 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis Enter the **ipv4** context
 Context **configure** [service vprn](#) *string* [aa-interface](#) *string* **ipv4**
 Tree [ipv4](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis Enable the **primary** context
 Context **configure** [service vprn](#) *string* [aa-interface](#) *string* **ipv4** **primary**
 Tree [primary](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis Primary IPv4 address assigned to the interface
 Context **configure** [service vprn](#) *string* [aa-interface](#) *string* **ipv4** **primary** **address** *string*
 Tree [address](#)
 Notes This element is mandatory.
 Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis IPv4 address prefix length
 Context **configure service vprn** *string aa-interface string ipv4 primary prefix-length number*
 Tree [prefix-length](#)
 Range 0 to 32
 Notes This element is mandatory.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance
 Context **configure service vprn** *string aa-interface string sap string*
 Tree [sap](#)
 Max. 1
 Instances
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis SAP ID
 Context **configure service vprn** *string aa-interface string sap string*
 Tree [sap](#)
 String Length 1 to 45
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the SAP

| | |
|------------|--|
| Context | configure service vprn <i>string aa-interface string sap string admin-state keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string aa-interface string sap string description string</i> |
| Tree | description |
| String Length | 1 to 160 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

egress

| | |
|------------|---|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string aa-interface string sap string egress</i> |
| Tree | egress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string aa-interface string sap string egress filter</i> |
| Tree | filter |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|----------|-------------------------|
| Synopsis | IPv4 filter policy name |
|----------|-------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string aa-interface string sap string egress filter ip reference</i> |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string aa-interface string sap string egress qos</i> |
| Tree | qos |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service vprn <i>string aa-interface string sap string egress qos sap-egress</i> |
| Tree | sap-egress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|------------|--|
| Synopsis | Policy ID to associate with SAP for mirrored service |
| Context | configure service vprn <i>string aa-interface string sap string egress qos sap-egress policy-name reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fwd-wholesale

| | |
|----------|--|
| Synopsis | Enter the fwd-wholesale context |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string aa-interface string sap string fwd-wholesale</i> |
| Tree | fwd-wholesale |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pppoe-service *reference*

| | |
|------------|--|
| Synopsis | PPPoE service name |
| Context | configure service vprn <i>string aa-interface string sap string fwd-wholesale pppoe-service reference</i> |
| Tree | pppoe-service |
| Reference | configure service epipe <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string aa-interface string sap string ingress</i> |
| Tree | ingress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string aa-interface string sap string ingress qos</i> |
| Tree | qos |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sap-ingress

| | |
|----------|--|
| Synopsis | Enter the sap-ingress context |
| Context | configure service vprn <i>string aa-interface string sap string ingress qos sap-ingress</i> |

Tree [sap-ingress](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis Enter the **overrides** context
 Context **configure service vprn string aa-interface string sap string ingress qos sap-ingress overrides**
 Tree [overrides](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis Policy ID
 Context **configure service vprn string aa-interface string sap string ingress qos sap-ingress policy-name *reference***
 Tree [policy-name](#)
 Reference **configure qos sap-ingress string**
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis Enter the **lag** context
 Context **configure service vprn string aa-interface string sap string lag**
 Tree [lag](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aaa

Synopsis Enter the **aaa** context
 Context **configure service vprn string aaa**
 Tree [aaa](#)

Introduced 16.0.R4
Platforms All

remote-servers

Synopsis Enter the **remote-servers** context
Context **configure service vprn string aaa remote-servers**
Tree [remote-servers](#)
Introduced 16.0.R4
Platforms All

radius

Synopsis Enable the **radius** context
Context **configure service vprn string aaa remote-servers radius**
Tree [radius](#)
Introduced 16.0.R4
Platforms All

access-algorithm keyword

Synopsis Algorithm used to access the set of RADIUS servers
Context **configure service vprn string aaa remote-servers radius access-algorithm keyword**
Tree [access-algorithm](#)
Default direct
Options direct, round-robin
Introduced 16.0.R4
Platforms All

accounting boolean

Synopsis Enable RADIUS command accounting
Context **configure service vprn string aaa remote-servers radius accounting boolean**
Tree [accounting](#)
Default false

Introduced 16.0.R4
Platforms All

accounting-port *number*

Synopsis Port number on RADIUS server for accounting requests
Context **configure** [service](#) [vprn](#) *string* [aaa](#) [remote-servers](#) [radius](#) [accounting-port](#) *number*
Tree [accounting-port](#)
Range 1 to 65535
Default 1813
Introduced 16.0.R4
Platforms All

admin-state *keyword*

Synopsis Administrative state of the authentication server
Context **configure** [service](#) [vprn](#) *string* [aaa](#) [remote-servers](#) [radius](#) [admin-state](#) *keyword*
Tree [admin-state](#)
Default enable
Options enable, disable
Introduced 16.0.R4
Platforms All

authorization *boolean*

Synopsis Enable RADIUS authorization
Context **configure** [service](#) [vprn](#) *string* [aaa](#) [remote-servers](#) [radius](#) [authorization](#) *boolean*
Tree [authorization](#)
Default false
Introduced 16.0.R4
Platforms All

interactive-authentication *boolean*

Synopsis Enable RADIUS interactive authentication

| | |
|------------|---|
| Context | configure service vprn <i>string</i> aaa remote-servers radius interactive-authentication <i>boolean</i> |
| Tree | interactive-authentication |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

port *number*

| | |
|------------|--|
| Synopsis | UDP port number on which to contact RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius port <i>number</i> |
| Tree | port |
| Range | 1 to 65535 |
| Default | 1812 |
| Introduced | 16.0.R4 |
| Platforms | All |

server [[index](#)] *number*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i> |
| Tree | server |
| Max. Instances | 5 |
| Introduced | 16.0.R4 |
| Platforms | All |

[index] *number*

| | |
|------------|--|
| Synopsis | RADIUS server ID |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i> |
| Tree | server |
| Range | 1 to 5 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |

Platforms All

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [address](#)

Notes This element is mandatory.

Introduced 16.0.R4

Platforms All

authenticator *keyword*

Synopsis Authenticator hash algorithm for the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number authenticator keyword**

Tree [authenticator](#)

Description This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.

Default md5

Options md5, sm3

Introduced 22.10.R1

Platforms All

secret *string*

Synopsis Secret key to access the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number secret string**

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R4

Platforms All

tls-client-profile *reference*

| | |
|-------------|---|
| Synopsis | TLS client profile for the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i> tls-client-profile reference |
| Tree | tls-client-profile |
| Description | This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS. |
| Reference | configure system security tls client-tls-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | All |

server-retry *number*

| | |
|------------|--|
| Synopsis | Number of attempts to retry contacting RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server-retry <i>number</i> |
| Tree | server-retry |
| Range | 1 to 10 |
| Default | 3 |
| Introduced | 16.0.R4 |
| Platforms | All |

server-timeout *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response from the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server-timeout <i>number</i> |
| Tree | server-timeout |
| Range | 1 to 90 |
| Default | 3 |
| Units | seconds |
| Introduced | 16.0.R4 |
| Platforms | All |

use-default-template *boolean*

| | |
|----------|---|
| Synopsis | Apply the RADIUS default user template to RADIUS user |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> aaa remote-servers radius use-default-template <i>boolean</i> |
| Tree | use-default-template |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

tacplus

| | |
|------------|---|
| Synopsis | Enable the tacplus context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus |
| Tree | tacplus |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting

| | |
|------------|--|
| Synopsis | Enable the accounting context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus accounting |
| Tree | accounting |
| Introduced | 16.0.R4 |
| Platforms | All |

record-type *keyword*

| | |
|------------|---|
| Synopsis | Type of accounting record packet sent to TACACS+ server |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus accounting record-type <i>keyword</i> |
| Tree | record-type |
| Default | stop-only |
| Options | start-stop, stop-only |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of the TACACS+ protocol |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

authorization

| | |
|------------|--|
| Synopsis | Enable the authorization context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus authorization |
| Tree | authorization |
| Introduced | 16.0.R4 |
| Platforms | All |

request-format

| | |
|-------------|---|
| Synopsis | Enter the request-format context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus authorization request-format |
| Tree | request-format |
| Description | Commands in this context configure access operations that are sent to the TACACS+ server during authorization. |
| Introduced | 21.10.R3 |
| Platforms | All |

access-operation-cmd *keyword*

| | |
|-------------|---|
| Synopsis | Access operations sent in authorization requests |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i> |
| Tree | access-operation-cmd |
| Description | This command sends an operation argument in authorization requests.

In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces. |
| Options | delete |

| | |
|----------------|----------|
| Max. Instances | 1 |
| Introduced | 21.10.R3 |
| Platforms | All |

use-priv-lvl *boolean*

| | |
|-------------|--|
| Synopsis | Allow privilege level mapping |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i> |
| Tree | use-priv-lvl |
| Description | <p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p> |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

interactive-authentication *boolean*

| | |
|------------|--|
| Synopsis | Allows TACACS+ interactive authentication |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus interactive-authentication <i>boolean</i> |
| Tree | interactive-authentication |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

priv-lvl-map

| | |
|----------|---|
| Synopsis | Enter the priv-lvl-map context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus priv-lvl-map |

| | |
|------------|------------------------------|
| Tree | priv-lvl-map |
| Introduced | 16.0.R4 |
| Platforms | All |

priv-lvl [[level](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the priv-lvl list instance |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> |
| Tree | priv-lvl |
| Introduced | 16.0.R4 |
| Platforms | All |

[level] *number*

| | |
|------------|--|
| Synopsis | Privilege level for the mapping |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> |
| Tree | priv-lvl |
| Range | 0 to 15 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

user-profile-name *reference*

| | |
|------------|---|
| Synopsis | User profile for the mapping |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> user-profile-name <i>reference</i> |
| Tree | user-profile-name |
| Reference | configure system security aaa local-profiles profile <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

server [*index*] *number*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |

| Synopsis | Aggregator AS number |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i> |
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

as-set *boolean*

| | |
|-------------|--|
| Synopsis | Use AS_SET path segment type for the aggregate route |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i> |
| Tree | as-set |
| Description | <p>When configured to true, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to false, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole

| | |
|------------|--|
| Synopsis | Enable the blackhole context |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole |
| Tree | blackhole |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |

Platforms All

generate-icmp *boolean*

Synopsis Send ICMP unreachable messages for aggregate routes

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **blackhole generate-icmp** *boolean*

Tree **generate-icmp**

Description When configured to **true**, ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop.
When configured to **false**, ICMP unreachable messages are not generated.

Default false

Introduced 16.0.R2

Platforms All

community *string*

Synopsis Community name that is added to the aggregate route

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **community** *string*

Tree **community**

Description This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.

String Length 1 to 72

Max. Instances 12

Notes This element is ordered by the user.

Introduced 16.0.R1

| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Address of the indirect next hop |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | indirect |
| Description | This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded. |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|----------|---|
| Synopsis | Local preference used when aggregate route is exported |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) local-preference <i>number</i> |
| Tree | local-preference |

| | |
|-------------|--|
| Description | This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes. |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|---|
| Synopsis | Policy name for the aggregated route |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) policy reference |
| Tree | policy |
| Description | <p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p> |
| Reference | configure policy-options policy-statement string |
| Introduced | 20.10.R1 |
| Platforms | All |

summary-only boolean

| | |
|-------------|---|
| Synopsis | Advertise the aggregate route only |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) summary-only boolean |
| Tree | summary-only |
| Description | <p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

tunnel-group *number*

| | |
|-------------|--|
| Synopsis | Tunnel group from which to associate the MC IPsec state |
| Context | configure service vpn <i>string aggregates aggregate (ipv4-prefix ipv6-prefix) tunnel-group number</i> |
| Tree | tunnel-group |
| Description | This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route. |
| Range | 1 to 64 |
| Introduced | 20.7.R1 |
| Platforms | All |

allow-export-bgp-vpn *boolean*

| | |
|------------|--|
| Synopsis | Include BGP-VPN routes for export |
| Context | configure service vpn <i>string allow-export-bgp-vpn boolean</i> |
| Tree | allow-export-bgp-vpn |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

autonomous-system *number*

| | |
|-------------|--|
| Synopsis | AS number advertised to peers for this router |
| Context | configure service vpn <i>string autonomous-system number</i> |
| Tree | autonomous-system |
| Description | This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.

If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted. |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp

| | |
|------------|--|
| Synopsis | Enable the bgp context |
| Context | configure service vprn string bgp |
| Tree | bgp |

| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the BGP instance |
| Context | configure service vprn string bgp admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-inactive *boolean*

| | |
|-------------|---|
| Synopsis | Advertise inactive BGP routes to peers |
| Context | configure service vprn string bgp advertise-inactive boolean |
| Tree | advertise-inactive |
| Description | When configured to true , this command allows any inactive BGP route to be advertised, even though it is not the used route.

When configured to false , the advertisement of inactive BGP routes to other BGP peers is disabled. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ipv6-next-hops

| | |
|----------|---|
| Synopsis | Enter the advertise-ipv6-next-hops context |
| Context | configure service vprn string bgp advertise-ipv6-next-hops |
| Tree | advertise-ipv6-next-hops |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv4 routes to be advertised |
| Context | configure service vprn <i>string</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

aggregator-id-zero *boolean*

| | |
|-------------|---|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to 0 |
| Context | configure service vprn <i>string</i> bgp aggregator-id-zero <i>boolean</i> |
| Tree | aggregator-id-zero |
| Description | <p>When configured to true, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.</p> <p>When configured to false, the AS number and router ID are added to the AGGREGATOR path attribute.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|------------|---|
| Synopsis | Advertise support for 4-byte ASNs |
| Context | configure service vprn <i>string</i> bgp asn-4-byte <i>boolean</i> |
| Tree | asn-4-byte |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | BGP authentication key for all peers |
| Context | configure service vprn string bgp authentication-key string |
| Tree | authentication-key |
| Description | This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting. |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|-------------|--|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn string bgp authentication-keychain reference |
| Tree | authentication-keychain |
| Description | This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session. |
| Reference | configure system security keychains keychain string |
| Introduced | 16.0.R3 |
| Platforms | All |

backup-path

| | |
|-------------|--|
| Synopsis | Enter the backup-path context |
| Context | configure service vprn string bgp backup-path |
| Tree | backup-path |
| Description | <p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for unlabeled unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp backup-path ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for unlabeled unicast IPv6 routes |
| Context | configure service vprn <i>string</i> bgp backup-path ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for labeled-unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp backup-path label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for labeled unicast IPv6 routes |
| Context | configure service vprn <i>string</i> bgp backup-path label-ipv6 <i>boolean</i> |
| Tree | label-ipv6 |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

best-path-selection

| | |
|------------|--|
| Synopsis | Enter the best-path-selection context |
| Context | configure service vprn string bgp best-path-selection |
| Tree | best-path-selection |
| Introduced | 16.0.R1 |
| Platforms | All |

always-compare-med

| | |
|-------------|--|
| Synopsis | Enter the always-compare-med context |
| Context | configure service vprn string bgp best-path-selection always-compare-med |
| Tree | always-compare-med |
| Description | Commands in this context determine how the BGP decision process is affected by the MED path attribute. |
| Introduced | 16.0.R1 |
| Platforms | All |

med-value *keyword*

| | |
|------------|---|
| Synopsis | Action for a missing MED attribute |
| Context | configure service vprn string bgp best-path-selection always-compare-med med-value keyword |
| Tree | med-value |
| Default | off |
| Options | off, missing-med-zero, missing-med-infinity, on |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-as *boolean*

| | |
|----------|---|
| Synopsis | Compare MED only for routes from same neighbor AS |
| Context | configure service vprn string bgp best-path-selection always-compare-med strict-as boolean |
| Tree | strict-as |

| | |
|-------------|---|
| Description | When configured to true , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.
When configured to false , the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

as-path-ignore

| | |
|-------------|--|
| Synopsis | Enter the as-path-ignore context |
| Context | configure service vprn string bgp best-path-selection as-path-ignore |
| Tree | as-path-ignore |
| Description | Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 boolean

| | |
|------------|--|
| Synopsis | Ignore AS path length for unlabeled unicast IPv4 routes |
| Context | configure service vprn string bgp best-path-selection as-path-ignore ipv4 boolean |

| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 boolean

| | |
|------------|--|
| Synopsis | Ignore AS path length for unlabeled unicast IPv6 routes |
| Context | configure service vprn string bgp best-path-selection as-path-ignore ipv6 boolean |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Ignore AS path length for labeled-unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp best-path-selection as-path-ignore label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Ignore AS path length for labeled unicast IPv6 routes |
| Context | configure service vprn <i>string</i> bgp best-path-selection as-path-ignore label-ipv6 <i>boolean</i> |
| Tree | label-ipv6 |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

compare-origin-validation-state *boolean*

| | |
|------------|--|
| Synopsis | Allow comparison of origin validation states |
| Context | configure service vprn <i>string</i> bgp best-path-selection compare-origin-validation-state <i>boolean</i> |
| Tree | compare-origin-validation-state |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

d-path-length-ignore *boolean*

| | |
|-------------|--|
| Synopsis | Enable D-PATH length ignore |
| Context | configure service vprn <i>string</i> bgp best-path-selection d-path-length-ignore <i>boolean</i> |
| Tree | d-path-length-ignore |
| Description | When configured to true , this command, enables the router to ignore the D-PATH domain segment length during best-path selection. |

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

| | |
|------------|----------|
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

deterministic-med *boolean*

| | |
|-------------|---|
| Synopsis | Group paths based on AS before MED attribute comparison |
| Context | configure service vprn string bgp best-path-selection deterministic-med boolean |
| Tree | deterministic-med |
| Description | When configured to true , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to false , paths are not grouped and the overall best-path selection can depend on the order of route arrival. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ebgp-ibgp-equal

| | |
|----------|--|
| Synopsis | Enter the ebgp-ibgp-equal context |
| Context | configure service vprn string bgp best-path-selection ebgp-ibgp-equal |
| Tree | ebgp-ibgp-equal |

| | |
|-------------|--|
| Description | <p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Consider EBGP and IBGP IPv4 routes equal |
| Context | configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Consider EBGP and IBGP IPv6 routes equal |
| Context | configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv6 <i>boolean</i> |
| Tree | ipv6 |

| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

ignore-nh-metric *boolean*

| | |
|-------------|---|
| Synopsis | Ignore next-hop distance in best path selection |
| Context | configure service vprn <i>string</i> bgp best-path-selection ignore-nh-metric <i>boolean</i> |
| Tree | ignore-nh-metric |
| Description | <p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-router-id

| | |
|-------------|---|
| Synopsis | Enable the ignore-router-id context |
| Context | configure service vprn <i>string</i> bgp best-path-selection ignore-router-id |
| Tree | ignore-router-id |
| Description | <p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

origin-invalid-unusable *boolean*

| | |
|------------|---|
| Synopsis | Ignore routes with invalid origin validation state |
| Context | configure service vprn <i>string</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i> |
| Tree | origin-invalid-unusable |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|---|
| Synopsis | Enable BFD |
| Context | configure service vprn <i>string</i> bgp bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Description | When configured to true , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations.
When configured to false , BFD is not enabled globally for all BGP sessions. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

client-reflect *boolean*

| | |
|-------------|---|
| Synopsis | Allow client reflection of routes by route reflector |
| Context | configure service vprn <i>string</i> bgp client-reflect <i>boolean</i> |
| Tree | client-reflect |
| Description | When configured to true , routes received from neighbors considered to be RR clients are reflected to other peers as expected.
When configured to false , routes received from neighbors considered to be RR clients are not reflected to other clients. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

cluster

| | |
|------------|--|
| Synopsis | Enter the cluster context |
| Context | configure service vprn string bgp cluster |
| Tree | cluster |
| Introduced | 16.0.R1 |

damp-peer-oscillations

| | |
|-------------|---|
| Synopsis | Enable the damp-peer-oscillations context |
| Context | configure service vprn string bgp damp-peer-oscillations |
| Tree | damp-peer-oscillations |
| Description | Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state. |
| Introduced | 16.0.R1 |
| Platforms | All |

error-interval *number*

| | |
|-------------|---|
| Synopsis | Time after a reset that the session must be error-free |
| Context | configure service vprn string bgp damp-peer-oscillations error-interval number |
| Tree | error-interval |
| Description | This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time. |
| Range | 0 to 2048 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

|-------------|--|
| Synopsis | Time that doubles after each session failure |
| Context | configure service vprn <i>string</i> bgp damp-peer-oscillations idle-hold-time second-wait number |
| Tree | second-wait |
| Description | This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time. |
| Range | 1 to 2048 |
| Default | 5 |
| Introduced | 16.0.R1 |

Platforms All

damping *boolean*

Synopsis Use BGP route damping to reduce route flap

Context **configure** *service vprn string bgp damping boolean*

Tree *damping*

Description When configured to **true**, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.

Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:

- Half-life: 15 minutes
- Max-suppress: 60 minutes
- Suppress-threshold: 3000
- Reuse-threshold: 750

When configured to **false**, BGP route damping for learned routes is disabled.

Default false

Introduced 16.0.R1

domain-id *string*

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp domain-id <i>string</i> |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |

Introduced 21.10.R1
 Platforms All

dynamic-neighbor-limit *number*

Synopsis Max dynamic BGP sessions to accept from remote peers
 Context **configure** *service vprn string bgp dynamic-neighbor-limit number*
 Tree [dynamic-neighbor-limit](#)
 Description This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
 Range 1 to 8192

forwarding-bits-set *keyword*

| | |
|-------------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Default | none |

| | |
|------------|--------------------|
| Options | none, all, non-fwd |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI. |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override. |
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|----------|--|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived without-no-export <i>boolean</i> |

| | |
|-------------|---|
| Tree | without-no-export |
| Description | <p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

restart-time *number*

| | |
|------------|---|
| Synopsis | Restart time advertised by GR capability |
| Context | configure service vprn <i>string</i> bgp graceful-restart restart-time <i>number</i> |
| Tree | restart-time |
| Range | 0 to 4095 |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | All |

stale-routes-time *number*

| | |
|------------|--|
| Synopsis | Maximum time to maintain routes after graceful restart |
| Context | configure service vprn <i>string</i> bgp graceful-restart stale-routes-time <i>number</i> |
| Tree | stale-routes-time |
| Range | 1 to 3600 |
| Default | 360 |
| Introduced | 16.0.R1 |
| Platforms | All |

group [[group-name](#)] *string*

| | |
|----------|--------------------------------------|
| Synopsis | Enter the group list instance |
|----------|--------------------------------------|

| | |
|------------|---|

| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | All |

[group-name] string

| | |
|---------------|---|
| Synopsis | BGP peer group name |
| Context | configure service vprn string bgp group string |
| Tree | group |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the BGP group |
| Context | configure service vprn string bgp group string admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-inactive boolean

| | |
|-------------|---|
| Synopsis | Advertise an inactive BGP route to peers |
| Context | configure service vprn string bgp group string advertise-inactive boolean |
| Tree | advertise-inactive |
| Description | <p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. |

- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ipv6-next-hops

| | |
|------------|--|
| Synopsis | Enable the advertise-ipv6-next-hops context |
| Context | configure service vprn string bgp group string advertise-ipv6-next-hops |

| | |
|------------|---|
| Synopsis | Enable IPv4 routes to be advertised |
| Context | configure service vprn string bgp group string advertise-ipv6-next-hops ipv4 boolean |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

aggregator-id-zero *boolean*

| | |
|------------|--|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to zero |
| Context | configure service vprn string bgp group string aggregator-id-zero boolean |
| Tree | aggregator-id-zero |
| Introduced | 16.0.R1 |
| Platforms | All |

as-override *boolean*

| | |
|-------------|--|
| Synopsis | Replace the peer's ASN with the local ASN in AS Path |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> as-override <i>boolean</i> |
| Tree | as-override |
| Description | When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When configured to false , no AS override is performed. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|-------------|--|
| Synopsis | Advertise the use of 4-byte ASNs |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> asn-4-byte <i>boolean</i> |
| Tree | asn-4-byte |
| Description | When this command inherits a value of true , the use of 4-byte ASNs is supported.

When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true .

When configured to false , this command disables the use of 4-byte ASNs. |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | BGP authentication key for peers in the group |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting. |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |

Platforms All

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [authentication-keychain](#) *reference*

Tree [authentication-keychain](#)

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** [system security keychains keychain](#) *string*

Introduced 16.0.R3

Platforms All

bfd-liveness *boolean*

Synopsis Enable BFD

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [bfd-liveness](#) *boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1

Platforms All

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [capability-negotiation](#) *boolean*

Tree [capability-negotiation](#)

Description When configured to **true**, this command enables the exchange of capabilities.

When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 16.0.R1
 Platforms All

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* **client-reflect** *boolean*
 Tree [client-reflect](#)
 Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.
 When the command inherits a value of **true**, client reflection of routes is enabled.
 When configured to **false**, this command disables client reflection of routes.
 Introduced 16.0.R1

| Platforms | All |

interface [[interface-name](#)] *reference*

| | |
|-------------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn string bgp group string dynamic-neighbor interface <i>reference</i> |
| Tree | interface |
| Description | <p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p> |
| Introduced | 22.10.R1 |
| Platforms | All |

[\[interface-name\]](#) *reference*

| | |

| Synopsis | Advertise support for the MCAST-IPv4 address family |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> family mcast-ipv4 <i>boolean</i> |
| Tree | mcast-ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mcast-ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Advertise support for the MCAST-IPv6 address family |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> family mcast-ipv6 <i>boolean</i> |
| Tree | mcast-ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

fast-external-failover *boolean*

| | |
|----------|---|
| Synopsis | Drop external BGP session immediately when link fails |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> fast-external-failover <i>boolean</i> |

| | |
|-------------|--|
| Tree | fast-external-failover |
| Description | <p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|--|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

gr-notification *boolean*

| | |
|-------------|--|
| Synopsis | Perform graceful restart procedures after NOTIFICATION |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart gr-notification <i>boolean</i> |
| Tree | gr-notification |
| Description | <p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

long-lived

| | |

advertised-stale-time *number*

| | |
|-------------|--|
| Synopsis | LLGR stale routes time for family override |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i> |
| Tree | advertised-stale-time |
| Description | This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override. |
| Range | 0 to 16777215 |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value. |
| Range | 0 to 16777216 |
| Default | 16777216 |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|----------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Default | none |
| Options | none, all, non-fwd |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | <p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p> |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | <p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> |

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

| | |
|------------|---------------|
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|-------------|---|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived without-no-export <i>boolean</i> |
| Tree | without-no-export |
| Description | <p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

restart-time *number*

| | |
|------------|---|
| Synopsis | Restart time advertised by GR capability |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart restart-time <i>number</i> |

minimum-hold-time *number*

| | |
|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time minimum-hold-time <i>number</i> |
| Tree | minimum-hold-time |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
When unconfigured, the command value is inherited from the BGP global-level setting. |
| Range | 0 3 to 65536 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|--|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time seconds <i>number</i> |
| Tree | seconds |
| Description | This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. |

Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP global-level configuration.

initial-send-delay-zero *boolean*

| | |
|-------------|---|
| Synopsis | Send BGP updates as soon as the session comes up |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> initial-send-delay-zero <i>boolean</i> |
| Tree | initial-send-delay-zero |
| Description | <p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

keepalive *number*

| | |
|-------------|--|
| Synopsis | Time after which the BGP KEEPALIVE message is sent |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> keepalive <i>number</i> |
| Tree | keepalive |
| Description | <p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p> |
| Range | 0 to 21845 |

passive *boolean*

Synopsis Enable passive mode for BGP communication
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [passive](#) *boolean*
Tree [passive](#)
Default false
Introduced 16.0.R1
Platforms All

path-mtu-discovery *boolean*

Synopsis Enable Path MTU Discovery
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [path-mtu-discovery](#) *boolean*
Tree [path-mtu-discovery](#)

| | |
|-------------|--|
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|------------|---|
| Synopsis | Peer AS number |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-as <i>number</i> |
| Tree | peer-as |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|--|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p> |
| Introduced | 16.0.R1 |

Platforms All

preference *number*

Synopsis Route preference for routes learned from all peers
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* [preference](#) *number*

| Context | configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> post-import <i>boolean</i> |
| Tree | post-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Percentage threshold that triggers a warning message |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

remove-private

| | |
|------------|---|
| Synopsis | Enable the remove-private context |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> remove-private |
| Tree | remove-private |
| Introduced | 16.0.R1 |
| Platforms | All |

limited *boolean*

| | |
|------------|---|
| Synopsis | Remove private ASNs up to first public ASN encountered |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> remove-private limited <i>boolean</i> |
| Tree | limited |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

replace *boolean*

| | |
|------------|---|
| Synopsis | Replace private ASN with global ASN before advertising |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> remove-private replace <i>boolean</i> |
| Tree | replace |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

skip-peer-as *boolean*

| | |
|------------|--|
| Synopsis | Keep private ASN if it is the same as the BGP peer ASN |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> remove-private skip-peer-as <i>boolean</i> |
| Tree | skip-peer-as |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

send-communities

| | |
|------------|--|
| Synopsis | Enter the send-communities context |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-communities |
| Tree | send-communities |
| Introduced | 16.0.R1 |
| Platforms | All |

extended *boolean*

| | |
|-------------|--|
| Synopsis | Advertise the Extended Communities attribute to peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-communities extended <i>boolean</i> |
| Tree | extended |
| Description | <p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

large *boolean*

| | |
|----------|---|
| Synopsis | Advertise the Large Communities attribute to peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-communities large <i>boolean</i> |
| Tree | large |

| | |
|-------------|---|
| Description | When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true .
When this command inherits a value of true , BGP large communities are sent to peers in the Large Communities attribute.
When configured to false , all large communities are removed from all routes advertised to BGP peers. |
| Introduced | 16.0.R1 |
| Platforms | All |

standard *boolean*

| | |
|-------------|---|
| Synopsis | Advertise the Communities attribute to peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-communities standard <i>boolean</i> |
| Tree | standard |
| Description | When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true .
When this command inherits a value of true , BGP standard communities are sent to peers in the Communities attribute.
When configured to false , all standard communities are removed from all routes advertised to BGP peers. |
| Introduced | 16.0.R1 |
| Platforms | All |

send-default

| | |
|------------|--|
| Synopsis | Enable the send-default context |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Generate and advertise an IPv4 default route (0/0) |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-default ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Generate and advertise an IPv6 default route (::/0) |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-default ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p> |
| Introduced | 16.0.R1 |

Platforms All

static-group *boolean*

Synopsis Use group for static peers

Context **configure** [service vprn](#) *string* [bgp group](#) *string* **static-group** *boolean*

Tree [static-group](#)

Default true

Introduced 16.0.R1

Platforms All

tcp-mss (*number* | *keyword*)

Synopsis TCP maximum segment size override

Context **configure** [service vprn](#) *string* [bgp group](#) *string* **tcp-mss** (*number* | *keyword*)

Tree [tcp-mss](#)

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).

The configured value controls two properties of the TCP connection as follows:

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Options ip-stack

Introduced 21.2.R1

Platforms All

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers

Context **configure** [service vprn](#) *string* [bgp group](#) *string* **third-party-nexthop** *boolean*

Tree [third-party-nexthop](#)

| | |
|-------------|---|
| Description | <p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ttl-security *number*

| | |
|-------------|--|
| Synopsis | Minimum TTL value for an incoming BGP packet |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> ttl-security <i>number</i> |
| Tree | ttl-security |
| Description | This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|------------|--|
| Synopsis | BGP peer type |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> type <i>keyword</i> |
| Tree | type |
| Default | no-type |
| Options | no-type, internal, external |
| Introduced | 16.0.R1 |
| Platforms | All |

hold-time

| | |
|----------|------------------------------------|
| Synopsis | Enter the hold-time context |
|----------|------------------------------------|

| | |
|------------|--|
| Context | configure service vprn string bgp hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | All |

minimum-hold-time *number*

| | |
|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure service vprn string bgp hold-time minimum-hold-time number |
| Tree | minimum-hold-time |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. |
| Range | 0 3 to 65535 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|---|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure service vprn string bgp hold-time seconds number |
| Tree | seconds |
| Description | <p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. |
| Range | 0 3 to 65535 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

ibgp-multipath *boolean*

| | |
|-------------|--|
| Synopsis | Enable IBGP multipath load balancing |
| Context | configure service vprn <i>string</i> bgp ibgp-multipath <i>boolean</i> |
| Tree | ibgp-multipath |
| Description | When configured to true , this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.

When configured to false , this command disables IBGP multipath load balancing. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

| | |
|------------|---|
| Synopsis | Maximum multipaths per prefix for EBGp learned routes |
| Context | configure service vprn <i>string</i> bgp multipath ebgp number |
| Tree | ebgp |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

family [family-type] keyword

| | |
|-------------|---|
| Synopsis | Enter the family list instance |
| Context | configure service vprn <i>string</i> bgp multipath family keyword |
| Tree | family |
| Description | <p>Commands in this context set ECMP multipath parameters that apply only to the specified label unicast address family.</p> <p>When multipath is enabled, traffic to the destination is load-shared across a set of paths (BGP routes) that the BGP decision process considers equal to the best path. The distribution of traffic over the multiple paths may or may not be equal. The distribution is based on weights derived from the Link Bandwidth Extended Community.</p> |
| Introduced | 19.5.R1 |
| Platforms | All |

[family-type] keyword

| | |
|------------|--|
| Synopsis | Address family type for the multipath selection |
| Context | configure service vprn <i>string</i> bgp multipath family keyword |
| Tree | family |
| Options | ipv4, ipv6, label-ipv4, label-ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

ebgp number

| | |
|-------------|--|
| Synopsis | Maximum multipaths when best path is EBGp learned route |
| Context | configure service vprn string bgp multipath family keyword ebgp number |
| Tree | ebgp |
| Description | This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled. |
| Range | 1 to 64 |
| Introduced | 19.5.R1 |
| Platforms | All |

ibgp number

| | |
|-------------|---|
| Synopsis | Maximum multipaths when best path is IBGP learned route |
| Context | configure service vprn string bgp multipath family keyword ibgp number |
| Tree | ibgp |
| Description | This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled. |
| Range | 1 to 64 |
| Introduced | 19.5.R1 |
| Platforms | All |

max-paths number

| | |
|-------------|---|
| Synopsis | Maximum number of multipaths per prefix or NLRI |
| Context | configure service vprn string bgp multipath family keyword max-paths number |
| Tree | max-paths |
| Description | This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.
Consider the following when configuring this command: <ul style="list-style-type: none"> • If the best path is an EBGp-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command. |

- If the best path is an IBGP-learned route and the **ibgp** command is configured, the limit configured in the **ibgp** command overrides the limit configured in this command.
- If the best path is an EBGP-learned route and the **ebgp** command is not configured, and this command is configured to 1, multipaths are disabled.
- If the best path is an IBGP-learned route and the **ibgp** command is not configured, and this command is configured to 1, multipaths are disabled.

Range 1 to 64

Introduced 19.5.R1

Platforms All

| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-inactive *boolean*

| | |
|----------|--|
| Synopsis | Advertise an inactive BGP route to peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-inactive <i>boolean</i> |
| Tree | advertise-inactive |

| | |
|-------------|---|
| Description | <p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ipv6-next-hops

| | |
|------------|---|
| Synopsis | Enable the advertise-ipv6-next-hops context |
| Context | configure <i>service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) advertise-ipv6-next-hops</i> |
| Tree | <i>advertise-ipv6-next-hops</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv4 routes to be advertised |
| Context | configure <i>service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) advertise-ipv6-next-hops ipv4 boolean</i> |
| Tree | <i>ipv4</i> |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

aggregator-id-zero *boolean*

| | |
|------------|---|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to zero |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aggregator-id-zero <i>boolean</i> |
| Tree | aggregator-id-zero |
| Introduced | 16.0.R1 |
| Platforms | All |

as-override *boolean*

| | |
|-------------|--|
| Synopsis | Replace the peer ASN with the local ASN in AS Path |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i> |
| Tree | as-override |
| Description | <p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). This command cannot be explicitly configured to false.</p> <p>When the command inherits a value of false, no AS override is performed.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|------------|---|
| Synopsis | Advertise the use of 4-byte ASNs |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) asn-4-byte <i>boolean</i> |
| Tree | asn-4-byte |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|----------|------------------------|
| Synopsis | BGP authentication key |
|----------|------------------------|

| | |
|---------------|---|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|-------------|---|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Description | This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session. |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|---|
| Synopsis | Enable BFD |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Description | <p>When configured to true, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BFD is removed from the associated protocol adjacency.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

capability-negotiation *boolean*

| | |
|------------|---|
| Synopsis | Enable capability negotiation |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) capability-negotiation <i>boolean</i> |
| Tree | capability-negotiation |
| Introduced | 16.0.R1 |
| Platforms | All |

client-reflect *boolean*

| | |
|------------|---|
| Synopsis | Allow cluster RR to advertise routes to its clients |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) client-reflect <i>boolean</i> |
| Tree | client-reflect |
| Introduced | 16.0.R1 |
| Platforms | All |

cluster

| | |

enforce-first-as *boolean*

| | |
|-------------|---|
| Synopsis | Enforce the configured peer AS value in received routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i> |
| Tree | enforce-first-as |
| Description | <p>When configured to true for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, received routes are not checked for compliance with the rule.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

error-handling

| | |
|------------|--|
| Synopsis | Enter the error-handling context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling |
| Tree | error-handling |
| Introduced | 16.0.R1 |
| Platforms | All |

update-fault-tolerance *boolean*

| | |
|-------------|---|
| Synopsis | Tolerate non-critical errors in UPDATE messages |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling update-fault-tolerance <i>boolean</i> |
| Tree | update-fault-tolerance |
| Description | When configured to true , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. |

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, all errors trigger a session reset.

Introduced 16.0.R1

mcast-ipv4 *boolean*

Synopsis Advertise support for the MCAST-IPv4 address family

Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **family mcast-ipv4** *boolean*

Tree [mcast-ipv4](#)

Default false

Introduced 16.0.R1

Platforms All

mcast-ipv6 *boolean*

Synopsis Advertise support for the MCAST-IPv6 address family

Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **family mcast-ipv6** *boolean*

| | |
|------------|----------------------------|
| Tree | mcast-ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

fast-external-failover *boolean*

| | |
|-------------|---|
| Synopsis | Drop external BGP session immediately when link fails |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) fast-external-failover <i>boolean</i> |
| Tree | fast-external-failover |
| Description | <p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

gr-notification *boolean*

| | |
|-------------|---|
| Synopsis | Perform graceful restart procedures after NOTIFICATION |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart gr-notification <i>boolean</i> |
| Tree | gr-notification |
| Description | <p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> |

When configured to **false**, NOTIFICATION messages are not supported.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

long-lived

| | |
|------------|---|
| Synopsis | Enable the long-lived context |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) graceful-restart long-lived |
| Tree | long-lived |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-stale-to-all-neighbors *boolean*

| | |
|------------|--|
| Synopsis | Advertise stale routes to all BGP peers |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) graceful-restart long-lived advertise-stale-to-all-neighbors boolean |
| Tree | advertise-stale-to-all-neighbors |

| Introduced | 16.0.R1 |
| Platforms | All |

advertised-stale-time *number*

| | |
|------------|--|
| Synopsis | Advertised long-lived stale time for LLGR routes |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) graceful-restart long-lived advertised-stale-time number |
| Tree | advertised-stale-time |
| Range | 0 to 16777215 |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | All |

family [*family-type*] *keyword*

| | |
|------------|--|
| Synopsis | Enter the family list instance |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> |
| Tree | family |
| Introduced | 16.0.R1 |
| Platforms | All |

[family-type] *keyword*

| | |
|------------|--|
| Synopsis | Address family type for LLGR |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> |
| Tree | family |
| Options | ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertised-stale-time *number*

| | |
|-------------|---|
| Synopsis | LLGR stale routes time for family override |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i> |
| Tree | advertised-stale-time |
| Description | This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override. |
| Range | 0 to 16777215 |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value. |
| Range | 0 to 16777216 |
| Default | 16777216 |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|-------------|--|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
| Context | configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.

This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6). |
| Default | none |
| Options | none, all, non-fwd |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|----------|---|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |

| | |
|-------------|---|
| Description | This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI. |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override. |
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|-------------|--|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i> |
| Tree | without-no-export |
| Description | When configured to true , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to false , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes. |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

restart-time *number*

| | |
|------------|---|
| Synopsis | Restart time advertised by GR capability |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart restart-time <i>number</i> |
| Tree | restart-time |
| Range | 0 to 4095 |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | All |

| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | All |

minimum-hold-time *number*

| | |
|------------|--|
| Synopsis | Minimum time BGP waits between successive messages |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) hold-time minimum-hold-time number |
| Tree | minimum-hold-time |
| Range | 0 3 to 65536 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|--|
| Synopsis | Maximum hold time between successive messages |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) hold-time seconds number |
| Tree | seconds |
| Description | <p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. |

- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP group-level configuration.

| | |

path-mtu-discovery *boolean*

Synopsis Enable path MTU discovery
 Context **configure** **service** **vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-mtu-discovery** *boolean*

| | |
|-------------|---|
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|-------------|---|
| Synopsis | Peer AS number |
| Context | configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i> |
| Tree | peer-as |
| Description | <p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p> |

| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|-------------|--|
| Synopsis | Route preference for routes learned from all peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i> |
| Tree | preference |
| Description | <p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p> |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit [*family*] *keyword*

| | |
|------------|---|
| Synopsis | Enter the prefix-limit list instance |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword |
| Tree | prefix-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

[family] *keyword*

| | |
|------------|---|
| Synopsis | Address family to which the limit applies |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword |
| Tree | prefix-limit |
| Options | ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

idle-timeout *number*

| | |
|-------------|---|
| Synopsis | Time which BGP peering remains idle before reconnecting |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit keyword idle-timeout number |
| Tree | idle-timeout |
| Description | This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.

When unconfigured, the command inherits the value from the group-level configuration. |
| Range | 1 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|----------|--|
| Synopsis | Send warning message at threshold instead of take-down |

| Tree | ipv6 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split-horizon. |

This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the use of split-horizon is disabled.

Introduced 16.0.R1
Platforms All

tcp-mss (*number* | *keyword*)

Synopsis TCP maximum segment size override

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **tcp-mss** (*number* | *keyword*)

Tree **tcp-mss**

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).

The configured value controls two properties of the TCP connection as follows:

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Options ip-stack

Introduced 21.2.R1

Platforms All

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **third-party-nexthop** *boolean*

Tree **third-party-nexthop**

Introduced 16.0.R1

Platforms All

ttl-security *number*

Synopsis Minimum TTL value for an incoming BGP packet

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **ttl-security** *number*

Tree [ttl-security](#)

Description This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.

When unconfigured, the command inherits the value of the group-level setting.

Range 1 to 255

Introduced 16.0.R1

use-bgp-routes boolean

| | |
|-------------|--|
| Synopsis | Use BGP routes to resolve BGP next hops |
| Context | configure service vprn string bgp next-hop-resolution use-bgp-routes <i>boolean</i> |
| Tree | use-bgp-routes |
| Description | <p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p> |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

path-mtu-discovery boolean

| | |
|-------------|--|
| Synopsis | Enable Path MTU Discovery |
| Context | configure service vprn string bgp path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> |

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

policy-name *reference*

| | |
|-------------|---|
| Synopsis | Name of policy that controls route importation into RIB |
| Context | configure service vprn string bgp rib-management ipv6 route-table-import policy-name reference |
| Tree | policy-name |
| Description | This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.

When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used. |

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to false, the use of split-horizon is disabled.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss *number*

| | |
|-------------|--|
| Synopsis | TCP maximum segment size override |
| Context | configure service vprn <i>string</i> bgp tcp-mss <i>number</i> |
| Tree | tcp-mss |
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> |

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

| | |
|------------|-------------|
| Range | 384 to 9746 |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|-------------|---|
| Synopsis | Apply third-party next-hop processing to EBGP peers |
| Context | configure <i>service vprn string bgp third-party-nexthop boolean</i> |
| Tree | third-party-nexthop |
| Description | <p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

resolution-filter

| | |
|-------------|---|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Description | Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers. |
| Introduced | 20.10.R1 |
| Platforms | All |

bgp boolean

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter bgp boolean |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

ldp boolean

| | |
|----------|---|
| Synopsis | Use LDP tunneling for next-hop resolution |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.
When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

mpls-fwd-policy boolean

| | |
|-------------|---|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.
When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rib-api boolean

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter rib-api boolean |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rsvp boolean

| | |
|-------------|--|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure <i>service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter rsvp boolean</i> |
| Tree | <i>rsvp</i> |
| Description | <p>When configured to true, BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to false, the RSVP LSP is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-isis boolean

| | |
|-------------|--|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure <i>service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-isis boolean</i> |
| Tree | <i>sr-isis</i> |
| Description | <p>When configured to true, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf boolean

| | |
|----------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure <i>service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean</i> |
| Tree | <i>sr-ospf</i> |

| | |
|-------------|--|
| Description | When configured to true , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.
When configured to false , OSPF tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf3 *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i> |
| Tree | sr-ospf3 |
| Description | When configured to true , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.
When configured to false , OSPF3 tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|--|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | When configured to true , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.
When configured to false , SR policies are not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |

Platforms All

sr-te *boolean*

Synopsis Use SR-TE tunneling for next-hop resolution

Context **configure** *service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te boolean*

Tree [sr-te](#)

Description When configured to **true**, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.
When configured to **false**, SR-TE tunneling is not used for next-hop resolution.

