This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced 16.0.R1

Platforms All

### **clear-n-flag** *boolean*

Synopsis Clear the N-flag in an OSPF prefix

Context **configure** *router string ospf number area string interface string node-sid clear-n-flag boolean*

Tree [clear-n-flag](#)

Description When configured to **true**, this command allows the user to clear the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default false

Introduced 16.0.R1

Platforms All

### **index** *number*

Synopsis Node SID index for this interface

Context **configure** *router string ospf number area string interface string node-sid index number*

Tree [index](#)

Range 0 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 16.0.R1

Platforms All

### **label** *number*

Synopsis Label value for the node SID

Context **configure** *router string ospf number area string interface string node-sid label number*

Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">passive</a> <i>boolean</i>
Tree	<a href="#">passive</a>
Introduced	16.0.R1
Platforms	All

### **poll-interval** *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">poll-interval</a> <i>number</i>
Tree	<a href="#">poll-interval</a>
Max. Range	0 to 4294967295
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Interface priority in the DR election on the subnet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	1
Introduced	16.0.R1
Platforms	All

**retransmit-interval** *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>retransmit-interval</b> <i>number</i>
Tree	<b>retransmit-interval</b>
Range	1 to 1800
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

**rib-priority** *keyword*

Synopsis	RIB priority for OSPF
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>rib-priority</b> <i>keyword</i>
Tree	<b>rib-priority</b>
Options	high
Introduced	16.0.R1
Platforms	All

**sid-protection** *boolean*

Synopsis	Allow adjacency SID protection by LFA and remote LFA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>sid-protection</b> <i>boolean</i>
Tree	<b>sid-protection</b>
Default	true
Introduced	16.0.R1
Platforms	All

**transit-delay** *number*

Synopsis	Required LSA transmit time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>transit-delay</b> <i>number</i>
Tree	<b>transit-delay</b>

Range	1 to 1800
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate-exclude** *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	<b>configure</b> <i>router string ospf number area string loopfree-alternate-exclude boolean</i>
Tree	<a href="#">loopfree-alternate-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **nssa**

Synopsis	Enable the <b>nssa</b> context
Context	<b>configure</b> <i>router string ospf number area string nssa</i>
Tree	<a href="#">nssa</a>
Introduced	16.0.R1
Platforms	All

### **area-range** [[ip-prefix-mask](#)] *string*

Synopsis	Enter the <b>area-range</b> list instance
Context	<b>configure</b> <i>router string ospf number area string nssa area-range string</i>
Tree	<a href="#">area-range</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix-mask]** *string*

Synopsis	IP prefix and subnet mask for the range used by the ABR
Context	<b>configure</b> <i>router string ospf number area string nssa area-range string</i>

Tree	<a href="#">area-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertise** *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">nssa</a> <a href="#">area-range</a> <i>string</i> <a href="#">advertise</a> <i>boolean</i>
Tree	<a href="#">advertise</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **originate-default-route**

Synopsis	Enable the <b>originate-default-route</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">nssa</a> <a href="#">originate-default-route</a>
Tree	<a href="#">originate-default-route</a>
Introduced	16.0.R1
Platforms	All

### **adjacency-check** *boolean*

Synopsis	Default route to remove if there is no adjacency
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">nssa</a> <a href="#">originate-default-route</a> <a href="#">adjacency-check</a> <i>boolean</i>
Tree	<a href="#">adjacency-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **type-nssa** *boolean*

Synopsis	Generate a default route using NSSA-LSA type
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>nssa</i> <i>originate-default-route</i> <i>type-nssa</i> <i>boolean</i>
Tree	<a href="#">type-nssa</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **redistribute-external** *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>nssa</i> <i>redistribute-external</i> <i>boolean</i>
Tree	<a href="#">redistribute-external</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>nssa</i> <i>summaries</i> <i>boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **stub**

Synopsis	Enable the <b>stub</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>stub</i>
Tree	<a href="#">stub</a>
Introduced	16.0.R1
Platforms	All

