severity *keyword*

Synopsis	Severity level associated with event type
Context	**configure** log log-events wlan-gw event *keyword* severity *keyword*
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	25.3.R2
Platforms	SAR Gen 2

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

cli

Synopsis	Enable the **cli** context
Context	**configure** log log-id *log-name* destination cli
Tree	cli
Description	Commands in this context configure log events directed to any subscribed CLI session. Subscribe to a CLI log from within a CLI session using the **tools perform log subscribe-to log-id** command. Events are sent to the CLI session for the duration of the CLI session or until a **tools perform log unsubscribe-from** command is issued. A local circular memory log is maintained for CLI logs.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this CLI log
Context	**configure** log log-id *log-name* destination cli max-entries *number*
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

console

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Send log events to the system console port

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** log log-id *log-name* destination console
Tree	console
Description	When specified, the system directs log events to the console port. If the console is not connected, the system drops all entries.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

file *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	File to send log events
Context	**configure** log log-id *log-name* destination file *reference*
Tree	file
Description	This command specifies the file where the system directs log events. When the command is modified, log files are not written to the new location until a rollover occurs or the log is manually cleared. Use the **clear log** command to force a rollover. Subsequent log entries are then written to the new location. If a rollover does not occur or the log is not cleared, the system continues to use the old location.
Reference	**configure** log file *file-policy-name*
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

memory

Synopsis	Enable the **memory** context
Context	**configure** log log-id *log-name* destination memory
Tree	memory
Description	Commands in this context configure log events directed to a memory file. A memory file is a circular buffer. When the file is full, each new entry replaces the oldest entry in the log.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this memory log
Context	**configure** log log-id *log-name* destination memory max-entries *number*
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

netconf

Synopsis	Enable the **netconf** context
Context	**configure** log log-id *log-name* destination netconf
Tree	netconf
Description	Commands in this context configure log events directed to a NETCONF session as notifications. A NETCONF client can subscribe to a NETCONF log using the configured **netconf-stream** for the log in a subscription request. One or more NETCONF sessions can subscribe to a NETCONF log or stream.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this NETCONF log
Context	**configure** log log-id *log-name* destination netconf max-entries *number*
Tree	max-entries
Range	50 to 3000
Introduced	25.3.R2
Platforms	SAR Gen 2

snmp

Synopsis	Enable the **snmp** context
Context	**configure** log log-id *log-name* destination snmp
Tree	snmp
Description	Commands in this context configure log events directed to the **snmp-trap-group** associated with the log ID. A local circular memory log is maintained for SNMP logs.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this SNMP log
Context	**configure** log log-id *log-name* destination snmp max-entries *number*
Tree	max-entries
Range	50 to 3000
Default	100

tls-client-profile *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	**configure** log syslog *log-syslog-name* tls-client-profile *reference*
Tree	tls-client-profile
Description	This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS. Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages. When this command is unconfigured, the syslog messages are sent over UDP.
Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

4.15.1 macsec command descriptions

macsec

Synopsis	Enter the **macsec** context
Context	**configure** macsec
Tree	macsec
Introduced	25.3.R2
Platforms	SAR Gen 2

connectivity-association [ca-name] *string*

Synopsis	Enter the **connectivity-association** list instance
Context	**configure** macsec connectivity-association *string*
Tree	connectivity-association
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ca-name**] *string*

Synopsis	Connectivity association name
Context	**configure** macsec connectivity-association *string*
Tree	connectivity-association
String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the connectivity association
Context	**configure** macsec connectivity-association *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

cipher-suite *keyword*

Synopsis	Data path encryption algorithm
Context	**configure** macsec connectivity-association *string* cipher-suite *keyword*
Tree	cipher-suite
Options	gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Default	gcm-aes-128
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-tag-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear tag mode for clear text before the SecTAG
Context	**configure** macsec connectivity-association *string* clear-tag-mode *keyword*
Tree	clear-tag-mode
Options	none, single-tag, dual-tag
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

delay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable delay protection
Context	**configure** macsec connectivity-association *string* delay-protection *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	delay-protection
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

description *string*

Synopsis	Text description
Context	**configure** macsec connectivity-association *string* description *string*
Tree	description
String length	1 to 80
Introduced	25.3.R2
Platforms	SAR Gen 2

encryption-offset *number*

Synopsis	Confidentiality (encryption) offset
Context	**configure** macsec connectivity-association *string* encryption-offset *number*
Tree	encryption-offset
Range	0 | 30 | 50
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

macsec-encrypt *boolean*

Synopsis	Encrypt and authenticate all PDUs
Context	**configure** macsec connectivity-association *string* macsec-encrypt *boolean*
Tree	macsec-encrypt
Description	When configured to **true**, all PDUs are encrypted and authenticated. When configured to **false**, all PDUs are transmitted in clear text, however, they are still authenticated and have the trailing ICV.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mka-hello-interval *keyword*

Synopsis	Interval used for MKA hello by the MKA protocol.
Context	**configure** macsec connectivity-association *string* mka-hello-interval *keyword*
Tree	mka-hello-interval
Options	1, 2, 3, 4, 5, 6, 500ms
Default	2
Introduced	26.3.R1
Platforms	SAR Gen 2

mka-key-server-priority *number*

Synopsis	Key server priority used by the MKA protocol
Context	**configure** macsec connectivity-association *string* mka-key-server-priority *number*
Tree	mka-key-server-priority
Description	This command specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.
Range	0 to 255
Default	16
Introduced	26.3.R1
Platforms	SAR Gen 2

replay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Discard packet when not within the replay window size
Context	**configure** macsec connectivity-association *string* replay-protection *boolean*
Tree	replay-protection
Description	When configured to **true**, replay protection is enabled and packets are discarded when they are not within the replay window size. With replay protection, the sequence of the ID number of received packets is checked. If a packet arrives out of sequence and the difference between the packet IDs exceeds the replay protection window size, the packet is counted by the receiving port and

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

discarded. For example if the replay protection window size is configured to five and a packet with an ID of 1006 arrives on the receiving link immediately following the packet assigned an ID of 1000, the packet with ID 1006 is counted and discarded because it is outside the parameter of the window size.

Replay protection is particularly useful for addressing man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link that arrives on the receiving link out of sequence will be detected and dropped instead of forwarded through the network.

Replay protection should not be enabled in cases where packets are expected to arrive out of order.

When configured to **false**, replay protection is not enabled.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

replay-window-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Replay protection window size
Context	**configure** macsec connectivity-association *string* replay-window-size *number*
Tree	replay-window-size
Range	0 to 4294967294
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

static-cak

Synopsis	Enter the **static-cak** context
Context	**configure** macsec connectivity-association *string* static-cak
Tree	static-cak
Description	Commands in this context configure the Connectivity Association Key (CAK) to manage the MACsec Key Agreement (MKA).
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

active-psk *number*

Synopsis	Active pre-shared-key (PSK)
Context	**configure** macsec connectivity-association *string* static-cak active-psk *number*
Tree	active-psk
Description	This command specifies the active transmitting PSK. If two PSKs are configured, the arriving MACsec MKA can be decrypted via CAKs using either PSK; however, only the active PSK is used for TX encryption of MKA PDUs.
Range	1 to 2
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

keychain

Synopsis	Enter the **keychain** context
Context	**configure** macsec connectivity-association *string* static-cak keychain
Tree	keychain
Introduced	25.10.R1
Platforms	SAR Gen 2

primary *reference*

Synopsis	Keychain name for primary use
Context	**configure** macsec connectivity-association *string* static-cak keychain primary *reference*
Tree	primary
Reference	**configure** system security keychains keychain *named-item*
Introduced	25.10.R1
Platforms	SAR Gen 2

pre-shared-key [psk-id] *number*

Synopsis	Enter the **pre-shared-key** list instance
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure pre-shared key attributes to enable MACsec using static connectivity association key (CAK) security mode. A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). The pre-shared key, the CKN and the CAK, must match on both ends of a link. A pre-shared key is configured on both devices at each end of a point-to-point link to enable MACsec via static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the successful MKA liveliness negotiation. The encryption type is used to encrypt the SAK and authenticate the MKA packet. The symmetric encryption key SAK (Security Association Key) must be encrypted (wrapped) via the MKA protocols. The AES key is derived from the pre-shared-key.
Max. instances	2
Introduced	25.3.R2
Platforms	SAR Gen 2

[**psk-id**] *number*

Synopsis	Pre-shared-key (PSK) ID
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key
Range	1 to 2
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

cak *encrypted-leaf-hex-without-prefix*

Synopsis	Connectivity association key (CAK) for the PSK
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak *encrypted-leaf-hex-without-prefix*
Tree	cak
Description	This command specifies the connectivity association key (CAK) for the pre-shared key. Two values are derived from the CAK: • Key Encryption Key (KEK), used to encrypt the MKA and SAK (symmetric key used for data path PDUs) distributed between all members • Integrity Check Value (ICV), used to authenticate the MKA and SAK PDUs distributed between all members

© 2026 Nokia.

	This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 126
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Introduced	25.3.R2
Platforms	SAR Gen 2

cak-name *cak-name*

Synopsis	Connectivity association key name (CKN) for the PSK
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak-name *cak-name*
Tree	cak-name
Description	This command specifies the connectivity association key name (CKN) for the pre-shared key. The CKN is appended to the MKA for identification of the appropriate CAK by the peer.
String length	1 to 64
String format	'cak-name' must be even-length hex up to 64 characters (e.g. 0a1b2c)
Introduced	25.3.R2
Platforms	SAR Gen 2

encryption-type *keyword*

Synopsis	Encryption for authentication of the MKA packet
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* encryption-type *keyword*
Tree	encryption-type
Options	aes-128-cmac, aes-256-cmac
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

mac-policy [mac-policy-id] *number*

Synopsis	Enter the **mac-policy** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** macsec mac-policy *number*
Tree	mac-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

[**mac-policy-id**] *number*

Synopsis	MAC address policy ID
Context	**configure** macsec mac-policy *number*
Tree	mac-policy
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

destination-mac-address [dest-mac-addr] *mac-address*

Synopsis	Add a list entry for **destination-mac-address**
Context	**configure** macsec mac-policy *number* destination-mac-address *mac-address*
Tree	destination-mac-address
Max. instances	5
Introduced	25.3.R2
Platforms	SAR Gen 2

[**dest-mac-addr**] *mac-address*

Synopsis	Destination MAC address added to the MAC policy
Context	**configure** macsec mac-policy *number* destination-mac-address *mac-address*
Tree	destination-mac-address
Notes	This element is part of a list key.

4.16.1 mirror command descriptions

mirror

Synopsis	Enter the **mirror** context
Context	**configure** mirror
Tree	mirror
Introduced	25.3.R2
Platforms	SAR Gen 2

mirror-dest [service-name] *service-name*

Synopsis	Enter the **mirror-dest** list instance
Context	**configure** mirror mirror-dest *service-name*
Tree	mirror-dest
Description	Commands in this context set up a packet mirroring service to allow mirrored packets to be directed locally (within the same router) or remotely (over the core of the network and with a far-end decode mirror encapsulation). The mirror destination service is composed of destination options that define where the mirrored packets are sent. It also specifies whether the defined service will receive mirrored packets from a far-end router over the network core. The mirror destination services are persistent between boots of the router and are included in the configuration saves.
Max. instances	255
Introduced	25.3.R2
Platforms	SAR Gen 2

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	**configure** mirror mirror-dest *service-name*
Tree	mirror-dest
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.

Notes	The following elements are part of a choice: **ing-vc-label** or **label-signaling**.
Introduced	25.3.R2
Platforms	SAR Gen 2

vc-id *number*

Synopsis	Virtual circuit ID associated with the remote source
Context	**configure** mirror mirror-dest *service-name* remote-source far-end *ipv4-address* vc-id *number*
Tree	vc-id
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Synopsis	Enter the **spoke-sdp** list instance
Context	**configure** mirror mirror-dest *service-name* remote-source spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
Introduced	25.3.R2
Platforms	SAR Gen 2

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	SDP ID number
Context	**configure** mirror mirror-dest *service-name* remote-source spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the service SDP binding
Context	**configure** mirror mirror-dest *service-name* remote-source spoke-sdp *sdp-bind-id* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

control-word *boolean*

Synopsis	Enable the PW control word on spoke SDPs
Context	**configure** mirror mirror-dest *service-name* remote-source spoke-sdp *sdp-bind-id* control-word *boolean*
Tree	control-word
Description	When configured to **true**, this command enables the PW control word on spoke SDPs that are part of a mirror destination. The control word must be enabled to allow MPLS-TP OAM on spoke SDP and is only valid for spoke SDPs that are part of a mirror service of type **ether**. When configured to **false**, this command disables the PW control word.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

egress

Synopsis	Enter the **egress** context
Context	**configure** mirror mirror-dest *service-name* remote-source spoke-sdp *sdp-bind-id* egress
Tree	egress
Introduced	25.3.R2
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	**configure** mirror mirror-source *service-name*
Tree	mirror-source
Description	This command creates or edits a service instance. When a service is created, the **customer** keyword and *customer-id* must be specified and associates the service with a customer. The *customer-id* must already exist having been created using the customer command in the service context. When a service is created with a customer association, it is not possible to edit the customer association. The service must be deleted and re-created with a new customer association. When a service is created, the use of the **customer***customer-id* is optional to navigate into the service configuration context. If attempting to edit a service with the incorrect *customer-id* results in an error. This command specifies the unique service identification number identifying the service in the service domain. This ID must be unique to this service and may not be used for

4.17.1 oam-pm command descriptions

oam-pm

Synopsis	Enter the **oam-pm** context
Context	**configure** oam-pm
Tree	oam-pm
Description	Commands in this context configure proactive and on-demand tests used to gather the performance and statistical information and define storage parameters (including binning structures).
Introduced	25.3.R2
Platforms	SAR Gen 2

bin-group [bin-group-id] *number*

Synopsis	Enter the **bin-group** list instance
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Introduced	25.3.R2
Platforms	SAR Gen 2

[**bin-group-id**] *number*

Synopsis	Bin group ID
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the bin group
Context	**configure** oam-pm bin-group *number* admin-state *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	SAR Gen 2

bin-type [bin-metric] *keyword*

Synopsis	Enter the **bin-type** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Introduced	25.3.R2
Platforms	SAR Gen 2

[**bin-metric**] *keyword*

Synopsis	Delay metric bin structure
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Options	fd – Frame Delay fdr – Frame Delay Range ifdv – Inter-Frame Delay Variation
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bin [bin-number] *number*

Synopsis	Enter the **bin** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Introduced	25.3.R2
Platforms	SAR Gen 2

[**bin-number**] *number*

Synopsis	Bin number

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Range	0 to 9
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

lower-bound *number*

Synopsis	Lower bound for the bin
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number* lower-bound *number*
Tree	lower-bound
Range	0 | 1 to 4294967295
Units	microseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

delay-event [direction] *keyword*

Synopsis	Enter the **delay-event** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Introduced	25.3.R2
Platforms	SAR Gen 2

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-threshold *number*

Synopsis	OAM-PM clear threshold for an excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* clear-threshold *number*
Tree	clear-threshold
Range	0 to 863999
Introduced	25.3.R2
Platforms	SAR Gen 2

exclude-lowest-bin *number*

Synopsis	Lowest bin excluded from the TCA count
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* exclude-lowest-bin *number*
Tree	exclude-lowest-bin
Range	1 to 9
Introduced	25.3.R2
Platforms	SAR Gen 2

lowest-bin *number*

Synopsis	Lowest delay bin used when applying a delay threshold
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* lowest-bin *number*
Tree	lowest-bin
Range	0 to 9
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

raise-threshold *number*

Synopsis	Raise threshold for excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* raise-threshold *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

exclude-from-avg [direction] *keyword*

Synopsis	Enter the **exclude-from-avg** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Introduced	25.3.R2
Platforms	SAR Gen 2

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bins *string*

Synopsis	Bin numbers excluded from the average calculation
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword* bins *string*
Tree	bins
String length	1 to 39
String format	'bins' must be all, comma-separated bin numbers, or ranges (0-9)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** oam-pm bin-group *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

session [session-name] *named-item*

Synopsis	Enter the **session** list instance
Context	**configure** oam-pm session *named-item*
Tree	session
Description	Commands in this context create the individual session containers that house the test specific configuration parameters.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**session-name**] *named-item*

Synopsis	OAM-PM session name
Context	**configure** oam-pm session *named-item*
Tree	session
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bin-group *reference*

Synopsis	Bin group for the session
Context	**configure** oam-pm session *named-item* bin-group *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	bin-group
Reference	**configure** oam-pm bin-group *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** oam-pm session *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

ethernet

Synopsis	Enable the **ethernet** context
Context	**configure** oam-pm session *named-item* ethernet
Tree	ethernet
Description	Commands in this context configure the Ethernet specific source and destination information, the priority, and the Ethernet tests tools on the launch point.
Notes	The following elements are part of a mandatory choice: **ethernet**, **ip**, or **mpls**.
Introduced	25.3.R2
Platforms	SAR Gen 2

dest-mac *mac-unicast-address*

Synopsis	Destination MAC address for the session
Context	**configure** oam-pm session *named-item* ethernet dest-mac *mac-unicast-address*
Tree	dest-mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dmm

Synopsis	Enable the **dmm** context
Context	**configure** oam-pm session *named-item* ethernet dmm
Tree	dmm
Description	Commands in this context configure the delay measurement message test command options.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet dmm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

data-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Data TLV size in the frames sent for the test
Context	**configure** oam-pm session *named-item* ethernet dmm data-tlv-size *number*
Tree	data-tlv-size
Description	This command configures a Data TLV to PDU and increases the frame on the wire by the specified amount. **Note:** This command only configures the size of the padding added to the PDU and does not configure the total size of the frame on the wire.
Range	0 | 3 to 2000
Units	octets
Default	0

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ethernet dmm interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 10000
Units	milliseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

test-duration *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	**configure** oam-pm session *named-item* ethernet dmm test-duration *number*
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

test-id *(number | keyword)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Test ID
Context	**configure** oam-pm session *named-item* ethernet dmm test-id *(number | keyword)*
Tree	test-id
Description	[None]
Range	0 to 2147483647
Options	auto – Automatically assign a test ID
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

priority *number*

Synopsis	Priority and forwarding class for the session
Context	**configure** oam-pm session *named-item* ethernet priority *number*
Tree	priority
Range	0 to 7
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

remote-mep *number*

Synopsis	Remote MEP for the session
Context	**configure** oam-pm session *named-item* ethernet remote-mep *number*
Tree	remote-mep
Range	1 to 8191
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

slm

Synopsis	Enable the **slm** context
Context	**configure** oam-pm session *named-item* ethernet slm
Tree	slm
Description	Commands in this context configure the synthetic loss measurement (SLM) test and create the container used to configure the individual test parameters.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet slm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

data-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Data TLV size in the frames sent for the test
Context	**configure** oam-pm session *named-item* ethernet slm data-tlv-size *number*
Tree	data-tlv-size
Description	This command configures a Data TLV to PDU and increases the frame on the wire by the specified amount. **Note:** This command only configures the size of the padding added to the PDU and does not configure the total size of the frame on the wire.
Range	0 | 3 to 2000
Units	octets
Default	0

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	**configure** oam-pm session *named-item* ethernet slm flr-threshold *number*
Tree	flr-threshold
Description	This command configures the Frame Loss Ratio (FLR) threshold used to determine whether the Delta-T is high loss. An individual Delta-T with a frame loss threshold equal to the configured threshold is marked high loss. An individual Delta-T with a frame loss threshold lower than the configured threshold is not marked as high loss.
Range	0 to 100
Units	percent
Default	50
Introduced	25.3.R2
Platforms	SAR Gen 2

hli-force-count *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI and CHLI counters despite availability
Context	**configure** oam-pm session *named-item* ethernet slm hli-force-count *boolean*
Tree	hli-force-count
Description	When configured to **true**, the router uses High Loss Interval (HLI) and Consecutive High Loss Interval (CHLI) counters to increment regardless of availability. Without this command, HLI and CHLI counters can only increment during times of availability, which includes undetermined availability.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ethernet slm interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000
Units	milliseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

loss-events

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **loss-events** context
Context	**configure** oam-pm session *named-item* ethernet slm loss-events
Tree	loss-events
Description	Commands in this context define the loss events and thresholds that are to be tracked.
Introduced	25.3.R2
Platforms	SAR Gen 2

avg-flr-event [direction] *keyword*

Synopsis	Enter the **avg-flr-event** list instance
Context	**configure** oam-pm session *named-item* ethernet slm loss-events avg-flr-event *keyword*
Tree	avg-flr-event
Description	Commands in this context configure the frame loss ratio threshold to be applied and checked at the end of the measurement interval for the specified direction. This is a percentage based on the average frame loss ratio over the entire measurement interval.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**direction**] *keyword*

Synopsis	Traffic flow direction
Context	**configure** oam-pm session *named-item* ethernet slm loss-events avg-flr-event *keyword*
Tree	avg-flr-event
Options	forward, backward
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-threshold *decimal-number*

Synopsis	Clear threshold for the average FLR
Context	**configure** oam-pm session *named-item* ethernet slm loss-events avg-flr-event *keyword* clear-threshold *decimal-number*
Tree	clear-threshold
Description	This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when to generate the clear event. If this command is not specified, the traffic crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and without regard to any previous window. Each unique event can only be raised once within the measurement interval. If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to the following measurement intervals. If a threshold crossing event is raised another is not raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.
Range	0.000 to 99.999
Units	percent
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

raise-threshold *decimal-number*

Synopsis	Rising threshold for the average FLR
Context	**configure** oam-pm session *named-item* ethernet slm loss-events avg-flr-event *keyword* raise-threshold *decimal-number*
Tree	raise-threshold
Description	This command configures the rising percentage that determines when the event is to be generated.
Range	0.000 to 100.000
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

chli-event [direction] *keyword*

Synopsis	Enter the **chli-event** list instance
Context	**configure** oam-pm session *named-item* ethernet slm loss-events chli-event *keyword*
Tree	chli-event
Description	Commands in this context configure the CHLI threshold to be monitored and the associated thresholds using the counter of the specified direction.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**direction**] *keyword*

Synopsis	Traffic flow direction
Context	**configure** oam-pm session *named-item* ethernet slm loss-events chli-event *keyword*
Tree	chli-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-threshold *number*

Synopsis	Clear threshold
Context	**configure** oam-pm session *named-item* ethernet slm loss-events chli-event *keyword* clear-threshold *number*
Tree	clear-threshold
Description	This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated. If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval. If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.
Range	0 to 863999
Introduced	25.3.R2
Platforms	SAR Gen 2

raise-threshold *number*

Synopsis	Rising threshold that determines when to generate event
Context	**configure** oam-pm session *named-item* ethernet slm loss-events chli-event *keyword* raise-threshold *number*
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

hli-event [direction] *keyword*

Synopsis	Enter the **hli-event** list instance
Context	**configure** oam-pm session *named-item* ethernet slm loss-events hli-event *keyword*
Tree	hli-event

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the HLI threshold to be monitored and the associated thresholds using the counter of the specified direction.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**direction**] *keyword*

Synopsis	Traffic flow direction
Context	**configure** oam-pm session *named-item* ethernet slm loss-events hli-event *keyword*
Tree	hli-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-threshold *number*

Synopsis	Clear threshold
Context	**configure** oam-pm session *named-item* ethernet slm loss-events hli-event *keyword* clear-threshold *number*
Tree	clear-threshold
Description	This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when the clear event should be generated. If this command is not specified, the traffic-crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and regardless of any previous window. Each unique event can only be raised once within the measurement interval. If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to following the measurement intervals. If a threshold crossing event is raised another is raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.
Range	0 to 863999
Introduced	25.3.R2
Platforms	SAR Gen 2

Synopsis	CHLI threshold
Context	**configure** oam-pm session *named-item* ethernet slm timing chli-threshold *number*
Tree	chli-threshold
Description	This command configures the number of Consecutive High Loss Intervals (CHLI) that when equal to or exceeded increments the CHLI counter. A CHLI counter is an indication that the sliding window is available but has crossed a threshold consecutive of unavailable Delta-T intervals. A CHLI can only be incremented once during a sliding window and, by default, it is only incremented during times of availability.
Range	1 to 9
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

consec-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Consecutive Delta-t intervals
Context	**configure** oam-pm session *named-item* ethernet slm timing consec-delta-t *number*
Tree	consec-delta-t
Description	This command configures the number of consecutive Delta-T small measurement intervals that make up the sliding window over which availability and unavailability is determined. Transitions from one state to another occurs when the this command is in a new state.
Range	2 to 10
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

frames-per-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Frames sent in one Delta-T

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** oam-pm session *named-item* ethernet slm timing frames-per-delta-t *number*
Tree	frames-per-delta-t
Description	This command configures the number of SLM frames sent, defining the size of the Delta-T (small measurement window). Each Delta-T is marked as high loss or not high loss based on the FLR threshold. The size of the Delta-T measurement is the product of the number of frames and the interval.
Range	1 to 50
Units	frames
Introduced	25.3.R2
Platforms	SAR Gen 2

source

Synopsis	Enable the **source** context
Context	**configure** oam-pm session *named-item* ethernet source
Tree	source
Description	Commands in this context define the source MEP launch point command options that are used by the individual tests within the session. If an MEP matching the configuration does not exist, the session is allowed to become active; however, the frames sent and received and seen under the **show oam-pm statistics session***session-name* command are zero.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix *ipv4-unicast-prefix*

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf prefix *ipv4-unicast-prefix*
Tree	prefix
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-policy

Synopsis	Enable the **sr-policy** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-policy
Tree	sr-policy
Description	Commands in this context identify the SR policy used to tunnel IP packets for the session tests.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
Introduced	25.3.R2
Platforms	SAR Gen 2

color *number*

Synopsis	Color for associating the SR policy with an objective
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-policy color *number*
Tree	color
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Segment Routing endpoint for the session
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-policy endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	endpoint
Description	This command configures the unicast IPv4 or globally routable IPv6 address endpoint of the tunnel.
Introduced	25.3.R2
Platforms	SAR Gen 2

segment-list *number*

Synopsis	Segment Routing segment list for the session
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-policy segment-list *number*
Tree	segment-list
Description	This command configures the identification of the segment list for the specific policy.
Range	1 to 32
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sr-te

Synopsis	Enable the **sr-te** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-te
Tree	sr-te
Description	Commands in this context allow for the specification of SR-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp *named-item-64*

Synopsis	Name of LSP that carries the test packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-te lsp *named-item-64*
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

twamp-light

Synopsis	Enable the **twamp-light** context
Context	**configure** oam-pm session *named-item* ip twamp-light
Tree	twamp-light
Description	Commands in this context configure the TWAMP-Light (Two Way Active Measurement Protocol, Light) or STAMP (Simple Two Way Active Measurement Protocol) test for the session.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ip twamp-light admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** oam-pm session *named-item* ip twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** oam-pm session *named-item* ip twamp-light interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 10000
Units	milliseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

loss

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **loss** context
Context	**configure** oam-pm session *named-item* ip twamp-light loss
Tree	loss
Introduced	25.3.R2
Platforms	SAR Gen 2

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	**configure** oam-pm session *named-item* ip twamp-light loss flr-threshold *number*
Tree	flr-threshold
Description	This command configures the Frame Loss Ratio (FLR) threshold used to determine whether the Delta-T is high loss. An individual Delta-T with a frame loss threshold equal to the configured threshold is marked high loss. An individual Delta-T with a frame loss threshold lower than the configured threshold is not marked as high loss.
Range	0 to 100
Units	percent
Default	50

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

hli-force-count *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI and CHLI counters despite availability
Context	**configure** oam-pm session *named-item* ip twamp-light loss hli-force-count *boolean*
Tree	hli-force-count
Description	When configured to **true**, the router uses High Loss Interval (HLI) and Consecutive High Loss Interval (CHLI) counters to increment regardless of availability. Without this command, HLI and CHLI counters can only increment during times of availability, which includes undetermined availability.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

timing

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **timing** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	clear-threshold
Description	This command configures a value used for stateful behavior to configure a percentage of loss value lower than the rising percentage to indicate when to generate the clear event. If this command is not specified, the traffic crossing alarm is stateless. Stateless means the state is not carried forward to other measurement intervals. Each measurement interval is analyzed independently and without regard to any previous window. Each unique event can only be raised once within the measurement interval. If this command is specified, the traffic crossing alarm uses stateful behavior. Stateful means each unique previous event state is carried forward to the following measurement intervals. If a threshold crossing event is raised another is not raised until a measurement interval completes and the clear threshold has not been exceeded. A clear event is raised under that condition.
Range	0.000 to 99.999
Units	percent
Introduced	25.3.R2
Platforms	SAR Gen 2

raise-threshold *decimal-number*

Synopsis	Rising threshold for the average FLR
Context	**configure** oam-pm session *named-item* ip twamp-light loss-events avg-flr-event *keyword* raise-threshold *decimal-number*
Tree	raise-threshold
Description	This command configures the rising percentage that determines when the event is to be generated.
Range	0.000 to 100.000
Units	percent
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

intervals-stored *number*

Synopsis	Maximum number of measurement intervals stored
Context	**configure** oam-pm session *named-item* measurement-interval *keyword* intervals-stored *number*
Tree	intervals-stored
Range	1 to 96
Introduced	25.3.R2
Platforms	SAR Gen 2

threshold-cross-alerts

Synopsis	Enter the **threshold-cross-alerts** context
Context	**configure** oam-pm session *named-item* measurement-interval *keyword* threshold-cross-alerts
Tree	threshold-cross-alerts
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of TCAs for measurement interval
Context	**configure** oam-pm session *named-item* measurement-interval *keyword* threshold-cross-alerts admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

delay-events *boolean*

Synopsis	Enable delay TCAs for the measurement interval
Context	**configure** oam-pm session *named-item* measurement-interval *keyword* threshold-cross-alerts delay-events *boolean*
Tree	delay-events
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

loss-events *boolean*

Synopsis	Enable loss TCAs for the measurement interval
Context	**configure** oam-pm session *named-item* measurement-interval *keyword* threshold-cross-alerts loss-events *boolean*
Tree	loss-events
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

session-type *keyword*

4.18.1 policy-options command descriptions

policy-options

Synopsis	Enter the **policy-options** context
Context	**configure** policy-options
Tree	policy-options
Description	Commands in this context configure route policies. Route policies are applied to the routing protocol.
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path [name] *named-item*

Synopsis	Enter the **as-path** list instance
Context	**configure** policy-options as-path *named-item*
Tree	as-path
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	AS path name
Context	**configure** policy-options as-path *named-item*
Tree	as-path
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path *named-item* expression *policy-as-path-regexp*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	expression
Description	This command configures a route policy AS path regular expression statement to use in route policy entries. An AS path in a BGP route matches an AS path regular expression, if the path matches the pattern of the regular expression. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS: • . • * • ? • {n} • {m,n} • {m, } To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.
String length	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path-group [name] *named-item*

Synopsis	Enter the **as-path-group** list instance
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	AS path group name
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

entry [entry] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** policy-options as-path-group *named-item* entry *number*
Tree	entry
Introduced	25.3.R2
Platforms	SAR Gen 2

[**entry**] *number*

Synopsis	AS path entry ID
Context	**configure** policy-options as-path-group *named-item* entry *number*
Tree	entry
Range	1 to 128
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path-group *named-item* entry *number* expression *policy-as-path-regexp*
Tree	expression
Description	This command configures an AS path group regular expression. An AS path in a BGP route matches an AS path group, if the pattern of the path matches the concatenation of all regular expressions in the group. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS: • . • * • ? • {n}

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String length	1 to 255
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

community [name] *policy-community-name*

Synopsis	Enter the **community** list instance
Context	**configure** policy-options community *policy-community-name*
Tree	community
Description	Commands in this context create a route policy community list or expression to use in route policy entries. A community list is an unordered set of community values (members). In general, for each member in the configured community list, there must be a match with at least one community in the route. A community expression is a set of community values that are arranged in a logical expression using operators such as AND, OR, and NOT. A route matches a community expression if it satisfies the logic of the expression. For more information, see the **expression** and **members** commands in the **configure policy-options community** context.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *policy-community-name*

Synopsis	Name of extended community set
Context	**configure** policy-options community *policy-community-name*
Tree	community
Description	This command configures a route policy community name.
String length	1 to 64
String format	'policy-community-name' must not be all spaces
Notes	This element is part of a list key.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

expression

Synopsis	Enable the **expression** context
Context	**configure** policy-options community *policy-community-name* expression
Tree	expression
Introduced	25.3.R2
Platforms	SAR Gen 2

exact *boolean*

Synopsis	Match exactly for the specified expression
Context	**configure** policy-options community *policy-community-name* expression exact *boolean*
Tree	exact
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

expr *expression-community*

Synopsis	Community expression value
Context	**configure** policy-options community *policy-community-name* expression expr *expression-community*
Tree	expr
String length	1 to 900
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

member [member] *member-community*

Synopsis	Add a list entry for **member**
Context	**configure** policy-options community *policy-community-name* member *member-community*
Tree	member

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**member**] *member-community*

Synopsis	Community member value
Context	**configure** policy-options community *policy-community-name* member *member-community*
Tree	member
Description	This command configures a BGP community value. Each member of a community list is a standard, extended, or large community value or a regular expression that potentially matches many community values. A regular expression incorporates terms and operators that use the terms. An individual numerical digit is an elementary term in the community regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS: • . • * • ? • {n} • {m,n} • {m, } To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.
String length	1 to 72
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

damping [name] *named-item*

Synopsis	Enter the **damping** list instance
Context	**configure** policy-options damping *named-item*
Tree	damping
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	Damping profile name
Context	**configure** policy-options damping *named-item*
Tree	damping
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

half-life *number*

Synopsis	Time after the FOM value is halved
Context	**configure** policy-options damping *named-item* half-life *number*
Tree	half-life
Range	1 to 45
Units	minutes
Introduced	25.3.R2
Platforms	SAR Gen 2

max-suppress *number*

Synopsis	Maximum time for a route to remain suppressed
Context	**configure** policy-options damping *named-item* max-suppress *number*
Tree	max-suppress
Range	1 to 720
Units	minutes
Introduced	25.3.R2
Platforms	SAR Gen 2

reuse *number*

Synopsis	Value below which a suppressed route can be used again
Context	**configure** policy-options damping *named-item* reuse *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	reuse
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

suppress *number*

Synopsis	Value above which a route is suppressed
Context	**configure** policy-options damping *named-item* suppress *number*
Tree	suppress
Range	1 to 20000
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-community-set [name] *policy-community-name*

Synopsis	Enter the **extended-community-set** list instance
Context	**configure** policy-options extended-community-set *policy-community-name*
Tree	extended-community-set
Description	Commands in this context configure an extended community set used in route policies. An extended community set defines a list of exact match route target extended communities (type 0, type 1, or type 2). The set can be referenced in policy statements to match BGP routes that carry or do not carry the specified route targets.
Introduced	25.10.R3
Platforms	SAR Gen 2

[**name**] *policy-community-name*

Synopsis	Name of extended community set
Context	**configure** policy-options extended-community-set *policy-community-name*
Tree	extended-community-set
Description	This command configures a route policy community name.
String length	1 to 64
String format	'policy-community-name' must not be all spaces
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.10.R3
Platforms	SAR Gen 2

member [value] *member-community*

Synopsis	Add a list entry for **member**
Context	**configure** policy-options extended-community-set *policy-community-name* member *member-community*
Tree	member
Description	Commands in this context add a route target member of an extended community set. The member must be configured in an exact match format and it must start with the substring 'target:'. This substring is followed by two numbers separated from each other by a colon. The meaning of the two numbers depends on whether the route target is in type 0, type 1 or type 2 format. These members cannot be configured to be regular expressions.
Introduced	25.10.R3
Platforms	SAR Gen 2

[**value**] *member-community*

Synopsis	Member of an extended community set
Context	**configure** policy-options extended-community-set *policy-community-name* member *member-community*
Tree	member
String length	1 to 72
String format	'value' must be target-type extended community (target:...:...)
Notes	This element is part of a list key.
Introduced	25.10.R3
Platforms	SAR Gen 2

global-variables

Synopsis	Enter the **global-variables** context
Context	**configure** policy-options global-variables
Tree	global-variables
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

name [variable-name] *policy-var-name*

Synopsis	Enter the **name** list instance
Context	**configure** policy-options global-variables name *policy-var-name*
Tree	name
Max. instances	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

[**variable-name**] *policy-var-name*

Synopsis	Global variable name used to reference policy functions
Context	**configure** policy-options global-variables name *policy-var-name*
Tree	name
String length	1 to 32
String format	'policy-var-name' must start and end with @ (e.g. @name@)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the policy variable
Context	**configure** policy-options global-variables name *policy-var-name* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	25.3.R2
Platforms	SAR Gen 2

decimal *decimal-number*

Synopsis	Attribute decimal to which variable name is resolved

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options global-variables name *policy-var-name* decimal *decimal-number*
Tree	decimal
Range	0.000 to 4294967295.000
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	25.3.R2
Platforms	SAR Gen 2

number *number*

Synopsis	Numerical value of the policy variable
Context	**configure** policy-options global-variables name *policy-var-name* number *number*
Tree	number
Range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	25.3.R2
Platforms	SAR Gen 2

value *named-item*

Synopsis	Policy variable value
Context	**configure** policy-options global-variables name *policy-var-name* value *named-item*
Tree	value
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy-statement [name] *named-item-64*

Synopsis	Enter the **policy-statement** list instance
Context	**configure** policy-options policy-statement *named-item-64*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	policy-statement
Description	Commands in this context configure a route policy statement. Route policy statements control the flow of routing information to and from a specific protocol, set of protocols, or to a specific BGP neighbor. The policy statement is a logical grouping of match and action criteria. A single policy statement can affect routing in one or more protocols and one or more peers or neighbors. A single policy statement can also affect both the import and export of routing information.
Max. instances	65535
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item-64*

Synopsis	Route policy statement name
Context	**configure** policy-options policy-statement *named-item-64*
Tree	policy-statement
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

default-action

Synopsis	Enable the **default-action** context
Context	**configure** policy-options policy-statement *named-item-64* default-action
Tree	default-action
Introduced	25.3.R2
Platforms	SAR Gen 2

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	**configure** policy-options policy-statement *named-item-64* default-action action-type *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

add-paths-send-limit *(number | keyword)*

Synopsis	BGP Add-Paths send limit applied for routes
Context	**configure** policy-options policy-statement *named-item-64* default-action add-paths-send-limit *(number | keyword)*
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-tag-policy *(param-midstring-64 | string)*

Synopsis	Administrative tag policy name
Context	**configure** policy-options policy-statement *named-item-64* default-action admin-tag-policy *(param-midstring-64 | string)*
Tree	admin-tag-policy
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	**configure** policy-options policy-statement *named-item-64* default-action advertise-label *keyword*
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	per-prefix, pop, pop-and-forward
Introduced	25.3.R2
Platforms	SAR Gen 2

aigp-metric

Synopsis	Enter the **aigp-metric** context
Context	**configure** policy-options policy-statement *named-item-64* default-action aigp-metric
Tree	aigp-metric
Introduced	25.3.R2
Platforms	SAR Gen 2

add *(number | string)*

Synopsis	AIGP metric to add
Context	**configure** policy-options policy-statement *named-item-64* default-action aigp-metric add *(number | string)*
Tree	add
String length	1 to 32
Range	0 to 4294967295
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **add** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

set *(keyword | number | string)*

Synopsis	AIGP metric
Context	**configure** policy-options policy-statement *named-item-64* default-action aigp-metric set *(keyword | number | string)*
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp
String format	'param-name' must start and end with @ (e.g. @name@)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **add** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path

Synopsis	Enter the **as-path** context
Context	**configure** policy-options policy-statement *named-item-64* default-action as-path
Tree	as-path
Introduced	25.3.R2
Platforms	SAR Gen 2

add *(param-midstring | string)*

Synopsis	AS path to add
Context	**configure** policy-options policy-statement *named-item-64* default-action as-path add *(param-midstring | string)*
Tree	add
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Notes	The following elements are part of a choice: **add** or **replace**.
Introduced	25.3.R2
Platforms	SAR Gen 2

replace *(param-midstring | string)*

Synopsis	AS path to replace
Context	**configure** policy-options policy-statement *named-item-64* default-action as-path replace *(param-midstring | string)*
Tree	replace
String length	1 to 32

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-leak *boolean*
Tree	bgp-leak
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

Synopsis	BGP-MED adjustment
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-med adjust *string*
Tree	adjust
String length	1 to 64
String format	'expression' must contain _igp_ or _med_ or @parameter@ 'expression' must contain one operator: +, - or *
Notes	The following elements are part of a choice: **adjust** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

set *(keyword | number | string)*

Synopsis	BGP-MED assignment
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-med set *(keyword | number | string)*
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **adjust** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric
Tree	bgp-tunnel-metric

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it. When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2

Introduced	25.3.R2
Platforms	SAR Gen 2

flex-algo *(string | number)*

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	**configure** policy-options policy-statement *named-item-64* default-action flex-algo *(string | number)*
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry. Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU. This command is not supported for multicast address families.
String length	1 to 32
Range	128 to 255
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

install-backup-path *boolean*

Context	**configure** policy-options policy-statement *named-item-64* default-action route-table-install *boolean*
Tree	route-table-install
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

value *(string | number)*

Synopsis	BGP SR label index associated with routes
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index value *(string | number)*
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes. If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation. If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.
String length	1 to 32
Range	0 to 1048575
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** policy-options policy-statement *named-item-64* entry *number*
Tree	entry
Description	Commands in this context create or edit route policy entries within the route policy statement. Multiple entries can be created using unique entries. The router exits the filter when the first match is found and executes the action specified. For this reason, entries must be sequenced correctly from most to least explicit. An entry does not require matching criteria defined (in which case, everything matches) but, at a minimum, must define an action to be considered complete. Entries without an action are considered incomplete and are rendered inactive.
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.