Default false

Introduced 20.10.R1

Platforms All

udp *boolean*

Synopsis Use MPLS over UDP tunneling for next-hop resolution

Context **configure** *service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp boolean*

Tree [udp](#)

Description When configured to **true**, BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to **false**, MPLS over UDP tunneling is not used for next-hop resolution.

Default false

Introduced 20.10.R1

Platforms All

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Default route tag

| | |
|-------------|--|
| Context | configure service vprn string bgp-evpn mpls number default-route-tag string |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the default-route-tag, then EVPN keeps tag A when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |

domain-id string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn string bgp-evpn mpls number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> |

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced 21.10.R1

dynamic-egress-label-limit *boolean*

Synopsis Enables dynamic egress label limit

Context **configure** *service vprn string bgp-evpn mpls number* **dynamic-egress-label-limit** *boolean*

Tree **dynamic-egress-label-limit**

Description When configured to **true**, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.

For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default false

weighted-ecmp *boolean*

Synopsis Enable weighted ECMP

Context **configure service vprn** *string* **bgp-evpn mpls** *number* **evpn-link-bandwidth weighted-ecmp** *boolean*

Tree **weighted-ecmp**

Description When configured to **true**, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.

Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).

The command also enables the weighted ECMP functionality for BGP CEs that are configured with an **evpn-link-bandwidth add-to-received-bgp** weight.

When configured to **false**, the router disables the processing of the EVPN link bandwidth extended community.

Default false

| | |
|------------|---------|
| Introduced | 21.2.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BGP-IPVPN MPLS |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.2.R1 |
| Platforms | All |

auto-bind-tunnel

| | |
|-------------|---|
| Synopsis | Enter the auto-bind-tunnel context |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel |
| Tree | auto-bind-tunnel |
| Description | Commands in this context configure the automatic binding parameters of a BGP-IPVPN service using tunnels to MP-BGP peers. |
| Introduced | 21.2.R1 |
| Platforms | All |

allow-flex-algo-fallback *boolean*

| | |
|-------------|---|
| Synopsis | Enable flexible algorithm fallback |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i> |
| Tree | allow-flex-algo-fallback |
| Description | <p>When configured to true, a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to false, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p> |
| Default | false |
| Introduced | 21.2.R1 |

Platforms All

ecmp *number*

Synopsis Maximum ECMP routes allowed

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **ecmp** *number*

Tree [ecmp](#)

Description This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the **configure service vprn** context level.

Range 1 to 32

Default 1

Introduced 21.2.R1

Platforms All

enforce-strict-tunnel-tagging *boolean*

Synopsis Allow enforcement of strict tunnel tagging

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **enforce-strict-tunnel-tagging** *boolean*

Tree [enforce-strict-tunnel-tagging](#)

Description When configured to **true**, the system must only consider LSPs marked with an administrative tag for next-hop resolution.

When configured to **false**, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.

Default false

Introduced 21.2.R1

Platforms All

resolution *keyword*

Synopsis Resolution method for tunnel selection

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **resolution** *keyword*

Tree [resolution](#)

Default none

Options none, filter, any

| | |
|------------|---------|
| Introduced | 21.2.R1 |
| Platforms | All |

resolution-filter

| | |
|-------------|---|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Description | Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers. |
| Introduced | 21.2.R1 |
| Platforms | All |

bgp boolean

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp boolean |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |
| Default | true |
| Introduced | 21.2.R1 |
| Platforms | All |

gre boolean

| | |
|-------------|--|
| Synopsis | Use GRE tunneling for next-hop resolution |
| Context | configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean |
| Tree | gre |
| Description | When configured to true , this command enables setting the tunnel type for the auto bind tunnel. |

When configured to **false**, this command disables setting the tunnel type for the auto bind tunnel.

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

ldp *boolean*

| | |
|-------------|---|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp <i>boolean</i> |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.
When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

mpls-fwd-policy *boolean*

| | |
|-------------|---|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter mpls-fwd-policy <i>boolean</i> |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.
When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|----------|--|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
|----------|--|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-isis *boolean*

| | |
|-------------|---|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis <i>boolean</i> |
| Tree | sr-isis |
| Description | When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.
When configured to false , IS-IS tunneling is not used for next-hop resolution. |

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i> |
| Tree | sr-ospf |
| Description | <p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf3 *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i> |
| Tree | sr-ospf3 |
| Description | <p>When configured to true, BGP uses an OSPFv3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPFv3 instance.</p> <p>When configured to false, OSPFv3 tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|----------|---|
| Synopsis | Use SR policies for next-hop resolution |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | When configured to true , SR policies are used to determine the address of the BGP next hop.

The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.

When configured to false , SR policies are not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|--|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te <i>boolean</i> |
| Tree | sr-te |
| Description | When configured to true , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.

When configured to false , SR-TE tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

udp *boolean*

| | |
|-------------|--|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter udp <i>boolean</i> |
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.

When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |

| | |
|------------|---------|
| Introduced | 21.2.R1 |
| Platforms | All |

weighted-ecmp *boolean*

| | |
|-------------|---|
| Synopsis | Allow weighted load-balancing |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp <i>boolean</i> |
| Tree | weighted-ecmp |
| Description | <p>When configured to true, this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.</p> <p>When configured to false, this command disables weighted ECMP for next-hop tunnel selection.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

domain-id *string*

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls domain-id <i>string</i> |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> |

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure <i>service vpn</i> <i>string</i> <i>bgp-ipvpn</i> <i>segment-routing-v6</i> <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

domain-id *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure <i>service vpn</i> <i>string</i> <i>bgp-ipvpn</i> <i>segment-routing-v6</i> <i>number</i> domain-id <i>string</i> |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The</p> |

VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

policy (*policy-expr-string* | *string*)

Synopsis Policy name

Context **configure service vprn** *string* **bgp-ipvpn segment-routing-v6** *number* **vrf-export policy** (*policy-expr-string* | *string*)

Tree **policy**

Description This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).

Each referenced object is either a policy logical expression or the name of a single policy.

Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.

Only the first policy can have the maximum length and the rest can be up to 64 characters.

Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.

ignore-mclt-on-takeover *boolean*

| | |
|-------------|--|
| Synopsis | Ignore maximum client lead during takeover from partner |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover ignore-mclt-on-takeover <i>boolean</i> |
| Tree | ignore-mclt-on-takeover |
| Description | When configured to true , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire. |

When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover partner-down-delay <i>number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease |

duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

| | |
|------------|---|
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover partner-down-delay <i>number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease |

duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

| | |
|------------|---|
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer [[address](#)] *reference*

| | |
|----------------|--|
| Synopsis | Enter the peer list instance |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string failover peer reference |
| Tree | peer |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[address] *reference*

| | |
|------------|--|
| Synopsis | IP address of the failover peer |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string failover peer reference |
| Tree | peer |
| Reference | configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sync-tag *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Tag that identifies synchronizing server or pool pairs |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover peer reference sync-tag <i>string</i> |
| Tree | sync-tag |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

startup-wait-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time between initialization and assuming active role |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover startup-wait-time <i>number</i> |
| Tree | startup-wait-time |
| Description | This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote. |
| Range | 60 to 3600 |
| Default | 120 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-lease-time *number*

| | |
|----------|---|
| Synopsis | Maximum lease time |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> max-lease-time <i>number</i> |

| | |
|------------|---|
| Tree | max-lease-time |
| Range | 10 to 315446399 |
| Default | 864000 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-lease-time *number*

| | |
|------------|--|
| Synopsis | Minimum lease time |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> min-lease-time <i>number</i> |
| Tree | min-lease-time |
| Range | 10 to 315446399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

minimum-free

| | |
|-------------|--|
| Synopsis | Enter the minimum-free context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> minimum-free |
| Tree | minimum-free |
| Description | Commands in this context specify the minimum number of free addresses in this pool. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

absolute *number*

| | |
|----------|---|
| Synopsis | Minimum number of free addresses in this pool or subnet |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> minimum-free absolute <i>number</i> |
| Tree | absolute |
| Range | 0 to 255 |

| | |
|------------|--|
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

event-when-depleted *boolean*

| | |
|-------------|--|
| Synopsis | Generate notification when addresses are depleted |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted boolean</i> |
| Tree | event-when-depleted |
| Description | When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.
When configured to false , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

percent *number*

| | |
|------------|---|
| Synopsis | Minimum free addresses as a percentage |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string minimum-free percent number</i> |
| Tree | percent |
| Range | 0 to 100 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nak-non-matching-subnet *boolean*

| | |
|----------|---|
| Synopsis | Send NAK if no match for request address pool range |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string nak-non-matching-subnet boolean</i> |

| | |
|-------------|---|
| Tree | nak-non-matching-subnet |
| Description | When configured to true , a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.
When configured to false or unconfigured, the system drops the DHCP packet. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-time *number*

| | |
|------------|--|
| Synopsis | Time interval during which a DHCP offer remains valid |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> offer-time <i>number</i> |
| Tree | offer-time |
| Range | 10 to 600 |
| Default | 60 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|---|
| Synopsis | Enter the options context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option [[number](#)] (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Enter the option list instance |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> options option (<i>number</i> <i>keyword</i>) |
| Tree | option |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[number] (*number* | *keyword*)

Synopsis DHCP option to send identification strings to client

Context **configure** [service](#) [vprn](#) *string* [dhcp-server](#) [dhcpv4](#) *string* [pool](#) *string* [options](#) [option](#) (*number* | *keyword*)

use-gi-address

| | |
|-------------|--|
| Synopsis | Enable the use-gi-address context |
| Context | configure service vprn string dhcp-server dhcpv4 string pool-selection use-gi-address |
| Tree | use-gi-address |
| Description | <p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime *number*

| | |
|-------------|--|
| Synopsis | Time this lease remains preferred |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.

Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level). |
| Range | 300 to 315446399 |
| Default | 3600 |
| Units | seconds |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-time *number*

| | |
|----------|---------------------------|
| Synopsis | Rebind time for the lease |
|----------|---------------------------|

| | |
|-------------|--|
| Context | configure service vprn string dhcp-server dhcpv6 string defaults rebind-time number |
| Tree | rebind-time |
| Description | <p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |
| Range | 0 to 1209600 |
| Default | 2880 |
| Units | seconds |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-time number

| | |
|-------------|---|
| Synopsis | Renew time for the lease |
| Context | configure service vprn string dhcp-server dhcpv6 string defaults renew-time number |
| Tree | renew-time |
| Description | <p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |

ignore-mclt-on-takeover boolean

| | |
|-------------|---|
| Synopsis | Ignore maximum client lead during takeover from partner |
| Context | configure service vprn string dhcp-server dhcpv6 string failover ignore-mclt-on-takeover boolean |
| Tree | ignore-mclt-on-takeover |
| Description | <p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-client-lead-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> failover partner-down-delay <i>number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

| Context | configure service vprn string dhcp-server dhcpv6 string failover startup-wait-time number |
| Tree | startup-wait-time |
| Description | This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote. |
| Range | 60 to 3600 |
| Default | 120 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-rapid-commit *boolean*

| | |
|-------------|---|
| Synopsis | Ignore Rapid Commit option |
| Context | configure service vprn string dhcp-server dhcpv6 string ignore-rapid-commit boolean |
| Tree | ignore-rapid-commit |
| Description | When configured to true , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id-mapping *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Map hosts within interface-to-prefix combinations |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> interface-id-mapping <i>boolean</i> |
| Tree | interface-id-mapping |
| Description | When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-hold

| | |
|------------|---|
| Synopsis | Enter the lease-hold context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> lease-hold |
| Tree | lease-hold |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

additional-scenarios

| | |
|-------------|--|
| Synopsis | Enter the additional-scenarios context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> lease-hold additional-scenarios |
| Tree | additional-scenarios |
| Description | Commands in this context configure additional types of leases or triggers that cause the system to hold up leases. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

internal-lease-ipsec *boolean*

| | |
|------------|--|
| Synopsis | Apply the lease hold timer to local IPsec clients |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> lease-hold additional-scenarios internal-lease-ipsec <i>boolean</i> |
| Tree | internal-lease-ipsec |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicited-release *boolean*

| | |
|-------------|---|
| Synopsis | Apply lease hold timer for solicited releases |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> lease-hold additional-scenarios solicited-release <i>boolean</i> |
| Tree | solicited-release |
| Description | This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

time *number*

ignore-mclt-on-takeover *boolean*

| | |
|-------------|---|
| Synopsis | Ignore maximum client lead during takeover from partner |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover ignore-mclt-on-takeover <i>boolean</i> |
| Tree | ignore-mclt-on-takeover |
| Description | <p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure <i>service vprn string dhcp-server dhcpv6 string pool string failover partner-down-delay number</i> |
| Tree | <i>partner-down-delay</i> |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime number

| | |
|----------|-----------------------------------|
| Synopsis | Time this lease remains preferred |
|----------|-----------------------------------|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | <p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p> |
| Range | 300 to 315446399 |
| Default | 3600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

entropy-label *boolean*

| | |
|-------------|--|
| Synopsis | Use entropy label |
| Context | configure service vprn <i>string</i> entropy-label <i>boolean</i> |
| Tree | entropy-label |
| Description | <p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> |

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, this command disables the use of entropy labels.

| | |
|------------|---------|
| Default | false |

export-inactive-bgp *boolean*

| | |
|-------------|---|
| Synopsis | Export preferred BGP route even if inactive |
| Context | configure service vprn string export-inactive-bgp boolean |
| Tree | export-inactive-bgp |
| Description | <p>When configured to true, the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE.</p> <p>When configured to false, the preferred BGP route is not exported if it is inactive.</p> |
| Default | false |

| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

flowspec

| | |
|------------|--|
| Synopsis | Enter the flowspec context |
| Context | configure service vprn <i>string</i> flowspec |
| Tree | flowspec |
| Introduced | 16.0.R1 |

Platforms All

filter-cam-type *keyword*

Synopsis Filter policy type for FlowSpec embedding

Context **configure** **service vprn** *string* **flowspec filter-cam-type** *keyword*

Tree **filter-cam-type**

Description This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.

Default normal

Options normal, packet-length

Introduced 20.7.R1

Platforms All

ip-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv4 filter

Context **configure** **service vprn** *string* **flowspec ip-filter-max-size** *number*

Tree **ip-filter-max-size**

Description This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).

The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.

The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.

Range 0 to 262143

Default 512

Introduced 16.0.R1

Platforms All

ipv6-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv6 filter

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> flowspec ipv6-filter-max-size <i>number</i> |
| Tree | ipv6-filter-max-size |
| Description | <p>This command configures the maximum number of IPv6 flowspec routes or rules that can be embedded into an ingress IPv6 filter policy for a specified routing instance. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv6 filter that embeds IPv6 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv6 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p> |

import-policy *reference*

| | |
|-------------|--|
| Synopsis | Import policy that filters IGMP packets |
| Context | configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Description | This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.

When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode). |
| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-group-sources *number*

| | |

policy *reference*

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name reference mcac policy <i>reference</i> |
| Tree | policy |
| Description | This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. |

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| Platforms | All |

level [*level-id*] *number*

| | |
|------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> mcac mc-constraints level <i>number</i> |
| Tree | level |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-id] *number*

| | |
|------------|--|
| Synopsis | Bandwidth level ID for an MCAC constraint |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> mcac mc-constraints level <i>number</i> |
| Tree | level |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth *number*

| | |
|------------|--|
| Synopsis | Bandwidth available for this level |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> mcac mc-constraints level <i>number</i> bandwidth <i>number</i> |
| Tree | bandwidth |
| Range | 0 to 2147483647 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

number-down [*number-lag-port-down*] *number*

| | |
|----------|--|
| Synopsis | Enter the number-down list instance |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> mcac mc-constraints number-down <i>number</i> |
| Tree | number-down |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

[number-lag-port-down] *number*

| | |
|------------|---|
| Synopsis | Number of ports that are down in this LAG link |
| Context | configure service vprn string igmp interface string mcac mc-constraints number-down number |
| Tree | number-down |
| Range | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level *number*

| | |
|-------------|--|
| Synopsis | Level ID to associate with number of down LAG ports |
| Context | configure service vprn string igmp interface string mcac mc-constraints number-down number level number |
| Tree | level |
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight *boolean*

| | |
|-------------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
| Context | configure service vprn string igmp interface string mcac mc-constraints use-lag-port-weight boolean |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> mcac policy reference |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p> |
| Reference | configure mcac policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> query-interval <i>number</i> |
| Tree | query-interval |
| Range | 2 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|---|
| Synopsis | Time between group-specific query messages |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> query-last-member-interval <i>number</i> |
| Tree | query-last-member-interval |
| Range | 1 to 1023 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response to the host-query messages |

| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R2 |
| Platforms | All |

subnet-check *boolean*

| | |
|------------|---|
| Synopsis | Allow subnet checking |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> subnet-check <i>boolean</i> |
| Tree | subnet-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

version *keyword*

| | |
|------------|--|
| Synopsis | IGMP protocol version |
| Context | configure service vprn <i>string</i> igmp interface <i>string</i> version <i>keyword</i> |
| Tree | version |
| Default | 3 |
| Options | 1, 2, 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|-------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vprn <i>string</i> igmp query-interval <i>number</i> |
| Tree | query-interval |
| Description | This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1. |
| Range | 2 to 1024 |
| Default | 125 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|----------|--|
| Synopsis | Time between group-specific query messages |
|----------|--|

| | |
|-------------|---|
| Context | configure service vprn string igmp query-last-member-interval number |
| Tree | query-last-member-interval |
| Description | This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group. |
| Range | 1 to 1023 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval number

| | |
|------------|--|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vprn string igmp query-response-interval number |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count number

| | |
|-------------|---|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vprn string igmp robust-count number |
| Tree | robust-count |
| Description | This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, the robust-count can be increased. |
| Range | 2 to 10 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

ssm-translate

| | |
|------------|--|
| Synopsis | Enter the ssm-translate context |

dynamic-tunnel-redundant-nexthop *string*

| | |
|-------------|--|
| Synopsis | Redundant next-hop address for the dynamic IPsec tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> dynamic-tunnel-redundant-nexthop <i>string</i> |
| Tree | dynamic-tunnel-redundant-nexthop |
| Description | This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service. |

| | |
|------------|---|
| Notes | The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop). |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |
|------------|--|
| Synopsis | Enter the hold-time context |
| Context | configure <i>service vprn string interface string hold-time</i> |
| Tree | <i>hold-time</i> |
| Introduced | 16.0.R1 |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure <i>service vprn string interface string hold-time ipv4</i> |
| Tree | <i>ipv4</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure <i>service vprn string interface string hold-time ipv4 down</i> |
| Tree | <i>down</i> |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | All |

init-only *boolean*

| | |
|----------|---|
| Synopsis | Apply delay only at interface configuration or reboot |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|----------|---|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

down

| | |
|-------------|---|
| Synopsis | Enter the down context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | All |

init-only *boolean*

| | |
|-------------|--|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies the delay only when when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv6 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

if-attribute

| | |
|----------|--|
| Synopsis | Enter the if-attribute context |
| Context | configure service vprn <i>string</i> interface <i>string</i> if-attribute |
| Tree | if-attribute |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

admin-group *reference*

| | |
|----------------|---|
| Synopsis | Administrative group name for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> if-attribute admin-group <i>reference</i> |
| Tree | admin-group |
| Reference | configure routing-options if-attribute admin-group <i>string</i> |
| Max. Instances | 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

srlg-group [[name](#)] *reference*

| | |
|------------|--|
| Synopsis | Add a list entry for srlg-group |
| Context | configure service vprn <i>string</i> interface <i>string</i> if-attribute srlg-group <i>reference</i> |
| Tree | srlg-group |
| Introduced | 16.0.R1 |
| Platforms | All |

[[name](#)] *reference*

| | |

| Context | configure service vprn <i>string</i> interface <i>string</i> if-attribute srlg-group <i>reference</i> |
| Tree | srlg-group |
| Reference | configure routing-options if-attribute srlg-group <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|----------|----------------------------------|
| Synopsis | Enter the ingress context |
|----------|----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress |
| Tree | ingress |
| Introduced | 19.7.R1 |
| Platforms | All |

destination-class-lookup *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP destination class lookup |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress destination-class-lookup <i>boolean</i> |
| Tree | destination-class-lookup |
| Description | When configured to true , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the destination-class match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.

When configured to false , destination class lookup is not enabled. |
| Default | false |
| Introduced | 20.7.R1 |
| Platforms | All |

policy-accounting *reference*

| | |
|------------|--|
| Synopsis | Ingress policy accounting template name |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress policy-accounting <i>reference</i> |
| Tree | policy-accounting |
| Reference | configure routing-options policy-accounting policy-acct-template <i>string</i> |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS |

ingress-stats *boolean*

| | |
|------------|--|
| Synopsis | Collect ingress statistics |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress-stats <i>boolean</i> |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-mtu *number*

| | |
|------------|---|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vpn <i>string</i> interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

ipsec

| | |
|------------|--|
| Synopsis | Enable the ipsec context |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec |
| Tree | ipsec |
| Introduced | 22.7.R1 |
| Platforms | VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of IPsec secured interface |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ip-exception *reference*

| | |
|-------------|--|
| Synopsis | IP exception filter |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ip-exception <i>reference</i> |
| Tree | ip-exception |
| Description | This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing. |

| | |
|------------|--|
| Reference | configure filter ip-exception <i>string</i> |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipsec-tunnel [[name](#)] *string*

| | |
|-------------|--|
| Synopsis | Enter the ipsec-tunnel list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> |
| Tree | ipsec-tunnel |
| Description | Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

[name] *string*

| | |
|---------------|--|
| Synopsis | IPsec tunnel name |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> |
| Tree | ipsec-tunnel |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the IPsec tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 22.7.R1 |
| Platforms | VSR |

bfd

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> bfd |
| Tree | bfd |
| Introduced | 22.7.R1 |
| Platforms | VSR |

bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Designate IPsec tunnel to carry BFD traffic |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> bfd bfd-designate <i>boolean</i> |
| Tree | bfd-designate |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> bfd bfd-liveness |
| Tree | bfd-liveness |
| Description | Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session. |

BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.

Introduced 22.7.R1
Platforms VSR

dest-ip *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Introduced 22.7.R1
Platforms VSR

service-name *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Administrative service name |
| Context | configure <i>service vprn string interface string ipsec ipsec-tunnel string bfd bfd-liveness service-name string</i> |
| Tree | <i>service-name</i> |
| Description | This command configures the name of the service where BFD traffic is forwarded to. |
| String Length | 1 to 64 |
| Notes | This element is mandatory. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Reset the DF bit to 0 in all payload IP packets |
| Context | configure <i>service vprn string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i> |
| Tree | <i>clear-df-bit</i> |
| Description | When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs. |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

copy-traffic-class-upon-decapsulation *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Enable traffic class copy upon decapsulation |
|----------|--|

| | |
|-------------|---|
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> copy-traffic-class-upon-decapsulation <i>boolean</i> |
| Tree | copy-traffic-class-upon-decapsulation |
| Description | When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

description *string*

| Introduced | 22.7.R1 |
| Platforms | VSR |

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum size of the encapsulated tunnel packet |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> encapsulated-ip-mtu <i>number</i> |
| Tree | encapsulated-ip-mtu |
| Description | This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 22.7.R1 |
| Platforms | VSR |

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the icmp-generation context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string icmp-generation |
| Tree | icmp-generation |
| Description | Commands in this context configure settings for ICMPv4 message generation. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the frag-required context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string icmp-generation frag-required |
| Tree | frag-required |
| Description | Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Administrative state of sending ICMP messages |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string icmp-generation frag-required admin-state keyword |

| | |
|-------------|--|
| Tree | admin-state |
| Description | This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Default | enable |
| Options | enable, disable |
| Introduced | 22.7.R1 |
| Platforms | VSR |

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Interval for sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp-generation frag-required interval <i>number</i> |
| Tree | interval |
| Description | This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4). |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 22.7.R1 |
| Platforms | VSR |

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Maximum number of ICMP messages that can be sent |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp-generation frag-required message-count <i>number</i> |
| Tree | message-count |

| | |
|-------------|--|
| Description | This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

id

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context
 Context **configure** [service vpn](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [key-exchange](#) [dynamic id](#)
 Tree [id](#)
 Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

 Introduced 22.7.R1
 Platforms VSR

fqdn *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

| | |
|---------------|---|
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic id fqdn <i>string</i> |
| Tree | fqdn |
| String Length | 1 to 255 |
| Notes | The following elements are part of a choice: fqdn , ipv4 , or ipv6 . |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipv4 *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IPv4 as the local ID type |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic id ipv4 <i>string</i> |
| Tree | ipv4 |
| Notes | The following elements are part of a choice: fqdn , ipv4 , or ipv6 . |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IPv6 used as the local IKE ID type |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | ipv6 |
| Notes | The following elements are part of a choice: fqdn , ipv4 , or ipv6 . |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | IKE policy ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic ike-policy <i>reference</i> |
| Tree | ike-policy |
| Description | This command specifies the ID of the IKE policy used for IKE negotiation.
The ipsec-transport-mode-profile configuration only supports IKEv2. |
| Reference | configure ipsec ike-policy <i>number</i> |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------------|--|
| Synopsis | IPsec transform IDs used by the dynamic key |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic ipsec-transform <i>reference</i> |
| Tree | ipsec-transform |
| Description | This command specifies IPsec transform IDs used for CHILD_SA negotiation. |
| Reference | configure ipsec ipsec-transform <i>number</i> |
| Max. Instances | 4 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Pre-shared key for authentication |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic pre-shared-key <i>string</i> |
| Tree | pre-shared-key |
| String Length | 1 to 115 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

manual

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable the manual context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual |
| Tree | manual |
| Description | Commands in this context configure settings for manually configured security associations for the IPsec tunnel. |
| Notes | The following elements are part of a choice: dynamic or manual . |
| Introduced | 22.7.R1 |
| Platforms | VSR |

keys [[security-association](#)] *number direction keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the keys list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number direction keyword</i> |
| Tree | keys |
| Description | Commands in this context configure the security association list for the tunnel. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

[security-association] number

| | |
|------------|---|
| Synopsis | SA entry ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange
manual keys <i>number</i> direction <i>keyword</i> |
| Tree | keys |
| Range | 1 to 16 |
| Notes | This element is part of a list key. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

direction keyword

| | |
|------------|---|
| Synopsis | Direction of the IPsec tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange
manual keys <i>number</i> direction <i>keyword</i> |
| Tree | keys |
| Options | inbound, outbound |
| Notes | This element is part of a list key. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

authentication-key string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Key used for the authentication algorithm |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange
manual keys <i>number</i> direction <i>keyword</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 130 |

Introduced 22.7.R1
 Platforms VSR

encryption-key *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Key used for the encryption algorithm
 Context **configure** [service vpn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange manual keys number direction keyword](#) [encryption-key string](#)
 Tree [encryption-key](#)
 String Length 1 to 66
 Introduced 22.7.R1
 Platforms VSR

ipsec-transform *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Transform entry used by manual SAs
 Context **configure** [service vpn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange manual keys number direction keyword](#) [ipsec-transform reference](#)
 Tree [ipsec-transform](#)
 Reference **configure** [ipsec ipsec-transform number](#)
 Notes This element is mandatory.
 Introduced 22.7.R1
 Platforms VSR

spi number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | SPI of inbound and outbound packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i> |
| Tree | spi |
| Description | This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.

The remote node can use the SPI to look up the instruction to verify and decrypt the packet. |
| Range | 256 to 16383 |
| Notes | This element is mandatory. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Local IPsec tunnel endpoint address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> local-gateway-address-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | local-gateway-address-override |
| Description | This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the max-history-key-records context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records |
| Tree | max-history-key-records |
| Description | Commands in this context configure the settings for recording historical IPsec keys. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

esp number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of recent records |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records esp <i>number</i> |
| Tree | esp |
| Range | 1 to 48 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ike number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Maximum number of historical IKE key records |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records ike <i>number</i> |
| Tree | ike |

| | |
|------------|---------|
| Range | 1 to 3 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Aging out time of the learned path MTU |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Default | 900 |
| Units | seconds |
| Introduced | 22.7.R1 |
| Platforms | VSR |

private-sap *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Private SAP ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> private-sap <i>number</i> |
| Tree | private-sap |
| Range | 0 to 4094 |
| Notes | This element is mandatory. |

Introduced 22.7.R1
 Platforms VSR

private-service *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Private service name
 Context **configure** [service](#) [vpn](#) *string* [interface](#) *string* [ipsec](#) [ipsec-tunnel](#) *string* [private-service](#) *string*
 Tree [private-service](#)
 Description This command configures the private service name.
 If unconfigured, the private service is the service where the secured interface resides.
 String Length 1 to 64
 Introduced 22.7.R1
 Platforms VSR

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) adjustment
 Context **configure** [service](#) [vpn](#) *string* [interface](#) *string* [ipsec](#) [ipsec-tunnel](#) *string* [private-tcp-mss-adjust](#) *number*
 Tree [private-tcp-mss-adjust](#)
 Description This command specifies the TCP MSS to adjust for the tunnel on the private side.
 When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
 Range 512 to 9000
 Units bytes

| | |
|------------|---------|
| Introduced | 22.7.R1 |
| Platforms | VSR |

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable propagation of the path MTU to IPv4 hosts |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i> |
| Tree | propagate-pmtu-v4 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts). |
| Default | true |
| Introduced | 22.7.R1 |
| Platforms | VSR |

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable propagation of the path MTU to IPv6 hosts |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> propagate-pmtu-v6 <i>boolean</i> |
| Tree | propagate-pmtu-v6 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts). |
| Default | true |
| Introduced | 22.7.R1 |
| Platforms | VSR |

public-tcp-mss-adjust (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP maximum segment size (MSS) on the public network |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Description | This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Options | auto |
| Introduced | 22.7.R1 |
| Platforms | VSR |

remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Remote IPsec tunnel endpoint address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> remote-gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | remote-gateway-address |
| Introduced | 22.7.R1 |
| Platforms | VSR |

replay-window *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|-------------------------|
| Synopsis | Anti-replay window size |
|----------|-------------------------|

| | |
|-------------|---|
| Context | configure service vpn <i>string interface string ipsec ipsec-tunnel string replay-window number</i> |
| Tree | replay-window |
| Description | This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled. |
| Range | 32 64 128 256 512 |
| Units | packets |
| Introduced | 22.7.R1 |
| Platforms | VSR |

security-policy

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the security-policy context |
| Context | configure service vpn <i>string interface string ipsec ipsec-tunnel string security-policy</i> |
| Tree | security-policy |
| Description | Commands in this context specify a security policy used by the tunnel. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

id number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Security policy ID for use by the tunnel |
| Context | configure service vpn <i>string interface string ipsec ipsec-tunnel string security-policy id number</i> |
| Tree | id |
| Max. Range | 0 to 4294967295 |
| Introduced | 22.7.R1 |
| Platforms | VSR |

strict-match *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable strict match of the security policy entry |
| Context | configure <i>service vpn</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipsec ipsec-tunnel</i> <i>string</i> <i>security-policy strict-match</i> <i>boolean</i> |
| Tree | <i>strict-match</i> |
| Description | <p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p> |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipv6-exception *reference*

| | |
|-------------|--|
| Synopsis | IPv6 filter exception used to bypass encryption |
| Context | configure <i>service vpn</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipsec ipv6-exception</i> <i>reference</i> |
| Tree | <i>ipv6-exception</i> |
| Description | <p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p> |
| Reference | configure <i>filter ipv6-exception</i> <i>string</i> |
| Introduced | 22.7.R1 |
| Platforms | VSR |

public-sap *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Public SAP ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec public-sap <i>number</i> |
| Tree | public-sap |
| Range | 0 to 4094 |
| Notes | This element is mandatory. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

tunnel-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Tunnel group ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec tunnel-group <i>reference</i> |
| Tree | tunnel-group |
| Reference | configure isa tunnel-group <i>number</i> |
| Notes | This element is mandatory. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

addresses

| | |
|------------|--|
| Synopsis | Enter the addresses context |
| Context | configure service vprn string interface string ipv4 addresses |
| Tree | addresses |
| Introduced | 16.0.R1 |
| Platforms | All |

address [[ipv4-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service vprn string interface string ipv4 addresses address string |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IPv4 address for the interface |
| Context | configure service vprn string interface string ipv4 addresses address string |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|--|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn string interface string ipv4 addresses address string prefix-length number |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

allow-directed-broadcasts *boolean*

| | |
|------------|---|
| Synopsis | Forward directed broadcasts |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 allow-directed-broadcasts <i>boolean</i> |
| Tree | allow-directed-broadcasts |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|--|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

multiplier *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** *service vprn string interface string ipv4 bfd multiplier number*

Tree [multiplier](#)

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 16.0.R1

Platforms All

receive *number*

Synopsis BFD receive interval over this interface

Context **configure** *service vprn string interface string ipv4 bfd receive number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.

Range 10 to 100000

Default 100

Units milliseconds

Introduced 16.0.R1

Platforms All

transmit-interval *number*

Synopsis BFD transmit interval over this interface

Context **configure** *service vprn string interface string ipv4 bfd transmit-interval number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

Range 10 to 100000

Default 100

| | |
|------------|--------------|
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|--|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

dhcp

| | |
|------------|---|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp |
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

lease-populate

| | |
|------------|--|
| Synopsis | Enter the lease-populate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | All |

max-leases *number*

| | |
|----------|---|
| Synopsis | Maximum number of DHCPv4 leases allowed |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |

| | |
|------------|----------------------------|
| Tree | max-leases |
| Range | 0 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | All |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

action *keyword*

| | |
|------------|---|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Default | keep |
| Options | replace, drop, keep |
| Introduced | 16.0.R1 |
| Platforms | All |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

ifindex

| | |
|------------|--|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|---|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id

| | |
|----------|---|
| Synopsis | Use the SAP ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-id

| | |
|-------------|---|
| Synopsis | Enter the remote-id context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

mac

| | |
|------------|--|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|---|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

vendor-specific-option

| | |
|-------------|--|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

client-mac-address *boolean*

| | |
|----------|---|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |

| | |
|------------|------------------------------------|
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pool-name *boolean*

| | |
|------------|---|
| Synopsis | Send the pool name in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id *boolean*

| | |
|------------|--|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

service-id *boolean*

| | |
|------------|--|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

system-id *boolean*

| | |
|------------|---|
| Synopsis | Send the system ID in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-server

| | |
|------------|--|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |

Platforms All

emulated-server *string*

Synopsis IP address used as the DHCP server address for the SAP

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server](#) [emulated-server](#) *string*

Tree [emulated-server](#)

Description This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.

Introduced 16.0.R1

Platforms All

lease-time

Synopsis Enter the **lease-time** context

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server](#) [lease-time](#)

Tree [lease-time](#)

Introduced 16.0.R1

Platforms All

radius-override *boolean*

Synopsis Use lease time information provided by RADIUS server

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server](#) [lease-time](#) [radius-override](#) *boolean*

Tree [radius-override](#)

Default false

Introduced 16.0.R1

Platforms All

value *number*

Synopsis DHCP lease time

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server](#) [lease-time](#) [value](#) *number*

| | |
|------------|-----------------------|
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-plain-bootp *boolean*

| | |
|------------|--|
| Synopsis | Enable relaying of plain BOOTP packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-plain-bootp <i>boolean</i> |
| Tree | relay-plain-bootp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-proxy

| | |
|------------|---|
| Synopsis | Enable the relay-proxy context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | All |

release-update-src-ip *boolean*

| | |
|----------|--|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | All |

release-include-gi-address *boolean*

| | |
|------------|---|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |

| | |
|------------|--------------------------------------|
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

src-ip-addr *keyword*

| | |
|------------|---|
| Synopsis | Type of source address to use for DHCP relay |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i> |
| Tree | src-ip-addr |
| Default | auto |
| Options | auto, gi-address |
| Introduced | 16.0.R1 |
| Platforms | All |

trusted *boolean*

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp trusted <i>boolean</i> |
| Tree | trusted |
| Description | <p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

use-arp *boolean*

| | |
|----------|---|
| Synopsis | Use ARP to determine the destination hardware address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp use-arp <i>boolean</i> |
| Tree | use-arp |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

icmp

| | |
|------------|---|
| Synopsis | Enter the icmp context |
| Context | configure service vprn string interface string ipv4 icmp |
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | All |

mask-reply *boolean*

| | |
|------------|---|
| Synopsis | Allow responses to ICMP mask requests on the interface |
| Context | configure service vprn string interface string ipv4 icmp mask-reply <i>boolean</i> |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|-------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn string interface string ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of sent Parameter Problem messages |
| Context | configure service vprn string interface string ipv4 icmp param-problem admin-state <i>keyword</i> |

| | |

| Tree | host-route |
| Introduced | 19.10.R1 |
| Platforms | All |

populate [[route-type](#)] *keyword*

| | |
|------------|--|
| Synopsis | Enter the populate list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Introduced | 19.10.R1 |
| Platforms | All |

[[route-type](#)] *keyword*

| | |
|------------|--|
| Synopsis | Type of ARP or ND entries that generate host routes |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Options | static, dynamic, evpn |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i> |

| | |
|-------------|--|
| Tree | route-tag |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |
| Introduced | 19.10.R1 |
| Platforms | All |

learn-unsolicited *boolean*

| | |
|-------------|--|
| Synopsis | Learn new entries from any received NA message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i> |
| Tree | learn-unsolicited |
| Description | <p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|------------|--|
| Synopsis | Enter the limit context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit |
| Tree | limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Generate log entries only if limit is reached |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-entries *number*

| | |
|------------|---|
| Synopsis | Maximum number of entries learned on an IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit max-entries <i>number</i> |
| Tree | max-entries |
| Range | 0 to 524288 |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Threshold value that triggers a warning message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

local-proxy-arp *boolean*

| | |
|----------|--|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i> |

| | |
|-------------|--|
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.
When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | All |

populate *boolean*

| | |
|------------|---|
| Synopsis | Allow static and dynamic hosts to be populated in system ARP cache |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i> |
| Tree | populate |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *boolean*

| | |
|-------------|--|
| Synopsis | Send a single refresh message before entry timeout |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i> |
| Tree | proactive-refresh |
| Description | When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).
When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-arp-policy *reference*

| | |
|----------|-----------------------|
| Synopsis | Proxy ARP policy name |
|----------|-----------------------|

admin-state *keyword*

| | |
|-------------|---|
| Synopsis | Administrative state of VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|-------------|---|
| Synopsis | Password for simple text authentication |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p> |

| | |
|---------------|---------|
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

backup string

| | |
|----------------|---|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn string interface string ipv4 vrrp number backup string |
| Tree | backup |
| Description | <p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> |
| Max. Instances | 16 |
| Introduced | 16.0.R1 |
| Platforms | All |

mac *string*

| | |
|-------------|--|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> mac <i>string</i> |
| Tree | mac |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit *boolean*

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure <i>service vprn string interface string ipv4 vrrp number</i> master-int-inherit <i>boolean</i> |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service vprn string interface string ipv4 vrrp number</i> message-interval <i>number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message. |
| Range | 1 to 2559 |
| Default | 10 |

| | |
|------------|-------------|
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i> |
| Tree | ntp-reply |
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|----------|---|
| Synopsis | Operational group name associated with the VRRP |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> owner <i>boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> passive <i>boolean</i> |
| Tree | passive |

| | |
|-------------|---|
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure <i>service vprn string interface string ipv4 vrrp number ping-reply boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure <i>service vprn string interface string ipv4 vrrp number policy reference</i> |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p> |

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

| | |
|------------|-------------------------------------|
| Reference | configure vrrp policy number |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|--|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service vprn string interface string ipv4 vrrp number preempt boolean |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|-------------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service vprn string interface string ipv4 vrrp number priority number |
| Tree | priority |
| Description | <p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p> |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

ssh-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow the non-owner master to reply to SSH requests |
| Context | configure <i>service vprn string interface string ipv4 vrrp number ssh-reply boolean</i> |
| Tree | ssh-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure <i>service vprn string interface string ipv4 vrrp number standby-forwarding boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure <i>service vprn string interface string ipv4 vrrp number telnet-reply boolean</i> |
| Tree | telnet-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> |

When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn string interface string ipv4 vrrp number traceroute-reply boolean |
| Tree | traceroute-reply |
| Description | <p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn string interface string ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

address [[ipv6-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service vprn string interface string ipv6 address string |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-address] *string*

| | |
|------------|--|
| Synopsis | IPv6 address assigned to the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable Duplicate Address Detection |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Description | When configured to true , the router enables Duplicate Address Detection (DAD).
When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Form IPv6 address from prefix and 64-bit interface ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> eui-64 <i>boolean</i> |
| Tree | eui-64 |
| Description | When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from |

the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv6 address prefix length |
| Context | configure service vprn <i>string interface string ipv6 address string prefix-length number</i> |
| Tree | prefix-length |
| Range | 4 to 128 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

primary-preference *number*

| | |
|-------------|---|
| Synopsis | Index assigned to the IPv6 address of the interface |
| Context | configure service vprn <i>string interface string ipv6 address string primary-preference number</i> |
| Tree | primary-preference |
| Description | <p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p> |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP ID whose state is tracked on this IP address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

type *keyword*

Synopsis Local termination point for the BFD session

Context **configure** *service vprn string interface string ipv6 bfd type keyword*

Tree *type*

Description This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.

Default auto

Options cpm-np, auto, fp

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dhcp6

| Synopsis | Enter the option context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay option |
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-id

| | |
|------------|--|
| Synopsis | Enter the interface-id context |
| Context | configure service vprn string interface string ipv6 dhcp6 relay option interface-id |
| Tree | interface-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use ASCII-encoded concatenated tuple |
| Context | configure service vprn string interface string ipv6 dhcp6 relay option interface-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | All |

if-index

| | |
|------------|--|
| Synopsis | Use interface index in interface ID option in DHCPv6 relay packet |
| Context | configure service vprn string interface string ipv6 dhcp6 relay option interface-id if-index |
| Tree | if-index |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id

| | |
|------------|--|
| Synopsis | Use SAP ID in interface ID option in DHCPv6 relay packet |
| Context | configure service vprn string interface string ipv6 dhcp6 relay option interface-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | All |

string *string*

| | |
|---------------|--|
| Synopsis | String for interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay option interface-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 80 |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-id *boolean*

| | |
|------------|--|
| Synopsis | Allow remote ID option to be sent in the DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay option remote-id <i>boolean</i> |
| Tree | remote-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy name |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

server *string*

| | |
|----------|---|
| Synopsis | DHCPv6 server to which the DHCPv6 requests are forwarded |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay server <i>string</i> |
| Tree | server |

| | |
|----------------|--------------------------------------|
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

source-address *string*

| | |
|------------|---|
| Synopsis | Source IPv6 address of the DHCPv6 relay messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay source-address <i>string</i> |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | All |

user-db *reference*

| | |
|------------|---|
| Synopsis | Local user database for authentication |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 relay user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server

| | |
|------------|---|

| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server |
| Tree | server |
| Introduced | 16.0.R1 |
| Platforms | All |

max-nbr-of-leases *number*

| | |
|----------|---|
| Synopsis | DHCPv6 leases allowed |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server max-nbr-of-leases <i>number</i> |

| | |
|------------|-----------------------------------|
| Tree | max-nbr-of-leases |
| Range | 0 to 8000 |
| Default | 8000 |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-delegation

| | |
|------------|---|
| Synopsis | Enter the prefix-delegation context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation |
| Tree | prefix-delegation |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the prefix delegation |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix [[ipv6-prefix](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the prefix list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation prefix <i>string</i> |
| Tree | prefix |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-prefix] string

| | |
|------------|---|
| Synopsis | IPv6 address and prefix |
| Context | configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string |
| Tree | prefix |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

client-id

| | |
|------------|---|
| Synopsis | Enter the client-id context |
| Context | configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id |
| Tree | client-id |
| Introduced | 16.0.R1 |
| Platforms | All |

duid string

| | |
|---------------|---|
| Synopsis | Requesting router ID |
| Context | configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id duid string |
| Tree | duid |
| String Length | 1 to 130 |
| Introduced | 16.0.R1 |
| Platforms | All |

iaid number

| | |
|-------------|---|
| Synopsis | IAID from the requesting router to match |
| Context | configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id iaid number |
| Tree | iaid |
| Description | This command configures the Identity Association ID (IAID) associated with a prefix delegation entry and must match the IAID sent by the requesting router for the prefix delegation to succeed. |

| | |
|------------|-----------------|
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

preferred-lifetime (*number* | *keyword*)

| | |
|-------------|---|
| Synopsis | Preferred lifetime of the prefix |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation prefix <i>string</i> preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Description | This command configures the preferred lifetime of the prefix. The value cannot be greater than the valid lifetime value. |
| Range | 1 to 4294967294 |
| Default | 604800 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Valid lifetime of the prefix |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation prefix <i>string</i> valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 1 to 4294967294 |
| Default | 2592000 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean*

| | |
|----------|---|
| Synopsis | Enable Duplicate Address Detection per interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 duplicate-address-detection <i>boolean</i> |

| | |
|------------|---|
| Tree | duplicate-address-detection |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

forward-ipv4-packets *boolean*

| | |
|------------|--|
| Synopsis | Forward unencapsulated IPv4 packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 forward-ipv4-packets <i>boolean</i> |
| Tree | forward-ipv4-packets |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

icmp6

| | |
|------------|--|
| Synopsis | Enter the icmp6 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 |
| Tree | icmp6 |
| Introduced | 16.0.R1 |
| Platforms | All |

packet-too-big

| | |
|-------------|---|
| Synopsis | Enter the packet-too-big context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big |
| Tree | packet-too-big |
| Description | Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of Packet Too Big message sends |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Number of Packet Too big Messages issued per time frame |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit Packet Too Big messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|------------|--|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem |
| Tree | param-problem |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of Parameter Problem message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Number used to limit ICMPv6 Parameter Problem messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit ICMPv6 Parameter Problem messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

redirects

| | |

| Tree | populate |
| Options | static, dynamic, evpn |
| Notes | This element is part of a list key. |
| Introduced | 20.2.R1 |
| Platforms | All |

route-tag number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery host-route
populate <i>keyword</i> route-tag <i>number</i> |
| Tree | route-tag |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |
| Introduced | 20.2.R1 |
| Platforms | All |

learn-unsolicited keyword

| | |
|-------------|---|
| Synopsis | Type of entries learned from unsolicited NA messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery learn-unsolicited
<i>keyword</i> |
| Tree | learn-unsolicited |
| Description | This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.