### **default-metric** *number*

Synopsis	Metric used by ABR for default route into the stub area
----------	---

Context	<b>configure router</b> <i>string ospf number area string stub default-metric number</i>
Tree	<a href="#">default-metric</a>
Range	1 to 16777214
Default	1
Introduced	16.0.R1
Platforms	All

### **summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	<b>configure router</b> <i>string ospf number area string stub summaries boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **virtual-link** [[router-id](#)] *string transit-area reference*

Synopsis	Enter the <b>virtual-link</b> list instance
Context	<b>configure router</b> <i>string ospf number area string virtual-link string transit-area reference</i>
Tree	<a href="#">virtual-link</a>
Introduced	16.0.R1
Platforms	All

### **[router-id]** *string*

Synopsis	Router identity of the virtual link neighbor
Context	<b>configure router</b> <i>string ospf number area string virtual-link string transit-area reference</i>
Tree	<a href="#">virtual-link</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**transit-area** *reference*

Synopsis	Transit area linking the backbone to not-connected area
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i>
Tree	<b>virtual-link</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**authentication-key** *string*

Synopsis	Authentication key
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

**authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>authentication-keychain</b> <i>reference</i>
Tree	<b>authentication-keychain</b>

Reference	<b>configure system security keychains keychain</b> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type used on OSPF interface
Context	<b>configure router</b> <i>string ospf number area string virtual-link string transit-area reference authentication-type keyword</i>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **dead-interval** *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure router</b> <i>string ospf number area string virtual-link string transit-area reference dead-interval number</i>
Tree	<a href="#">dead-interval</a>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure router</b> <i>string ospf number area string virtual-link string transit-area reference hello-interval number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**message-digest-key** [[key-id](#)] *number*

Synopsis	Enter the <b>message-digest-key</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">virtual-link</a> <i>string</i> <a href="#">transit-area</a> <i>reference</i> <a href="#">message-digest-key</a> <i>number</i>

### **bgp-ls-identifier**

Synopsis Enable the **bgp-ls-identifier** context  
Context **configure** *router string ospf number database-export bgp-ls-identifier*  
Tree [bgp-ls-identifier](#)  
Introduced 16.0.R1  
Platforms All

### **value** *number*

Synopsis BGP-LS identifier sent in the BGP-LS NLRI  
Context **configure** *router string ospf number database-export bgp-ls-identifier value number*  
Tree [value](#)  
Max. Range 0 to 4294967295  
Default 0

Introduced 16.0.R1  
Platforms All

### **igp-identifier** *number*

Synopsis IGP instance in the BGP-LS NLRI  
Context **configure** [router](#) *string* [ospf](#) *number* [database-export](#) [igp-identifier](#) *number*  
Tree [igp-identifier](#)  
Max. Range 0 to 18446744073709551615  
Introduced 16.0.R1  
Platforms All

### **entropy-label**

Synopsis Enter the **entropy-label** context  
Context **configure** [router](#) *string* [ospf](#) *number* [entropy-label](#)  
Tree [entropy-label](#)  
Introduced 16.0.R1  
Platforms All

### **override-tunnel-elc** *boolean*

Synopsis Enable override of received ELC advertisements  
Context **configure** [router](#) *string* [ospf](#) *number* [entropy-label](#) [override-tunnel-elc](#) *boolean*  
Tree [override-tunnel-elc](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **export-limit**

Synopsis Enable the **export-limit** context  
Context **configure** [router](#) *string* [ospf](#) *number* [export-limit](#)  
Tree [export-limit](#)  
Introduced 16.0.R1

Platforms All

### **log-percent** *number*

Synopsis Export limit before warning and SNMP notification sent  
 Context **configure** *router string ospf number export-limit log-percent number*  
 Tree [log-percent](#)  
 Range 1 to 100  
 Introduced 16.0.R1  
 Platforms All

### **number** *number*

Synopsis Maximum routes or prefixes exported from route table  
 Context **configure** *router string ospf number export-limit number number*  
 Tree [number](#)  
 Range 1 to 4294967295  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **export-policy** *reference*