When configured to **false**, no routes are tagged for faster route table updates.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-leak *boolean*
Tree	bgp-leak
Default	false
Introduced	25.3.R2

String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **adjust** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.

When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it. When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from aggregate-contributor *boolean*
Tree	aggregate-contributor
Description	When configured to **true**, matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor. This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, **vrf-export** policy or **vrf-import** policy, no routes are matched by that entry. When configured to **false**, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

area *ipv4-address*

type *keyword*

Synopsis	Community count to match the community count criteria
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from community count type *keyword*
Tree	type
Options	standard, extended, large
Introduced	25.3.R2
Platforms	SAR Gen 2

value *(number | string)*

Synopsis	Number of BGP communities to match the BGP route
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from community count value *(number | string)*
Tree	value
String length	1 to 32
Range	0 to 1024
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

expression *string*

Synopsis	Community expression statement as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from community expression *string*
Tree	expression
Description	This command configures a community expression statement as a match criterion for the policy statement. This statement is a logical expression string composed of logical operators (keywords AND, OR, NOT), community names delimited by square brackets [], and parentheses ( ) to group subexpressions. If the expression contains special characters (for example, #, $, spaces), the entire string must be enclosed in double quotes. The expression specified must already be defined using the **configure policy-options community expression expr** command. The following are examples of valid logical expressions: "[community_list_A] OR ([community_list_B] AND [community_list_C])"

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

"NOT [community_list_A]"

"[community_list_A] AND [community_list_B] OR [community_list_C]"

"NOT ([community_list_A] OR [community_list_B] OR [community_list_C])"

String length 1 to 900

Notes The following elements are part of a choice: **expression** or **name**.

Introduced 25.3.R2

Platforms SAR Gen 2

name *(param-midstring-64 | string)*

Synopsis Community list name

Context **configure** policy-options policy-statement *named-item-64* entry *number* from community name *(param-midstring-64 | string)*

Tree name

String length 1 to 64

String format 'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
'name' must not contain square brackets []

Notes The following elements are part of a choice: **expression** or **name**.

Introduced 25.3.R2

Platforms SAR Gen 2

distinguisher *number*

Synopsis SR policy distinguisher as a match criterion

Context **configure** policy-options policy-statement *named-item-64* entry *number* from distinguisher *number*

Tree distinguisher

Description This command configures an SR Policy distinguisher as a route policy match criterion. This match criterion is only used in import policies.

Range 0 to 4294967295

Introduced 25.3.R2

Platforms SAR Gen 2

endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis SR policy endpoint address as a match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* entry *number* from endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	endpoint
Description	This command configures an SR Policy endpoint address as a route policy match criterion. This match criterion is only used in import policies.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn-type *keyword*

Synopsis	EVPN type as a match criterion for the entry
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from evpn-type *keyword*
Tree	evpn-type
Options	ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix, selective-multicast, multicast-join-sync, multicast-leave-sync, selective-pmsi-auto-discovery
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-community-set *reference*

Synopsis	Extended community set as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from extended-community-set *reference*
Tree	extended-community-set
Description	This command filters matched routes based on the route target extended communities they carry or do not carry. The referenced extended community set is a route policy construct that holds a list of exact match route target extended communities (any mix of type 0, type 1 and type 2).
Reference	**configure** policy-options extended-community-set *policy-community-name*
Introduced	25.10.R3
Platforms	SAR Gen 2

extended-community-set-options *keyword*

Synopsis	Extended community set options as a match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* entry *number* from extended-community-set-options *keyword*
Tree	extended-community-set-options
Description	This command is used in combination with the referenced extended community set to filter matched routes based on the route target extended communities they carry or do not carry. The referenced extended community set is a route policy construct that holds a list of exact match route target extended communities (any mix of type 0, type 1 and type 2).
Options	any – Matches if route has any of the listed route targets all – Matches if route has all of the listed route targets invert – Matches if route has none of the listed route targets
Default	any
Introduced	25.10.R3
Platforms	SAR Gen 2

external *boolean*

Synopsis	Specify the external IS-IS route as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from external *boolean*
Tree	external
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

family *keyword*

Synopsis	Address family as the match condition
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from family *keyword*
Tree	family
Description	This command specifies address families as matching conditions.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Max. instances	20

Introduced	25.3.R2
Platforms	SAR Gen 2

interface-subnets

Synopsis	Enter the **interface-subnets** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from interface-subnets
Tree	interface-subnets
Description	Commands in this context configure the applied router instance and interfaces that are used as the matching condition within each policy statement entry when exporting the IP address of the associated interface to a routing protocol. The interface subnet policy statement match criterion is applied to the following unicast use case contexts: • **export**, when used with OSPFv2, OSPFv3, IS-IS, RIP, RIPng, and BGP • **route-table-import**, when used with BGP • **vrf-export**, when used with MP-BGP
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-int-name *interface-name*

Synopsis	Interface name as the match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from interface-subnets ip-int-name *interface-name*
Tree	ip-int-name
Description	This command specifies the interface name to match when exporting the IP address of the associated interface to a routing protocol.
String length	1 to 32
Max. instances	10
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

Platforms	SAR Gen 2

origin *keyword*

Synopsis	Route origin match criteria
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from origin *keyword*
Tree	origin
Description	This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes: Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the **sub-mgmt** option for the **protocol** command. Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the **direct** option for the **protocol** command. Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the **direct** option for the **protocol** command. Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the **managed** option for the **protocol** command. The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	25.3.R2
Platforms	SAR Gen 2

origin-validation-state *keyword*

Synopsis	Origin validation state used for match criteria

Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta, dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ifl, srv6, video, evpn-ifl-host
Max. instances	5
Introduced	25.3.R2
Platforms	SAR Gen 2

route-distinguisher-list *(param-midstring-64 | string)*

Synopsis	Route distinguisher list as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from route-distinguisher-list *(param-midstring-64 | string)*
Tree	route-distinguisher-list
Description	This command specifies the (possibly parameterized) name of a route distinguisher (RD) list. This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list. BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
Introduced	25.3.R2
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-list *(param-midstring | string)*

Synopsis	Name of a source address prefix list to match
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from source-address prefix-list *(param-midstring | string)*
Tree	prefix-list
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

state *keyword*

Synopsis	State used as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from state *keyword*
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby, fsg-active-path-restoration
Introduced	25.3.R2
Platforms	SAR Gen 2

tag *(number | keyword)*

Synopsis	Route tag used as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from tag *(number | keyword)*
Tree	tag
Range	1 to 4294967295
Options	no-tag
Introduced	25.3.R2
Platforms	SAR Gen 2

to

Synopsis	Enable the **to** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to
Tree	to
Introduced	25.3.R2
Platforms	SAR Gen 2

level *number*

Synopsis	IS-IS route level as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to level *number*
Tree	level
Range	1 to 2
Introduced	25.3.R2
Platforms	SAR Gen 2

neighbor

Synopsis	Enter the **neighbor** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to neighbor
Tree	neighbor
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone | ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	IP address to match the neighbor
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to neighbor ip-address *(ipv4-address-no-zone | ipv6-address-no-zone | ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	ip-address
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-list *(param-midstring | string)*

Synopsis	Name to match the neighbor prefix list
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to neighbor prefix-list *(param-midstring | string)*
Tree	prefix-list
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-list *(param-midstring-64 | string)*

Synopsis	Prefix list as match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* to prefix-list *(param-midstring-64 | string)*
Tree	prefix-list
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
Max. instances	28

entry-type *keyword*

Synopsis	The entry type for a route policy entry
Context	**configure** policy-options policy-statement *named-item-64* entry-type *keyword*
Tree	entry-type
Options	numbered, named
Default	numbered
Introduced	25.3.R2
Platforms	SAR Gen 2

named-entry [entry-name] *named-item-255*

Synopsis	Enter the **named-entry** list instance
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255*
Tree	named-entry
Max. instances	16384
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**entry-name**] *named-item-255*

Synopsis	Route policy entry name
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255*
Tree	named-entry
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

action

Synopsis	Enable the **action** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action
Tree	action
Introduced	25.3.R2
Platforms	SAR Gen 2

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action action-type *keyword*
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

add-paths-send-limit *(number | keyword)*

Synopsis	BGP Add-Paths send limit applied for routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action add-paths-send-limit *(number | keyword)*
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-tag-policy *(param-midstring-64 | string)*

Synopsis	Administrative tag policy name
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action admin-tag-policy *(param-midstring-64 | string)*
Tree	admin-tag-policy
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)

Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action advertise-label *keyword*
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.
Options	per-prefix, pop, pop-and-forward
Introduced	25.3.R2
Platforms	SAR Gen 2

aigp-metric

Synopsis	Enter the **aigp-metric** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action aigp-metric
Tree	aigp-metric
Introduced	25.3.R2
Platforms	SAR Gen 2

add *(number | string)*

Synopsis	AIGP metric to add
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action aigp-metric add *(number | string)*
Tree	add
String length	1 to 32
Range	0 to 4294967295
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **add** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

set *(keyword | number | string)*

Synopsis	AIGP metric
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action aigp-metric set *(keyword | number | string)*
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **add** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path

Synopsis	Enter the **as-path** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path
Tree	as-path
Introduced	25.3.R2
Platforms	SAR Gen 2

add *(param-midstring | string)*

Synopsis	AS path to add
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path add *(param-midstring | string)*
Tree	add
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Notes	The following elements are part of a choice: **add** or **replace**.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

replace *(param-midstring | string)*

Synopsis	AS path to replace
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path replace *(param-midstring | string)*
Tree	replace
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Notes	The following elements are part of a choice: **add** or **replace**.
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path-prepend

Synopsis	Enter the **as-path-prepend** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path-prepend
Tree	as-path-prepend
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path *(number | string | keyword)*

Synopsis	AS number to prepend to the AS path attribute
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path-prepend as-path *(number | string | keyword)*
Tree	as-path
String length	1 to 32
Range	1 to 4294967295
Options	most-recent
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

repeat *(number | string)*

Synopsis	Number of times to prepend the specified AS number
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action as-path-prepend repeat *(number | string)*
Tree	repeat
String length	1 to 32
Range	1 to 50
Default	1
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-leak *boolean*
Tree	bgp-leak
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-med

Synopsis	Enter the **bgp-med** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-med
Tree	bgp-med
Introduced	25.3.R2
Platforms	SAR Gen 2

adjust *string*

Synopsis	BGP-MED adjustment
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-med adjust *string*
Tree	adjust
String length	1 to 64
String format	'expression' must contain _igp_ or _med_ or @parameter@ 'expression' must contain one operator: +, - or *
Notes	The following elements are part of a choice: **adjust** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

set *(keyword | number | string)*

Synopsis	BGP-MED assignment

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-med set *(keyword | number | string)*
Tree	set
String length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
String format	'param-name' must start and end with @ (e.g. @name@)
Notes	The following elements are part of a choice: **adjust** or **set**.
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it. When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

create-mpls-tunnel *boolean*

Synopsis	Create an MPLS tunnel
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action create-mpls-tunnel *boolean*
Tree	create-mpls-tunnel
Description	When configured to **true**, the router creates an MPLS tunnel. This command is supported for only the following address families: • evpn • ipv4 • ipv6 • label-ipv4 • label-ipv6 • vpn-ipv4 • vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

create-udp-tunnel *boolean*

Synopsis	Create an MPLS-over-UDP tunnel
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action create-udp-tunnel *boolean*
Tree	create-udp-tunnel
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

damping *(keyword | param-midstring | string)*

Synopsis	Damping profile used for routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action damping *(keyword | param-midstring | string)*
Tree	damping
String length	1 to 32
Options	none
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Introduced	25.3.R2
Platforms	SAR Gen 2

flex-algo *(string | number)*

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action flex-algo *(string | number)*
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry. Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU. This command is not supported for multicast address families.
String length	1 to 32
Range	128 to 255
String format	'param-name' must start and end with @ (e.g. @name@)

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

value *(string | number)*

Synopsis	BGP SR label index associated with routes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index value *(string | number)*
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes. If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation. If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.
String length	1 to 32
Range	0 to 1048575
String format	'param-name' must start and end with @ (e.g. @name@)
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-maintenance-policy *(param-midstring | string)*

Synopsis	SR maintenance policy as an action
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-maintenance-policy *(param-midstring | string)*
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
String format	'param-midstring' must contain @param@ somewhere (e.g. prefix@name@suffix)
Introduced	25.3.R2
Platforms	SAR Gen 2

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sticky-ecmp *boolean*
Tree	sticky-ecmp

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from aggregate-contributor *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	aggregate-contributor
Description	When configured to **true**, matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor. This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, **vrf-export** policy or **vrf-import** policy, no routes are matched by that entry. When configured to **false**, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

area *ipv4-address*

Synopsis	OSPF area as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from area *ipv4-address*
Tree	area
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

as-path

expression *string*

Synopsis	Community expression statement as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from community expression *string*
Tree	expression
Description	This command configures a community expression statement as a match criterion for the policy statement. This statement is a logical expression string composed of logical operators (keywords AND, OR, NOT), community names delimited by square brackets [], and parentheses ( ) to group subexpressions. If the expression contains special characters (for example, #, $, spaces), the entire string must be enclosed in double quotes. The expression specified must already be defined using the **configure policy-options community expression expr** command. The following are examples of valid logical expressions: "[community_list_A] OR ([community_list_B] AND [community_list_C])" "NOT [community_list_A]" "[community_list_A] AND [community_list_B] OR [community_list_C]" "NOT ([community_list_A] OR [community_list_B] OR [community_list_C])"

Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	25.3.R2
Platforms	SAR Gen 2

origin *keyword*

Synopsis	Route origin match criteria
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from origin *keyword*
Tree	origin
Description	This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes: Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the **sub-mgmt** option for the **protocol** command. Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the **direct** option for the **protocol** command. Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the **direct** option for the **protocol** command. Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the **managed** option for the **protocol** command. The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	25.3.R2
Platforms	SAR Gen 2

origin-validation-state *keyword*

Synopsis	Origin validation state used for match criteria
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from origin-validation-state *keyword*
Tree	origin-validation-state
Description	This command specifies a validation state that is used to match BGP routes based on their origin validation state.

value *named-item*

Synopsis	Policy variable value
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from policy-variables name *policy-var-name* value *named-item*
Tree	value
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-list *(param-midstring-64 | string)*

Synopsis	Prefix list as match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list *(param-midstring-64 | string)*
Tree	prefix-list
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
Max. instances	28
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-list-override [prefix-list] *string*

Synopsis	Enter the **prefix-list-override** list instance
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string*
Tree	prefix-list-override
Description	Commands in this context convert a prefix list to a specific match type. The routing policy uses the converted list as a match condition.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The prefix list to be converted can be specified by its name, as an expression containing the name of a global variable that holds the name of the prefix list, or as an expression containing the name of a subroutine variable that holds the name of the prefix list.

Max. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

[**prefix-list**] *string*

Synopsis	Prefix list to be converted
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string*
Tree	prefix-list-override
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

end-length *number*

Synopsis	Prefix range end length
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string* end-length *number*
Tree	end-length
Range	0 to 128
Notes	The following elements are part of a choice: (**end-length** and **start-length**) or **through-length**.
Introduced	25.3.R2
Platforms	SAR Gen 2

start-length *number*

Synopsis	Prefix range start length
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string* start-length *number*
Tree	start-length
Range	0 to 128

Platforms	SAR Gen 2

through-length *number*

Synopsis	Prefix through length
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string* through-length *number*
Tree	through-length
Range	0 to 128
Notes	The following elements are part of a choice: (**end-length** and **start-length**) or **through-length**.
Introduced	25.3.R2
Platforms	SAR Gen 2

type *keyword*

Synopsis	New match type for entries in referenced prefix list
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from prefix-list-override *string* type *keyword*
Tree	type
Options	exact, longer, through, range
Default	exact
Introduced	25.3.R2
Platforms	SAR Gen 2

protocol

Synopsis	Enter the **protocol** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from protocol
Tree	protocol
Description	Commands in this context configure the match criterion based on protocols for a route policy statement entry and may be used for both import and export policies.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

instance *(keyword | number)*

Synopsis	Instance for protocol IS-IS, OSPF, or OSPFv3 to match
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from protocol instance *(keyword | number)*
Tree	instance
Description	This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion. When this command is explicitly configured, the **name** command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).
Range	0 to 127
Options	all
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from protocol name *keyword*
Tree	name
Description	This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set: • direct • static • isis • aggregate • bgp • bgp-label • direct-interface If multiple protocols are specified, the **instance** command cannot be explicitly configured.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	The protocol **direct-interface** route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.
Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta, dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ifl, srv6, video, evpn-ifl-host
Max. instances	5
Introduced	25.3.R2
Platforms	SAR Gen 2

route-distinguisher-list *(param-midstring-64 | string)*

Synopsis	Route distinguisher list as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from route-distinguisher-list *(param-midstring-64 | string)*
Tree	route-distinguisher-list
Description	This command specifies the (possibly parameterized) name of a route distinguisher (RD) list. This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list. BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.
String length	1 to 64
String format	'param-midstring-64' must contain @param@ somewhere (e.g. prefix@name@suffix)
Introduced	25.3.R2
Platforms	SAR Gen 2

source-address

Synopsis	Enter the **source-address** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from source-address
Tree	source-address

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Address mask for matching routes to the prefix entry
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* mask-pattern *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	mask-pattern
Description	This command specifies the address mask to compare against the prefix entry to determine whether the route is considered a match. A route matches the prefix entry if the following conditions are met. • The bitwise logical AND of the prefix address and its mask matches the bitwise logical AND of the route address and its mask. • The prefix length of the prefix entry matches the prefix length of the route. For example, for a prefix entry of 17.1.0.0/32, routes with an address 17.1.x.0 (where x can be 0 through 255) and a prefix length of 32 match the entry.
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

start-length *number*

Synopsis	Start in the prefix range length
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* start-length *number*

through-length *number*

Synopsis	Prefix through length
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* through-length *number*
Tree	through-length
Range	0 to 128
Notes	The following elements are part of a choice: **mask-pattern**, (**end-length** and **start-length**), **through-length**, or **to-prefix**.
Introduced	25.3.R2
Platforms	SAR Gen 2

to-prefix [ip-prefix] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Add a list entry for **to-prefix**
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* to-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	to-prefix
Notes	The following elements are part of a choice: **mask-pattern**, (**end-length** and **start-length**), **through-length**, or **to-prefix**.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for "to" match type
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* to-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	to-prefix
Description	This command configures an IP prefix to use in a route policy prefix list for the to match type. If the prefix entry is in the format *prefix1*/*length1*, and this command is configured in the format *prefix2*/*length2*, a route matches the prefix entry if the following conditions are met. • The route shares the same most-significant bits (specified by *length1*) with the prefix entry • The route shares the same most-significant bits (specified by *length2*) with this IP prefix value • The prefix length of the route is in the range of *length1* to *length2* (inclusive)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For example, for a prefix entry of 10.0.0.8 with a to IP prefix value of 10.0.0.0/32, routes 10.0.0.0/8, 10.0.0.0/9, 10.0.0.0.0/10, and so on, to 10.0.0.0/32 are considered matches for the prefix entry.

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

route-distinguisher-list [name] *named-item-64*

Synopsis	Enter the **route-distinguisher-list** list instance
Context	**configure** policy-options route-distinguisher-list *named-item-64*
Tree	route-distinguisher-list
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item-64*

Synopsis	Route distinguisher list name
Context	**configure** policy-options route-distinguisher-list *named-item-64*
Tree	route-distinguisher-list
Description	This command creates a list of entries used to match the RD in BGP routes of specific address families.
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character 'name' must not contain @ (use @param@ in policy expressions)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

rd-entry [rd] *string*

Synopsis	Add a list entry for **rd-entry**
Context	**configure** policy-options route-distinguisher-list *named-item-64* rd-entry *string*
Tree	rd-entry
Max. instances	128

Introduced	25.3.R2
Platforms	SAR Gen 2

[**rd**] *string*

Synopsis	Route distinguisher
Context	**configure** policy-options route-distinguisher-list *named-item-64* rd-entry *string*
Tree	rd-entry
Description	This command creates an RD matching entry containing an IPv4 address or ASN and the assigned number. The following formats are supported: • *a.b.c.d*/*m*:* – RD in IPv4 format with a wildcard character (such as 10.0.0.0/16:*) • *a.b.c.d*/*m*:*n* – RD in IPv4 format with a specific number (such as 10.0.0.2/32:535) • *asn*:* – RD in ASN format with a wildcard character (such as 65000:*) • *asn*:*n* – RD in ASN format with a specific number (such as 65000:535) See the "Route distinguishers" section of the *7705 SAR Gen 2 Layer 3 Services Guide: IES and VPRN* for information about Type values.
String length	3 to 28
String format	'rd' must be ip/mask:num, asn:num or 4byte-asn:num (e.g. 10.0.0.0/8:100 or 65535:0)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

4.19.1 port command descriptions

port [port-id] *port*

Synopsis	Enter the **port** list instance
Context	**configure** port *port*
Tree	port
Description	Commands in this context configure ports, multilink bundles, and bundle protection groups (BPGs). Before a port can be configured, the chassis slot must be provisioned with a valid card type and the MDA must be provisioned with a valid MDA type.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**port-id**] *port*

Synopsis	Port ID
Context	**configure** port *port*
Tree	port
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

access

Synopsis	Enter the **access** context
Context	**configure** port *port* access
Tree	access
Description	Commands in this context configure egress and ingress pool policy commands.
Introduced	25.3.R2
Platforms	SAR Gen 2

egress

Synopsis	Enter the **egress** context
Context	**configure** port *port* access egress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	egress
Description	Commands in this context specify the configuration of access egress buffer pools to determine how a CBS-reserved space is handled and the strategy for utilizing the shared buffer space.
Introduced	25.3.R2
Platforms	SAR Gen 2

pool [name] *named-item*

Synopsis	Enter the **pool** list instance
Context	**configure** port *port* access egress pool *named-item*
Tree	pool
Description	Commands in this context configure pool policies for the pool instance.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Pool name for the access port
Context	**configure** port *port* access egress pool *named-item*
Tree	pool
String length	1 to 32
MD-CLI default	default
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress

Synopsis	Enter the **ingress** context
Context	**configure** port *port* access ingress
Tree	ingress
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

pool [name] *named-item*

Synopsis	Enter the **pool** list instance
Context	**configure** port *port* access ingress pool *named-item*
Tree	pool
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	Pool name for the access port
Context	**configure** port *port* access ingress pool *named-item*
Tree	pool
String length	1 to 32
MD-CLI default	default
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the port
Context	**configure** port *port* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	SAR Gen 2

connector

Synopsis	Enter the **connector** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** port *port* connector
Tree	connector
Description	Commands in this context configure connector ports and modes.
Introduced	25.3.R2
Platforms	SAR Gen 2

breakout *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port breakout of the transceiver used in the connector
Context	**configure** port *port* connector breakout *keyword*
Tree	breakout
Description	This command defines the port breakout of the transceiver used in the connector. Specifying the type triggers the creation of the ports that will be accessible under the connector. When a QSFP28 connector uses an SFP+ optical module with the QSFP28-to-SFP+/SFP28 adapter, set this command to **c1-10g**. This value indicates the presence of the adapter. For some connectors (for example, QSFPDD), there can be overlap in the breakout for different host interfaces. The same port breakout can be supported on an optical modules that uses a host interface of CAUI-4 as another optical module that uses 100GAUI-2. To distinguish from the CAUI-4 host interface, the "-aui2" suffix is used on some breakout options. This is only necessary where there is overlap. In other situations, SR OS sets the host interface correctly without requiring the distinction in the breakout option.
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g, c4-100g, c1-10g, c1-25g, c1-50g, c8-50g, c1-800g, c3-100g, c8-100g, c2-400g, c1-400g-flex, c2-400g-flex, c1-1g, c2-1g, c1-100g-aui2, c2-100g-aui2, c1-400g-aui4, c4-100g-aui1, c1-100g-aui1, c1-400g-aui4-flex, c8-10g
Introduced	25.3.R2
Platforms	SAR Gen 2

rs-fec-mode *keyword*

Synopsis	RS-FEC mode for the Ethernet connector
Context	**configure** port *port* connector rs-fec-mode *keyword*
Tree	rs-fec-mode

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet connector. See "Forward Error Correction" in the *7705 SAR Gen 2 Interface Configuration Guide* for more information about FEC settings.
Options	cl91-514-528, cl91-514-544
Introduced	25.3.R2
Platforms	SAR Gen 2

ddm-events *boolean*

Synopsis	Enable Digital Diagnostic Monitoring (DDM) events
Context	**configure** port *port* ddm-events *boolean*
Tree	ddm-events
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

description *very-long-description*

Synopsis	Text description
Context	**configure** port *port* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

dist-cpu-protection

Synopsis	Enter the **dist-cpu-protection** context
Context	**configure** port *port* dist-cpu-protection
Tree	dist-cpu-protection
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policy *reference*

Synopsis	Distributed CPU protection policy name
Context	**configure** port *port* dist-cpu-protection policy *reference*
Tree	policy
Reference	**configure** system security dist-cpu-protection policy *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

dwdm

Synopsis	Enter the **dwdm** context
Context	**configure** port *port* dwdm
Tree	dwdm
Description	Commands in this context configure the Dense Wavelength Division Multiplexing (DWDM) parameters for the port.
Introduced	25.3.R2
Platforms	SAR Gen 2

coherent

Synopsis	Enter the **coherent** context
Context	**configure** port *port* dwdm coherent
Tree	coherent
Description	Commands in this context configure the coherent optical module.
Introduced	25.3.R2
Platforms	SAR Gen 2

compatibility *keyword*

Synopsis	Optical mode and rate of operation
Context	**configure** port *port* dwdm coherent compatibility *keyword*
Tree	compatibility
Options	long-haul, metro, access, interop, interop2, interop3, long-haul-non-differential, oif-400g-zr, open-zrp-ofec1, open-zrp-ofec2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	long-haul
Introduced	25.3.R2
Platforms	SAR Gen 2

cpr-window-size *number*

Synopsis	Window size for the carrier phase recovery
Context	**configure** port *port* dwdm coherent cpr-window-size *number*
Tree	cpr-window-size
Description	This command configures the window size for the carrier phase recovery. When this command is changed, the link bounces because the receiver needs to be reconfigured.
Range	2 | 4 | 8 | 16 | 32 | 64
Units	symbols
Introduced	25.3.R2
Platforms	SAR Gen 2

dispersion *number*

Synopsis	Residual chromatic dispersion compensation
Context	**configure** port *port* dwdm coherent dispersion *number*
Tree	dispersion
Description	This command specifies the residual chromatic dispersion compensation when the coherent receiver is operating in manual dispersion control mode.
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Mode used to compensate for chromatic dispersion
Context	**configure** port *port* dwdm coherent mode *keyword*
Tree	mode
Options	automatic, manual

netrx *boolean*

Synopsis	Report the network (optical side) receive alarm
Context	**configure** port *port* dwdm coherent report-alarm netrx *boolean*
Tree	netrx
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

nettx *boolean*

Synopsis	Report the network (optical side) transmit alarm
Context	**configure** port *port* dwdm coherent report-alarm nettx *boolean*
Tree	nettx
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

rx-los-reaction *keyword*

Synopsis	Reaction to an RX LOS
Context	**configure** port *port* dwdm coherent rx-los-reaction *keyword*
Tree	rx-los-reaction
Description	This command configures the reaction to an RX LOS. **Note:** If this command is disabled for some coherent DWDM transceivers, the transceiver only reports local fault alarms when an RX LOS condition occurs; however, the port returns to service faster after the LOS condition is cleared. For these transceivers, if this command is enabled, there is better visibility of individual alarms (for example, signal-fail, local fault, no-am-lock), but the port takes longer to service after the LOS condition is cleared.
Options	none, squelch

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	squelch
Introduced	25.3.R2
Platforms	SAR Gen 2

rx-los-thresh *decimal-number*

Synopsis	Average input power LOS threshold
Context	**configure** port *port* dwdm coherent rx-los-thresh *decimal-number*
Tree	rx-los-thresh
Range	-30 to -13
Units	decibel-milliwatts
Default	-23
Introduced	25.3.R2
Platforms	SAR Gen 2

sweep

Synopsis	Enter the **sweep** context
Context	**configure** port *port* dwdm coherent sweep
Tree	sweep
Description	Commands in this context allow users to configure the dispersion sweep **start** and **end** values for the automatic mode of coherent control. If the user knows the approximate or theoretical residual dispersion of the link, these commands can be used to limit the range of sweeping for the automatic control mode and therefore achieve a faster link up.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *number*

Synopsis	Upper bound of the dispersion compensation range
Context	**configure** port *port* dwdm coherent sweep end *number*
Tree	end
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	2000

Tree	target-power
Range	-20 to 3
Units	decibel-milliwatts
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

frequency *number*

Synopsis	Center frequency for tunable DWDM optical interface
Context	**configure** port *port* dwdm frequency *number*
Tree	frequency
Description	This command configures the center frequency to use for a tunable DWDM optical interface. This command can be used to specify any frequency in the C band. To set the DWDM frequency, the port must be a physical port and the provisioned MDA type must have DWDM tunable optics (for example, p1-100g-tun-b), or the MDA must support the option of tunable DWDM optic modules. This command replaces the **configure port dwdm channel** command.

cir *(number | keyword)*

Synopsis	CIR for the queue

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* queue-overrides queue *reference* rate cir *(number | keyword)*
Tree	cir
Description	This command specifies the administrative CIR used by the queue. When the **rate** command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer. The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop. The CIR can be used by the queue's parent **cir-level** and **cir-weight** commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	SAR Gen 2

pir *(number | keyword)*

Synopsis	PIR for the queue
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* queue-overrides queue *reference* rate pir *(number | keyword)*
Tree	pir
Description	This command specifies the administrative PIR used by the queue. When the **rate** command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's **adaptation-rule** commands and the actual hardware where the queue is provisioned. The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	SAR Gen 2

Synopsis	Enter the **scheduler-policy** context
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy
Tree	scheduler-policy
Description	Commands in this context configure a scheduler policy for the egress queue group.
Introduced	25.3.R2
Platforms	SAR Gen 2

overrides

Synopsis	Enter the **overrides** context
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides
Tree	overrides
Introduced	25.3.R2
Platforms	SAR Gen 2

scheduler [scheduler-name] *named-item*

Synopsis	Enter the **scheduler** list instance
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *named-item*
Tree	scheduler
Description	Commands in this context are used to override specific attributes of the specified scheduler name. A scheduler defines bandwidth controls that limit each child (other schedulers and queues) associated with the scheduler. Scheduler objects are created within the hierarchical tiers of the policy. It is assumed that each scheduler created has queues or other schedulers defined as child associations. The scheduler can be a child which takes bandwidth from a scheduler in a higher tier. A total of 32 schedulers can be created within a single scheduler policy with no restriction on the distribution between the tiers. The scheduler name must exist in the applied scheduler policy.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**scheduler-name**] *named-item*

Synopsis	Scheduler name
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *named-item*
Tree	scheduler
Description	This command specifies the scheduler name. Valid names consist of any string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

parent

Synopsis	Enter the **parent** context
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *named-item* parent
Tree	parent
Description	Commands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy. The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir-weight *number*

Synopsis	CIR that overrides the parent

rate

Synopsis	Enter the **rate** context
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *named-item* rate
Tree	rate
Description	Commands in this context override specific attributes of the specified scheduler rate. The actual operating rate of the scheduler is limited by bandwidth constraints other than its maximum rate. The scheduler's parent scheduler may not have the available bandwidth to meet the scheduler's needs. The bandwidth available to the parent scheduler could be allocated to other child schedulers or the child queues on the parent scheduler may be based on a higher priority. The children of the scheduler may not need the maximum rate available to the scheduler due to an insufficient offered load or limits to their own maximum rates.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir *(number | keyword)*

Synopsis	CIR for the scheduler
Context	**configure** port *port* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *named-item* rate cir *(number | keyword)*
Tree	cir

Description	Commands in this context configure Ethernet access ingress port commands.
Introduced	25.3.R2
Platforms	SAR Gen 2

queue-group [queue-group-name] *reference*

Synopsis	Enter the **queue-group** list instance
Context	**configure** port *port* ethernet access ingress queue-group *reference*
Tree	queue-group
Description	Commands in this context create an ingress queue group on the Ethernet port. Queue groups created on access ports are used as an alternative queue destination for SAPs. Queue groups can be created on both access and network oriented ports. When the port is in access mode, the queue groups must be created within the port access node. Access ingress queue groups can only be used by ingress SAP forwarding classes and only a single ingress queue group per port is supported. When the queue group is created in an ingress port context, the queue group name must be an existing ingress queue group template. Two ingress queue groups with the same name cannot be created on the same port. When creating a queue group, the system will attempt to allocate queue resources based on the queues defined in the queue group template. If the appropriate queue resources do not currently exist, the queue group will not be created. Ingress port queue groups do not support shared-queuing or multipoint shared queuing behavior. A port queue group cannot be removed from the port when a forwarding class is currently redirected to the group. All forwarding class redirections must first be removed prior to removing the queue group.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**queue-group-name**] *reference*

Synopsis	Queue group name
Context	**configure** port *port* ethernet access ingress queue-group *reference*

Platforms	SAR Gen 2

queue [queue-id] *reference*

Synopsis	Enter the **queue** list instance
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference*
Tree	queue
Description	Commands in this context associate a queue for use in a queue group template. The template queue is created on each queue group object that is created with the queue group template name. Each queue is identified within the template by a queue ID number. The template ensures that all queue groups created with the template's name have the same queue IDs, providing a uniform structure for the forwarding class redirection commands in the SAP egress QoS policies. The queue commands can be individually changed for each queue in each queue group using per queue overrides.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**queue-id**] *reference*

Synopsis	Queue ID for the queue group template
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference*

low

Synopsis	Enter the **low** context
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference* drop-tail low
Tree	low
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which out-of-profile packets are accepted into the queue and discarded.
Introduced	25.3.R2
Platforms	SAR Gen 2

percent-reduction-from-mbs *(number | keyword)*

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference* drop-tail low percent-reduction-from-mbs *(number | keyword)*
Tree	percent-reduction-from-mbs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

mbs *(number | keyword)*

Synopsis	MBS for the template queue

Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference* rate
Tree	rate
Introduced	25.3.R2
Platforms	SAR Gen 2

cir *(number | keyword)*

Synopsis	CIR for the queue
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference* rate cir *(number | keyword)*
Tree	cir

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the administrative CIR used by the queue. When the **rate** command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer. The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop. The CIR can be used by the queue's parent **cir-level** and **cir-weight** commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	SAR Gen 2

pir *(number | keyword)*

Synopsis	PIR for the queue
Context	**configure** port *port* ethernet access ingress queue-group *reference* queue-overrides queue *reference* rate pir *(number | keyword)*
Tree	pir
Description	This command specifies the administrative PIR used by the queue. When the **rate** command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's **adaptation-rule** commands and the actual hardware where the queue is provisioned. The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2
Platforms	SAR Gen 2

scheduler-policy

Synopsis	Enter the **scheduler-policy** context
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy
Tree	scheduler-policy
Description	Commands in this context configure a scheduler policy for the ingress queue group.
Introduced	25.3.R2
Platforms	SAR Gen 2

overrides

Synopsis	Enter the **overrides** context
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides
Tree	overrides
Description	Commands in this context specify the set of attributes specifying values specific to the given queue-group instance.
Introduced	25.3.R2
Platforms	SAR Gen 2

scheduler [scheduler-name] *named-item*

Synopsis	Enter the **scheduler** list instance
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item*
Tree	scheduler
Description	Commands in this context are used to override specific attributes of the specified scheduler name. A scheduler defines bandwidth controls that limit each child (other schedulers and queues) associated with the scheduler. Scheduler objects are created within the hierarchical tiers of the policy. It is assumed that each scheduler created has queues or other schedulers defined as child associations. The scheduler can be a child which takes bandwidth from a scheduler in a higher tier. A total of 32 schedulers can be created within a single scheduler policy with no restriction on the distribution between the tiers. The scheduler name must exist in the applied scheduler policy.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**scheduler-name**] *named-item*

Synopsis	Scheduler name
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item*
Tree	scheduler
Description	This command specifies the scheduler name. Valid names consist of any string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

parent

Synopsis	Enter the **parent** context
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item* parent
Tree	parent
Description	Commands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy. The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir-weight *number*

Synopsis	CIR that overrides the parent
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item* parent cir-weight *number*

Introduced	25.3.R2
Platforms	SAR Gen 2

rate

Synopsis	Enter the **rate** context
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item* rate
Tree	rate
Description	Commands in this context override specific attributes of the specified scheduler rate. The actual operating rate of the scheduler is limited by bandwidth constraints other than its maximum rate. The scheduler's parent scheduler may not have the available bandwidth to meet the scheduler's needs. The bandwidth available to the parent scheduler could be allocated to other child schedulers or the child queues on the parent scheduler may be based on a higher priority. The children of the scheduler may not need the maximum rate available to the scheduler due to an insufficient offered load or limits to their own maximum rates.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir *(number | keyword)*

Synopsis	CIR for the scheduler
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item* rate cir *(number | keyword)*
Tree	cir
Description	This command specifies the CIR. When a parent is associated with the scheduler, this command provides the amount of bandwidth to be considered during the parent

scheduler's within-cir distribution phase. When the **rate** command is executed, a valid PIR setting must be explicitly defined before specifying the CIR. If the CIR is set to **max**, the CIR rate is set to infinity.