When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior. |

| | |
|------------|--------------------------|
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|------------|--|
| Synopsis | Enter the limit context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit |
| Tree | limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|-------------|--|
| Synopsis | Generate log entries when limit is reached |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit log-only <i>boolean</i> |
| Tree | log-only |
| Description | When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.

When configured to false , the router does not send the warning message. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-entries *number*

| | |
|-------------|--|
| Synopsis | Maximum number of entries learned on an IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit max-entries <i>number</i> |
| Tree | max-entries |
| Description | This command configures the maximum number of entries that can be learned on an IP interface.

When unconfigured, no maximum limit is imposed. |
| Range | 0 to 102400 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Threshold percentage that triggers a warning message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

local-proxy-nd *boolean*

| | |
|-------------|---|
| Synopsis | Enable local proxy neighbor discovery on the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i> |
| Tree | local-proxy-nd |
| Description | <p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *keyword*

| | |
|----------|---|
| Synopsis | Proactive refresh of neighbor entries |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i> |
| Tree | proactive-refresh |

| | |
|-------------|---|
| Description | This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-nd-policy *reference*

| | |
|----------------|--|
| Synopsis | Proxy Neighbor Discovery policy name for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i> |

admin-state keyword

| | |
|-------------|--|
| Synopsis | Administrative state of VRRP |
| Context | configure service vprn string interface string ipv6 vrrp number admin-state keyword |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

backup string

| | |
|-------------|--|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn string interface string ipv6 vrrp number backup string |
| Tree | backup |
| Description | This command associates router IPv6 virtual router IP addresses with those of the parental IP interface. |

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

mac string

| | |
|-------------|--|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure service vprn string interface string ipv6 vrrp number mac string |
| Tree | mac |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit boolean

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure service vprn string interface string ipv6 vrrp number master-int-inherit boolean |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> message-interval <i>number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message. |
| Range | 10 to 4095 |
| Default | 100 |
| Units | centiseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other |

protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.

| | |
|------------|---|
| Reference | configure service oper-group <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string interface string ipv6 vrrp number ntp-reply boolean</i> |
| Tree | ntp-reply |
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group name associated with the VRRP |
| Context | configure service vprn <i>string interface string ipv6 vrrp number oper-group reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp number owner <i>boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp number passive <i>boolean</i> |
| Tree | passive |
| Description | When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to false , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt *boolean*

| | |
|----------|---|

| Context | configure service vprn <i>string interface string ipv6 vrrp number preempt boolean</i> |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|-------------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service vprn <i>string interface string ipv6 vrrp number priority number</i> |
| Tree | priority |
| Description | <p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p> |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding boolean

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service vprn <i>string interface string ipv6 vrrp number standby-forwarding boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).

When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> traceroute-reply <i>boolean</i> |
| Tree | traceroute-reply |
| Description | When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address). |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|----------|---|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing |

| | |
|------------|--------------------------------|
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn string interface string load-balancing flow-label-load-balancing boolean |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.
When configured to false , the router disables load balancing in ECMP and LAG. |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn string interface string load-balancing ip-load-balancing keyword |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs. |
| Default | both |
| Options | both, destination, source, inner-ip |
| Introduced | 16.0.R3 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|----------|---|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn string interface string load-balancing spi-load-balancing boolean |
| Tree | spi-load-balancing |

| | |
|-------------|---|
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |
|------------|---|
| Synopsis | Enable use of TEID in hashing |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing teid-load-balancing <i>boolean</i> |
| Tree | teid-load-balancing |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

loopback *boolean*

| | |
|------------|---|
| Synopsis | Use interface as a loopback interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> loopback <i>boolean</i> |
| Tree | loopback |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mac *string*

| | |
|------------|---|
| Synopsis | MAC address for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-accounting *boolean*

| | |
|----------|-------------------------------------|
| Synopsis | Enable MAC accounting functionality |
|----------|-------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> mac-accounting <i>boolean</i> |
| Tree | mac-accounting |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

| | |
|------------|---|
| Synopsis | Operational group to monitor |
| Context | configure service vprn <i>string</i> interface <i>string</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

multi-chassis-shunting-profile *reference*

| | |
|-------------|---|
| Synopsis | Multi-chassis shunting profile name |
| Context | configure service vprn <i>string</i> interface <i>string</i> multi-chassis-shunting-profile <i>reference</i> |
| Tree | multi-chassis-shunting-profile |
| Description | This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces. |
| Reference | configure service vprn <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> |
| Notes | The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop). |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ping-template

| | |
|------------|---|
| Synopsis | Enable the ping-template context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ping-template |
| Tree | ping-template |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the ping template |
| Context | configure service vprn <i>string</i> interface <i>string</i> ping-template admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

destination-address *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Ping template destination address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ping-template destination-address <i>string</i> |
| Tree | destination-address |
| Description | <p>This command configures the address to where the ICMP echo requests are directed to test connectivity. The source of the ICMP echo request is the primary IPv4 address of the interface under which the ping-template is configured. The destination address must be on the same subnet as the source IP address. A configuration warning message displays if the primary IPv4 address and the destination are not on the same subnet, INFO: PIP #2092 Ping template misconfiguration - destination-address and primary IP address should fall in the same subnet.</p> <p>Unnumbered interfaces and loopback addresses are not supported.</p> <p>The config service <code>ies vprn interface ping-template</code> must be administratively disabled to remove or change the destination-address ip-address.</p> |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

name *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--------------------|
| Synopsis | Ping template name |
|----------|--------------------|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ping-template <i>name</i> <i>reference</i> |
| Tree | name |
| Description | This command configures the name of the ping template to be assigned to the IP interface. |
| Reference | configure test-oam icmp ping-template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ptp-hw-assist

| | |
|------------|---|
| Synopsis | Enter the ptp-hw-assist context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ptp-hw-assist |
| Tree | ptp-hw-assist |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

admin-state *keyword*

| | |
|-------------|--|
| Synopsis | Administrative state of the PTP time stamping assist |
| Context | configure service vprn <i>string</i> interface <i>string</i> ptp-hw-assist admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.

Only one interface per physical port can have ptp-hw-assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port. |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

radius-auth-policy *reference*

| | |

| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|---|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority [[priority-level](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the priority list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[priority-level] *number*

| | |
|------------|---|
| Synopsis | Priority level |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs-contribution (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Minimum amount of cumulative buffer space allowed |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>) |
| Tree | mbs-contribution |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

policy-name *reference*

| | |
|------------|--|
| Synopsis | Policer control policy name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy <i>policy-name</i> <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos policer-control-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

qinq-mark-top-only *boolean*

| | |
|------------|---|
| Synopsis | Mark top Q-tags |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i> |
| Tree | qinq-mark-top-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 16.0.R1 |

Platforms All

overrides

Synopsis Enter the **overrides** context

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress](#) [overrides](#)

| Reference | configure qos sap-egress <i>string</i> hs-wrr-group <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-class-weight *number*

| | |
|------------|---|
| Synopsis | Class weight override of the WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

percent-rate *decimal-number*

| | |
|------------|--|
| Synopsis | Percent rate override applied to the HS WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> percent-rate <i>decimal-number</i> |
| Tree | percent-rate |
| Range | 0.01 to 100.00 |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

rate (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Scheduling rate override applied to the HS WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> rate (<i>number</i> <i>keyword</i>) |
| Tree | rate |
| Range | 1 to 2000000000 |
| Units | kilobps |
| Options | max |

| | |
|------------|---|
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policer [**policer-id**] *reference*

| | |
|------------|---|
| Synopsis | Enter the policer list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides policer <i>reference</i> |
| Tree | policer |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[policer-id] *reference*

| | |
|------------|---|
| Synopsis | Policer unique ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides policer <i>reference</i> |
| Tree | policer |
| Reference | configure qos sap-egress <i>string</i> policer <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | MBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number</i> <i>keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|------------|--|
| Synopsis | Packet size modification for policing information |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|--|
| Synopsis | Enter the percent-rate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir *decimal-number*

| | |
|----------|------------------|
| Synopsis | CIR percent rate |
|----------|------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate cir <i>decimal-number</i> |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir *decimal-number*

| | |
|------------|---|
| Synopsis | PIR percent rate |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate pir <i>decimal-number</i> |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|------------|---|
| Synopsis | Enter the rate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | CIR rate |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis PIR rate
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#) *reference* **rate** **pir** (*number* | *keyword*)

 Range 1 to 6400000000
 Units kilobps
 Options max
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis Mode of statistics collected by the policer
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#) *reference* **stat-mode** *keyword*
 Tree [stat-mode](#)
 Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue [[queue-id](#)] *reference*

Synopsis Enter the **queue** list instance
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) *reference*
 Tree [queue](#)
 Introduced 16.0.R1
 Platforms All

[queue-id] reference

| | |
|------------|--|
| Synopsis | Policer unique ID |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference |
| Tree | queue |
| Reference | configure qos sap-egress string queue number |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

adaptation-rule

| | |
|------------|--|
| Synopsis | Enter the adaptation-rule context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule |
| Tree | adaptation-rule |
| Introduced | 16.0.R1 |
| Platforms | All |

cir keyword

| | |
|------------|--|
| Synopsis | Constraint used when deriving the operational CIR value |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword |
| Tree | cir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

pir keyword

| | |
|----------|--|
| Synopsis | Constraint used when deriving the operational PIR value |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword |
| Tree | pir |
| Options | max, min, closest |

Introduced 16.0.R1
Platforms All

avg-frame-overhead *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress](#)
[overrides queue reference avg-frame-overhead decimal-number](#)
Tree [avg-frame-overhead](#)
Range 0.00 to 100.00
Introduced 16.0.R1
Platforms All

burst-limit (*number | keyword*)

Synopsis Explicit shaping burst size for the queue
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress](#)
[overrides queue reference burst-limit \(number | keyword\)](#)
Tree [burst-limit](#)
Range 1 to 14000000
Units bytes
Options auto
Introduced 16.0.R1
Platforms All

cbs (*number | keyword*)

Synopsis CBS
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress](#)
[overrides queue reference cbs \(number | keyword\)](#)
Tree [cbs](#)
Range 0 to 1048576
Units kilobytes
Options auto
Introduced 16.0.R1
Platforms All

drop-tail

| | |
|------------|--|
| Synopsis | Enter the drop-tail context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail |
| Tree | drop-tail |
| Introduced | 16.0.R1 |
| Platforms | All |

low

| | |
|------------|---|
| Synopsis | Enter the low context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low |
| Tree | low |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-reduction-from-mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Percentage reduction from the MBS for a queue drop tail |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>) |
| Tree | percent-reduction-from-mbs |
| Range | 0 to 100 |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-class-weight *number*

| | |
|----------|--|
| Synopsis | Class weight override for the queue |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |

Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

hs-wred-queue

Synopsis Enter the **hs-wred-queue** context
 Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference](#) [hs-wred-queue](#)
 Tree [hs-wred-queue](#)
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

policy reference

Synopsis Slope policy applied to the HSQ queue group queue
 Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference](#) [hs-wred-queue policy reference](#)
 Tree [policy](#)
 Reference **configure** [qos slope-policy string](#)
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
 Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference](#) [hs-wrr-weight number](#)
 Tree [hs-wrr-weight](#)
 Range 1 to 127
 Default 1
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis MBS

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>) |
| Tree | mbs |
| Range | 0 to 1073741824 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-queue-depth

| | |
|------------|--|
| Synopsis | Enable the monitor-queue-depth context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> monitor-queue-depth |
| Tree | monitor-queue-depth |
| Introduced | 20.10.R1 |
| Platforms | All |

fast-polling *boolean*

| | |
|-------------|--|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> monitor-queue-depth fast-polling <i>boolean</i> |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
When configured to false , fast queue polling is not enabled. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|----------|--|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> monitor-queue-depth violation-threshold <i>decimal-number</i> |
| Tree | violation-threshold |

| | |
|-------------|--|
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|---|
| Synopsis | Enter the parent context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference parent |
| Tree | parent |
| Introduced | 16.0.R1 |
| Platforms | All |

cir-weight *number*

| | |
|------------|--|
| Synopsis | CIR parameter that overrides parent for queue group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference parent cir-weight <i>number</i> |
| Tree | cir-weight |
| Range | 0 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight *number*

| | |
|------------|--|
| Synopsis | PIR parameter that overrides parent for queue group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference parent weight <i>number</i> |
| Tree | weight |
| Range | 0 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | All |

cir decimal-number

| | |
|------------|--|
| Synopsis | CIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference percent-rate cir decimal-number |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

pir decimal-number

| | |
|------------|--|
| Synopsis | PIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference percent-rate pir decimal-number |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

rate

| | |
|----------|---|
| Synopsis | Enter the rate context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |

Introduced 16.0.R1
 Platforms All

cir (*number* | *keyword*)

Synopsis CIR rate

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |

| Tree | eth-vsm-grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Receive and process Nokia ETH-CFM Grace PDU on the MEP |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i> |
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

low-priority-defect *keyword*

| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i> |
| Tree | low-priority-defect |
| Default | mac-rem-err-xcon |
| Options | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

one-way-delay-threshold *number*

| | |
|------------|--|
| Synopsis | Threshold time limit for the one-way delay test |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i> |
| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Default | 3 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos sap-ingress policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-ingress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

queuing-type *keyword*

| | |
|------------|--|
| Synopsis | Queuing type |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos sap-ingress queuing-type <i>keyword</i> |
| Tree | queuing-type |
| Options | shared, multipoint-shared |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR |

scheduler-policy

| | |
|------------|---|
| Synopsis | Enter the scheduler-policy context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy |
| Tree | scheduler-policy |
| Introduced | 16.0.R1 |
| Platforms | All |

overrides

| | |
|------------|--|
| Synopsis | Enter the overrides context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | All |

scheduler [[scheduler-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the scheduler list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Introduced | 16.0.R1 |
| Platforms | All |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | IP MTU for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Description | This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.

When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPsec transport mode profile name

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ip-tunnel](#) *string* [ipsec-transport-mode-profile](#) *reference*

Tree [ipsec-transport-mode-profile](#)

Reference **configure** [ipsec](#) [ipsec-transport-mode-profile](#) *string*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local IP address of this tunnel

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ip-tunnel](#) *string* [local-ip-address](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [local-ip-address](#)

Description This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).
When this command specifies an IPv6 address, it must be a global unicast address.

Introduced 16.0.R1

Platforms All

pmtu-discovery-aging *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time to age out the learned path MTU |
| Context | configure <i>service vprn string interface string sap string ip-tunnel string pmtu-discovery-aging number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Default | 900 |
| Units | seconds |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP Maximum Segment Size (MSS) on the private side |
| Context | configure <i>service vprn string interface string sap string ip-tunnel string private-tcp-mss-adjust number</i> |
| Tree | private-tcp-mss-adjust |
| Description | This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Tree | icmp-generation |

| | |
|-------------|--|
| Description | Commands in this context configure settings for ICMPv4 message generation. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the frag-required context |
| Context | configure service vprn string interface string sap string ipsec-tunnel string icmp-generation frag-required |
| Tree | frag-required |
| Description | Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Administrative state of sending ICMP messages |
| Context | configure service vprn string interface string sap string ipsec-tunnel string icmp-generation frag-required admin-state keyword |
| Tree | admin-state |
| Description | This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Default | enable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Interval for sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required interval <i>number</i> |
| Tree | interval |
| Description | This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4). |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

message-count *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Maximum number of ICMP messages that can be sent |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required message-count <i>number</i> |
| Tree | message-count |
| Description | This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp6-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the icmp6-generation context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation |
| Tree | icmp6-generation |
| Description | Commands in this context configure settings for ICMPv6 message generation. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the packet-too-big context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big |
| Tree | packet-too-big |
| Description | <p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Administrative state of Packet Too Big message sends |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Interval for sending Packet Too Big messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big interval <i>number</i> |
| Tree | interval |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Maximum number of ICMPv6 PTB messages that can be sent |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big message-count <i>number</i> |
| Tree | message-count |
| Description | This command configures the maximum number of PTB messages that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |

| | |
|------------|--|
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Private MTU of the IPsec tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Description | This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

key-exchange

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enter the key-exchange context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange |

| Reference | configure ipsec cert-profile <i>string</i> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

status-verify

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the status-verify context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify |
| Tree | status-verify |
| Description | Commands in this context configure attributes of Certificate Status Verification (CSV). |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-result *keyword*

| | |
|-------------|--|
| Synopsis | Default result for Certificate Status Verification |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify default-result <i>keyword</i> |
| Tree | default-result |
| Description | This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result. |
| Default | revoked |
| Options | revoked, good |

| | |
|------------|--|
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

primary *keyword*

| | |
|-------------|---|
| Synopsis | Primary method of CSV to verify the revocation status |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify primary <i>keyword</i> |
| Tree | primary |
| Description | This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer. |
| Default | crI |
| Options | crI, ocsp |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

secondary *keyword*

| | |
|-------------|---|
| Synopsis | Secondary method used to verify certificate revocation |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify secondary <i>keyword</i> |
| Tree | secondary |
| Description | This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate. |
| Default | none |
| Options | none, crI, ocsp |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

trust-anchor-profile *reference*

| | |
|-----------|---|
| Synopsis | Trust anchor profile name |

| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> max-history-key-records ike <i>number</i> |
| Tree | ike |
| Range | 1 to 3 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pmtu-discovery-aging number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Aging out time of the learned path MTU |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Default | 900 |
| Units | seconds |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | TCP maximum segment size (MSS) adjustment |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string private-tcp-mss-adjust number</i> |
| Tree | private-tcp-mss-adjust |
| Description | This command specifies the TCP MSS to adjust for the tunnel on the private side.
When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v4 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable propagation of the path MTU to IPv4 hosts |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string propagate-pmtu-v4 boolean</i> |
| Tree | propagate-pmtu-v4 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v6 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable propagation of the path MTU to IPv6 hosts |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string propagate-pmtu-v6 boolean</i> |
| Tree | propagate-pmtu-v6 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP maximum segment size (MSS) on the public network |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string public-tcp-mss-adjust (number keyword)</i> |
| Tree | public-tcp-mss-adjust |
| Description | This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Options | auto |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

replay-window *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Anti-replay window size |
| Context | configure <i>service vpn string interface string sap string ipsec-tunnel string replay-window number</i> |
| Tree | <i>replay-window</i> |
| Description | This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled. |
| Range | 32 64 128 256 512 |
| Units | packets |
| Introduced | 19.7.R1 |

strict-match *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable strict match of the security policy entry |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i> |
| Tree | strict-match |
| Description | <p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p> |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Default | none |
| Options | none, down |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service vprn string interface string spoke-sdp string bfd wait-for-up-timer number |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time |

for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.

| Default | 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm-padding-size *number*

| | |
|-------------|---|
| Synopsis | Number of octets of padding to insert in CCM packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i> |
| Tree | ccm-padding-size |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second. |
| Range | 3 to 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> ip-mirror-interface <i>string</i> spoke-sdp <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|----------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> ip-mirror-interface <i>string</i> spoke-sdp <i>string</i> ingress |
| Tree | ingress |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string</i> ip-mirror-interface <i>string</i> spoke-sdp <i>string</i> ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn <i>string</i> ip-mirror-interface <i>string</i> spoke-sdp <i>string</i> ingress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Spoke SDP ingress VC label |
| Context | configure service vprn <i>string</i> ip-mirror-interface <i>string</i> spoke-sdp <i>string</i> ingress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 1 to 1048575 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipsec

| | |
|------------|--|
| Synopsis | Enter the ipsec context |
| Context | configure service vprn string ipsec |
| Tree | ipsec |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

allow-reverse-route-override-type keyword

| | |
|-------------|---|
| Synopsis | System behavior for new reverse route |
| Context | configure service vprn string ipsec allow-reverse-route-override-type keyword |
| Tree | allow-reverse-route-override-type |
| Description | This command specifies the system behavior when a new reverse route overlaps with an existing reverse route.

When unconfigured, the system does not allow a new dynamic LAN-to-LAN tunnel that terminates in the private VPRN service to be created with an overlapping reverse route. |
| Options | same-idi, any-idi |
| Introduced | 20.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multi-chassis-shunt-interface [name] reference

| | |
|------------|--|
| Synopsis | Enter the multi-chassis-shunt-interface list instance |
| Context | configure service vprn string ipsec multi-chassis-shunt-interface reference |
| Tree | multi-chassis-shunt-interface |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] reference

| | |
|-----------|--|
| Synopsis | Multi-chassis shunt interface name |
| Context | configure service vprn string ipsec multi-chassis-shunt-interface reference |
| Tree | multi-chassis-shunt-interface |
| Reference | configure service vprn string interface string |
| Notes | This element is part of a list key. |

Introduced 22.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

next-hop

Synopsis Enter the **next-hop** context
 Context **configure service vpn** *string* **ipsec multi-chassis-shunt-interface** *reference* **next-hop**
 Tree **next-hop**
 Description Commands in this context configure the next hop for shunting over the interface.
 Introduced 22.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Next hop address
 Context **configure service vpn** *string* **ipsec multi-chassis-shunt-interface** *reference* **next-hop**
address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
 Tree **address**
 Description This command configures the next-hop address for the shunting interface.
 Introduced 22.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunting-profile [*name*] *string*

Synopsis Enter the **multi-chassis-shunting-profile** list instance
 Context **configure service vpn** *string* **ipsec multi-chassis-shunting-profile** *string*
 Tree **multi-chassis-shunting-profile**
 Max. 64
 Instances
 Introduced 22.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[*name*] *string*

Synopsis Multi-chassis shunting profile name
 Context **configure service vpn** *string* **ipsec multi-chassis-shunting-profile** *string*

| | |
|---------------|--|
| Tree | multi-chassis-shunting-profile |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

peer [[ip-address](#)] *reference*

| | |
|----------------|--|
| Synopsis | Enter the peer list instance |
| Context | configure service vprn <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> peer <i>reference</i> |
| Tree | peer |
| Max. Instances | 3 |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[ip-address] *reference*

| | |
|------------|--|
| Synopsis | Peer address |
| Context | configure service vprn <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> peer <i>reference</i> |
| Tree | peer |
| Reference | configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Notes | This element is part of a list key. |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multi-chassis-shunt-interface *reference*

| | |
|------------|---|
| Synopsis | Multi-chassis shunt interface |
| Context | configure service vprn <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> peer <i>reference</i> multi-chassis-shunt-interface <i>reference</i> |
| Tree | multi-chassis-shunt-interface |
| Reference | configure service vprn <i>string</i> ipsec multi-chassis-shunt-interface <i>reference</i> |
| Introduced | 22.5.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

security-policy [*id*] *number*

Synopsis Enter the **security-policy** list instance
 Context **configure service vpn** *string ipsec security-policy number*
 Tree [security-policy](#)
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis IPsec security policy ID
 Context **configure service vpn** *string ipsec security-policy number*
 Tree [security-policy](#)
 Range 1 to 32768
 Notes This element is part of a list key.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [*entry-id*] *number*

Synopsis Enter the **entry** list instance
 Context **configure service vpn** *string ipsec security-policy number entry number*
 Tree [entry](#)
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis IPsec security policy entry ID
 Context **configure service vpn** *string ipsec security-policy number entry number*
 Tree [entry](#)
 Range 1 to 16
 Notes This element is part of a list key.

| | |
|------------|--|
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-ip

| | |
|-------------|--|
| Synopsis | Enter the local-ip context |
| Context | configure service vpn string ipsec security-policy number entry number local-ip |
| Tree | local-ip |
| Description | <p>Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address string

| | |
|------------|---|
| Synopsis | Destination IPv4 address of the aggregate route |
| Context | configure service vpn string ipsec security-policy number entry number local-ip address string |
| Tree | address |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

any boolean

| | |
|------------|--|
| Synopsis | Use any IP address |
| Context | configure service vpn string ipsec security-policy number entry number local-ip any boolean |
| Tree | any |
| Default | false |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-ipv6

| | |
|-------------|--|
| Synopsis | Enter the local-ipv6 context |
| Context | configure service vpn <i>string</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6 |
| Tree | local-ipv6 |
| Description | <p>Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|------------|---|
| Synopsis | Destination IPv6 address of the aggregate route |
| Context | configure service vpn <i>string</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6 address <i>string</i> |
| Tree | address |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

any *boolean*

| | |
|------------|--|
| Synopsis | Use any IP address |
| Context | configure service vpn <i>string</i> ipsec security-policy <i>number</i> entry <i>number</i> local-ipv6 any <i>boolean</i> |
| Tree | any |
| Default | false |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

remote-ip

| | |
|-------------|---|
| Synopsis | Enter the remote-ip context |
| Context | configure service vpn string ipsec security-policy number entry number remote-ip |
| Tree | remote-ip |
| Description | Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry.

The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|------------|--|
| Synopsis | Destination IPv4 address of the aggregate route |
| Context | configure service vpn string ipsec security-policy number entry number remote-ip address string |
| Tree | address |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

any *boolean*

| | |
|------------|---|
| Synopsis | Use any IP address |
| Context | configure service vpn string ipsec security-policy number entry number remote-ip any boolean |
| Tree | any |
| Default | false |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

remote-ipv6

| | |
|----------|---|
| Synopsis | Enter the remote-ipv6 context |
| Context | configure service vpn string ipsec security-policy number entry number remote-ipv6 |

| | |
|-------------|--|
| Tree | remote-ipv6 |
| Description | Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.

The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address string

| | |
|------------|---|
| Synopsis | Destination IPv6 address of the aggregate route |
| Context | configure service vprn string ipsec security-policy number entry number remote-ipv6 address string |
| Tree | address |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

any boolean

| | |
|------------|--|
| Synopsis | Use any IP address |
| Context | configure service vprn string ipsec security-policy number entry number remote-ipv6 any boolean |
| Tree | any |
| Default | false |
| Notes | The following elements are part of a choice: address or any . |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|---|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn string ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn string ipv6 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

reachable-time *number*

| | |
|------------|--|
| Synopsis | Neighbor reachability detection timer |
| Context | configure service vprn string ipv6 neighbor-discovery reachable-time number |
| Tree | reachable-time |
| Range | 30 to 3600 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

stale-time *number*

| | |
|------------|--|
| Synopsis | Neighbor discovery cache entry stale time |
| Context | configure service vprn string ipv6 neighbor-discovery stale-time number |
| Tree | stale-time |
| Range | 60 to 65535 |
| Default | 14400 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-advertisement

| | |
|------------|--|
| Synopsis | Enter the router-advertisement context |
| Context | configure service vprn string ipv6 router-advertisement |
| Tree | router-advertisement |
| Introduced | 16.0.R1 |
| Platforms | All |

dns-options

| | |
|------------|--|
| Synopsis | Enable the dns-options context |
| Context | configure service vprn string ipv6 router-advertisement dns-options |
| Tree | dns-options |
| Introduced | 16.0.R1 |
| Platforms | All |

rdnss-lifetime (*keyword | number*)

| | |
|-------------|---|
| Synopsis | Maximum time over which the RDNSS address is valid |
| Context | configure service vprn string ipv6 router-advertisement dns-options rdnss-lifetime (<i>keyword number</i>) |
| Tree | rdnss-lifetime |
| Description | This command specifies the maximum time that the RDNSS address is used for name resolution by the client. |
| Range | 0 4 to 3600 |
| Default | infinite |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

server *string*

| | |
|----------------|---|
| Synopsis | RAs that are forwarded to IPv6 DNS servers |
| Context | configure service vprn string ipv6 router-advertisement dns-options server <i>string</i> |
| Tree | server |
| Max. Instances | 4 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [ip-int-name] *reference*

| | |
|------------|---|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-int-name] *reference*

| | |
|------------|---|
| Synopsis | VPRN interface name |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> |
| Tree | interface |
| Reference | configure service vprn <i>string</i> interface <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router advertisement |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

current-hop-limit *number*

| | |
|----------|--|
| Synopsis | Hop limit advertised in RA messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |

| | |
|------------|---------|
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

dns-options

| | |
|------------|--|
| Synopsis | Enable the dns-options context |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options |
| Tree | dns-options |
| Introduced | 16.0.R1 |
| Platforms | All |

include-rdnss *boolean*

| | |
|------------|--|
| Synopsis | Include the RDNSS option in the RA |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options include-rdnss boolean |
| Tree | include-rdnss |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

rdnss-lifetime (*number | keyword*)

| | |
|------------|--|
| Synopsis | Maximum time over which the RDNSS address 25 is valid |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options rdnss-lifetime (number keyword) |
| Tree | rdnss-lifetime |
| Range | 0 4 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

server string

| | |
|----------------|--|
| Synopsis | RAs that are forwarded to IPv6 DNS servers |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options server string |
| Tree | server |
| Max. Instances | 4 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

managed-configuration boolean

| | |
|------------|--|
| Synopsis | Set the managed address configuration flag |
| Context | configure service vprn string ipv6 router-advertisement interface reference managed-configuration boolean |
| Tree | managed-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-advertisement-interval number

| | |
|------------|--|
| Synopsis | Maximum time between sending advertisement messages |
| Context | configure service vprn string ipv6 router-advertisement interface reference max-advertisement-interval number |
| Tree | max-advertisement-interval |
| Range | 4 to 1800 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

min-advertisement-interval number

| | |
|----------|--|
| Synopsis | Minimum interval between router advertisement messages |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 3 to 1350 |
| Default | 200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu *number*

| | |
|------------|--|
| Synopsis | MTU for sending packets to the router |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 1280 to 9800 |
| Introduced | 16.0.R1 |
| Platforms | All |

other-stateful-configuration *boolean*

| | |
|------------|--|
| Synopsis | Set the other configuration flag |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix [[ipv6-prefix](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the prefix list instance |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> |
| Tree | prefix |
| Max. Instances | 254 |
| Introduced | 16.0.R1 |

Platforms All

[ipv6-prefix] *string*

Synopsis IPv6 address prefix

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*

Tree [prefix](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

autonomous *boolean*

Synopsis Set the autonomous flag value

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*
[autonomous](#) *boolean*

Tree [autonomous](#)

Default true

Introduced 16.0.R1

Platforms All

on-link *boolean*

Synopsis Use prefix for on-link determination

| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Default | 604800 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

valid-lifetime (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Remaining time in which the prefix is still valid |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> valid-lifetime (<i>keyword</i> <i>number</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Default | 2592000 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

reachable-time *number*

| | |
|------------|---|
| Synopsis | Time the router is reachable by other hosts or nodes |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-time *number*

| | |
|----------|---|
| Synopsis | Time to advertise neighbor advertisement messages |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference retransmit-time <i>number</i> |
| Tree | retransmit-time |
| Range | 0 to 1800000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

router-lifetime *number*

| | |
|------------|--|
| Synopsis | Lifetime value in neighbor advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference router-lifetime <i>number</i> |
| Tree | router-lifetime |
| Range | 0 4 to 9000 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

use-virtual-mac *boolean*

| | |
|------------|---|
| Synopsis | Use VRRP virtual MAC address for advertisement message |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference use-virtual-mac <i>boolean</i> |
| Tree | use-virtual-mac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

isis [**isis-instance**] *number*

| | |
|----------|---|
| Synopsis | Enter the isis list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> |
| Tree | isis |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

[isis-instance] number

| | |
|------------|--|
| Synopsis | Instance ID for the IS-IS instance |
| Context | configure service vprn string isis number |
| Tree | isis |
| Range | 0 to 127 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of the IS-IS instance |
| Context | configure service vprn string isis number admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-passive-only boolean

| | |
|------------|---|
| Synopsis | Advertise prefixes that belong to passive interfaces |
| Context | configure service vprn string isis number advertise-passive-only boolean |
| Tree | advertise-passive-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability keyword

| | |
|----------|--|
| Synopsis | Router capabilities advertisement to neighbors |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> isis number advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Options | area, as |
| Introduced | 16.0.R1 |
| Platforms | All |

all-l1isis *string*

| | |
|------------|---|
| Synopsis | Destination MAC address for all L1 IS-IS routers |
| Context | configure service vprn <i>string</i> isis number all-l1isis <i>string</i> |
| Tree | all-l1isis |
| Default | 01:80:C2:00:00:14 |
| Introduced | 16.0.R1 |
| Platforms | All |

all-l2isis *string*

| | |
|------------|---|
| Synopsis | Destination MAC address for all L2 IS-IS routers |
| Context | configure service vprn <i>string</i> isis number all-l2isis <i>string</i> |
| Tree | all-l2isis |
| Default | 01:80:C2:00:00:15 |
| Introduced | 16.0.R1 |
| Platforms | All |

area-address *string*

| | |
|----------------|---|
| Synopsis | Area address portion of the NSAP address |
| Context | configure service vprn <i>string</i> isis number area-address <i>string</i> |
| Tree | area-address |
| String Length | 2 to 38 |
| Max. Instances | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|------------|--|
| Synopsis | Perform authentication check to reject mismatch PDUs |
| Context | configure service vprn <i>string isis number authentication-check boolean</i> |
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to verify PDUs sent from neighbors |
| Context | configure service vprn <i>string isis number authentication-key string</i> |
| Tree | authentication-key |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Keychain used to sign and authenticate |
| Context | configure service vprn <i>string isis number authentication-keychain reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string isis number authentication-type keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|------------|---|
| Synopsis | Authenticate individual IS-IS packets of the CSNP type |
| Context | configure service vprn <i>string isis number csnp-authentication boolean</i> |
| Tree | csnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

default-route-tag *number*

| | |
|------------|--|
| Synopsis | Route tag for the default route |
| Context | configure service vprn <i>string isis number default-route-tag number</i> |
| Tree | default-route-tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|--|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string isis number export-limit</i> |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent *number*

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string isis number export-limit log-percent number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn <i>string</i> isis <i>number</i> export-limit number <i>number</i> |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn <i>string</i> isis <i>number</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|----------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> isis <i>number</i> graceful-restart |
| Tree | graceful-restart |

Introduced 16.0.R1
 Platforms All

helper-mode *boolean*

Synopsis Enable the Graceful Restart helper for IS-IS
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [graceful-restart](#) [helper-mode](#) *boolean*
 Tree [helper-mode](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [hello-authentication](#) *boolean*
 Tree [hello-authentication](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello-padding *keyword*

Synopsis IS-IS Hello message padding
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [hello-padding](#) *keyword*
 Tree [hello-padding](#)
 Options adaptive, loose, strict, none
 Introduced 16.0.R1
 Platforms All

ignore-attached-bit *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [ignore-attached-bit](#) *boolean*
 Tree [ignore-attached-bit](#)

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-lsp-errors *boolean*

| | |
|------------|--|
| Synopsis | Ignore LSP packets with errors |
| Context | configure service vprn <i>string isis number</i> ignore-lsp-errors <i>boolean</i> |
| Tree | ignore-lsp-errors |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-narrow-metric *boolean*

| | |
|------------|---|
| Synopsis | Ignore links with narrow metrics |
| Context | configure service vprn <i>string isis number</i> ignore-narrow-metric <i>boolean</i> |
| Tree | ignore-narrow-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

iid-tlv *boolean*

| | |
|------------|--|
| Synopsis | Use IID TLVs with IS-IS multi-instance |
| Context | configure service vprn <i>string isis number</i> iid-tlv <i>boolean</i> |
| Tree | iid-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string isis number</i> import-policy <i>reference</i> |

| | |
|----------------|--|
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the interface list instance |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the IS-IS interface |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|-------------|---|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn string isis number interface string bfd-liveness |
| Tree | bfd-liveness |
| Description | Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|---|
| Synopsis | Enable the ipv4 context |
| Context | configure service vprn string isis number interface string bfd-liveness ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

include-bfd-tlv *boolean*

| | |
|------------|--|
| Synopsis | Enable IS-IS BFD TLVs on the interface |
| Context | configure service vprn string isis number interface string bfd-liveness ipv4 include-bfd-tlv <i>boolean</i> |
| Tree | include-bfd-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|---|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn string isis number interface string bfd-liveness ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |

Platforms All

include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [bfd-liveness](#) [ipv6](#) **include-bfd-tlv** *boolean*

Tree [include-bfd-tlv](#)

Default false

Introduced 16.0.R1

Platforms All

csnp-interval *number*

Synopsis Time interval between successive CSN PDUs sent

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **csnp-interval** *number*

Tree [csnp-interval](#)

Range 1 to 65535

Default 10

Units seconds

Introduced 16.0.R1

Platforms All

default-instance *boolean*

Synopsis Allow non-MI capable router to establish an adjacency

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **default-instance** *boolean*

Tree [default-instance](#)

Default false

Introduced 16.0.R1

Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication** *boolean*

| | |
|------------|--------------------------------------|
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key or hash string for Hello PDUs |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-key <i>string</i> |
| Tree | hello-authentication-key |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Authentication keychain to use for the session |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-keychain <i>reference</i> |
| Tree | hello-authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Hello authentication type |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

| | |
|------------|---|
| Synopsis | Interface type to broadcast, point-to-point, or to be default |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> interface-type <i>keyword</i> |
| Tree | interface-type |
| Options | point-to-point, broadcast |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|------------|---|
| Synopsis | Enable IPv4 multicast routing for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> ipv4-multicast <i>boolean</i> |
| Tree | ipv4-multicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|---|
| Synopsis | Enable IPv6 unicast routing for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> ipv6-unicast <i>boolean</i> |
| Tree | ipv6-unicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

level [*level-number*] *keyword*

| | |
|----------------|---|
| Synopsis | Enter the level list instance |
| Context | configure <i>service</i> <i>vpn</i> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|---|
| Synopsis | ISIS protocol level number |
| Context | configure <i>service</i> <i>vpn</i> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key for Hello PDUs |
| Context | configure <i>service</i> <i>vpn</i> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> level <i>keyword</i> hello-authentication-key <i>string</i> |
| Tree | hello-authentication-key |
| Description | This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.

If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-keychain *reference*

| | |
|------------|--|
| Synopsis | Authentication keychain to use for the session |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i> |
| Tree | hello-authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|-------------|--|
| Synopsis | Hello authentication enabled on the context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Description | This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included. |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Interval between Hello messages sent on this level |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 20000 |
| Default | 9 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|--|
| Synopsis | Hello messages missed from neighbor before router declares adjacency down |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric *number*

| | |
|------------|---|
| Synopsis | IS-IS interface metric applied for IPv4 multicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> ipv4-multicast-metric <i>number</i> |
| Tree | ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast-metric *number*

| | |
|----------|---|
| Synopsis | IS-IS interface metric applied for IPv6 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> ipv6-unicast-metric <i>number</i> |
| Tree | ipv6-unicast-metric |

| | |
|------------|---------------|
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

metric number

| | |
|------------|--|
| Synopsis | IS-IS interface metric applied for IPv4 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean

| | |
|------------|--|
| Synopsis | Passive interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> passive <i>boolean</i> |
| Tree | passive |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|------------|--|
| Synopsis | Router to become the designated router on a multi-access network |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> priority <i>number</i> |
| Tree | priority |
| Range | 0 to 127 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

sd-offset number

| | |
|----------|------------------------------------|
| Synopsis | Value of the signal degrade offset |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string isis number interface string level keyword sd-offset number</i> |
| Tree | sd-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

sf-offset *number*

| | |
|------------|---|
| Synopsis | Value of the signal fail offset |
| Context | configure service vprn <i>string isis number interface string level keyword sf-offset number</i> |
| Tree | sf-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|------------|---|
| Synopsis | IS-IS levels for this interface |
| Context | configure service vprn <i>string isis number interface string level-capability keyword</i> |
| Tree | level-capability |
| Default | 1/2 |
| Options | 1, 2, 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|------------|---|
| Synopsis | Load balancing weight |
| Context | configure service vprn <i>string isis number interface string load-balancing-weight number</i> |
| Tree | load-balancing-weight |
| Max. Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|--|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable Loopfree Alternative at interface level. |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate exclude <i>boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|--|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|--|
| Synopsis | Route next hop policy template that is applied to interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsp-pacing-interval *number*

| | |
|------------|--|
| Synopsis | Interval for sending LSPs from interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> lsp-pacing-interval <i>number</i> |
| Tree | lsp-pacing-interval |
| Range | 0 to 65535 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mesh-group

| | |
|------------|---|
| Synopsis | Enable the mesh-group context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group |
| Tree | mesh-group |
| Introduced | 16.0.R1 |
| Platforms | All |

blocked

| | |
|------------|--|
| Synopsis | Prevent the interface from flooding LSPs |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group blocked |
| Tree | blocked |
| Notes | The following elements are part of a choice: blocked or value . |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

| | |
|----------|--|
| Synopsis | Mesh group for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group value <i>number</i> |
| Tree | value |
| Range | 1 to 2000000000 |
| Notes | The following elements are part of a choice: blocked or value . |

Introduced 16.0.R1
 Platforms All

passive *boolean*

Synopsis Passive interface
 Context **configure** *service vprn string isis number interface string* **passive** *boolean*
 Tree **passive**
 Default false
 Introduced 16.0.R1
 Platforms All

retransmit-interval *number*

Synopsis Minimum time between LSP PDU retransmissions on point-to-point interface
 Context **configure** *service vprn string isis number interface string* **retransmit-interval** *number*
 Tree **retransmit-interval**
 Range 1 to 65535
 Default 5
 Units seconds
 Introduced 16.0.R1
 Platforms All

tag *number*

Synopsis Route tag for IP address of interface
 Context **configure** *service vprn string isis number interface string* **tag** *number*
 Tree **tag**
 Range 1 to 4294967295
 Introduced 16.0.R1
 Platforms All

ipv4-multicast-routing *keyword*

Synopsis IS-IS topology for IPv4 multicast routing

| | |
|------------|--|
| Context | configure service vprn <i>string isis number ipv4-multicast-routing keyword</i> |
| Tree | ipv4-multicast-routing |
| Default | native |
| Options | false, native, mt |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-routing *boolean*

| | |
|------------|--|
| Synopsis | Support IPv4 routing for IS-IS instance |
| Context | configure service vprn <i>string isis number ipv4-routing boolean</i> |
| Tree | ipv4-routing |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-routing *keyword*

| | |
|------------|--|
| Synopsis | Routing topology for IPv6 |
| Context | configure service vprn <i>string isis number ipv6-routing keyword</i> |
| Tree | ipv6-routing |
| Default | false |
| Options | false, native, mt |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string isis number level keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

| | |
|------------|--|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn string isis number level keyword |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn string isis number level keyword advertise-router-capability boolean |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to verify PDUs sent on the interface |
| Context | configure service vprn string isis number level keyword authentication-key string |
| Tree | authentication-key |
| Description | This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.

Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|--|
| Synopsis | Keychain used to sign and authenticate |
| Context | configure service vprn string isis number level keyword authentication-keychain reference |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain string |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|--|
| Synopsis | Authentication type to be used |
| Context | configure service vprn string isis number level keyword authentication-type keyword |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|------------|--|
| Synopsis | Enable authentication of CSNP IS-IS protocol packets |
| Context | configure service vprn string isis number level keyword csnp-authentication boolean |
| Tree | csnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

default-ipv4-multicast-metric *number*

| | |
|----------|---|
| Synopsis | Default metric for IPv4 unicast |
| Context | configure service vprn string isis number level keyword default-ipv4-multicast-metric number |
| Tree | default-ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Default | 10 |

Introduced 16.0.R1
Platforms All

default-ipv6-unicast-metric *number*

Synopsis Default metric for IPv6 unicast
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [default-ipv6-unicast-metric](#) *number*
Tree [default-ipv6-unicast-metric](#)
Range 1 to 16777215
Default 10
Introduced 16.0.R1
Platforms All

default-metric *number*

Synopsis Default metric
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [default-metric](#) *number*
Tree [default-metric](#)
Range 1 to 16777215
Default 10
Introduced 16.0.R1
Platforms All

external-preference *number*

Synopsis External route preference for IS-IS level
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [external-preference](#) *number*
Tree [external-preference](#)
Range 1 to 255
Introduced 16.0.R1
Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

| | |
|------------|--|
| Context | configure service vprn <i>string isis number level</i> keyword hello-authentication <i>boolean</i> |
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|---|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string isis number level</i> keyword hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate-exclude *boolean*

| | |
|------------|--|
| Synopsis | Exclude interface participating in specific IS-IS level in SPF LFA computation |
| Context | configure service vprn <i>string isis number level</i> keyword loopfree-alternate-exclude <i>boolean</i> |
| Tree | loopfree-alternate-exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-mtu-size *number*

WARNING:

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|----------|---|
| Synopsis | LSP MTU size |
| Context | configure service vprn <i>string isis number level</i> keyword lsp-mtu-size <i>number</i> |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Default | 1492 |

| | |
|------------|---------|
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | External route preference at level |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

psnp-authentication *boolean*

| | |
|------------|--|
| Synopsis | Enable authentication on PSNP IS-IS protocol packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> psnp-authentication <i>boolean</i> |
| Tree | psnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

wide-metrics-only *boolean*

| | |
|------------|--|
| Synopsis | Use wide metrics advertisements in the LSPs |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> wide-metrics-only <i>boolean</i> |
| Tree | wide-metrics-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|----------|--|
| Synopsis | Routing level for instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> level-capability <i>keyword</i> |

| | |
|------------|----------------------------------|
| Tree | level-capability |
| Default | 1/2 |
| Options | 1, 2, 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

link-group [[link-group-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the link-group list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> |
| Tree | link-group |
| Introduced | 16.0.R1 |
| Platforms | All |

[link-group-name] *string*

| | |
|---------------|---|
| Synopsis | Link group name for the IS-IS protocol |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> |
| Tree | link-group |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|--|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric-offset *number*

| | |
|------------|---|
| Synopsis | Offset value for the IPv4 multicast address family |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> ipv4-multicast-metric-offset <i>number</i> |
| Tree | ipv4-multicast-metric-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-unicast-metric-offset *number*

| | |
|----------|---|
| Synopsis | Offset value for the IPv4 unicast address family |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> ipv4-unicast-metric-offset <i>number</i> |
| Tree | ipv4-unicast-metric-offset |
| Range | 1 to 16777215 |

Introduced 16.0.R1
 Platforms All

ipv6-unicast-metric-offset *number*

Synopsis Offset value for the IPv6 unicast address family
 Context **configure** **service vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **ipv6-unicast-metric-offset** *number*
 Tree [ipv6-unicast-metric-offset](#)
 Range 1 to 16777215
 Introduced 16.0.R1
 Platforms All

member [[interface-name](#)] *reference*

Synopsis Add a list entry for **member**
 Context **configure** **service vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **member** *reference*
 Tree [member](#)
 Max. Instances 8
 Introduced 16.0.R1
 Platforms All

[interface-name] *reference*

Synopsis Interface name for the associated link group
 Context **configure** **service vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **member** *reference*
 Tree [member](#)
 Reference **configure** **service vprn** *string* **isis** *number* **interface** *string*
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

oper-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> oper-members <i>number</i> |
| Tree | oper-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

revert-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links to return link group to normal state and remove offsets |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> revert-members <i>number</i> |
| Tree | revert-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string</i> isis <i>number</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vprn <i>string</i> isis <i>number</i> loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|----------------|--|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vprn string isis number loopfree-alternate exclude prefix-policy reference |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement string |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsp-lifetime *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | Amount of time during which an LSP is considered valid |
| Context | configure service vprn string isis number lsp-lifetime number |
| Tree | lsp-lifetime |
| Range | 350 to 65535 |
| Default | 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-minimum-remaining-lifetime *number*

| | |
|----------|--|
| Synopsis | Minimum value for the Remaining Lifetime of an LSP |
| Context | configure service vprn string isis number lsp-minimum-remaining-lifetime number |
| Tree | lsp-minimum-remaining-lifetime |

| | |
|------------|--------------|
| Range | 350 to 65535 |
| Units | seconds |
| Introduced | 19.7.R1 |
| Platforms | All |

lsp-mtu-size *number*

WARNING:

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | LSP MTU size |
| Context | configure service vprn <i>string isis number</i> lsp-mtu-size <i>number</i> |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Default | 1492 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-refresh

| | |
|------------|---|
| Synopsis | Enter the lsp-refresh context |
| Context | configure service vprn <i>string isis number</i> lsp-refresh |
| Tree | lsp-refresh |
| Introduced | 16.0.R1 |
| Platforms | All |

half-lifetime *boolean*

| | |
|------------|--|
| Synopsis | Set the refresh interval to always be half the LSP lifetime |
| Context | configure service vprn <i>string isis number</i> lsp-refresh half-lifetime <i>boolean</i> |
| Tree | half-lifetime |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|---|
| Synopsis | Refresh timer interval |
| Context | configure service vprn <i>string</i> isis <i>number</i> lsp-refresh interval <i>number</i> |
| Tree | interval |
| Range | 150 to 65535 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mru-mismatch-detection *boolean*

| | |
|-------------|--|
| Synopsis | Enable detection of MRU mismatch |
| Context | configure service vprn <i>string</i> isis <i>number</i> mru-mismatch-detection <i>boolean</i> |
| Tree | mru-mismatch-detection |
| Description | <p>When configured to true, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to false, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p> |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

multi-topology

| | |
|------------|---|
| Synopsis | Enable the multi-topology context |
| Context | configure service vprn <i>string</i> isis <i>number</i> multi-topology |
| Tree | multi-topology |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|------------|--|
| Synopsis | Support IPv4 topology (MT3) |
| Context | configure service vprn <i>string isis number multi-topology</i> ipv4-multicast <i>boolean</i> |
| Tree | ipv4-multicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|--|
| Synopsis | Support multi-topology TLVs |
| Context | configure service vprn <i>string isis number multi-topology</i> ipv6-unicast <i>boolean</i> |
| Tree | ipv6-unicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-import

| | |
|------------|--|
| Synopsis | Enter the multicast-import context |
| Context | configure service vprn <i>string isis number</i> multicast-import |
| Tree | multicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Submit IPv4 routes into the multicast RPF of the RTM |
| Context | configure service vprn <i>string isis number multicast-import</i> ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload

| | |
|------------|---|
| Synopsis | Enable the overload context |
| Context | configure service vprn string isis number overload |
| Tree | overload |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|--|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn string isis number overload max-metric boolean |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-external *boolean*

| | |
|------------|---|
| Synopsis | Advertise the external routes when router is in overloaded |
| Context | configure service vprn string isis number overload-export-external boolean |
| Tree | overload-export-external |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-interlevel *boolean*

| | |
|------------|---|
| Synopsis | Advertise the inter-level routes when router is overloaded |
| Context | configure service vprn string isis number overload-export-interlevel boolean |
| Tree | overload-export-interlevel |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|---|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn string isis number overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|--|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn string isis number overload-on-boot max-metric boolean |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload state after reboot |
| Context | configure service vprn string isis number overload-on-boot timeout number |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

poi-tlv *boolean*

| | |
|------------|--|
| Synopsis | Purge Originator Identification TLV |
| Context | configure service vprn string isis number poi-tlv boolean |
| Tree | poi-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-attributes-tlv *boolean*

| | |
|------------|---|
| Synopsis | Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-attributes-tlv <i>boolean</i> |
| Tree | prefix-attributes-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit

| | |
|------------|---|
| Synopsis | Enable the prefix-limit context |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit |
| Tree | prefix-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of prefixes for IS-IS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit limit <i>number</i> |
| Tree | limit |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Send warning message when the prefix limit is reached |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

overload-timeout (*number* | *keyword*)

Synopsis Time router remains in overload after prefix limit is exceeded before restarting

Context **configure service vprn** *string isis number prefix-limit overload-timeout* (*number* | *keyword*)

Tree [overload-timeout](#)

Range 1 to 1800

Default forever

Units seconds

Options forever

Introduced 16.0.R1

Platforms All

warning-threshold *number*

Synopsis Threshold value to trigger a warning message to be sent

Context **configure service vprn** *string isis number prefix-limit warning-threshold* *number*

Tree [warning-threshold](#)

Range 0 to 100

Default 0

Units percent

Introduced 16.0.R1

Platforms All

psnp-authentication *boolean*

Synopsis Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type

Context **configure service vprn** *string isis number psnp-authentication* *boolean*

Tree [psnp-authentication](#)

Default true

Introduced 16.0.R1

Platforms All

|------------|---|
| Synopsis | Enter the timers context |
| Context | configure service vprn string isis number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-wait

| | |
|------------|--|
| Synopsis | Enter the Isp-wait context |
| Context | configure service vprn string isis number timers Isp-wait |
| Tree | Isp-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-initial-wait *number*

| | |
|------------|--|
| Synopsis | Initial LSP generation delay |
| Context | configure service vprn string isis number timers Isp-wait Isp-initial-wait number |
| Tree | Isp-initial-wait |
| Range | 10 to 100000 |
| Default | 10 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-max-wait *number*

| | |
|------------|--|
| Synopsis | Maximum time between two consecutive LSP occurrences |
| Context | configure service vprn string isis number timers Isp-wait Isp-max-wait number |
| Tree | Isp-max-wait |
| Range | 10 to 120000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

lsp-second-wait *number*

Synopsis Delay between first and second LSP generation

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [lsp-wait](#) [lsp-second-wait](#) *number*

Tree [lsp-second-wait](#)

Range 10 to 100000

Default 1000

Units milliseconds

Introduced 16.0.R1

Platforms All

spf-wait

Synopsis Enter the **spf-wait** context

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [spf-wait](#)

Tree [spf-wait](#)

Introduced 16.0.R1

Platforms All

spf-initial-wait *number*

Synopsis Initial SPF calculation delay after topology change

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [spf-wait](#) [spf-initial-wait](#) *number*

Tree [spf-initial-wait](#)

Range 10 to 100000

Default 1000

Units milliseconds

Introduced 16.0.R1

Platforms All

spf-max-wait *number*

Synopsis Maximum interval amid two consecutive SPF calculations

| | |
|------------|---|
| Context | configure service vprn <i>string isis number timers spf-wait spf-max-wait number</i> |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Default | 10000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|--|
| Synopsis | Hold time between first and second SPF calculations |
| Context | configure service vprn <i>string isis number timers spf-wait spf-second-wait number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import

| | |
|------------|--|
| Synopsis | Enter the unicast-import context |
| Context | configure service vprn <i>string isis number unicast-import</i> |
| Tree | unicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Submit IPv4 routes into unicast RTM |
| Context | configure service vprn <i>string isis number unicast-import ipv4 boolean</i> |
| Tree | ipv4 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Submit IPv6 routes into unicast RTM |
| Context | configure service vprn <i>string isis number unicast-import ipv6 boolean</i> |
| Tree | ipv6 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

l2tp

| | |
|------------|---|
| Synopsis | Enable the l2tp context |
| Context | configure service vprn <i>string l2tp</i> |
| Tree | l2tp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of L2TP |
| Context | configure service vprn <i>string l2tp admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|---|
| Synopsis | Attribute of the Value Pair (AVP) hiding algorithm |
| Context | configure service vprn <i>string l2tp avp-hiding keyword</i> |
| Tree | avp-hiding |
| Options | sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *boolean*

| | |
|------------|---|
| Synopsis | Use challenge-response authentication |
| Context | configure service vprn <i>string</i> l2tp challenge <i>boolean</i> |
| Tree | challenge |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|---|
| Synopsis | Destruction timeout |
| Context | configure service vprn <i>string</i> l2tp destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Default | 60 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-tunnel

| | |
|------------|--|
| Synopsis | Enter the ethernet-tunnel context |
| Context | configure service vprn <i>string</i> l2tp ethernet-tunnel |
| Tree | ethernet-tunnel |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reconnect-timeout (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Timeout for a session setup retry |
| Context | configure service vprn <i>string</i> l2tp ethernet-tunnel reconnect-timeout (<i>number</i> <i>keyword</i>) |
| Tree | reconnect-timeout |
| Range | 10 to 3600 |
| Default | infinite |

| | |
|------------|---|
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

exclude-avps

| | |
|------------|---|
| Synopsis | Enter the exclude-avps context |
| Context | configure service vprn string l2tp exclude-avps |
| Tree | exclude-avps |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

calling-number *boolean*

| | |
|------------|--|
| Synopsis | Calling Number AVP to exclude |
| Context | configure service vprn string l2tp exclude-avps calling-number <i>boolean</i> |
| Tree | calling-number |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

initial-rx-lcp-conf-req *boolean*

| | |
|------------|---|
| Synopsis | Exclude the Initial Received LCP CONFREQ AVP |
| Context | configure service vprn string l2tp exclude-avps initial-rx-lcp-conf-req <i>boolean</i> |
| Tree | initial-rx-lcp-conf-req |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|----------|--|
| Synopsis | Enter the failover context |
| Context | configure service vprn string l2tp failover |

| | |
|------------|---|
| Tree | failover |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-max-session-lifetime *number*

| | |
|------------|---|
| Synopsis | Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase |
| Context | configure service vprn <i>string</i> l2tp failover recovery-max-session-lifetime <i>number</i> |
| Tree | recovery-max-session-lifetime |
| Range | 2 to 4294967295 |
| Default | 2 |
| Units | centiseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-method *keyword*

| | |
|------------|--|
| Synopsis | Recovery method of the sequence numbers after failover |
| Context | configure service vprn <i>string</i> l2tp failover recovery-method <i>keyword</i> |
| Tree | recovery-method |
| Default | mcs |
| Options | mcs, recovery-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|---|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp [*id*] *reference*

Synopsis Enter the **track-srrp** list instance

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference*

Tree [track-srrp](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[id] *reference*

Synopsis SRRP instance ID for multi-chassis redundancy failover

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference*

Tree [track-srrp](#)

Reference **configure** [redundancy multi-chassis peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [sync track-srrp](#) *number*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *reference*

Synopsis Multi-chassis peer address

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference* [peer](#) *reference*

Tree [peer](#)

Reference **configure** [redundancy multi-chassis peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

Synopsis Synchronization tag on the multi-chassis peer

| | |
|---------------|---|
| Context | configure service vpn <i>string</i> l2tp failover track-srrp reference sync-tag <i>string</i> |
| Tree | sync-tag |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group [**tunnel-group-name**] *string*

| | |
|------------|--|
| Synopsis | Enter the group list instance |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[tunnel-group-name] *string*

| | |
|---------------|--|
| Synopsis | Tunnel group name |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| String Length | 1 to 63 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the L2TP tunnel group |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|---|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *keyword*

| | |
|------------|--|
| Synopsis | Enable use of challenge-response authentication |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> challenge <i>keyword</i> |
| Tree | challenge |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|--|
| Synopsis | Destruction timeout |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-tunnel

Synopsis Enter the **ethernet-tunnel** context

Context **configure service vprn string l2tp group string ethernet-tunnel**

Tree [ethernet-tunnel](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout (*number* | *keyword*)

Synopsis Timeout for a session setup retry at group level

Context **configure service vprn string l2tp group string ethernet-tunnel reconnect-timeout (*number* | *keyword*)**

Tree [reconnect-timeout](#)

Range 10 to 3600

Units seconds

Options infinite

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis Enter the **failover** context

Context **configure service vprn string l2tp group string failover**

Tree [failover](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis Recovery method of the sequence numbers after failover

Context **configure service vprn string l2tp group string failover recovery-method *keyword***

Tree [recovery-method](#)

Options mcs, recovery-tunnel

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|---|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Idle timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2tpv3

| | |
|------------|---|
| Synopsis | Enter the I2tpv3 context |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 |
| Tree | I2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Cookie field length |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 cookie-length (<i>number</i> <i>keyword</i>) |
| Tree | cookie-length |
| Range | 4 8 |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|--|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 digest-type <i>keyword</i> |
| Tree | digest-type |
| Options | none, md5, sha1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nonce-length *number*

| | |
|------------|--|
| Synopsis | Length for the local L2TPv3 nonce (random number) |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 nonce-length <i>number</i> |
| Tree | nonce-length |
| Range | 0 16 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TPv3 password |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 private-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | TCP Maximum Segment Size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pw-cap-list

| | |
|----------|--------------------------------------|
| Synopsis | Enter the pw-cap-list context |
|----------|--------------------------------------|

| | |
|------------|--|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list |
| Tree | pw-cap-list |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Advertise Ethernet pseudowire type |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet <i>boolean</i> |
| Tree | ethernet |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-vlan *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Advertise Ethernet VLAN pseudowire type |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet-vlan <i>boolean</i> |
| Tree | ethernet-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rem-router-id *string*

| | |
|----------|--|
| Synopsis | Filter on remote router ID |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 rem-router-id <i>string</i> |
| Tree | rem-router-id |
| Default | 0.0.0.0 |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-password-change *boolean*

Synopsis Enable tracking of password changes
Context **configure** [service vprn](#) [string l2tp group](#) [string l2tpv3](#) [track-password-change](#) *boolean*
Tree [track-password-change](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis Enter the **lac** context
Context **configure** [service vprn](#) [string l2tp group](#) [string lac](#)
Tree [lac](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *keyword*

Synopsis DF (do not fragment) bit in data traffic transmitted as LAC
Context **configure** [service vprn](#) [string l2tp group](#) [string lac](#) [df-bit](#) *keyword*
Tree [df-bit](#)
Options false, true
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis Enter the **lns** context
Context **configure** [service vprn](#) [string l2tp group](#) [string lns](#)
Tree [lns](#)
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Ins-group *reference*

Synopsis ISA LNS group
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [Ins-group](#) *reference*
 Tree [Ins-group](#)
 Reference **configure** [isa](#) [Ins-group](#) *number*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance-method *keyword*

Synopsis New sessions for L2TP ISA MDA
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [load-balance-method](#) *keyword*
 Tree [load-balance-method](#)
 Default per-session
 Options per-session, per-tunnel
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis Enter the **mlppp** context
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [mlppp](#)
 Tree [mlppp](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis Administrative state of MLPPP in the L2TP tunnel group
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [mlppp](#) [admin-state](#) *keyword*
 Tree [admin-state](#)
 Default disable

| | |
|------------|---|
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|------------|---|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn string l2tp group string lns mlppp endpoint |
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vprn string l2tp group string lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vprn string l2tp group string lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *boolean*

| | |
|------------|---|
| Synopsis | Enable link fragmentation and interleaving |
| Context | configure service vprn string l2tp group string lns mlppp interleave boolean |
| Tree | interleave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay (*number | keyword*)

| | |
|------------|--|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn string l2tp group string lns mlppp max-fragment-delay (number keyword) |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Default | no-fragmentation |
| Units | milliseconds |
| Options | no-fragmentation |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|------------|---|
| Synopsis | Maximum MLPPP links |
| Context | configure service vprn string l2tp group string lns mlppp max-links number |
| Tree | max-links |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|----------|--|
| Synopsis | Reassembly timeout |
| Context | configure service vprn string l2tp group string lns mlppp reassemble-timeout number |

| | |
|------------|---|
| Tree | reassembly-timeout |
| Range | 100 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *boolean*

| | |
|------------|---|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn string l2tp group string lns mlppp short-sequence-numbers boolean |
| Tree | short-sequence-numbers |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|--|
| Synopsis | Enter the ppp context |
| Context | configure service vprn string l2tp group string lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|---|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vprn string l2tp group string lns ppp authentication keyword |
| Tree | authentication |
| Default | pref-chap |
| Options | pap, chap, pref-chap, pref-pap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|---------------|---|
| Synopsis | Authentication policy when a DHCP message is received |
| Context | configure service vprn string l2tp group string lns ppp authentication-policy string |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|------------|--|
| Synopsis | Enter the chap-challenge-length context |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end *number*

| | |
|------------|---|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length end number |
| Tree | end |
| Range | 8 to 64 |
| Default | 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start *number*

| | |
|----------|---|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length start number |
| Tree | start |
| Range | 8 to 64 |

| | |
|------------|--|
| Default | 32 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-group-interface

| | |
|------------|--|
| Synopsis | Enter the default-group-interface context |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface |
| Tree | default-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface *string*

| | |
|---------------|---|
| Synopsis | Group interface |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface interface string |
| Tree | interface |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name *string*

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface service-name string |
| Tree | service-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipcp-subnet-negotiation *boolean*

| | |
|----------|---|
| Synopsis | Allow IPCP subnet negotiation for PPPoE hosts |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp ipcp-subnet-negotiation <i>boolean</i> |
| Tree | ipcp-subnet-negotiation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | PPP keepalive interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive interval <i>number</i> |
| Tree | interval |
| Range | 10 to 300 |
| Default | 30 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|------------|---|
| Synopsis | PPP keepalive multiplier |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive multiplier <i>number</i> |
| Tree | multiplier |
| Range | 1 to 5 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-force-ack-accm *boolean*

| | |
|------------|--|
| Synopsis | Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp lcp-force-ack-accm <i>boolean</i> |
| Tree | lcp-force-ack-accm |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-ignore-magic-numbers *boolean*

| | |
|------------|--|
| Synopsis | Check magic number in echo request and reply messages |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp lcp-ignore-magic-numbers <i>boolean</i> |
| Tree | lcp-ignore-magic-numbers |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Maximum PPP MTU size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Default | 1500 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *boolean*

| | |
|----------|--|
| Synopsis | Use authentication AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp proxy-authentication <i>boolean</i> |
| Tree | proxy-authentication |

Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-lcp *boolean*

Synopsis Proxy LCP AVPs that are received from LAC
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp proxy-lcp](#) *boolean*
 Tree [proxy-lcp](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reject-disabled-ncp *boolean*

Synopsis Force LCP Protocol Reject for IPv6CP Configure Request
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp reject-disabled-ncp](#) *boolean*
 Tree [reject-disabled-ncp](#)
 Default false
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis Local user database for PPP PAP and CHAP authentication
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp user-db](#) *string*
 Tree [user-db](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis Local address
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [local-address](#) *string*

Tree [local-address](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name used to distinguish tunnels
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [local-name](#) *string*
Tree [local-name](#)
String Length 1 to 64
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [max-retries-estab](#) *number*
Tree [max-retries-estab](#)
Range 2 to 7
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [max-retries-not-estab](#) *number*
Tree [max-retries-not-estab](#)
Range 2 to 7
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Password between L2TP LAC and LNS
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [password](#) *string*

| | |
|---------------|---|
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

protocol *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Protocol version |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> protocol <i>keyword</i> |
| Tree | protocol |
| Default | v2 |
| Options | v2, v3, v3draft |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-accounting-policy *reference*

| | |
|------------|---|
| Synopsis | RADIUS accounting policy |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> radius-accounting-policy <i>reference</i> |
| Tree | radius-accounting-policy |
| Reference | configure aaa radius l2tp-accounting-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive-window-size *number*

| | |
|------------|---|
| Synopsis | L2TP receive window size |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> receive-window-size <i>number</i> |
| Tree | receive-window-size |
| Range | 4 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-assign-method *keyword*

| | |
|------------|---|
| Synopsis | Session assignment method |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> session-assign-method <i>keyword</i> |
| Tree | session-assign-method |
| Options | existing-first, weighted, weighted-random |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Session limit |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> session-limit (<i>number</i> <i>keyword</i>) |
| Tree | session-limit |
| Range | 1 to 250000 |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel [[tunnel-name](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the tunnel list instance |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| Max. Instances | 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[tunnel-name] *string*

| | |
|---------------|---|
| Synopsis | Tunnel name |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| String Length | 1 to 32 |

| | |
|------------|---|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the L2TP tunnel |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-establish *boolean*

| | |
|------------|---|
| Synopsis | Allow the tunnel to be automatically set up by the system |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> auto-establish <i>boolean</i> |
| Tree | auto-establish |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|---|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *keyword*

| | |
|----------|---|
| Synopsis | Enable use of challenge-response authentication |
|----------|---|

| | |
|------------|--|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> challenge <i>keyword</i> |
| Tree | challenge |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|--|
| Synopsis | Destruction timeout |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|------------|--|
| Synopsis | Enter the failover context |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover |
| Tree | failover |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-method *keyword*

| | |
|------------|---|
| Synopsis | Recovery method of the sequence numbers after failover |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover recovery-method <i>keyword</i> |
| Tree | recovery-method |
| Options | mcs, recovery-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|--|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|----------|--------------|
| Synopsis | Idle timeout |
|----------|--------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|------------|---|
| Synopsis | Enter the l2tpv3 context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 private-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |

| | |
|------------|---|
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|--|
| Synopsis | Enter the lac context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit *keyword*

| | |
|------------|--|
| Synopsis | DF (do not fragment) bit in data traffic transmitted as LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac df-bit <i>keyword</i> |
| Tree | df-bit |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lns

| | |
|------------|--|
| Synopsis | Enter the lns context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns |
| Tree | lns |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lns-group *reference*

| | |
|----------|---|
| Synopsis | ISA LNS group |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns lns-group <i>reference</i> |
| Tree | lns-group |

| | |
|------------|--|
| Reference | configure isa lns-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

load-balance-method *keyword*

| | |
|------------|--|
| Synopsis | New sessions for L2TP ISA MDA |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns load-balance-method <i>keyword</i> |
| Tree | load-balance-method |
| Options | per-session, per-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mlppp

| | |
|------------|---|
| Synopsis | Enter the mlppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp |
| Tree | mlppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of MLPPP in the L2TP tunnel |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|----------|--|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint |

| | |
|------------|---|
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *keyword*

| | |
|------------|--|
| Synopsis | Use of Link fragmentation and interleaving |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp interleave <i>keyword</i> |
| Tree | interleave |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay *number*

| | |
|------------|---|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-fragment-delay <i>number</i> |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|------------|--|
| Synopsis | Maximum MLPPP links |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-links <i>number</i> |
| Tree | max-links |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|------------|---|
| Synopsis | Reassembly timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp reassemble-timeout <i>number</i> |
| Tree | reassemble-timeout |
| Range | 100 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *keyword*

| | |
|----------|--|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp short-sequence-numbers <i>keyword</i> |

| | |
|------------|---|
| Tree | short-sequence-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|--|
| Synopsis | Enter the ppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|--|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication <i>keyword</i> |
| Tree | authentication |
| Options | pap, chap, pref-chap, pref-pap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|---------------|--|
| Synopsis | Authentication policy when a DHCP message is received |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication-policy <i>string</i> |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|----------|--|
| Synopsis | Enter the chap-challenge-length context |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end number

| | |
|------------|--|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length end <i>number</i> |
| Tree | end |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start number

| | |
|------------|--|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length start <i>number</i> |
| Tree | start |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-group-interface

| | |
|------------|--|
| Synopsis | Enter the default-group-interface context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp default-group-interface |
| Tree | default-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface string

| | |
|---------------|---|
| Synopsis | Group interface |
| Context | configure service vprn string l2tp group string tunnel string lns ppp default-group-interface interface string |
| Tree | interface |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name string

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn string l2tp group string tunnel string lns ppp default-group-interface service-name string |
| Tree | service-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipcp-subnet-negotiation keyword

| | |
|------------|--|
| Synopsis | Use of IPCP subnet negotiation for PPPoE hosts |
| Context | configure service vprn string l2tp group string tunnel string lns ppp ipcp-subnet-negotiation keyword |
| Tree | ipcp-subnet-negotiation |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn string l2tp group string tunnel string lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis PPP keepalive interval

Context **configure** *service vprn string l2tp group string tunnel string lns ppp keepalive interval number*

Tree [interval](#)

Range 10 to 300

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis PPP keepalive multiplier

Context **configure** *service vprn string l2tp group string tunnel string lns ppp keepalive multiplier number*

Tree [multiplier](#)

Range 1 to 5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm *keyword*

Synopsis Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option

Context **configure** *service vprn string l2tp group string tunnel string lns ppp lcp-force-ack-accm keyword*

Tree [lcp-force-ack-accm](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *keyword*

| | |
|------------|--|
| Synopsis | Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp lcp-ignore-magic-numbers <i>keyword</i> |
| Tree | lcp-ignore-magic-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Maximum PPP MTU size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *keyword*

| | |
|------------|--|
| Synopsis | Authentication AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-authentication <i>keyword</i> |
| Tree | proxy-authentication |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-lcp *keyword*

| | |
|----------|---|
| Synopsis | Use the Proxy LCP AVPs that are received from the LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-lcp <i>keyword</i> |
| Tree | proxy-lcp |
| Options | false, true |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reject-disabled-ncp *keyword*

Synopsis Force LCP Project Reject for IPv6CP Configure Request
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) **reject-disabled-ncp** *keyword*
 Tree [reject-disabled-ncp](#)
 Options false, true
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis Local user database for PPP PAP and CHAP authentication
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) **user-db** *string*
 Tree [user-db](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis Local address
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-address** *string*
 Tree [local-address](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name used to distinguish tunnels
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-name** *string*
 Tree [local-name](#)
 String Length 1 to 64

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **max-retries-estab** *number*
 Tree [max-retries-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **max-retries-not-estab** *number*
 Tree [max-retries-not-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Password between L2TP LAC and LNS
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **password** *string*
 Tree [password](#)
 String Length 1 to 115
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *string*

Synopsis Peer address
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **peer** *string*
 Tree [peer](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis Tunnel preference number with its group
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [preference](#) *number*
 Tree [preference](#)
 Range 0 to 16777215
 Default 50
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis RADIUS accounting policy
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [radius-accounting-policy](#) *reference*
 Tree [radius-accounting-policy](#)
 Reference **configure** [aaa radius](#) [l2tp-accounting-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [receive-window-size](#) *number*
 Tree [receive-window-size](#)
 Range 4 to 1024
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-name *string*

Synopsis Remote tunnel host name

| | |
|---------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> remote-name <i>string</i> |
| Tree | remote-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> session-limit (<i>number</i> <i>keyword</i>) |
| Tree | session-limit |
| Range | 1 to 65534 |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit for each group of this router |
| Context | configure service vprn <i>string</i> l2tp group-session-limit <i>number</i> |
| Tree | group-session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Default | 300 |
| Units | seconds |
| Options | infinite |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

Synopsis Idle timeout
Context **configure** [service vprn](#) *string* [l2tp](#) **idle-timeout** (*number* | *keyword*)
Tree [idle-timeout](#)
Range 0 to 3600
Default infinite
Units seconds
Options infinite
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-avps

Synopsis Enter the **ignore-avps** context
Context **configure** [service vprn](#) *string* [l2tp](#) **ignore-avps**
Tree [ignore-avps](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sequencing-required *boolean*

Synopsis Ignore Sequencing Required AVP
Context **configure** [service vprn](#) *string* [l2tp](#) [ignore-avps](#) **sequencing-required** *boolean*
Tree [sequencing-required](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis Enter the **l2tpv3** context

| | |
|------------|---|
| Context | configure service vprn <i>string</i> l2tp l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length *number*

| | |
|------------|--|
| Synopsis | Cookie field length |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 cookie-length <i>number</i> |
| Tree | cookie-length |
| Range | 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|---|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 digest-type <i>keyword</i> |
| Tree | digest-type |
| Options | md5, sha1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nonce-length *number*

| | |
|------------|---|
| Synopsis | Length of the local L2TPv3 nonce (random number) |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 nonce-length <i>number</i> |
| Tree | nonce-length |
| Range | 0 16 to 64 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TPv3 password |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

| | |
|------------|--|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 private-tcp-mss-adjust <i>number</i> |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust *number*

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 public-tcp-mss-adjust <i>number</i> |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transport-type

| | |
|------------|--|
| Synopsis | Enter the transport-type context |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 transport-type |
| Tree | transport-type |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip *boolean*

| | |
|------------|---|
| Synopsis | Use IP as the transport type for the L2TPv3 tunnel |
| Context | configure <i>service vprn string l2tp l2tpv3 transport-type ip boolean</i> |
| Tree | <i>ip</i> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|---|
| Synopsis | Enter the lac context |
| Context | configure <i>service vprn string l2tp lac</i> |
| Tree | <i>lac</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

calling-number-format *string*

| | |
|---------------|---|
| Synopsis | Calling Number AVP for L2TP control messages |
| Context | configure <i>service vprn string l2tp lac calling-number-format string</i> |
| Tree | <i>calling-number-format</i> |
| String Length | 1 to 255 |
| Default | %S %s |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cisco-nas-port

| | |
|------------|---|
| Synopsis | Enter the cisco-nas-port context |
| Context | configure <i>service vprn string l2tp lac cisco-nas-port</i> |
| Tree | <i>cisco-nas-port</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet string

| | |
|---------------|--|
| Synopsis | L2TP Cisco NAS port AVP with binary patterns for Ethernet |
| Context | configure service vprn string l2tp lac cisco-nas-port ethernet string |
| Tree | ethernet |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit boolean

| | |
|------------|--|
| Synopsis | Send all L2TP packets with DF bit set to 1 |
| Context | configure service vprn string l2tp lac df-bit boolean |
| Tree | df-bit |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address string

| | |
|------------|--|
| Synopsis | Local address |
| Context | configure service vprn string l2tp local-address string |
| Tree | local-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-name string

| | |
|---------------|---|
| Synopsis | Local host name |
| Context | configure service vprn string l2tp local-name string |
| Tree | local-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for established tunnels |
| Context | configure service vprn <i>string</i> l2tp max-retries-estab <i>number</i> |
| Tree | max-retries-estab |
| Range | 2 to 7 |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-not-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for unestablished tunnels |
| Context | configure service vprn <i>string</i> l2tp max-retries-not-estab <i>number</i> |
| Tree | max-retries-not-estab |
| Range | 2 to 7 |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-attempt *keyword*

| | |
|------------|---|
| Synopsis | Tunnel that is selected when previous session setup failed |
| Context | configure service vprn <i>string</i> l2tp next-attempt <i>keyword</i> |
| Tree | next-attempt |
| Default | next-preference-level |
| Options | same-preference-level, next-preference-level |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|----------|--|
| Synopsis | L2TP password |
| Context | configure service vprn <i>string</i> l2tp password <i>string</i> |
| Tree | password |

String Length 1 to 115
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-address-change-policy *keyword*

Synopsis Reaction for L2TP response from a different address
Context **configure** [service vprn](#) *string* [l2tp peer-address-change-policy](#) *keyword*
Tree [peer-address-change-policy](#)
Default reject
Options accept, ignore, reject
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis RADIUS accounting policy
Context **configure** [service vprn](#) *string* [l2tp radius-accounting-policy](#) *reference*
Tree [radius-accounting-policy](#)
Reference **configure** [aaa radius](#) [l2tp-accounting-policy](#) *string*
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
Context **configure** [service vprn](#) *string* [l2tp receive-window-size](#) *number*
Tree [receive-window-size](#)
Range 4 to 1024
Default 64
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

replace-result-code

| | |
|------------|---|
| Synopsis | Enter the replace-result-code context |
| Context | configure service vprn string l2tp replace-result-code |
| Tree | replace-result-code |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error code |
| Context | configure service vprn string l2tp replace-result-code cdn-invalid-dst <i>boolean</i> |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error |
| Context | configure service vprn string l2tp replace-result-code cdn-permanent-no-facilities <i>boolean</i> |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error |
| Context | configure service vprn string l2tp replace-result-code cdn-temporary-no-facilities <i>boolean</i> |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rtm-debounce-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Debounce timer that declares L2TP action for route table management events |
| Context | configure service vprn <i>string</i> l2tp rtm-debounce-time (<i>number</i> <i>keyword</i>) |
| Tree | rtm-debounce-time |
| Range | 0 to 5000 |
| Default | infinite |
| Units | milliseconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-assign-method *keyword*

| | |
|------------|--|
| Synopsis | Session assignment method |
| Context | configure service vprn <i>string</i> l2tp session-assign-method <i>keyword</i> |
| Tree | session-assign-method |
| Default | existing-first |
| Options | existing-first, weighted, weighted-random |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit of this router |
| Context | configure service vprn <i>string</i> l2tp session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-selection-blacklist

| | |
|----------|--|
| Synopsis | Enter the tunnel-selection-blacklist context |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist |

| | |
|------------|---|
| Tree | tunnel-selection-blacklist |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

add-tunnel-on

| | |
|------------|---|
| Synopsis | Enter the add-tunnel-on context |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on |
| Tree | add-tunnel-on |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address-change-timeout *boolean*

| | |
|------------|---|
| Synopsis | Enable a timed-out tunnel to be forced to the denylist |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on address-change-timeout <i>boolean</i> |
| Tree | address-change-timeout |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-err-code *boolean*

| | |
|------------|---|
| Synopsis | Add to deny if CDN is received with code: General error |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-err-code <i>boolean</i> |
| Tree | cdn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst *boolean*

| | |
|----------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 6 |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-invalid-dst boolean |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 5 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-permanent-no-facilities boolean |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 4 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities boolean |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-err-code boolean

| | |
|------------|--|
| Synopsis | Add to denylist if received with general error code |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-err-code boolean |
| Tree | stop-ccn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-other *boolean*

| | |
|------------|---|
| Synopsis | Add to denylist if StopCCN received with general error |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-other <i>boolean</i> |
| Tree | stop-ccn-other |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tx-cdn-not-established-in-time *boolean*

| | |
|------------|---|
| Synopsis | Add to denylist if CDN transmitted with result code |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on tx-cdn-not-established-in-time <i>boolean</i> |
| Tree | tx-cdn-not-established-in-time |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-list-length (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Number of tunnels or peers in the denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist max-list-length (<i>number</i> <i>keyword</i>) |
| Tree | max-list-length |
| Range | 1 to 65535 |
| Default | infinite |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-time *number*

| | |
|----------|--|
| Synopsis | Time that a tunnel or peer can remain in the denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist max-time <i>number</i> |

| | |
|------------|---|
| Tree | max-time |
| Range | 1 to 60 |
| Default | 5 |
| Units | minutes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout-action *keyword*

| | |
|------------|---|
| Synopsis | Action when a tunnel or peer exceeds time in denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist timeout-action <i>keyword</i> |
| Tree | timeout-action |
| Default | remove-from-blacklist |
| Options | remove-from-blacklist, try-one-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp tunnel-session-limit <i>number</i> |
| Tree | tunnel-session-limit |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

label-mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Allocation mode for VPRN service labels |
| Context | configure service vprn <i>string</i> label-mode <i>keyword</i> |
| Tree | label-mode |
| Default | vrf |

| | |
|------------|---------------|
| Options | vrf, next-hop |
| Introduced | 16.0.R1 |
| Platforms | All |

local-routes-domain-id *string*

| | |
|-------------|--|
| Synopsis | Local routes domain ID |
| Context | configure service vprn <i>string</i> local-routes-domain-id <i>string</i> |
| Tree | local-routes-domain-id |
| Description | <p>This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.</p> <p>The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> |
| Introduced | 21.10.R1 |
| Platforms | All |

log

| | |
|------------|---|
| Synopsis | Enter the log context |
| Context | configure service vprn <i>string</i> log |
| Tree | log |
| Introduced | 16.0.R1 |
| Platforms | All |

filter [**filter-name**] *string*

| | |
|----------------|--|
| Synopsis | Enter the filter list instance |
| Context | configure service vprn <i>string</i> log filter <i>string</i> |
| Tree | filter |
| Max. Instances | 1500 |

Introduced 16.0.R1

| Range | 1 to 4294967295 |
| Notes | The following elements are part of a choice: eq, gt, gte, lt, lte , or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

lt number

| | |
|------------|---|
| Synopsis | Number of the log event to match |
| Context | configure service vprn string log filter string named-entry string match event lt number |
| Tree | lt |
| Range | 1 to 4294967295 |
| Notes | The following elements are part of a choice: eq, gt, gte, lt, lte , or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

lte number

| | |
|----------|--|
| Synopsis | Number of the log event to match |
| Context | configure service vprn string log filter string named-entry string match event lte number |
| Tree | lte |

| | |
|------------|--|
| Range | 1 to 4294967295 |
| Notes | The following elements are part of a choice: eq , gt , gte , lt , lte , or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

neq number

| | |
|------------|--|
| Synopsis | Log event message to filter out |
| Context | configure service vprn string log filter string named-entry string match event neq number |
| Tree | neq |
| Range | 1 to 4294967295 |
| Notes | The following elements are part of a choice: eq , gt , gte , lt , lte , or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

message

| | |
|------------|---|
| Synopsis | Enter the message context |
| Context | configure service vprn string log filter string named-entry string match message |
| Tree | message |
| Introduced | 21.2.R1 |
| Platforms | All |

eq string

| | |
|---------------|---|
| Synopsis | Log event message to match |
| Context | configure service vprn string log filter string named-entry string match message eq string |
| Tree | eq |
| String Length | 1 to 400 |
| Notes | The following elements are part of a choice: eq or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

neq string

| | |
|---------------|--|
| Synopsis | Log event message to be filtered out |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match message neq <i>string</i> |
| Tree | neq |
| String Length | 1 to 400 |
| Notes | The following elements are part of a choice: eq or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

regex boolean

| | |
|------------|---|
| Synopsis | String comparison to determine if the log event matches the value of pattern |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match message regex <i>boolean</i> |
| Tree | regex |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

severity

| | |
|------------|---|
| Synopsis | Enter the severity context |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match severity |
| Tree | severity |
| Introduced | 21.2.R1 |
| Platforms | All |

eq keyword

| | |
|----------|---|
| Synopsis | Log event severity level to match |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match severity eq <i>keyword</i> |
| Tree | eq |
| Options | cleared, indeterminate, critical, major, minor, warning |
| Notes | The following elements are part of a choice: eq , gt , gte , lt , lte , or neq . |

Introduced 21.2.R1
Platforms All

gt keyword

Synopsis Log event severity level
Context **configure service vprn string log filter string named-entry string match severity gt keyword**
Tree [gt](#)
Options cleared, indeterminate, critical, major, minor, warning
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte**, or **neq**.
Introduced 21.2.R1
Platforms All

gte keyword

Synopsis Log event severity level
Context **configure service vprn string log filter string named-entry string match severity gte keyword**
Tree [gte](#)
Options cleared, indeterminate, critical, major, minor, warning
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte**, or **neq**.
Introduced 21.2.R1
Platforms All

lt keyword

Synopsis Log event severity level
Context **configure service vprn string log filter string named-entry string match severity lt keyword**
Tree [lt](#)
Options cleared, indeterminate, critical, major, minor, warning
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte**, or **neq**.
Introduced 21.2.R1
Platforms All

Ite keyword

| | |
|------------|--|
| Synopsis | Log event severity level |
| Context | configure service vprn string log filter string named-entry string match severity lte keyword |
| Tree | lte |
| Options | cleared, indeterminate, critical, major, minor, warning |
| Notes | The following elements are part of a choice: eq, gt, gte, lt, lte, or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

neq keyword

| | |
|------------|--|
| Synopsis | Log event severity level to filter out |
| Context | configure service vprn string log filter string named-entry string match severity neq keyword |
| Tree | neq |
| Options | cleared, indeterminate, critical, major, minor, warning |
| Notes | The following elements are part of a choice: eq, gt, gte, lt, lte, or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

subject

| | |
|------------|---|
| Synopsis | Enter the subject context |
| Context | configure service vprn string log filter string named-entry string match subject |
| Tree | subject |
| Introduced | 21.2.R1 |
| Platforms | All |

eq string

| | |
|----------|---|
| Synopsis | Log event subject string to match |
| Context | configure service vprn string log filter string named-entry string match subject eq string |
| Tree | eq |

| | |
|---------------|--|
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: eq or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

neq string

| | |
|---------------|---|
| Synopsis | Log event subject string to filter out |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match subject neq <i>string</i> |
| Tree | neq |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: eq or neq . |
| Introduced | 21.2.R1 |
| Platforms | All |

regexp boolean

| | |
|------------|---|
| Synopsis | String comparison to determine if the log event matches the value of subject |
| Context | configure service vprn <i>string</i> log filter <i>string</i> named-entry <i>string</i> match subject regexp <i>boolean</i> |
| Tree | regexp |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

log-id [name] string

| | |
|----------------|---|
| Synopsis | Enter the log-id list instance |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> |
| Tree | log-id |
| Max. Instances | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

[name] *string*

| | |
|---------------|--|
| Synopsis | Log ID |
| Context | configure service vprn string log log-id string |
| Tree | log-id |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 21.2.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the log |
| Context | configure service vprn string log log-id string admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn string log log-id string description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

destination

| | |
|------------|--|
| Synopsis | Enter the destination context |
| Context | configure service vprn string log log-id string destination |
| Tree | destination |
| Introduced | 16.0.R1 |

Platforms All

netconf

Synopsis Enable the **netconf** context

Context **configure service vprn string log log-id string destination netconf**

Tree [netconf](#)

Notes The following elements are part of a choice: **netconf**, **snmp**, or **syslog**.

Introduced 16.0.R1

Platforms All

max-entries *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Number of events stored in the NETCONF log

Context **configure service vprn string log log-id string destination netconf max-entries number**

Tree [max-entries](#)

Range 50 to 3000

Default 100

Introduced 16.0.R1

Platforms All

snmp

Synopsis Enable the **snmp** context

Context **configure service vprn string log log-id string destination snmp**

Tree [snmp](#)

Notes The following elements are part of a choice: **netconf**, **snmp**, or **syslog**.