Synopsis Export policies that determine exported routes  
 Context **configure** *router string ospf number export-policy reference*  
 Tree [export-policy](#)  
 Description This command configures export routing policies for the routes exported from the routing table to IS-IS.  
 If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.  
 If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.  
 If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.  
 Routing policies are created in the **configure router policy-options** context.  
 Reference **configure** [policy-options policy-statement string](#)

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **external-db-overflow**

Synopsis	Enable the <b>external-db-overflow</b> context
Context	<b>configure</b> <i>router string ospf number external-db-overflow</i>
Tree	<a href="#">external-db-overflow</a>
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Time during which the router operates in overload
Context	<b>configure</b> <i>router string ospf number external-db-overflow interval number</i>
Tree	<a href="#">interval</a>
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	All

### **limit** *number*

Synopsis	Number of external LSA at which overload is triggered
Context	<b>configure</b> <i>router string ospf number external-db-overflow limit number</i>
Tree	<a href="#">limit</a>
Range	0 to 2147483647
Default	0
Introduced	16.0.R1
Platforms	All

**external-preference** *number*

Synopsis	Preference for OSPF external routes
Context	<b>configure</b> <b>router</b> <i>string ospf number external-preference number</i>
Tree	<a href="#">external-preference</a>
Range	1 to 255
Default	150
Introduced	16.0.R1
Platforms	All

**flexible-algorithms**

Synopsis	Enter the <b>flexible-algorithms</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf number flexible-algorithms</i>
Tree	<a href="#">flexible-algorithms</a>
Description	Commands in this context configure the OSPFv2 parameters for flexible algorithm participation.
Introduced	21.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	<b>configure</b> <b>router</b> <i>string ospf number flexible-algorithms admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

**flex-algo** [[flex-algo-id](#)] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string ospf number flexible-algorithms flex-algo number</i>

Tree	<a href="#">flex-algo</a>
Description	<p>Commands in this context configure the attributes of the OSPFv2 flexible algorithm.</p> <p>The maximum unique flexible algorithms can be configured on a router across all configured OSPFv2 instances. In each OSPF flexible algorithm configuration context, the OSPFv2 instance participation can be either enabled or disabled, and it configures the advertising of a locally-configured flexible algorithm definition.</p> <p>When flexible algorithm is enabled in an OSPF instance, it is enabled for all areas within the OSPF instance.</p>
Max. Instances	7
Introduced	21.7.R1
Platforms	All

### **[flex-algo-id] number**

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i>
Tree	<a href="#">flex-algo</a>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

### **advertise reference**

Synopsis	Flexible Algorithm Definition advertisement
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">advertise</a> <i>reference</i>
Tree	<a href="#">advertise</a>
Description	<p>This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).</p> <p>The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.</p>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i>
Introduced	21.7.R1
Platforms	All

## loopfree-alternate

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	21.7.R1
Platforms	All

## participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">participate</a> <i>boolean</i>
Tree	<a href="#">participate</a>
Description	When configured to <b>true</b> , the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.  When configured to <b>false</b> , flexible algorithm participation is not enabled.
Default	false
Introduced	21.7.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">helper-mode</a> <i>boolean</i>
Tree	<a href="#">helper-mode</a>

Default	true
Introduced	16.0.R1
Platforms	All

### **strict-lsa-checking** *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">strict-lsa-checking</a> <i>boolean</i>
Tree	<a href="#">strict-lsa-checking</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **igp-shortcut**

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">igp-shortcut</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">igp-shortcut</a> <a href="#">tunnel-next-hop</a>

Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution state for IGP shortcut tunnels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">igp-shortcut</a> <a href="#">tunnel-next-hop</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	none, filter, any, match-family-ip
Default	none
Introduced	16.0.R1
Platforms	All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf number igp-shortcut tunnel-next-hop family keyword resolution-filter</i>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

**rsvp boolean**

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string ospf number igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp boolean</i>
Tree	<a href="#">rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-te boolean**

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string ospf number igp-shortcut tunnel-next-hop family keyword resolution-filter sr-te boolean</i>
Tree	<a href="#">sr-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy reference**

Synopsis	Import policy names for routes from IGP to route table
Context	<b>configure</b> <b>router</b> <i>string ospf number import-policy reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **ldp-over-rsvp** *boolean*