The **sum** keyword specifies that the CIR be used as the summed CIR values of the children schedulers, policers, or queues.

Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	25.3.R2
Platforms	SAR Gen 2

pir *(number | keyword)*

Synopsis	PIR for the scheduler
Context	**configure** port *port* ethernet access ingress queue-group *reference* scheduler-policy overrides scheduler *named-item* rate pir *(number | keyword)*
Tree	pir
Description	This command specifies the PIR. When the **rate** command is executed, a valid PIR setting must be explicitly defined. Any other value results in an error without modifying the current PIR rate.
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	25.3.R2

Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

autonegotiate *keyword*

Synopsis	Speed and duplex autonegotiation on the Ethernet port
Context	**configure** port *port* ethernet autonegotiate *keyword*
Tree	autonegotiate
Description	This command enables speed and duplex autonegotiation on Fast Ethernet ports and enables far-end fault indicator support on Gb ports. When autonegotiation is enabled on a port, the link attempts to automatically negotiate the link **speed** and **duplex** commands. If autonegotiation is enabled, the configured **duplex** and **speed** commands are ignored. When autonegotiation is disabled on a port, the port does not attempt to autonegotiate and will only operate at the **speed** and **duplex** command settings configured for the port. Note that disabling autonegotiation on Gb ports is not allowed as the IEEE 802.3 specification for Gb Ethernet requires autonegotiation be enabled for far end fault indication. It is required for autonegotiation to be limited for ports in a LAG to guarantee a specific port speed.
Options	true, false, limited
Introduced	25.3.R2
Platforms	SAR Gen 2

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	**configure** port *port* ethernet collect-stats *boolean*

Platforms	SAR Gen 2

half-life *number*

Synopsis	Half-life decay time
Context	**configure** port *port* ethernet dampening half-life *number*
Tree	half-life
Description	This command specifies the time that must pass before penalties decay to one-half the initial amount. The half-life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half-life must be less than or equal to 49 and greater than or equal to one.
Range	1 to 2000
Units	seconds
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

max-suppress-time *number*

Synopsis	Maximum suppression time
Context	**configure** port *port* ethernet dampening max-suppress-time *number*
Tree	max-suppress-time
Description	This command specifies the maximum suppression time, which is the time it can take after the physical link comes up before the worst case accumulated penalties have decayed to the reuse threshold. The maximum penalty is derived from the maximum suppression time, half life, and reuse threshold, using the following equation: maximum penalty = (reuse threshold) 2 expo:(maximum suppression time/half life) The half life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half life must be less than or equal to 49 and greater than or equal to one.
Range	1 to 43200
Units	seconds
Default	20
Introduced	25.3.R2
Platforms	SAR Gen 2

Use subject to Terms available at: www.nokia.com/terms.

reuse-threshold *number*

Synopsis	Threshold which port-up state is no longer suppressed
Context	**configure** port *port* ethernet dampening reuse-threshold *number*
Tree	reuse-threshold
Description	This command specifies the threshold at which the port-up state is no longer suppressed, after the port has been in a suppressed state and the accumulated penalties decay drops below this threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

suppress-threshold *number*

Synopsis	Threshold at which the port-up state is suppressed
Context	**configure** port *port* ethernet dampening suppress-threshold *number*
Tree	suppress-threshold
Description	This command specifies the threshold at which the port-up state is suppressed until the accumulated penalties drop below the reuse threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	2000
Introduced	25.3.R2
Platforms	SAR Gen 2

discard-rx-pause-frames *boolean*

Synopsis	Discard received pause frames
Context	**configure** port *port* ethernet discard-rx-pause-frames *boolean*
Tree	discard-rx-pause-frames
Description	When configured to **true**, the router discards the received pause frames, which are used for local link flow control.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, pause frames are processed upon receipt, and the transmit side of the receiving port pauses its transmissions.

Default false

Introduced 25.3.R2

max-authentication-requests *number*

Synopsis	Maximum number of RADIUS retries
Context	**configure** port *port* ethernet dot1x max-authentication-requests *number*
Tree	max-authentication-requests
Range	1 to 10
Default	2
Introduced	25.3.R2
Platforms	SAR Gen 2

per-host-authentication

Synopsis	Enter the **per-host-authentication** context
Context	**configure** port *port* ethernet dot1x per-host-authentication
Tree	per-host-authentication
Description	Commands in this context configure per-host authentication on the port or VLAN scope. When dot1x authentication is configured, the router authenticates each host based on the source MAC or VLAN. When a host is authenticated via RADIUS policy, its source MAC is allowed through the port, while the port is closed for any other MAC. Any traffic from the allowed host is forwarded on the port, including untagged, and tagged packets.
Introduced	25.3.R2
Platforms	SAR Gen 2

Platforms	SAR Gen 2

keep-alive *number*

Synopsis	Time interval between keepalive PDUs
Context	**configure** port *port* ethernet down-when-looped keep-alive *number*
Tree	keep-alive
Description	This command configures the time interval between the keepalive PDUs transmitted toward the network during Ethernet loop detection.
Range	1 to 120
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

retry-timeout *number*

Synopsis	Wait time before re-enabling port after loop detection
Context	**configure** port *port* ethernet down-when-looped retry-timeout *number*
Tree	retry-timeout

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the minimum wait time before re-enabling the Ethernet port after it is brought down because of a loop detection.
Range	0 | 10 to 160
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	SAR Gen 2

tunneling *boolean*

Synopsis	Enable down-when-looped tunneling
Context	**configure** port *port* ethernet down-when-looped tunneling *boolean*
Tree	tunneling
Default	true
Introduced	26.7.R1
Platforms	SAR Gen 2

use-broadcast-address *boolean*

Synopsis	Use broadcast MAC address for destination MAC address
Context	**configure** port *port* ethernet down-when-looped use-broadcast-address *boolean*
Tree	use-broadcast-address
Description	When configured to **true**, the router declares a loop when the destination MAC address matches the broadcast MAC address. When configured to **false**, the router declares a loop when the destination MAC address matches the MAC address of the Ethernet port.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

duplex *keyword*

Synopsis	Duplex type for the fast Ethernet port
Context	**configure** port *port* ethernet duplex *keyword*
Tree	duplex

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the duplex of a Fast Ethernet port when autonegotiation is disabled. This command setting is ignored if autonegotiation is enabled for the port.
Options	full, half
Introduced	25.3.R2
Platforms	SAR Gen 2

efm-oam

Synopsis	Enter the **efm-oam** context
Context	**configure** port *port* ethernet efm-oam
Tree	efm-oam
Description	Commands in this context configure EFM-OAM attributes.
Introduced	25.3.R2
Platforms	SAR Gen 2

accept-remote-loopback *boolean*

Synopsis	Enable reactions to loopback control OAMPDUs from peers
Context	**configure** port *port* ethernet efm-oam accept-remote-loopback *boolean*
Tree	accept-remote-loopback
Description	When configured to **true**, the router enables reactions to loopback control OAM PDUs from peers.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the EFM OAM operation
Context	**configure** port *port* ethernet efm-oam admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

hold-time *number*

Synopsis	Wait time before protocol returns to operational state
Context	**configure** port *port* ethernet efm-oam hold-time *number*
Tree	hold-time
Description	This command specifies the time the EFM-OAM protocol waits before going back to the operational state after leaving the operational state. The hold time does not apply if the EFM-OAM protocol moved from the operational state to link fault. A hold-time value of zero indicates that there is no delay in transitioning to the operational state. A non-zero value causes the EFM-OAM protocol to attempt to negotiate with a peer if possible, but it remains in the send-local-remote-ok state until the hold time has expired if negotiation is successful. If the EFM-OAM protocol is administratively disabled while it is in the operational state and then re-enabled when a non-zero hold time is configured, EFM-OAM attempts transition to the operational state immediately.
Range	1 to 50
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-efm-state *boolean*

Synopsis	Suppress port state changes for EFM-OAM faults
Context	**configure** port *port* ethernet efm-oam ignore-efm-state *boolean*
Tree	ignore-efm-state
Description	When configured to **true**, the ETH-OAM protocol does not impact the state of the port when there is a failure in the protocol state machine (discovery, configuration, timeout, loops, and so on). There is only a protocol warning message on the port. When configured to **false**, the port state is affected by any existing EFM-OAM protocol fault condition.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mode *keyword*

Synopsis	Mode of OAM operation for the Ethernet port
Context	**configure** port *port* ethernet efm-oam mode *keyword*
Tree	mode
Description	This command configures the mode of OAM operation for the Ethernet port. These two modes differ in that active mode causes the port to continually send out EFM-OAM information PDUs while passive mode waits for the peer to initiate the negotiation process. A passive mode port cannot initiate monitoring activities (such as loopback) with the peer.
Options	passive – Rely on peer to begin negotiation and monitoring active – Provide capability to begin negotiation and monitoring
Default	active
Introduced	25.3.R2
Platforms	SAR Gen 2

multiplier *number*

Synopsis	Multiplier for the transmit interval of OAMPDUs
Context	**configure** port *port* ethernet efm-oam multiplier *number*
Tree	multiplier
Description	This command configures the multiplier for the transmit interval to set the local link down timer.
Range	2 to 5
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-rdi-rx

Synopsis	Enter the **peer-rdi-rx** context
Context	**configure** port *port* ethernet efm-oam peer-rdi-rx
Tree	peer-rdi-rx
Description	Commands in this context allow an action to be configured for the various event conditions that can be received from a peer under the context of the EFM-OAM protocol.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

critical-event *keyword*

Synopsis	Action taken after receipt of critical event flag
Context	**configure** port *port* ethernet efm-oam peer-rdi-rx critical-event *keyword*
Tree	critical-event
Description	This command defines how to react to the reception of a critical event flag field set in the informational OAMPDU.
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	25.3.R2
Platforms	SAR Gen 2

dying-gasp *keyword*

Synopsis	Action taken after receipt of dying gasp flag
Context	**configure** port *port* ethernet efm-oam peer-rdi-rx dying-gasp *keyword*
Tree	dying-gasp
Description	This command defines how to react to the reception of a dying gasp flag field set in the informational OAMPDU.
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	25.3.R2
Platforms	SAR Gen 2

event-notification *keyword*

Synopsis	Action taken after receipt of event TLVs
Context	**configure** port *port* ethernet efm-oam peer-rdi-rx event-notification *keyword*
Tree	event-notification
Description	This command defines the reaction to the reception of event TLVs contained in the event notification OAMPDU. The event TLVs contained in the event notification OAMPDU are analyzed to determine if the peer has crossed the error threshold for the window. The analysis does not consider any local SDs or SF thresholds. The analysis is based solely on the information received from the peer. The analysis is performed on all event TLVs contained in the event notification OAMPDU without regard for the support

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

of specific error counters. In the case of symbol errors, a threshold below the error rate can be used to return the port to service.

Options	log-only, port-out-of-service
Default	log-only
Introduced	25.3.R2
Platforms	SAR Gen 2

link-fault *keyword*

Synopsis	Action taken after receipt of link fault flag
Context	**configure** port *port* ethernet efm-oam peer-rdi-rx link-fault *keyword*
Tree	link-fault
Description	This command defines how to react to the reception of a link fault flag set in the informational PDU from the peer.
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	25.3.R2
Platforms	SAR Gen 2

remote-loopback-forward-non-efm-frames *boolean*

Synopsis	Allow the forwarding of non-EFM frames on the port
Context	**configure** port *port* ethernet efm-oam remote-loopback-forward-non-efm-frames *boolean*
Tree	remote-loopback-forward-non-efm-frames
Description	When configured to **true**, the router forwards non-EFM traffic that is received from the EFM peer when in remote loopback state.
Default	false
Introduced	25.10.R1
Platforms	SAR Gen 2

transmit-interval *number*

Synopsis	Transmit interval of OAMPDUs
Context	**configure** port *port* ethernet efm-oam transmit-interval *number*
Tree	transmit-interval

Range	1 to 600
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

trigger-fault *keyword*

Synopsis	Flag setting in the information OAMPDU
Context	**configure** port *port* ethernet efm-oam trigger-fault *keyword*
Tree	trigger-fault
Description	This command configures the appropriate flag field in the information OAMPDU, bursting three consecutive packets during the off cycle. If the local port state is operational, this command changes the local port state to "Link Up". If the local port state is not operational, this configuration is installed as an EFM reason to prevent the port from returning to an up operational state. This command can be used as a precursor to administratively disabling a port. This terminates the peering relationship without having to wait for protocol timeouts, assuming the peer supports the necessary action when receiving the dying gasp or critical event flag setting.
Options	dying-gasp, critical-event
Introduced	25.3.R2
Platforms	SAR Gen 2

tunneling *boolean*

Synopsis	Enable EFM-OAM PDU tunneling
Context	**configure** port *port* ethernet efm-oam tunneling *boolean*
Tree	tunneling
Description	When configured to **true**, the router enables EFM-OAM PDU tunneling. Enabling tunneling allows a port mode Epipe SAP to pass OAM frames through the pipe to the far end. When configured to **false**, tunneling is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress

Synopsis	Enter the **egress** context

Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais client-meg-level *number*
Tree	client-meg-level
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	25.3.R2
Platforms	SAR Gen 2

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais interface-support *boolean*
Tree	interface-support
Description	When configured to **true**, the system enables the generation of AIS PDUs based on the associated endpoint state. AIS on operationally down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to **true**, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP. When configured to **false**, the generation of AIS PDUs is disabled.
Default	false

Platforms	SAR Gen 2

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	25.3.R2
Platforms	SAR Gen 2

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*

eth-bn

Synopsis	Enter the **eth-bn** context
Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-bn
Tree	eth-bn
Description	Commands in this context configure Ethernet Bandwidth Notification (ETH-BN) message handling.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Enable the reception and processing of ETH-BN messages
Context	**configure** port *port* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-bn receive *boolean*
Tree	receive
Description	When configured to **true**, this command enables the reception and processing of ETH-BN messages and the retrieval and processing of the current bandwidth field for inclusion in dynamic egress rate adjustments. The received rate is an Layer 2 rate, and is expected to be in Mb/s. If this rate is a link rate (including preamble, start frame delimiter, and inter-frame gap), this would require the use of network egress queue groups. When configured to **false**, message reception is disabled.
Default	false
Introduced	25.3.R2

© 2026 Nokia.

tunnel-nearest-bridge *boolean*

Synopsis	Allow the received LLDP packets to be tunneled
Context	**configure** port *port* ethernet lldp dest-mac *keyword* tunnel-nearest-bridge *boolean*
Tree	tunnel-nearest-bridge
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest bridge to be tunneled without being intercepted on the local port. When configured to **false**, the system disables nearest bridge tunneling. The **nearest-bridge** option in the **configure port ethernet lldp dest-mac mac-type** command must be disabled for tunneling to occur. This is applicable to NULL SAP Epipe and VPLS services only.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nearest-customer *boolean*

Synopsis	Enable the nearest customer tunneling
Context	**configure** port *port* ethernet lldp dest-mac *keyword* tunnel-nearest-customer *boolean*
Tree	tunnel-nearest-customer
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest customer to be tunneled without being intercepted on the local port. When configured to **false**, the system disables nearest customer tunneling.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-nearest-non-tpmr *boolean*

Synopsis	Enable the nearest non-TPMR tunneling
Context	**configure** port *port* ethernet lldp dest-mac *keyword* tunnel-nearest-non-tpmr *boolean*
Tree	tunnel-nearest-non-tpmr
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest non-TPMR to be tunneled without being intercepted on the local port.

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm for the Ethernet port
Context	**configure** port *port* ethernet load-balancing-algorithm *keyword*
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	25.3.R2
Platforms	SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address of the Ethernet port
Context	**configure** port *port* ethernet mac-address *mac-address*
Tree	mac-address
Description	This command specifies the MAC address of the Ethernet port. Allowed values are any non-broadcast, non-multicast MAC, and non-IEEE reserved MAC addresses. The default value indicates that an operation MAC address is to be assigned from the chassis MAC address pool.
Default	00:00:00:00:00:00
Introduced	25.3.R2
Platforms	SAR Gen 2

min-frame-length *number*

Synopsis	Minimum transmitted frame length
Context	**configure** port *port* ethernet min-frame-length *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	min-frame-length
Description	This command configures the minimum transmitted frame length.
Range	64 | 68 | 72
Units	bytes
Default	64
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Operation mode for the Ethernet port
Context	**configure** port *port* ethernet mode *keyword*
Tree	mode
Options	access, network, hybrid
Introduced	25.3.R2
Platforms	SAR Gen 2

mtu *number*

Synopsis	Maximum payload MTU size for the Ethernet port
Context	**configure** port *port* ethernet mtu *number*
Tree	mtu
Description	This command configures the maximum payload MTU size for the Ethernet port. This command indirectly defines the largest physical packet the port can transmit or the far-end Ethernet port can receive. Packets that cannot be fragmented at egress and exceed the MTU size are discarded. The MTU size includes the destination MAC address, source MAC address, the Ethertype or length field, and the complete Ethernet payload. This value does not include the preamble, start of frame delimiter, or the trailing CRC.
Range	512 to 9800
Units	bytes
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

network

Synopsis	Enter the **network** context
Context	**configure** port *port* ethernet network
Tree	network

adaptation-rule

Synopsis	Enter the **adaptation-rule** context
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* adaptation-rule
Tree	adaptation-rule
Description	Commands in this context specify the method used by the system to derive the operational CIR and PIR settings when the queue is provisioned in hardware. For the CIR and PIR commands individually, the system attempts to find the best operational rate depending on the defined constraint. Commands in this context are ignored for egress HSQ queue group queues that are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the adaptation rule is performed under the **hs-wrr-group** command within the egress queue group template.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* adaptation-rule cir *keyword*

drop-tail

Synopsis	Enter the **drop-tail** context
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* drop-tail
Tree	drop-tail
Description	Commands in this context configure queue drop tail commands.
Introduced	25.3.R2
Platforms	SAR Gen 2

low

Synopsis	Enter the **low** context
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* drop-tail low
Tree	low
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

percent-reduction-from-mbs *(number | keyword)*

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* drop-tail low percent-reduction-from-mbs *(number | keyword)*
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

rate

Synopsis	Enter the **rate** context
Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* rate
Tree	rate
Description	Commands in this context specify the administrative PIR and CIR for the queue. Defining a PIR does not necessarily guarantee that the queue can transmit at the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.

This command can be executed at anytime, altering the PIR and CIR rates for all queues created through the association of the SAP egress QoS policy with the queue ID.

This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the rate is performed under the **hs-wrr-group** command within the egress queue group template.

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 25.3.R2

Platforms SAR Gen 2

cir *(number | keyword)*

Synopsis CIR for the queue

Context **configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* rate cir *(number | keyword)*

Tree cir

Description This command specifies the administrative CIR used by the queue. When the **rate** command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.

The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.

The CIR can be used by the queue's parent **cir-level** and **cir-weight** commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.

pir *(number | keyword)*

Synopsis PIR for the queue

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** port *port* ethernet network egress queue-group *reference* instance-id *number* queue-overrides queue *reference* rate pir *(number | keyword)*
Tree	pir
Description	This command specifies the administrative PIR used by the queue. When the **rate** command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's **adaptation-rule** commands and the actual hardware where the queue is provisioned. The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	25.3.R2

Platforms	SAR Gen 2

rs-fec-mode *keyword*

Synopsis	RS-FEC mode on the Ethernet port
Context	**configure** port *port* ethernet rs-fec-mode *keyword*
Tree	rs-fec-mode
Description	This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet port. See "Forward Error Correction" in the *7705 SAR Gen 2 Interface Configuration Guide* for more information about FEC settings.
Options	cl91-514-528, cl74, cl108
Introduced	25.3.R2
Platforms	SAR Gen 2

speed *number*

Synopsis	Ethernet port speed
Context	**configure** port *port* ethernet speed *number*
Tree	speed
Description	This command configures the port speed for ports that support multiple speeds. This applies to the following:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Fast Ethernet when autonegotiation is not enabled
- 10/100/1000 Mb/s Ethernet when autonegotiation is not enabled
- 10/1G ports supporting 10G SFP+ or 1G SFP
- 40/100G ports supporting QSFP28s on non connector-based MDAs

If autonegotiation is enabled for the port, this command setting is ignored. Speed cannot be configured for ports that are part of a LAG.

Range	10 | 100 | 1000 | 10000 | 25000 | 40000 | 50000 | 100000
Units	megabps
Introduced	25.3.R2

Platforms	SAR Gen 2

code-type *keyword*

Synopsis	Encoding type of SSMs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** port *port* ethernet ssm code-type *keyword*
Tree	code-type
Description	This command configures the use of the SDH/SONET set of values to encode SSMs. Configuring the network type is only applicable to SyncE ports. It is not configurable on SONET/SDH ports.
Options	sonet – G.781 Option I compliant network sdh – G.781 Option II compliant network
Default	sdh
Introduced	25.3.R2
Platforms	SAR Gen 2

esmc-tunnel *boolean*

Synopsis	Tunnel ESMC frames in Epipe or VPLS services
Context	**configure** port *port* ethernet ssm esmc-tunnel *boolean*
Tree	esmc-tunnel
Description	When configured to **true**, ESMC frames that are received into the Ethernet port can be tunneled in an Epipe or VPLS service. When configured to **false**, ESMC frames are extracted upon reception by the port and are not tunneled through the service.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tx-dus *boolean*

Synopsis	Force QL value transmitted be set to QL-DNU or QL-DUS
Context	**configure** port *port* ethernet ssm tx-dus *boolean*
Tree	tx-dus
Description	When configured to **true**, the router sets the QL value transmitted from the SSM channel of the SyncE port to QL-DUS or QL-DNU. This capability is provided to block the use of the interface from the 7705 SAR Gen 2 for timing purposes.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tx-extended-ql-tlv *boolean*

Synopsis	Include the Extended QL TLV in transmitted ESMC
Context	**configure** port *port* ethernet ssm tx-extended-ql-tlv *boolean*
Tree	tx-extended-ql-tlv
Description	When configured to **true**, the router includes the Extended QL TLV in transmitted ESMC messages. When configured to **false**, the router turns off the inclusion of the TLV in the ESMC messages.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

util-stats-interval *number*

Synopsis	Interval to calculate utilization statistics
Context	**configure** port *port* ethernet util-stats-interval *number*
Tree	util-stats-interval
Description	This command configures the interval used to calculate the utilization statistics. Port utilization statistics are only available for physical Ethernet ports on a host system. These statistics are not available for the following: • Ethernet ports on an Ethernet satellite • PXC ports • vsm-cca-xp ports
Range	30 to 600
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	SAR Gen 2

xgig *keyword*

Synopsis	Ethernet port mode
Context	**configure** port *port* ethernet xgig *keyword*
Tree	xgig
Description	This command configures a 10 Gb/s interface to be in LAN or WAN mode.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configuring the port to be in WAN mode, certain SONET/SDH commands can be changed to reflect the SONET/SDH requirements for the port. When configuring the port to be in LAN mode, all SONET/SDH commands are pre-determined and not configurable.

Options	lan, wan
Introduced	25.3.R2
Platforms	SAR Gen 2

gnss

Synopsis	Enter the **gnss** context
Context	**configure** port *port* gnss
Tree	gnss
Description	Commands in this context configure GNSS port attributes.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

antenna-cable-delay *number*

Synopsis	Signal delay resulting from GNSS antenna cable length
Context	**configure** port *port* gnss antenna-cable-delay *number*
Tree	antenna-cable-delay
Description	This command configures the expected signal delay resulting from the length of the GNSS antenna cable.
Range	0 to 32767
Units	nanoseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

Description	Commands in this context configure the GNSS systems that are used by the GNSS receiver.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

galileo *boolean*

Synopsis	Enable GNSS receiver to use GALILEO constellation type
Context	**configure** port *port* gnss constellation galileo *boolean*
Tree	galileo
Description	When configured to **true**, this command enables the use of the European Galileo GNSS system.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

glonass *boolean*

Synopsis	Enable GNSS receiver to use GLONASS constellation type
Context	**configure** port *port* gnss constellation glonass *boolean*
Tree	glonass
Description	When configured to **true**, the system enables the use of the Russian GLONASS GNSS system. **Note**: The **glonass** command is currently not supported.
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

gps *boolean*

Synopsis	Enable GNSS receiver to use GPS constellation type
Context	**configure** port *port* gnss constellation gps *boolean*
Tree	gps
Description	When configured to **true**, this command enables the use of the American GPS GNSS system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, this command disables the use of the American GPS GNSS system.

Default true

Introduced 26.3.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx

elevation-mask-angle *number*

Synopsis Minimum elevation mask angle

Context **configure** port *port* gnss elevation-mask-angle *number*

Tree elevation-mask-angle

Description This command configures the elevation mask angle, which provides a method of filtering satellites used by the system.

Satellites with low elevation may provide degraded accuracy because of the long signal path through the atmosphere. Signals from satellites below the configured minimum satellite elevation are not used.

Nokia does not recommend configuring an elevation mask angle below 10.

Range 0 to 89

Units degrees angle

Default 10

Introduced 26.3.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx

signal-cnr-mask *number*

Synopsis Signal CNR mask strength in dB-Hz

Context **configure** port *port* gnss signal-cnr-mask *number*

Tree signal-cnr-mask

Description This command configures the threshold to determine the signal strength of the CNR mask to filter satellites used by the system. Satellites with CNR values below the configured minimum threshold may negatively impact accuracy, and their signals are ignored.

Range 0 to 37

Default 30

Introduced 26.7.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx

serial

Synopsis	Enter the **serial** context
Context	**configure** port *port* serial
Tree	serial
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

rs232

Synopsis	Enable the **rs232** context
Context	**configure** port *port* serial rs232
Tree	rs232
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administratively enable/disable the RS-232 port.
Context	**configure** port *port* serial rs232 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

channel-group [ds0-index] *number*

Synopsis	Enter the **channel-group** list instance
Context	**configure** port *port* serial rs232 channel-group *number*
Tree	channel-group
Introduced	26.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**ds0-index**] *number*

Synopsis	Specifies the DS0 channel group.
Context	**configure** port *port* serial rs232 channel-group *number*
Tree	channel-group
Range	1
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administratively enable/disable the RS232 channel group.
Context	**configure** port *port* serial rs232 channel-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

description *long-description*

Synopsis	Add/remove a text description.
Context	**configure** port *port* serial rs232 channel-group *number* description *long-description*
Tree	description
String length	1 to 160
Default	DS0GRP
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

character-length *number*

Synopsis	Number of data bits used to transmit a character.
Context	**configure** port *port* serial rs232 character-length *number*
Tree	character-length
Range	6 to 8
Default	8
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

control-lead

Synopsis	Enter the **control-lead** context
Context	**configure** port *port* serial rs232 control-lead
Tree	control-lead
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

input

Synopsis	Enter the **input** context
Context	**configure** port *port* serial rs232 control-lead input
Tree	input
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

dts-dsr *keyword*

Synopsis	Data Terminal Ready (DTR) or Data Set Ready (DSR) input control lead.
Context	**configure** port *port* serial rs232 control-lead input dts-dsr *keyword*
Tree	dts-dsr
Options	high, low
Default	high
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rts-dcd *keyword*

Synopsis	Request To Send (RTS) or Data Carrier Detect (DCD) input control lead.
Context	**configure** port *port* serial rs232 control-lead input rts-dcd *keyword*
Tree	rts-dcd
Options	high, low, end-to-end
Default	high
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

monitor

Synopsis	Enter the **monitor** context
Context	**configure** port *port* serial rs232 control-lead monitor
Tree	monitor
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

dts-dsr *keyword*

Synopsis	Data Terminal Ready (DTR) or Data Set Ready (DSR) input control lead monitoring.
Context	**configure** port *port* serial rs232 control-lead monitor dts-dsr *keyword*
Tree	dts-dsr
Options	on, off
Default	off
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

rts-dcd *keyword*

Synopsis	Request To Send (RTS) or Data Carrier Detect (DCD) input control lead monitoring.
Context	**configure** port *port* serial rs232 control-lead monitor rts-dcd *keyword*
Tree	rts-dcd
Options	on, off
Default	off

Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

output

Synopsis	Enter the **output** context
Context	**configure** port *port* serial rs232 control-lead output
Tree	output
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

cts-alb *keyword*

Synopsis	Clear To Send (CTS) or Analog Loopback (ALB) output control lead.
Context	**configure** port *port* serial rs232 control-lead output cts-alb *keyword*
Tree	cts-alb
Options	high, low, end-to-end
Default	high
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

dcd-rts *keyword*

Synopsis	Data Carrier Detect (DCD) or Request To Send (RTS) output control lead.
Context	**configure** port *port* serial rs232 control-lead output dcd-rts *keyword*
Tree	dcd-rts
Options	high, low, end-to-end
Default	high
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ri-rdl *keyword*

Synopsis	Ring Indicator (RI) or Remote Digital Loopback (RDL) output control lead.
Context	**configure** port *port* serial rs232 control-lead output ri-rdl *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ri-rdl
Options	high, low
Default	high
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

data-position *keyword*

Synopsis	HCM data start position.
Context	**configure** port *port* serial rs232 data-position *keyword*
Tree	data-position
Options	f0-b5, f0-b6, none
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** port *port* serial rs232 hold-time
Tree	hold-time
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

down *number*

Synopsis	Hold timer for link down event dampening.
Context	**configure** port *port* serial rs232 hold-time down *number*
Tree	down
Range	0 to 100
Units	deciseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

up *number*

Synopsis	Hold timer for link up event dampening.
Context	**configure** port *port* serial rs232 hold-time up *number*
Tree	up
Range	0 to 100
Units	deciseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

loopback *keyword*

Synopsis	Activate a loopback on the serial port.
Context	**configure** port *port* serial rs232 loopback *keyword*
Tree	loopback
Options	none, bidir-e
Default	none
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

mon-data-inactivity

Synopsis	Enter the **mon-data-inactivity** context
Context	**configure** port *port* serial rs232 mon-data-inactivity
Tree	mon-data-inactivity
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

clear *number*

Synopsis	Debounce timer for clearing data inactivity monitoring.
Context	**configure** port *port* serial rs232 mon-data-inactivity clear *number*
Tree	clear
Range	10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100

Units	seconds
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

raise *number*

Synopsis	Debounce timer for raising data inactivity monitoring.
Context	**configure** port *port* serial rs232 mon-data-inactivity raise *number*
Tree	raise
Range	10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100
Units	seconds
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

parity *keyword*

Synopsis	The parity bit in a character.
Context	**configure** port *port* serial rs232 parity *keyword*
Tree	parity
Options	none, odd, even, mark, space
Default	none
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

report-alarm

Synopsis	Enter the **report-alarm** context
Context	**configure** port *port* serial rs232 report-alarm
Tree	report-alarm
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ctrl-lead-mon *boolean*

Synopsis	Enable/disable control lead monitoring alarm.

© 2026 Nokia.

Context	**configure** port *port* serial rs232 report-alarm ctrl-lead-mon *boolean*
Tree	ctrl-lead-mon
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

hcm-oof *boolean*

Synopsis	Enable/disable local HCM oof alarm.
Context	**configure** port *port* serial rs232 report-alarm hcm-oof *boolean*
Tree	hcm-oof
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

hcm-rai *boolean*

Synopsis	Enable/disable remote HCM rai alarm.
Context	**configure** port *port* serial rs232 report-alarm hcm-rai *boolean*
Tree	hcm-rai
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

mon-data-inact *boolean*

Synopsis	Enable/disable data inactivity monitoring alarm.
Context	**configure** port *port* serial rs232 report-alarm mon-data-inact *boolean*
Tree	mon-data-inact
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

s-bit-signaling *boolean*

Synopsis	S-bit signaling mode.
Context	**configure** port *port* serial rs232 s-bit-signaling *boolean*
Tree	s-bit-signaling
Introduced	26.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7705 SAR-Hx, 7705 SAR-Mx

socket [socket-id] *number*

Synopsis	Enter the **socket** list instance
Context	**configure** port *port* serial rs232 socket *number*
Tree	socket
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

[**socket-id**] *number*

Synopsis	The socket identifier.
Context	**configure** port *port* serial rs232 socket *number*
Tree	socket
Range	1
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administratively enable/disable the RS-232 socket.
Context	**configure** port *port* serial rs232 socket *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

description *long-description*

Synopsis	Add/remove a text description.
Context	**configure** port *port* serial rs232 socket *number* description *long-description*
Tree	description

Notes	The following elements are part of a choice: **all-ones** or **pattern**.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

idle-signal-fill

Synopsis	Enter the **idle-signal-fill** context
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* idle-signal-fill
Tree	idle-signal-fill
Description	Commands in this context configure the signaling pattern to be transmitted when the circuit emulation service is not operational or temporarily experiences under-run conditions. This command is only valid for CESoPSN-CAS circuit emulation services. It is blocked with a warning for unstructured (SATOP) and basic CESoPSN circuit emulation services.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

all-ones

Synopsis	Transmit 8-bit value as 11111111
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* idle-signal-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: **all-ones** or **pattern**.

Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

pattern *number*

Synopsis	User-defined pattern to be transmitted
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* idle-signal-fill pattern *number*
Tree	pattern
Range	0 to 15
Notes	The following elements are part of a choice: **all-ones** or **pattern**.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

loopback *keyword*

Synopsis	Loopback mode on the channel group
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* loopback *keyword*
Tree	loopback
Description	This command configures the specified port or channel in a loopback mode.
Options	line, internal
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* mode *keyword*
Tree	mode
Options	access, network
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

network

Synopsis	Enter the **network** context
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* network
Tree	network
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

accounting-policy *reference*

Synopsis	Accounting policy
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* network accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* network collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

queue-policy *reference*

Synopsis	Network queue policy on TDM E0 network channel group
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* network queue-policy *reference*
Tree	queue-policy
Reference	**configure** qos network-queue *named-item*
Introduced	26.3.R1

Platforms	7705 SAR-Hx, 7705 SAR-Mx

timeslot *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Timeslot list for the channel group
Context	**configure** port *port* tdm e1 *tdm-e1-index* channel-group *number* timeslot *number*
Tree	timeslot
Description	This command configures the list of timeslots to be used in a channel group. For the list of DS-0 timeslots to be used in the DS-1 or E1 channel-group, the timeslots are defaulted as defined by the encapsulation type. ATM channel groups do not allow timeslots to change.
Range	1 to 32
Max. instances	32
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

clock-source *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clock source for data transmission
Context	**configure** port *port* tdm e1 *tdm-e1-index* clock-source *keyword*
Tree	clock-source
Description	This command specifies the clock source to use for the link transmit timing. The options are to use the locally recovered clock from the line's receive data stream, the node central reference, or an adaptively recovered clock using the received packets.
Options	loop-timed, node-timed, adaptive, differential
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

framing *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing on the E1 channel
Context	**configure** port *port* tdm e1 *tdm-e1-index* framing *keyword*
Tree	framing
Description	This command specifies the E1 framing to use with the associated channel.
Options	no-crc-g704, g704, e1-unframed
Default	g704
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** port *port* tdm e1 *tdm-e1-index* hold-time
Tree	hold-time
Description	Commands in this context configure link dampening timers in 100s of milliseconds. This guards against reporting excessive interface transitions. This is implemented by not advertising subsequent transitions of the interface to upper layer protocols until the configured timer has expired.
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

down *number*

Synopsis	Hold timer for link down event dampening on channels
Context	**configure** port *port* tdm e1 *tdm-e1-index* hold-time down *number*
Tree	down
Description	This command configures the DS1/E1 down link dampening timer, which guards against reporting excessive interface transitions. Subsequent transitions of the interface from one state to another are not advertised to upper layer protocols until the configured timer expires.
Range	0 to 100

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	deciseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

up *number*

Synopsis	Hold timer for link up event dampening on channels
Context	**configure** port *port* tdm e1 *tdm-e1-index* hold-time up *number*
Tree	up
Description	This command configures the DS1/E1 up link dampening timer, which guards against reporting excessive interface transitions. Subsequent transitions of the interface from one state to another are not advertised to upper layer protocols until the configured timer expires.
Range	0 to 100
Units	deciseconds
Default	0
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

loopback *keyword*

Synopsis	Loopback mode
Context	**configure** port *port* tdm e1 *tdm-e1-index* loopback *keyword*
Tree	loopback
Options	line, internal
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

report-alarm

Synopsis	Enter the **report-alarm** context
Context	**configure** port *port* tdm e1 *tdm-e1-index* report-alarm
Tree	report-alarm
Introduced	26.3.R1

Platforms	7705 SAR-Hx, 7705 SAR-Mx

ais *boolean*

Synopsis	Report alarm indication signal errors
Context	**configure** port *port* tdm e1 *tdm-e1-index* report-alarm ais *boolean*
Tree	ais
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

los *boolean*

Synopsis	Report loss of signal errors
Context	**configure** port *port* tdm e1 *tdm-e1-index* report-alarm los *boolean*
Tree	los
Default	true
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

oof *boolean*

Synopsis	Report out-of-frame errors
Context	**configure** port *port* tdm e1 *tdm-e1-index* report-alarm oof *boolean*
Tree	oof
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

rai *boolean*

Synopsis	Report resource availability indicator events
Context	**configure** port *port* tdm e1 *tdm-e1-index* report-alarm rai *boolean*
Tree	rai
Default	false

Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

signal-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal mode on the channel
Context	**configure** port *port* tdm e1 *tdm-e1-index* signal-mode *keyword*
Tree	signal-mode
Description	This command configures the signal mode on the channel. When enabled, it uses routing information to direct the payload of voice or data to its destination.
Options	channel-associated-signaling
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

ssm

Synopsis	Enter the **ssm** context
Context	**configure** port *port* tdm e1 *tdm-e1-index* ssm
Tree	ssm
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Enable/disable SSM.
Context	**configure** port *port* tdm e1 *tdm-e1-index* ssm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.

ssm-bit *number*

Synopsis	The sa-bit to use for conveying SSM information
Context	**configure** port *port* tdm e1 *tdm-e1-index* ssm ssm-bit *number*
Tree	ssm-bit
Range	4 to 8
Default	8
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

tx-dus *boolean*

Synopsis	Enable/disable always transmitting 0xF (dus/dnu) in SSM messaging channel.
Context	**configure** port *port* tdm e1 *tdm-e1-index* ssm tx-dus *boolean*
Tree	tx-dus
Default	false
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

encoding *keyword*

Synopsis	Encoding for the physical DS1/E1 port
Context	**configure** port *port* tdm encoding *keyword*
Tree	encoding
Description	This command configures the encoding for the physical DS1 or E1 port. Use **b8zs** to specify that B8ZS (bipolar with eight-zero substitution) zero code suppression is used on the port (supported only on a DS1 port). Use **ami** to specify that AMI (alternate mark inversion) is used on the port (supported only on a DS1 port). Use **hdb3** to specify that HDB3 (high-density bipolar of order 3) is used on the port (supported only on an E1 port).
Options	b8zs, ami, hdb3
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

length *number*

Synopsis	Cable length for short buildout on a physical DS1 port
Context	**configure** port *port* tdm length *number*
Tree	length
Range	133 | 266 | 399 | 533 | 655
Introduced	25.3.R2
Platforms	7705 SAR-Hx, 7705 SAR-Mx

line-impedance *number*

Synopsis	Line impedance for the physical DS1/E1 port
Context	**configure** port *port* tdm line-impedance *number*
Tree	line-impedance
Description	This command configures the line impedance of a port. Line impedance is set on a per-port basis, and ports on the same card can have different values. Before changing the line impedance of a port, the port must be shut down. DS1 ports support only 100 ohms. E1 ports support 75 and 120 ohms.
Range	75 | 100 | 120
Units	ohms
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

tpif

Synopsis	Enable the **tpif** context
Context	**configure** port *port* tdm tpif
Tree	tpif
Introduced	26.3.R1
Platforms	7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis	Administratively enable/disable the TPIF channel group.
Context	**configure** port *port* tdm tpif admin-state *keyword*
Tree	admin-state

4.22.1 qos command descriptions

qos

Synopsis	Enter the **qos** context
Context	**configure** qos
Tree	qos
Introduced	25.3.R2
Platforms	SAR Gen 2

match-list

Synopsis	Enter the **match-list** context
Context	**configure** qos match-list
Tree	match-list
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-prefix-list [prefix-list-name] *named-item*

Synopsis	Enter the **ip-prefix-list** list instance
Context	**configure** qos match-list ip-prefix-list *named-item*
Tree	ip-prefix-list
Max. instances	512
Introduced	25.3.R2
Platforms	SAR Gen 2

[**prefix-list-name**] *named-item*

Synopsis	IP prefix list name
Context	**configure** qos match-list ip-prefix-list *named-item*
Tree	ip-prefix-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** qos match-list ip-prefix-list *named-item* description *description*

policy-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis QoS network policy ID

Context **configure** qos network *network-policy-name* policy-id *number*

Tree policy-id

Description This command specifies the QoS network policy ID and uniquely identifies the policy on the router.

Network **policy-id 1** exists as the default policy that is applied to all network interfaces by default. The network policy-id 1 cannot be modified or deleted. It defines the default DSCP-to-FC mapping and MPLS EXP-to-FC mapping for the ingress. For the egress, it defines forwarding classes that represent individual queues and the packet marking criteria.

Network **policy-id 1** exists as the default policy that is applied to all network ports by default. This default policy cannot be modified or deleted. It defines the default DSCP-to-FC mapping and default unicast meters for ingress IP traffic. For the egress, it defines the forwarding class to dot1p and DSCP values and the packet marking criteria.

If a new network policy is created (for instance, **policy-id 3**), only the default action and egress forwarding class parameters are identical to the default policy. A new network policy does not contain the default DSCP-to-FC and MPLS-EXP-to-FC mapping for network QoS policy of type **ip-interface** or the DSCP-to-FC mapping (for network QoS policy of type **port**). The default network policy can be copied to create a new network policy that includes the default ingress DSCP-to-FC and MPLS EXP-to-FC mapping (as appropriate).

Range 1 to 65535

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	**configure** qos network-queue *named-item* queue *number* avg-frame-overhead *decimal-number*
Tree	avg-frame-overhead
Description	This command configures the average frame overhead, expressed as a percentage, at which the offered load expands on the physical medium (wire) at egress. This is important for accurate "on-the-wire" rate calculations at various levels of H-QoS that do not inherently account for the physical medium characteristics. For example, without considering this overhead, a port scheduler in H-QoS might inaccurately estimate the available bandwidth on the wire, potentially leading to congestion issues and unexpected packet loss.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The rates impacted by the average frame overhead encompass the rates set on port-schedulers and aggregate rate limits for subscribers and Vports. This impact is evident in the configured values, which represent on-the-wire rates. Queue configured rates, however, remain unaffected by this adjustment and continue to reflect Layer 2 rates.

Configure the average frame overhead in networks with physical mediums that have constant sizes of transmission units (packets or cells) or in scenarios where the average packet size is known.

The average frame overhead only affects rate and weight calculations and does not impact collected statistics for accounting purposes.

For Ethernet ports, the effect of this command depends on the setting of the **avg-frame-overhead-mode** command in advanced QoS configuration policy associated with the queue. If the **avg-frame-overhead-mode** is set to **auto**, the packet encapsulation overhead calculation is based on a fixed 20 bytes (7 bytes for preamble, 1 byte for start of frame delimiter and 12 bytes for Inter-Frame Gap (IFG)) that Ethernet medium adds to every packet during transmission. In other words, the configured rates for port scheduler and aggregate rate limits for subscribers and Vports represent on-the-wire rates.

arbiter-name *named-item*

Synopsis	Arbiter name
Context	**configure** qos policer-control-policy *named-item* tier *number* arbiter *named-item* arbiter-parent arbiter-name *named-item*
Tree	arbiter-name
Description	This command specifies the arbiter name. In tier 1, the arbiter name is not allowed and only the system reversed name "root" is accepted. The specified arbiter name must exist within the policer control policy at tier 1 or the parent command fails. When a tiered arbiter is acting as a parent for another tiered arbiter, the parent arbiter cannot be removed from the policy. The child arbiter receives all bandwidth directly from its parent arbiter (that receives bandwidth from the root arbiter).
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

level *number*

Synopsis	Level the child arbiter uses on its parent
Context	**configure** qos policer-control-policy *named-item* tier *number* arbiter *named-item* arbiter-parent level *number*
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

weight *number*

Synopsis	Weight attribute at parent level applied to children
Context	**configure** qos policer-control-policy *named-item* tier *number* arbiter *named-item* arbiter-parent weight *number*
Tree	weight
Description	This command defines how multiple children at the same parent strict level compete when insufficient bandwidth exists on the parent for that level. Each child's weight is divided by the sum of the active children's weights and the result is multiplied by the available bandwidth. If a child cannot receive its entire weighted fair share of bandwidth

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

due to a defined child rate limit, the remainder of its bandwidth is distributed between the other children based on their weights.

Range	1 to 100
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

Platforms	SAR Gen 2

monitor-threshold *number*

Synopsis	Congestion monitoring threshold
Context	**configure** qos port-scheduler-policy *named-item* monitor-threshold *number*
Tree	monitor-threshold
Description	This command defines the congestion monitoring threshold for the desired monitoring entity under the port-scheduler for per aggregate port scheduler rate, per individual level, and per group that is aggregating multiple levels. The congestion threshold is specified as a percentage of the configured PIR rate for the entity for which congestion monitoring is desired. For example, if the configured PIR rate for level 1 is 1000,000 kb/s, and the monitoring threshold is set to 90%, an event where the offered rate is >90,000 kb/s is recorded. This event is shown as part of the cumulative count of congestion threshold exceeds since the last clearing of the counters.
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

orphan-overrides

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* scheduler-parent cir-weight *number*
Tree	cir-weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

level *number*

Synopsis	Level of priority while feeding to the parent
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* scheduler-parent level *number*
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

scheduler-name *named-item*

Synopsis	Parent scheduler name
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* scheduler-parent scheduler-name *named-item*
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

weight *number*

Synopsis	Weight used by the scheduler for feeding the queue
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* scheduler-parent weight *number*
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

wred-queue

Synopsis	Enter the **wred-queue** context
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* wred-queue
Tree	wred-queue
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Pool association to allow queue-specific WRED slopes
Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* wred-queue mode *keyword*
Tree	mode
Options	native, pool-per-queue
Introduced	25.3.R2
Platforms	SAR Gen 2

usage *keyword*

Synopsis	Congestion control type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** qos queue-group-templates egress queue-group *named-item* queue *number* wred-queue usage *keyword*
Tree	usage
Options	auto, exceed-low
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress

Synopsis	Enter the **ingress** context
Context	**configure** qos queue-group-templates ingress
Tree	ingress
Introduced	25.3.R2
Platforms	SAR Gen 2

queue-group [ingress-queue-group-name] *named-item*

Synopsis	Enter the **queue-group** list instance
Context	**configure** qos queue-group-templates ingress queue-group *named-item*
Tree	queue-group
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ingress-queue-group-name**] *named-item*

Synopsis	Ingress queue group template name
Context	**configure** qos queue-group-templates ingress queue-group *named-item*
Tree	queue-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

scheduler-name *named-item*

Synopsis	Scheduler name
Context	**configure** qos queue-group-templates ingress queue-group *named-item* queue *number* scheduler-parent scheduler-name *named-item*
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

Description	This command defines the port priority that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the port schedulers with-CIR pass and the **cir-weight** command is ignored.
Range	0 to 8
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

cir-weight *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	**configure** qos sap-egress *qos-policy-name* policer *number* port-parent cir-weight *number*
Tree	cir-weight
Description	This command defines the weight that the policer uses at the within-CIR port priority level. All CIR weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit. When this command is set to the default value, the policer receives bandwidth only after other children with a non-zero weight at this level have been serviced.
Range	0 to 100
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	**configure** qos sap-egress *qos-policy-name* queue *number* avg-frame-overhead *decimal-number*
Tree	avg-frame-overhead
Description	This command configures the average frame overhead, expressed as a percentage, at which the offered load expands on the physical medium (wire) at egress. This is important for accurate "on-the-wire" rate calculations at various levels of H-QoS that do not inherently account for the physical medium characteristics. For example, without considering this overhead, a port-scheduler in H-QoS might inaccurately estimate the available bandwidth on the wire, potentially leading to congestion issues and unexpected packet loss.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The rates impacted by the average frame overhead encompass the rates set on port-schedulers and aggregate rate limits for subscribers and Vports. This impact is evident in the configured values, which represent on-the-wire (OTW) rates. Queue configured rates, however, remain unaffected by this adjustment and continue to reflect Layer 2 rates.

Configure the average frame overhead in networks with physical mediums that have constant sizes of transmission units (packets or cells) or in scenarios where the average packet size is known.

The average frame overhead only affects rate and weight calculations and does not impact collected statistics for accounting purposes.

For Ethernet ports, the effect of this command depends on the setting of the **avg-frame-overhead-mode** command in advanced QoS configuration policy associated with the queue. If the **avg-frame-overhead-mode** is set to **auto**, the packet encapsulation overhead calculation is based on a fixed 20 bytes (7 bytes for preamble, 1 byte for start of frame delimiter and 12 bytes for Inter-Frame Gap) that Ethernet medium adds to every packet during transmission. In other words, the configured rates for port-scheduler and aggregate rate limits for subscribers and Vports represent OTW rates.

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	**configure** qos sap-egress *qos-policy-name* queue *number* scheduler-parent cir-weight *number*
Tree	cir-weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

level *number*

Synopsis	Level of priority while feeding to the parent
Context	**configure** qos sap-egress *qos-policy-name* queue *number* scheduler-parent level *number*
Tree	level
Range	1 to 8
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

scheduler-name *named-item*

Synopsis	Parent scheduler name
Context	**configure** qos sap-egress *qos-policy-name* queue *number* scheduler-parent scheduler-name *named-item*
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2

Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

weight *number*

Synopsis	Weight used by the scheduler for feeding the queue
Context	**configure** qos sap-egress *qos-policy-name* queue *number* scheduler-parent weight *number*
Tree	weight
Range	0 to 100
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

wred-queue

Synopsis	Enter the **wred-queue** context
Context	**configure** qos sap-egress *qos-policy-name* queue *number* wred-queue
Tree	wred-queue
Introduced	25.3.R2
Platforms	SAR Gen 2

mode *keyword*

Synopsis	Pool association to allow queue-specific WRED slopes
Context	**configure** qos sap-egress *qos-policy-name* queue *number* wred-queue mode *keyword*
Tree	mode
Options	native, pool-per-queue
Introduced	25.3.R2
Platforms	SAR Gen 2

usage *keyword*

Synopsis	Congestion control type
Context	**configure** qos sap-egress *qos-policy-name* queue *number* wred-queue usage *keyword*
Tree	usage

Options	auto, exceed-low
Introduced	25.3.R2
Platforms	SAR Gen 2

scope *keyword*

Synopsis	Scope of the policy
Context	**configure** qos sap-egress *qos-policy-name* scope *keyword*
Tree	scope
Options	exclusive – Allow policy to be assigned to only one port template – Allow policy to be assigned to multiple ports
Default	template
Introduced	25.3.R2
Platforms	SAR Gen 2

sap-ingress [sap-ingress-policy-name] *qos-policy-name*

Synopsis	Enter the **sap-ingress** list instance
Context	**configure** qos sap-ingress *qos-policy-name*
Tree	sap-ingress
Introduced	25.3.R2
Platforms	SAR Gen 2

[**sap-ingress-policy-name**] *qos-policy-name*

Synopsis	Policy name
Context	**configure** qos sap-ingress *qos-policy-name*
Tree	sap-ingress
String length	1 to 64
String format	'qos-policy-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

default-fc *sap-ingress-fc-name*

Synopsis	Default forwarding class for non-matching traffic
Context	**configure** qos sap-ingress *qos-policy-name* default-fc *sap-ingress-fc-name*
Tree	default-fc
String length	1 to 32
String format	'sap-ingress-fc-name' must be one of be|l2|af|l1|h2|ef|h1|nc with optional .sub-name (e.g. be or ef.my-sub)
Introduced	25.3.R2
Platforms	SAR Gen 2

default-priority *keyword*

Synopsis	Priority for packets received on an ingress SAP
Context	**configure** qos sap-ingress *qos-policy-name* default-priority *keyword*
Tree	default-priority
Options	low, high
Default	low
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** qos sap-ingress *qos-policy-name* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

dot1p [dot1p-value] *number*

Synopsis	Enter the **dot1p** list instance
Context	**configure** qos sap-ingress *qos-policy-name* dot1p *number*

percent-rate

Synopsis	Enter the **percent-rate** context
Context	**configure** qos sap-ingress *qos-policy-name* policer *number* percent-rate
Tree	percent-rate
Description	Commands in this context configure the policer PIR and CIR as a percentage of the actual port speed or reference bandwidth, as opposed to absolute rate values. The reference bandwidth is configured on a per-port basis using the **configure port ethernet ingress-reference-bw** command and overrides the actual port speed. If the reference bandwidth is modified, the PIR and CIR are recalculated based on the new bandwidth and the configured percentage values. This command is mutually exclusive with the **rate** command used to specify absolute rate values for the policer. Configuring one removes the existing configuration of the other.
Notes	The following elements are part of a choice: **percent-rate** or **rate**.
Introduced	25.3.R2
Platforms	SAR Gen 2

cir *decimal-number*

Synopsis	Administrative CIR percent

scheduler [scheduler-name] *named-item*

Synopsis	Enter the **scheduler** list instance
Context	**configure** qos scheduler-policy *named-item* tier *number* scheduler *named-item*
Tree	scheduler
Introduced	25.3.R2
Platforms	SAR Gen 2

[**scheduler-name**] *named-item*

Synopsis	Scheduler name
Context	**configure** qos scheduler-policy *named-item* tier *number* scheduler *named-item*
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands. If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name. If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.

Platforms	SAR Gen 2

boot-timer *number*

Synopsis	Time before BGP EVPN multi-homing DF election algorithm
Context	**configure** redundancy bgp-evpn ethernet-segment boot-timer *number*
Tree	boot-timer
Description	This command allows the necessary time for the control plane protocols to come up upon PE boot-up before bringing up the ESs and running the DF algorithm. The following considerations apply to this command: • The **boot-timer** command must provide enough time to allow the IOMs and BGP sessions to come up before exchanging ES routes and running the DF election for each EVI or ISID. • The boot-timer is synchronized across CPMs and is relative to the system up time; it is not changed or reset upon CPM switchover. • The boot-timer is never interrupted (the **es-activation-timer**, however, can be interrupted if there is a new event triggering the DF election). • The boot-timer runs per EVI or ISID on the ESs in the system. If the system up time (time the system has been up since the last reboot) is less than the **boot-timer** value, the system does not run the DF election for any EVI or ISID. When the **boot-timer** value expires, the DF election runs, and if the system is elected DF for the EVI or ISID, the **es-activation-timer** is triggered. • The system does not advertise ES routes until the boot timer expires, which guarantees that the peer ES PEs only run the DF election when the PE is ready to become the DF, if required.

min-down-timer *number*

Synopsis	Min downtime for BGP multi-homing site after transition
Context	**configure** redundancy bgp-mh site min-down-timer *number*
Tree	min-down-timer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the BGP multi-homing site minimum down time. When this value is set and the site goes operationally down, it remains operationally down for at least the length of time configured by this timer, regardless of whether other state changes might cause the site to go operationally up. This timer is restarted every time the site transitions from operationally up to down. This timer is optimized in the following circumstances: • If the site goes down on the DF but there are no BGP multi-homing peers with the same site in an up state, this timer is not used. • If the site goes down on the DF but there are no active BGP multi-homing peers, this timer is not used. • If this timer is active and a BGP multihoming update is received from the DF indicating its site is down, this timer is immediately terminated and the BGP multihoming algorithm is triggered to determine whether this PE should become the DF.
Range	1 to 100
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

cert-sync *boolean*

Synopsis	Automatically synchronize certificate files
Context	**configure** redundancy cert-sync *boolean*
Tree	cert-sync
Description	When configured to **true**, the system automatically synchronizes the certificate/CRL/key when importing or generating (for the key). If a new CF card is inserted into cf3: into the backup CPM, the system synchronizes the system-pki directory from the active CPM.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-chassis

Synopsis	Enter the **multi-chassis** context

designated-role *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designated role for the IPsec domain
Context	**configure** redundancy multi-chassis ipsec-domain *number* designated-role *keyword*
Tree	designated-role
Description	This command configures the designated role of the tunnel group in the IPsec domain.
Options	standby, active
Default	standby
Introduced	25.3.R2
Platforms	SAR Gen 2

priority *number*

Synopsis	Priority for the IPsec domain
Context	**configure** redundancy multi-chassis ipsec-domain *number* priority *number*
Tree	priority
Description	This command configures the priority for the tunnel group in the IPsec domain. The node with the higher priority is more likely to be elected as active within the domain.
Range	0 to 255
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

revertive *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable revertive behavior for the tunnel group
Context	**configure** redundancy multi-chassis ipsec-domain *number* revertive *boolean*
Tree	revertive

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router enables the revertive behavior of the tunnel group, which allows a router in an N:M domain to automatically take over as the active router in the domain when it becomes eligible to do so. When configured to **false**, the revertive behavior of the tunnel group is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-group *reference*

WARNING:

bfd *boolean*

Synopsis	Enable BFD detection for the MC-EP peering tunnel
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint bfd *boolean*
Tree	bfd
Description	When configured to **true**, the system uses Bidirectional Forwarding Detection (BFD) to control the state of the associated protocol interface, where the state of the protocol interface is tied to the state of the BFD session between the local and remote nodes. The BFD settings are configured in the IP interface contexts.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

boot-timer *number*

Synopsis	Time to attempt connection before declaring failure
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint boot-timer *number*
Tree	boot-timer
Description	This command configures the time interval to attempt connection that applies after the node reboots. This command specifies the time the multi-chassis endpoint (MC-EP) protocol takes to establish a connection before declaring a connection failure with the remote peer. When the time interval expires, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	1 to 600
Units	seconds
Default	300
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-on-neighbor-failure *number*

Synopsis	Number of keepalive intervals to wait for packets
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint hold-on-neighbor-failure *number*
Tree	hold-on-neighbor-failure

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the number of keepalive intervals that the local node waits for packets from the MC-EP peer before declaring a connection failure. When the number of intervals is reached, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	2 to 25
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

keep-alive-interval *number*

Synopsis	Interval for exchange of keepalive messages
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint keep-alive-interval *number*
Tree	keep-alive-interval
Description	This command configures the interval for which keepalive messages are exchanged between two systems participating as MC-EP when BFD is not active. The fast keepalive messages are used to detect remote node failure.
Range	5 to 500
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

passive-mode *boolean*

Synopsis	Enable passive mode for the MC-EP tunnel
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint passive-mode *boolean*
Tree	passive-mode
Description	When configured to **true**, the system enables passive mode behavior for the MC-EP protocol. Assuming the remote pair is configured with regular MC-EP in passive mode, the MC-EP pair remains dormant until two of the pseudowires in an MC-EP are activated by the remote PEs. When one pseudowire is active, the dormant MC-EP pair becomes active. The regular mechanism to select the best pseudowire between the active pair is initiated, and the system blocks the Rx and Tx directions of the other pseudowire.
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

system-priority *number*

Synopsis	System priority of the MC-EP
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-endpoint system-priority *number*
Tree	system-priority
Description	This command configures the system priority of the MC-EP. The peer configured with the lower value is selected as the master. If the system priority values are equal, the peer with the higher system ID (chassis MAC address) becomes the master.
Range	0 to 255
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

mc-ipsec

Synopsis	Enable the **mc-ipsec** context
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-ipsec
Tree	mc-ipsec
Description	Commands in this context configure the 1:1 and N:M MC-IPsec multi-chassis state failover mechanism that allows the IPsec tunnel to continue to function without interruption if an active node fails.
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* mc-ipsec bfd-liveness *boolean*

sync-tag *named-item*

Synopsis	Tag to synchronize the tunnel group with the MC peer
Context	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)* sync tunnel-group *number* sync-tag *named-item*
Tree	sync-tag
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

rollback-sync *keyword*

Synopsis	Parameters for redundancy rollback synchronization
Context	**configure** redundancy rollback-sync *keyword*
Tree	rollback-sync
Options	rollback-single, rollback-all
Introduced	25.3.R2
Platforms	SAR Gen 2

switchover-exec *url*

Synopsis	CLI script file executed after a redundancy switchover
Context	**configure** redundancy switchover-exec *url*
Tree	switchover-exec
Description	This command specifies the location and name of the CLI script file executed following a redundancy switchover from the previously active CPM card. A switchover can happen because of a fatal failure or by manual action. The CLI script file can contain commands for environment settings, classic CLI debug configuration (excluding mirroring settings), and other commands not maintained by the configuration redundancy. The following commands are not supported in the switchover-exec file: **clear**, **configure**, **candidate**, **oam**, **tools**, **oam**, **ping**, **traceroute**, **mstat**, **mtrace**, and **mrinfo**.
String length	1 to 100
Introduced	25.3.R2

4.24.1 router command descriptions

router [router-name] *named-item-64*

Synopsis	Enter the **router** list instance
Context	**configure** router *named-item-64*
Tree	router
Description	Commands in this context configure a router instance that represents a virtual router in the system. At least two instances always exist in the system. The Base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. instances	4
Introduced	25.3.R2
Platforms	SAR Gen 2

[**router-name**] *named-item-64*

Synopsis	Administrative router name
Context	**configure** router *named-item-64*
Tree	router
String length	1 to 64
MD-CLI default	Base
String format	'string-not-all-spaces' must contain at least one non-space character 'router-instance' must be 1 to 32 characters
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

aggregates

Synopsis	Enter the **aggregates** context
Context	**configure** router *named-item-64* aggregates
Tree	aggregates
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

aggregate [ip-prefix] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Enter the **aggregate** list instance
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)*
Tree	aggregate
Description	Commands in this context add aggregate routes to the routing table when there are one or more component routes. A component route is any route installed in the forwarding table that is a more-specific match of the aggregate. The use of aggregate routes can lead to smaller routing table sizes by reducing the number of routes that need to be advertised to neighbor routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Destination IP address prefix of the aggregate route
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)*
Tree	aggregate
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

aggregator

Synopsis	Enter the **aggregator** context
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* aggregator
Tree	aggregator
Description	Commands in this context configure the BGP AGGREGATOR path attribute for the aggregate route.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

address *ipv4-unicast-address*

Synopsis	Aggregator IP address
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* aggregator address *ipv4-unicast-address*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

as-number *number*

Synopsis	Aggregator AS number
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* aggregator as-number *number*
Tree	as-number
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

as-set *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* as-set *boolean*
Tree	as-set
Description	When configured to **true**, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes. When configured to **false**, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

blackhole

Synopsis	Enable the **blackhole** context
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* blackhole
Tree	blackhole
Notes	The following elements are part of a choice: **blackhole** or **indirect**.
Introduced	25.3.R2
Platforms	SAR Gen 2

generate-icmp *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* blackhole generate-icmp *boolean*
Tree	generate-icmp
Description	When configured to **true**, ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to **false**, ICMP unreachable messages are not generated.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

community *community*

Synopsis	Community name that is added to the aggregate route
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* community *community*
Tree	community
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String length	1 to 72
Max. instances	12
Notes	This element is ordered by the user.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

discard-component-communities *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* discard-component-communities *boolean*
Tree	discard-component-communities
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

indirect *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* indirect *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	indirect
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: **blackhole** or **indirect**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

local-preference *number*

Synopsis	Local preference used when aggregate route is exported
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* local-preference *number*
Tree	local-preference
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *reference*

Synopsis	Policy name for the aggregated route
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* policy *reference*
Tree	policy
Description	This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes. If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.3.R2
Platforms	SAR Gen 2

summary-only *boolean*

Synopsis	Advertise the aggregate route only
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* summary-only *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	summary-only
Description	When configured to **true**, the router suppresses the advertisement of more specific component routes for the aggregate. When configured to **false**, the router advertises both the aggregate route and its contributing routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-group *number*

Synopsis	Tunnel group from which to associate the MC IPSec state
Context	**configure** router *named-item-64* aggregates aggregate *(ipv4-prefix | ipv6-prefix)* tunnel-group *number*
Tree	tunnel-group
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-bgp-to-igp-export *boolean*

Synopsis	Enable the distribution of BGP routes into the IGP
Context	**configure** router *named-item-64* allow-bgp-to-igp-export *boolean*
Tree	allow-bgp-to-igp-export
Description	When configured to **true**, the router can export base BGP RTM routes into the IGP routing instance within the base router. This command applies to already exported BGP prefixes and to newly received BGP prefixes.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-icmp-redirect *boolean*

Synopsis	Allow ICMP redirects on the management interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* allow-icmp-redirect *boolean*
Tree	allow-icmp-redirect
Description	When configured to **true**, ICMP redirect messages can be received on the management interface. When configured to **false**, all received ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-icmp6-redirect *boolean*

Synopsis	Allow IPv6 ICMP redirects on the management interface
Context	**configure** router *named-item-64* allow-icmp6-redirect *boolean*
Tree	allow-icmp6-redirect
Description	When configured to **true**, IPv6 ICMP redirect messages can be received on the management interface. When configured to **false**, all received IPv6 ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

autonomous-system *number*

Synopsis	AS number advertised to peers for this router
Context	**configure** router *named-item-64* autonomous-system *number*
Tree	autonomous-system
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated. If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bgp

Synopsis	Enable the **bgp** context
Context	**configure** router *named-item-64* bgp
Tree	bgp
Introduced	25.3.R2
Platforms	SAR Gen 2

add-paths

Synopsis	Enable the **add-paths** context
Context	**configure** router *named-item-64* bgp add-paths
Tree	add-paths
Description	Commands in this context configure add-paths support for the specified address families of the BGP instance. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn

Synopsis	Enter the **evpn** context
Context	**configure** router *named-item-64* bgp add-paths evpn
Tree	evpn
Description	Commands in this context configure the Add-Paths capability for EVPN routes. By default, Add-Paths is not enabled for EVPN routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	**configure** router *named-item-64* bgp add-paths evpn receive *boolean*
Tree	receive
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Maximum number of EVPN paths to send
Context	**configure** router *named-item-64* bgp add-paths evpn send *(number | keyword)*
Tree	send
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** router *named-item-64* bgp add-paths ipv4
Tree	ipv4
Description	Commands in this context configure add-paths support for the IPv4 unicast address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv4 prefix
Context	**configure** router *named-item-64* bgp add-paths ipv4 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple unlabeled IPv4 unicast routes per prefix to be received from a peer. When configured to **false**, the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

send *(number | keyword)*

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	**configure** router *named-item-64* bgp add-paths ipv4 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** router *named-item-64* bgp add-paths ipv6
Tree	ipv6
Description	Commands in this context configure add-paths support for the IPv6 unicast address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv6 prefix
Context	**configure** router *named-item-64* bgp add-paths ipv6 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to **false**, the ADD-PATH receive capability is not enabled.
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	**configure** router *named-item-64* bgp add-paths ipv6 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per unlabeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv4

Synopsis	Enter the **label-ipv4** context
Context	**configure** router *named-item-64* bgp add-paths label-ipv4
Tree	label-ipv4
Description	Commands in this context configure add-paths support for the labeled IPv4 unicast address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	**configure** router *named-item-64* bgp add-paths label-ipv4 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to **false**, the ADD-PATH receive capability is not enabled.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Paths advertised per labeled IPv4 unicast prefix
Context	**configure** router *named-item-64* bgp add-paths label-ipv4 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv6

Synopsis	Enter the **label-ipv6** context
Context	**configure** router *named-item-64* bgp add-paths label-ipv6
Tree	label-ipv6
Description	Commands in this context configure add-paths support for the labeled IPv6 unicast address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	**configure** router *named-item-64* bgp add-paths label-ipv6 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to **false**, the ADD-PATH receive capability is not enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Paths advertised per labeled IPv6 unicast prefix
Context	**configure** router *named-item-64* bgp add-paths label-ipv6 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-ipv4

Synopsis	Enter the **vpn-ipv4** context
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv4
Tree	vpn-ipv4
Description	Commands in this context configure add-paths support for the VPN-IPv4 address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv4 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple routes per VPN-IPv4 prefix to be received from a peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Maximum paths advertised per VPN-IPv4 prefix
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv4 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-ipv6

Synopsis	Enter the **vpn-ipv6** context
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv6
Tree	vpn-ipv6
Description	Commands in this context configure add-paths support for the VPN-IPv6 address family.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv6 receive *boolean*
Tree	receive
Description	When configured to **true**, this command allows multiple routes per VPN-IPv6 prefix to be received from a peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Maximum paths advertised per VPN-IPv6 prefix
Context	**configure** router *named-item-64* bgp add-paths vpn-ipv6 send *(number | keyword)*
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	**configure** router *named-item-64* bgp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-external

Synopsis	Enter the **advertise-external** context
Context	**configure** router *named-item-64* bgp advertise-external
Tree	advertise-external

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context allow BGP to advertise its best external route to a destination for specified address families even when its best overall route is an internal route.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	**configure** router *named-item-64* bgp advertise-external ipv4 *boolean*
Tree	ipv4
Default	false

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp advertise-external label-ipv6 *boolean*
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	**configure** router *named-item-64* bgp advertise-inactive *boolean*
Tree	advertise-inactive
Description	When configured to **true**, this command allows any inactive BGP route to be advertised, even though it is not the used route. When configured to **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-ipv6-next-hops

Synopsis	Enter the **advertise-ipv6-next-hops** context
Context	**configure** router *named-item-64* bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Description	Commands in this context allow specified BGP address family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied. This command context has no effect on routes advertised to IPv4 peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	**configure** router *named-item-64* bgp advertise-ipv6-next-hops evpn *boolean*
Tree	evpn

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to **false**, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	**configure** router *named-item-64* bgp advertise-ipv6-next-hops ipv4 *boolean*
Tree	ipv4
Description	When configured to **true**, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to **false**, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	**configure** router *named-item-64* bgp advertise-ipv6-next-hops label-ipv4 *boolean*
Tree	label-ipv4
Description	When configured to **true**, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to **false**, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	**configure** router *named-item-64* bgp advertise-ipv6-next-hops vpn-ipv6 *boolean*
Tree	vpn-ipv6
Description	When configured to **true**, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to **false**, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	**configure** router *named-item-64* bgp aggregator-id-zero *boolean*
Tree	aggregator-id-zero
Description	When configured to **true**, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes. When configured to **false**, the AS number and router ID are added to the AGGREGATOR path attribute.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

asn-4-byte *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	**configure** router *named-item-64* bgp asn-4-byte *boolean*
Tree	asn-4-byte
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	**configure** router *named-item-64* bgp authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the **configure system security hash-control management-interface md-cli hash-algorithm** setting. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 422
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	**configure** router *named-item-64* bgp authentication-keychain *reference*
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	**configure** system security keychains keychain *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

backup-path

Synopsis	Enter the **backup-path** context
Context	**configure** router *named-item-64* bgp backup-path
Tree	backup-path
Description	Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.