Introduced 16.0.R1

Platforms All

max-entries *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Number of events stored in the memory log |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> destination snmp max-entries <i>number</i> |
| Tree | max-entries |
| Range | 50 to 3000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

syslog *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Index with the information to format event messages sent to a specific SYSLOG collector |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> destination syslog <i>reference</i> |
| Tree | syslog |
| Reference | configure service vprn <i>string</i> log syslog <i>string</i> |
| Notes | The following elements are part of a choice: netconf , snmp , or syslog . |
| Introduced | 16.0.R1 |
| Platforms | All |

filter *reference*

| | |
|------------|--|
| Synopsis | Event filter policy with the log destination |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> filter <i>reference</i> |
| Tree | filter |
| Reference | configure service vprn <i>string</i> log filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

netconf-stream *string*

| | |
|---------------|--|
| Synopsis | Destination NETCONF stream name |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> netconf-stream <i>string</i> |
| Tree | netconf-stream |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy name |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

source

| | |
|------------|--|
| Synopsis | Enter the source context |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> source |
| Tree | source |
| Introduced | 16.0.R1 |
| Platforms | All |

change *boolean*

| | |
|------------|---|
| Synopsis | Collect log events from the change event stream |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> source change <i>boolean</i> |
| Tree | change |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

debug *boolean*

| | |
|------------|--|
| Synopsis | Collect log events from the debug event stream |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> source debug <i>boolean</i> |
| Tree | debug |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

main *boolean*

| | |
|------------|---|
| Synopsis | Collect log events from the main event stream |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> source main <i>boolean</i> |
| Tree | main |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

security *boolean*

| | |
|------------|---|
| Synopsis | Collect log events from the security event stream |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> source security <i>boolean</i> |
| Tree | security |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

time-format *keyword*

| | |
|------------|---|
| Synopsis | Time zone output for file log contents and syslog |
| Context | configure service vprn <i>string</i> log log-id <i>string</i> time-format <i>keyword</i> |
| Tree | time-format |
| Default | utc |
| Options | utc, local |
| Introduced | 16.0.R1 |

Platforms All

snmp-trap-group [[log-name](#)] *string*

Synopsis Enter the **snmp-trap-group** list instance
 Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string*
 Tree [snmp-trap-group](#)
 Introduced 16.0.R1
 Platforms All

[log-name] *string*

Synopsis Log ID
 Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string*
 Tree [snmp-trap-group](#)
 String Length 1 to 17
 Notes This element is part of a list key.
 Introduced 21.2.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string* [description](#) *string*

 String Length 1 to 80
 Introduced 16.0.R1
 Platforms All

trap-target [[name](#)] *string*

Synopsis Enter the **trap-target** list instance
 Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string* [trap-target](#) *string*
 Tree [trap-target](#)

| | |
|----------------|---------|
| Max. Instances | 25 |
| Introduced | 16.0.R1 |
| Platforms | All |

[name] *string*

| | |
|---------------|---|
| Synopsis | Trap target name |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> |
| Tree | trap-target |
| String Length | 1 to 28 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IP address of the trap receiver |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

notify-community *string*

| | |
|---------------|--|
| Synopsis | SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> notify-community <i>string</i> |
| Tree | notify-community |
| String Length | 1 to 31 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

port *number*

| | |
|------------|--|
| Synopsis | UDP port number to send messages to this remote SNMP notification collector |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> port <i>number</i> |
| Tree | port |
| Range | 0 1 to 65535 |
| Default | 162 |
| Introduced | 16.0.R1 |
| Platforms | All |

replay *boolean*

| | |
|------------|---|
| Synopsis | Retransmit missed notifications |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> replay <i>boolean</i> |
| Tree | replay |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

security-level *keyword*

| | |
|----------|--|
| Synopsis | Security level at which SNMP notification messages are sent to SNMP notification collector |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> security-level <i>keyword</i> |
| Tree | security-level |
| Default | no-auth-no-privacy |
| Options | no-auth-no-privacy, auth-no-privacy, privacy |
| Introduced | 16.0.R1 |
| Platforms | All |

version *keyword*

| | |
|------------|---|
| Synopsis | SNMP version to format notification messages sent to this SNMP notification collector |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> version <i>keyword</i> |
| Tree | version |
| Default | snmpv3 |
| Options | snmpv1, snmpv2c, snmpv3 |
| Introduced | 16.0.R1 |
| Platforms | All |

syslog [[syslog-name](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the syslog list instance |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> |
| Tree | syslog |
| Max. Instances | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

[syslog-name] *string*

| | |
|---------------|---|
| Synopsis | Syslog name |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> |
| Tree | syslog |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |

Introduced 21.2.R1
 Platforms All

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the Syslog target host
 Context **configure service vprn string log syslog string address** (*ipv4-address-no-zone | ipv6-address-no-zone*)
 Tree [address](#)
 Introduced 16.0.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure service vprn string log syslog string description string**
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms All

facility *keyword*

Synopsis Facility code for messages
 Context **configure service vprn string log syslog string facility keyword**
 Tree [facility](#)
 Default local7
 Options kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
 Introduced 16.0.R1
 Platforms All

log-prefix (*keyword | string*)

Synopsis String that is prepended to every log message sent to this target syslog host
 Context **configure service vprn string log syslog string log-prefix** (*keyword | string*)

| | |
|---------------|----------------------------|
| Tree | log-prefix |
| String Length | 1 to 32 |
| Default | TMNX |
| Options | no-prefix |
| Introduced | 16.0.R1 |
| Platforms | All |

port number

| | |
|------------|--|
| Synopsis | Destination port when sending syslog over UDP |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> port number |
| Tree | port |
| Range | 0 1 to 65535 |
| Default | 514 |
| Introduced | 16.0.R1 |
| Platforms | All |

severity keyword

| | |
|------------|--|
| Synopsis | Severity level threshold for the syslog message |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> severity <i>keyword</i> |
| Tree | severity |
| Default | info |
| Options | emergency, alert, critical, error, warning, notice, info, debug |
| Introduced | 16.0.R1 |
| Platforms | All |

tls-client-profile reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | TLS client profile used to encrypt syslog communication |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> tls-client-profile <i>reference</i> |
| Tree | tls-client-profile |

| | |
|-------------|--|
| Description | This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.
Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.
When this command is unconfigured, the syslog messages are sent over UDP. |
| Reference | configure system security tls client-tls-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | All |

management

| | |
|------------|--|
| Synopsis | Enable the management context |
| Context | configure service vprn <i>string</i> management |
| Tree | management |
| Introduced | 16.0.R4 |
| Platforms | All |

allow-ftp *boolean*

| | |
|-------------|---|
| Synopsis | Allow access to the FTP server |
| Context | configure service vprn <i>string</i> management allow-ftp <i>boolean</i> |
| Tree | allow-ftp |
| Description | When configured to true , this command allows FTP access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the SR OS FTP server. |
| Default | false |
| Introduced | 16.0.R6 |
| Platforms | All |

allow-grpc *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the gRPC server |
| Context | configure service vprn <i>string</i> management allow-grpc <i>boolean</i> |
| Tree | allow-grpc |
| Description | When configured to true , this command allows access to the gRPC server via the VPRN router instance. |

| | |
|------------|--|
| | When configured to false , this command disallows gRPC server access. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-netconf *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the NETCONF server |
| Context | configure service vprn string management allow-netconf boolean |
| Tree | allow-netconf |
| Description | When configured to true , this command allows NETCONF server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the NETCONF server. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-ssh *boolean*

| | |
|-------------|---|
| Synopsis | Allow access to the SSH server |
| Context | configure service vprn string management allow-ssh boolean |
| Tree | allow-ssh |
| Description | When configured to true , this command allows SSH server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows SSH server access. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the IPv4 Telnet server |
| Context | configure service vprn string management allow-telnet boolean |
| Tree | allow-telnet |
| Description | When configured to true , this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance. |

When configured to **false**, this command disallows access to the IPv4 Telnet server.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet6 *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the Telnet IPv6 server |
| Context | configure service vprn string management allow-telnet6 boolean |
| Tree | allow-telnet6 |
| Description | When configured to true , this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance.
When configured to false , this command removes access to the IPv6 Telnet server. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

maximum-ipv4-routes

| | |
|------------|--|
| Synopsis | Enter the maximum-ipv4-routes context |
| Context | configure service vprn string maximum-ipv4-routes |
| Tree | maximum-ipv4-routes |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Action when the maximum number of routes, held within a VRF context, is reached |
| Context | configure service vprn string maximum-ipv4-routes log-only boolean |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Mid-level water marker for the number of routes which this VRF holds |
| Context | configure <i>service vprn string maximum-ipv4-routes threshold number</i> |
| Tree | <i>threshold</i> |
| Range | 1 to 100 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of routes that are configured on this virtual router |
| Context | configure <i>service vprn string maximum-ipv4-routes value number</i> |
| Tree | <i>value</i> |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-ipv6-routes

| | |
|------------|---|
| Synopsis | Enter the maximum-ipv6-routes context |
| Context | configure <i>service vprn string maximum-ipv6-routes</i> |
| Tree | <i>maximum-ipv6-routes</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|----------|--|
| Synopsis | Action when the maximum number of routes, held within a VRF context, is reached |
| Context | configure <i>service vprn string maximum-ipv6-routes log-only boolean</i> |
| Tree | <i>log-only</i> |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Mid-level water marker for the number of routes which this VRF holds |
| Context | configure <i>service vprn string maximum-ipv6-routes threshold number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of routes that are configured on this virtual router |
| Context | configure <i>service vprn string maximum-ipv6-routes value number</i> |

| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-maximum-routes

| | |
|------------|---|
| Synopsis | Enter the mc-maximum-routes context |
| Context | configure <i>service vprn string mc-maximum-routes</i> |
| Tree | mc-maximum-routes |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Action when the maximum number of multicast routes, held within a VRF context, is reached |
| Context | configure service vprn <i>string mc-maximum-routes log-only boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Mid-level water marker for the number of multicast routes which this VRF holds |
| Context | configure service vprn <i>string mc-maximum-routes threshold number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

| | |
|------------|--|
| Synopsis | Maximum multicast routes configured on virtual router |
| Context | configure service vprn <i>string mc-maximum-routes value number</i> |
| Tree | value |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

mld

| | |
|------------|---|
| Synopsis | Enable the mld context |
| Context | configure service vprn <i>string mld</i> |
| Tree | mld |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MLD |
| Context | configure service vprn <i>string</i> mld admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-group-interface [forwarding-service](#) *string* [group-interface-name](#) *reference*

| | |
|------------|--|
| Synopsis | Enter the forwarding-group-interface list instance |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> |
| Tree | forwarding-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

forwarding-service *string*

| | |
|---------------|--|
| Synopsis | Forwarding service for a subscriber interface in a retailer context |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> |
| Tree | forwarding-group-interface |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-interface-name *reference*

| | |
|----------|---|
| Synopsis | Group interface name |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> |
| Tree | forwarding-group-interface |

| | |
|------------|--|
| Reference | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the MLD interface |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

import-policy *reference*

| | |
|------------|---|
| Synopsis | Import policy to filter MLD packets |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-group-sources *number*

| | |
|-------------|--|
| Synopsis | Maximum number of group sources for this interface |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-group-sources <i>number</i> |
| Tree | maximum-number-group-sources |
| Description | This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed. |

| | |
|------------|---|
| Range | 1 to 32000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-groups *number*

| | |
|------------|--|
| Synopsis | Maximum number of groups for this interface |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-groups <i>number</i> |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-sources *number*

| | |
|------------|---|
| Synopsis | Maximum number of sources that are allowed per group |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-sources <i>number</i> |
| Tree | maximum-number-sources |
| Range | 1 to 1000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mcac

| | |
|------------|---|
| Synopsis | Enter the mcac context |
| Context | configure service vprn <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> mcac |
| Tree | mcac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bandwidth

[ip-interface-name] *string*

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R2 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of the MLD interface |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|------------|--|
| Synopsis | Import policy to filter MLD packets |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-group-sources *number*

| | |
|-------------|--|
| Synopsis | Maximum number of group sources for this interface |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> maximum-number-group-sources <i>number</i> |
| Tree | maximum-number-group-sources |
| Description | This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed. |
| Range | 1 to 32000 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-groups *number*

| | |
|------------|---|
| Synopsis | Maximum number of groups for this interface |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> maximum-number-groups <i>number</i> |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-sources *number*

| | |
|------------|--|
| Synopsis | Maximum number of sources that are allowed per group |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> maximum-number-sources <i>number</i> |
| Tree | maximum-number-sources |
| Range | 1 to 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

mcac

| | |
|------------|--|
| Synopsis | Enter the mcac context |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac |
| Tree | mcac |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth

| | |
|------------|--|
| Synopsis | Enter the bandwidth context |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac bandwidth |
| Tree | bandwidth |
| Introduced | 16.0.R1 |
| Platforms | All |

mandatory (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Pre-reserved bandwidth for all mandatory channels |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac bandwidth mandatory (<i>number</i> <i>keyword</i>) |
| Tree | mandatory |
| Range | 0 to 2147483647 |
| Default | unlimited |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

total (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum allowed bandwidth |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac bandwidth total (<i>number</i> <i>keyword</i>) |
| Tree | total |
| Range | 0 to 2147483647 |
| Default | unlimited |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-policy *reference*

| | |
|------------|--|
| Synopsis | Name of multicast CAC interface policy |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac interface-policy <i>reference</i> |
| Tree | interface-policy |
| Reference | configure mcac interface-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-constraints

| | |
|------------|---|
| Synopsis | Enter the mc-constraints context |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac mc-constraints |
| Tree | mc-constraints |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac mc-constraints level <i>number</i> |
| Tree | level |
| Introduced | 16.0.R1 |

Platforms All

[level-id] *number*

Synopsis Bandwidth level ID for an MCAC constraint

Context **configure** [service](#) [vprn](#) *string* [mld](#) [interface](#) *string* [mcac](#) [mc-constraints](#) [level](#) *number*

Tree [level](#)

Range 1 to 8

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

bandwidth *number*

Synopsis Bandwidth available for this level

Context **configure** [service](#) [vprn](#) *string* [mld](#) [interface](#) *string* [mcac](#) [mc-constraints](#) [level](#) *number* [bandwidth](#) *number*

Tree [bandwidth](#)

Range 0 to 2147483647

Units kilobps

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

number-down [[number-lag-port-down](#)] *number*

Context **configure** [service](#) [vprn](#) *string* [mld](#) [interface](#) *string* [mcac](#) [mc-constraints](#) [number-down](#) *number*

Tree [number-down](#)

Introduced 16.0.R1

Platforms All

[number-lag-port-down] *number*

Synopsis Number of ports that are down in this LAG link

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac mc-constraints number-down <i>number</i> |
| Tree | number-down |
| Range | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level *number*

| | |
|-------------|--|
| Synopsis | Level ID to associate with number of down LAG ports |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac mc-constraints number-down <i>number</i> level <i>number</i> |
| Tree | level |
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight *boolean*

| | |
|-------------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
| Context | configure service vprn <i>string</i> mld interface <i>string</i> mcac mc-constraints use-lag-port-weight <i>boolean</i> |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn string mld interface string mcac policy reference |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p> |
| Reference | configure mcac policy string |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval number

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vprn string mld interface string query-interval number |
| Tree | query-interval |
| Range | 2 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval number

| | |
|----------|---|
| Synopsis | Time between group-specific query messages |
| Context | configure service vprn string mld interface string query-last-member-interval number |
| Tree | query-last-member-interval |
| Range | 1 to 1023 |

Introduced 16.0.R1
 Platforms All

query-response-interval *number*

Synopsis Time to wait for a response to the host-query messages
 Context **configure** [service vprn](#) *string* [mld interface](#) *string* [query-response-interval](#) *number*
 Tree [query-response-interval](#)
 Range 1 to 1023
 Introduced 16.0.R1
 Platforms All

router-alert-check *boolean*

Synopsis Enable router alert checking for IGMP or MLD messages
 Context **configure** [service vprn](#) *string* [mld interface](#) *string* [router-alert-check](#) *boolean*
 Tree [router-alert-check](#)
 Default true
 Introduced 16.0.R1

| Introduced | 19.10.R1 |
| Platforms | All |

local-address *string*

| | |
|------------|--|
| Synopsis | Local end of an MSDP session |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> local-address <i>string</i> |
| Tree | local-address |
| Introduced | 19.10.R1 |
| Platforms | All |

receive-message-rate

| | |
|------------|---|
| Synopsis | Enter the receive-message-rate context |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> receive-message-rate |
| Tree | receive-message-rate |
| Introduced | 19.10.R1 |
| Platforms | All |

rate number

| | |
|------------|---|
| Synopsis | Number of MSDP messages read from the TCP session |
| Context | configure service vprn string msdp group string peer string receive-message-rate rate number |
| Tree | rate |
| Range | 10 to 10000 |
| Introduced | 19.10.R1 |
| Platforms | All |

threshold number

| | |
|------------|--|
| Synopsis | Limit for MSDP messages read from the TCP session |
| Context | configure service vprn string msdp group string peer string receive-message-rate threshold number |
| Tree | threshold |
| Range | 1 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

time number

| | |
|------------|---|
| Synopsis | Limit of MSDP messages read from the TCP session |
| Context | configure service vprn string msdp group string peer string receive-message-rate time number |
| Tree | time |
| Range | 1 to 600 |
| Units | seconds |
| Introduced | 19.10.R1 |
| Platforms | All |

receive-message-rate

| | |
|------------|---|
| Synopsis | Enter the receive-message-rate context |
| Context | configure service vprn string msdp group string receive-message-rate |
| Tree | receive-message-rate |
| Introduced | 19.10.R1 |

Platforms All

rate *number*

Synopsis Number of MSDP messages read from the TCP session
 Context **configure** [service vprn](#) *string* [msdp group](#) *string* [receive-message-rate](#) *rate number*
 Tree [rate](#)
 Range 10 to 10000
 Introduced 19.10.R1
 Platforms All

threshold *number*

Synopsis Limit for MSDP messages read from the TCP session
 Context **configure** [service vprn](#) *string* [msdp group](#) *string* [receive-message-rate](#) *threshold number*
 Tree [threshold](#)
 Range 1 to 1000000
 Introduced 19.10.R1
 Platforms All

time *number*

Synopsis Limit of MSDP messages read from the TCP session
 Context **configure** [service vprn](#) *string* [msdp group](#) *string* [receive-message-rate](#) *time number*
 Tree [time](#)
 Range 1 to 600
 Units seconds
 Introduced 19.10.R1
 Platforms All

import-policy *reference*

Synopsis Policies to import Source Active state from the Source Active list into MSDP
 Context **configure** [service vprn](#) *string* [msdp import-policy](#) *reference*
 Tree [import-policy](#)

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |
| Platforms | All |

local-address *string*

| | |
|------------|--|
| Synopsis | Local end of an MSDP session |
| Context | configure service vprn <i>string</i> msdp local-address <i>string</i> |
| Tree | local-address |
| Introduced | 19.10.R1 |
| Platforms | All |

peer [[ip-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the peer list instance |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> |
| Tree | peer |
| Introduced | 19.10.R1 |
| Platforms | All |

[ip-address] *string*

| | |
|------------|---|
| Synopsis | IP address of the remote MSDP router for peering |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> |
| Tree | peer |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

active-source-limit *number*

| | |
|----------|--|
| Synopsis | Maximum number of active messages accepted by MSDP |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn string msdp peer string active-source-limit number |
| Tree | active-source-limit |
| Range | 0 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MSDP |
| Context | configure service vprn string msdp peer string admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 19.10.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | MD5 authentication key for the MSDP peering session |
| Context | configure service vprn string msdp peer string authentication-key string |
| Tree | authentication-key |
| String Length | 1 to 370 |
| Introduced | 19.10.R1 |
| Platforms | All |

default-peer *boolean*

| | |
|------------|--|
| Synopsis | Enable/Disable default peer as MSDP peer |
| Context | configure service vprn string msdp peer string default-peer boolean |
| Tree | default-peer |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Policies to export source active state into MSDP |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Policies to import Source Active state from the Source Active list into MSDP |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |
| Platforms | All |

local-address *string*

| | |
|------------|---|
| Synopsis | Local end of an MSDP session |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> local-address <i>string</i> |
| Tree | local-address |
| Introduced | 19.10.R1 |
| Platforms | All |

receive-message-rate

| | |
|----------|--|
| Synopsis | Enter the receive-message-rate context |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> receive-message-rate |

| | |
|------------|--------------------------------------|
| Tree | receive-message-rate |
| Introduced | 19.10.R1 |
| Platforms | All |

rate number

| | |
|------------|---|
| Synopsis | Number of MSDP messages read from the TCP session |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> receive-message-rate rate <i>number</i> |
| Tree | rate |
| Range | 10 to 10000 |
| Introduced | 19.10.R1 |
| Platforms | All |

threshold number

| | |
|------------|--|
| Synopsis | Limit for MSDP messages read from the TCP session |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> receive-message-rate threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

time number

| | |
|------------|---|
| Synopsis | Limit of MSDP messages read from the TCP session |
| Context | configure service vprn <i>string</i> msdp peer <i>string</i> receive-message-rate time <i>number</i> |
| Tree | time |
| Range | 1 to 600 |
| Units | seconds |
| Introduced | 19.10.R1 |
| Platforms | All |

receive-message-rate

| | |
|----------|---|
| Synopsis | Enter the receive-message-rate context |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn string msdp receive-message-rate |
| Tree | receive-message-rate |
| Introduced | 19.10.R1 |
| Platforms | All |

rate number

| | |
|------------|--|
| Synopsis | Number of MSDP messages read from the TCP session |
| Context | configure service vprn string msdp receive-message-rate rate number |
| Tree | rate |
| Range | 10 to 10000 |
| Introduced | 19.10.R1 |
| Platforms | All |

threshold number

| | |
|------------|---|
| Synopsis | Limit for MSDP messages read from the TCP session |
| Context | configure service vprn string msdp receive-message-rate threshold number |
| Tree | threshold |
| Range | 1 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

time number

| | |
|------------|--|
| Synopsis | Limit of MSDP messages read from the TCP session |
| Context | configure service vprn string msdp receive-message-rate time number |
| Tree | time |
| Range | 1 to 600 |
| Units | seconds |
| Introduced | 19.10.R1 |
| Platforms | All |

rpf-table *keyword*

| | |
|------------|---|
| Synopsis | Route tables for RPF lookup |
| Context | configure service vprn <i>string</i> msdp rpf-table <i>keyword</i> |
| Tree | rpf-table |
| Default | rtable-u |
| Options | rtable-m, rtable-u, both |
| Introduced | 19.10.R1 |
| Platforms | All |

source [[ip-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the source list instance |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> |
| Tree | source |
| Introduced | 19.10.R1 |
| Platforms | All |

[ip-prefix] *string*

| | |
|------------|---|
| Synopsis | Source IP address for accepted active source messages |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

active-source-limit *number*

| | |
|------------|---|
| Synopsis | Number of active source messages accepted by MSDP |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> active-source-limit <i>number</i> |
| Tree | active-source-limit |
| Range | 0 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

source-active-cache-lifetime *number*

| | |
|------------|--|
| Synopsis | Lifetime given to SA cache entries when created or refreshed |
| Context | configure service vprn <i>string</i> msdp source-active-cache-lifetime <i>number</i> |
| Tree | source-active-cache-lifetime |
| Range | 90 to 600 |
| Default | 90 |
| Units | seconds |
| Introduced | 19.10.R1 |
| Platforms | All |

mss-adjust

| | |
|------------|--|
| Synopsis | Enable the mss-adjust context |
| Context | configure service vprn <i>string</i> mss-adjust |
| Tree | mss-adjust |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-group *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | NAT group used for TCP-MSS adjustment |
| Context | configure service vprn <i>string</i> mss-adjust nat-group <i>number</i> |
| Tree | nat-group |
| Max. Range | 0 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

segment-size *number*

| | |
|----------|--|
| Synopsis | TCP-MSS option value in transmitted TCP SYN requests |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> mss-adjust segment-size <i>number</i> |
| Tree | segment-size |
| Range | 160 to 10240 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtrace2

| | |
|------------|--|
| Synopsis | Enter the mtrace2 context |
| Context | configure service vprn <i>string</i> mtrace2 |
| Tree | mtrace2 |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of multicast path tracing |
| Context | configure service vprn <i>string</i> mtrace2 admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

udp-port *number*

| | |
|------------|---|
| Synopsis | Destination UDP port for mstat2 mtrace2 test, or unsolicited mstat2 mtrace2 packets |
| Context | configure service vprn <i>string</i> mtrace2 udp-port <i>number</i> |
| Tree | udp-port |
| Range | 1024 to 49151 |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-info-policy *reference*

| | |
|------------|---|
| Synopsis | Multicast policy name for virtual router |
| Context | configure service vprn <i>string</i> multicast-info-policy <i>reference</i> |
| Tree | multicast-info-policy |
| Reference | configure multicast-management multicast-info-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mvpn

| | |
|------------|---|
| Synopsis | Enable the mvpn context |
| Context | configure service vprn <i>string</i> mvpn |
| Tree | mvpn |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery

| | |
|------------|--|
| Synopsis | Enter the auto-discovery context |
| Context | configure service vprn <i>string</i> mvpn auto-discovery |
| Tree | auto-discovery |
| Introduced | 19.5.R1 |
| Platforms | All |

source-address *string*

| | |
|------------|---|
| Synopsis | IPv4 source address |
| Context | configure service vprn <i>string</i> mvpn auto-discovery source-address <i>string</i> |
| Tree | source-address |
| Default | 0.0.0.0 |
| Introduced | 19.5.R1 |
| Platforms | All |

type *keyword*

| | |
|------------|--|
| Synopsis | Status of multicast VPN membership auto-discovery |
| Context | configure service vprn <i>string mvpn auto-discovery type keyword</i> |
| Tree | type |
| Options | bgp, mdt-safi |
| Introduced | 19.5.R1 |
| Platforms | All |

c-mcast-signaling *keyword*

| | |
|------------|--|
| Synopsis | Protocol for PE-to-PE signaling of CE multicast states |
| Context | configure service vprn <i>string mvpn c-mcast-signaling keyword</i> |
| Tree | c-mcast-signaling |
| Default | pim |
| Options | bgp, pim |
| Introduced | 19.5.R1 |
| Platforms | All |

intersite-shared

| | |
|-------------|---|
| Synopsis | Enter the intersite-shared context |
| Context | configure service vprn <i>string mvpn intersite-shared</i> |
| Tree | intersite-shared |
| Description | Commands in this context configure whether to use inter-site shared C-trees. Optional parameters allow enabling additional intersite shared functionality. Not specifying an optional parameter when executing the command disables that parameter. |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of inter-site shared C-trees use |
| Context | configure service vprn <i>string mvpn intersite-shared admin-state keyword</i> |
| Tree | admin-state |
| Default | enable |

| | |
|------------|-----------------|
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

kat-type5-advertisement-withdraw *boolean*

| | |
|-------------|---|
| Synopsis | Enable KATs on source PEs for ng-MVPN deployments |
| Context | configure service vprn <i>string</i> mvpn intersite-shared kat-type5-advertisement-withdraw <i>boolean</i> |
| Tree | kat-type5-advertisement-withdraw |
| Description | When configured to true , this command specifies that the MVPN Type-5 “Source Active AD routes” are not removed even if all receivers are removed from the tree. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

persistent-type5-advertisement *boolean*

| | |
|-------------|--|
| Synopsis | Ensure Type-5 S-A routes are generated for MCAST source |
| Context | configure service vprn <i>string</i> mvpn intersite-shared persistent-type5-advertisement <i>boolean</i> |
| Tree | persistent-type5-advertisement |
| Description | When configured to true , this command removes the MVPN Type-5 “Source Active AD routes” even if receivers are present but the keepalive timer (KAT) has timed out because of no traffic. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

mdt-type *keyword*

| | |
|----------|--|
| Synopsis | MVPN instance type per PE node |
| Context | configure service vprn <i>string</i> mvpn mdt-type <i>keyword</i> |
| Tree | mdt-type |
| Default | sender-receiver |
| Options | sender-only, receiver-only, sender-receiver |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

provider-tunnel

| | |
|------------|--|
| Synopsis | Enter the provider-tunnel context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel |
| Tree | provider-tunnel |
| Introduced | 19.5.R1 |
| Platforms | All |

inclusive

| | |
|------------|--|
| Synopsis | Enter the inclusive context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive |
| Tree | inclusive |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|------------|---|
| Synopsis | Enable the bier context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier |
| Tree | bier |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of BIER |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|--|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn string mvpn provider-tunnel inclusive bier sub-domain number |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

bsr *keyword*

| | |
|------------|---|
| Synopsis | BSR signaling type |
| Context | configure service vprn string mvpn provider-tunnel inclusive bsr keyword |
| Tree | bsr |
| Options | unicast, spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|------------|---|
| Synopsis | Enable the mldp context |
| Context | configure service vprn string mvpn provider-tunnel inclusive mldp |
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn string mvpn provider-tunnel inclusive mldp admin-state keyword |
| Tree | admin-state |

| | |
|------------|-----------------|
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enable the p2mp-sr context |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 21.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state for P2MP SR |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | All |

bfd-leaf boolean

| | |
|-------------|--|
| Synopsis | Enable unidirectional multipoint BFD on the leaf PE |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-leaf boolean |
| Tree | bfd-leaf |
| Description | When configured to true , this command enables unidirectional multipoint BFD sessions on a receiver (leaf) PE node for upstream fast failure detection over P2MP SR tree LSP. |
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

bfd-root

| | |
|------------|--|
| Synopsis | Enable the bfd-root context |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root |
| Tree | bfd-root |
| Introduced | 21.10.R1 |
| Platforms | All |

multiplier number

| | |
|-------------|--|
| Synopsis | Multiplier for the transmit interval of the BFD session |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root multiplier number |
| Tree | multiplier |
| Description | This command configures the multiplier for the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

transmit-interval number

| | |
|-------------|---|
| Synopsis | Transmit interval of the BFD session |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|------------|---|
| Synopsis | Use P2MP policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|---|
| Synopsis | Static policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr static-policy <i>reference</i> |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|---|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim |
| Tree | pim |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of PIM use for provider tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |

Introduced 19.5.R1
Platforms All

group-address *string*

Synopsis Multicast group address
Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [group-address](#) *string*
Tree [group-address](#)
Notes This element is mandatory.
Introduced 19.5.R1
Platforms All

hello-interval *number*

Synopsis Frequency at which PIM Hello messages are transmitted
Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [hello-interval](#) *number*
Tree [hello-interval](#)
Range 0 to 255
Default 30
Introduced 19.5.R1
Platforms All

hello-multiplier *number*

Synopsis Multiplier to determine the holdtime for a PIM neighbor
Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [hello-multiplier](#) *number*
Tree [hello-multiplier](#)
Range 20 to 100
Default 35
Introduced 19.5.R1
Platforms All

improved-assert *boolean*

Synopsis Enable the improved assert procedure

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim improved-assert
<i>boolean</i> |
| Tree | improved-assert |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|---|
| Synopsis | PIM mode for the inclusive provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim mode <i>keyword</i> |
| Tree | mode |
| Options | asm, ssm |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

three-way-hello *boolean*

| | |
|------------|---|
| Synopsis | Enable PIM three-way hello |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim three-way-hello
<i>boolean</i> |
| Tree | three-way-hello |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

tracking-support *boolean*

| | |
|------------|--|
| Synopsis | Enable the T bit in the LAN Prune Delay option |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim tracking-support
<i>boolean</i> |
| Tree | tracking-support |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp

| | |
|------------|---|
| Synopsis | Enable the rsvp context |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive rsvp</i> |
| Tree | rsvp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of RSVP use for provider tunnels |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive rsvp admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-leaf *boolean*

| | |
|------------|--|
| Synopsis | Enable unidirectional multi-point BFD on a receiver |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive rsvp bfd-leaf boolean</i> |
| Tree | bfd-leaf |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-root

| | |
|------------|--|
| Synopsis | Enable the bfd-root context |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive rsvp bfd-root</i> |
| Tree | bfd-root |
| Introduced | 19.5.R1 |
| Platforms | All |

multiplier *number*

| | |
|------------|--|
| Synopsis | Enable unidirectional multi-point BFD on a sender |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root multiplier <i>number</i> |
| Tree | multiplier |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|------------|---|
| Synopsis | Transmit interval for the BFD session |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template *reference*

| | |
|------------|--|
| Synopsis | P2MP LSP created as the provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp lsp-template <i>reference</i> |
| Tree | lsp-template |
| Reference | configure router <i>string</i> mpls lsp-template <i>string</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-rate-monitoring

| | |
|----------|---|
| Synopsis | Enter the umh-rate-monitoring context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring |

| | |
|------------|-------------------------------------|
| Tree | umh-rate-monitoring |
| Introduced | 21.5.R1 |
| Platforms | All |

revertive-timer *number*

| | |
|------------|--|
| Synopsis | Time until switch to primary PMSI after recovering rate |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring revertive-timer <i>number</i> |
| Tree | revertive-timer |
| Range | 0 to 3600 |
| Introduced | 21.5.R1 |
| Platforms | All |

traffic-rate-delta *number*

| | |
|------------|---|
| Synopsis | Rate delta between PMSIs under which traffic switches |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring traffic-rate-delta <i>number</i> |
| Tree | traffic-rate-delta |
| Range | 0 to 4294967294 |
| Introduced | 21.5.R1 |
| Platforms | All |

wildcard-spmsi *boolean*

| | |
|------------|--|
| Synopsis | Enable RFC 6625 S-PMSI functionality for NG-MVPN |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive wildcard-spmsi <i>boolean</i> |
| Tree | wildcard-spmsi |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

selective

| | |
|----------|------------------------------------|
| Synopsis | Enter the selective context |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective |
| Tree | selective |
| Introduced | 19.5.R1 |
| Platforms | All |

asm-mdt *boolean*

| | |
|------------|--|
| Synopsis | Enable Data MDT with PIM-ASM mode on receiver PE node |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective asm-mdt <i>boolean</i> |
| Tree | asm-mdt |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery *boolean*

| | |
|------------|---|
| Synopsis | Enable C-trees to P-tunnel binding auto-discovery |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective auto-discovery <i>boolean</i> |
| Tree | auto-discovery |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|------------|---|
| Synopsis | Enable the bier context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier |
| Tree | bier |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|------------------------------|
| Synopsis | Administrative state of BIER |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|---|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier sub-domain <i>number</i> |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-delay-interval *number*

| | |
|------------|---|
| Synopsis | Interval a PE switches from inclusive to selective |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-delay-interval <i>number</i> |
| Tree | data-delay-interval |
| Range | 3 to 180 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-threshold

| | |
|------------|--|
| Synopsis | Enter the data-threshold context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-threshold |
| Tree | data-threshold |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the group-prefix list instance |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-add *number*

| | |
|------------|--|
| Synopsis | PE add threshold |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-add <i>number</i> |
| Tree | pe-threshold-add |
| Range | 1 to 65535 |
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-delete *number*

| | |
|----------|---|
| Synopsis | PE delete threshold |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-delete <i>number</i> |
| Tree | pe-threshold-delete |
| Range | 2 to 65535 |

| | |
|------------|---------|
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | S-PMSI threshold |
| Context | configure service vprn <i>string</i> mvprn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) threshold <i>number</i> |
| Tree | threshold |
| Range | 0 to 4294967294 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

join-tlv-packing *boolean*

| | |
|------------|--|
| Synopsis | Enable packing of MDT join TLVs into a single PDU |
| Context | configure service vprn <i>string</i> mvprn provider-tunnel selective join-tlv-packing <i>boolean</i> |
| Tree | join-tlv-packing |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|------------|---|
| Synopsis | Enable the mldp context |
| Context | configure service vprn <i>string</i> mvprn provider-tunnel selective mldp |
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

maximum-p2mp-spmsi *number*

| | |
|------------|---|
| Synopsis | Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp maximum-p2mp-spmsi <i>number</i> |
| Tree | maximum-p2mp-spmsi |
| Range | 1 to 4000 |
| Default | 10 |
| Introduced | 19.5.R1 |
| Platforms | All |

multistream-spmsi [[multistream-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the multistream-spmsi list instance |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

[[multistream-id](#)] *number*

| | |
|----------|---|
| Synopsis | Multistream spmsi id |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Range | 1 to 1024 |
| Notes | This element is part of a list key. |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of multi-stream S-PMSI |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [source-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Add a list entry for group-prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

source-prefix (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|--|
| Synopsis | IPv4 or IPv6 unicast source address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template *reference*

| | |
|------------|---|
| Synopsis | RSVP-TE LSP template for S-PMSI |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> lsp-template <i>reference</i> |
| Tree | lsp-template |
| Reference | configure router <i>string</i> mpls lsp-template <i>string</i> |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enter the p2mp-sr context |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 21.5.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|----------|--|
| Synopsis | Use P2MP policy for selective MVPN provider tunnel |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |

| | |
|------------|---------|
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|---|
| Synopsis | P2MP static policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr static-policy <i>reference</i> |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim |
| Tree | pim |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 19.5.R1 |
| Platforms | All |

group-address *string*

| | |
|------------|--|
| Synopsis | Group address of the data MDT |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim group-address <i>string</i> |
| Tree | group-address |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|----------|--|
| Synopsis | PIM mode for the selective provider tunnel |
|----------|--|

| | |
|------------|---|
| Context | configure service vpn <i>string mvpn provider-tunnel selective multistream-spmsi number pim mode keyword</i> |
| Tree | mode |
| Options | asm, ssm |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enable the p2mp-sr context |
| Context | configure service vpn <i>string mvpn provider-tunnel selective p2mp-sr</i> |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 21.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of P2MP SR |
| Context | configure service vpn <i>string mvpn provider-tunnel selective p2mp-sr admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | All |

p2mp-policy boolean

| | |
|------------|---|
| Synopsis | Use P2MP policy for selective MVPN provider tunnel |
| Context | configure service vpn <i>string mvpn provider-tunnel selective p2mp-sr p2mp-policy boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|--|
| Synopsis | Static policy for selective MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective p2mp-sr static-policy reference |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|---|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim |
| Tree | pim |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix *string*

| | |
|------------|---|
| Synopsis | Multicast group address and netmask length |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim group-prefix <i>string</i> |
| Tree | group-prefix |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|----------|--|
| Synopsis | PIM mode. |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim mode <i>keyword</i> |
| Tree | mode |
| Options | asm, ssm |
| Notes | This element is mandatory. |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp

| | |
|------------|---|
| Synopsis | Enable the rsvp context |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp |
| Tree | rsvp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of RSVP use for provider tunnels |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template reference

| | |
|------------|---|
| Synopsis | P2MP LSP created as the selective provider tunnel |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp lsp-template reference |
| Tree | lsp-template |
| Reference | configure router string mpls lsp-template string |
| Introduced | 19.5.R1 |
| Platforms | All |

maximum-p2mp-spmsi number

| | |
|----------|--|
| Synopsis | Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective rsvp maximum-p2mp-spmsi <i>number</i> |
| Tree | maximum-p2mp-spmsi |
| Range | 1 to 4000 |
| Default | 10 |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-rate-monitoring

| | |
|------------|---|
| Synopsis | Enter the umh-rate-monitoring context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring |
| Tree | umh-rate-monitoring |
| Introduced | 21.5.R1 |
| Platforms | All |

group [group-ip-address] (*ipv4-prefix* | *ipv6-prefix*) **source** (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the group list instance |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Introduced | 21.5.R1 |
| Platforms | All |

[group-ip-address] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Group IP address |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | All |

source (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Source IP address |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | All |

revertive-timer *number*

| | |
|------------|---|
| Synopsis | Time until switch to primary PMSI after recovering rate |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) revertive-timer <i>number</i> |
| Tree | revertive-timer |
| Range | 0 to 3600 |
| Introduced | 21.5.R1 |
| Platforms | All |

traffic-rate-delta *number*

| | |
|------------|--|
| Synopsis | Rate delta between PMSIs under which traffic switches |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) traffic-rate-delta <i>number</i> |
| Tree | traffic-rate-delta |
| Range | 0 to 4294967294 |
| Introduced | 21.5.R1 |
| Platforms | All |

redundant-source-list

| | |
|------------|--|
| Synopsis | Enter the redundant-source-list context |
| Context | configure service vprn <i>string</i> mvpn redundant-source-list |
| Tree | redundant-source-list |
| Introduced | 19.5.R1 |
| Platforms | All |

source-prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|----------------|---|
| Synopsis | Add a list entry for source-prefix |
| Context | configure service vpn <i>string</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | source-prefix |
| Max. Instances | 16 |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Unicast address prefix and mask |
| Context | configure service vpn <i>string</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | source-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

rpf-select

| | |
|------------|--|
| Synopsis | Enter the rpf-select context |
| Context | configure service vpn <i>string</i> mvpn rpf-select |
| Tree | rpf-select |
| Introduced | 19.5.R1 |
| Platforms | All |

core-mvpn [[core-mvpn-service-name](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the core-mvpn list instance |
| Context | configure service vpn <i>string</i> mvpn rpf-select core-mvpn <i>reference</i> |
| Tree | core-mvpn |
| Introduced | 19.5.R1 |
| Platforms | All |

[core-mvpn-service-name] reference

| | |
|------------|--|
| Synopsis | Core MVPN service name |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> |
| Tree | core-mvpn |
| Reference | configure service vprn <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [ip-group-prefix] string

| | |
|-------------------|---|
| Synopsis | Enter the group-prefix list instance |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Min.
Instances | 1 |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] string

| | |
|------------|---|
| Synopsis | IPv4 multicast address prefix and mask |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

starg boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|-------------|
| Synopsis | Starg flag. |
|----------|-------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> mvpn rpf-select core-mvpn <i>reference</i> group-prefix <i>string</i>
starg <i>boolean</i> |
| Tree | starg |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-pe-backup

| | |
|------------|---|
| Synopsis | Enter the umh-pe-backup context |
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup |
| Tree | umh-pe-backup |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-pe [*ip-address*] *string*

| | |
|------------|--|
| Synopsis | Enter the umh-pe list instance |
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup umh-pe <i>string</i> |
| Tree | umh-pe |

| Tree | ip-fragmentation |
| Options | fragment-ipv6, fragment-ipv6-unless-ipv4-df-set |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

min-first-fragment-size-rx *number*

| | |
|-------------|---|
| Synopsis | Minimum MTU size for upstream packets |
| Context | configure service vprn <i>string</i> nat inside large-scale dual-stack-lite endpoint <i>string</i> min-first-fragment-size-rx <i>number</i> |
| Tree | min-first-fragment-size-rx |
| Description | This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment. |
| Range | 512 to 1280 |
| Default | 1280 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reassembly *boolean*

| | |

nat-import *reference*

Synopsis Import BGP-VPN routes in NAT inside routing context

Context **configure service vprn string nat inside large-scale nat44 nat-import reference**

Tree [nat-import](#)

Description This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT.

A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.

All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.

Reference **configure policy-options policy-statement string**

Max. Instances 5

Notes This element is ordered by the user.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-host

| | |
|-------------|--|
| Synopsis | Enable the default-host context |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> l2-aware default-host |
| Tree | default-host |
| Description | <p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> |

Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

The rate of redirected unknown traffic can be restricted by configuration.

| | |
|------------|--|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inside-router-instance *string*

| | |

subscriber-limit *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Number of L2-Aware NAT subscribers per outside address |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension subscriber-limit <i>number</i> |
| Tree | subscriber-limit |
| Description | When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following: |

- well-known port (this is a fixed and permanently allocated block of ports for all NAT types)
- static port-forwarding range (if enabled by configuration)
- port range allocated for initial port blocks of each L2-Aware subscriber
- port range allocated for extended port blocks for the remainder after the three previous port ranges

The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber.

The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.

| | |
|------------|--|
| Range | 2 to 2000 |

| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dynamic-block-reservation *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Reserve dynamic block for subscriber |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding dynamic-block-reservation <i>boolean</i> |
| Tree | dynamic-block-reservation |
| Description | <p>When configured to true, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> |

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

| | |
|------------|--|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-end *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | End of the wildcard range for port forwards |
| Context | configure service vpn <i>string nat outside pool string port-forwarding range-end number</i> |
| Tree | range-end |
| Description | <p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p> |
| Range | 0 1023 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-start *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Start of the wildcard range for port forwards |
| Context | configure service vpn <i>string nat outside pool string port-forwarding range-start number</i> |
| Tree | range-start |

| | |
|-------------|---|
| Description | <p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-end command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the range-start implicit value is set to 1. Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p> |
| Range | 0 1 1025 to 65535 |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-reservation

| | |
|------------|---|
| Synopsis | Enter the port-reservation context |
| Context | configure service vprn string nat outside pool string port-reservation |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-blocks *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Port block size for NAT subscribers |
| Context | configure service vprn string nat outside pool string port-reservation port-blocks number |
| Tree | port-blocks |
| Description | <p>In CGN, this specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the l2-aware port-block-extension hierarchy in the NAT pool.</p> |

| | |
|------------|---|
| Range | 0 to 64512 |
| Notes | The following elements are part of a choice: port-blocks or ports . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ports *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Size of the port block for NAT subscribers |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-reservation ports <i>number</i> |
| Tree | ports |
| Description | For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.

For L2-aware NAT, this command specifies the size of the initial port-block of a subscriber in the pool. Additional port blocks (extended port blocks) for the L2-aware subscriber must be explicitly enabled under the I2-aware port-block-extension hierarchy in the NAT pool.