Synopsis	Allow LSP over RSVP in this OSPF instance
Context	<b>configure</b> <b>router</b> <i>string ospf number</i> <b>ldp-over-rsvp</b> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp-sync** *boolean*

Synopsis	Configure IGP-LDP synchronization for interfaces
Context	<b>configure</b> <b>router</b> <i>string ospf number</i> <b>ldp-sync</b> <i>boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf number</i> <b>loopfree-alternate</b>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

### **augment-route-table** *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	<b>configure</b> <b>router</b> <i>string ospf number</i> <b>loopfree-alternate</b> <b>augment-route-table</b> <i>boolean</i>
Tree	<a href="#">augment-route-table</a>

Description	When configured to <b>true</b> , this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP. When configured to <b>false</b> , rLFA-specific information is not added to RTM entries.
Default	false
Introduced	21.10.R1
Platforms	All

## exclude

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <b>exclude</b>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

## prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <b>exclude</b> <a href="#">prefix-policy</a> <i>reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

## multi-homed-prefix

Synopsis	Enable the <b>multi-homed-prefix</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <b>multi-homed-prefix</b>
Tree	<a href="#">multi-homed-prefix</a>

Description	<p>Commands in this context configure a multihomed prefix LFA for both RTM routes (IP FRR) and SR-OSPF tunnels. SR-OSPF tunnels enable multihomed prefix extension in both algorithm 0 and flexible-algorithm numbers.</p> <p>This feature makes use of the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of local anycast prefixes.</p> <p>The computed IP next-hop based backup path is added to OSPF routes of external /32 prefixes (OSPFv2 routes types 3, 4, 5, and 7) and local /32 anycast prefixes in the RTM if the prefix is not protected by base LFA or if the user set leaf preference value to all. The user must enable the ip-fast-reroute leaf to have these backup paths programmed into the FIB in datapath.</p> <p>The computed IP next hop or repair tunnel based backup path is also programmed for SR-OSPF node SID tunnels of external /32 prefixes and to /32 prefixes in same area as the computing node S and which are advertised by multiple routers (anycast prefix) in both algorithm 0 and flexible-algorithm numbers.</p>
Introduced	22.2.R1
Platforms	All

### **preference** *keyword*

Synopsis	Multi-homed prefix LFA backup path preference
Context	<b>configure</b> <i>router string ospf number loopfree-alternate multi-homed-prefix preference keyword</i>
Tree	<a href="#">preference</a>
Options	none, all
Default	none
Introduced	22.2.R1
Platforms	All

### **remote-lfa**

Synopsis	Enable the <b>remote-lfa</b> context
Context	<b>configure</b> <i>router string ospf number loopfree-alternate remote-lfa</i>
Tree	<a href="#">remote-lfa</a>
Introduced	16.0.R1
Platforms	All

### **max-pq-cost** *number*

Synopsis	Destination max cost for reverse SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <b>max-pq-cost</b> <i>number</i>
Tree	<a href="#">max-pq-cost</a>
Max. Range	0 to 4294967295
Default	65535
Introduced	16.0.R1
Platforms	All

### **node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <b>node-protect</b>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R4
Platforms	All

### **max-pq-nodes** *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF's
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">node-protect</a> <b>max-pq-nodes</b> <i>number</i>
Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R4
Platforms	All

### **ti-lfa**

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <b>ti-lfa</b>
Tree	<a href="#">ti-lfa</a>
Introduced	16.0.R1

Platforms All

### **max-sr-frr-labels** *number*

Synopsis Maximum number of labels the TI-LFA backup path can use

Context **configure** *router string ospf number loopfree-alternate ti-lfa max-sr-frr-labels number*

Tree [max-sr-frr-labels](#)

Description This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.

Range 0 to 3

Default 2

Introduced 16.0.R1

Platforms All

### **node-protect**

Synopsis Enable the **node-protect** context

Context **configure** *router string ospf number loopfree-alternate ti-lfa node-protect*

Tree [node-protect](#)

Introduced 16.0.R5

Platforms All

### **multi-instance** *boolean*

Synopsis Enable OSPF Multi Instance Extensions

Context **configure** *router string ospf number multi-instance boolean*

Tree [multi-instance](#)

Description When configured to **true**, the Base router supports RFC 6549, OSPFv2 Multi-Instance Extensions.