Introduced	25.3.R2
Platforms	SAR Gen 2

compare-origin-validation-state *boolean*

Synopsis	Compare RPKI origin validation state of usable routes
Context	**configure** router *named-item-64* bgp best-path-selection compare-origin-validation-state *boolean*
Tree	compare-origin-validation-state
Description	When configured to **true**, the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state. When configured to **false**, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

d-path-length-ignore *boolean*

Synopsis	Enable D-PATH length ignore
Context	**configure** router *named-item-64* bgp best-path-selection d-path-length-ignore *boolean*
Tree	d-path-length-ignore
Description	When configured to **true**, this command, enables the router to ignore the D-PATH domain segment length during best-path selection. At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance. At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs. Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

deterministic-med *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	**configure** router *named-item-64* bgp best-path-selection deterministic-med *boolean*
Tree	deterministic-med
Description	When configured to **true**, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases. When configured to **false**, paths are not grouped and the overall best-path selection can depend on the order of route arrival.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ebgp-ibgp-equal

Synopsis	Enter the **ebgp-ibgp-equal** context
Context	**configure** router *named-item-64* bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal
Description	Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families. By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	**configure** router *named-item-64* bgp best-path-selection ignore-nh-metric *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ignore-nh-metric
Description	When configured to **true**, BGP ignores the resolved distance to the BGP next hop in its route selection process. When configured to **false**, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the **router** context) or IP prefix learned from VPRN BGP peers (in the **vprn** context).
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-router-id

Synopsis	Enable the **ignore-router-id** context
Context	**configure** router *named-item-64* bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families. By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

include-internal

Synopsis	Enter the **include-internal** context
Context	**configure** router *named-item-64* bgp best-path-selection ignore-router-id include-internal
Tree	include-internal
Description	Commands in this context specify the internal address families for which the router ID values are ignored, even when comparing two IBGP paths or an EBGP and an IBGP path.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

origin-invalid-unusable *boolean*

Synopsis	Deem invalid routes unusable for best-path selection
Context	**configure** router *named-item-64* bgp best-path-selection origin-invalid-unusable *boolean*
Tree	origin-invalid-unusable
Description	When configured to **true**, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers. When configured to **false**, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix according to the BGP decision process.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** router *named-item-64* bgp bfd-liveness *boolean*
Tree	bfd-liveness
Description	When configured to **true**, BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to **false**, BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-strict-mode

Synopsis	Enter the **bfd-strict-mode** context
Context	**configure** router *named-item-64* bgp bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

advertise

Synopsis	Enable the **advertise** context
Context	**configure** router *named-item-64* bgp bfd-strict-mode advertise
Tree	advertise
Description	Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements: • The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**. • The interface associated with the peer has a valid BFD configuration. When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state. When unconfigured, BGP does not advertise the Strict-BFD capability to peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	**configure** router *named-item-64* bgp bfd-strict-mode advertise holdtime *number*
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	**configure** router *named-item-64* bgp bfd-strict-mode next-hop-reachability *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	next-hop-reachability
Description	When configured to **true**, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met: • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address. Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent. Configuring this command to **true** only affects routes belonging to the following address families: • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast • IPv6 multicast • IPv4 VPN multicast • IPv6 VPN multicast When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** router *named-item-64* bgp bgp-tunnel-metric

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	bgp-tunnel-metric
Description	Commands in this context control the tunnel table metrics associated with BGP label unicast routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-aigp *boolean*

Synopsis	Use the AIGP attribute as tunnel metric when present
Context	**configure** router *named-item-64* bgp bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, the TTM metric is based on the AIGP metric if the route has the path attribute. When the BGP-LU route is selected for installation in TTM and it is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the resolved cost to the BGP next-hop of the route; otherwise, the metric is set to the value in the **value** setting. When configured to **false**, the AIGP attribute is ignored for purposes to TTM metric derivation.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

prefer-med *boolean*

Synopsis	Use the MED attribute as tunnel metric when present
Context	**configure** router *named-item-64* bgp bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, the TTM metric is based on the MED metric value of the BGP-LU route. When a BGP-LU route is selected for installation in TTM and is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the resolved cost to the BGP next hop of the route added to it. Otherwise, the metric is set to the value configured using the **value** command. When configured to **false**, the MED attribute is ignored for TTM metric derivation. **Note: prefer-aigp** takes precedence over this command if the received BGP-LU has both attributes.
Default	false
Introduced	25.3.R2

Platforms	SAR Gen 2

value *number*

Synopsis	BGP tunnel metric value
Context	**configure** router *named-item-64* bgp bgp-tunnel-metric value *number*
Tree	value
Description	This command configures a BGP tunnel metric for label IPv4 routes that do not have their metric set by more specific means. If a BGP-LU route is selected for installation in the TTM and there is no tunnel metric policy action that applies to the route, the TTM metric of the associated tunnel is set to this value if either: • **prefer-aigp** is set to **false** • **prefer-aigp** is set to **true** but the BGP-LU route does not have an AIGP attribute
Range	0 to 4294967295
Default	1000
Introduced	25.3.R2
Platforms	SAR Gen 2

bgp-tunnel-preference *number*

Synopsis	BGP tunnel table preference
Context	**configure** router *named-item-64* bgp bgp-tunnel-preference *number*
Tree	bgp-tunnel-preference
Description	This command configures the tunnel table preference for BGP-LU tunnel type. The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table. This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the **mixed-lsp-mode** option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.
Range	1 to 255
Default	12
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

block-prefix-sid *boolean*

Synopsis	Block the prefix SID attribute
Context	**configure** router *named-item-64* bgp block-prefix-sid *boolean*
Tree	block-prefix-sid
Description	When configured to **true**, all prefix SID attributes are removed from label IPv4 and label IPv6 routes when they are exchanged with EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed. When configured to **false**, all prefix SID attributes associated with label IPv4 and label IPv6 routes are propagated without restriction. A change of this configuration causes the affected BGP sessions to flap.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	**configure** router *named-item-64* bgp client-reflect *boolean*
Tree	client-reflect
Description	When configured to **true**, routes received from neighbors considered to be RR clients are reflected to other peers as expected. When configured to **false**, routes received from neighbors considered to be RR clients are not reflected to other clients.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

cluster

Synopsis	Enter the **cluster** context
Context	**configure** router *named-item-64* bgp cluster
Tree	cluster
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology location for ORR
Context	**configure** router *named-item-64* bgp cluster allow-local-fallback *boolean*
Tree	allow-local-fallback
Description	When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**. When configured to **false**, no route is advertised to the clients when there are no reachable routes from the client's ORR location.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	**configure** router *named-item-64* bgp cluster cluster-id *ipv4-address*
Tree	cluster-id
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	**configure** router *named-item-64* bgp cluster orr-location *number*
Tree	orr-location
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.

Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	**configure** router *named-item-64* bgp connect-retry *number*
Tree	connect-retry
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	25.3.R2
Platforms	SAR Gen 2

convergence

Synopsis	Enter the **convergence** context
Context	**configure** router *named-item-64* bgp convergence
Tree	convergence
Description	Commands in this context configure the route convergence delay.
Introduced	25.3.R2
Platforms	SAR Gen 2

family [family-type] *keyword*

Synopsis	Enter the **family** list instance
Context	**configure** router *named-item-64* bgp convergence family *keyword*
Tree	family
Description	Commands in this context configure route convergence options for a specific BGP address family, specifically, the maximum amount of time BGP waits until it advertises the routes of the address family to its BGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**family-type**] *keyword*

Synopsis	Address family for which convergence selection applies
Context	**configure** router *named-item-64* bgp convergence family *keyword*
Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-wait-to-advertise *number*

Synopsis	Maximum wait time before advertising routes
Context	**configure** router *named-item-64* bgp convergence family *keyword* max-wait-to-advertise *number*
Tree	max-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

min-wait-to-advertise *number*

Synopsis	Minimum wait time before advertising routes
Context	**configure** router *named-item-64* bgp convergence min-wait-to-advertise *number*
Tree	min-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the **damp-peer-oscillations** context
Context	**configure** router *named-item-64* bgp damp-peer-oscillations

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	damp-peer-oscillations
Description	Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, *A Border Gateway Protocol 4 (BGP-4)*. When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.
Introduced	25.3.R2
Platforms	SAR Gen 2

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	**configure** router *named-item-64* bgp damp-peer-oscillations error-interval *number*
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

idle-hold-time

Synopsis	Enter the **idle-hold-time** context
Context	**configure** router *named-item-64* bgp damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Description	Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp damp-peer-oscillations idle-hold-time initial-wait *number*
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	**configure** router *named-item-64* bgp damp-peer-oscillations idle-hold-time max-wait *number*
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each session failure
Context	**configure** router *named-item-64* bgp damp-peer-oscillations idle-hold-time second-wait *number*
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	**configure** router *named-item-64* bgp damping *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	damping
Description	When configured to **true**, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes. Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters: • Half-life: 15 minutes • Max-suppress: 60 minutes • Suppress-threshold: 3000 • Reuse-threshold: 750 When configured to **false**, BGP route damping for learned routes is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	**configure** router *named-item-64* bgp def-recv-evpn-encap *keyword*
Tree	def-recv-evpn-encap
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
Options	mpls, vxlan
Default	mpls
Introduced	25.3.R2
Platforms	SAR Gen 2

default-label-preference

Synopsis	Enter the **default-label-preference** context
Context	**configure** router *named-item-64* bgp default-label-preference
Tree	default-label-preference

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	**configure** router *named-item-64* bgp egress-peer-engineering admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	**configure** router *named-item-64* bgp enforce-first-as *boolean*
Tree	enforce-first-as
Description	When configured to **true** for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the **update-fault-tolerance** command in the **error-handling** context is set to **false**) or the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**). This command does not flap an established session because it applies only to routes received after the command is issued. When configured to **false**, received routes are not checked for compliance with the rule.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

error-handling

Synopsis	Enter the **error-handling** context
Context	**configure** router *named-item-64* bgp error-handling
Tree	error-handling

Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

legacy-mode *boolean*

Synopsis	Enable legacy-mode of BGP error handling
Context	**configure** router *named-item-64* bgp error-handling legacy-mode *boolean*
Tree	legacy-mode
Description	When configured to **true**, the BGP instance handles the BGP update error messages based on the configured **update-fault-tolerance** commands. If these commands are not explicitly configured, BGP error handling follows the legacy procedures described in RFC 4271, which can result in disruptive session resets. When configured to **false**, the BGP instance ignores the configured **update-fault-tolerance** commands and applies the new error handling procedures described in RFC 7606 on all sessions.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	**configure** router *named-item-64* bgp error-handling update-fault-tolerance *boolean*
Tree	update-fault-tolerance
Description	When configured to **true**, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When configured to **false**, most errors trigger a session reset.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

export

Synopsis	Enable the **export** context
Context	**configure** router *named-item-64* bgp export
Tree	export
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to all peers. Route policies are configured in the **configure policy-options** context.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When no export policies are specified in this context, BGP-learned routes are advertised by default and non-BGP routes are not advertised.

Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	List of export policy names
Context	**configure** router *named-item-64* bgp export policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). When no export policies are specified, BGP-learned routes are advertised by default and non-BGP routes are not advertised.
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-nh-encoding

Synopsis	Enter the **extended-nh-encoding** context
Context	**configure** router *named-item-64* bgp extended-nh-encoding
Tree	extended-nh-encoding
Description	Commands in this context specify the IPv4-related address families that can receive IPv6 next hops from peers. The peers should not send such routes unless the peers receive notification of this capability. If the router receives an enabled address family

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.

Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes

sr-policy-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	**configure** router *named-item-64* bgp family sr-policy-ipv6 *boolean*
Tree	sr-policy-ipv6
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	**configure** router *named-item-64* bgp family vpn-ipv4 *boolean*
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	**configure** router *named-item-64* bgp family vpn-ipv6 *boolean*
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	**configure** router *named-item-64* bgp fast-external-failover *boolean*
Tree	fast-external-failover

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to **false**, the BGP session remains up until the hold time expires.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

graceful-restart

Synopsis	Enable the **graceful-restart** context
Context	**configure** router *named-item-64* bgp graceful-restart
Tree	graceful-restart
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

gr-notification *boolean*

Synopsis	Perform Graceful Restart procedures
Context	**configure** router *named-item-64* bgp graceful-restart gr-notification *boolean*
Tree	gr-notification
Description	When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error. When configured to **false**, NOTIFICATION messages are not supported.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

long-lived

Synopsis	Enable the **long-lived** context
Context	**configure** router *named-item-64* bgp graceful-restart long-lived
Tree	long-lived

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures. LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort. The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	**configure** router *named-item-64* bgp graceful-restart long-lived advertise-stale-to-all-neighbors *boolean*
Tree	advertise-stale-to-all-neighbors
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	**configure** router *named-item-64* bgp graceful-restart long-lived advertised-stale-time *number*
Tree	advertised-stale-time
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	**configure** router *named-item-64* bgp graceful-restart long-lived forwarding-bits-set *keyword*
Tree	forwarding-bits-set
Description	This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family. This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	**configure** router *named-item-64* bgp graceful-restart long-lived helper-override-restart-time *number*
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	**configure** router *named-item-64* bgp graceful-restart long-lived helper-override-stale-time *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	25.3.R2
Platforms	SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	**configure** router *named-item-64* bgp graceful-restart long-lived without-no-export *boolean*
Tree	without-no-export
Description	When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

restart-time *number*

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	**configure** router *named-item-64* bgp group *named-item-64* advertise-inactive *boolean*
Tree	advertise-inactive
Description	When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicapt IPv4 and IPv6 routes depends on several factors. • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertise unless the active non-BGP route is matched and accepted by an export policy applied to the session • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicity configured to **false**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 25.3.R2

aigp *boolean*

Synopsis	Add AIGP attribute to advertised routes
Context	**configure** router *named-item-64* bgp group *named-item-64* aigp *boolean*
Tree	aigp
Description	When configured to **true**, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance. When configured to **false**, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	**configure** router *named-item-64* bgp group *named-item-64* as-override *boolean*
Tree	as-override
Description	When configured to **true**, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute. This command should be used with caution, as it breaks BGP's loop detection mechanism. When configured to **false**, no AS override is performed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	**configure** router *named-item-64* bgp group *named-item-64* asn-4-byte *boolean*
Tree	asn-4-byte
Description	When this command inherits a value of **true**, the use of 4-byte ASNs is supported. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When configured to **false**, this command disables the use of 4-byte ASNs.
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for peers in the group
Context	**configure** router *named-item-64* bgp group *named-item-64* authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the **configure system security hash-control management-interface md-cli hash-algorithm** setting**.** This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 422
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	**configure** router *named-item-64* bgp group *named-item-64* authentication-keychain *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	**configure** system security keychains keychain *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** router *named-item-64* bgp group *named-item-64* bfd-liveness *boolean*
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-strict-mode

Synopsis	Enter the **bfd-strict-mode** context
Context	**configure** router *named-item-64* bgp group *named-item-64* bfd-strict-mode
Tree	bfd-strict-mode
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise

Synopsis	Enable the **advertise** context
Context	**configure** router *named-item-64* bgp group *named-item-64* bfd-strict-mode advertise
Tree	advertise
Description	Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements: • The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**. • The interface associated with the peer has a valid BFD configuration. When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced	25.3.R2
Platforms	SAR Gen 2

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	**configure** router *named-item-64* bgp group *named-item-64* bfd-strict-mode advertise holdtime *number*
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	**configure** router *named-item-64* bgp group *named-item-64* bfd-strict-mode next-hop-reachability *boolean*
Tree	next-hop-reachability
Description	When configured to **true**, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met: • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address. Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Configuring this command to **true** only affects routes belonging to the following address families:

- IPv4
- IPv6
- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 25.3.R2

Platforms SAR Gen 2

block-prefix-sid *boolean*

Synopsis Block the prefix SID attribute

Context **configure** router *named-item-64* bgp group *named-item-64* block-prefix-sid *boolean*

Tree block-prefix-sid

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

capability-negotiation *boolean*

Synopsis Enable capability negotiation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* capability-negotiation *boolean*
Tree	capability-negotiation
Description	When configured to **true**, this command enables the exchange of capabilities. When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	**configure** router *named-item-64* bgp group *named-item-64* client-reflect *boolean*
Tree	client-reflect
Description	When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When the command inherits a value of **true**, client reflection of routes is enabled. When configured to **false**, this command disables client reflection of routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

cluster

Synopsis	Enter the **cluster** context
Context	**configure** router *named-item-64* bgp group *named-item-64* cluster
Tree	cluster
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology location
Context	**configure** router *named-item-64* bgp group *named-item-64* cluster allow-local-fallback *boolean*
Tree	allow-local-fallback

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**. When configured to **false**, no route is advertised to the client.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	**configure** router *named-item-64* bgp group *named-item-64* cluster cluster-id *ipv4-address*
Tree	cluster-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	**configure** router *named-item-64* bgp group *named-item-64* cluster orr-location *number*
Tree	orr-location
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs are calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* connect-retry *number*
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the **damp-peer-oscillations** context
Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations
Tree	damp-peer-oscillations
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state. When unconfigured, command settings are inherited from the global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations error-interval *number*
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

idle-hold-time

Synopsis	Enter the **idle-hold-time** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations idle-hold-time initial-wait *number*
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations idle-hold-time max-wait *number*
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	**configure** router *named-item-64* bgp group *named-item-64* damp-peer-oscillations idle-hold-time second-wait *number*
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	**configure** router *named-item-64* bgp group *named-item-64* damping *boolean*
Tree	damping
Introduced	25.3.R2
Platforms	SAR Gen 2

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	**configure** router *named-item-64* bgp group *named-item-64* def-recv-evpn-encap *keyword*
Tree	def-recv-evpn-encap
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community. When unconfigured, the setting for this command is inherited from the BGP global-level configuration.
Options	mpls, vxlan
Introduced	25.3.R2
Platforms	SAR Gen 2

default-label-preference

Synopsis	Enter the **default-label-preference** context

dynamic-neighbor

Synopsis	Enter the **dynamic-neighbor** context
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor
Tree	dynamic-neighbor
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	25.3.R2
Platforms	SAR Gen 2

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor interface *interface-name*
Tree	interface
Description	Commands in this context configure an unnumbered base router network interface for dynamic neighbors. If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses. The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions. When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**interface-name**] *interface-name*

Synopsis	Name of the dynamic neighbor interface
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor interface *interface-name*
Tree	interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor interface *interface-name* allowed-peer-as *string*
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format *n1*..*n*2. All values greater than or equal to *n1* and less than or equal to *n2*are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
String format	'allowed-peer-as' must be 4-byte decimal AS number or AS..AS range
Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-sessions *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor interface *interface-name* max-sessions *number*
Tree	max-sessions
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

match

Synopsis	Enter the **match** context
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor match
Tree	match
Description	Commands in this context configure match conditions for the dynamic neighbors.
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix [ip-prefix] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Enter the **prefix** list instance
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor match prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Dynamic peer prefix for the group
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor match prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor match prefix *(ipv4-prefix | ipv6-prefix)* allowed-peer-as *string*
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format *n1*..*n*2.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	All values greater than or equal to *n1* and less than or equal to *n2*are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
String format	'allowed-peer-as' must be 4-byte decimal AS number or AS..AS range
Max. instances	32
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

dynamic-neighbor-limit *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	**configure** router *named-item-64* bgp group *named-item-64* dynamic-neighbor-limit *number*
Tree	dynamic-neighbor-limit
Description	This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer. When unconfigured, the setting is inherited from the BGP global-level configuration.
Range	1 to 8192
Introduced	25.3.R2
Platforms	SAR Gen 2

ebgp-default-reject-policy

Synopsis	Enable the **ebgp-default-reject-policy** context
Context	**configure** router *named-item-64* bgp group *named-item-64* ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

export *boolean*

Synopsis	Enable default reject export policy for external peers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* ebgp-default-reject-policy export *boolean*
Tree	export
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	**configure** router *named-item-64* bgp group *named-item-64* ebgp-default-reject-policy import *boolean*
Tree	import
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

egress-engineering

Synopsis	Enable the **egress-engineering** context
Context	**configure** router *named-item-64* bgp group *named-item-64* egress-engineering
Tree	egress-engineering
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	**configure** router *named-item-64* bgp group *named-item-64* egress-engineering admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for group
Context	**configure** router *named-item-64* bgp group *named-item-64* egress-peer-engineering-label-unicast *boolean*
Tree	egress-peer-engineering-label-unicast
Description	When configured to **true**, BGP generates a label-unicast route for each /32 or /128 prefix that corresponds to the BGP group address in the scope of the command. These routes can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. They support the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	**configure** router *named-item-64* bgp group *named-item-64* enforce-first-as *boolean*
Tree	enforce-first-as
Introduced	25.3.R2
Platforms	SAR Gen 2

error-handling

Synopsis	Enter the **error-handling** context
Context	**configure** router *named-item-64* bgp group *named-item-64* error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	SAR Gen 2

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* error-handling update-fault-tolerance *boolean*
Tree	update-fault-tolerance
Description	When configured to **true**, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, all errors trigger a session reset.
Introduced	25.3.R2
Platforms	SAR Gen 2

export

Synopsis	Enable the **export** context
Context	**configure** router *named-item-64* bgp group *named-item-64* export
Tree	export
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the **configure policy-options** context. When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	BGP export policy name
Context	**configure** router *named-item-64* bgp group *named-item-64* export policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-nh-encoding

Synopsis	Enable the **extended-nh-encoding** context
Context	**configure** router *named-item-64* bgp group *named-item-64* extended-nh-encoding
Tree	extended-nh-encoding
Description	Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings. When the context is unconfigured, command settings are inherited from the higher level BGP configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	**configure** router *named-item-64* bgp group *named-item-64* fast-external-failover *boolean*
Tree	fast-external-failover
Description	When this command inherits a value of **true**, the router drops an external BGP session on a single-hop route immediately when the local interface goes down. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When configured to **false**, the BGP session remains up until the hold time expires.
Introduced	25.3.R2
Platforms	SAR Gen 2

graceful-restart

Synopsis	Enable the **graceful-restart** context
Context	**configure** router *named-item-64* bgp group *named-item-64* graceful-restart
Tree	graceful-restart
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the context is unconfigured, the command settings are inherited from the BGP global-level configuration.

Introduced 25.3.R2

Platforms SAR Gen 2

gr-notification *boolean*

Synopsis Perform graceful restart procedures after NOTIFICATION

Context **configure** router *named-item-64* bgp group *named-item-64* graceful-restart gr-notification *boolean*

Tree gr-notification

Description When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to **false**, NOTIFICATION messages are not supported.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

long-lived

Synopsis Enable the **long-lived** context

Context **configure** router *named-item-64* bgp group *named-item-64* graceful-restart long-lived

Tree long-lived

Description Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.

LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.

The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.

Introduced 25.3.R2

Platforms SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	**configure** router *named-item-64* bgp group *named-item-64* graceful-restart long-lived forwarding-bits-set *keyword*
Tree	forwarding-bits-set
Description	This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family. This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).
Options	none, all, non-fwd
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	**configure** router *named-item-64* bgp group *named-item-64* graceful-restart long-lived helper-override-restart-time *number*
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	**configure** router *named-item-64* bgp group *named-item-64* graceful-restart long-lived helper-override-stale-time *number*

Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	25.3.R2
Platforms	SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	**configure** router *named-item-64* bgp group *named-item-64* graceful-restart long-lived without-no-export *boolean*
Tree	without-no-export
Description	When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

Synopsis	Minimum hold time between successive messages
Context	**configure** router *named-item-64* bgp group *named-item-64* hold-time minimum-hold-time *number*
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. When unconfigured, the command value is inherited from the BGP global-level setting.
Range	0 | 3 to 65536
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Maximum time BGP waits between successive messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* hold-time seconds *number*
Tree	seconds
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances. • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. When unconfigured, the command setting is inherited from the BGP global-level configuration.
Range	0 | 3 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

import

Synopsis	Enable the **import** context
Context	**configure** router *named-item-64* bgp group *named-item-64* import
Tree	import
Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the **configure policy-options** context. When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	BGP import policy name
Context	**configure** router *named-item-64* bgp group *named-item-64* import policy *(policy-expr-string | string)*
Tree	policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies route policies that control the handling of inbound routes received from certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	**configure** router *named-item-64* bgp group *named-item-64* initial-send-delay-zero *boolean*
Tree	initial-send-delay-zero
Description	When configured to **true**, BGP updates are sent as soon as the session comes up. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.
Introduced	25.3.R2
Platforms	SAR Gen 2

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	**configure** router *named-item-64* bgp group *named-item-64* keepalive *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	keepalive
Description	This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires. This value is generally one-third of the hold time interval configured in the **hold-time seconds** context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value: • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. When unconfigured, the command inherits the BGP global-level setting.
Range	0 to 21845
Introduced	25.3.R2
Platforms	SAR Gen 2

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	**configure** router *named-item-64* bgp group *named-item-64* label-preference *number*

outbound-route-filtering

Synopsis	Enable the **outbound-route-filtering** context
Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When this context is unconfigured, the group command settings are inherited from the BGP global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-community

Synopsis	Enable the **extended-community** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the command settings are inherited from the global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering extended-community accept-orf *boolean*
Tree	accept-orf
Description	When configured to **true**, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.
Introduced	25.3.R2
Platforms	SAR Gen 2

send-orf

Synopsis	Enable the **send-orf** context
Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering extended-community send-orf
Tree	send-orf
Description	Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD. When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

route-target [community-name] *named-item*

Synopsis	Add a list entry for **route-target**
Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering extended-community send-orf route-target *named-item*
Tree	route-target
Introduced	25.3.R2
Platforms	SAR Gen 2

[**community-name**] *named-item*

Synopsis	Route target community name
Context	**configure** router *named-item-64* bgp group *named-item-64* outbound-route-filtering extended-community send-orf route-target *named-item*
Tree	route-target
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

passive *boolean*

Synopsis	Enable passive mode for BGP communication
Context	**configure** router *named-item-64* bgp group *named-item-64* passive *boolean*
Tree	passive
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	**configure** router *named-item-64* bgp group *named-item-64* path-mtu-discovery *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	path-mtu-discovery
Description	When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections. When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated. When configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-as *number*

Synopsis	Peer AS number
Context	**configure** router *named-item-64* bgp group *named-item-64* peer-as *number*
Tree	peer-as
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	**configure** router *named-item-64* bgp group *named-item-64* peer-ip-tracking *boolean*
Tree	peer-ip-tracking
Description	When configured to **true**, this command enables BGP peer tracking. Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, peer tracking is disabled.

Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hold-excess *number*

Synopsis	Percentage of maximum routes to install in route table
Context	**configure** router *named-item-64* bgp group *named-item-64* prefix-limit *keyword* hold-excess *number*
Tree	hold-excess
Description	This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the **post-import** command is configured to **true**, only routes not rejected by import policies count toward the limit. A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route. This command is mutually exclusive with the **idle-timeou**t and **log-only** commands.
Range	1 to 100
Introduced	25.3.R2
Platforms	SAR Gen 2

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting
Context	**configure** router *named-item-64* bgp group *named-item-64* prefix-limit *keyword* idle-timeout *number*
Tree	idle-timeout
Description	This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.
Range	1 to 1024
Introduced	25.3.R2
Platforms	SAR Gen 2

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	**configure** router *named-item-64* bgp group *named-item-64* prefix-limit *keyword* log-only *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	log-only
Description	When configured to **true**, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached. This command and **idle-timeout** cannot be configured simultaneously. When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	**configure** router *named-item-64* bgp group *named-item-64* prefix-limit *keyword* maximum *number*
Tree	maximum
Description	This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken. When **log-only** is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	**configure** router *named-item-64* bgp group *named-item-64* prefix-limit *keyword* post-import *boolean*
Tree	post-import
Description	When configured to **true**, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit. When configured to **false**, the system limits the number of routes to all routes received from the peer.

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	**configure** router *named-item-64* bgp group *named-item-64* send-communities extended *boolean*
Tree	extended
Description	When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute. When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	**configure** router *named-item-64* bgp group *named-item-64* send-communities large *boolean*
Tree	large
Description	When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute. When configured to **false**, all large communities are removed from all routes advertised to BGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	**configure** router *named-item-64* bgp group *named-item-64* send-communities standard *boolean*
Tree	standard
Description	When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this command inherits a value of **true**, BGP standard communities are sent to peers in the Communities attribute.

When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.

Introduced	25.3.R2
Platforms	SAR Gen 2

send-default

Synopsis	Enable the **send-default** context
Context	**configure** router *named-item-64* bgp group *named-item-64* send-default
Tree	send-default
Introduced	25.3.R2
Platforms	SAR Gen 2

export-policy *reference*

Synopsis	Export policy name
Context	**configure** router *named-item-64* bgp group *named-item-64* send-default export-policy *reference*
Tree	export-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	**configure** router *named-item-64* bgp group *named-item-64* send-default ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6 *boolean*

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	**configure** router *named-item-64* bgp group *named-item-64* send-default ipv6 *boolean*
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	**configure** router *named-item-64* bgp group *named-item-64* split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split-horizon. This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP. Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the use of split-horizon is disabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

static-group *boolean*

Synopsis	Use group for static peers
Context	**configure** router *named-item-64* bgp group *named-item-64* static-group *boolean*
Tree	static-group
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tcp-mss *(number | keyword)*

Synopsis	TCP maximum segment size override
Context	**configure** router *named-item-64* bgp group *named-item-64* tcp-mss *(number | keyword)*
Tree	tcp-mss
Description	This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command). The configured value controls two properties of the TCP connection as follows: TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router. TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.
Range	384 to 9746
Options	ip-stack
Introduced	25.3.R2
Platforms	SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	**configure** router *named-item-64* bgp group *named-item-64* third-party-nexthop *boolean*
Tree	third-party-nexthop
Description	When configured to **true**, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route. When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.
Introduced	25.3.R2
Platforms	SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	**configure** router *named-item-64* bgp group *named-item-64* ttl-security *number*
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP accepst from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

type *keyword*

Synopsis	BGP peer type
Context	**configure** router *named-item-64* bgp group *named-item-64* type *keyword*
Tree	type
Options	internal, external
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	**configure** router *named-item-64* bgp group *named-item-64* vpn-apply-export *boolean*
Tree	vpn-apply-export
Description	When configured to **true**, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the export policies are not applied.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

vpn-apply-import *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	**configure** router *named-item-64* bgp group *named-item-64* vpn-apply-import *boolean*
Tree	vpn-apply-import
Description	When configured to **true**, base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the import policies are not applied.
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** router *named-item-64* bgp hold-time
Tree	hold-time
Introduced	25.3.R2
Platforms	SAR Gen 2

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	**configure** router *named-item-64* bgp hold-time minimum-hold-time *number*
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0 | 3 to 65535
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Maximum time BGP waits between successive messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp hold-time seconds *number*
Tree	seconds
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances. • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.
Range	0 | 3 to 65535
Default	90
Introduced	25.3.R2
Platforms	SAR Gen 2

ibgp-multipath *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	**configure** router *named-item-64* bgp ibgp-multipath *boolean*
Tree	ibgp-multipath
Description	When configured to **true**, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops. When configured to **false**, this command disables IBGP multipath load balancing.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

import

Synopsis	Enable the **import** context
Context	**configure** router *named-item-64* bgp import
Tree	import

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the **configure policy-options** context. When no import policies are specified in this context, BGP routes are accepted by default.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	BGP import policy name
Context	**configure** router *named-item-64* bgp import policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies a list of objects, where each object is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by this command is allowed to be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as session comes up
Context	**configure** router *named-item-64* bgp initial-send-delay-zero *boolean*
Tree	initial-send-delay-zero

label-ipv6

Synopsis	Enter the **label-ipv6** context
Context	**configure** router *named-item-64* bgp label-allocation label-ipv6
Tree	label-ipv6
Description	This command controls the label allocation behavior for labeled unicast IPv6 routes. The label options are **explicit-null** and **normal**.
Introduced	25.3.R2
Platforms	SAR Gen 2

explicit-null *boolean*

Synopsis	Apply advertised label and associated programming rules
Context	**configure** router *named-item-64* bgp label-allocation label-ipv6 explicit-null *boolean*
Tree	explicit-null
Description	When configured to **true**, this command uses the advertised label and associated programming rules on this instance of BGP. The following applies: • The router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising. It sets the BGP label value to IPv6 explicit null (value 2), forcing a POP behavior for received packets. • The received label-unicast IPv6 routes never create tunnels in TTM that can be used to resolve other BGP routes (with an IPv6 next-hop). • A received label-unicast IPv6 route can be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP). When configured to **false**, advertised label IPv6 programming rules are not used. The following applies • When the router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising, it sets the BGP label value to a proper value in the dynamic label range and programs a POP or SWAP operation for that label, depending on the origin of the route and various import policy actions that could apply to the route. • Received label-unicast IPv6 routes that have a prefix length of 128 bits are automatically installed in TTM so that they can be used to resolve other (non-labeled-unicast) BGP routes (with an IPv6 next-hop). • A received label-unicast IPv6 route cannot be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP). • The label-ipv6 routes used for ECMP toward an IPv6 destination cannot be a mix of routes with regular label values and routes with special (IPv6 explicit null) label values. Changes in the value of this leaf do not cause the BGP sessions of the base router to reset.

add-paths

Synopsis	Enable the **add-paths** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* add-paths

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	add-paths
Description	Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer. When unconfigured, command settings are inherited from a higher level BGP configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn

Synopsis	Enter the **evpn** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* add-paths evpn
Tree	evpn
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* add-paths evpn receive *boolean*
Tree	receive
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send *(number | keyword)*

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* add-paths evpn send *(number | keyword)*
Tree	send
Range	1 to 16

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* advertise-inactive *boolean*
Tree	advertise-inactive
Description	When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors. • If the active route for the IP prefix is a BGP route, that route is advertised.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 25.3.R2

Platforms SAR Gen 2

advertise-ipv6-next-hops

Synopsis Enable the **advertise-ipv6-next-hops** context

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* advertise-ipv6-next-hops

Tree advertise-ipv6-next-hops

Description Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.

When unconfigured, command settings are inherited from a higher level BGP configuration.

Introduced 25.3.R2

Platforms SAR Gen 2

evpn *boolean*

Synopsis Advertise EVPN route with IPv6 next-hop address

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* advertise-ipv6-next-hops evpn *boolean*

Tree evpn

Description When configured to **true**, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.

When configured to **false**, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.

Default false

Platforms	SAR Gen 2

aigp *boolean*

Synopsis	Add AIGP attribute to advertised routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* aigp *boolean*
Tree	aigp
Description	When configured to **true**, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.

Introduced 25.3.R2

Platforms SAR Gen 2

as-override *boolean*

Synopsis Replace the peer's ASN with the local ASN in AS Path

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* as-override *boolean*

Tree as-override

Description When configured to **true**, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When configured to **false**, no AS override is performed.

Introduced 25.3.R2

Platforms SAR Gen 2

asn-4-byte *boolean*

Introduced	25.3.R2
Platforms	SAR Gen 2

advertise

Synopsis	Enable the **advertise** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* bfd-strict-mode advertise
Tree	advertise
Description	Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements: • The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**. • The interface associated with the peer has a valid BFD configuration. When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state. When unconfigured, BGP does not advertise the Strict-BFD capability to peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* bfd-strict-mode advertise holdtime *number*
Tree	holdtime
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

Range	1 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop-reachability *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* bfd-strict-mode next-hop-reachability *boolean*
Tree	next-hop-reachability
Description	When configured to **true**, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met: • The BFD session to the peer is in a down state. • There is a valid interface BFD configuration that applies to the peer. • There is a valid BFD liveness configuration that applies to the peer. The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address. Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent. Configuring this command to **true** only affects routes belonging to the following address families: • IPv4 • IPv6 • IPv4 VPN • IPv6 VPN • labeled unicast IPv4 • labeled unicast IPv6 • EVPN • IPv4 multicast • IPv6 multicast • IPv4 VPN multicast • IPv6 VPN multicast

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 25.3.R2

Platforms SAR Gen 2

block-prefix-sid *boolean*

Synopsis Block the prefix SID attribute

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* block-prefix-sid *boolean*

Tree block-prefix-sid

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 25.3.R2

cluster

Synopsis	Enter the **cluster** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* cluster
Tree	cluster
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* cluster allow-local-fallback *boolean*
Tree	allow-local-fallback
Description	When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**. When configured to **false**, this command no route is advertised to the client.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

cluster-id *ipv4-address*

Synopsis	Route reflector cluster ID
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* cluster cluster-id *ipv4-address*
Tree	cluster-id
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* cluster orr-location *number*
Tree	orr-location
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* connect-retry *number*
Tree	connect-retry
Range	1 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

damp-peer-oscillations

Synopsis	Enable the **damp-peer-oscillations** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations
Tree	damp-peer-oscillations
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations error-interval *number*
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

idle-hold-time

Synopsis	Enter the **idle-hold-time** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations idle-hold-time initial-wait *number*
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations idle-hold-time max-wait *number*
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	25.3.R2
Platforms	SAR Gen 2

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damp-peer-oscillations idle-hold-time second-wait *number*
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	25.3.R2
Platforms	SAR Gen 2

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* damping *boolean*
Tree	damping
Introduced	25.3.R2
Platforms	SAR Gen 2

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* def-recv-evpn-encap *keyword*
Tree	def-recv-evpn-encap
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community. When unconfigured, the setting for this command is inherited from the BGP group-level configuration.
Options	mpls, vxlan
Introduced	25.3.R2
Platforms	SAR Gen 2

default-label-preference

Synopsis	Enter the **default-label-preference** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-label-preference
Tree	default-label-preference
Introduced	25.3.R2
Platforms	SAR Gen 2

ebgp *number*

Synopsis	Default preference for EBGP
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-label-preference ebgp *number*
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-label-preference ibgp *number*
Tree	ibgp
Range	0 to 255

© 2026 Nokia.