This command does not affect the size of extended port blocks. |
| Range | 1 to 64512 |
| Notes | The following elements are part of a choice: port-blocks or ports . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| | |
|----------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

type keyword

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn string network-interface string ipv4 bfd type keyword |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

icmp

| | |
|------------|---|
| Synopsis | Enter the icmp context |
| Context | configure service vprn string network-interface string ipv4 icmp |
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | All |

mask-reply boolean

| | |
|------------|--|
| Synopsis | Allow responses to ICMP mask requests on the interface |
| Context | configure service vprn string network-interface string ipv4 icmp mask-reply boolean |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|-------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn string network-interface string ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |

Introduced 16.0.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of sent Parameter Problem messages
 Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 icmp param-problem admin-state](#) *keyword*
 Tree [admin-state](#)
 Default enable
 Options enable, disable
 Introduced 16.0.R1
 Platforms All

number *number*

Synopsis Maximum number of Parameter Problem messages to send
 Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 icmp param-problem number](#) *number*
 Tree [number](#)
 Range 10 to 1000
 Default 100
 Introduced 16.0.R1
 Platforms All

seconds *number*

Synopsis Time used to limit number of Parameter Problem messages
 Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 icmp param-problem seconds](#) *number*
 Tree [seconds](#)
 Range 1 to 60
 Default 10
 Units seconds
 Introduced 16.0.R1
 Platforms All

redirects

| | |
|-------------|---|
| Synopsis | Enter the redirects context |
| Context | configure service vprn string network-interface string ipv4 icmp redirects |
| Tree | redirects |
| Description | <p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of sending ICMP redirect messages |
| Context | configure service vprn string network-interface string ipv4 icmp redirects admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number number

| | |
|------------|---|
| Synopsis | Maximum number of ICMP redirect messages to send |
| Context | configure service vprn string network-interface string ipv4 icmp redirects number number |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit the number of ICMP redirect messages |

| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service vprn string network-interface string ipv4 icmp ttl-expired seconds number |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unreachables

| | |
|-------------|--|
| Synopsis | Enter the unreachables context |
| Context | configure service vprn string network-interface string ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of sending unreachable messages |
| Context | configure service vprn string network-interface string ipv4 icmp unreachables admin-state keyword |
| Tree | admin-state |

| | |
|------------|-----------------|
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Maximum number of unreachable messages to send |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 icmp unreachable number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time to limit the number of ICMP unreachable messages |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 icmp unreachable seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor-discovery

| | |
|------------|---|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

retry-timer *number*

| | |
|------------|---|
| Synopsis | ARP retry interval |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery retry-timer <i>number</i> |
| Tree | retry-timer |
| Range | 1 to 300 |
| Default | 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

static-neighbor [[ipv4-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the static-neighbor list instance |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IPv4 address that corresponds to the physical address |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-address *string*

| | |
|----------|---|
| Synopsis | MAC address for the static neighbor |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> mac-address <i>string</i> |

| | |
|------------|-----------------------------|
| Tree | mac-address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|-------------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |
| Tree | timeout |
| Description | This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table. |
| Range | 0 to 65535 |
| Default | 14400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

primary

| | |
|------------|--|
| Synopsis | Enable the primary context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 primary |
| Tree | primary |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|------------|--|
| Synopsis | Primary IPv4 address assigned to the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 primary address <i>string</i> |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms All

broadcast *keyword*

Synopsis Broadcast address format

Context **configure** [service](#) [vprn](#) *string* [network-interface](#) *string* [ipv4](#) [primary](#) **broadcast** *keyword*

Tree [broadcast](#)

Default host-ones

Options all-ones, host-ones

Introduced 16.0.R1

Platforms All

prefix-length *number*

Synopsis IPv4 address prefix length

Context **configure** [service](#) [vprn](#) *string* [network-interface](#) *string* [ipv4](#) [primary](#) **prefix-length** *number*

Tree [prefix-length](#)

Range 0 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

secondary [[address](#)] *string*

Synopsis Enter the **secondary** list instance

Context **configure** [service](#) [vprn](#) *string* [network-interface](#) *string* [ipv4](#) **secondary** *string*

Tree [secondary](#)

Introduced 16.0.R1

Platforms All

[[address](#)] *string*

Synopsis Secondary IPv4 address assigned to the interface

Context **configure** [service](#) [vprn](#) *string* [network-interface](#) *string* [ipv4](#) **secondary** *string*

Tree [secondary](#)

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

broadcast *keyword*

| | |
|------------|---|
| Synopsis | Broadcast address format |
| Context | configure service vpn <i>string</i> network-interface <i>string</i> ipv4 secondary <i>string</i> broadcast <i>keyword</i> |
| Tree | broadcast |
| Default | host-ones |
| Options | all-ones, host-ones |
| Introduced | 16.0.R1 |
| Platforms | All |

igp-inhibit *boolean*

| | |
|-------------|---|
| Synopsis | Disable the running IGP from recognizing secondary IP |
| Context | configure service vpn <i>string</i> network-interface <i>string</i> ipv4 secondary <i>string</i> igp-inhibit <i>boolean</i> |
| Tree | igp-inhibit |
| Description | When configured to true , the running IGP does not recognize the secondary IP address as a local interface. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|--|
| Synopsis | IPv4 address prefix length |
| Context | configure service vpn <i>string</i> network-interface <i>string</i> ipv4 secondary <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms All

tcp-mss *number*

Synopsis TCP maximum segment size for the interface

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 tcp-mss](#) *number*

Tree [tcp-mss](#)

Range 384 to 9746

Introduced 16.0.R1

Platforms All

urpf-check

Synopsis Enable the **urpf-check** context

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 urpf-check](#)

Tree [urpf-check](#)

Introduced 16.0.R1

Platforms All

ignore-default *boolean*

Synopsis Ignore default route when performing a uRPF check

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 urpf-check ignore-default](#) *boolean*

Tree [ignore-default](#)

Default false

Introduced 16.0.R1

Platforms All

mode *keyword*

Synopsis Unicast RPF check mode

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 urpf-check mode](#) *keyword*

Tree [mode](#)

Default strict

Options strict, loose, strict-no-ecmp

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

lag

| | |
|------------|--|
| Synopsis | Enter the lag context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag |
| Tree | lag |
| Introduced | 16.0.R1 |
| Platforms | All |

link-map-profile *number*

| | |
|-------------|---|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | <p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p> |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

per-link-hash

| | |
|------------|--|
| Synopsis | Enter the per-link-hash context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | All |

class *number*

| | |
|------------|---|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash class <i>number</i> |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight *number*

| | |
|------------|--|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash weight <i>number</i> |
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|------------|--|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing |
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|---|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing flow-label-load-balancing <i>boolean</i> |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. |

When configured to **false**, the router disables load balancing in ECMP and LAG.

| | |
|------------|---------|
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing ip-load-balancing <i>keyword</i> |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs. |
| Default | both |
| Options | both, destination, source, inner-ip |
| Introduced | 16.0.R3 |
| Platforms | All |

lsr-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | LSR load-balancing algorithm |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing lsr-load-balancing <i>keyword</i> |
| Tree | lsr-load-balancing |
| Description | This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting. |
| Options | lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid |
| Introduced | 16.0.R1 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|----------|--|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing spi-load-balancing <i>boolean</i> |

| | |
|-------------|---|
| Tree | spi-load-balancing |
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |
|------------|---|
| Synopsis | Enable use of TEID in hashing |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing teid-load-balancing <i>boolean</i> |
| Tree | teid-load-balancing |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

loopback

| | |
|------------|--|
| Synopsis | Use interface as a loopback interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> loopback |
| Tree | loopback |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

mac *string*

| | |
|------------|---|
| Synopsis | MAC address for the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | All |

port string

| | |
|---------------|--|
| Synopsis | Port to bind the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> port <i>string</i> |
| Tree | port |
| String Length | 1 to 45 |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-instance *number*

| | |
|-------------|---|
| Synopsis | Port egress queue group instance for this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-instance <i>number</i> |
| Tree | egress-instance |
| Description | This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-port-redirect-group *reference*

| | |
|----------|---|
| Synopsis | QoS queue group name |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-port-redirect-group <i>reference</i> |
| Tree | egress-port-redirect-group |

| | |
|-------------|---|
| Description | This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface. |
| Reference | configure qos queue-group-templates egress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-fp-redirect-group *reference*

| | |
|-------------|---|
| Synopsis | Forwarding plane queue group policy for the interface |
| Context | configure service vpn <i>string</i> network-interface <i>string</i> qos ingress-fp-redirect-group <i>reference</i> |
| Tree | ingress-fp-redirect-group |
| Description | This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface. |
| Reference | configure qos queue-group-templates ingress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-instance *number*

| | |
|-------------|---|
| Synopsis | Forwarding plane ingress queue group for this interface |
| Context | configure service vpn <i>string</i> network-interface <i>string</i> qos ingress-instance <i>number</i> |
| Tree | ingress-instance |
| Description | This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

network-policy *reference*

| | |
|----------|---|
| Synopsis | Network policy name associated with a network interface |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos network-policy <i>reference</i> |
| Tree | network-policy |
| Description | This command associates an existing network policy name with the IP interface. |
| Reference | configure qos network <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

tos-marking-state *keyword*

| | |
|------------|--|
| Synopsis | TOS marking state |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> tos-marking-state <i>keyword</i> |
| Tree | tos-marking-state |
| Default | trusted |
| Options | trusted, untrusted |
| Introduced | 16.0.R1 |
| Platforms | All |

ntp

| | |
|------------|--|
| Synopsis | Enable the ntp context |
| Context | configure service vprn <i>string</i> ntp |
| Tree | ntp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of NTP execution |
| Context | configure service vprn <i>string</i> ntp admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authenticate *boolean*

| | |
|------------|---|
| Synopsis | Authentication of NTP PDUs when acting as a server |
| Context | configure service vprn <i>string</i> ntp authenticate <i>boolean</i> |
| Tree | authenticate |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|------------|---|
| Synopsis | Reject NTP PDUs that do not match the authentication key-id, type, or key requirements |
| Context | configure service vprn <i>string</i> ntp authentication-check <i>boolean</i> |
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the authentication-key list instance |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|--|
| Synopsis | Index of the NTP authentication key table that uniquely identifies an authentication key and type |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

Platforms All

key string

Synopsis Key to authenticate NTP packets

Synopsis Local interface used to transmit NTP broadcast packets
 Context **configure service vprn string ntp broadcast reference**
 Tree [broadcast](#)

| | |
|------------|--|
| Reference | configure service vprn <i>string interface string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

key-id *reference*

| | |
|------------|--|
| Synopsis | Authentication key and type used by the node |
| Context | configure service vprn <i>string ntp broadcast reference key-id reference</i> |
| Tree | key-id |
| Reference | configure service vprn <i>string ntp authentication-key number</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ttl *number*

| | |
|------------|--|
| Synopsis | TTL value of messages transmitted by this broadcast address |
| Context | configure service vprn <i>string ntp broadcast reference ttl number</i> |
| Tree | ttl |
| Range | 1 to 255 |
| Default | 127 |
| Introduced | 16.0.R1 |
| Platforms | All |

version *number*

| | |
|------------|--|
| Synopsis | NTP version number generated or accepted by this node in NTP packets |
| Context | configure service vprn <i>string ntp broadcast reference version number</i> |
| Tree | version |
| Range | 2 to 4 |
| Default | 4 |
| Introduced | 16.0.R1 |
| Platforms | All |

ospf [*ospf-instance*] *number*

| | |
|----------------|--|
| Synopsis | Enter the ospf list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> |
| Tree | ospf |
| Max. Instances | 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

[ospf-instance] *number*

| | |
|------------|--|
| Synopsis | Specifies the value of the integrated OSPF instance. |
| Context | configure service vprn <i>string</i> ospf <i>number</i> |
| Tree | ospf |
| Range | 0 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|----------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf <i>number</i> advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Default | false |

| | |
|------------|-----------------------|
| Options | false, link, area, as |
| Introduced | 16.0.R1 |
| Platforms | All |

area [[area-id](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the area list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> |
| Tree | area |
| Introduced | 16.0.R1 |
| Platforms | All |

[area-id] *string*

| | |
|------------|---|
| Synopsis | Area-ID attribute |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> |
| Tree | area |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ne-profile *reference*

| | |
|------------|---|
| Synopsis | Network element profile to be advertised |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> advertise-ne-profile <i>reference</i> |
| Tree | advertise-ne-profile |
| Reference | configure system network-element-discovery profile <i>string</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|----------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> advertise-router-capability <i>boolean</i> |

| | |
|------------|---|
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [[ip-prefix-mask](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> |
| Tree | area-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix-mask] *string*

| | |
|------------|--|
| Synopsis | IPv4 unicast address prefix and mask |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise *boolean*

| | |
|------------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> advertise <i>boolean</i> |
| Tree | advertise |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole-aggregate *boolean*

| | |
|----------|---|
| Synopsis | Install a low priority blackhole route to avoid loops |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf number area string blackhole-aggregate boolean</i> |
| Tree | blackhole-aggregate |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|---|
| Synopsis | Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route |
| Context | configure service vprn <i>string ospf number area string export-policy reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|---|
| Synopsis | Route imported as Summary Type 3/Inter-Area-Prefix-LSA |
| Context | configure service vprn <i>string ospf number area string import-policy reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|----------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn <i>string ospf number area string interface string</i> |
| Tree | interface |

Introduced 16.0.R1
 Platforms All

[interface-name] *string*

Synopsis IP interface name
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string*
 Tree [interface](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of the OSPF interface
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* **admin-state** *keyword*
 Tree [admin-state](#)
 Default enable
 Options enable, disable
 Introduced 16.0.R1
 Platforms All

advertise-router-capability *boolean*

Synopsis Allow router advertisement capabilities
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* **advertise-router-capability** *boolean*
 Tree [advertise-router-capability](#)
 Default true
 Introduced 16.0.R1
 Platforms All

advertise-subnet *boolean*

| | |
|------------|--|
| Synopsis | Advertise point-to-point interfaces as subnet routes |
| Context | configure service vprn <i>string</i> ospf number area <i>string</i> interface <i>string</i> advertise-subnet <i>boolean</i> |
| Tree | advertise-subnet |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key |
| Context | configure service vprn <i>string</i> ospf number area <i>string</i> interface <i>string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn <i>string</i> ospf number area <i>string</i> interface <i>string</i> authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|----------|---|
| Synopsis | Authentication type used on OSPF interface |
| Context | configure service vprn <i>string</i> ospf number area <i>string</i> interface <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |

Introduced 16.0.R1
 Platforms All

bfd-liveness

Synopsis Enable the **bfd-liveness** context
 Context **configure** [service vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* [bfd-liveness](#)
 Tree [bfd-liveness](#)
 Introduced 16.0.R1
 Platforms All

remain-down-on-failure *boolean*

Synopsis Force adjacency down on failure until session returns
 Context **configure** [service vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* [bfd-liveness](#) [remain-down-on-failure](#) *boolean*
 Tree [remain-down-on-failure](#)
 Default false
 Introduced 16.0.R1
 Platforms All

dead-interval *number*

Synopsis OSPF wait time for Hellos before neighbor declared down
 Context **configure** [service vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* [dead-interval](#) *number*
 Tree [dead-interval](#)
 Range 2 to 65535
 Units seconds
 Introduced 16.0.R1
 Platforms All

hello-interval *number*

Synopsis Time between OSPF Hellos of this interface

| | |
|------------|--|
| Context | configure service vprn <i>string ospf number area string interface string hello-interval number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Interface type |
| Context | configure service vprn <i>string ospf number area string interface string interface-type keyword</i> |
| Tree | interface-type |
| Description | <p>This command specifies the interface type.</p> <p>Use this command to set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided the link is used as a point-to-point.</p> <p>If the interface type is not known at the time the interface is added to OSPF and subsequently the IP interface is bound (or moved) to a different interface type, this command must be entered manually.</p> <p>Configuring the interface type to secondary, allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p> |
| Options | broadcast, non-broadcast, point-to-point, secondary |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|----------|----------------------------------|
| Synopsis | Configure load-balancing-weight. |
|----------|----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf number area string interface string load-balancing-weight number</i> |
| Tree | load-balancing-weight |
| Range | 1 to 4294967295 |
| Introduced | 20.2.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string ospf number area string interface string loopfree-alternate</i> |
| Tree | loopfree-alternate |
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|---|
| Synopsis | Enable fast reroute at OSPF primary interface level |
| Context | configure service vprn <i>string ospf number area string interface string loopfree-alternate exclude boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|--|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string ospf number area string interface string loopfree-alternate policy-map</i> |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|--|
| Synopsis | Route next hop policy template that is applied to interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsa-filter-out *keyword*

| | |
|------------|---|
| Synopsis | LSA flooding reduction |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> lsa-filter-out <i>keyword</i> |
| Tree | lsa-filter-out |
| Default | none |
| Options | none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults |
| Introduced | 16.0.R1 |
| Platforms | All |

message-digest-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|----------|--|
| Synopsis | Message digest index |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |

| | |
|------------|-------------------------------------|
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 string

| | |
|---------------|---|
| Synopsis | MD5 hash key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> message-digest-key <i>number</i> md5 <i>string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

metric number

| | |
|------------|---|
| Synopsis | Explicit route cost metric that is applied to the interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu number

| | |
|------------|--|
| Synopsis | MTU for the OSPF to use on the interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9786 |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor [address] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for neighbor |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> neighbor <i>string</i> |
| Tree | neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[address] *string*

| | |
|------------|--|
| Synopsis | IPv4 address of the OSPFv2 neighbor |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> neighbor <i>string</i> |
| Tree | neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|--|
| Synopsis | Allow interface to be advertised as an OSPF interface without running the OSPF protocol |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> passive <i>boolean</i> |
| Tree | passive |
| Introduced | 16.0.R1 |
| Platforms | All |

poll-interval *number*

| | |
|------------|---|
| Synopsis | Interval for Hellos to non-adjacent OSPF NBMA neighbor |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> poll-interval <i>number</i> |
| Tree | poll-interval |
| Max. Range | 0 to 4294967295 |
| Default | 120 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms All

priority *number*

Synopsis Interface priority in the DR election on the subnet

Context **configure** *service vprn string ospf number area string interface string priority number*

Tree [priority](#)

Range 0 to 255

Default 1

Introduced 16.0.R1

Platforms All

retransmit-interval *number*

Synopsis Time before OSPF retransmits an unacknowledged LSA

Context **configure** *service vprn string ospf number area string interface string retransmit-interval number*

Tree [retransmit-interval](#)

Range 1 to 1800

Default 5

Units seconds

Introduced 16.0.R1

Platforms All

rib-priority *keyword*

Synopsis RIB priority for OSPF

Context **configure** *service vprn string ospf number area string interface string rib-priority keyword*

Tree [rib-priority](#)

Options high

Introduced 16.0.R1

Platforms All

transit-delay *number*

| | |
|------------|--|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate-exclude *boolean*

| | |
|------------|--|
| Synopsis | Exclude interfaces in OSPF areas in SPF LFA computation |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> loopfree-alternate-exclude <i>boolean</i> |
| Tree | loopfree-alternate-exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

nssa

| | |
|------------|---|
| Synopsis | Enable the nssa context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> nssa |
| Tree | nssa |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [[ip-prefix-mask](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> nssa area-range <i>string</i> |
| Tree | area-range |
| Introduced | 16.0.R1 |

Platforms All

[ip-prefix-mask] *string*

Synopsis IPv4 unicast address prefix and mask
 Context **configure** [service vprn string ospf number area string nssa area-range string](#)
 Tree [area-range](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

advertise *boolean*

Synopsis Advertise summarized range of addresses to other areas
 Context **configure** [service vprn string ospf number area string nssa area-range string advertise boolean](#)
 Tree [advertise](#)
 Default true
 Introduced 16.0.R1
 Platforms All

originate-default-route

Synopsis Enable the **originate-default-route** context
 Context **configure** [service vprn string ospf number area string nssa originate-default-route](#)
 Tree [originate-default-route](#)
 Introduced 16.0.R1
 Platforms All

adjacency-check *boolean*

Synopsis Perform adjacency checks before originating a default route
 Context **configure** [service vprn string ospf number area string nssa originate-default-route adjacency-check boolean](#)
 Tree [adjacency-check](#)
 Default false

Introduced 16.0.R1
Platforms All

type-nssa *boolean*

Synopsis Generate a default route using NSSA-LSA type
Context **configure** [service vprn](#) *string* [ospf number area](#) *string* [nssa originate-default-route type-nssa](#) *boolean*
Tree [type-nssa](#)
Default false
Introduced 16.0.R1
Platforms All

redistribute-external *boolean*

Synopsis Redistribute external routes into the NSSA
Context **configure** [service vprn](#) *string* [ospf number area](#) *string* [nssa redistribute-external](#) *boolean*
Tree [redistribute-external](#)
Default true
Introduced 16.0.R1
Platforms All

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the NSSA on an ABR
Context **configure** [service vprn](#) *string* [ospf number area](#) *string* [nssa summaries](#) *boolean*
Tree [summaries](#)
Default true
Introduced 16.0.R1
Platforms All

sham-link [[interface](#)] *string* [ip-address](#) *string*

Synopsis Enter the **sham-link** list instance
Context **configure** [service vprn](#) *string* [ospf number area](#) *string* [sham-link](#) *string* [ip-address](#) *string*
Tree [sham-link](#)

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

[interface] *string*

| | |
|---------------|--|
| Synopsis | Local interface name used for the sham-link |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> |
| Tree | sham-link |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-address *string*

| | |
|------------|--|
| Synopsis | IP address of the sham-link neighbor |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> |
| Tree | sham-link |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to send and receive OSPF packets |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type to be used |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|----------|--|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |

| | |
|------------|---------|
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|---|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

message-digest-key [**key-id**] *number*

| | |
|------------|---|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|---|
| Synopsis | Message digest index |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 string

| | |
|---------------|---|
| Synopsis | MD5 key or hash key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> md5 <i>string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

metric number

| | |
|------------|--|
| Synopsis | Explicit route cost metric that is applied to the sham link |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 65535 |
| Default | 1 |
| Introduced | 16.0.R1 |

retransmit-interval number

| | |
|------------|---|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|--|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

stub

| | |
|------------|--|
| Synopsis | Enable the stub context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> stub |
| Tree | stub |
| Introduced | 16.0.R1 |
| Platforms | All |

default-metric *number*

| | |
|------------|---|
| Synopsis | Metric used by the ABR for the default route into the stub area |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> stub default-metric <i>number</i> |
| Tree | default-metric |
| Range | 1 to 16777214 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

summaries *boolean*

| | |
|----------|---|
| Synopsis | Send summary (Type 3) LSAs into the stub area on an ABR |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> stub summaries <i>boolean</i> |
| Tree | summaries |
| Default | true |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

virtual-link [**router-id**] *string transit-area reference*

| | |
|------------|--|
| Synopsis | Enter the virtual-link list instance |
| Context | configure service vprn <i>string ospf number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Introduced | 16.0.R1 |
| Platforms | All |

[router-id] *string*

| | |
|------------|--|
| Synopsis | Router identity of the virtual link neighbor |
| Context | configure service vprn <i>string ospf number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-area *reference*

| | |
|------------|--|
| Synopsis | Transit area that links backbone area to area without physical connection with the backbone |
| Context | configure service vprn <i>string ospf number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Reference | configure service vprn <i>string ospf number area string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | Authentication key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|--|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|----------|--|
| Synopsis | Authentication type used on OSPF interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |

| | |
|------------|--------------------------|
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|------------|---|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

message-digest-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|---|
| Synopsis | Message digest index |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 *string*

| | |
|---------------|--|
| Synopsis | MD5 hash key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> md5 <i>string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|------------|--|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|--|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

compatible-rfc1583 *boolean*

| | |
|------------|--|
| Synopsis | OSPF summary and external route calculations |
| Context | configure service vprn <i>string</i> ospf <i>number</i> compatible-rfc1583 <i>boolean</i> |
| Tree | compatible-rfc1583 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|---|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent *number*

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-limit log-percent <i>number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |

Platforms All

number *number*

Synopsis Maximum routes or prefixes exported from route table

Context **configure** *service vprn string ospf number export-limit number number*

Tree [number](#)

Range 1 to 4294967295

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

export-policy *reference*

Synopsis Export policies that determine exported routes

Context **configure** *service vprn string ospf number export-policy reference*

Tree [export-policy](#)

Description This command configures export routing policies for the routes exported from the routing table to IS-IS.

If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

Reference **configure** [policy-options policy-statement string](#)

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

external-db-overflow

Synopsis Enable the **external-db-overflow** context

| | |
|------------|--|
| Context | configure service vprn <i>string ospf number external-db-overflow</i> |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn <i>string ospf number external-db-overflow interval number</i> |
| Tree | interval |
| Range | 0 to 2147483647 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|---|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn <i>string ospf number external-db-overflow limit number</i> |
| Tree | limit |
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn <i>string ospf number external-preference number</i> |
| Tree | external-preference |
| Range | 1 to 255 |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn string ospf number graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|---|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn string ospf number graceful-restart helper-mode boolean |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-lsa-checking *boolean*

| | |
|------------|---|
| Synopsis | Perform strict LSA checking during graceful restart helper |
| Context | configure service vprn string ospf number graceful-restart strict-lsa-checking boolean |
| Tree | strict-lsa-checking |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-dn-bit *boolean*

| | |
|------------|--|
| Synopsis | Ignore the DN bit for OSPF LSA packets for the instance |
| Context | configure service vprn string ospf number ignore-dn-bit boolean |
| Tree | ignore-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn string ospf number import-policy reference |
| Tree | import-policy |
| Reference | configure policy-options policy-statement string |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn string ospf number loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vprn string ospf number loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|-------------|---|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vprn string ospf number loopfree-alternate exclude prefix-policy reference |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation. |

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

multicast-import *boolean*

| | |
|------------|--|
| Synopsis | Submit routes into the multicast Route Table Manager |
| Context | configure service vprn <i>string</i> ospf <i>number</i> multicast-import <i>boolean</i> |
| Tree | multicast-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload *boolean*

| | |
|------------|--|
| Synopsis | Change local router state to appear overloaded |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload <i>boolean</i> |
| Tree | overload |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-ext-1 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-ext-1 <i>boolean</i> |
| Tree | overload-include-ext-1 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

overload-include-ext-2 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-ext-2 <i>boolean</i> |
| Tree | overload-include-ext-2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-stub *boolean*

| | |
|------------|---|
| Synopsis | Advertise all stub interfaces with max metric value |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-stub <i>boolean</i> |
| Tree | overload-include-stub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|---|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|---|
| Synopsis | Time during which the router operates in overload state before reestablishing normal operations |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-on-boot timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |

log-only *boolean*

| | |
|----------|---|
| Synopsis | Log the event without triggering overload |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit log-only boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-count *number*

| | |
|------------|--|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit max-lsa-count number</i> |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit overload-timeout (number keyword)</i> |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Default | forever |
| Units | seconds |
| Options | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|----------|--|
| Synopsis | Percentage of the max LSA count that causes a warning |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit warning-threshold number</i> |
| Tree | warning-threshold |
| Range | 0 to 100 |

| | |
|------------|---------|
| Default | 0 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

super-backbone *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable super-backbone functionality. |
| Context | configure service vprn string ospf number super-backbone <i>boolean</i> |
| Tree | super-backbone |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-dn-bit *boolean*

| | |
|------------|---|
| Synopsis | Suppress the DN bit setting for OSPF LSA packets |
| Context | configure service vprn string ospf number suppress-dn-bit <i>boolean</i> |
| Tree | suppress-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enter the timers context |
| Context | configure service vprn string ospf number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

incremental-spf-wait *number*

| | |
|----------|--|
| Synopsis | Delay time before an incremental SPF calculation starts |
| Context | configure service vprn string ospf number timers incremental-spf-wait <i>number</i> |

| | |
|------------|--------------------------------------|
| Tree | incremental-spf-wait |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-accumulate *number*

| | |
|------------|--|
| Synopsis | Delay to gather LSAs before advertising to neighbors |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers Isa-accumulate <i>number</i> |
| Tree | Isa-accumulate |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-arrival *number*

| | |
|------------|---|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers Isa-arrival <i>number</i> |
| Tree | Isa-arrival |
| Range | 0 to 600000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-generate

| | |
|------------|--|
| Synopsis | Enter the Isa-generate context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers Isa-generate |
| Tree | Isa-generate |
| Introduced | 16.0.R1 |

Platforms All

lsa-initial-wait *number*

Synopsis First wait period between OSPF LSA generation

Context **configure** [service vprn](#) *string* [ospf](#) *number* [timers](#) [lsa-generate](#) [lsa-initial-wait](#) *number*

Tree [lsa-initial-wait](#)

Range 10 to 600000

Default 5000

Units milliseconds

Introduced 16.0.R1

Platforms All

lsa-second-wait *number*

Synopsis Hold time between the first and second LSA generation

Context **configure** [service vprn](#) *string* [ospf](#) *number* [timers](#) [lsa-generate](#) [lsa-second-wait](#) *number*

Tree [lsa-second-wait](#)

Range 10 to 600000

Default 5000

Units milliseconds

Introduced 16.0.R1

Platforms All

max-lsa-wait *number*

Synopsis Max time between two LSAs being generated

Context **configure** [service vprn](#) *string* [ospf](#) *number* [timers](#) [lsa-generate](#) [max-lsa-wait](#) *number*

Tree [max-lsa-wait](#)

Range 10 to 600000

Default 5000

Units milliseconds

Introduced 16.0.R1

Platforms All

redistribute-delay *number*

| | |
|------------|--|
| Synopsis | Hold down timer for external routes into OSPF |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers redistribute-delay <i>number</i> |
| Tree | redistribute-delay |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

| Options | 0005, 0105, 0205, 8005 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

vpn-tag number

| | |
|------------|---|
| Synopsis | OSPF VPN tag |
| Context | configure service vpn <i>string</i> ospf <i>number</i> vpn-tag <i>number</i> |
| Tree | vpn-tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

ospf3 [ospf-instance] number

| | |
|----------|--|
| Synopsis | Enter the ospf3 list instance |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> |

| | |
|----------------|-----------------------|
| Tree | ospf3 |
| Max. Instances | 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

[ospf-instance] *number*

| | |
|------------|---|
| Synopsis | Specifies the value of the integrated OSPF instance. |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> |
| Tree | ospf3 |
| Range | 0 to 31 64 to 95 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Default | false |
| Options | false, link, area, as |
| Introduced | 16.0.R1 |
| Platforms | All |

area [[area-id](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the area list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> |
| Tree | area |
| Introduced | 16.0.R1 |
| Platforms | All |

[area-id] *string*

| | |
|------------|--|
| Synopsis | Area-ID attribute |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> |
| Tree | area |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Address ranges to create on an ABR for route summarization or suppression |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise *boolean*

| | |
|------------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i> |
| Tree | advertise |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole-aggregate *boolean*

| | |
|------------|---|
| Synopsis | Install a low priority blackhole route to avoid loops |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> blackhole-aggregate <i>boolean</i> |
| Tree | blackhole-aggregate |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|-----------|---|
| Synopsis | Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |

| | |
|----------------|--------------------------------------|
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Route imported as Summary Type 3/Inter-Area-Prefix-LSA |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication

| | |
|------------|---|
| Synopsis | Enable the authentication context |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> authentication |
| Tree | authentication |
| Introduced | 16.0.R6 |
| Platforms | All |

inbound *reference*

| | |
|-----------|---|
| Synopsis | sa-name |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> authentication inbound <i>reference</i> |
| Tree | inbound |
| Reference | configure ipsec static-sa <i>string</i> |

| | |
|------------|----------------------------|
| Notes | This element is mandatory. |
| Introduced | 16.0.R6 |
| Platforms | All |

outbound *reference*

| | |
|------------|---|
| Synopsis | sa-name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> authentication outbound <i>reference</i> |
| Tree | outbound |
| Reference | configure ipsec static-sa <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R6 |
| Platforms | All |

bfd-liveness

| | |
|------------|---|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

remain-down-on-failure *boolean*

| | |
|------------|---|
| Synopsis | Force adjacency down on failure until session returns |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness remain-down-on-failure <i>boolean</i> |
| Tree | remain-down-on-failure |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|----------|---|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|---|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Interface type |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> interface-type <i>keyword</i> |
| Tree | interface-type |
| Description | <p>This command specifies the interface type.</p> <p>Use this command to set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided the link is used as a point-to-point.</p> <p>If the interface type is not known at the time the interface is added to OSPF and subsequently the IP interface is bound (or moved) to a different interface type, this command must be entered manually.</p> <p>Configuring the interface type to secondary, allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This</p> |

interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

| | |
|------------|---|
| Options | broadcast, non-broadcast, point-to-point, secondary |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|------------|--|
| Synopsis | Configure load-balancing-weight. |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> load-balancing-weight <i>number</i> |
| Tree | load-balancing-weight |
| Range | 1 to 4294967295 |
| Introduced | 20.2.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|---|
| Synopsis | Enable fast reroute at OSPF primary interface level |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate exclude <i>boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|---|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string ospf3 number area string interface string loopfree-alternate policy-map</i> |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|---|
| Synopsis | Route next hop policy template that is applied to interface |
| Context | configure service vprn <i>string ospf3 number area string interface string loopfree-alternate policy-map route-nh-template reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsa-filter-out *keyword*

| | |
|------------|--|
| Synopsis | LSA flooding reduction |
| Context | configure service vprn <i>string ospf3 number area string interface string lsa-filter-out keyword</i> |
| Tree | lsa-filter-out |
| Default | none |
| Options | none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults |
| Introduced | 16.0.R1 |
| Platforms | All |

metric *number*

| | |
|----------|---|
| Synopsis | Explicit route cost metric that is applied to the interface |
| Context | configure service vprn <i>string ospf3 number area string interface string metric number</i> |
| Tree | metric |
| Range | 1 to 65535 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

mtu number

| | |
|------------|--|
| Synopsis | MTU for the OSPF to use on the interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9786 |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor [address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | Add a list entry for neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> neighbor (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IPv6 link local address of the OSPFv3 neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> neighbor (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean

| | |
|----------|---|
| Synopsis | Allow interface to be advertised as an OSPF interface without running the OSPF protocol |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> passive <i>boolean</i> |

| | |
|------------|-------------------------|
| Tree | passive |
| Introduced | 16.0.R1 |
| Platforms | All |

poll-interval *number*

| | |
|------------|--|
| Synopsis | Interval for Hellos to non-adjacent OSPF NBMA neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> poll-interval <i>number</i> |
| Tree | poll-interval |
| Max. Range | 0 to 4294967295 |
| Default | 120 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|---|
| Synopsis | Interface priority in the DR election on the subnet |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|------------|--|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms All

rib-priority *keyword*

Synopsis RIB priority for OSPF

Context **configure** [service](#) [vprn](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* **rib-priority** *keyword*

Tree [rib-priority](#)

Options high

Introduced 16.0.R1

| Synopsis | Address ranges to create on an ABR for route summarization or suppression |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise *boolean*

| | |
|------------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> nssa <i>area-range</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i> |
| Tree | advertise |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

originate-default-route

| | |
|------------|---|
| Synopsis | Enable the originate-default-route context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> nssa originate-default-route |
| Tree | originate-default-route |
| Introduced | 16.0.R1 |
| Platforms | All |

adjacency-check *boolean*

| | |
|------------|---|
| Synopsis | Perform adjacency checks before originating a default route |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> nssa originate-default-route adjacency-check <i>boolean</i> |
| Tree | adjacency-check |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

type-nssa *boolean*

| | |
|------------|---|
| Synopsis | Generate a default route using NSSA-LSA type |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> nssa originate-default-route type-nssa <i>boolean</i> |
| Tree | type-nssa |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

redistribute-external *boolean*

Synopsis Redistribute external routes into the NSSA

Context **configure service vprn** *string ospf3 number area string nssa redistribute-external boolean*

Tree [redistribute-external](#)

Default true

Introduced 16.0.R1

Platforms All

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the NSSA on an ABR

Context **configure service vprn** *string ospf3 number area string nssa summaries boolean*

Tree [summaries](#)

Default true

Introduced 16.0.R1

Platforms All

stub

Synopsis Enable the **stub** context

Context **configure service vprn** *string ospf3 number area string stub*

Tree [stub](#)

Introduced 16.0.R1

Platforms All

default-metric *number*

Synopsis Metric used by the ABR for the default route into the stub area

| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

external-db-overflow

| | |
|------------|--|
| Synopsis | Enable the external-db-overflow context |
| Context | configure service vprn string ospf3 number external-db-overflow |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval number

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn string ospf3 number external-db-overflow interval number |
| Tree | interval |
| Range | 0 to 2147483647 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

limit number

| | |
|------------|---|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn string ospf3 number external-db-overflow limit number |
| Tree | limit |
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference number

| | |
|----------|--|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn string ospf3 number external-preference number |
| Tree | external-preference |
| Range | 1 to 255 |

| | |
|------------|---------|
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|--|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|---|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-lsa-checking *boolean*

| | |
|------------|---|
| Synopsis | Perform strict LSA checking during graceful restart helper |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i> |
| Tree | strict-lsa-checking |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-dn-bit *boolean*

| | |
|----------|--|
| Synopsis | Ignore the DN bit for OSPF LSA packets for the instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> ignore-dn-bit <i>boolean</i> |
| Tree | ignore-dn-bit |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|--|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|--|
| Synopsis | Enter the exclude context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|----------|---|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
|----------|---|

| | |
|----------------|--|
| Context | configure service vprn <i>string ospf3 number loopfree-alternate exclude prefix-policy reference</i> |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

multicast-import *boolean*

| | |
|------------|---|
| Synopsis | Submit routes into the multicast Route Table Manager |
| Context | configure service vprn <i>string ospf3 number multicast-import boolean</i> |
| Tree | multicast-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload *boolean*

| | |
|------------|---|
| Synopsis | Change local router state to appear overloaded |
| Context | configure service vprn <i>string ospf3 number overload boolean</i> |
| Tree | overload |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-ext-1 *boolean*

| | |
|----------|---|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string ospf3 number overload-include-ext-1 boolean</i> |

| | |
|------------|--|
| Tree | overload-include-ext-1 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

overload-include-ext-2 *boolean*

| | |
|------------|---|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-ext-2 <i>boolean</i> |
| Tree | overload-include-ext-2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-stub *boolean*

| | |
|------------|--|
| Synopsis | Advertise all stub interfaces with max metric value |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-stub <i>boolean</i> |
| Tree | overload-include-stub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|--|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|----------|--|
| Synopsis | Time during which the router operates in overload state before reestablishing normal operations |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-on-boot timeout <i>number</i> |

| | |
|------------|-------------------------|
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF internal routes |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

reference-bandwidth *number*

| | |
|------------|---|
| Synopsis | Bandwidth to reference the default costing of interfaces |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> reference-bandwidth <i>number</i> |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |
| Default | 100000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|------------|--|
| Synopsis | Enter the rib-priority context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|--|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority high |
| Tree | high |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-list *reference*

| | |
|------------|--|
| Synopsis | Higher priority list used during OSPF route calculation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority high prefix-list <i>reference</i> |
| Tree | prefix-list |
| Reference | configure policy-options prefix-list <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

router-id *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Unique router ID for the OSPF instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> router-id <i>string</i> |
| Tree | router-id |
| Introduced | 16.0.R1 |
| Platforms | All |

rtr-adv-lsa-limit

| | |
|------------|---|
| Synopsis | Enable the rtr-adv-lsa-limit context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rtr-adv-lsa-limit |
| Tree | rtr-adv-lsa-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|--|
| Synopsis | Log the event without triggering overload |
| Context | configure service vprn string ospf3 number rtr-adv-lsa-limit log-only boolean |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-count *number*

| | |
|------------|--|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn string ospf3 number rtr-adv-lsa-limit max-lsa-count number |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn string ospf3 number rtr-adv-lsa-limit overload-timeout (number keyword) |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Default | forever |
| Units | seconds |
| Options | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|----------|---|
| Synopsis | Percentage of the max LSA count that causes a warning |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn string ospf3 number rtr-adv-lsa-limit warning-threshold number |
| Tree | warning-threshold |
| Range | 0 to 100 |
| Default | 0 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-dn-bit *boolean*

| | |
|------------|---|
| Synopsis | Suppress the DN bit setting for OSPF LSA packets |
| Context | configure service vprn string ospf3 number suppress-dn-bit boolean |
| Tree | suppress-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|--|
| Synopsis | Enter the timers context |
| Context | configure service vprn string ospf3 number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

incremental-spf-wait *number*

| | |
|------------|--|
| Synopsis | Delay time before an incremental SPF calculation starts |
| Context | configure service vprn string ospf3 number timers incremental-spf-wait number |
| Tree | incremental-spf-wait |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-accumulate *number*

| | |
|------------|--|
| Synopsis | Delay to gather LSAs before advertising to neighbors |
| Context | configure service vprn string ospf3 number timers isa-accumulate number |
| Tree | isa-accumulate |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-arrival *number*

| | |
|------------|---|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn string ospf3 number timers isa-arrival number |
| Tree | isa-arrival |
| Range | 0 to 600000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-generate

| | |
|------------|---|
| Synopsis | Enter the isa-generate context |
| Context | configure service vprn string ospf3 number timers isa-generate |
| Tree | isa-generate |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-initial-wait *number*

| | |
|----------|---|
| Synopsis | First wait period between OSPF LSA generation |
| Context | configure service vprn string ospf3 number timers isa-generate isa-initial-wait number |
| Tree | isa-initial-wait |

| | |
|------------|--------------|
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second LSA generation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-generate lsa-second-wait <i>number</i> |
| Tree | lsa-second-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-wait *number*

| | |
|------------|--|
| Synopsis | Max time between two LSAs being generated |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-generate max-lsa-wait <i>number</i> |
| Tree | max-lsa-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

redistribute-delay *number*

| | |
|----------|---|
| Synopsis | Hold down timer for external routes into OSPF |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers redistribute-delay <i>number</i> |
| Tree | redistribute-delay |
| Range | 0 to 1000 |
| Default | 1000 |

| | |
|------------|--------------|
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-wait

| | |
|------------|---|
| Synopsis | Enter the spf-wait context |
| Context | configure service vprn string ospf3 number timers spf-wait |
| Tree | spf-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-initial-wait number

| | |
|------------|---|
| Synopsis | Initial SPF calculation delay after a topology change |
| Context | configure service vprn string ospf3 number timers spf-wait spf-initial-wait number |
| Tree | spf-initial-wait |
| Range | 10 to 100000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-max-wait number

| | |
|------------|---|
| Synopsis | Max interval between two consecutive SPF calculations |
| Context | configure service vprn string ospf3 number timers spf-wait spf-max-wait number |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Default | 10000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second SPF calculation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers spf-wait spf-second-wait <i>number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import *boolean*

| | |
|------------|---|
| Synopsis | Submit routes into the unicast Route Table Manager |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> unicast-import <i>boolean</i> |
| Tree | unicast-import |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

pcp

| | |
|------------|---|
| Synopsis | Enter the pcp context |
| Context | configure service vprn <i>string</i> pcp |
| Tree | pcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

server [*name*] *string*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> pcp server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis PCP server name
Context **configure** [service vprn string](#) [pcp server string](#)
Tree [server](#)
String Length 1 to 32
Notes This element is part of a list key.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the PCP server
Context **configure** [service vprn string](#) [pcp server string](#) **admin-state** *keyword*
Tree [admin-state](#)
Default disable
Options enable, disable
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
Context **configure** [service vprn string](#) [pcp server string](#) **description** *string*
Tree [description](#)

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-stack-lite-address *string*

Synopsis Inside Dual Stack Lite AFTR address
Context **configure** [service vprn string](#) [pcp server string](#) **dual-stack-lite-address** *string*

| | |
|------------|--|
| Tree | dual-stack-lite-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fwd-inside-router *string*

| | |
|------------|---|
| Synopsis | PCP forwarding inside virtual router instance |
| Context | configure service vprn string pcp server string fwd-inside-router string |
| Tree | fwd-inside-router |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface [[name](#)] *reference*

| | |
|----------------|--|
| Synopsis | Add a list entry for interface |
| Context | configure service vprn string pcp server string interface reference |
| Tree | interface |
| Max. Instances | 32 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *reference*

| | |
|------------|--|
| Synopsis | Interface name |
| Context | configure service vprn string pcp server string interface reference |
| Tree | interface |
| Reference | configure service vprn string interface string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|----------|-------------------|
| Synopsis | PCP server policy |
|----------|-------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> pcp server <i>string</i> policy <i>reference</i> |
| Tree | policy |
| Reference | configure service nat pcp-server-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> pim |
| Tree | pim |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of PIM |
| Context | configure service vprn <i>string</i> pim admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

apply-to *keyword*

| | |
|------------|--|
| Synopsis | IES and non-IES interfaces to create in PIM |
| Context | configure service vprn <i>string</i> pim apply-to <i>keyword</i> |
| Tree | apply-to |
| Default | none |
| Options | all, none |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp-nh-override *boolean*

| | |
|-------------|--|
| Synopsis | Disable VRF import EC support for next-hop resolution |
| Context | configure service vprn <i>string</i> pim bgp-nh-override <i>boolean</i> |
| Tree | bgp-nh-override |
| Description | When configured to true , the RPF check is performed using IPv4 VPN AF next-hop instead of IPv4 AF VRF import extended community (EC).
When configured to false , the RPF check is performed using IPv4 AF VRF import EC. |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

import

| | |
|------------|--|
| Synopsis | Enter the import context |
| Context | configure service vprn <i>string</i> pim import |
| Tree | import |
| Introduced | 16.0.R1 |
| Platforms | All |

join-policy *reference*

| | |
|----------------|---|
| Synopsis | Policy name |
| Context | configure service vprn <i>string</i> pim import join-policy <i>reference</i> |
| Tree | join-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

register-policy *reference*

| | |
|----------|---|
| Synopsis | Policy name |
| Context | configure service vprn <i>string</i> pim import register-policy <i>reference</i> |

| | |
|----------------|--|
| Tree | register-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vpn <i>string</i> pim interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|--|
| Synopsis | Interface name |
| Context | configure service vpn <i>string</i> pim interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the PIM interface |
| Context | configure service vpn <i>string</i> pim interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

assert-period *number*

| | |
|------------|--|
| Synopsis | Time for periodic refreshes of PIM Assert messages on an interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> assert-period <i>number</i> |
| Tree | assert-period |
| Range | 1 to 300 |
| Default | 60 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|------------|---|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Use Bidirectional Forwarding Detection for IPv4 on PIM interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> bfd-liveness ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Use Bidirectional Forwarding Detection for IPv6 on PIM interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> bfd-liveness ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bsm-check-rtr-alert *boolean*

| | |
|------------|--|
| Synopsis | Check router alert option in bootstrap messages received |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> bsm-check-rtr-alert <i>boolean</i> |
| Tree | bsm-check-rtr-alert |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Frequency at which PIM Hello messages are sent over this interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 0 to 255 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|--|
| Synopsis | Multiplier to determine the hold time for PIM neighbor |

| Synopsis | Level ID to associate with number of down LAG ports |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> level <i>number</i> |
| Tree | level |
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight boolean

| | |
|-------------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints use-lag-port-weight <i>boolean</i> |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac <i>policy reference</i> |
| Tree | policy |
| Description | This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. |

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| | |
|------------|--|
| Reference | configure mcac policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-senders *keyword*

candidate *boolean*

| | |
|----------|---|
| Synopsis | Enable auto-RP to advertise candidate RP information |
| Context | configure service vprn <i>string</i> pim rp ipv4 candidate <i>boolean</i> |
| Tree | candidate |

| | |
|-------------|--|
| Description | When configured to true , the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.