This support is enabled per instance and allows flexibility when migrating a particular instance from classic OSPFv2 to a multi-instance OSPFv2.

Default false

Introduced 19.10.R1

Platforms All

**multicast-import** *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	<b>configure</b> <i>router string ospf number multicast-import boolean</i>
Tree	<a href="#">multicast-import</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload** *boolean*

Synopsis	Change local router state to appear overloaded
Context	<b>configure</b> <i>router string ospf number overload boolean</i>
Tree	<a href="#">overload</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-include-ext-1** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure</b> <i>router string ospf number overload-include-ext-1 boolean</i>
Tree	<a href="#">overload-include-ext-1</a>
Default	false
Introduced	19.7.R1
Platforms	All

**overload-include-ext-2** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure</b> <i>router string ospf number overload-include-ext-2 boolean</i>
Tree	<a href="#">overload-include-ext-2</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-include-stub** *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	<b>configure</b> <i>router string ospf number overload-include-stub boolean</i>
Tree	<a href="#">overload-include-stub</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-on-boot**

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure</b> <i>router string ospf number overload-on-boot</i>
Tree	<a href="#">overload-on-boot</a>
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Time during which the router operates in overload state
Context	<b>configure</b> <i>router string ospf number overload-on-boot timeout number</i>
Tree	<a href="#">timeout</a>
Range	1 to 1800
Units	seconds
Introduced	16.0.R1

Tree	<a href="#">segment-routing</a>

Introduced	16.0.R1
Platforms	All

### **adj-sid-hold** (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>segment-routing</b> <b>adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>adj-sid-hold</b>

**Description** This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 300
Units	seconds
Options	none
Default	15
Introduced	16.0.R1

Platforms All

### **adjacency-set** [*id*] *number*

Synopsis Enter the **adjacency-set** list instance

Context **configure** *router string ospf number segment-routing adjacency-set number*

Synopsis	Enter the <b>adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a>
Tree	<a href="#">adjacency-sid</a>
Introduced	22.7.R1
Platforms	All

### **allocate-dual-sids** *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a> <a href="#">allocate-dual-sids</a> <i>boolean</i>
Tree	<a href="#">allocate-dual-sids</a>

Description	When configured to <b>true</b> , the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.  When configured to <b>false</b> , the router disables the support of two SR-MPLS adjacency SIDs per interface.
Default	false
Introduced	22.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis Label value for the node SID

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [backup-node-sid](#) [label](#) *number*

Tree [label](#)

Range 1 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 16.0.R1

Platforms All

### **class-forwarding** *boolean*

Synopsis Allow CBF with ECMP over RSVP-TE LSPs as IGP shortcuts

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [class-forwarding](#) *boolean*

Tree [class-forwarding](#)

Description When configured to **true**, this command enables Class-Based Forwarding (CBF) with ECMP for SR-OSPF resolved to RSVP-TE LSPs as IGP shortcuts.

For CBF with ECMP to be effective, a class forwarding policy must be defined, as well as FC to set associations and RSVP-TE LSPs to set associations.

When configured to **false**, CBF over IGP shortcuts is disabled.

Default false

Introduced 20.5.R1

Platforms All

## egress-statistics

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure</b> <i>router string ospf number segment-routing egress-statistics</i>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

## adj-set *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string ospf number segment-routing egress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

## adj-sid *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string ospf number segment-routing egress-statistics adj-sid boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1

Platforms	All

**adj-set *boolean***

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string ospf number segment-routing ingress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

**adj-sid *boolean***

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string ospf number segment-routing ingress-statistics adj-sid boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

**node-sid *boolean***

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <i>router string ospf number segment-routing ingress-statistics node-sid boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1
Platforms	All

## mapping-server

Synopsis	Enter the <b>mapping-server</b> context
Context	<b>configure</b> <i>router string ospf number segment-routing mapping-server</i>
Tree	<a href="#">mapping-server</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the OSPF mapping server
Context	<b>configure</b> <i>router string ospf number segment-routing mapping-server admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## node-sid-map [[sid-index](#)] *number*