Introduced	25.3.R2
Platforms	SAR Gen 2

default-preference

Synopsis	Enter the **default-preference** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-preference
Tree	default-preference
Introduced	25.3.R2
Platforms	SAR Gen 2

ebgp *number*

Synopsis	Default preference for EBGP
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-preference ebgp *number*
Tree	ebgp
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

ibgp *number*

Synopsis	Default preference for IBGP
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-preference ibgp *number*
Tree	ibgp
Range	0 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

default-route-target *boolean*

Synopsis	Send default RTC route (zero prefix length) to peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* default-route-target *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	default-route-target
Description	When configured to **true**, this command sends the default RTC route (zero prefix length) toward the selected peers. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, a default RTC route is not sent.
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

ebgp-default-reject-policy

Synopsis	Enable the **ebgp-default-reject-policy** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* ebgp-default-reject-policy
Tree	ebgp-default-reject-policy
Introduced	25.3.R2
Platforms	SAR Gen 2

export *boolean*

Synopsis	Enable default reject export policy for external peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* ebgp-default-reject-policy export *boolean*
Tree	export
Default	true

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* ebgp-default-reject-policy import *boolean*
Tree	import
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

egress-engineering

Synopsis	Enable the **egress-engineering** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* egress-engineering
Tree	egress-engineering
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* egress-engineering admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for neighbor
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* egress-peer-engineering-label-unicast *boolean*
Tree	egress-peer-engineering-label-unicast
Description	When configured to **true**, BGP generates a label-unicast route for the /32 or /128 prefix that corresponds to the BGP neighbor address. This route can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. This supports the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* enforce-first-as *boolean*
Tree	enforce-first-as
Description	When configured to **true** for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the **update-fault-tolerance** command in the **error-handling** context is set to **false**) or the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**). This command does not flap an established session because it applies only to routes received after the command is issued. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, received routes are not checked for compliance with the rule.
Introduced	25.3.R2
Platforms	SAR Gen 2

error-handling

Synopsis	Enter the **error-handling** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* error-handling
Tree	error-handling
Introduced	25.3.R2
Platforms	SAR Gen 2

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* error-handling update-fault-tolerance *boolean*
Tree	update-fault-tolerance
Description	When configured to **true**, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, all errors trigger a session reset.
Introduced	25.3.R2
Platforms	SAR Gen 2

export

Synopsis	Enable the **export** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* export
Tree	export
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the **configure policy-options** context. When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	BGP export policy name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* export policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-nh-encoding

Synopsis	Enable the **extended-nh-encoding** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* extended-nh-encoding
Tree	extended-nh-encoding
Description	Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings. When the context is unconfigured, command settings are inherited from the higher level BGP configuration.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

ipv4 *boolean*

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* family vpn-ipv6 *boolean*
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* fast-external-failover *boolean*
Tree	fast-external-failover
Description	When this command inherits a value of **true**, the router drops an external BGP session on a single-hop route immediately when the local interface goes down. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**. When configured to **false**, the BGP session remains up until the hold time expires.
Introduced	25.3.R2
Platforms	SAR Gen 2

graceful-restart

Synopsis	Enable the **graceful-restart** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart
Tree	graceful-restart
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers. When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart gr-notification *boolean*
Tree	gr-notification
Description	When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error. When configured to **false**, NOTIFICATION messages are not supported.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

long-lived

Synopsis	Enable the **long-lived** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived
Tree	long-lived
Description	Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures. LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort. The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.
Introduced	25.3.R2
Platforms	SAR Gen 2

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived advertise-stale-to-all-neighbors *boolean*
Tree	advertise-stale-to-all-neighbors

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived family *keyword* advertised-stale-time *number*
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived family *keyword* helper-override-stale-time *number*
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	25.3.R2
Platforms	SAR Gen 2

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived forwarding-bits-set *keyword*
Tree	forwarding-bits-set
Description	This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.

This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).

Options none, all, non-fwd

Default none

Introduced 25.3.R2

Platforms SAR Gen 2

helper-override-restart-time *number*

Synopsis Locally-configured override for restart time

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived helper-override-restart-time *number*

Tree helper-override-restart-time

Description This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.

Range 0 to 4095

Introduced 25.3.R2

Platforms SAR Gen 2

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived helper-override-stale-time *number*

Tree helper-override-stale-time

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range 0 to 16777215

Introduced 25.3.R2

Platforms	SAR Gen 2

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* graceful-restart long-lived without-no-export *boolean*
Tree	without-no-export
Description	When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Maximum hold time between successive messages
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* hold-time seconds *number*
Tree	seconds
Description	The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection. Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances: • If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. When unconfigured, the command setting is inherited from the BGP group-level configuration.
Range	0 | 3 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

import

Synopsis	Enable the **import** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* import
Tree	import
Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the **configure policy-options** context. When this context is unconfigured, the policy association is inherited from the BGP group-level configuration.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	Names of the BGP import policies
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* import policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies route policies that control the handling of inbound routes received from certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".
String length	1 to 255
String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Min. instances	1
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* initial-send-delay-zero *boolean*
Tree	initial-send-delay-zero
Description	When configured to **true**, BGP updates are sent as soon as the session comes up. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this command inherits a value of **false**, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.

Introduced 25.3.R2

Platforms SAR Gen 2

keepalive *number*

Use subject to Terms available at: www.nokia.com/terms.

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* loop-detect-threshold *number*
Tree	loop-detect-threshold
Range	0 to 15
Introduced	25.3.R2
Platforms	SAR Gen 2

med-out *(number | keyword)*

Synopsis	Default MED attribute value to advertise to peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* med-out *(number | keyword)*
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	25.3.R2
Platforms	SAR Gen 2

min-route-advertisement *number*

Synopsis	Minimum interval between successive prefix updates
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* min-route-advertisement *number*
Tree	min-route-advertisement
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

multihop *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* multihop *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	multihop
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

multipath-eligible *boolean*

Synopsis	Allow routes from this peer in multipath eligibility
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* multipath-eligible *boolean*
Tree	multipath-eligible
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop-self *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-self *boolean*
Tree	next-hop-self
Description	When configured to **true**, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address. Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the **configure router bgp rr-vpn-forwarding** command should also be configured. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

next-hop-unchanged

Synopsis	Enable the **next-hop-unchanged** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged
Tree	next-hop-unchanged

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify the IP address families where the next hop remains unchanged when sending BGP routes to peers of the neighbor.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn *boolean*

Synopsis	Advertise EVPN routes with unchanged BGP next hop
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged evpn *boolean*
Tree	evpn
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv4 *boolean*

Synopsis	Advertise label-IPv4 routes with unchanged BGP next hop
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged label-ipv4 *boolean*
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv6 *boolean*

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged label-ipv6 *boolean*
Tree	label-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

Use subject to Terms available at: www.nokia.com/terms.

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged vpn-ipv4 *boolean*
Tree	vpn-ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* next-hop-unchanged vpn-ipv6 *boolean*
Tree	vpn-ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

origin-validation

Synopsis	Enable the **origin-validation** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-validation
Tree	origin-validation
Description	Commands in this context configure the marking of every inbound IPv4, IPv6, labeled IPv4, and labeled IPv6 route from the BGP peer with one of the following origin validation states: • Valid (0) • Not-Found (1) • Invalid (2) The configurations apply to all types of BGP peers, but generally should be applied only to EBGP peers and groups that contain only EBGP peers.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-validation ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-validation ipv6 *boolean*
Tree	ipv6
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-validation label-ipv4 *boolean*
Tree	label-ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-validation label-ipv6 *boolean*
Tree	label-ipv6

© 2026 Nokia.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

outbound-route-filtering

Synopsis	Enable the **outbound-route-filtering** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-community

Synopsis	Enable the **extended-community** context
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the command settings are inherited from the group-level configuration.
Introduced	25.3.R2
Platforms	SAR Gen 2

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* outbound-route-filtering extended-community accept-orf *boolean*
Tree	accept-orf
Description	When configured to **true**, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced 25.3.R2

Platforms SAR Gen 2

send-orf

Synopsis Enable the **send-orf** context

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* outbound-route-filtering extended-community send-orf

Tree send-orf

Description Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.

When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced 25.3.R2

Platforms SAR Gen 2

route-target [community-name] *named-item*

Synopsis Add a list entry for **route-target**

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* outbound-route-filtering extended-community send-orf route-target *named-item*

passive *boolean*

Synopsis	Use passive mode for BGP communication
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* passive *boolean*
Tree	passive
Introduced	25.3.R2
Platforms	SAR Gen 2

path-mtu-discovery *boolean*

Synopsis	Enable path MTU discovery
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-mtu-discovery *boolean*
Tree	path-mtu-discovery
Description	When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections. When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated. When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer-as *number*

Synopsis	Peer AS number
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* peer-as *number*
Tree	peer-as
Description	This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer. For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router. For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-creation-type *keyword*

Synopsis	Peer creation type
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* peer-creation-type *keyword*
Tree	peer-creation-type
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* peer-ip-tracking *boolean*
Tree	peer-ip-tracking
Description	When configured to **true**, this command enables BGP peer tracking. Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, peer tracking is disabled.

Introduced 25.3.R2

Platforms SAR Gen 2

preference *number*

Synopsis Route preference for routes learned from all peers

Context **configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* preference *number*

Tree preference

Description This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

When unconfigured, the command setting is inherited from the group-level configuration.

Range 1 to 255

Introduced 25.3.R2

Platforms SAR Gen 2

prefix-limit [family] *keyword*

Synopsis Enter the **prefix-limit** list instance

hold-excess *number*

Synopsis	Percentage of maximum routes to install in route table
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* prefix-limit *keyword* hold-excess *number*
Tree	hold-excess
Description	This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the **post-import** command is configured to **true**, only routes not rejected by import policies count toward the limit. A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route. This command is mutually exclusive with the **idle-timeout** and **log-only** commands.
Range	1 to 100
Introduced	25.3.R2
Platforms	SAR Gen 2

idle-timeout *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* prefix-limit *keyword* idle-timeout *number*
Tree	idle-timeout
Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer. When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split-horizon. This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP. Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the use of split-horizon is disabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

tcp-mss *(number | keyword)*

Synopsis	TCP maximum segment size override
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* tcp-mss *(number | keyword)*
Tree	tcp-mss
Description	This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command). The configured value controls two properties of the TCP connection as follows: TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	25.3.R2
Platforms	SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* third-party-nexthop *boolean*
Tree	third-party-nexthop
Introduced	25.3.R2
Platforms	SAR Gen 2

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* ttl-security *number*
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded. When unconfigured, the command inherits the value of the group-level setting.
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* vpn-apply-export *boolean*
Tree	vpn-apply-export
Description	When configured to **true**, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the export policies are not applied.
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-apply-import *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	**configure** router *named-item-64* bgp neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* vpn-apply-import *boolean*
Tree	vpn-apply-import
Description	When configured to **true**, base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**. When this command inherits a value of **false**, the import policies are not applied.
Introduced	25.3.R2
Platforms	SAR Gen 2

Context	**configure** router *named-item-64* bgp neighbor-trust
Tree	neighbor-trust

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context enable a label security feature at an inter-AS boundary for the specified IP families. This label security feature allows the configuration of a router, acting in a PE or in an ASBR role, to accept packets of VPN-IP or EVPN prefixes only from direct EBGP neighbors to which it advertised a service label. The untrusted state identifies the participating interfaces. The router supports a maximum of 15 network interfaces that can participate in this feature. At a high level, BGP tracks each direct EBGP neighbor over an untrusted interface and to which it sent a prefix label. For each of those prefixes, BGP programs a bit map in the ILM record that indicates, on a per-untrusted interface basis, whether the matching received packets must be forwarded or dropped.
Introduced	25.3.R2
Platforms	SAR Gen 2

evpn *boolean*

Synopsis	Enable inter-AS label security for the EVPN family
Context	**configure** router *named-item-64* bgp neighbor-trust evpn *boolean*
Tree	evpn
Default	false

next-hop-resolution

Synopsis	Enter the **next-hop-resolution** context
Context	**configure** router *named-item-64* bgp next-hop-resolution
Tree	next-hop-resolution
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-unresolved-leaking *boolean*

Synopsis	Allow unresolved BGP routes to be leaked to VPRN routes
Context	**configure** router *named-item-64* bgp next-hop-resolution allow-unresolved-leaking *boolean*
Tree	allow-unresolved-leaking
Description	When configured to **true**, this command instructs BGP in the base router instance to allow its routes to be leaked to other (VPRN) BGP instances even if the routes to be leaked do not have a BGP next-hop that can be resolved by the base instance. When configured to **false**, VPRN cannot import a route.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

labeled-routes

Synopsis	Enter the **labeled-routes** context
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes

allow-static *boolean*

Synopsis	Allow static routes to resolve BGP next-hop
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes allow-static *boolean*
Tree	allow-static
Description	When configured to **true**, the BGP next-hop of label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 routes received from any EBGP or IBGP peer can be resolved using static routes, except for static default routes (0/0 and ::/0). A static route is less preferred than a local or interface route for resolving the BGP next-hop of labeled route but is more preferred than other IGP routes or tunnels. When configured to **false**, BGP next-hop resolution using static routes is not allowed. A label-IPv4 or label-IPv6 route can be resolved by a static blackhole route, even when this command is configured to **false**, but only if the static blackhole route is the longest prefix match (LPM) static route for the BGP next-hop address.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

rr-use-route-table *boolean*

Synopsis	Use RTM to resolve BGP next-hop if TTM resolution fails
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes rr-use-route-table *boolean*
Tree	rr-use-route-table
Description	When configured to **true**, this command enables BGP to perform a lookup of IGP routes in the route table to resolve the BGP next-hop of label-IPv4 and label-IPv6 routes. This is useful for a Route Reflector (RR) that does not participate in tunnel signaling protocols such as LDP and RSVP and therefore, does not have tunnels to resolve the BGP next-hops of label-unicast routes. Disable route table installation (via the **route-table-install** command) before setting this command to **true**; otherwise, forwarding of label routes resolved in this way will be incorrect. When configured to **false**, RTM next-hop resolution is not enabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

transport-tunnel

Synopsis	Enter the **transport-tunnel** context
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel
Tree	transport-tunnel
Description	Commands in this context configure options for the next-hop resolution of BGP labeled routes (VPN-IP and labeled-unicast) using tunnels in TTM.
Introduced	25.3.R2
Platforms	SAR Gen 2

family [family-type] *keyword*

Synopsis	Enter the **family** list instance

Introduced	25.3.R2
Platforms	SAR Gen 2

[**family-type**] *keyword*

Synopsis	Address family type for tunnel selection
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword*
Tree	family
Options	vpn, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* allow-flex-algo-fallback *boolean*
Tree	allow-flex-algo-fallback

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, a BGP router with a Flex-Algorithm action configured (via the **configure policy-options policy-statement entry action flex-algo** command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available**.** When configured to **false**, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

enforce-strict-tunnel-tagging *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* enforce-strict-tunnel-tagging *boolean*
Tree	enforce-strict-tunnel-tagging
Description	When configured to **true**, the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered. When configured to **false**, matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

enforce-untagged-route *keyword*

Synopsis	Untagged route type enforcement
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* enforce-untagged-route *keyword*
Tree	enforce-untagged-route
Description	This command configures the enforcement of BGP routes with no administrative tag policy applied by modifying the next-hop resolution behavior for autobind services. If the **untagged-tunnel** option is configured, untagged routes only bind to LSPs with no administrative tag configured. If both tagged and untagged tunnels to the next hop exist, the system only considers the untagged tunnels. If no untagged tunnels to the next hop exist, the resolution of untagged routes fails.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	The **untagged-tunnel** option can be used in combination with the **enforce-strict-tunnel-tagging** command configured to **true**, in which case tagged routes resolve to tagged LSPs, and untagged routes only resolve to untagged LSPs. When unconfigured, untagged routes can bind to tagged or untagged LSPs.
Options	none – Untagged routes can bind to tagged or untagged LSPs untagged-tunnel – Untagged routes only bind to LSPs without an admin tag
Default	none
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes. When configured to **false**, BGP tunneling for next-hop resolution is not enabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter ldp *boolean*
Tree	ldp
Description	When configured to **true**, this command enables the selection of LDP tunneling for next-hop resolution and specifies the LDP tunnels in the tunnel table corresponding to /32 IPv4 FECs and /128 IPv6 FECs. When configured to **false**, LDP tunneling for next-hop resolution is not enabled.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter rsvp *boolean*
Tree	rsvp
Description	When configured to **true**, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations. This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to **false**, this command disables the selection of RSVP tunneling for next-hop resolution.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter sr-isis *boolean*
Tree	sr-isis
Description	When configured to **true**, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP labeled routes. This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference IS-IS instance. In the case of a tie, the IS-IS instance with the lowest metric SR tunnel is selected over the lowest numbered IS-IS instance. When configured to **false**, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter sr-ospf *boolean*
Tree	sr-ospf
Description	When configured to **true**, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP labeled routes. This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPF instance. In the case of a tie, the OSPF instance with the lowest metric SR tunnel is selected over the lowest numbered OSPF instance. When configured to **false**, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.
Default	false

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter sr-ospf3 *boolean*
Tree	sr-ospf3
Description	When configured to **true**, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP labeled routes. This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance. In the case of a tie, the OSPFv3 instance with the lowest metric SR tunnel is selected over the lowest numbered OSPFv3 instance. When configured to **false**, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter sr-policy *boolean*
Tree	sr-policy
Description	When configured to **true**, this command enables the use of SR policies to resolve the next hop of BGP routes. The SR policies are statically configured in the local router or learned through BGP routes (AFI 1/SAFI 73 or AFI 2/SAFI 73). BGP resolves a labeled IPv4 route with an IPv4 next-hop address or a labeled IPv6 route with IPv4-mapped IPv6 next-hop address using an SR policy selected by applying the following procedure in preference order: • **IPv4 endpoint** - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy. • **null IPv4 endpoint (0.0.0.0)** - The highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'. • **null IPv6 endpoint (0::0)** - The highest numbered color extended community attached to the labeled IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

BGP resolves a labeled IPv6 route with an IPv6 next hop that is not an IPv4-mapped IPv6 address using an SR policy selected by applying the following procedure in preference order:

- **IPv6 endpoint** - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy.
- **null IPv6 endpoint (0.::0)** - The highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.
- **null IPv4 endpoint (0.0.0.0)** - The highest numbered color extended community attached to the labeled IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

When configured to **false**, SR policies are not enabled for next-hop resolution.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

sr-te *boolean*

Synopsis Use SR-TE tunneling for next-hop resolution

Context **configure** router *named-item-64* bgp next-hop-resolution labeled-routes transport-tunnel family *keyword* resolution-filter sr-te *boolean*

Tree sr-te

Description When configured to **true**, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.

In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.

When configured to **false**, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

Context	**configure** router *named-item-64* bgp next-hop-resolution shortcut-tunnel family *keyword* resolution-filter sr-ospf *boolean*
Tree	sr-ospf
Description	When configured to **true**, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes. This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPF instance. In the case of a tie, the OSPF instance with the lowest metric SR tunnel is selected over the lowest numbered OSPF instance. When configured to **false**, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution shortcut-tunnel family *keyword* resolution-filter sr-ospf3 *boolean*
Tree	sr-ospf3
Description	When configured to **true**, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes. This command allows BGP to use the SR tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance. In the case of a tie, the OSPFv3 instance with the lowest metric SR tunnel is selected over the lowest numbered OSPFv3 instance. When configured to **false**, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

sr-policy *boolean*

Synopsis Use SR policies for next-hop resolution

Context **configure** router *named-item-64* bgp next-hop-resolution shortcut-tunnel family *keyword* resolution-filter sr-policy *boolean*

Tree sr-policy

Description When configured to **true**, this command enables the use of SR policies to resolve the next hop of BGP routes.

The SR policies are statically configured in the local router or learned through BGP routes (AFI 1/SAFI 73 or AFI 2/SAFI 73). BGP resolves an IPv4 route with an IPv4 next-hop address or an IPv6 route with IPv4-mapped IPv6 next-hop address using an SR policy selected by applying the following procedure in preference order:

- **IPv4 endpoint** - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy.
- **null IPv4 endpoint (0.0.0.0)** - The highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.
- **null IPv6 endpoint (0::0)** - The highest numbered color extended community attached to the IPv4 or IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

BGP resolves an IPv6 route with an IPv6 next hop that is not an IPv4-mapped IPv6 address using an SR policy selected by applying the following procedure in preference order:

- **IPv6 endpoint** - The next hop must match the endpoint of the SR policy and the highest numbered color extended community attached to the IPv6 route must match the color of the SR policy.
- **null IPv6 endpoint (0.::0)** - The highest numbered color extended community attached to the IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.
- **null IPv4 endpoint (0.0.0.0)** - The highest numbered color extended community attached to the IPv6 route must match the color of the SR policy and its color bits must be set to '01' or '10'.

When configured to **false**, SR policies are not enabled for next-hop resolution.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

sr-te *boolean*

Synopsis Use SR-TE tunneling for next-hop resolution

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp next-hop-resolution shortcut-tunnel family *keyword* resolution-filter sr-te *boolean*
Tree	sr-te
Description	When configured to **true**, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution. In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID. When configured to **false**, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	**configure** router *named-item-64* bgp next-hop-resolution use-bgp-routes *boolean*
Tree	use-bgp-routes
Description	This command enables the use of BGP routes to resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route. This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

use-leaked-routes

Synopsis	Enter the **use-leaked-routes** context
Context	**configure** router *named-item-64* bgp next-hop-resolution use-leaked-routes
Tree	use-leaked-routes
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

static *boolean*

Synopsis	Use leaked static routes to resolve BGP next hop
Context	**configure** router *named-item-64* bgp next-hop-resolution use-leaked-routes static *boolean*
Tree	static
Description	When configured to **true**, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP. When configured to **false**, the router prevents the use of leaked static routes to resolve BGP routes.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-family-policy *reference*

Synopsis	Policy to filter routes for next-hop resolution
Context	**configure** router *named-item-64* bgp next-hop-resolution vpn-family-policy *reference*
Tree	vpn-family-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.3.R2
Platforms	SAR Gen 2

weighted-ecmp *boolean*

Synopsis	Use weighted ECMP for next-hop tunnel selection for 6PE
Context	**configure** router *named-item-64* bgp next-hop-resolution weighted-ecmp *boolean*
Tree	weighted-ecmp
Description	When configured to **true**, this command enables weighted ECMP for next-hop tunnel selection for 6PE. When weighted ECMP is enabled, the RSVP-TE tunnel used to forward 6PE packets to the ECMP next hop that is chosen according to the outcome of the hash on the packet at the normalized load-balancing weight of the tunnel. When configured to **false**, weighted ECMP is disabled for next-hop tunnel selection for 6PE.
Default	false

Introduced	25.3.R2
Platforms	SAR Gen 2

optimal-route-reflection

Synopsis	Enter the **optimal-route-reflection** context
Context	**configure** router *named-item-64* bgp optimal-route-reflection
Tree	optimal-route-reflection
Introduced	25.3.R2
Platforms	SAR Gen 2

location [location-id] *number*

Synopsis	Enter the **location** list instance
Context	**configure** router *named-item-64* bgp optimal-route-reflection location *number*
Tree	location
Description	Commands in this context configure the location ID for the route reflector. A BGP neighbor can be associated with a location if it is a route-reflector client. Up to three IPv4 addresses and three IPv6 addresses can be specified per location. If the TE DB is unable find a node in its topology database that matches a primary address of the location, it tries to find a node matching a secondary address. If this attempt also fails, the TE DB tries to find a node matching a tertiary address. The IP addresses specified for a location should be topologically “close” to a set of clients that should all receive the same optimal path for that location.
Introduced	25.3.R2
Platforms	SAR Gen 2

[location-id] *number*

Synopsis	Optimal route reflection location ID
Context	**configure** router *named-item-64* bgp optimal-route-reflection location *number*
Tree	location
Range	1 to 255
Notes	This element is part of a list key.
Introduced	25.3.R2

Synopsis	Maximum interval between consecutive SPF calculations
Context	**configure** router *named-item-64* bgp optimal-route-reflection spf-wait max-wait *number*
Tree	max-wait
Range	1 to 600
Default	60
Introduced	25.3.R2
Platforms	SAR Gen 2

second-wait *number*

Synopsis	Delay between first and second SPF calculation
Context	**configure** router *named-item-64* bgp optimal-route-reflection spf-wait second-wait *number*
Tree	second-wait
Range	1 to 300
Default	15
Introduced	25.3.R2
Platforms	SAR Gen 2

outbound-route-filtering

Synopsis	Enable the **outbound-route-filtering** context
Context	**configure** router *named-item-64* bgp outbound-route-filtering

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When unconfigured, the ORF capabilities are not enabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

extended-community

Synopsis	Enable the **extended-community** context
Context	**configure** router *named-item-64* bgp outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the ORF capabilities for Extended Communities is not enabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	**configure** router *named-item-64* bgp outbound-route-filtering extended-community accept-orf *boolean*
Tree	accept-orf
Description	When configured to **true**, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers. When configured to **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

send-orf

Synopsis	Enable the **send-orf** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp outbound-route-filtering extended-community send-orf
Tree	send-orf
Description	Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD. When this context in unconfigured, ORF send capability is not enabled.
Introduced	25.3.R2
Platforms	SAR Gen 2

route-target [community-name] *named-item*

Synopsis	Add a list entry for **route-target**

override-tunnel-elc *boolean*

Synopsis	Enable entropy label capability on BGP tunnels
Context	**configure** router *named-item-64* bgp override-tunnel-elc *boolean*
Tree	override-tunnel-elc

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command renders all far ends for BGP tunnels as entropy-label-capable, regardless of any received capability signaling. This ensures that the entropy label will be inserted on BGP tunnels in the absence of capability signaling support by the far end. This is a system-wide configuration, since efficient entropy label operation requires that all LSRs in a network support entropy labels. This command should be used with care, particularly in inter-AS use cases, as entropy label capability may differ between domains. When configured to **false**, this command disables all far ends for BGP tunnels as entropy-label-capable.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	**configure** router *named-item-64* bgp path-mtu-discovery *boolean*
Tree	path-mtu-discovery
Description	When configured to **true**, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accomodate the IP MTU constraint. When configured to **false**, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	**configure** router *named-item-64* bgp peer-ip-tracking *boolean*
Tree	peer-ip-tracking
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

peer-tracking-policy *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	**configure** router *named-item-64* bgp peer-tracking-policy *reference*
Tree	peer-tracking-policy
Description	This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled. When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes. Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.3.R2
Platforms	SAR Gen 2

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	**configure** router *named-item-64* bgp preference *number*
Tree	preference
Description	This command configures the route preference for routes learned from the configured peers. The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.
Range	1 to 255
Default	170
Introduced	25.3.R2
Platforms	SAR Gen 2

purge-timer *number*

Synopsis	Maximum time before stale routes are purged

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* bgp purge-timer *number*
Tree	purge-timer
Description	This command configures the maximum time before stale routes are purged. When a route refresh request is sent to a peer for VPN-IP routes received from that peer (in the RIB-IN), the routes are set to stale and the purge timer is started. If the routes are not updated (refreshed) before the purge timer expires, the routes are removed.
Range	1 to 60
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

rapid-update

Synopsis	Enter the **rapid-update** context
Context	**configure** router *named-item-64* bgp rapid-update
Tree	rapid-update
Description	Commands in this context specify the address families that are configured to support the rapid update functionality. The rapid update functionality overrides the remaining time on a peer's MRAI timer and immediately sends routes belonging the specified address families (and all other pending updates) to the peers receiving these routes.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	**configure** router *named-item-64* bgp rib-management ipv4 route-table-import policy-name *reference*
Tree	policy-name
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs. When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used. Aggregate routes are always imported into each RIB, independent of the specified policy. Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes. When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

leak-import

Synopsis	Enter the **leak-import** context
Context	**configure** router *named-item-64* bgp rib-management ipv6 leak-import
Tree	leak-import
Description	Commands in this context specify route policies that control the importation of leak-eligible routes from the BGP RIB of another routing instance into the unlabeled-IPv6 RIB of the base router. To leak a route from one routing instance to another, the origin and destination RIB types must be the same; for example, it is not possible to leak a route from an unlabeled-IPv4 RIB of a VPRN into the labeled-IPv4 RIB of the base router.
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *(policy-expr-string | string)*

Synopsis	Leak import policy name
Context	**configure** router *named-item-64* bgp rib-management ipv6 leak-import policy *(policy-expr-string | string)*
Tree	policy
Description	This command specifies one or more leak import policies. Policy names are limited to 64 characters except for the first policy. Only one object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).
String length	1 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'policy-expr-string' must contain [for a bracketed policy name in a routing policy logical expression (e.g. [policyA])
Max. instances	15
Notes	This element is ordered by the user.
Introduced	25.3.R2

route-table-import

Synopsis	Enter the **route-table-import** context
Context	**configure** router *named-item-64* bgp rib-management ipv6 route-table-import
Tree	route-table-import
Description	This command enables the context to specify the name of a route to control the importation of active routes from the IP route table into one of the BGP RIBs. If this command is configured, then routes dropped or rejected by the configured policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by this command then the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used. Aggregate routes are always imported into each RIB, independent of this command's policy. Route modifications specified in the actions of this command's policy are ignored and have no effect on the imported routes. If this command is not configured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.
Introduced	25.3.R2

router-id *ipv4-address*

Synopsis	Router ID for the BGP instance in the AS
Context	**configure** router *named-item-64* bgp router-id *ipv4-address*
Tree	router-id
Description	This command specifies the router ID to be used with the BGP instance. Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID. When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

rr-vpn-forwarding *boolean*

Synopsis	Allow route reflector to forward VPN-IP routes
Context	**configure** router *named-item-64* bgp rr-vpn-forwarding *boolean*
Tree	rr-vpn-forwarding
Description	When configured to **true**, the route reflector resolves VPN-IPv4 and VPN-IPv6 routes, sets itself as the next hop, and generates new labels for all the resolved routes. During this process, all received VPN-IP routes, regardless of route target, are imported into the dummy VRF, where the BGP next hops are resolved. The routes are resolved to next-hop-self, and BGP allocates new VPRN service-label values for the routes, which are then advertised to peers. The **transport-tunnel** command under the **configure router bgp next-hop-resolution labeled-routes** context determines what types of tunnels are eligible to resolve the next hops. If a received VPN-IP route from IBGP peer X is resolved and selected as the best path so that it can be re-advertised to an IBGP peer Y, and the BGP next-hop is modified toward peer Y (by using the **next-hop-self** command in Y's group or neighbor context or by using a next-hop action in an export policy applied to Y), BGP allocates a new VPRN service label value for the route, signals that new label value to Y, and programs the IOM to do the corresponding label swap operation. The supported combinations of X and Y are outlined below:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- from X (client) to Y (client)
- from X (client) to Y (non-client)
- from X (non-client) to Y (client)

When configured to **false**, the routes are re-advertised without signaling new VPRN labels, even if the BGP next hop is changed.

Nokia recommends setting this command to **false** for scaling and convergence reasons.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

segment-routing

Synopsis	Enter the **segment-routing** context

Introduced	25.3.R2
Platforms	SAR Gen 2

selective-label-ip *keyword*

Synopsis	Label IP routes installed for local use on NHS router
Context	**configure** router *named-item-64* bgp selective-label-ip *keyword*
Tree	selective-label-ip
Description	This command enables selective installation of labeled unicast routes for resolution by local services and IP shortcuts on a labeled unicast Next-hop=self router. This command is supported for labeled unicast for both IPv4 and IPv6 routes. The **no-install** option installs labeled IP routes that are required by services. This option conserves labeled route table space in addition to RTM table space on BGP-LU next-hop-self route reflectors. The **route-table-install-only** option ensures that the labeled unicast routes are installed in the RTM in full. When **no-install** is specified, the download of labeled unicast routes for NHLFE resolution by services continues.
Options	no-install, route-table-install-only
Introduced	25.3.R2
Platforms	SAR Gen 2

selective-label-ip-prioritization *boolean*

Synopsis	Enable BGP selective prioritization for labeled routes
Context	**configure** router *named-item-64* bgp selective-label-ip-prioritization *boolean*
Tree	selective-label-ip-prioritization
Description	When this command is set to **true**, every labeled IPv4 and IPv6 route that is received and potentially usable by a local service is automatically prioritized for fast control plane reconvergence. When the reachability of a BGP next-hop changes, the labeled IPv4 and IPv6 routes are updated into the route table first, along with other routes manually tagged as high priority by import policies. A /32 or /128 labeled unicast route (and associated BGP-LU tunnel) is determined to be potentially usable by a local service if one of the following conditions applies: • the route matches the far-end address of a user-provisioned SDP of a Layer 2 service and the SDP is configured to use BGP tunnels as transport

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- the route matches the BGP next-hop address of a BGP-EVPN or IP VPN route, and this VPN route is either imported into a local service or readvertised by the router acting as a next-hop-self route reflector or a model-B ASBR

When this command is set to **false,** selective-label IP prioritization for BGP is not used.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

selective-label-ipv4-install *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	**configure** router *named-item-64* bgp selective-label-ipv4-install *boolean*

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	**configure** router *named-item-64* bgp split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split-horizon. This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP. Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary. When configured to **false**, the use of split-horizon is disabled.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sr-policy-import *boolean*

Synopsis	Import all segment routing policies into the BGP RIB
Context	**configure** router *named-item-64* bgp sr-policy-import *boolean*
Tree	sr-policy-import
Description	When configured to **true**, statically-configured non-local segment routing policies from the segment routing database are imported into the BGP RIB so that they can be advertised as originated routes toward BGP peers supporting segment routing policies (**sr-policy-ipv4** IP family type). When configured to **false**, the SR policies are not imported into the BGP RIB.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

subconfed-vpn-forwarding *boolean*

Synopsis	Allow subconfed route resolution, next hop and labels
Context	**configure** router *named-item-64* bgp subconfed-vpn-forwarding *boolean*
Tree	subconfed-vpn-forwarding
Description	When this is set to **true**, the base router BGP instance retains all received VPN-IPv4 and VPN-IPv6 routes, including those with route targets not matching any VRF import policy of any locally configured VPRN. In addition, when the base router BGP is configured to apply a **next-hop-self** command to a peer of any type (EBGP, IBGP, or confed-EBGP), VPN-IPv4 and VPN-IPv6 routes are advertised to the peer with a new BGP label, next hop, and label-swap forwarding entry. These behaviors described above are applied when the **enable-inter-as-vpn** or **enable-rr-vpn-forwarding** commands are enabled in the **configure router bgp context**, in the same BGP instance. This applies regardless of whether the base router has a confederation configuration. When this command is set to **false**, subconfederation VPN forwarding is not used.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tcp-mss *number*

Synopsis	TCP maximum segment size override
Context	**configure** router *named-item-64* bgp tcp-mss *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tcp-mss
Description	This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command). The configured value controls two properties of the TCP connection as follows: TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router. TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.
Range	384 to 9746
Introduced	25.3.R2
Platforms	SAR Gen 2

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	**configure** router *named-item-64* bgp third-party-nexthop *boolean*
Tree	third-party-nexthop
Description	When configured to **true**, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route. When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged. When configured to **false**, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	**configure** router *named-item-64* bgp vpn-apply-export *boolean*
Tree	vpn-apply-export
Description	When configured to **true**, base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the export policies are not applied.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* dhcp-server dhcpv4 *named-item* failover ignore-mclt-on-takeover *boolean*
Tree	ignore-mclt-on-takeover
Description	When configured to **true**, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire. When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

maximum-client-lead-time *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	**configure** router *named-item-64* dhcp-server dhcpv4 *named-item* failover maximum-client-lead-time *number*
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600

partner-down-delay *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	**configure** router *named-item-64* dhcp-server dhcpv4 *named-item* failover partner-down-delay *number*
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	25.3.R2
Platforms	SAR Gen 2

peer [address] *reference*

Synopsis	Enter the **peer** list instance
Context	**configure** router *named-item-64* dhcp-server dhcpv4 *named-item* failover peer *reference*
Tree	peer
Description	Commands in this context define the peer-related parameters for DHCP failover. DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link. MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.

Description	Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address. A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.
Introduced	25.3.R2
Platforms	SAR Gen 2

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* defaults preferred-lifetime *number*
Tree	preferred-lifetime
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime. Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	25.3.R2
Platforms	SAR Gen 2

rebind-time *number*

Synopsis	Rebind time for the lease
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* defaults rebind-time *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rebind-time
Description	This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases. The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message. Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	SAR Gen 2

renew-time *number*

Synopsis	Renew time for the lease
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* defaults renew-time *number*
Tree	renew-time
Description	This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state. The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message. Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.
Range	0 to 604800
Units	seconds

Default	1800
Introduced	25.3.R2
Platforms	SAR Gen 2

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* defaults valid-lifetime *number*
Tree	valid-lifetime
Description	This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days. Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Units	seconds
Default	86400

Synopsis	Maximum time that DHCP server can extend client's lease
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* failover maximum-client-lead-time *number*
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	SAR Gen 2

partner-down-delay *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* failover partner-down-delay *number*
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds

interface-id-mapping *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* interface-id-mapping *boolean*
Tree	interface-id-mapping
Description	When configured to **true**, this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

lease-hold

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* pool *named-item* prefix *ipv6-prefix* preferred-lifetime *number*
Tree	preferred-lifetime
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime. Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

rebind-time *number*

Synopsis	Rebind time for the lease
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* pool *named-item* prefix *ipv6-prefix* rebind-time *number*
Tree	rebind-time
Description	This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases. The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message. Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	25.3.R2
Platforms	SAR Gen 2

renew-time *number*

Synopsis	Renew time for the lease
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* pool *named-item* prefix *ipv6-prefix* renew-time *number*
Tree	renew-time
Description	This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state. The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	**configure** router *named-item-64* dhcp-server dhcpv6 *named-item* pool *named-item* prefix *ipv6-prefix* valid-lifetime *number*
Tree	valid-lifetime
Description	This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days. Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

ecmp *number*

Synopsis	Maximum equal-cost routes for routing table instance
Context	**configure** router *named-item-64* ecmp *number*
Tree	ecmp
Description	This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol. If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria: **1.** The system selects the lowest next hop router ID. **2.** If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.
Range	1 to 128
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

entropy-label *boolean*

Synopsis	Use entropy label
Context	**configure** router *named-item-64* entropy-label *boolean*
Tree	entropy-label
Description	When configured to **true**, this command enables the use of entropy labels. The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the **configure router mpls** or **configure router mpls lsp** context.