When configured to false , the candidate RP information is not specified. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

mapping-agent *boolean*

| | |
|-------------|---|
| Synopsis | Enable the mapping agent on the node |
| Context | configure service vprn <i>string</i> pim rp ipv4 mapping-agent <i>boolean</i> |
| Tree | mapping-agent |
| Description | When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rp-candidate

| | |
|------------|--|
| Synopsis | Enter the rp-candidate context |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate |
| Tree | rp-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|-------------|--|
| Synopsis | Local RP address |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate address <i>string</i> |
| Tree | address |
| Description | This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router. |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the Candidate RP |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [[ipv4-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | Add a list entry for group-range |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[[ipv4-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | IPv4 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

holdtime *number*

| | |
|----------|--|
| Synopsis | Time during which the neighboring router considers this router to be up |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate holdtime <i>number</i> |
| Tree | holdtime |

| | |
|------------|----------|
| Range | 5 to 255 |
| Default | 150 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|---|
| Synopsis | Candidate RP priority |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate <i>priority number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 192 |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |
|------------|---|
| Synopsis | Enter the static context |
| Context | configure service vprn <i>string</i> pim rp ipv4 <i>static</i> |
| Tree | static |
| Introduced | 16.0.R1 |
| Platforms | All |

address [[ipv4-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service vprn <i>string</i> pim rp ipv4 <i>static</i> <i>address string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|----------|--------------------------------|
| Synopsis | IPv4 address for the static RP |
|----------|--------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

group-prefix [**ipv4-prefix**] *string*

| | |
|------------|---|
| Synopsis | Add a list entry for group-prefix |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-prefix] *string*

| | |
|------------|---|
| Synopsis | IPv4 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

override *boolean*

| | |
|------------|--|
| Synopsis | Change the precedence for static RP over dynamically learnt RP |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> override <i>boolean</i> |
| Tree | override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|----------|-------------------------------|
| Synopsis | Enter the ipv6 context |
|----------|-------------------------------|

| | |
|------------|--|
| Context | configure service vprn string pim rp ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

anycast [ipv6-address] string rp-set-peer string

| | |
|------------|--|
| Synopsis | Add a list entry for anycast |
| Context | configure service vprn string pim rp ipv6 anycast string rp-set-peer string |
| Tree | anycast |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-address] string

| | |
|------------|--|
| Synopsis | Loopback IP address shared by routes in RP set |
| Context | configure service vprn string pim rp ipv6 anycast string rp-set-peer string |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

rp-set-peer string

| | |
|------------|--|
| Synopsis | Peer in the anycast RP set |
| Context | configure service vprn string pim rp ipv6 anycast string rp-set-peer string |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bsr-candidate

| | |
|----------|--|
| Synopsis | Enter the bsr-candidate context |
| Context | configure service vprn string pim rp ipv6 bsr-candidate |

| | |
|------------|-------------------------------|
| Tree | bsr-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|------------|--|
| Synopsis | Candidate BSR IP address for Bootstrap Router election |
| Context | configure service vprn <i>string</i> pim rp ipv6 bsr-candidate address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the Candidate BSR |
| Context | configure service vprn <i>string</i> pim rp ipv6 bsr-candidate admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

hash-mask-len *number*

| | |
|------------|--|
| Synopsis | Length for bootstrap hash mask |
| Context | configure service vprn <i>string</i> pim rp ipv6 bsr-candidate hash-mask-len <i>number</i> |
| Tree | hash-mask-len |
| Range | 0 to 128 |
| Default | 126 |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|----------|----------------------------------|
| Synopsis | Bootstrap priority of the router |
|----------|----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> pim rp ipv6 bsr-candidate priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

embedded-rp

| | |
|------------|--|
| Synopsis | Enable the embedded-rp context |
| Context | configure service vprn <i>string</i> pim rp ipv6 embedded-rp |
| Tree | embedded-rp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of embedded RP |
| Context | configure service vprn <i>string</i> pim rp ipv6 embedded-rp admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [*ipv6-prefix*] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for group-range |
| Context | configure service vprn <i>string</i> pim rp ipv6 embedded-rp group-range <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-prefix] string

| | |
|------------|---|
| Synopsis | IPv6 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv6 embedded-rp group-range <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

rp-candidate

| | |
|------------|--|
| Synopsis | Enter the rp-candidate context |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate |
| Tree | rp-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address string

| | |
|------------|--|
| Synopsis | Local RP address |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the Candidate RP |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [[ipv6-prefix](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for group-range |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-prefix] *string*

| | |
|------------|--|
| Synopsis | IPv6 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

holdtime *number*

| | |
|------------|---|
| Synopsis | Time during which the neighboring router considers this router to be up |
| Context | configure service vprn <i>string</i> pim rp ipv6 rp-candidate holdtime <i>number</i> |
| Tree | holdtime |
| Range | 5 to 255 |
| Default | 150 |

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-delete-hold-time *number*

Synopsis Delete hold time

Context **configure** [service vprn string](#) [radius proxy string](#) [cache track-delete-hold-time number](#)

Tree [track-delete-hold-time](#)

Range 0 to 6000

Default 0

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis Enter the **defaults** context

Context **configure** [service vprn string](#) [radius proxy string](#) [defaults](#)

Tree [defaults](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-server-policy *string*

Synopsis Default accounting RADIUS server policy
 Context **configure** [service vprn string](#) [radius proxy string](#) [defaults accounting-server-policy string](#)
 Tree [accounting-server-policy](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-server-policy *string*

Synopsis Default authentication RADIUS server policy
 Context **configure** [service vprn string](#) [radius proxy string](#) [defaults authentication-server-policy string](#)
 Tree [authentication-server-policy](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [service vprn string](#) [radius proxy string](#) [description string](#)
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [[interface-name](#)] *reference*

Synopsis Add a list entry for **interface**
 Context **configure** [service vprn string](#) [radius proxy string](#) [interface reference](#)
 Tree [interface](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *reference*

Synopsis IP interface name
 Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [interface](#) *reference*
 Tree [interface](#)
 Reference **configure** [service](#) [vprn](#) *string* [interface](#) *string*
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

load-balance-key

Synopsis Enter the **load-balance-key** context
 Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [load-balance-key](#)
 Tree [load-balance-key](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-1

Synopsis Enter the **attribute-1** context
 Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [load-balance-key](#) [attribute-1](#)
 Tree [attribute-1](#)
 Notes The following elements are part of a choice: (**attribute-1**, **attribute-2**, **attribute-3**, **attribute-4**, and **attribute-5**) or **source-ip-udp**.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *number*

Synopsis Attribute type to cache for this RADIUS Proxy server
 Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [load-balance-key](#) [attribute-1](#) [type](#) *number*

| | |
|------------|---|
| Tree | type |

| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-4 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-5

| | |
|------------|---|
| Synopsis | Enter the attribute-5 context |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 |
| Tree | attribute-5 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (number | keyword)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 vendor (number keyword) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-udp

| | |
|----------|---|
| Synopsis | Key to consist of the source IP address and source UDP port of the RADIUS message |
| Context | configure service vprn string radius proxy string load-balance-key source-ip-udp |
| Tree | source-ip-udp |

| | |
|------------|---|
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

purpose *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Purpose of the RADIUS proxy |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> purpose <i>keyword</i> |
| Tree | purpose |
| Options | accounting, authentication, accounting-authentication |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

secret *string*

| | |
|---------------|---|
| Synopsis | Format of the secret key to access the RADIUS proxy server |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> secret <i>string</i> |
| Tree | secret |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

send-accounting-response *boolean*

| | |
|------------|---|
| Synopsis | Allow RADIUS proxy server to respond to Accounting-Response messages |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> send-accounting-response <i>boolean</i> |
| Tree | send-accounting-response |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|---|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|-------------|--|
| Synopsis | IPv4 address of the distributed RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw address <i>string</i> |
| Tree | address |
| Description | This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv6-address *string*

| | |
|-------------|---|
| Synopsis | IPv6 address of the distributed RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw ipv6-address <i>string</i> |
| Tree | ipv6-address |
| Description | This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis ISA WLAN gateway group
 Context **configure** *service vprn string radius proxy string wlan-gw-group reference*
 Tree *wlan-gw-group*
 Reference **configure** *isa wlan-gw-group number*
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [*name*] *string*

Synopsis Enter the **server** list instance
 Context **configure** *service vprn string radius server string*
 Tree *server*
 Max. Instances 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[*name*] *string*

Synopsis External RADIUS server name
 Context **configure** *service vprn string radius server string*
 Tree *server*
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-coa *boolean*

| | |
|------------|--|
| Synopsis | Process Change of Authorization (CoA) messages |
| Context | configure service vprn <i>string</i> radius server <i>string</i> accept-coa <i>boolean</i> |
| Tree | accept-coa |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

acct-port *number*

| | |
|------------|--|
| Synopsis | UDP port number of the RADIUS for accounting events |
| Context | configure service vprn <i>string</i> radius server <i>string</i> acct-port <i>number</i> |
| Tree | acct-port |
| Range | 1 to 65535 |
| Default | 1813 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IP address of the RADIUS server |
| Context | configure service vprn <i>string</i> radius server <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auth-port *number*

| | |
|----------|--|
| Synopsis | UDP port number of the RADIUS to be used as match criteria |
| Context | configure service vprn <i>string</i> radius server <i>string</i> auth-port <i>number</i> |
| Tree | auth-port |
| Range | 1 to 65535 |
| Default | 1812 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [service vprn](#) *string* [radius server](#) *string* [description](#) *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pending-requests-limit *number*

Synopsis Limit of the number for pending RADIUS requests
 Context **configure** [service vprn](#) *string* [radius server](#) *string* [pending-requests-limit](#) *number*
 Tree [pending-requests-limit](#)
 Range 1 to 4096
 Default 4096
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python script policy to modify CoA messages
 Context **configure** [service vprn](#) *string* [radius server](#) *string* [python-policy](#) *reference*
 Tree [python-policy](#)
 Reference **configure** [python](#) [python-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis Secret key associated with this RADIUS server
 Context **configure** [service vprn](#) *string* [radius server](#) *string* [secret](#) *string*

| | |
|---------------|---|
| Tree | secret |
| String Length | 1 to 115 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reassemble

| | |
|------------|---|
| Synopsis | Enable the reassemble context |
| Context | configure service vprn string reassemble |
| Tree | reassemble |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-group *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | NAT group (including WLAN Gateway group) that executes the reassemble |
| Context | configure service vprn string reassemble nat-group number |
| Tree | nat-group |
| Max. Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

to-base-network *boolean*

| | |
|------------|---|
| Synopsis | Allow reassembled traffic sent to network interface |
| Context | configure service vprn string reassemble to-base-network boolean |
| Tree | to-base-network |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

redundant-interface [*interface-name*] *string*

| | |
|------------|--|
| Synopsis | Enter the redundant-interface list instance |
| Context | configure <i>service vprn string</i> redundant-interface <i>string</i> |
| Tree | redundant-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] *string*

| | |
|---------------|--|
| Synopsis | Interface name |
| Context | configure <i>service vprn string</i> redundant-interface <i>string</i> |
| Tree | redundant-interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the interface |
| Context | configure <i>service vprn string</i> redundant-interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure <i>service vprn string</i> redundant-interface <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time

Synopsis Enter the **hold-time** context

Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [hold-time](#)

Tree [hold-time](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis Enter the **ipv4** context

Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [hold-time](#) [ipv4](#)

Tree [ipv4](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down

Synopsis Enter the **down** context

Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [hold-time](#) [ipv4](#) [down](#)

Tree [down](#)

Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [hold-time](#) [ipv4](#) [down](#) [init-only](#) *boolean*

Tree [init-only](#)

| | |
|-------------|---|
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|----------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |

| | |
|------------|---|
| Introduced | 16.0.R1 |

authentication-key *string*

| | |
|-------------|--|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn <i>string</i> rip authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> |

When unconfigured, this command removes the authentication password from the configuration and disables authentication.

String Length 1 to 51

Introduced 16.0.R4

Platforms All

authentication-type *keyword*

Synopsis Authentication type used between RIP neighbors

Context **configure** **service vprn** *string rip authentication-type keyword*

Tree [authentication-type](#)

Description This command sets the type of authentication to be used between RIP neighbors.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

Default none

Options none, password, md5, md20

Introduced 16.0.R4

Platforms All

bfd-liveness *boolean*

Synopsis Enable BFD to control the state of protocol adjacency

Context **configure** **service vprn** *string rip bfd-liveness boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.

When configured to **false**, this command removes BFD from the associated protocol adjacency.

Default false

Introduced 16.0.R4

Platforms All

check-zero *boolean*

Synopsis Enable checking of mandatory zero fields

| | |
|-------------|---|
| Context | configure service vprn string rip check-zero boolean |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.
When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). |

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Description This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range 1 to 1200
Units seconds
Notes This element is mandatory.
Introduced 16.0.R4
Platforms All

timeout *number*

Synopsis RIP timeout timer
Context **configure** [service](#) [vprn](#) *string* [rip](#) [group](#) *string* [neighbor](#) *string* **timers** [timeout](#) *number*
Tree [timeout](#)
Description This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

| | |
|------------|----------------------------|
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|--|
| Synopsis | Timer that controls the frequency of updates |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> timers update <i>number</i> |
| Tree | update |
| Range | 1 to 600 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |

unicast-address [[address](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for unicast-address |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> unicast-address <i>string</i> |
| Tree | unicast-address |
| Introduced | 16.0.R4 |
| Platforms | All |

[address] *string*

| | |
|------------|--|
| Synopsis | Unicast IPv6 address for the neighbor |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> unicast-address <i>string</i> |
| Tree | unicast-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|------------|---|
| Synopsis | Route preference |
| Context | configure service vprn <i>string</i> rip group <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|---|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> rip group <i>string</i> receive <i>keyword</i> |
| Tree | receive |
| Options | version-1, version-2, both, none |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|--|
| Synopsis | RIP version and method used to send RIP updates |
| Context | configure service vprn <i>string</i> rip group <i>string</i> send <i>keyword</i> |
| Tree | send |
| Options | none, version-1, broadcast, multicast |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string</i> rip group <i>string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). |

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Introduced 16.0.R4
Platforms All

timers

Synopsis Enable the **timers** context

receive *keyword*

| | |
|------------|--|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> receive <i>keyword</i> |
| Tree | receive |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|---|
| Synopsis | RIPng version and method used to send RIPng updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> send <i>keyword</i> |
| Tree | send |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|----------|---|
| Synopsis | Enable split horizon and poison reverse |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string ripng group string split-horizon boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p> |
| Introduced | 16.0.R4 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enable the timers context |
| Context | configure service vprn <i>string ripng group string timers</i> |
| Tree | timers |
| Introduced | 16.0.R4 |
| Platforms | All |

flush number

| | |
|-------------|--|
| Synopsis | RIP flush timer |
| Context | configure service vprn <i>string ripng group string timers flush number</i> |
| Tree | flush |
| Description | This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

timeout *number*

| | |
|-------------|--|
| Synopsis | RIP timeout timer |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> timers timeout <i>number</i> |
| Tree | timeout |
| Description | This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|---|
| Synopsis | Timer that controls the frequency of updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> timers update <i>number</i> |
| Tree | update |
| Range | 1 to 600 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policies to decide routes for routing table |
| Context | configure service vprn <i>string</i> ripng import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

message-size *number*

| | |
|------------|---|
| Synopsis | Maximum number of routes in the message |
| Context | configure service vprn <i>string ripng message-size number</i> |
| Tree | message-size |
| Range | 25 to 255 |
| Default | 25 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-in *number*

| | |
|------------|--|
| Synopsis | Metric added to routes received from the neighbor |
| Context | configure service vprn <i>string ripng metric-in number</i> |
| Tree | metric-in |
| Range | 1 to 16 |
| Default | 1 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-out *number*

| | |
|------------|---|
| Synopsis | Metric added to routes exported into RIPng |
| Context | configure service vprn <i>string ripng metric-out number</i> |
| Tree | metric-out |
| Range | 1 to 16 |
| Default | 1 |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|----------|---|
| Synopsis | Route preference |
| Context | configure service vprn <i>string ripng preference number</i> |
| Tree | preference |

| | |
|------------|----------|
| Range | 1 to 255 |
| Default | 100 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|--|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string ripng receive keyword</i> |
| Tree | receive |
| Default | ripng |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|---|
| Synopsis | RIPng version and method used to send RIPng updates |
| Context | configure service vprn <i>string ripng send keyword</i> |
| Tree | send |
| Default | ripng |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string ripng split-horizon boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that</p> |

| | |
|------------|---|
| | learned the route, with the advertised metric equaling an increment of the metric-in value. |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enable the timers context |
| Context | configure service vprn string ripng timers |
| Tree | timers |
| Introduced | 16.0.R4 |
| Platforms | All |

flush *number*

| | |
|-------------|--|
| Synopsis | RIP flush timer |
| Context | configure service vprn string ripng timers flush number |
| Tree | flush |
| Description | This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

timeout *number*

| | |
|-------------|--|
| Synopsis | RIP timeout timer |
| Context | configure service vprn string ripng timers timeout number |
| Tree | timeout |
| Description | This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database. |

| | |
|------------|----------------------------|
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|---|
| Synopsis | Timer that controls the frequency of updates |
| Context | configure service vprn <i>string</i> ripng timers update <i>number</i> |
| Tree | update |
| Range | 1 to 600 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

router-id *string*

| | |
|------------|---|
| Synopsis | Unique router ID for the router in the AS |
| Context | configure service vprn <i>string</i> router-id <i>string</i> |
| Tree | router-id |
| Introduced | 16.0.R1 |
| Platforms | All |

segment-routing-v6 [[instance](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the segment-routing-v6 list instance |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> |
| Tree | segment-routing-v6 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

[instance] *number*

| | |
|------------|---|
| Synopsis | Segment routing IPv6 instance |
| Context | configure service vprn <i>string segment-routing-v6 number</i> |
| Tree | segment-routing-v6 |
| Range | 1 to 2 |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

locator [[locator-name](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the locator list instance |
| Context | configure service vprn <i>string segment-routing-v6 number locator reference</i> |
| Tree | locator |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

[locator-name] *reference*

| | |
|------------|---|
| Synopsis | SRv6 locator name |
| Context | configure service vprn <i>string segment-routing-v6 number locator reference</i> |
| Tree | locator |
| Reference | configure router <i>string segment-routing segment-routing-v6 locator string</i> |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

function

| | |
|-------------|---|
| Synopsis | Enter the function context |
| Context | configure service vprn <i>string segment-routing-v6 number locator reference function</i> |
| Tree | function |
| Description | Commands in this context configure the End SID functions for each SRH mode.
The end-dt4 configuration and the end-dt46 configuration are mutually exclusive. |

The **end-dt6** configuration and the **end-dt46** configuration are mutually exclusive.

| | |
|------------|---|
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

end-dt4

| | |
|------------|--|
| Synopsis | Enable the end-dt4 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator <i>reference</i> function end-dt4 |
| Tree | end-dt4 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator <i>reference</i> function end-dt4 value <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

end-dt46

| | |
|------------|---|
| Synopsis | Enable the end-dt46 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator <i>reference</i> function end-dt46 |
| Tree | end-dt46 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator reference function end-dt46 <i>value number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

end-dt6

| | |
|------------|---|
| Synopsis | Enable the end-dt6 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator reference function end-dt6 |
| Tree | end-dt6 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> locator reference function end-dt6 <i>value number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

micro-segment-locator [*locator-name*] *reference*

| | |
|------------|---|
| Synopsis | Enter the micro-segment-locator list instance |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> |
| Tree | micro-segment-locator |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

[locator-name] *reference*

| | |
|-------------|---|
| Synopsis | Micro-segment SRv6 locator name |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> |
| Tree | micro-segment-locator |
| Description | This command associates a pre-defined micro-segment SRv6 locator (defined in the configure router segment-routing segment-routing-v6 context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN. |
| Reference | configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

function

| | |
|------------|---|
| Synopsis | Enter the function context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function |
| Tree | function |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt4

| | |
|----------|--------------------------------|
| Synopsis | Enable the udt4 context |
|----------|--------------------------------|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt4 |
| Tree | udt4 |
| Description | Commands in this context configure the SRv6 uDT4 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv4 prefixes occur in the VPRN service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt4 value number |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt46

| | |
|-------------|---|
| Synopsis | Enable the udt46 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt46 |
| Tree | udt46 |
| Description | The commands in this context configure the SRv6 uDT46 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv4 and IPv6 prefixes occur in the VPRN service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|----------|---------------------|
| Synopsis | SRv6 function value |
|----------|---------------------|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt46 <i>value</i> <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt6

| | |
|-------------|---|
| Synopsis | Enable the udt6 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt6 |
| Tree | udt6 |
| Description | Commands in this context configure the SRv6 uDT6 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occur in the VPRN service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value *number*

| | |
|-------------|---|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt6 <i>value</i> <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

selective-fib *boolean*

| | |
|------------|---|
| Synopsis | Enable selective FIB |
| Context | configure <i>service vprn string selective-fib boolean</i> |
| Tree | selective-fib |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Service ID |
| Context | configure <i>service vprn string service-id number</i> |
| Tree | service-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |

| Introduced | 16.0.R5 |
| Platforms | All |

community [**community-string**] *string*

| | |
|-------------|--|
| Synopsis | Enter the community list instance |
| Context | configure service vprn string snmp community string |
| Tree | community |
| Description | <p>Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.</p> <p>VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).</p> <p>The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).</p> |

backup-tag *number*

Synopsis Static route backup tag

Context **configure** **service** **vprn** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** **keyword** **backup-tag** *number*

Tree **backup-tag**

Description This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.

The tag specified at this level of the static route causes the tag values that are configured under the **next-hop**, **black-hole**, and **indirect** contexts of the static route to be ignored.

Range 1 to 4294967295

Introduced 21.2.R1

cpe-check [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|----------------|--|
| Synopsis | Enter the cpe-check list instance |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | cpe-check |
| Description | <p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p> |

cpe-check [**address**] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|----------------|--|
| Synopsis | Enter the cpe-check list instance |
| Context | configure service vprn string static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword interface string cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | cpe-check |
| Description | <p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p> |

| Tree | address |
| Description | This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.

The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the |

Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.

One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.

The configured IP address can be either on the network or the access side.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[sampling-type](#)] *keyword*

Synopsis Traffic sampling type

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Description | This command configures the type of traffic to be sampled on the associated IP interface. |
| Options | unicast, multicast, both |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

direction *keyword*

| | |
|-------------|---|
| Synopsis | Direction of traffic for cflowd sampling |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i> |
| Tree | direction |
| Description | This command configures the direction in which sampling occurs on the associated IP interfaces. |
| Default | ingress-only |
| Options | ingress-only, egress-only, both |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sample-profile (*keyword* | *number*)

| | |
|-------------|--|
| Synopsis | Sample profile ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> sample-profile (<i>keyword</i> <i>number</i>) |
| Tree | sample-profile |
| Description | This command defines the sampling rate profile associated with this interface. |
| Max. Range | 0 to 4294967295 |
| Options | 1 |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Type of cflowd analysis |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> type <i>keyword</i> |
| Tree | type |
| Description | This command configures the cflowd sampling type on the associated IP interface. |
| Options | acl, interface |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-trigger

| | |
|------------|--|
| Synopsis | Enter the data-trigger context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger |
| Tree | data-trigger |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of data-triggered host creation |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|----------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> description <i>string</i> |

| | |
|---------------|---|
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dynamic-routes-track-srrp

| | |
|------------|--|
| Synopsis | Enable the dynamic-routes-track-srrp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp |
| Tree | dynamic-routes-track-srrp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|--|
| Synopsis | Delay before updating the route state after the last SRRP transition |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp hold-time <i>number</i> |
| Tree | hold-time |
| Range | 1 to 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gtp-parameters

| | |
|------------|---|
| Synopsis | Enter the gtp-parameters context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters |
| Tree | gtp-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of GTP access |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fpe *reference***WARNING:**

| Reference | configure subscriber-mgmt diameter-gx-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress |
| Tree | ingress |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-accounting *reference*

| | |
|------------|---|
| Synopsis | Ingress policy accounting template name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress policy-accounting <i>reference</i> |
| Tree | policy-accounting |
| Reference | configure routing-options policy-accounting policy-acct-template <i>string</i> |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s |

ingress-stats *boolean*

| | |
|------------|---|
| Synopsis | Collect ingress interface statistics |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress-stats <i>boolean</i> |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|------------|---|
| Synopsis | Interface IP MTU |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-linking

Synopsis Enter the **ipoe-linking** context

Context **configure service vprn string subscriber-interface string group-interface string ipoe-linking**

Tree **ipoe-linking**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of IPoE host linking

Context **configure service vprn string subscriber-interface string group-interface string ipoe-linking admin-state keyword**

Tree **admin-state**

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-router-advertisement *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send unsolicited router advertisement after DHCP setup

Context **configure service vprn string subscriber-interface string group-interface string ipoe-linking gratuitous-router-advertisement boolean**

Tree **gratuitous-router-advertisement**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shared-circuit-id *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enable circuit ID in DHCPv4 Option82 to validate DHCPv6 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking shared-circuit-id <i>boolean</i> |
| Tree | shared-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|---|
| Synopsis | Enter the ipoe-session context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of IPoE session management |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|----------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session description <i>string</i> |

| | |
|---------------|---|
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-auth

| | |
|------------|--|
| Synopsis | Enter the force-auth context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth |
| Tree | force-auth |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when circuit ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth cid-change <i>boolean</i> |
| Tree | cid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when remote ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth rid-change <i>boolean</i> |
| Tree | rid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | IPoE Session policy to be used for new sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session ipoe-session-policy <i>reference</i> |
| Tree | ipoe-session-policy |
| Reference | configure subscriber-mgmt ipoe-session-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval (*keyword* | *number*)

| | |
|------------|--|
| Synopsis | Minimum time between two authentication attempts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session min-auth-interval (<i>keyword</i> <i>number</i>) |
| Tree | min-auth-interval |
| Range | 1 to 32000000 |
| Default | infinite |
| Units | seconds |
| Options | infinite, always-reauthenticate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-session-timeout *keyword*

| | |
|------------|---|
| Synopsis | Session timeout attribute to be interpreted |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session radius-session-timeout <i>keyword</i> |
| Tree | radius-session-timeout |
| Options | absolute, ignore, backwards-compatible |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of sessions per SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stateless-redundancy *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session stateless-redundancy <i>boolean</i> |
| Tree | stateless-redundancy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Local user database that is used to (pre-)authenticate new sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

arp-host

| | |
|------------|--|
| Synopsis | Enter the arp-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host |
| Tree | arp-host |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |

Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit *number*

Synopsis Maximum number of ARP hosts
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 arp-host](#) **host-limit** *number*
 Tree [host-limit](#)
 Range 1 to 524287
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis Minimum authentication interval
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 arp-host](#) **min-auth-interval** *number*
 Tree [min-auth-interval](#)
 Range 1 to 6000
 Default 15
 Units minutes
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-host-limit *number*

Synopsis Maximum number of ARP hosts per SAP
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 arp-host](#) **sap-host-limit** *number*
 Tree [sap-host-limit](#)
 Range 1 to 131071
 Default 1
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd
admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd
echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|----------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive number

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval number

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type keyword

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp

| | |
|------------|--|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp |
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|----------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications |

| | |
|------------|---|
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|---|
| Synopsis | Enable PPPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter reference

| | |
|------------|--|
| Synopsis | DHCP filter ID for the group interface |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp filter reference |
| Tree | filter |
| Reference | configure filter dhcp-filter number |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address string

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp gi-address string |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-populate

| | |
|------------|--|
| Synopsis | Enter the lease-populate context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2-header

| | |
|----------|-------------------------------------|
| Synopsis | Enable the I2-header context |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate l2-header |
| Tree | l2-header |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|--|
| Synopsis | IEEE address used in anti-spoofing entries for the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate l2-header mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-leases *number*

| | |
|------------|---|
| Synopsis | Maximum number of DHCPv4 leases |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 1 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

match-circuit-id *boolean*

| | |
|------------|---|
| Synopsis | Enable Option 82 circuit ID on relayed DHCP packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp match-circuit-id <i>boolean</i> |
| Tree | match-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-selection

| | |
|------------|---|
| Synopsis | Enter the offer-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection |
| Tree | offer-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|--|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|----------|---|
| Synopsis | Designated client MAC addresses for Offer selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac mac-address <i>keyword</i> |

| | |
|-------------|---|
| Tree | mac-address |
| Description | This command specifies the client MAC addresses for which the Discover delay applies. |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server [[ipv4-address](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv4-address] *string*

| | |
|----------|---|
| Synopsis | IP address of the DHCP server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |

| | |
|------------|---|
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay DHCP Discover messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|--|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

action *keyword*

| | |
|----------|---|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Default | keep |

| | |
|------------|---|
| Options | replace, drop, keep |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use the SAP ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.

When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id

| | |
|-------------|---|
| Synopsis | Enter the remote-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac

| | |
|------------|---|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|----------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id none |

| | |
|------------|--|
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|---|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|------------|---|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pool-name *boolean*

| | |
|------------|--|
| Synopsis | Send the pool name in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id *boolean*

| | |
|------------|---|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

system-id *boolean*

| | |
|----------|--|
| Synopsis | Send the system ID in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

emulated-server *string*

| | |
|------------|---|
| Synopsis | IP address used as DHCP server address in SAP context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|----------|-------------------------------------|
| Synopsis | Enter the lease-time context |
|----------|-------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time</i> |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-override *boolean*

| | |
|------------|--|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service vprn <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time radius-override</i> <i>boolean</i> |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | DHCP lease time |
| Context | configure service vprn <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time value</i> <i>number</i> |
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-------------|--|
| Synopsis | Python policy name |
| Context | configure service vprn <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp python-policy</i> <i>reference</i> |
| Tree | python-policy |
| Description | This command associates a Python policy name with the interface. |
| Reference | configure python <i>python-policy string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay-proxy

Synopsis Enable the **relay-proxy** context

Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp relay-proxy**

Tree [relay-proxy](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-update-src-ip *boolean*

Synopsis Update the source IP address of a DHCP RELEASE message

Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp relay-proxy release-update-src-ip boolean**

Tree [release-update-src-ip](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

siaddr-override *string*

Synopsis DHCP server IP address for address hiding function

Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp relay-proxy siaddr-override string**

Tree [siaddr-override](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-include-gi-address *boolean*

Synopsis Include gateway IP address in DHCP Release messages

Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp release-include-gi-address boolean**

Tree [release-include-gi-address](#)

Default false

| | |
|------------|---|
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

src-ip-addr *keyword*

| | |
|------------|--|
| Synopsis | Type of source address to use for DHCP relay |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i> |
| Tree | src-ip-addr |
| Default | auto |
| Options | auto, gi-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

trusted *boolean*

| | |
|----------|--|
| Synopsis | Relay untrusted packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp trusted <i>boolean</i> |
| Tree | trusted |

| | |
|-------------|---|
| Description | <p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Local user database for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

icmp

| | |
|------------|--|
| Synopsis | Enter the icmp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp |
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mask-reply *boolean*

| | |
|----------|--|
| Synopsis | Allow responses to ICMP mask requests on the interface |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp mask-reply <i>boolean</i> |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

param-problem

| | |
|-------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of sent Parameter Problem messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|----------|--|
| Synopsis | Maximum number of Parameter Problem messages to send |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |

| | |
|------------|---|
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit number of Parameter Problem messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

redirects

| | |
|-------------|--|
| Synopsis | Enter the redirects context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects |
| Tree | redirects |
| Description | Commands in this context configure the settings for ICMP redirect messages generated by the interface.

The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |

| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of ICMP redirect messages to send |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit the number of ICMP redirect messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ttl-expired

| | |
|-------------|--|
| Synopsis | Enter the ttl-expired context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired |
| Tree | ttl-expired |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of sending TTL expired messages |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|------------|---|
| Synopsis | Maximum number of TTL expired messages to send |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-matching-address *boolean*

| | |
|-------------|---|
| Synopsis | Use the subscriber interface address as source address |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired use-matching-address <i>boolean</i> |
| Tree | use-matching-address |
| Description | When configured to true , the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.

For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.

When configured to false , the system uses the first configured address. |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

unreachables

| | |
|-------------|--|
| Synopsis | Enter the unreachables context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of sending unreachable messages |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of unreachable messages to send |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachable number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Time to limit the number of ICMP unreachable messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachable seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-df-bit *boolean*

| | |
|-------------|--|
| Synopsis | Ignore DF bit in the IPv4 header when fragmenting |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 ignore-df-bit <i>boolean</i> |
| Tree | ignore-df-bit |
| Description | <p>When configured to true, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.</p> <p>When configured to false, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.</p> |
| Default | false |
| Introduced | 20.5.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-proxy-arp *boolean*

| | |
|-------------|---|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i> |
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.
When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate *boolean*

| | |
|------------|--|
| Synopsis | Allow static and dynamic hosts to be populated in system ARP cache |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i> |
| Tree | populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-arp-policy *reference*

| | |
|----------|--|
| Synopsis | Proxy ARP policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i> |
| Tree | proxy-arp-policy |

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-proxy-arp *boolean*

| | |
|------------|---|
| Synopsis | Enable remote proxy ARP on the interface |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i> |
| Tree | remote-proxy-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|------------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |
| Tree | timeout |
| Range | 0 to 65535 |
| Default | 14400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|----------|--|
| Synopsis | QoS route lookup |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|---|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Default | strict |
| Options | strict, loose, strict-no-ecmp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-multiple-wan-addresses *boolean*

| | |
|----------|--|
| Synopsis | Allow multiple WAN addresses |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i> |

| | |
|------------|---|
| Tree | allow-multiple-wan-addresses |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-reply

| | |
|------------|---|
| Synopsis | Enter the auto-reply context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply |
| Tree | auto-reply |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-solicitation *boolean*

| | |
|------------|---|
| Synopsis | Enable auto-reply for NS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply neighbor-solicitation <i>boolean</i> |
| Tree | neighbor-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicitation *boolean*

| | |
|------------|---|
| Synopsis | Enable auto-reply for RS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply router-solicitation <i>boolean</i> |
| Tree | router-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 bfd</i> |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 bfd admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 bfd echo-receive number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|----------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 bfd multiplier number</i> |

| | |
|-------------|---|
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive number

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd receive number |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval number

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type keyword

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 bfd type keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp6

| | |
|------------|---|
| Synopsis | Enter the dhcp6 context |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 dhcp6</i> |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter reference

| | |
|------------|--|
| Synopsis | DHCPv6 filter |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 dhcp6 filter reference</i> |
| Tree | filter |
| Reference | configure filter dhcp6-filter <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option

| | |
|----------|--|
| Synopsis | Enter the option context |
| Context | configure service vprn <i>string subscriber-interface string group-interface string ipv6 dhcp6 option</i> |

| | |
|------------|---|
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id

| | |
|------------|--|
| Synopsis | Enter the interface-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id |
| Tree | interface-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use ASCII-encoded concatenated tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

if-index

| | |
|------------|---|
| Synopsis | Use interface index in interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id if-index |
| Tree | if-index |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|----------|--|
| Synopsis | Use SAP ID in interface ID option in DHCPv6 relay packet |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | String for interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id string string |
| Tree | string |
| String Length | 1 to 80 |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id *boolean*

| | |
|------------|---|
| Synopsis | Allow remote ID option to be sent in the DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option remote-id boolean |
| Tree | remote-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

override-slaac *boolean*

| | |
|----------|---|
| Synopsis | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 override-slaac boolean |
| Tree | override-slaac |
| Default | false |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis Enable the **pd-managed-route** context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6](#) [pd-managed-route](#)
 Tree [pd-managed-route](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis Next hop type
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6](#) [pd-managed-route](#) [next-hop](#) *keyword*
 Tree [next-hop](#)
 Default ipv6
 Options ipv4, ipv6
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis Enter the **proxy-server** context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6](#) [proxy-server](#)
 Tree [proxy-server](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the DHCPv6 proxy server
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6](#) [proxy-server](#) [admin-state](#) *keyword*

| | |
|------------|---|
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use the DHCP proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|---|
| Synopsis | Allow the PPP application to use DHCP relay functionality |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time for prefix to remain preferred on this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 300 to 4294967294 |
| Default | 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-timer *number*

| | |
|------------|---|
| Synopsis | Rebind timer (T2) for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i> |
| Tree | rebind-timer |
| Range | 0 to 1209600 |
| Default | 2880 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-timer *number*

| | |
|------------|--|
| Synopsis | Renew timer (T1) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i> |
| Tree | renew-timer |
| Range | 0 to 604800 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server-id

| | |
|------------|--|
| Synopsis | Enter the server-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id |
| Tree | server-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-ascii *string*

| | |
|---------------|--|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i> |
| Tree | duid-en-ascii |
| String Length | 1 to 58 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-hex *string*

| | |
|---------------|--|
| Synopsis | DUID system ID in hexadecimal format |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i> |
| Tree | duid-en-hex |
| String Length | 1 to 118 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-ll

| | |
|----------|--|
| Synopsis | Use link-layer address (DUID-LL) as DUID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-ll |

| | |
|------------|--|
| Tree | duid-ll |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for prefix to remain valid on this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 300 to 4294967294 |
| Default | 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay

| | |
|------------|---|
| Synopsis | Enter the relay context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay |
| Tree | relay |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCPv6 Relay |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

advertise-selection

| | |
|------------|---|
| Synopsis | Enter the advertise-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection |
| Tree | advertise-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|--|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|----------|---|
| Synopsis | Designated client MAC addresses for Advertise selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |

| | |
|------------|---|
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value number

| | |
|------------|--|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis Enter the **preference-option** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection preference-option**

Tree [preference-option](#)

Description Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis Preference option value for DHCPv6 Advertise messages

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection preference-option value** *number*

Tree [value](#)

Range 0 to 255

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [*ipv6-address*] *string*

Synopsis Enter the **server** list instance

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string*

Tree [server](#)

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] string

| | |
|------------|--|
| Synopsis | IP address of the DHCPv6 server |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string |
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value number

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string preference-option value number |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|----------|---|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string solicit-delay number |
| Tree | solicit-delay |

| | |
|-------------|---|
| Description | This command configures the time to delay DHCPv6 Solicit messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the server instance or the client-mac context. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|----------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|------------|---|
| Synopsis | Allow the PPP application to use DHCP relay functionality |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-split

| | |
|-------------|---|
| Synopsis | Enter the lease-split context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split |
| Tree | lease-split |
| Description | <p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero |
| Introduced | 21.2.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of DHCPv6 lease split

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 relay lease-split admin-state](#) *keyword*

Tree [admin-state](#)

Default disable

Options enable, disable

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 relay lease-split valid-lifetime](#) *number*

Tree [valid-lifetime](#)

Range 300 to 315446399

Default 3600

Units seconds

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis Link address for the DHCPv6 relay messages

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 relay link-address](#) *string*

Tree [link-address](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server string

| | |
|----------------|--|
| Synopsis | DHCP6 server(s) to which the DHCP6 requests are forwarded |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay server string |
| Tree | server |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-address string

| | |
|------------|--|
| Synopsis | Source IPv6 address for the DHCPv6 relay messages |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay source-address string |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

snooping

| | |
|------------|---|
| Synopsis | Enter the snooping context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 snooping |
| Tree | snooping |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

admin-state keyword

| | |
|----------|---|
| Synopsis | Administrative state of DHCPv6 snooping |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 snooping admin-state keyword |
| Tree | admin-state |
| Default | disable |

| | |
|------------|--|
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user database used for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-ident *keyword*

| | |
|------------|---|
| Synopsis | DHCP6 user identification for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-ident <i>keyword</i> |
| Tree | user-ident |
| Default | mac |
| Options | mac, mac-interface-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-bridged-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv6 IPoE bridged mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 ipoe-bridged-mode <i>boolean</i> |
| Tree | ipoe-bridged-mode |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dad-snooping *boolean*

| | |
|------------|--|
| Synopsis | Populate table via duplicate address detection packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery dad-snooping <i>boolean</i> |
| Tree | dad-snooping |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of neighbor entries learned per SLAAC host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery neighbor-limit <i>number</i> |
| Tree | neighbor-limit |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|----------|---|
| Synopsis | QoS route lookup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

router-advertisements

Synopsis Enter the **router-advertisements** context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#)
[router-advertisements](#)
 Tree [router-advertisements](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of router advertisements
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#)
[router-advertisements](#) **admin-state** *keyword*
 Tree [admin-state](#)
 Default disable
 Options enable, disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis Protocol with forced multicast
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#)
[router-advertisements](#) **force-mcast** *keyword*
 Tree [force-mcast](#)
 Options ip, ip-mac
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis Maximum advertisement interval

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i> |
| Tree | max-advertisement-interval |
| Range | 900 to 1800 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-advertisement-interval *number*

| | |
|------------|---|
| Synopsis | Minimum advertisement interval |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 900 to 1350 |
| Default | 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|--|
| Synopsis | Enter the options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

current-hop-limit *number*

| | |
|----------|--|
| Synopsis | Hop limit to be advertised |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i> |
| Tree | current-hop-limit |

| | |
|------------|---|
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dns

| | |
|------------|---|
| Synopsis | Enter the dns context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns |
| Tree | dns |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

include-rdnss *boolean*

| | |
|------------|--|
| Synopsis | Include the RDNSS server option 25 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns include-rdnss <i>boolean</i> |
| Tree | include-rdnss |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rdnss-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time for the RDNSS address to remain valid |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns rdnss-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | rdnss-lifetime |
| Range | 900 to 3600 |
| Default | 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-configuration *boolean*

| | |
|------------|---|
| Synopsis | Managed address configuration flag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements options managed-configuration <i>boolean</i> |
| Tree | managed-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mtu (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Advertised MTU value |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements options mtu (<i>number</i> <i>keyword</i>) |
| Tree | mtu |
| Range | 1280 to 9212 |
| Default | not-included |
| Units | bytes |
| Options | not-included |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

other-stateful-configuration *boolean*

| | |
|------------|--|
| Synopsis | Other stateful configuration flag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements options other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reachable-time *number*

| | |
|----------|---|
| Synopsis | Neighbor discovery reachable time that is advertised for this group interface |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retransmit-timer *number*

| | |
|------------|---|
| Synopsis | Neighbor discovery retransmit timer that is advertised for this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options retransmit-timer <i>number</i> |
| Tree | retransmit-timer |
| Range | 0 to 1800000 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Router lifetime |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | router-lifetime |
| Range | 2700 to 9000 |
| Default | 4500 |
| Units | seconds |
| Options | no-default-router |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-options

| | |
|------------|--|
| Synopsis | Enter the prefix-options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options |
| Tree | prefix-options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

autonomous *boolean*

| | |
|------------|--|
| Synopsis | Value of the autonomous flag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

on-link *boolean*

| | |
|------------|---|
| Synopsis | Assign the prefix to an interface on the specified link |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | Time for a prefix to remain preferred |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Default | 3600 |

| | |
|------------|---|
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for a prefix to remain valid |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Default | 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicit

| | |
|------------|--|
| Synopsis | Enter the router-solicit context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit |
| Tree | router-solicit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of router-solicit based authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer (*number* | *keyword*)

Synopsis Time before an inactive host is removed

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 router-solicit inactivity-timer (number | keyword)*

Tree [inactivity-timer](#)