Synopsis	Enter the <b>node-sid-map</b> list instance
Context	<b>configure</b> <i>router string ospf number segment-routing mapping-server node-sid-map number</i>
Tree	<a href="#">node-sid-map</a>
Introduced	16.0.R1
Platforms	All

## [\[sid-index\]](#) *number*

Synopsis	Start SID index for the node SID mapping
Context	<b>configure</b> <i>router string ospf number segment-routing mapping-server node-sid-map number</i>
Tree	<a href="#">node-sid-map</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

## ip-prefix *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Starting prefix of the mapping

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [mapping-server](#) [node-sid-map](#) *number* [ip-prefix](#) *string*

Tree [ip-prefix](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

## range *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Number of prefixes mapped by Extended Range Prefix TLV

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [mapping-server](#) [node-sid-map](#) *number* [range](#) *number*

Tree [range](#)

Range 1 to 65535

Default 1

Introduced 16.0.R1

Platforms All

## scope

Synopsis Enter the **scope** context

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [mapping-server](#) [node-sid-map](#) *number* [scope](#)

Tree [scope](#)

Introduced 16.0.R1

Platforms All

### **area** *reference*

Synopsis Area ID in which the advertise Extended Range TLV is advertised

Context **configure** [router](#) [string](#) [ospf](#) [number](#) [segment-routing](#) [mapping-server](#) [node-sid-map](#) [number](#) [scope](#) [area](#) [reference](#)

Tree [area](#)

Reference **configure** [router](#) [string](#) [ospf](#) [number](#) [area](#) [string](#)

Notes The following elements are part of a choice: **area** or **as**.

Introduced 16.0.R1

Platforms All

### **as**

Synopsis Advertise Extended Range TLV in whole autonomous system

Context **configure** [router](#) [string](#) [ospf](#) [number](#) [segment-routing](#) [mapping-server](#) [node-sid-map](#) [number](#) [scope](#) [as](#)

Tree [as](#)

Notes The following elements are part of a choice: **area** or **as**.

Introduced 16.0.R1

Platforms All

### **maximum-sid-depth**

Synopsis Enter the **maximum-sid-depth** context

Context **configure** [router](#) [string](#) [ospf](#) [number](#) [segment-routing](#) [maximum-sid-depth](#)

Tree [maximum-sid-depth](#)

Introduced 20.2.R1

Platforms All

### **override-bmi** *number*

Synopsis Value to override the announced node MSD-BMI value

Context **configure** [router](#) [string](#) [ospf](#) [number](#) [segment-routing](#) [maximum-sid-depth](#) [override-bmi](#) [number](#)

Tree	<a href="#">override-bmi</a>
Description	This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.  When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.
Range	0 to 12
Introduced	20.2.R1
Platforms	All

### **override-erld** *number*

Synopsis	Value to override the announced node MSD-ERLD value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">maximum-sid-depth</a> <a href="#">override-erld</a> <i>number</i>
Tree	<a href="#">override-erld</a>
Description	This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.  When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.
Range	0 to 15
Introduced	20.2.R1
Platforms	All

### **prefix-sid-range**

Synopsis	Enable the <b>prefix-sid-range</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">prefix-sid-range</a>
Tree	<a href="#">prefix-sid-range</a>
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	16.0.R1
Platforms	All

## global

Synopsis	BGP global SR range allocation
Context	<b>configure</b> <i>router string ospf number segment-routing prefix-sid-range global</i>
Tree	<a href="#">global</a>
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the <b>configure router mpls-labels sr-labels</b> context.
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## max-index *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	<b>configure</b> <i>router string ospf number segment-routing prefix-sid-range max-index number</i>
Tree	<a href="#">max-index</a>
Range	0 to 524287
Default	1
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## start-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	<b>configure</b> <i>router string ospf number segment-routing prefix-sid-range start-label number</i>
Tree	<a href="#">start-label</a>
Range	0 to 524287
Default	0

Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

### **srlb reference**

Synopsis	Segment routing local block
Context	<b>configure router string ospf number segment-routing srlb reference</b>
Tree	<a href="#">srlb</a>
Reference	<b>configure router string mpls-labels reserved-label-block string</b>
Introduced	16.0.R1
Platforms	All

### **tunnel-mtu number**

Synopsis	Tunnel MTU size
Context	<b>configure router string ospf number segment-routing tunnel-mtu number</b>
Tree	<a href="#">tunnel-mtu</a>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref number**

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure router string ospf number segment-routing tunnel-table-pref number</b>
Tree	<a href="#">tunnel-table-pref</a>
Description	This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the <b>any</b> value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

**Note:** The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8
- ROUTE\_PREF\_LDP 9
- ROUTE\_PREF\_OSPF\_TTM 10
- ROUTE\_PREF\_ISIS\_TTM 11
- ROUTE\_PREF\_BGP\_TTM 12
- ROUTE\_PREF\_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-IS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	16.0.R1
Platforms	All

## timers

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <i>router string ospf number timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R1
Platforms	All

**incremental-spf-wait** *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>timers</b> <b>incremental-spf-wait</b> <i>number</i>
Tree	<b>incremental-spf-wait</b>
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**lsa-accumulate** *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>timers</b> <b>lsa-accumulate</b> <i>number</i>
Tree	<b>lsa-accumulate</b>
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**lsa-arrival** *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>timers</b> <b>lsa-arrival</b> <i>number</i>
Tree	<b>lsa-arrival</b>
Range	0 to 600000
Units	milliseconds

Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>timers</b> <b>spf-wait</b>
Tree	<b>spf-wait</b>
Introduced	16.0.R1
Platforms	All

### **spf-initial-wait** *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>timers</b> <b>spf-wait</b> <b>spf-initial-wait</b> <i>number</i>
Tree	<b>spf-initial-wait</b>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**spf-max-wait** *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	<b>configure</b> <i>router string ospf number timers spf-wait spf-max-wait number</i>
Tree	<a href="#">spf-max-wait</a>
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

**spf-second-wait** *number*

Synopsis	Hold time between the first and second SPF calculation
Context	<b>configure</b> <i>router string ospf number timers spf-wait spf-second-wait number</i>
Tree	<a href="#">spf-second-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**traffic-engineering** *boolean*

Synopsis	Calculate traffic engineering route
Context	<b>configure</b> <i>router string ospf number traffic-engineering boolean</i>
Tree	<a href="#">traffic-engineering</a>
Default	false
Introduced	16.0.R1
Platforms	All

**traffic-engineering-options**

Synopsis	Enter the <b>traffic-engineering-options</b> context
Context	<b>configure</b> <i>router string ospf number traffic-engineering-options</i>

Tree	<a href="#">traffic-engineering-options</a>
Introduced	20.7.R1
Platforms	All

### **advertise-delay** *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">traffic-engineering-options</a> <a href="#">advertise-delay</a> <i>boolean</i>
Tree	<a href="#">advertise-delay</a>
Description	<p>When configured to <b>true</b>, the router advertises link delay in the IGP LSDB within the OSPF-TE TLV attribute or when the Application-Specific Link Attribute (ASLA) is enabled within SR-TE ASLA.</p> <p>When the router is configured under the <b>configure router ospf traffic-engineering-options sr-te application-specific-link-attributes</b> command to generate SR-TE ASLA attributes, link delay is advertised as a legacy RFC 3630 TLV when RSVP-TE is enabled and as an ASLA RFC 8920 TLV for SR-TE when MPLS is enabled for an interface.</p> <p>SR OS accepts and handles both legacy RSVP-TE TLVs and ASLAs for the RSVP application. However, SR OS only advertises RFC 3630 legacy RSVP-TE TLVs (as recommended by RFC 8920) to avoid compatibility issues.</p> <p>When configured to <b>false</b>, the router disables link delay advertisement.</p>
Default	false
Introduced	22.10.R1
Platforms	All

