely identify the port in the LAG
Context	**configure** lag *lag-interface* port *reference*
Tree	port
Reference	**configure** port *port*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

hash-weight *(number | keyword)*

Synopsis	Flow hashing distribution between LAG ports
Context	**configure** lag *lag-interface* port *reference* hash-weight *(number | keyword)*
Tree	hash-weight
Range	1 to 100000
Options	port-speed
Introduced	25.3.R2
Platforms	SAR Gen 2

priority *number*

Synopsis	Priority of the port in the LAG
Context	**configure** lag *lag-interface* port *reference* priority *number*
Tree	priority
Range	1 to 65535
Default	32768

© 2026 Nokia.

Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administrative state of PTP timestamping
Context	**configure** lag *lag-interface* ptp-timestamping admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ipv4-address *ipv4-address*

Synopsis	IPv4 destination address for PTP messages into port
Context	**configure** lag *lag-interface* ptp-timestamping ipv4-address *ipv4-address*
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ipv6-address *ipv6-address*

Synopsis	IPv6 destination address for PTP messages into port
Context	**configure** lag *lag-interface* ptp-timestamping ipv6-address *ipv6-address*
Tree	ipv6-address
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

selection-criteria

Synopsis	Enter the **selection-criteria** context
Context	**configure** lag *lag-interface* selection-criteria

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	selection-criteria
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Criteria to select the active subgroup
Context	**configure** lag *lag-interface* selection-criteria mode *keyword*
Tree	mode
Options	highest-count, highest-weight, best-port
Default	highest-count
Introduced	25.3.R2
Platforms	SAR Gen 2

slave-to-partner *boolean*

Synopsis	Use slave-to-partner for selection criteria
Context	**configure** lag *lag-interface* selection-criteria slave-to-partner *boolean*
Tree	slave-to-partner
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

subgroup-hold-time *(number | keyword)*

Synopsis	Delay time when switching to a new active subgroup
Context	**configure** lag *lag-interface* selection-criteria subgroup-hold-time *(number | keyword)*
Tree	subgroup-hold-time
Range	0 to 2000
Units	deciseconds
Options	infinite
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

Use subject to Terms available at: www.nokia.com/terms.

standby-signaling *keyword*

Synopsis	Way of signaling a member port to the remote side
Context	**configure** lag *lag-interface* standby-signaling *keyword*
Tree	standby-signaling
Options	lacp, power-off
Default	lacp
Introduced	25.3.R2
Platforms	SAR Gen 2

4.14.1 log command descriptions

log

Synopsis	Enter the **log** context
Context	**configure** log
Tree	log
Introduced	25.3.R2
Platforms	SAR Gen 2

accounting-policy [policy-id] *number*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

[**policy-id**] *number*

Synopsis	Accounting policy unique ID
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	**configure** log accounting-policy *number* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	**configure** log accounting-policy *number* align *boolean*
Tree	align
Description	When the **align** command is configured to **true**, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network. When the **align** command is configured to **false**, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

collection-interval *number*

Synopsis	Accounting collection interval
Context	**configure** log accounting-policy *number* collection-interval *number*
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** log accounting-policy *number* custom-record
Tree	custom-record
Introduced	25.3.R2
Platforms	SAR Gen 2

policer [id] *number*

Synopsis	Enter the **policer** list instance
Context	**configure** log accounting-policy *number* custom-record policer *number*
Tree	policer
Introduced	25.3.R2
Platforms	SAR Gen 2

[**id**] *number*

Synopsis	Policer ID
Context	**configure** log accounting-policy *number* custom-record policer *number*
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

e-counters

Synopsis	Enter the **e-counters** context
Context	**configure** log accounting-policy *number* custom-record policer *number* e-counters
Tree	e-counters
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

exceed-profile-octets-discarded-count *boolean*

Synopsis	Include the exceed profile octets discarded count
Context	**configure** log accounting-policy *number* custom-record policer *number* e-counters exceed-profile-octets-discarded-count *boolean*
Tree	exceed-profile-octets-discarded-count
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

exceed-profile-octets-forwarded-count *boolean*

Synopsis	Include the exceed profile octets forwarded count
Context	**configure** log accounting-policy *number* custom-record policer *number* e-counters exceed-profile-octets-forwarded-count *boolean*
Tree	exceed-profile-octets-forwarded-count
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

exceed-profile-octets-offered-count *boolean*

Synopsis	Include the exceed profile octets offered count
Context	**configure** log accounting-policy *number* custom-record policer *number* e-counters exceed-profile-octets-offered-count *boolean*
Tree	exceed-profile-octets-offered-count
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

exceed-profile-packets-discarded-count *boolean*

Synopsis	Include the exceed profile packets discarded count
Context	**configure** log accounting-policy *number* custom-record policer *number* e-counters exceed-profile-packets-discarded-count *boolean*
Tree	exceed-profile-packets-discarded-count