Range 1 to 31536000

Default 300

Units seconds

Options infinite

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis Minimum interval between two consecutive authentication attempts for the same host

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 router-solicit min-auth-interval number*

Tree [min-auth-interval](#)

Range 1 to 360000

Default 300

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis Local user-database that is used for router solicit based authentication

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 router-solicit user-db reference*

Tree [user-db](#)

Reference **configure** *subscriber-mgmt local-user-db string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|---|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Default | strict |
| Options | strict, loose, strict-no-ecmp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address-assignment

| | |
|------------|--|
| Synopsis | Enter the local-address-assignment context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment |
| Tree | local-address-assignment |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of Local Address Assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |

| | |
|------------|---|
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|---|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for non-DHCP/managed IPoE hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications ipoe <i>boolean</i> |
| Tree | ipoe |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|----------|---|
| Synopsis | Request local addresses for PPP IPCP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications ppp <i>boolean</i> |

| | |
|------------|---|
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

default-pool *string*

| | |
|----------------|--|
| Synopsis | Default pools |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 default-pool <i>string</i> |
| Tree | default-pool |
| String Length | 1 to 32 |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *reference*

| | |
|------------|---|
| Synopsis | Local DHCP server that contains pools for local address assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 server <i>reference</i> |
| Tree | server |
| Reference | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|---|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-slaac *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for IPoE SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-slaac <i>boolean</i> |
| Tree | ipoe-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-wan *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for IPoE IA NA hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i> |
| Tree | ipoe-wan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp-slaac *boolean*

| | |
|----------|--|
| Synopsis | Request local addresses for PPP SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i> |
| Tree | ppp-slaac |
| Default | false |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server reference

Synopsis Local DHCPv6 server that contains pools for local address assignment
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment ipv6](#) [server](#) *reference*
 Tree [server](#)
 Reference **configure** [service vprn](#) *string* [dhcp-server dhcpv6](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac string

Synopsis MAC address for the interface
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [mac](#) *string*
 Tree [mac](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq-auth-policy reference

Synopsis Diameter NASREQ application policy to use for authentication
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [nasreq-auth-policy](#) *reference*
 Tree [nasreq-auth-policy](#)
 Reference **configure** [subscriber-mgmt](#) [diameter-nasreq-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-up-while-empty boolean

Synopsis Enable this group interface without any active SAPs

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> oper-up-while-empty <i>boolean</i> |
| Tree | oper-up-while-empty |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pppoe

| | |
|------------|---|
| Synopsis | Enter the pppoe context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe |
| Tree | pppoe |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of PPPoE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | PPPoE anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Default | mac-sid |
| Options | mac-sid, mac-sid-ip |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp-client

| | |
|------------|--|
| Synopsis | Enter the dhcp-client context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client |
| Tree | dhcp-client |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-id *keyword*

| | |
|------------|---|
| Synopsis | Type of information that DHCP option 61 contains |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client client-id <i>keyword</i> |
| Tree | client-id |
| Options | mac-pppoe-session-id |
| Introduced | 16.0.R7 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|-----------|--|
| Synopsis | PPPoE policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe policy <i>reference</i> |
| Tree | policy |
| Reference | configure subscriber-mgmt ppp-policy <i>string</i> |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python policy used to modify PPPoE packets
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe python-policy](#) *reference*
 Tree [python-policy](#)
 Reference **configure** [python](#) [python-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-limit *number*

Synopsis Maximum PPPoE sessions per SAP
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe sap-session-limit](#) *number*
 Tree [sap-session-limit](#)
 Range 1 to 131071
 Default 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis Maximum PPPoE sessions
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe session-limit](#) *number*
 Tree [session-limit](#)
 Range 1 to 333823
 Default 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Local user database for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-auth-policy *reference*

| | |
|------------|--|
| Synopsis | RADIUS authentication policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> radius-auth-policy <i>reference</i> |
| Tree | radius-auth-policy |
| Reference | configure subscriber-mgmt radius-authentication-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

redundant-interface *reference*

| | |
|------------|---|
| Synopsis | Redundant interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> redundant-interface <i>reference</i> |
| Tree | redundant-interface |
| Reference | configure service vprn <i>string</i> redundant-interface <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap [[sap-id](#)] *string*

| | |
|----------|------------------------------------|
| Synopsis | Enter the sap list instance |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string</i> |
| Tree | sap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[sap-id] *string*

| | |
|---------------|---|
| Synopsis | SAP ID |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string</i> |
| Tree | sap |
| String Length | 1 to 45 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-policy *reference*

| | |
|------------|---|
| Synopsis | Accounting policy |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string accounting-policy reference</i> |
| Tree | accounting-policy |
| Reference | configure log accounting-policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the SAP |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string admin-state keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | Type of anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Options | source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Application profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

calling-station-id *string*

| | |
|---------------|---|
| Synopsis | Calling station ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> calling-station-id <i>string</i> |
| Tree | calling-station-id |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

collect-stats *boolean*

| | |
|----------|---|
| Synopsis | Collect accounting statistics |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> collect-stats <i>boolean</i> |
| Tree | collect-stats |

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpu-protection

| | |
|------------|---|
| Synopsis | Enter the cpu-protection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection |
| Tree | cpu-protection |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

eth-cfm-monitoring

| | |
|------------|--|
| Synopsis | Enable the eth-cfm-monitoring context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring |
| Tree | eth-cfm-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

aggregate

| | |
|------------|--|
| Synopsis | Apply rate limit to the sum of the per peer packet rates |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring aggregate |
| Tree | aggregate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

car

| | |
|----------|---|
| Synopsis | Ignore Ethernet CFM packets when enforcing overall rate |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring car |
| Tree | car |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

ip-src-monitoring

| | |
|------------|---|
| Synopsis | Enable IP source monitoring for CPU protection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection ip-src-monitoring |
| Tree | ip-src-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

mac-monitoring

| | |
|------------|--|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

policy-id *reference*

| | |
|------------|--|
| Synopsis | CPM protection policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i> |
| Tree | policy-id |
| Reference | configure system security cpu-protection <i>policy number</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

default-host

Synopsis Enter the **default-host** context

| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. |

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

| | |

squelch-ingress-levels *number*

| | |
|----------------|---|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped. |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

|------------|---|
| Synopsis | Maximum number of multicast groups to be tracked per group |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> igmp-host-tracking maximum-number-group-sources number |
| Tree | maximum-number-group-sources |
| Range | 1 to 32000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-groups *number*

| | |
|------------|--|
| Synopsis | Maximum number of multicast groups to be tracked |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> igmp-host-tracking maximum-number-groups number |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-number-sources *number*

| | |
|------------|--|
| Synopsis | Maximum number of multicast sources to be tracked |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> igmp-host-tracking maximum-number-sources <i>number</i> |
| Tree | maximum-number-sources |
| Range | 1 to 1000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-alert-check *boolean*

| | |
|------------|---|
| Synopsis | Enable IGMP router alert check option |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> igmp-host-tracking router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6 reference

| | |
|------------|--|
| Synopsis | IPv6 filter policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress filter ipv6 reference |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

match-qinq-dot1p keyword

| | |
|----------|---|
| Synopsis | Ingress match QinQ Dot1p |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos match-qinq-dot1p keyword |
| Tree | match-qinq-dot1p |
| Options | top, bottom |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer-control-policy

Synopsis Enter the **policer-control-policy** context
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) **policer-control-policy**
 Tree [policer-control-policy](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis Policer control policy name
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) **policer-control-policy** *policy-name* *reference*
 Tree [policy-name](#)
 Reference **configure** [qos](#) **policer-control-policy** *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-ingress

Synopsis Enter the **sap-ingress** context
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) **sap-ingress**
 Tree [sap-ingress](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis Policy ID
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) **sap-ingress** *policy-name* *reference*

| | |
|------------|--|
| Tree | policy-name |
| Reference | configure qos sap-ingress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

queuing-type *keyword*

| | |
|------------|--|
| Synopsis | Queuing type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress queuing-type <i>keyword</i> |
| Tree | queuing-type |
| Options | shared, multipoint-shared |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR |

scheduler-policy

| | |
|------------|---|
| Synopsis | Enter the scheduler-policy context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy |
| Tree | scheduler-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|------------|--|
| Synopsis | Scheduler policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos scheduler-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lag

| | |
|------------|--|
| Synopsis | Enter the lag context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag |
| Tree | lag |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-map-profile *number*

| | |
|-------------|---|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | <p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p> |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

per-link-hash

| | |
|------------|--|
| Synopsis | Enter the per-link-hash context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

class *number*

| | |
|----------|---|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash class <i>number</i> |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

weight *number*

| | |
|------------|---|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash weight <i>number</i> |
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

monitor-oper-group *reference*

| | |
|------------|--|
| Synopsis | Monitor operational group |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multi-service-site *reference*

| | |
|----------|--|
| Synopsis | Multi service site name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> multi-service-site <i>reference</i> |
| Tree | multi-service-site |

| | |
|------------|---|
| Reference | configure service customer <i>string</i> multi-service-site <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

oper-group *reference*

| | |
|------------|--|
| Synopsis | Operational group |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

static-host

| | |
|------------|--|
| Synopsis | Enter the static-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host |
| Tree | static-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4 [**ip**] *string* **mac** *string*

| | |
|------------|--|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ip] *string*

| | |
|----------|--------------------------------------|
| Synopsis | IPv4 address used by the static host |
|----------|--------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|--|
| Synopsis | MAC address used by the static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ancp-string *string*

| | |
|---------------|---|
| Synopsis | ANCP string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> ancp-string <i>string</i> |
| Tree | ancp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile

Synopsis Enter the **app-profile** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **app-profile**

Tree **app-profile**

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile reference

Synopsis Application profile used by the static host

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **app-profile profile** *reference*

Tree **profile**

Reference **configure application-assurance group** *number* **partition** *number* **policy app-profile** *string*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scope keyword

Synopsis Scope of the static host application profile

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **app-profile scope** *keyword*

Tree **scope**

Default subscriber

Options subscriber, mac

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id string

Synopsis Intermediate destination ID

| | |
|---------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> int-dest-id <i>string</i> |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [**prefix**] *string*

| | |
|-------------|---|
| Synopsis | Enter the managed-route list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] *string*

| | |
|------------|---|
| Synopsis | Managed route prefix associated with IPv4 static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpe-check

| | |
|------------|--|
| Synopsis | Enable the cpe-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check |
| Tree | cpe-check |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destination-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | IP address of the target CPE device |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check destination-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | destination-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

drop-count *number*

| | |
|------------|---|
| Synopsis | Consecutive ping replies missed before CPE deemed down |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check drop-count <i>number</i> |
| Tree | drop-count |
| Range | 1 to 255 |
| Default | 3 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failed-action

| | |
|------------|--|
| Synopsis | Enter the failed-action context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action |
| Tree | failed-action |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric *number*

| | |
|----------|--|
| Synopsis | Metric associated with the provisioned managed route |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action metric <i>number</i> |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference *number*

| | |
|------------|--|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action preference <i>number</i> |
| Tree | preference |
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag *number*

| | |
|------------|---|
| Synopsis | Route tag used if CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

withdraw *boolean*

| | |
|------------|--|
| Synopsis | Withdraw the route when the CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw <i>boolean</i> |
| Tree | withdraw |
| Default | false |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|--|
| Synopsis | Interval between ICMP pings to the target CPE IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i> |
| Tree | interval |
| Range | 1 to 255 |
| Default | 1 |
| Units | seconds |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log *boolean*

| | |
|------------|--|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size *number*

| | |
|----------|--|
| Synopsis | Padding size for CPE connectivity checks |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Default | 56 |
| Units | bytes |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Source IP address used in the ICMP messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|------------|--|
| Synopsis | Time interval determining that a ping is missed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i> |
| Tree | timeout |
| Range | 1 to 10 |
| Default | 1 |
| Units | seconds |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric *number*

| | |
|----------|---|
| Synopsis | Metric associated with the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> metric <i>number</i> |
| Tree | metric |

| | |
|-------------|---|
| Description | This command configures a metric to associate with the provisioned managed route. |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference *number*

| | |
|-------------|---|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> preference <i>number</i> |
| Tree | preference |
| Description | This command configures the preference associated with the provisioned managed route. |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag *number*

| | |
|------------|--|
| Synopsis | Route tag used if CPE check fails |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rip-policy *reference*

| | |
|----------|--|
| Synopsis | RIP policy name |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> rip-policy <i>reference</i> |
| Tree | rip-policy |

| | |
|------------|---|
| Reference | configure subscriber-mgmt rip-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|------------|---|
| Synopsis | Enter the shcv context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> shcv |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | SLA profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Sub-profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|----------|--|
| Synopsis | Enter the subscriber-id context |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Subscriber identification |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id <i>string</i> string |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|------------|---|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id use-sap-id |
| Tree | use-sap-id |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6 [*prefix*] *string* **mac** *string*

| | |
|------------|--|
| Synopsis | Enter the ipv6 list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] string

| | |
|------------|---|
| Synopsis | IPv6 prefix |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|---|
| Synopsis | MAC address |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the static host |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anccp-string string

| | |
|----------|---|
| Synopsis | ANCP string |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string anccp-string string |

| | |
|---------------|---|
| Tree | ancp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile

| | |
|------------|--|
| Synopsis | Enter the app-profile context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile |
| Tree | app-profile |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

profile *reference*

| | |
|------------|---|
| Synopsis | Application profile used by the static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile profile <i>reference</i> |
| Tree | profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scope *keyword*

| | |
|------------|---|
| Synopsis | Scope of the static host application profile |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile scope <i>keyword</i> |
| Tree | scope |
| Default | subscriber |
| Options | subscriber, mac |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id *string*

| | |
|---------------|---|
| Synopsis | Intermediate destination ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> int-dest-id <i>string</i> |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-linking *string*

| | |
|------------|---|
| Synopsis | IPv6 host associated with the IPv4 host through the learned MAC address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> mac-linking <i>string</i> |
| Tree | mac-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [[ipv6-prefix](#)] *string*

| | |
|-------------|---|
| Synopsis | Enter the managed-route list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[[ipv6-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | Managed route prefix associated with IPv6 static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpe-check

Synopsis Enable the **cpe-check** context

Context **configure** **service** **vpn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv6** *string* **mac** *string* **managed-route** *string* **cpe-check**

Tree **cpe-check**

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis IP address of the target CPE device

Context **configure** **service** **vpn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv6** *string* **mac** *string* **managed-route** *string* **cpe-check** **destination-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **destination-ip-address**

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop-count *number*

Synopsis Consecutive ping replies missed before CPE deemed down

Context **configure** **service** **vpn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv6** *string* **mac** *string* **managed-route** *string* **cpe-check** **drop-count** *number*

Tree **drop-count**

Range 1 to 255

Default 3

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failed-action

| | |
|------------|---|
| Synopsis | Enter the failed-action context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action |
| Tree | failed-action |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric number

| | |
|------------|--|
| Synopsis | Metric associated with the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action metric <i>number</i> |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|------------|--|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action preference <i>number</i> |
| Tree | preference |
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|----------|-----------------------------------|
| Synopsis | Route tag used if CPE check fails |
|----------|-----------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

withdraw *boolean*

| | |
|------------|--|
| Synopsis | Withdraw the route when the CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw <i>boolean</i> |
| Tree | withdraw |
| Default | false |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | Interval between ICMP pings to the target CPE IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i> |
| Tree | interval |
| Range | 1 to 255 |
| Default | 1 |
| Units | seconds |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log *boolean*

| | |
|------------|--|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size *number*

| | |
|------------|--|
| Synopsis | Padding size for CPE connectivity checks |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Default | 56 |
| Units | bytes |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Source IP address used in the ICMP messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|----------|---|
| Synopsis | Time interval determining that a ping is missed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i> |

| | |
|------------|---|
| Tree | timeout |
| Range | 1 to 10 |
| Default | 1 |
| Units | seconds |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric number

| | |
|-------------|--|
| Synopsis | Metric associated with the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> metric <i>number</i> |
| Tree | metric |
| Description | This command configures a metric to associate with the provisioned managed route. |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|-------------|--|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> preference <i>number</i> |
| Tree | preference |
| Description | This command configures the preference associated with the provisioned managed route. |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|----------|-----------------------------------|
| Synopsis | Route tag used if CPE check fails |
|----------|-----------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string tag number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retail-svc-id *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Retail service ID |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string retail-svc-id number</i> |
| Tree | retail-svc-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|------------|---|
| Synopsis | Enter the shcv context |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string shcv</i> |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|----------|--|
| Synopsis | SLA profile name |
| Context | configure service vprn <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string sla-profile reference</i> |
| Tree | sla-profile |

| | |
|------------|--|
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Sub-profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Subscriber identification |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id <i>string</i> string |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|------------|--|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id use-sap-id |
| Tree | use-sap-id |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-learning

| | |
|------------|---|
| Synopsis | Enter the mac-learning context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-triggered *boolean*

| | |
|------------|---|
| Synopsis | Enable learning of MAC addresses from data packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host mac-learning data-triggered <i>boolean</i> |
| Tree | data-triggered |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-mac *boolean*

| | |
|------------|---|
| Synopsis | Enforce single MAC address and subscriber for the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host mac-learning single-mac <i>boolean</i> |
| Tree | single-mac |
| Default | false |
| Introduced | 16.0.R4 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis Enter the **sub-sla-mgmt** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **sub-sla-mgmt**

Tree **sub-sla-mgmt**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of SAP subscriber management

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **sub-sla-mgmt admin-state** *keyword*

Tree **admin-state**

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis Enter the **defaults** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **sub-sla-mgmt defaults**

Tree **defaults**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis Default application profile name for this SAP

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **sub-sla-mgmt defaults app-profile** *reference*

Tree **app-profile**

| | |
|------------|---|
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id

| | |
|------------|---|
| Synopsis | Enter the int-dest-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id |
| Tree | int-dest-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | Use the configured string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

top-q-tag

| | |
|------------|---|
| Synopsis | Use the top Q-tag of this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id top-q-tag |
| Tree | top-q-tag |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | Default SLA profile for hosts on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
sub-sla-mgmt defaults sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Default subscriber profile used for subscribers on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
sub-sla-mgmt defaults sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|------------|---|
| Synopsis | Use auto-generated subscriber identification string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis Use SAP ID as default subscriber identification string

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*
[sub-sla-mgmt defaults subscriber-id sap-id](#)

Tree [sap-id](#)

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis Default subscriber identification string for the SAP

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*
[sub-sla-mgmt defaults subscriber-id string](#) *string*

Tree [string](#)

String Length 1 to 64

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-sub-parameters

Synopsis Enter the **single-sub-parameters** context

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*
[sub-sla-mgmt single-sub-parameters](#)

Tree [single-sub-parameters](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

non-sub-traffic

Synopsis Enable the **non-sub-traffic** context

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic |
| Tree | non-sub-traffic |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Application profile name for all non-subscriber traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | SLA profile applicable for all non-subscriber traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Subscriber ID profile applied for all non-subscriber traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Subscriber ID applied for all non-subscriber traffic

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [single-sub-parameters](#) [non-sub-traffic](#) [subscriber-id](#) *string*

Tree [subscriber-id](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profiled-traffic-only *boolean*

Synopsis Include all traffic in subscriber profile

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [single-sub-parameters](#) [profiled-traffic-only](#) *boolean*

Tree [profiled-traffic-only](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis Subscriber identification policy used on this SAP

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [sub-ident-policy](#) *reference*

Tree [sub-ident-policy](#)

Reference **configure** [subscriber-mgmt](#) [sub-ident-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-limit (*keyword | number*)

| | |
|------------|--|
| Synopsis | Maximum number of subscribers on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt subscriber-limit (<i>keyword number</i>) |
| Tree | subscriber-limit |
| Range | 1 to 131071 |
| Default | 1 |
| Options | no-limit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-parameters

| | |
|------------|--|
| Synopsis | Enter the sap-parameters context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters |
| Tree | sap-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | Anti-spoof type of the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Default | ip-mac |
| Options | ip-mac, nh-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|----------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters description <i>string</i> |

| | |
|---------------|---|
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-sla-mgmt

| | |
|------------|--|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|---|
| Synopsis | Enter the defaults context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Default application profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|----------|---------------------|
| Synopsis | Default SLA profile |
|----------|---------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Default subscriber profile |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|------------|--|
| Synopsis | Subscriber ID that is autogenerated |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | String to be used as default subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-ident-policy *reference*

| | |
|------------|--|
| Synopsis | Subscriber identification policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt sub-ident-policy <i>reference</i> |
| Tree | sub-ident-policy |
| Reference | configure subscriber-mgmt sub-ident-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy *reference*

| | |
|------------|---|
| Synopsis | Subscriber host connectivity verification policy for IPv4 and IPv6 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy <i>reference</i> |
| Tree | shcv-policy |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv4 *reference*

| | |
|----------|--|
| Synopsis | Subscriber host connectivity verification policy for IPv4 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv4 <i>reference</i> |

| | |
|------------|--|
| Tree | shcv-policy-ipv4 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv6 *reference*

| | |
|------------|--|
| Synopsis | Subscriber host connectivity verification policy for IPv6 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv6 <i>reference</i> |
| Tree | shcv-policy-ipv6 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

srrp [[srrp-id](#)] *number*

| | |
|----------------|---|
| Synopsis | Enter the srrp list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> |
| Tree | srrp |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[srrp-id] *number*

| | |
|------------|---|
| Synopsis | SRRP instance ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> |
| Tree | srrp |
| Range | 1 to 4294967295 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of SRRP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd-liveness

| | |
|------------|--|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dest-ip *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Destination IPv4 prefix |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness dest-ip <i>string</i> |
| Tree | dest-ip |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Name of the interface running BFD |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness interface-name <i>string</i> |
| Tree | interface-name |

| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gw-mac *string*

| | |
|------------|--|
| Synopsis | Gateway MAC address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> gw-mac <i>string</i> |
| Tree | gw-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

keep-alive-interval *number*

| | |
|------------|---|
| Synopsis | Interval between SRRP advertisements |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> keep-alive-interval <i>number</i> |
| Tree | keep-alive-interval |
| Range | 1 to 100 |
| Default | 10 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

message-path *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | SAP to use as the SRRP message path |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> message-path <i>reference</i> |
| Tree | message-path |
| Reference | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

monitor-oper-group

| | |
|------------|---|
| Synopsis | Enter the monitor-oper-group context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group |
| Tree | monitor-oper-group |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-name *reference*

| | |
|------------|---|
| Synopsis | Operational group name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group group-name <i>reference</i> |
| Tree | group-name |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

priority-step *number*

| | |
|------------|---|
| Synopsis | Step value to change priority of SRRP instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group priority-step <i>number</i> |
| Tree | priority-step |
| Range | 1 to 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

one-garp-per-sap *boolean*

| | |
|------------|--|
| Synopsis | Send one gratuitous ARP to each SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> one-garp-per-sap <i>boolean</i> |
| Tree | one-garp-per-sap |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy reference

Synopsis VRRP priority control policy associated with the SRRP

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **srrp** *number* **policy reference**

Tree [policy](#)

Reference **configure vrrp policy** *number*

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preempt boolean

Synopsis Allow the SRRP instance to override an existing master

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **srrp** *number* **preempt boolean**

Tree [preempt](#)

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority number

Synopsis Priority for this interface at this level

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **srrp** *number* **priority number**

Tree [priority](#)

Range 1 to 254

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-fib-population-packets *keyword*

| | |
|------------|---|
| Synopsis | Mode used to send FIB population packets (such as ARP) on switchover |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> send-fib-population-packets <i>keyword</i> |
| Tree | send-fib-population-packets |
| Default | all |
| Options | all, outer-tag-only |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

suppress-aa-sub *boolean*

| | |
|------------|--|
| Synopsis | Enable application assurance suppression for ESM subscribers |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> suppress-aa-sub <i>boolean</i> |
| Tree | suppress-aa-sub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tos-marking-state *keyword*

| | |
|------------|--|
| Synopsis | TOS marking state |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> tos-marking-state <i>keyword</i> |
| Tree | tos-marking-state |
| Default | trusted |
| Options | trusted, untrusted |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Group interface type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> type <i>keyword</i> |
| Tree | type |
| Default | plain |
| Options | plain, lns, wlan-gw, gtp, bonding |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|---|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of WLAN Gateway |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

gateway-address [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|----------|--|
| Synopsis | Enter the gateway-address list instance |
|----------|--|

| | |
|----------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Max. Instances | 10 |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Gateway endpoint address of the WLAN Gateway tunnel |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

purpose

| | |
|------------|--|
| Synopsis | Enter the purpose context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose |
| Tree | purpose |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

xconnect *boolean*

| | |
|------------|--|
| Synopsis | Use tunnel IP address for crosse-connect traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose xconnect <i>boolean</i> |
| Tree | xconnect |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

gateway-router *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Routing instance the WLAN-GW endpoint resides in |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-router <i>string</i> |
| Tree | gateway-router |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

group-encryption

| | |
|------------|---|
| Synopsis | Enter the group-encryption context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption |
| Tree | group-encryption |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encryption-keygroup-inbound *reference*

| | |
|------------|--|
| Synopsis | Encryption keygroup for inbound traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-inbound <i>reference</i> |
| Tree | encryption-keygroup-inbound |
| Reference | configure group-encryption encryption-keygroup <i>number</i> |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encryption-keygroup-outbound *reference*

| | |
|----------|---|
| Synopsis | Encryption keygroup for inbound traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-outbound <i>reference</i> |

| | |
|------------|---|
| Tree | encryption-keygroup-outbound |
| Reference | configure group-encryption encryption-keygroup <i>number</i> |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

l2-ap

| | |
|------------|---|
| Synopsis | Enter the l2-ap context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap |
| Tree | l2-ap |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

access-point [[sap-id](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the access-point list instance |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> |
| Tree | access-point |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[sap-id] *string*

| | |
|---------------|--|
| Synopsis | SAP ID for the Layer 2 access point |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> |
| Tree | access-point |
| String Length | 1 to 45 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the L2 access points |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Service encapsulation type of this access point |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> encap-type <i>keyword</i> |
| Tree | encap-type |
| Options | null, dot1q, qinq |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

epipe-sap-template *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Parameters template for the internal connections with the ISA cards |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> epipe-sap-template <i>reference</i> |
| Tree | epipe-sap-template |
| Reference | configure service template epipe-sap-template <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

auto-sub-id-fmt *keyword*

| | |
|------------|--|
| Synopsis | Format of the auto-generated subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap auto-sub-id-fmt <i>keyword</i> |
| Tree | auto-sub-id-fmt |
| Default | include-ap-tags |
| Options | include-ap-tags, sap-only |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Default encapsulation type for Layer 2 access points |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap default-encap-type <i>keyword</i> |
| Tree | default-encap-type |
| Default | null |
| Options | null, dot1q, qinq |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lanext**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enable the lanext context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw lanext |
| Tree | lanext |
| Introduced | 16.0.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-bd *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of bridge domains

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**
lanext **max-bd** *number*

Tree **max-bd**

Range 1 to 131071

Default 131071

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis Enable the **learn-ap-mac** context

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**
learn-ap-mac

Tree **learn-ap-mac**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

Synopsis Delay authentication until ARP/ND is answered or timed out, after which AP MAC can be included

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**
learn-ap-mac **delay-auth** *boolean*

Tree **delay-auth**

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility

| | |
|------------|--|
| Synopsis | Enter the mobility context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility |
| Tree | mobility |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|--|
| Synopsis | Minimum time between two mobility events for a single UE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility hold-time <i>number</i> |
| Tree | hold-time |
| Range | 0 to 255 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-tunnel-type *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enable mobility between terminating tunnel types |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility inter-tunnel-type <i>boolean</i> |
| Tree | inter-tunnel-type |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-vlan *boolean*

| | |
|----------|---|
| Synopsis | Enable mobility within different VLANs within the same range of VLAN Q-tags |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility inter-vlan <i>boolean</i> |
| Tree | inter-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

trigger

| | |
|------------|--|
| Synopsis | Enter the trigger context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility trigger |
| Tree | trigger |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

control *boolean*

| | |
|------------|---|
| Synopsis | Use control traffic (DHCP, DHCPv6, and ICMPv6-RS messages) as mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility trigger control <i>boolean</i> |
| Tree | control |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

data *boolean*

| | |
|------------|--|
| Synopsis | Use data traffic as mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
mobility trigger data <i>boolean</i> |
| Tree | data |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

iapp *boolean*

| | |
|------------|---|
| Synopsis | Use Inter Access Point Protocol (IAPP) messages as mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger iapp <i>boolean</i> |
| Tree | iapp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

oper-down-on-group-degrade *boolean*

| | |
|------------|--|
| Synopsis | Bring interface operationally down when its ISA WLAN Gateway becomes degraded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw oper-down-on-group-degrade <i>boolean</i> |
| Tree | oper-down-on-group-degrade |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp-mss-adjust *number*

| | |
|------------|---|
| Synopsis | Value for the TCP Maximum Segment Size (MSS) option if not present, or if value is higher |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tcp-mss-adjust <i>number</i> |
| Tree | tcp-mss-adjust |
| Range | 160 to 10240 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-egress-qos

| | |
|----------|--|
| Synopsis | Enter the tunnel-egress-qos context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos |

| | |
|------------|------------------------------------|
| Tree | tunnel-egress-qos |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Administrative state of egress QoS for WLAN-GW tunnels |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

agg-rate-limit (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Aggregate rate limit of each shaper associated with this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos agg-rate-limit (<i>number</i> <i>keyword</i>) |
| Tree | agg-rate-limit |
| Range | 1 to 100000000 |
| Default | max |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

granularity *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Granularity of the egress shaping for WLAN Gateway |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
tunnel-egress-qos granularity <i>keyword</i> |
| Tree | granularity |
| Default | per-tunnel |
| Options | per-tunnel, per-retailer |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum time that the egress QoS resources associated with a tunnel (such as a shaper) are held |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
tunnel-egress-qos hold-time (<i>number</i> <i>keyword</i>) |
| Tree | hold-time |
| Range | 1 to 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multi-client-only *boolean*

| | |
|------------|--|
| Synopsis | Tunnel traffic to shape when multiple UEs use this tunnel |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
tunnel-egress-qos multi-client-only <i>boolean</i> |
| Tree | multi-client-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Identifier of the egress QoS policy associated with each tunnel of this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos qos <i>reference</i> |
| Tree | qos |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scheduler-policy reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Identifier of the egress scheduler policy associated with each tunnel of this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos scheduler-policy <i>reference</i> |
| Tree | scheduler-policy |
| Reference | configure qos scheduler-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-encaps

| | |
|------------|---|
| Synopsis | Enter the tunnel-encaps context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps |
| Tree | tunnel-encaps |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

learn-l2tp-cookie (*keyword* | *hex-string*)

| | |
|---------------|---|
| Synopsis | System that learns the cookie from L2TP tunnels terminating on this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps learn-l2tp-cookie (<i>keyword</i> <i>hex-string</i>) |
| Tree | learn-l2tp-cookie |
| String Length | 6 |
| Default | never |
| Options | never, always |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vlan-range [[range](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the vlan-range list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> |
| Tree | vlan-range |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[range] *string*

| | |
|------------|---|
| Synopsis | IEEE 802.1q VLAN tag range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> |
| Tree | vlan-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication

| | |
|----------|--|
| Synopsis | Enter the authentication context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication |
| Tree | authentication |

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis Minimum time to hold a UE down after an authentication failure
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication** **hold-time** *number*
 Tree [hold-time](#)
 Range 0 to 3600
 Default 5
 Units seconds
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis Enable the **local** context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication** **local**
 Tree [local](#)
 Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

coa-policy *reference*

Synopsis RADIUS ISA policy applied to CoA or disconnect messages
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication** **local** **coa-policy** *reference*
 Tree [coa-policy](#)
 Reference **configure** [aaa radius](#) [isa-policy](#) *string*
 Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-ue-state *keyword*

| | |
|------------|--|
| Synopsis | UE state accepted for immediate authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local default-ue-state <i>keyword</i> |
| Tree | default-ue-state |
| Options | portal, dsm |
| Notes | This element is mandatory. |
| Introduced | 22.2.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

on-control-plane *boolean*

| | |
|------------|--|
| Synopsis | Trigger authentication on first control plane packet instead of first data packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication on-control-plane <i>boolean</i> |
| Tree | on-control-plane |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|------------|--|
| Synopsis | RADIUS policy for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication policy <i>reference</i> |
| Tree | policy |
| Reference | configure aaa radius isa-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vlan-mismatch-timeout *number*

| | |
|----------|--|
| Synopsis | Timeout value for the RADIUS proxy cache if a packet is received with a non-matching VLAN |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication vlan-mismatch-timeout <i>number</i> |

| | |
|------------|---------------------------------------|
| Tree | vlan-mismatch-timeout |
| Range | 5 to 60 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

data-triggered-ue-creation

| | |
|------------|--|
| Synopsis | Enter the data-triggered-ue-creation context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation |
| Tree | data-triggered-ue-creation |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of data-triggered UE creation |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

arp *boolean*

| | |
|------------|---|
| Synopsis | Authenticate ARP packets received from an unknown UE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation arp <i>boolean</i> |
| Tree | arp |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

create-proxy-cache-entry

| | |
|------------|---|
| Synopsis | Enter the create-proxy-cache-entry context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry |
| Tree | create-proxy-cache-entry |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mac-format *string*

| | |
|---------------|--|
| Synopsis | MAC address format |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry mac-format <i>string</i> |
| Tree | mac-format |
| String Length | 2 to 7 |
| Default | aa: |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enable the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

name *string*

| | |
|---------------|---|
| Synopsis | RADIUS Proxy server name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server name <i>string</i> |
| Tree | name |
| String Length | 1 to 32 |

| | |
|------------|------------------------------------|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string*

| | |
|------------|---|
| Synopsis | Router instance of the RADIUS proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server router-instance <i>string</i> |
| Tree | router-instance |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcp4

| | |
|------------|--|
| Synopsis | Enter the dhcp4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 |
| Tree | dhcp4 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCPv4 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dns string

| | |
|----------------|---|
| Synopsis | DNS servers signaled in DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 dns <i>string</i> |
| Tree | dns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

l2-aware-ip-address (*ipv4-unicast-address* | *keyword*)

| | |
|------------|--|
| Synopsis | L2-Aware NAT inside IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 l2-aware-ip-address (<i>ipv4-unicast-address</i> <i>keyword</i>) |
| Tree | l2-aware-ip-address |
| Options | from-pool |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active number

| | |
|----------|---|
| Synopsis | IP address lease time for the UE after successful (portal) authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time active <i>number</i> |
| Tree | active |

| | |
|------------|------------------------------------|
| Range | 300 to 3600 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | IP address lease time that is provided before and during (portal) authentication to the UE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time initial number |
| Tree | initial |
| Range | 300 to 3600 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nbns string

| | |
|----------------|---|
| Synopsis | NetBIOS servers signaled in DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 nbns string |
| Tree | nbns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcp6

| | |
|----------|---|
| Synopsis | Enter the dhcp6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 |

| | |
|------------|------------------------------------|
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the protocol |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime

| | |
|------------|---|
| Synopsis | Enter the preferred-lifetime context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime |
| Tree | preferred-lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active *number*

| | |
|------------|---|
| Synopsis | Preferred signaled lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime active <i>number</i> |
| Tree | active |
| Range | 300 to 3600 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|--|
| Synopsis | Preferred signaled lifetime when the UE is not fully authenticated |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime initial <i>number</i> |
| Tree | initial |
| Range | 300 to 3600 |
| Default | 300 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime

| | |
|------------|--|
| Synopsis | Enter the valid-lifetime context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime |
| Tree | valid-lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active number

| | |
|------------|---|
| Synopsis | Signaled valid lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime active <i>number</i> |
| Tree | active |
| Range | 300 to 3600 |

| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

soft-quota-exhausted-filter *reference*

| | |
|-------------|---|
| Synopsis | Filter applied when soft volume quota is reached |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress soft-quota-exhausted-filter <i>reference</i> |
| Tree | soft-quota-exhausted-filter |
| Description | This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the ip-filter command in the configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Reference | configure subscriber-mgmt isa-filter <i>string</i> |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

one-time-redirect

|------------|--|
| Synopsis | Enter the one-time-redirect context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect |
| Tree | one-time-redirect |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port *number*

| | |
|----------|---|
| Synopsis | Destination port of packets considered for HTTP redirect |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect port <i>number</i> |

| | |
|------------|------------------------------------|
| Tree | port |
| Range | 1 to 65535 |
| Default | 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

url string

| | |
|---------------|---|
| Synopsis | URL for redirected HTTP protocol packets that can be overridden by AAA |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect url <i>string</i> |
| Tree | url |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

volume-quota-direction keyword

| | |
|-------------|---|
| Synopsis | Volume quota direction for WLAN GW |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm volume-quota-direction <i>keyword</i> |
| Tree | volume-quota-direction |
| Description | This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Default | both |
| Options | both, ingress, egress |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

extension [[extension-range](#)] string

| | |
|------------|---|
| Synopsis | Add a list entry for extension |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> extension <i>string</i> |
| Tree | extension |
| Introduced | 21.7.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[extension-range] *string*

Synopsis VLAN tag range used for matching

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [extension](#) *string*

Tree [extension](#)

Description This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect-policy *reference*

Synopsis Default HTTP redirect policy for portal authentication

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [http-redirect-policy](#) *reference*

Tree [http-redirect-policy](#)

Reference **configure** [subscriber-mgmt](#) [http-redirect-policy](#) *string*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

idle-timeout-action *keyword*

Synopsis Action to perform when the idle timeout expires

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [idle-timeout-action](#) *keyword*

Tree [idle-timeout-action](#)

Default remove

Options remove, shcv

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-service

| | |
|------------|---|
| Synopsis | Enable the I2-service context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service |
| Tree | I2-service |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Layer 2 service for VLAN range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service *reference*

| | |
|-----------|---|
| Synopsis | Layer 2 service associated with the range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service service <i>reference</i> |
| Tree | service |
| Reference | configure service vpls <i>string</i> |

| | |
|------------|------------------------------------|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-policy *reference*

| | |
|------------|--|
| Synopsis | NAT policy for DSM and ISA portal authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> nat-policy <i>reference</i> |
| Tree | nat-policy |
| Reference | configure service nat nat-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

retail-service *string*

| | |
|---------------|---|
| Synopsis | Default retail service for new UEs in this range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> retail-service <i>string</i> |
| Tree | retail-service |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

slaac

| | |
|------------|--|
| Synopsis | Enter the slaac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> slaac |
| Tree | slaac |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--------------------------------------|
| Synopsis | Administrative state of the protocol |
|----------|--------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> slaac admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime

| | |
|------------|---|
| Synopsis | Enter the preferred-lifetime context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> slaac preferred-lifetime |
| Tree | preferred-lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active number

| | |
|------------|--|
| Synopsis | Preferred signaled lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> slaac preferred-lifetime active <i>number</i> |
| Tree | active |
| Range | 300 to 3600 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|----------|---|
| Synopsis | Preferred signaled lifetime when the UE is not fully authenticated |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> slaac preferred-lifetime initial <i>number</i> |
| Tree | initial |
| Range | 300 to 3600 |

| | |

| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time *number*

Synopsis Lease time

Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wpp](#) [lease-time](#) *number*

Tree [lease-time](#)

Range 10 to 315446399

Default 600

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal

Synopsis Enter the **portal** context

Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wpp](#) [portal](#)

Tree [portal](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis Web portal server name

Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wpp](#) [portal](#) [name](#) *string*

Tree [name](#)

String Length 1 to 32

Notes The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group *reference*

| | |
|------------|---|
| Synopsis | WPP portal group for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp portal portal-group <i>reference</i> |
| Tree | portal-group |
| Reference | configure aaa wpp portal-group <i>string</i> |
| Notes | The following elements are part of a choice: portal-group or (name and router-instance). |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string*

| | |
|------------|---|
| Synopsis | The virtual router instance of the WPP portal for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp portal router-instance <i>string</i> |
| Tree | router-instance |
| Notes | The following elements are part of a choice: portal-group or (name and router-instance). |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

restore-to-initial-on-disconnect *boolean*

| | |
|------------|--|
| Synopsis | Restore initial profiles after a host has disconnected |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp restore-to-initial-on-disconnect <i>boolean</i> |
| Tree | restore-to-initial-on-disconnect |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

triggered-hosts *boolean*

| | |
|----------|--------------------------------|
| Synopsis | Enable/disable triggered hosts |
|----------|--------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp triggered-hosts <i>boolean</i> |
| Tree | triggered-hosts |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

| | |
|------------|--|
| Synopsis | User database |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |
|------------|--|
| Synopsis | Enter the hold-time context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

down

| | |
|----------|-------------------------------|
| Synopsis | Enter the down context |
|----------|-------------------------------|

| | |
|-------------|--|
| Context | configure service vprn string subscriber-interface string hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

init-only *boolean*

| | |
|-------------|--|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn string subscriber-interface string hold-time ipv4 down init-only boolean |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn string subscriber-interface string hold-time ipv4 down seconds number |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|----------|--|
| Synopsis | Enter the up context |
| Context | configure service vprn string subscriber-interface string hold-time ipv4 up |
| Tree | up |

| | |
|-------------|---|
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv4 seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|---|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

down

| | |
|-------------|---|
| Synopsis | Enter the down context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

init-only *boolean*

| | |
|-------------|--|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies the delay only when when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-linking

| | |
|------------|---|
| Synopsis | Enter the ipoe-linking context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipoe-linking |
| Tree | ipoe-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gratuitous-router-advertisement *boolean*

| | |
|------------|--|
| Synopsis | Send unsolicited router advertisement after DHCP setup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i> |
| Tree | gratuitous-router-advertisement |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|---|
| Synopsis | Enter the ipoe-session context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipoe-session session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address [[ipv4-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[[ipv4-address](#)] *string*

| | |
|------------|---|
| Synopsis | IP address associated with the subscriber subnet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gateway string

| | |
|------------|---|
| Synopsis | Gateway IP address within the subnet for SRRP routing |
| Context | configure service vprn string subscriber-interface string ipv4 address string gateway string |
| Tree | gateway |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

holdup-time number

| | |
|------------|---|
| Synopsis | Wait time before accepting new state attribute |
| Context | configure service vprn string subscriber-interface string ipv4 address string holdup-time number |
| Tree | holdup-time |
| Range | 100 to 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate-host-routes boolean

| | |
|------------|---|
| Synopsis | Populate subscriber host routes in local FIB |
| Context | configure service vprn string subscriber-interface string ipv4 address string populate-host-routes boolean |
| Tree | populate-host-routes |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length number

| | |
|----------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn string subscriber-interface string ipv4 address string prefix-length number |
| Tree | prefix-length |
| Range | 0 to 32 |

| | |
|------------|---|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-srrp *number*

| | |
|------------|---|
| Synopsis | SRRP instance whose state is tracked on this IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-unmatching-subnets *boolean*

| | |
|------------|--|
| Synopsis | Allow subscriber hosts without a matching subnet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 allow-unmatching-subnets <i>boolean</i> |
| Tree | allow-unmatching-subnets |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

arp-host

| | |
|------------|---|
| Synopsis | Enter the arp-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 arp-host |
| Tree | arp-host |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|-----------------------------------|
| Synopsis | Administrative state of ARP hosts |
|----------|-----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 arp-host admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

host-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 arp-host host-limit <i>number</i> |
| Tree | host-limit |
| Range | 1 to 524287 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|------------|--|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string subscriber-interface string ipv4 bfd echo-receive number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string subscriber-interface string ipv4 bfd multiplier number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive *number*

| | |
|-------------|---|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string subscriber-interface string ipv4 bfd receive number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval *number*

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals. |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

default-dns *string*

| | |
|----------------|---|
| Synopsis | Default DNS server addresses |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 default-dns <i>string</i> |
| Tree | default-dns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp

| | |
|------------|--|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp |
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|---|
| Synopsis | Enable IPoE clients to use the DHCP relay or proxy server |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp client-applications dhcp boolean |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|--|
| Synopsis | Enable PPPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp client-applications ppp boolean |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address string

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp gi-address string |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-populate

| | |
|----------|---|
| Synopsis | Enter the lease-populate context |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-leases *number*

| | |
|------------|--|
| Synopsis | Maximum number of DHCPv4 leases |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 0 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-selection

| | |
|------------|--|
| Synopsis | Enter the offer-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection |
| Tree | offer-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|---|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|----------|---|
| Synopsis | Delay before sending DHCP Discover messages |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection client-mac discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|-------------|--|
| Synopsis | Designated client MAC addresses for Offer selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Description | This command specifies the client MAC addresses for which the Discover delay applies. |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server [ipv4-address] *string*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv4-address] *string*

| | |
|------------|--|
| Synopsis | IP address of the DHCP server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay DHCP Discover messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|---|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|------------|--|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option client-mac-address boolean |
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id *boolean*

| | |
|----------|--|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service vprn string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option sap-id boolean |
| Tree | sap-id |

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

system-id *boolean*

| | |
|------------|--|
| Synopsis | Send the system ID in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

emulated-server *string*

| | |
|------------|---|
| Synopsis | IP address used as DHCP server address in SAP context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-override *boolean*

| | |
|------------|---|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i> |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