This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, the use of entropy labels is disabled.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

evi-route-target *evi-route-target*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVI route target to use for EVPN neighbor synchronization
Context	**configure** router *named-item-64* evpn-neighbor-synchronization evi-route-target *evi-route-target*
Tree	evi-route-target
Description	This command configures the EVI route target used on the MAC/IP routes advertised for the routing context. On reception, the EVI route target is used to identify the routing context in which the ARP and ND entries are installed.
String length	10 to 28
String format	'evi-route-target-32' must be evi-target:(IPv4:comm|AS pairs|IEEE MAC) per ext-community rules
Introduced	26.3.R1
Platforms	SAR Gen 2

retention-timer *number*

Synopsis	Time that an EVPN ARP or ND entry is retained
Context	**configure** router *named-item-64* evpn-neighbor-synchronization retention-timer *number*
Tree	retention-timer
Description	This command sets the timer that determines how long an EVPN ARP or ND entry is retained after the remote PE withdraws the MAC/IP route that originated it. The behavior for a synchronized ARP and ND entry is as follows: **1.** When the originating EVPN MAC/IP route is withdrawn, the retention timer starts, and the entry remains present until the timer expires. **2.** While the retention timer is active, the system attempts to refresh the entry by sending an ARP Request or Neighbor Solicitation to the IP owner. This refresh may occur at any point from the start of the timer until 30 seconds before it expires. **3.** ARP Requests and Neighbor Solicitations are staggered within the timeout period to prevent overloading the CPM transmitter when many entries require refreshing.

redundant-mcast *boolean*

Synopsis	Use interface as a redundant-pair member for multicast
Context	**configure** router *named-item-64* igmp interface *interface-name* redundant-mcast *boolean*
Tree	redundant-mcast
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	**configure** router *named-item-64* igmp interface *interface-name* router-alert-check *boolean*
Tree	router-alert-check
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

ssm-translate

Synopsis	Enter the **ssm-translate** context
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate
Tree	ssm-translate
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	25.3.R2
Platforms	SAR Gen 2

group-range start *ipv4-multicast-address* end *ipv4-multicast-address*

Synopsis	Enter the **group-range** list instance
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
Description	Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.
Introduced	25.3.R2
Platforms	SAR Gen 2

start *ipv4-multicast-address*

Synopsis	Lower bound of the IP address group range
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

end *ipv4-multicast-address*

Synopsis	Upper bound of the IP address group range
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** router *named-item-64* igmp interface *interface-name* ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

static

Synopsis	Enter the **static** context
Context	**configure** router *named-item-64* igmp interface *interface-name* static
Tree	static
Description	Commands in this context configure the testing of multicast forwarding on an interface without a receiver host.
Introduced	25.3.R2
Platforms	SAR Gen 2

group [group-address] *ipv4-multicast-address*

Synopsis	Enter the **group** list instance
Context	**configure** router *named-item-64* igmp interface *interface-name* static group *ipv4-multicast-address*
Tree	group
Description	Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records. IGMP static group memberships are used to test multicast forwarding without a receiver host. When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members. When the group entries are configured on point-to-point links that connect routers to a rendezvous point (RP), the static IGMP group entries do not generate join messages toward the RP.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**group-address**] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	**configure** router *named-item-64* igmp interface *interface-name* static group *ipv4-multicast-address*
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** router *named-item-64* igmp interface *interface-name* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** router *named-item-64* igmp interface *interface-name* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

starg

Synopsis	Add a starg (*,G) address entry for the group range
Context	**configure** router *named-item-64* igmp interface *interface-name* static group *ipv4-multicast-address* starg
Tree	starg
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address*

Synopsis	Enter the **group-range** list instance
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address*
Tree	group-range
Description	Commands in this context configure the ranges of IP addresses for the static groups.
Introduced	25.3.R2
Platforms	SAR Gen 2

start *ipv4-multicast-address*

Synopsis	IP address for the start of the static group range
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *ipv4-multicast-address*

Synopsis	IP address for the end of the static group range
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2

© 2026 Nokia.

Platforms	SAR Gen 2

step *ipv4-address*

Synopsis	Step interval in the group-range address
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address*
Tree	group-range
MD-CLI default	0.0.0.1
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address* source *ipv4-unicast-address*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address* source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

starg

Synopsis	Add a starg (*,G) address entry for the group range
Context	**configure** router *named-item-64* igmp interface *interface-name* static group-range start *ipv4-multicast-address* end *ipv4-multicast-address* step *ipv4-address* starg
Tree	starg
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	25.3.R2
Platforms	SAR Gen 2

subnet-check *boolean*

Synopsis	Allow subnet checking
Context	**configure** router *named-item-64* igmp interface *interface-name* subnet-check *boolean*
Tree	subnet-check
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

version *keyword*

Synopsis	IGMP protocol version
Context	**configure** router *named-item-64* igmp interface *interface-name* version *keyword*
Tree	version
Options	1, 2, 3
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

query-interval *number*

Synopsis	Time between two consecutive host-query messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* igmp query-interval *number*
Tree	query-interval
Description	This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.
Range	2 to 1024
Units	seconds
Default	125
Introduced	25.3.R2
Platforms	SAR Gen 2

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	**configure** router *named-item-64* igmp query-last-member-interval *number*
Tree	query-last-member-interval
Description	This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.
Range	1 to 1023
Units	seconds
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	**configure** router *named-item-64* igmp query-response-interval *number*
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	**configure** router *named-item-64* igmp robust-count *number*
Tree	robust-count
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, this value can be increased.
Range	2 to 10
Default	2
Introduced	25.3.R2
Platforms	SAR Gen 2

ssm-translate

Synopsis	Enter the **ssm-translate** context
Context	**configure** router *named-item-64* igmp ssm-translate
Tree	ssm-translate
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	25.3.R2
Platforms	SAR Gen 2

group-range start *ipv4-multicast-address* end *ipv4-multicast-address*

Synopsis	Enter the **group-range** list instance
Context	**configure** router *named-item-64* igmp ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
Description	Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *ipv4-multicast-address*

Synopsis	Lower bound of the IP address group range
Context	**configure** router *named-item-64* igmp ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

end *ipv4-multicast-address*

Synopsis	Upper bound of the IP address group range
Context	**configure** router *named-item-64* igmp ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address*
Tree	group-range
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** router *named-item-64* igmp ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Min. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** router *named-item-64* igmp ssm-translate group-range start *ipv4-multicast-address* end *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	**configure** router *named-item-64* interface *interface-name*
Tree	interface
Description	Commands in this context create a logical IP routing or unnumbered MPLS-TP interface. An IP address, port, or system can then be associated with the IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**interface-name**] *interface-name*

Synopsis	Router interface name
Context	**configure** router *named-item-64* interface *interface-name*
Tree	interface
Description	This command specifies the name of the router interface. When a user enters a new name, the system creates a new logical interface and the context changes to that interface for more command processing. When an existing interface name is entered, the user enters the router interface context for editing and configuration. Nokia recommends using names that are meaningful and unique to remove ambiguity when displaying the state associated with IP interfaces either via show commands or model-driven interfaces. See "Router configuration overview" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about the interface name.
String length	1 to 32

Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	**configure** router *named-item-64* interface *interface-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	25.3.R2
Platforms	SAR Gen 2

autoconfigure

Synopsis	Enter the **autoconfigure** context
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure
Tree	autoconfigure
Description	Commands in this context configure the autoconfigure functionality for the interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4
Tree	ipv4
Description	Commands in this context configure IPv4 autoconfigure settings.
Introduced	25.3.R2
Platforms	SAR Gen 2

dhcp-client

Synopsis	Enable the **dhcp-client** context
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dhcp-client
Description	Commands in this context configure the node as an IPv4 DHCP client. When the node operates as a DHCP client, it learns the IP address of the interface via dynamic IP address assignment.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the DHCP client
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

class-id

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **class-id** context
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client class-id
Tree	class-id
Description	Commands in this context configure the vendor class ID for the DHCP client.
Introduced	25.3.R2
Platforms	SAR Gen 2

ascii-string *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

interface

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interface name as the client ID
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client client-id interface
Tree	interface
Description	This command configures the node to use the interface name as the client ID.
Notes	The following elements are part of a choice: **ascii-string**, **hex-string**, **interface**, or **mac**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mac

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address as the client ID
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client client-id mac
Tree	mac
Description	This command configures the node to use the MAC address as the client ID.
Notes	The following elements are part of a choice: **ascii-string**, **hex-string**, **interface**, or **mac**.
Introduced	25.3.R2
Platforms	SAR Gen 2

lease-time *(number | keyword)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lease time the DHCP client requests

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client lease-time *(number | keyword)*
Tree	lease-time
Description	This command configures the lease time that the DHCP client requests to the DHCP server. The DHCP server can override the configured value.
Range	10 to 315446399
Units	seconds
Options	infinite – Request an infinite lease with no expiry
Default	86400
Introduced	25.3.R2
Platforms	SAR Gen 2

request-options

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **request-options** context
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client request-options
Tree	request-options
Description	Commands in this context configure the DHCP options to include in the parameter request list as part of the DHCPREQUEST message to the server.
Introduced	25.3.R2
Platforms	SAR Gen 2

dns-server *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the DNS server option
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client request-options dns-server *boolean*
Tree	dns-server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the node includes the DNS server option (Option 54) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

router *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the router option
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client request-options router *boolean*
Tree	router
Description	When configured to **true**, the node includes the router option (Option 3) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

static-route *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include the static route option
Context	**configure** router *named-item-64* interface *interface-name* autoconfigure ipv4 dhcp-client request-options static-route *boolean*
Tree	static-route
Description	When configured to **true**, the node includes the static route option (Option 121) in the DHCPREQUEST message to the server.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

description *very-long-description*

Synopsis	Text description
Context	**configure** router *named-item-64* interface *interface-name* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

dist-cpu-protection *reference*

Synopsis	DCP policy name for interface
Context	**configure** router *named-item-64* interface *interface-name* dist-cpu-protection *reference*
Tree	dist-cpu-protection
Description	This command configures a Distributed CPU Protection (DCP) policy for the associated IP interface or SAP. The user can only assign a valid created DCP policy to a SAP or network interface (this rule does not apply to templates such as an MSAP policy). If the operator does not assign a DCP policy to a router interface, the system uses the default network DCP policy.
Reference	**configure** system security dist-cpu-protection policy *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

egress

Synopsis	Enter the **egress** context
Context	**configure** router *named-item-64* interface *interface-name* egress
Tree	egress
Description	Commands in this context configure egress network filter policies for the IP interface. The system does not filter unless an operator defines a filter.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

filter

Synopsis	Enter the **filter** context
Context	**configure** router *named-item-64* interface *interface-name* egress filter
Tree	filter
Description	Commands in this context configure the names of the egress IPv4 and IPv6 network filter policies for the interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip *reference*

Synopsis	IPv4 filter policy name
Context	**configure** router *named-item-64* interface *interface-name* egress filter ip *reference*
Tree	ip
Reference	**configure** filter ip-filter *filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6 *reference*

Synopsis	IPv6 filter policy name
Context	**configure** router *named-item-64* interface *interface-name* egress filter ipv6 *reference*
Tree	ipv6
Reference	**configure** filter ipv6-filter *filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm
Tree	eth-cfm
Description	Commands in this context configure the Ethernet CFM command options for the associated IP interface.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*

Synopsis	Enter the **mep** list instance
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Description	Commands in this context configure an 802.1ag Maintenance Endpoint (MEP) instance.
Max. instances	1
Introduced	25.3.R2
Platforms	SAR Gen 2

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name* association *admin-name*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	25.3.R2
Platforms	SAR Gen 2

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-tlv-ignore *keyword*
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. instances	2
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	25.3.R2
Platforms	SAR Gen 2

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	25.3.R2
Platforms	SAR Gen 2

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* facility-fault *boolean*
Tree	facility-fault
Description	When configured to **true**, the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to **false**, the system monitors transmissions and reports fault conditions.
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

low-priority-defect *keyword*

Synopsis	Lowest priority defect for fault alarm generation
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Description	This command specifies the lowest priority defect that generates a fault alarm and also configures the fault state of the MEP that causes a network reaction.
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	25.3.R2
Platforms	SAR Gen 2

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* mac-address *mac-unicast-address-no-zero*
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	SAR Gen 2

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** router *named-item-64* interface *interface-name* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds

Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

flavor *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Network interface flavor
Context	**configure** router *named-item-64* interface *interface-name* flavor *keyword*
Tree	flavor
Options	regular – Regular network interface pdn – PDN interface unnumbered-mpls-tp – Unnumbered MPLS-TP interface
Default	regular
Introduced	25.3.R2
Platforms	SAR Gen 2

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time
Tree	hold-time
Description	Commands in this context configure the interface-level up and down hold timers for the associated IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4
Tree	ipv4
Description	Commands in this context configure the interface-level IPv4 hold timers for the associated IP interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

down

Synopsis	Enter the **down** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4 down init-only *boolean*
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4 down seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2

Platforms	SAR Gen 2

up

Synopsis	Enter the **up** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv4 up seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6
Tree	ipv6
Description	Commands in this context configure the interface-level IPv6 hold timers for the associated IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

down

Synopsis	Enter the **down** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6 down init-only *boolean*
Tree	init-only
Description	When configured to **true**, the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Down hold time for the IP interface
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6 down seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2

up

Synopsis	Enter the **up** context
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Up hold time for the IP interface
Context	**configure** router *named-item-64* interface *interface-name* hold-time ipv6 up seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

if-attribute

Synopsis	Enter the **if-attribute** context
Context	**configure** router *named-item-64* interface *interface-name* if-attribute
Tree	if-attribute
Description	Commands in this context configure attributes of the IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-group *reference*

Synopsis	Administrative group name for the interface
Context	**configure** router *named-item-64* interface *interface-name* if-attribute admin-group *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-group
Description	This command specifies the administrative group membership to an interface. The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.
Reference	**configure** routing-options if-attribute admin-group *named-item*
Max. instances	32
Introduced	25.3.R2
Platforms	SAR Gen 2

delay

Synopsis	Enter the **delay** context
Context	**configure** router *named-item-64* interface *interface-name* if-attribute delay
Tree	delay
Introduced	25.3.R2
Platforms	SAR Gen 2

dynamic

Synopsis	Enter the **dynamic** context
Context	**configure** router *named-item-64* interface *interface-name* if-attribute delay dynamic
Tree	dynamic
Description	Commands in this context configure dynamic link delay measurement options for the interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

static *number*

Synopsis	Unidirectional link delay static information
Context	**configure** router *named-item-64* interface *interface-name* if-attribute delay static *number*
Tree	static
Description	This command configures the unidirectional link delay. By default there is no configured delay, and the link delay metric TLV is pruned in the IGP.

Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 16777214
Units	microseconds
Introduced	25.3.R2
Platforms	SAR Gen 2

srlg-group [name] *reference*

Synopsis	Add a list entry for **srlg-group**
Context	**configure** router *named-item-64* interface *interface-name* if-attribute srlg-group *reference*
Tree	srlg-group
Description	Commands in this context add a list entry for a Shared Risk Link Group (SRLG) that can be associated with an IP or MPLS interface to tag IP or MPLS interfaces that share a specific outcome with the same identifier. For example, an SRLG group identifier could represent all links that use separate fibers but are carried in the same fiber conduit. The name and identifier of each SRLG group must be configured locally on each router before the user configures the SRLG membership of an interface. A maximum of 1024 SRLGs can be configured per system. The user can apply SRLGs to an IES, VPRN, network IP, or MPLS interface. A maximum of 64 SRLGs can be applied to an interface. See "Shared Risk Link Groups" in the *7705 SAR Gen 2 MPLS Guide* for more information about SRLGs.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *reference*

Synopsis	SRLG name
Context	**configure** router *named-item-64* interface *interface-name* if-attribute srlg-group *reference*
Tree	srlg-group
Reference	**configure** routing-options if-attribute srlg-group *named-item*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress

Synopsis	Enter the **ingress** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* interface *interface-name* ingress
Tree	ingress
Description	Commands in this context configure ingress network filter policies for the IP interface. If an ingress filter is not defined, the system performs no filtering.
Introduced	25.3.R2
Platforms	SAR Gen 2

filter

Synopsis	Enter the **filter** context
Context	**configure** router *named-item-64* interface *interface-name* ingress filter
Tree	filter
Description	Commands in this context associate an IP filter policy with an IP interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip *reference*

Synopsis	IPv4 filter policy name
Context	**configure** router *named-item-64* interface *interface-name* ingress filter ip *reference*
Tree	ip
Reference	**configure** filter ip-filter *filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-mtu *number*

Synopsis	Interface IP MTU
Context	**configure** router *named-item-64* interface *interface-name* ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface. The operational IP MTU used for the interface is based on the configured IP MTU and the port MTU of the port bound to this interface; that is, the operational MTU is set to the lesser of the values configured by this command and the port MTU value less the Ethernet header size. If the interface supports IPv6 packets, this command must be set to at least 1280, in accordance with RFC 2460 *Internet Protocol, Version 6 (IPv6) Specification*.
Range	512 to 9786
Units	bytes
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec

Synopsis	Enable the **ipsec** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec
Tree	ipsec
Description	Commands in this context configure an IPsec secured interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	**configure** router *named-item-64* interface *interface-name* ipsec admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.

ip-exception *reference*

Synopsis	IP exception filter
Context	**configure** router *named-item-64* interface *interface-name* ipsec ip-exception *reference*
Tree	ip-exception
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	**configure** filter ip-exception *filter-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

ipsec-tunnel [name] *named-item*

Synopsis	Enter the **ipsec-tunnel** list instance
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item*
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**name**] *named-item*

Synopsis	IPsec tunnel name
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item*
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'name' must not start with a number (e.g. tunnel-1)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the **bfd-liveness** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* bfd bfd-liveness
Tree	bfd-liveness
Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session. BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.
Introduced	25.3.R2
Platforms	SAR Gen 2

dest-ip *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* bfd bfd-liveness dest-ip *ipv4-unicast-address*
Tree	dest-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

interface *interface-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* bfd bfd-liveness interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

service-name *service-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* bfd bfd-liveness service-name *service-name*
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

clear-df-bit *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* clear-df-bit *boolean*
Tree	clear-df-bit
Description	When configured to **true**, the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

copy-traffic-class-upon-decapsulation *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* copy-traffic-class-upon-decapsulation *boolean*
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to **true**, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

description *description*

Synopsis	Text description
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	25.3.R2
Platforms	SAR Gen 2

encapsulated-ip-mtu *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* encapsulated-ip-mtu *number*
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp-generation

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **icmp-generation** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	25.3.R2
Platforms	SAR Gen 2

frag-required

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Enter the **frag-required** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp-generation frag-required admin-state *keyword*
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp-generation frag-required interval *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

message-count *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp-generation frag-required message-count *number*
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp6-generation

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **icmp6-generation** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

packet-too-big

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **packet-too-big** context
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp6-generation packet-too-big
Tree	packet-too-big
Description	Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side. The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel. The private MTU for the tunnel is configured via the **configure router interface ipsec ipsec-tunnel ip-mtu** command for the interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* icmp6-generation packet-too-big admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

spi *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* key-exchange manual keys *number* direction *keyword* spi *number*
Tree	spi
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* security-policy id *number*
Tree	id
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

strict-match *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	**configure** router *named-item-64* interface *interface-name* ipsec ipsec-tunnel *named-item* security-policy strict-match *boolean*
Tree	strict-match
Description	When configured to **true**, this command enables strict match of the security policy entry. When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry. If there is no match, the setup fails, and TS_UNACCEPTABLE is sent. If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent. If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	**configure** router *named-item-64* interface *interface-name* ipv4 dhcp gi-address *ipv4-unicast-address*
Tree	gi-address
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.
String format	'ipv4-address' must use only digits and dots (no %zone)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Introduced 25.3.R2

Platforms SAR Gen 2

relay-plain-bootp *boolean*

Synopsis	Relay plain BOOTP messages
Context	**configure** router *named-item-64* interface *interface-name* ipv4 dhcp relay-plain-bootp *boolean*
Tree	relay-plain-bootp
Description	When configured to **true**, the system relays plain BOOTP messages. When configured to **false**, the system considers the plain BOOTP packets as malformed DHCP packets; therefore, the system does not relay the messages.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	**configure** router *named-item-64* interface *interface-name* ipv4 dhcp server *ipv4-unicast-address*
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	**configure** router *named-item-64* interface *interface-name* ipv4 dhcp src-ip-addr *keyword*
Tree	src-ip-addr
Options	auto, gi-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	auto
Introduced	25.3.R2
Platforms	SAR Gen 2

trusted *boolean*

Synopsis	Relay untrusted packets
Context	**configure** router *named-item-64* interface *interface-name* ipv4 dhcp trusted *boolean*
Tree	trusted
Description	When configured to **true**, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request. A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit. This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

icmp

Synopsis	Enter the **icmp** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 icmp
Tree	icmp
Description	Commands in this context configure Internet Control Message Protocol (ICMP) parameters on a network IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 icmp mask-reply *boolean*
Tree	mask-reply

Introduced	25.3.R2
Platforms	SAR Gen 2

ip-helper-address *ipv4-unicast-address*

Synopsis	IP address of the target UDP broadcast gateway
Context	**configure** router *named-item-64* interface *interface-name* ipv4 ip-helper-address *ipv4-unicast-address*
Tree	ip-helper-address
Description	This command configures the redirection of broadcast UDP packets received on the associated interface to the specified helper gateway address, and then to the gateway.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	25.3.R2
Platforms	SAR Gen 2

local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 local-dhcp-server *reference*
Tree	local-dhcp-server
Reference	**configure** router *named-item-64* dhcp-server dhcpv4 *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

nat

Synopsis	Enable the **nat** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 nat
Tree	nat
Description	Commands in this context enable NAT and configure CPM NAT policies for the IPv4 interface. These commands must be used in conjunction with NAT pools where the pool application is configured with the **configure router nat outside pool applications use-interface-ip** command.
Introduced	25.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

cpm-nat-policy *reference*

Synopsis	CPM NAT policy association with public IPv4 interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 nat cpm-nat-policy *reference*
Tree	cpm-nat-policy
Description	This command associates a CPM NAT policy to the interface. The NAT policy applies to traffic that either originates from, or is destined to, the local node itself (CPM traffic). Specifically, it is used when the traffic is routed through a public NAT IPv4 interface in the outside routing context. A CPM NAT policy should be used when the local node communicates with public networks over NAT, and the source or destination is a local interface within the outside routing context. This can include the public IPv4 interface or any other interface assigned to that routing context.
Reference	**configure** service nat cpm-nat-policy *external-named-item*
Introduced	25.7.R1
Platforms	SAR Gen 2

cpm-spf-nat-policy *reference*

Synopsis	CPM NAT policy for static port forwards
Context	**configure** router *named-item-64* interface *interface-name* ipv4 nat cpm-spf-nat-policy *reference*
Tree	cpm-spf-nat-policy
Description	This command associates a CPM NAT policy to the interface for static port forwards. The configurations for traffic using static port forwards to a local IP address in the outside routing context are separate from those used for other CPM traffic going through NAT. This command allows the router to apply different NAT behavior for port-forwarded traffic than for general traffic originating from the local node.
Reference	**configure** service nat cpm-nat-policy *external-named-item*
Introduced	25.7.R1
Platforms	SAR Gen 2

neighbor-discovery

Synopsis	Enter the **neighbor-discovery** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	neighbor-discovery
Introduced	25.3.R2
Platforms	SAR Gen 2

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery learn-unsolicited *boolean*
Tree	learn-unsolicited
Description	When configured to **true**, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both. When configured to **false**, the router follows standard behavior for learning neighbor entries. • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

limit

Synopsis	Enter the **limit** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery limit
Tree	limit
Description	Commands in this context configure the maximum number of dynamic neighbor entries that can be learned on the interface When the number of entries reaches the threshold (the configured percentage) of this limit, the system sends an SNMP trap. When the limit is exceeded, the system learns no new entries until an entry expires and traffic to these destinations is dropped. Already learned entries are refreshed.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery limit log-only *boolean*
Tree	log-only
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery limit max-entries *number*
Tree	max-entries
Range	0 to 524288
Introduced	25.3.R2
Platforms	SAR Gen 2

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery limit threshold *number*
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	25.3.R2
Platforms	SAR Gen 2

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery local-proxy-arp *boolean*
Tree	local-proxy-arp
Description	When configured to **true**, the router enables local proxy ARP on the interface. When configured to **false**, the router does not respond to ARP requests for addresses on the same subnet.
Introduced	25.3.R2
Platforms	SAR Gen 2

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery proactive-refresh *boolean*
Tree	proactive-refresh
Description	When configured to **true**, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery proxy-arp-policy *reference*
Tree	proxy-arp-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2

Platforms	SAR Gen 2

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery remote-proxy-arp *boolean*
Tree	remote-proxy-arp
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

retry-timer *number*

Synopsis	ARP retry interval
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery retry-timer *number*
Tree	retry-timer
Range	1 to 300
Units	deciseconds
Default	50
Introduced	25.3.R2
Platforms	SAR Gen 2

static-neighbor [ipv4-address] *ipv4-address*

Synopsis	Enter the **static-neighbor** list instance
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery static-neighbor *ipv4-address*
Tree	static-neighbor
Description	Commands in this context configure a static ARP entry that associates an IP address with a MAC address for the core router instance.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ipv4-address**] *ipv4-address*

Synopsis	IPv4 address that corresponds to the physical address
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery static-neighbor *ipv4-address*
Tree	static-neighbor
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

mac-address *mac-address*

Synopsis	MAC address for the static neighbor
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery static-neighbor *ipv4-address* mac-address *mac-address*
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

static-neighbor-unnumbered

Synopsis	Enable the **static-neighbor-unnumbered** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Description	Commands in this context configure the static ARP MAC for an unnumbered interface. This entry overrides the dynamic ARP entry on the unnumbered interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-address *mac-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address for the static neighbor
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery static-neighbor-unnumbered mac-address *mac-address*
Tree	mac-address
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 neighbor-discovery timeout *number*
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	25.3.R2
Platforms	SAR Gen 2

primary

Synopsis	Enable the **primary** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 primary
Tree	primary
Introduced	25.3.R2
Platforms	SAR Gen 2

address *ipv4-unicast-address*

Synopsis	Primary IPv4 address assigned to the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 primary address *ipv4-unicast-address*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	25.3.R2
Platforms	SAR Gen 2

broadcast *keyword*

Synopsis	Broadcast address format
Context	**configure** router *named-item-64* interface *interface-name* ipv4 primary broadcast *keyword*
Tree	broadcast
Description	This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts. This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.
Options	all-ones, host-ones
Default	host-ones
Introduced	25.3.R2
Platforms	SAR Gen 2

gre-termination *boolean*

Synopsis	Enable GRE termination
Context	**configure** router *named-item-64* interface *interface-name* ipv4 primary gre-termination *boolean*
Tree	gre-termination
Description	When configured to **true**, the router terminates MPLS-over-GRE and IP-over-GRE packets for destination IP addresses from a user-defined subnet. The user defines a subnet for the termination of GRE packets by executing this command on a numbered network IP interface or a loopback interface.

Context	**configure** router *named-item-64* interface *interface-name* ipv4 unnumbered ip-int-name *interface-name*
Tree	ip-int-name
String length	1 to 32
Notes	The following elements are part of a choice: **ip-address**, **ip-int-name**, or **system**.
Introduced	25.3.R2
Platforms	SAR Gen 2

system

Synopsis	Use system IP address for the unnumbered IP interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 unnumbered system
Tree	system
Notes	The following elements are part of a choice: **ip-address**, **ip-int-name**, or **system**.
Introduced	25.3.R2
Platforms	SAR Gen 2

urpf-check

Synopsis	Enable the **urpf-check** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 urpf-check
Tree	urpf-check
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-default *boolean*

Synopsis	Ignore default routes when performing a uRPF check
Context	**configure** router *named-item-64* interface *interface-name* ipv4 urpf-check ignore-default *boolean*
Tree	ignore-default
Description	When configured to **true**, the router ignores default routes while performing a uRPF check to determine the validity of incoming packets. When configured to **false**, default routes are considered eligible.
Default	false
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

mode *keyword*

Synopsis	Unicast RPF check mode
Context	**configure** router *named-item-64* interface *interface-name* ipv4 urpf-check mode *keyword*
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	25.3.R2
Platforms	SAR Gen 2

vrrp [virtual-router-id] *number*

Synopsis	Enter the **vrrp** list instance
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number*
Tree	vrrp
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its Virtual Router Identifier (VRID) and a set of IP addresses.
Introduced	25.3.R2
Platforms	SAR Gen 2

[**virtual-router-id**] *number*

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* admin-state *keyword*
Tree	admin-state
Description	The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes. When **disabled**, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing. Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated. An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

authentication-key *encrypted-leaf*

Synopsis	Password for simple text authentication
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages. If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7705 SAR Gen 2 System Management Guide* for more information.
String length	1 to 94

Introduced	25.3.R2
Platforms	SAR Gen 2

backup *ipv4-unicast-address*

Synopsis	Virtual router IP addresses for the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* backup *ipv4-unicast-address*
Tree	backup
Description	This command associates virtual router IP addresses with those of the parental IP interface. This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance. Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance. For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails. See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness

Synopsis	Enable the **bfd-liveness** context
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context assign a Bidirectional Forwarding Detection (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism that speeds up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

advertisement message. In addition, the standby VRRP routers transition to a master state to speed up convergence.

The VRRP election process takes place based on the advertisement messages sent by all VRRP routers.

Only one BFD session can be assigned to any VRRP or SRRP instance, but multiple SRRP or VRRP sessions can use the same BFD session.

Introduced	25.3.R2
Platforms	SAR Gen 2

dest-ip *ipv4-address*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IP address to use for BFD session
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* bfd-liveness dest-ip *ipv4-address*
Tree	dest-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.

Tree	init-delay
Range	1 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* mac *mac-unicast-address*
Tree	mac
Description	This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID. Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

String format 'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

Introduced 25.3.R2

Platforms SAR Gen 2

master-int-inherit *boolean*

Synopsis Allow master instance to dictate the master down timer

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* master-int-inherit *boolean*

Tree master-int-inherit

Description When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 25.3.R2

Platforms SAR Gen 2

message-interval *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* message-interval *number*

Tree message-interval

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

monitor-oper-group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* monitor-oper-group *reference*
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	**configure** service oper-group *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* ntp-reply *boolean*
Tree	ntp-reply
Description	When configured to **true**, the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to **false**, the router does not process NTP requests.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* oper-group *reference*
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	**configure** service oper-group *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

owner *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* owner *boolean*
Tree	owner

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to **false**, this virtual router instance is designated as a non-owner.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

passive *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* passive *boolean*
Tree	passive
Description	When configured to **true**, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down). When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* ping-reply *boolean*
Tree	ping-reply
Description	When configured to **true**, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.

Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

policy *reference*

Synopsis VRRP priority control policy

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* policy *reference*

Tree policy

Description This command configures a VRRP priority control policy to associate with the virtual router instance.

VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.

An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference **configure** vrrp policy *number*

Introduced 25.3.R2

Platforms SAR Gen 2

preempt *boolean*

Synopsis Allow the VRRP to override an existing non-owner master

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* preempt *boolean*

Tree preempt

Description When configured to **true**, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.

Default true

Introduced 25.3.R2

Platforms SAR Gen 2

priority *number*

Synopsis Base priority for the VRRP

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* priority *number*

Tree priority

Description This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range 1 to 255

Introduced 25.3.R2

Platforms SAR Gen 2

ssh-reply *boolean*

Synopsis Allow the non-owner master to reply to SSH requests

Context **configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* ssh-reply *boolean*

Tree ssh-reply

Description When configured to **true**, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).

When configure to **false**, SSH requests to non-owner master virtual IP addresses are silently discarded.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* standby-forwarding *boolean*
Tree	standby-forwarding
Description	When configured to **true**, the standby router forwards all traffic. When configured to **false**, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* telnet-reply *boolean*
Tree	telnet-reply
Description	When configured to **true**, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	**configure** router *named-item-64* interface *interface-name* ipv4 vrrp *number* traceroute-reply *boolean*
Tree	traceroute-reply
Description	When configured to **true**, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default false

Introduced 25.3.R2

address [ipv6-address] *ipv6-address*

Synopsis Enter the **address** list instance

Context **configure** router *named-item-64* interface *interface-name* ipv6 address *ipv6-address*

Tree address

Description Commands in this context assign an IPv6 address to the interface.

A global IPv6 address and *prefix-length* combined create a locally configured interface IPv6 prefix and subnet. The defined global IP prefix must be unique within the context of a routing instance. It cannot overlap with any other existing global IP prefix defined on another IP interface within the same routing context.

This overlap restriction is not applicable for IPv6 host addresses configured on loopback interfaces. For example, an IPv6 loopback host address configured on a loopback interface may overlap with another prefix subnet configured on another IP interface within the same routing context.

Introduced 25.3.R2

Platforms SAR Gen 2

[ipv6-address] *ipv6-address*

Synopsis IPv6 address assigned to the interface

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv6 address *ipv6-address* primary-preference *number*
Tree	primary-preference
Description	This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected. If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.
Range	1 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

tag *(number | keyword)*

Synopsis	Route tag to be matched by BGP export policy rules
Context	**configure** router *named-item-64* interface *interface-name* ipv6 address *ipv6-address* tag *(number | keyword)*
Tree	tag
Description	This command associates an administrative tag value with an interface IP address. This tag value is added to the IP FIB entries corresponding to the subnet route and host route

© 2026 Nokia.

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
Context	**configure** router *named-item-64* interface *interface-name* ipv6 duplicate-address-detection *boolean*
Tree	duplicate-address-detection
Description	When configured to **true**, the router enables Duplicate Address Detection (DAD) on the interface. When configured to **false**, the router disables DAD on a per-interface basis. This prevents the router from performing a DAD check on the interface. All IPv6 addresses on an interface with DAD disabled, immediately enter a preferred state, without checking for uniqueness on the interface. This is useful for interfaces that enter a looped state during troubleshooting and are operationally disabled when the loop is detected, requiring manual intervention to clear the DAD violation.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

forward-ipv4-packets *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	**configure** router *named-item-64* interface *interface-name* ipv6 forward-ipv4-packets *boolean*
Tree	forward-ipv4-packets
Description	When configured to **true**, the router can use an IPv6-only interface, with no configured IPv4 addresses, to forward IPv4 packets that originate or terminate locally. The interface reports that its IPv4 operational state is up if its IPv6 operational state is up. Not all protocols observe the interface as up from an IPv4 perspective. This command mostly supports BGP routing use cases; see RFC 5549 for details. When configured to **false**, the router prevents IPv4 packets from being forwarded if there are no configured IPv4 subnets.
Default	false
Introduced	25.3.R2

link-local-address

Synopsis	Enter the **link-local-address** context
Context	**configure** router *named-item-64* interface *interface-name* ipv6 link-local-address
Tree	link-local-address
Description	Commands in this context configure the IPv6 link-local address that is used as a virtual SRRP IPv6 address by the master SRRP node. This address is sent in the Router Advertisements initiated by the master SRRP node. Clients use this address as IPv6 default-gateway. Both SRRP nodes, master and backup, must be configured with the same link-local address. Only one link-local address is allowed per interface. **Caution**: Removing a manually configured link-local address may impact routing protocols or static routes that have a dependency on that address. Nokia does not recommend removing a link-local address when there are active IPv6 subscriber hosts on an IES or VPRN interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

address *ipv6-address*

Platforms	SAR Gen 2

limit

Synopsis	Enter the **limit** context
Context	**configure** router *named-item-64* interface *interface-name* ipv6 neighbor-discovery limit
Tree	limit
Description	Commands in this context configure the maximum amount of dynamic IPv6 neighbor entries that can be learned on an IP interface. When the number of dynamic neighbor entries reaches the configured percentage of this limit the system sends an SNMP trap. When the limit is exceeded, no new entries are learned until an entry expires and traffic to these destinations is dropped. Entries that have already been learned are refreshed.
Introduced	25.3.R2
Platforms	SAR Gen 2

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	**configure** router *named-item-64* interface *interface-name* ipv6 neighbor-discovery limit log-only *boolean*
Tree	log-only
Description	When configured to **true**, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned. When configured to **false**, the router does not send the warning message.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	**configure** router *named-item-64* interface *interface-name* ipv6 neighbor-discovery limit max-entries *number*
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface.

© 2026 Nokia.