Synopsis	Accounting policy record type
Context	**configure** log accounting-policy *number* record *keyword*
Tree	record
Description	This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the **show log accounting-records** command. To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command. When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command.
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress,

encryption-key *encrypted-leaf*

Synopsis	Secret key for the encryption of log files
Context	**configure** log encryption-key *encrypted-leaf*
Tree	encryption-key
Description	This command specifies the encryption key used by AES-256-CTR for log file encryption. The encryption key is used for all local log files on the system. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 126
Introduced	25.3.R2
Platforms	SAR Gen 2

event-damping *boolean*

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger adp event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger chassis event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger diameter event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger etun event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger ipsec event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger logger event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger mirror event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger pim-snooping event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger rip event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger security event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	25.3.R2

Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger vrrp event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

accounting-files-total-size *number*

Synopsis	Per CF total accounting file storage limit
Context	**configure** log file-storage-control accounting-files-total-size *number*
Tree	accounting-files-total-size
Description	This command configures the limit for the total space that all accounting files can occupy on each storage device on the active CPM. When this threshold is reached, new accounting files are no longer created in the \act-collect directory of the storage device until SR OS removes older accounting files from the \act directory and the occupancy is below the limit. Currently open, in-progress accounting files in the \act-collect directory are not affected by this limit and are completed. When unconfigured, there is no specific limit for the total size of all accounting files. Only accounting files in the \act directory with system generated names (including no file extension) are applicable toward the total size limit. If a user manually adds or deletes accounting files from the \act directory, the size of the files is not taken into account for up to 1 hour.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed compact flash (CF) device, the limit is never reached.

Range	50 to 4194304
Units	megabytes
Introduced	25.3.R2
Platforms	SAR Gen 2

log-files-total-size *number*

Synopsis	Per CF total log file storage limit

severity *keyword*

Synopsis	Severity level associated with event type
Context	**configure** log log-events dynsvc event *keyword* severity *keyword*
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	**configure** log log-events dynsvc event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events dynsvc event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events dynsvc event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

throttle *boolean*

Synopsis	Throttle log events of this type
Context	**configure** log log-events dynsvc event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	SAR Gen 2

efm-oam event *keyword*

Synopsis	Enter the **efm-oam** list instance
Context	**configure** log log-events efm-oam event *keyword*
Tree	efm-oam
Introduced	25.3.R2
Platforms	SAR Gen 2

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	**configure** log log-events efm-oam event *keyword*
Tree	efm-oam
Options	tmnxDot3OamPeerChanged, tmnxDot3OamLoopDetected, tmnxDot3OamLoopCleared, dot3OamThresholdEvent, dot3OamNonThresholdEvent, tmnxDot3OamSdThresholdEvent, tmnxDot3OamThresholdEventClr, tmnxDot3OamNonThresholdEventClr

Context	**configure** log log-events nat event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events nat event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events nat event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

throttle *boolean*

Synopsis	Throttle log events of this type
Context	**configure** log log-events nat event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	SAR Gen 2

ntp event *keyword*

Synopsis	Enter the **ntp** list instance
Context	**configure** log log-events ntp event *keyword*
Tree	ntp
Introduced	25.3.R2
Platforms	SAR Gen 2

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	**configure** log log-events ntp event *keyword*
Tree	ntp
Options	tmnxNtpAuthMismatch, tmnxNtpNoServersAvail, tmnxNtpServersAvail, tmnxNtpOperChange, tmnxNtpServerChange
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	**configure** log log-events ntp event *keyword* generate *boolean*
Tree	generate
Introduced	25.3.R2
Platforms	SAR Gen 2

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	**configure** log log-events ntp event *keyword* repeat *boolean*
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	**configure** log log-events security event *keyword* generate *boolean*
Tree	generate
Introduced	25.3.R2
Platforms	SAR Gen 2

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	**configure** log log-events security event *keyword* repeat *boolean*
Tree	repeat
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

severity *keyword*

Synopsis	Severity level associated with event type
Context	**configure** log log-events security event *keyword* severity *keyword*
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	**configure** log log-events security event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events security event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events security event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

throttle *boolean*

Synopsis	Throttle log events of this type
Context	**configure** log log-events security event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	25.3.R2
Platforms	SAR Gen 2

snmp event *keyword*

Synopsis	Enter the **snmp** list instance
Context	**configure** log log-events snmp event *keyword*
Tree	snmp
Introduced	25.3.R2