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* admin-state *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Description	The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes. When **disabled**, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing. Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated. An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

backup *ipv6-address*

Synopsis	Virtual router IP addresses for the interface
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* backup *ipv6-address*
Tree	backup
Description	This command associates router IPv6 virtual router IP addresses with those of the parental IP interface. This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance. Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance. For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails. See "Owner and non-owner VRRP" in the *7705 SAR Gen 2 Router Configuration Guide* for more information about owner and non-owner virtual router instances.

bfd-liveness

Synopsis	Enable the **bfd-liveness** context
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context assign a bidirectional forwarding detect (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism for use in speeding up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP Advertisement message. In addition, the standby VRRP routers transition to a Master state to speed convergence. The normal VRRP election process takes place based on the Advertisement messages sent by all VRRP routers. There can be only one BFD session assigned to any specific VRRP or SRRP instance, but there can be multiple SRRP or VRRP sessions using the same BFD session.
Introduced	25.3.R2
Platforms	SAR Gen 2

mac *mac-unicast-address*

Synopsis	Virtual MAC address to use in ARP responses
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* mac *mac-unicast-address*
Tree	mac
Description	This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID. Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address. Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC. An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	25.3.R2
Platforms	SAR Gen 2

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* master-int-inherit *boolean*
Tree	master-int-inherit
Description	When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 25.3.R2

Platforms SAR Gen 2

message-interval *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* message-interval *number*

Tree message-interval

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as the master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Platforms	SAR Gen 2

owner *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* owner *boolean*
Tree	owner
Description	When configured to **true**, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to **false**, this virtual router instance is designated as a non-owner.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

passive *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* passive *boolean*
Tree	passive
Description	When configured to **true**, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* ping-reply *boolean*
Tree	ping-reply
Description	When configured to **true**, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address). When configured to **false**, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded. Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

policy *reference*

Synopsis	VRRP priority control policy
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* policy *reference*

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	**configure** vrrp policy *number*
Introduced	25.3.R2
Platforms	SAR Gen 2

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* preempt *boolean*
Tree	preempt
Description	When configured to **true**, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router. When configured to **false**, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

priority *number*

Synopsis	Base priority for the VRRP
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* priority *number*
Tree	priority
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process. The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.
Range	1 to 255
Introduced	25.3.R2

Platforms	SAR Gen 2

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* standby-forwarding *boolean*
Tree	standby-forwarding
Description	When configured to **true**, the standby router forwards all traffic. When configured to **false**, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* telnet-reply *boolean*
Tree	telnet-reply
Description	When configured to **true**, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	**configure** router *named-item-64* interface *interface-name* ipv6 vrrp *number* traceroute-reply *boolean*
Tree	traceroute-reply

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

lag

Synopsis	Enter the **lag** context
Context	**configure** router *named-item-64* interface *interface-name* lag
Tree	lag
Introduced	25.3.R2
Platforms	SAR Gen 2

ldp-sync-timer

Synopsis	Enter the **ldp-sync-timer** context
Context	**configure** router *named-item-64* interface *interface-name* ldp-sync-timer
Tree	ldp-sync-timer
Description	Commands in this context set associated parameters for the synchronization of an IGP and LDP.
Introduced	25.3.R2
Platforms	SAR Gen 2

end-of-lib *boolean*

Synopsis	Terminate LDP synchronization timer
Context	**configure** router *named-item-64* interface *interface-name* ldp-sync-timer end-of-lib *boolean*
Tree	end-of-lib
Description	This command configures the system to terminate the LDP synchronization timer early for a specific session to an LDP peer, if the IGP interface receives LDP End-of-LIB Typed Wildcard FEC messages for every FEC type negotiated.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

seconds *number*

Synopsis	Time interval for the LDP synchronization timer
Context	**configure** router *named-item-64* interface *interface-name* ldp-sync-timer seconds *number*
Tree	seconds
Range	1 to 1800
Introduced	25.3.R2
Platforms	SAR Gen 2

load-balancing

Synopsis	Enter the **load-balancing** context
Context	**configure** router *named-item-64* interface *interface-name* load-balancing
Tree	load-balancing
Description	Commands in this context configure interface per-flow load-balancing options that apply to traffic that enters this interface and that egresses over a LAG or ECMP. This is a per-interface setting. Load-balancing options enabled on the interface level overwrite options that can also be enabled on the system level.
Introduced	25.3.R2
Platforms	SAR Gen 2

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	**configure** router *named-item-64* interface *interface-name* load-balancing ip-load-balancing *keyword*
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **l4-load-balancing** command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	both
Introduced	25.3.R2
Platforms	SAR Gen 2

lsr-load-balancing *keyword*

Synopsis	LSR load-balancing algorithm
Context	**configure** router *named-item-64* interface *interface-name* load-balancing lsr-load-balancing *keyword*
Tree	lsr-load-balancing
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	25.3.R2
Platforms	SAR Gen 2

loopback

Synopsis	Use interface as a loopback interface
Context	**configure** router *named-item-64* interface *interface-name* loopback
Tree	loopback
Description	When configured, this interface is used as a loopback interface. This command and the **vas-if-type** command are mutually exclusive.
Notes	The following elements are part of a choice: **loopback** or **port**.
Introduced	25.3.R2
Platforms	SAR Gen 2

mac *mac-unicast-address*

Synopsis	MAC address of the interface
Context	**configure** router *named-item-64* interface *interface-name* mac *mac-unicast-address*
Tree	mac
Description	This command assigns a specific MAC address to an IP interface. Only one MAC address can be assigned to an IP interface. When multiple **mac** commands are entered, the last command overwrites the previous command.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

mac-accounting *boolean*

Synopsis	Enable MAC accounting functionality
Context	**configure** router *named-item-64* interface *interface-name* mac-accounting *boolean*
Tree	mac-accounting
Description	When configured to **true**, the router enables MAC accounting functionality.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

network-domains

Synopsis	Enter the **network-domains** context
Context	**configure** router *named-item-64* interface *interface-name* network-domains
Tree	network-domains
Introduced	25.3.R2
Platforms	SAR Gen 2

network-domain [domain-name] *reference*

Synopsis	Add a list entry for **network-domain**
Context	**configure** router *named-item-64* interface *interface-name* network-domains network-domain *reference*
Tree	network-domain
Description	Commands in this context assign an interface to a network domain. The router then takes the network domain into account during SAP ingress queue allocation for VPLS SAP. The network domain association can only be done in the base routing context. An operator can associate a network domain with an interface without a physical port being specified, but the configuration has no effect until a corresponding port, or LAG, is defined. Single interfaces can be associated with multiple network domains.
Max. instances	5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

[**domain-name**] *reference*

Synopsis	Network domain name
Context	**configure** router *named-item-64* interface *interface-name* network-domains network-domain *reference*
Tree	network-domain
Reference	**configure** router *named-item-64* network-domains network-domain *named-item*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

port *(port-and-encap | keyword)*

Synopsis	Port to bind to this interface
Context	**configure** router *named-item-64* interface *interface-name* port *(port-and-encap | keyword)*
Tree	port
Description	This command creates an association between a logical IP interface and a physical port. An operator can also associate an interface with the system (loopback address).
String length	1 to 45
Options	system
Notes	The following elements are part of a choice: **loopback** or **port**.
Introduced	25.3.R2
Platforms	SAR Gen 2

ptp-hw-assist

Synopsis	Enter the **ptp-hw-assist** context
Context	**configure** router *named-item-64* interface *interface-name* ptp-hw-assist
Tree	ptp-hw-assist
Description	Commands in this context enable the port-based timestamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Only one interface per physical port can have port-based timestamping assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.

Introduced 26.3.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx

admin-state *keyword*

Synopsis Administrative state of the PTP timestamping assist

Context **configure** router *named-item-64* interface *interface-name* ptp-hw-assist admin-state *keyword*

Tree admin-state

Options enable, disable

Default disable

Introduced 26.3.R1

Platforms 7705 SAR-Hx, 7705 SAR-Mx

qos

Synopsis Enter the **qos** context

Context **configure** router *named-item-64* interface *interface-name* qos

Tree qos

Description Commands in this context associate a network QoS policy with a network IP interface. Only one network QoS policy can be associated with an IP interface at one time. Attempts to associate a second QoS policy return an error.

Introduced 25.3.R2

Platforms SAR Gen 2

egress-instance *number*

Synopsis Port egress queue group instance for this interface

Context **configure** router *named-item-64* interface *interface-name* qos egress-instance *number*

Tree egress-instance

Description This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.

Range 1 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

egress-port-redirect-group *reference*

Synopsis	QoS queue group name
Context	**configure** router *named-item-64* interface *interface-name* qos egress-port-redirect-group *reference*
Tree	egress-port-redirect-group
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.
Reference	**configure** qos queue-group-templates egress queue-group *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress-fp-redirect-group *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	**configure** router *named-item-64* interface *interface-name* qos ingress-fp-redirect-group *reference*
Tree	ingress-fp-redirect-group
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	**configure** qos queue-group-templates ingress queue-group *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

ingress-instance *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	**configure** router *named-item-64* interface *interface-name* qos ingress-instance *number*
Tree	ingress-instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	25.3.R2
Platforms	SAR Gen 2

network-policy *reference*

Synopsis	Network policy name associated with a network interface
Context	**configure** router *named-item-64* interface *interface-name* qos network-policy *reference*
Tree	network-policy
Description	This command associates an existing network policy name with the IP interface.
Reference	**configure** qos network *network-policy-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	**configure** router *named-item-64* interface *interface-name* tos-marking-state *keyword*
Tree	tos-marking-state
Description	This command configures the ToS marking state. This command is used to alter the default trusted state to a non-trusted state. When configured to **trusted** or default, the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted. When configured to **untrusted**, all egress network IP interfaces remark IP packets received on the network interface according to the egress marking defintions on each network interface.
Options	trusted, untrusted
Default	trusted
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

untrusted

Synopsis	Enable the **untrusted** context
Context	**configure** router *named-item-64* interface *interface-name* untrusted
Tree	untrusted
Description	Commands in this context configure the untrusted state for a network IP interface. The untrusted state identifies the participating interfaces in the label security feature for prefixes of a VPN family at an inter-AS boundary. The router supports a maximum of 15 network interfaces that can participate in this feature. The user normally applies this command to an inter-AS interface. PIP keeps track of the untrusted status of each interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

default-forwarding *keyword*

Synopsis	Default action for selective ILM
Context	**configure** router *named-item-64* interface *interface-name* untrusted default-forwarding *keyword*
Tree	default-forwarding
Description	This command specifies the default forwarding behavior of labeled packets received on this interface. This command sets the default behavior for an untrusted interface in the datapath and for all ILMs. When enabling the label security for VPN IPv4 or VPN IPv6 prefixes, BGP programs the data path to provide an exception to the normal way of forwarding away from the default for those VPRN ILMs. When the default behavior is to forward packets, the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a L2 service context. When the specified behavior is to drop packets, all labeled packets received on the interface are automatically dropped.
Options	forward, drop
Default	forward
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

urpf-selected-vprns *boolean*

Synopsis	Enable uRPF checking of incoming traffic on interface
Context	**configure** router *named-item-64* interface *interface-name* urpf-selected-vprns *boolean*
Tree	urpf-selected-vprns
Description	When configured to **true**, the router performs uRPF checks of incoming traffic on the network interface for the following: • Packets associated with the global routing table (base router) context • Packets associated with VPRNs that have enabled the uRPF check using the **configure service vprn network ingress urpf-check** command When configured to **false**, the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router and all VPRNs) based on the IPv4 and IPv6 **urpf-check** command configuration options of the network interface.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

vas-if-type *keyword*

Synopsis	Value Added Service (VAS) facing interface type
Context	**configure** router *named-item-64* interface *interface-name* vas-if-type *keyword*
Tree	vas-if-type
Options	to-from-access, to-from-network, to-from-both

Tree	mtu
Range	1280 to 9800
Introduced	25.3.R2
Platforms	SAR Gen 2

nd-router-preference *keyword*

Synopsis	Default router preference for Router Advertisements
Context	**configure** router *named-item-64* ipv6 router-advertisement interface *interface-name* nd-router-preference *keyword*
Tree	nd-router-preference
Description	This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs. This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the connected host to assist in its selection of the most appropriate default gateway on a link. This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.
Options	medium, high, low
Default	medium
Introduced	25.3.R2
Platforms	SAR Gen 2

value *number*

Synopsis	BGP-LS ID sent in the BGP-LS NLRI
Context	**configure** router *named-item-64* isis *number* database-export bgp-ls-identifier value *number*
Tree	value
Description	This command configures the BGP-LS ID to export. If an NRC-P network domain has multiple IGP domains, a user must configure BGP-LS speakers within each IGP domain with the same unique ASN, BGP-LS ID tuple. The BGP-LS identifier is optional and is only sent in a BGP-LS NLRI if configured in the IGP instance of an IGP domain. **Note:** If this IGP instance participates in traffic engineering with RSVP-TE or SR-TE, the **traffic-engineering** command configuration is not strictly required because enabling the extended TE-DB populates this information automatically. However, Nokia recommends enabling the **traffic-engineering** command to make the configuration consistent with other routers in the network that do not require the enabling of the extended TE-DB.
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R2
Platforms	SAR Gen 2

igp-identifier *number*

Synopsis	IGP instance ID in the BGP-LS NLRI
Context	**configure** router *named-item-64* isis *number* database-export igp-identifier *number*
Tree	igp-identifier
Description	This command configures the unique identifier for the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of instance ID defined in IS-IS (RFC 6822) is unique within a routing domain. A user can remove any overlap by configuring the new identifier value to be unique within an IGP domain when this router sends the IGP link-state information using BGP-LS.
Max. range	0 to 18446744073709551615
Introduced	25.3.R2
Platforms	SAR Gen 2

reachable-ls-only *boolean*

Synopsis	Encode only reachable link-state information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* isis *number* database-export reachable-ls-only *boolean*
Tree	reachable-ls-only
Description	When configured to **true**, the router, acting as a BGP-LS producer, must withdraw all link-state objects it has advertised in BGP, in accordance with section 5.9 of RFC 9552. This withdrawal occurs when the node that originated the corresponding LSPs is determined to be unreachable in the IGP based on the failure of a reachability check for that node. This withdrawal operation assists network controllers in assessing a reachable IGP topology, even in networks with segmented areas. For backward compatibility, the default behavior remains unchanged. When configure to **false**, the router continues to send link-state objects even for links that fail an IGP reachability check.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

default-route-tag *number*

Use subject to Terms available at: www.nokia.com/terms.

Tree	export-policy
Description	This command configures export routing policies for the routes exported from the routing table to IS-IS. If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied. Routing policies are created in the **configure router policy-options** context.

Platforms SAR Gen 2

participate *boolean*

Synopsis Allow participation in the Flexible Algorithm

Context **configure** router *named-item-64* isis *number* flexible-algorithms flex-algo *number* participate *boolean*

Tree participate

Description When configured to **true**, the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.

When configured to **false**, flexible algorithm participation is not enabled.

Default false

Introduced 25.3.R2

Platforms SAR Gen 2

graceful-restart

Synopsis Enable the **graceful-restart** context

Context **configure** router *named-item-64* isis *number* graceful-restart

Tree graceful-restart

Introduced 25.3.R2

Platforms SAR Gen 2

helper-mode *boolean*

Synopsis Enable the Graceful Restart helper for IS-IS

Context **configure** router *named-item-64* isis *number* graceful-restart helper-mode *boolean*

Tree helper-mode

Default true

Introduced 25.3.R2

Platforms SAR Gen 2

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	**configure** router *named-item-64* isis *number* hello-authentication *boolean*
Tree	hello-authentication
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

hello-padding *keyword*

Synopsis	IS-IS Hello message padding
Context	**configure** router *named-item-64* isis *number* hello-padding *keyword*
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-attached-bit *boolean*

Synopsis	Ignore attached bit on received Layer 1 LSPs
Context	**configure** router *named-item-64* isis *number* ignore-attached-bit *boolean*
Tree	ignore-attached-bit
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-lsp-errors *boolean*

Synopsis	Ignore LSP packets with errors
Context	**configure** router *named-item-64* isis *number* ignore-lsp-errors *boolean*
Tree	ignore-lsp-errors
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ignore-narrow-metric *boolean*

Synopsis	Ignore links with narrow metrics
Context	**configure** router *named-item-64* isis *number* ignore-narrow-metric *boolean*
Tree	ignore-narrow-metric
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

igp-shortcut

Synopsis	Enter the **igp-shortcut** context
Context	**configure** router *named-item-64* isis *number* igp-shortcut
Tree	igp-shortcut
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of RSVP-TE or SR-TE shortcut
Context	**configure** router *named-item-64* isis *number* igp-shortcut admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R2
Platforms	SAR Gen 2

allow-sr-over-srte *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable SR over SR-TE LSPs
Context	**configure** router *named-item-64* isis *number* igp-shortcut allow-sr-over-srte *boolean*
Tree	allow-sr-over-srte

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with **allow-sr-over-srte** explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all available SR-TE LSPs as IGP shortcuts regardless of the explicit **allow-sr-over-srte** configuration. Under ECMP, when this command is configured to **true**, preference is given to the SR-TE LSPs with **allow-sr-over-srte** explicitly configured over the LSPs that do not have **allow-sr-over-srte** configured.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

tunnel-next-hop

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **tunnel-next-hop** context
Context	**configure** router *named-item-64* isis *number* igp-shortcut tunnel-next-hop
Tree	tunnel-next-hop
Introduced	25.3.R2
Platforms	SAR Gen 2

family [family-type] *keyword*

Synopsis	Enter the **family** list instance
Context	**configure** router *named-item-64* isis *number* igp-shortcut tunnel-next-hop family *keyword*
Tree	family
Introduced	25.3.R2
Platforms	SAR Gen 2

[**family-type**] *keyword*

Synopsis	Address family type for tunnel next hop
Context	**configure** router *named-item-64* isis *number* igp-shortcut tunnel-next-hop family *keyword*

admin-state *keyword*

Synopsis	Administrative state of the IS-IS interface
Context	**configure** router *named-item-64* isis *number* interface *interface-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** router *named-item-64* isis *number* interface *interface-name* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enable the **ipv4** context
Context	**configure** router *named-item-64* isis *number* interface *interface-name* bfd-liveness ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	SAR Gen 2

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	**configure** router *named-item-64* isis *number* interface *interface-name* bfd-liveness ipv4 include-bfd-tlv *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv6

Synopsis	Enable the **ipv6** context
Context	**configure** router *named-item-64* isis *number* interface *interface-name* bfd-liveness ipv6
Tree	ipv6
Introduced	25.3.R2
Platforms	SAR Gen 2

include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	**configure** router *named-item-64* isis *number* interface *interface-name* bfd-liveness ipv6 include-bfd-tlv *boolean*
Tree	include-bfd-tlv
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	**configure** router *named-item-64* isis *number* interface *interface-name* conditional-advertise-prefix *reference*
Tree	conditional-advertise-prefix
Description	This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met. The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

csnp-interval *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	**configure** router *named-item-64* isis *number* interface *interface-name* csnp-interval *number*
Tree	csnp-interval
Range	1 to 65535
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

default-instance *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	**configure** router *named-item-64* isis *number* interface *interface-name* default-instance *boolean*
Tree	default-instance
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

delay-normalization

Synopsis	Enable the **delay-normalization** context
Context	**configure** router *named-item-64* isis *number* interface *interface-name* delay-normalization
Tree	delay-normalization
Description	Commands in this context configure delay normalization for the interface within the IGP instance. When configured, the normalized delay is used by the TLVs within the IGP link-state packets. When unconfigured, the measured delay is used by the respective TLVs within the IGP link-state packets.
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-homed-prefix

Synopsis	Enable the **multi-homed-prefix** context
Context	**configure** router *named-item-64* isis *number* loopfree-alternate multi-homed-prefix
Tree	multi-homed-prefix
Description	Commands in this context enable multihomed prefix LFA for IS-IS routes (IP FRR), SR-ISIS tunnels, and SRv6-ISIS tunnels. This feature uses the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes. This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of intra-area anycast prefixes.

The computed IP next hop-based backup path is added to IS-IS routes of external /32 prefixes or /128 prefixes and intra-area /32 or /128 anycast prefixes in the RTM if the prefix is not protected by the base LFA or if the user set leaf preference command option is configured to all. The user must enable the **configure routing-options ip-fast-reroute** command to have these backup paths programmed into the FIB in the datapath.

The computed IP next hop or repair tunnel-based backup path is also programmed for:

- SR-ISIS node SID tunnels of external /32 IPv4 prefixes and /128 IPv6 prefixes, and node SID tunnels of intra-area /32 IPv4 anycast prefixes and /128 anycast IPv6 prefixes, in both algorithm 0 and flexible-algorithms
- SRv6-ISIS locator routes and tunnels of external prefixes and of intra-area anycast prefixes of any size, in both algorithm 0 and flexible algorithm numbers.

As a result, an SR-TE LSP, an SR-MPLS policy, or an SRv6 policy which uses an SR-ISIS SID or an SRv6-ISIS SID of those same prefixes in its configured or computed SID list benefits from the multihomed prefix LFA protection.

Once the IP next-hop based multihomed prefix LFA is enabled, the extensions to compute an SR-TE repair tunnel for the multihomed prefix LFA in the case of SR-ISIS and SRv6-ISIS are automatically enabled if the user also enabled TI-LFA or Remote LFA. The computation reuses the SID list of the primary path or of the TI-LFA or Remote LFA backup path of the alternate ABR or ASBR or alternate owner router.

node-protect

Synopsis	Enable the **node-protect** context
Context	**configure** router *named-item-64* isis *number* loopfree-alternate remote-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	SAR Gen 2

max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPFs
Context	**configure** router *named-item-64* isis *number* loopfree-alternate remote-lfa node-protect max-pq-nodes *number*
Tree	max-pq-nodes
Range	1 to 32
Default	16
Introduced	25.3.R2
Platforms	SAR Gen 2

ti-lfa

Synopsis	Enable the **ti-lfa** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* isis *number* loopfree-alternate ti-lfa
Tree	ti-lfa
Description	Commands in this context enable the use of the Topology-Independent LFA (TI-LFA) algorithm in the LFA SPF calculation for this IS-IS instance.
Introduced	25.3.R2
Platforms	SAR Gen 2

max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	**configure** router *named-item-64* isis *number* loopfree-alternate ti-lfa max-sr-frr-labels *number*
Tree	max-sr-frr-labels
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	25.3.R2
Platforms	SAR Gen 2

node-protect

Synopsis	Enable the **node-protect** context
Context	**configure** router *named-item-64* isis *number* loopfree-alternate ti-lfa node-protect
Tree	node-protect
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp-lifetime *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* isis *number* lsp-lifetime *number*
Tree	lsp-lifetime
Range	350 to 65535
Units	seconds
Default	1200
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp-minimum-remaining-lifetime *number*

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	**configure** router *named-item-64* isis *number* lsp-minimum-remaining-lifetime *number*
Tree	lsp-minimum-remaining-lifetime
Range	350 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp-mtu-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP MTU size
Context	**configure** router *named-item-64* isis *number* lsp-mtu-size *number*
Tree	lsp-mtu-size
Range	490 to 9778
Units	bytes
Default	1492
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp-refresh

Synopsis	Enter the **lsp-refresh** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* isis *number* lsp-refresh
Tree	lsp-refresh
Introduced	25.3.R2
Platforms	SAR Gen 2

half-lifetime *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
Context	**configure** router *named-item-64* isis *number* lsp-refresh half-lifetime *boolean*
Tree	half-lifetime
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

interval *number*

Synopsis	Refresh timer interval
Context	**configure** router *named-item-64* isis *number* lsp-refresh interval *number*
Tree	interval
Range	150 to 65535
Units	seconds
Default	600
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-part-tlv

Synopsis	Enter the **multi-part-tlv** context
Context	**configure** router *named-item-64* isis *number* multi-part-tlv
Tree	multi-part-tlv
Description	Commands in this context configure the behavior of the MP-TLV capability.
Introduced	26.3.R1
Platforms	SAR Gen 2

© 2026 Nokia.

Tree	overload-export-external
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

overload-export-interlevel *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	**configure** router *named-item-64* isis *number* overload-export-interlevel *boolean*
Tree	overload-export-interlevel
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

overload-fib-error-notify-only

Synopsis	Enable the **overload-fib-error-notify-only** context
Context	**configure** router *named-item-64* isis *number* overload-fib-error-notify-only
Tree	overload-fib-error-notify-only
Description	Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP. **Note**: Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled. When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state. The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the **retry** command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information. When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

retry *number*

Synopsis	Time to retry programming failed entries in the FIB
Context	**configure** router *named-item-64* isis *number* overload-fib-error-notify-only retry *number*
Tree	retry
Description	This command configures the time the router uses to retry programming the failed entries in the FIB. The **overload-fib-error-notify-only** command must be configured to use the retry timer. The removal of the **overload-fib-error-notify-only** configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.
Range	10 to 1800
Units	seconds
Default	10
Introduced	25.3.R2
Platforms	SAR Gen 2

overload-include-locators *boolean*

Synopsis	Advertise SRv6 locators if IS-IS instance overloads
Context	**configure** router *named-item-64* isis *number* overload-include-locators *boolean*
Tree	overload-include-locators
Description	When configured to **true**, if the IS-IS instance goes into overload (because of resource depletion or manual configuration), the router includes SRv6 locators when it advertises links and prefixes with **max-metric**.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

overload-on-boot

Synopsis	Enable the **overload-on-boot** context

adj-sid-hold *(number | keyword)*

Synopsis	Adjacency SID hold time
Context	**configure** router *named-item-64* isis *number* segment-routing adj-sid-hold *(number | keyword)*
Tree	adj-sid-hold
Description	This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency. When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection. • IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV. • The adjacency SID hold timer starts. • The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges. • If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.

- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 1800
Units	seconds
Options	none

override-bmi *number*

Synopsis	Value to override the announced node MSD-BMI value
Context	**configure** router *named-item-64* isis *number* segment-routing maximum-sid-depth override-bmi *number*
Tree	override-bmi
Description	This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.

When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.

Range	0 to 13
Introduced	25.3.R2
Platforms	SAR Gen 2

override-erld *number*

Synopsis	Value to override the announced node MSD-ERLD value
Context	**configure** router *named-item-64* isis *number* segment-routing maximum-sid-depth override-erld *number*
Tree	override-erld
Description	This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing. When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.
Range	0 to 15
Introduced	25.3.R2
Platforms	SAR Gen 2

micro-loop-avoidance

Synopsis	Enable the **micro-loop-avoidance** context
Context	**configure** router *named-item-64* isis *number* segment-routing micro-loop-avoidance
Tree	micro-loop-avoidance
Description	Commands in this context configure the microloop avoidance feature in the IGP instance. This feature prevents microloops from using Segment Routing (SR) loop-free tunnels for packets that are forwarded over SR IS-IS node SID tunnels. These commands enable microloop avoidance for MT0. Microloop avoidance for MT2 is enabled when this command is enabled along with SR-MPLS MT2 using the **configure router isis segment-routing multi-topology mt2** command.
Introduced	25.3.R2
Platforms	SAR Gen 2

fib-delay *number*

Synopsis	FIB delay before programming new primary next-hops
Context	**configure** router *named-item-64* isis *number* segment-routing micro-loop-avoidance fib-delay *number*
Tree	fib-delay
Description	This command specifies the delay time before programming the new next-hops for the SR tunnel.
Range	1 to 300
Units	deciseconds
Default	15
Introduced	25.3.R2
Platforms	SAR Gen 2

multi-topology

Synopsis	Enter the **multi-topology** context
Context	**configure** router *named-item-64* isis *number* segment-routing multi-topology
Tree	multi-topology
Introduced	25.3.R2
Platforms	SAR Gen 2

mt2 *boolean*

Synopsis	Support IPv6 routing topology (MT2)
Context	**configure** router *named-item-64* isis *number* segment-routing multi-topology mt2 *boolean*
Tree	mt2
Description	When configured to **true**, the router enables SR-MPLS for MS-ISIS MT, which enables Segment Routing in MT2.
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix-sid-range

Synopsis	Enable the **prefix-sid-range** context
Context	**configure** router *named-item-64* isis *number* segment-routing prefix-sid-range
Tree	prefix-sid-range
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	25.3.R2
Platforms	SAR Gen 2

global

Synopsis	BGP global SR range allocation
Context	**configure** router *named-item-64* isis *number* segment-routing prefix-sid-range global
Tree	global
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the **configure router mpls-labels sr-labels** context.
Notes	The following elements are part of a choice: **global** or (**max-index** and **start-label**).
Introduced	25.3.R2
Platforms	SAR Gen 2

max-index *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	**configure** router *named-item-64* isis *number* segment-routing prefix-sid-range max-index *number*
Tree	max-index
Range	0 to 1048575
Default	1
Notes	The following elements are part of a choice: **global** or (**max-index** and **start-label**).

tunnel-table-pref *number*

Synopsis Preference of SR tunnels created by the IGP instance

Context **configure** router *named-item-64* isis *number* segment-routing tunnel-table-pref *number*

Tree tunnel-table-pref

Description This command configures the TTM preference of SR tunnels created by the IGP instance. This is used in the case of BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the new tunnel binding commands are configured to the **any** value which parses the TTM for tunnels in the protocol preference order. The user can choose to either go with the global TTM preference or list explicitly the tunnel types they want to use. When they list the tunnel types explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected one fails. Also, a reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to TTM a SR tunnel entry for each resolved remote node SID prefix and programs the data path with the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the setting of the default preference of the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as **SR-ISIS** and **SR-OSPF**).

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more instances of that protocol programmed a tunnel for the same prefix. The selection of a SR tunnel in this case is based on the lowest preference IGP instance. In the case of a tie, the instance with the lowest metric SR tunnel is selected over the lowest numbered IGP instance.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range 1 to 255

Default 11

Range	6 to 1048575
Notes	The following elements are part of a choice: (**interface**, **next-hop**, and **swap-label**) or **pop**.
Introduced	25.3.R2
Platforms	SAR Gen 2

graceful-restart

Synopsis	Enter the **graceful-restart** context
Context	**configure** router *named-item-64* ldp graceful-restart
Tree	graceful-restart
Introduced	25.3.R2
Platforms	SAR Gen 2

helper-mode *boolean*

Synopsis	Enable graceful restart helper
Context	**configure** router *named-item-64* ldp graceful-restart helper-mode *boolean*
Tree	helper-mode

Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

maximum-recovery-time *number*

Synopsis	Value for the local maximum recovery time
Context	**configure** router *named-item-64* ldp graceful-restart maximum-recovery-time *number*
Tree	maximum-recovery-time
Range	15 to 1800
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	SAR Gen 2

neighbor-liveness-time *number*

Synopsis	Value for the neighbor liveness timer
Context	**configure** router *named-item-64* ldp graceful-restart neighbor-liveness-time *number*
Tree	neighbor-liveness-time
Range	5 to 300
Units	seconds
Default	120
Introduced	25.3.R2
Platforms	SAR Gen 2

implicit-null-label *boolean*

Synopsis	Signal the implicit null label value for all LDP FECs for which the node is the egress LER
Context	**configure** router *named-item-64* ldp implicit-null-label *boolean*
Tree	implicit-null-label
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

import-pmsi-routes

Synopsis	Enter the **import-pmsi-routes** context
Context	**configure** router *named-item-64* ldp import-pmsi-routes
Tree	import-pmsi-routes
Introduced	25.3.R2
Platforms	SAR Gen 2

import-policy *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	**configure** router *named-item-64* ldp import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

import-tunnel-table *reference*

Synopsis	Tunnel table import policies for non-host prefixes
Context	**configure** router *named-item-64* ldp import-tunnel-table *reference*
Tree	import-tunnel-table
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	25.3.R2
Platforms	SAR Gen 2

interface-parameters

Synopsis	Enter the **interface-parameters** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* ldp interface-parameters
Tree	interface-parameters
Introduced	25.3.R2
Platforms	SAR Gen 2

interface [ip-int-name] *reference*

Synopsis	Enter the **interface** list instance
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference*
Tree	interface
Introduced	25.3.R2
Platforms	SAR Gen 2

[**ip-int-name**] *reference*

Synopsis	Interface name
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference*
Tree	interface
Reference	**configure** router *named-item-64* interface *interface-name*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* bfd-liveness
Tree	bfd-liveness
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Allow BFD tracking of IPv4 LDP Session for interface
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* bfd-liveness ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enable the **ipv4** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	SAR Gen 2

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

fec-type-capability

Synopsis	Enter the **fec-type-capability** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 fec-type-capability
Tree	fec-type-capability
Introduced	25.3.R2
Platforms	SAR Gen 2

prefix-ipv4 *boolean*

Synopsis	Enable IPv4 prefix FEC capability
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 fec-type-capability prefix-ipv4 *boolean*
Tree	prefix-ipv4
Default	true
Introduced	25.3.R2
Platforms	SAR Gen 2

hello

Synopsis	Enable the **hello** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 hello
Tree	hello
Introduced	25.3.R2
Platforms	SAR Gen 2

factor *number*

Synopsis	Factor value for Hello
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 hello factor *number*
Tree	factor
Range	1 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Timeout value for Hello
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 hello timeout *number*
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

keepalive

Synopsis	Enable the **keepalive** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 keepalive
Tree	keepalive
Introduced	25.3.R2
Platforms	SAR Gen 2

factor *number*

Synopsis	Factor value for keepalive
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 keepalive factor *number*
Tree	factor
Range	1 to 255
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Time that LDP waits before tearing down session

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 keepalive timeout *number*
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

local-lsr-id

Synopsis	Enter the **local-lsr-id** context
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 local-lsr-id
Tree	local-lsr-id
Introduced	25.3.R2
Platforms	SAR Gen 2

interface-name *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 local-lsr-id interface-name *reference*
Tree	interface-name
Reference	**configure** router *named-item-64* interface *interface-name*
Introduced	25.3.R2
Platforms	SAR Gen 2

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* ipv4 transport-address *keyword*
Tree	transport-address
Options	interface, system
Introduced	25.3.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	SAR Gen 2

load-balancing-weight *number*

Synopsis	Load balancing weight for the LDP interface
Context	**configure** router *named-item-64* ldp interface-parameters interface *reference* load-balancing-weight *number*
Tree	load-balancing-weight
Max. range	0 to 4294967295
Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** router *named-item-64* ldp interface-parameters ipv4
Tree	ipv4
Introduced	25.3.R2
Platforms	SAR Gen 2

hello

Synopsis	Enter the **hello** context
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 hello
Tree	hello
Introduced	25.3.R2
Platforms	SAR Gen 2

factor *number*

Synopsis	Value for the Hello factor
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 hello factor *number*
Tree	factor
Range	1 to 255
Default	3

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Timeout value for Hello
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 hello timeout *number*
Tree	timeout
Range	3 to 65535
Units	seconds
Default	15
Introduced	25.3.R2
Platforms	SAR Gen 2

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 keepalive
Tree	keepalive
Introduced	25.3.R2
Platforms	SAR Gen 2

factor *number*

Synopsis	Value for the keep-alive factor
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 keepalive factor *number*
Tree	factor
Range	1 to 255
Default	3
Introduced	25.3.R2
Platforms	SAR Gen 2

timeout *number*

Synopsis	Timeout value for keepalive

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** router *named-item-64* ldp interface-parameters ipv4 keepalive timeout *number*
Tree	timeout
Range	3 to 65535
Units	seconds
Default	30
Introduced	25.3.R2
Platforms	SAR Gen 2

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	**configure** router *named-item-64* ldp interface-parameters ipv4 transport-address *keyword*
Tree	transport-address
Options	interface, system
Default	system
Introduced	25.3.R2
Platforms	SAR Gen 2

label-withdrawal-delay *number*

Synopsis	Time interval during which LDP delays for the withdrawal of FEC-label binding
Context	**configure** router *named-item-64* ldp label-withdrawal-delay *number*
Tree	label-withdrawal-delay
Range	3 to 120
Units	seconds
Introduced	25.3.R2
Platforms	SAR Gen 2

ldp-shortcut

Synopsis	Enter the **ldp-shortcut** context
Context	**configure** router *named-item-64* ldp ldp-shortcut
Tree	ldp-shortcut

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	25.3.R2
Platforms	SAR Gen 2

ipv4 *boolean*

Synopsis	Forward IPv4 packets by using LDP shortcuts
Context	**configure** router *named-item-64* ldp ldp-shortcut ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

legacy-ipv4-lsr-interop *boolean*

Synopsis	Allow interoperability with legacy IPv4 LSR implementations
Context	**configure** router *named-item-64* ldp legacy-ipv4-lsr-interop *boolean*
Tree	legacy-ipv4-lsr-interop
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

lsp-bfd [prefix-list] *reference*

Synopsis	Enter the **lsp-bfd** list instance
Context	**configure** router *named-item-64* ldp lsp-bfd *reference*
Tree	lsp-bfd
Max. instances	16
Introduced	25.3.R2
Platforms	SAR Gen 2

[**prefix-list**] *reference*

Synopsis	Name of a router policy options prefix list
Context	**configure** router *named-item-64* ldp lsp-bfd *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	lsp-bfd
Reference	**configure** policy-options prefix-list *named-item-64*
Notes	This element is part of a list key.
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-liveness *boolean*

Synopsis	Enable BFD on LDP LSPs for FECs matching prefix list
Context	**configure** router *named-item-64* ldp lsp-bfd *reference* bfd-liveness *boolean*
Tree	bfd-liveness
Default	false
Introduced	25.3.R2
Platforms	SAR Gen 2

bfd-template *reference*

Synopsis	BFD sessions template associated with the prefix list
Context	**configure** router *named-item-64* ldp lsp-bfd *reference* bfd-template *reference*
Tree	bfd-template
Reference	**configure** bfd bfd-template *named-item*
Introduced	25.3.R2
Platforms	SAR Gen 2

failure-action *keyword*

Synopsis	Reaction to BFD session failure for the prefix list
Context	**configure** router *named-item-64* ldp lsp-bfd *reference* failure-action *keyword*
Tree	failure-action
Options	down
Introduced	25.3.R2
Platforms	SAR Gen 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lsp-ping-interval *(number | keyword)*

Synopsis	LSP ping transmit interval for periodic verification
Context	**configure** router *named-item-64* ldp lsp-bfd *reference* lsp-ping-interval *(number | keyword)*
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	25.3.R2
Platforms	SAR Gen 2

priority *number*

Synopsis	Prefix list to control the search order
Context	**configure** router *named-item-64* ldp lsp-bfd *reference* priority *number*
Tree	priority
Range	1 to 99