### **sr-te** *keyword*

Synopsis	Advertisement of link attributes for SR-TE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">traffic-engineering-options</a> <a href="#">sr-te</a> <i>keyword</i>
Tree	<a href="#">sr-te</a>
Description	This command specifies the advertisement of TE attributes of each link on a per-application basis for RSVP-TE and SR-TE applications.
Options	false, legacy, application-specific-link-attributes
Default	false
Introduced	20.7.R1
Platforms	All

**unicast-import** *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	<b>configure</b> <b>router</b> <i>string ospf number unicast-import boolean</i>
Tree	<a href="#">unicast-import</a>
Default	true
Introduced	16.0.R1
Platforms	All

**ospf3** [[ospf-instance](#)] *number*

Synopsis	Enter the <b>ospf3</b> list instance

Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>dead-interval</b> <i>number</i>
Tree	<b>dead-interval</b>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**hello-interval** *number*

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>hello-interval</b> <i>number</i>
Tree	<b>hello-interval</b>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**interface-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>interface-type</b> <i>keyword</i>
Tree	<b>interface-type</b>
Description	This command specifies the interface type. <b>broadcast</b> - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. <b>non-broadcast</b> - Non-broadcast network <b>point-to-point</b> - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

**secondary** - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight for an OSPF3 interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>load-balancing-weight</b> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	20.2.R1
Platforms	All

### **loopfree-alternate**

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>loopfree-alternate</b>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

### **exclude** *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>loopfree-alternate</b> <b>exclude</b> <i>boolean</i>
Tree	<a href="#">exclude</a>

Default	false
Introduced	16.0.R3
Platforms	All

## policy-map

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a>
Tree	<a href="#">policy-map</a>
Introduced	16.0.R3
Platforms	All

## route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a> <a href="#">route-nh-template</a> <i>reference</i>
Tree	<a href="#">route-nh-template</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

## lsa-filter-out *keyword*

Synopsis	LSA flooding reduction
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">lsa-filter-out</a> <i>keyword</i>
Tree	<a href="#">lsa-filter-out</a>
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Default	none
Introduced	16.0.R1
Platforms	All

**metric number**

Synopsis	Route cost metric for the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**mtu number**

Synopsis	MTU for the OSPF to use on the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

**neighbor [address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	Add a list entry for <b>neighbor</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>neighbor</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>neighbor</b>
Introduced	16.0.R1
Platforms	All

**[address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	Neighbor link local address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>neighbor</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**node-sid**

Synopsis	Enable the <b>node-sid</b> context
Context	<b>configure</b> <i>router string ospf3 number area string interface string node-sid</i>
Tree	<i>node-sid</i>
Description	<p>Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.</p> <p>In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.</p> <p>This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.</p> <p>The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.</p> <p>The <b>clear-n-flag</b> option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p> <p>The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.</p>
Introduced	16.0.R4
Platforms	All

**clear-n-flag** *boolean*

Synopsis	Clear the N-flag in an OSPF3 prefix
Context	<b>configure</b> <i>router string ospf3 number area string interface string node-sid clear-n-flag boolean</i>
Tree	<i>clear-n-flag</i>

Description	<p>When configured to <b>true</b>, this command allows the user to clear the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system.</p> <p>When configured to <b>false</b>, the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.</p> <p>When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p>
Default	false
Introduced	16.0.R5
Platforms	All

### **index number**

Synopsis	Node SID index for this interface
Context	<b>configure</b> <i>router string ospf3 number area string interface string node-sid index number</i>
Tree	<i>index</i>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R4
Platforms	All

### **label number**

Synopsis	Node SID index for this interface
Context	<b>configure</b> <i>router string ospf3 number area string interface string node-sid label number</i>
Tree	<i>label</i>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R4
Platforms	All

### **passive boolean**

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	<b>configure</b> <i>router string ospf3 number area string interface string passive boolean</i>

Tree	<a href="#">passive</a>
Introduced	16.0.R1
Platforms	All

### **poll-interval** *number*

Synopsis	Interval for Hellos to non-adjacent OSPF NBMA neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">poll-interval</a> <i>number</i>
Tree	<a href="#">poll-interval</a>
Max. Range	0 to 4294967295
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Interface priority in the DR election on the subnet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	1
Introduced	16.0.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 1800
Units	seconds
Default	5
Introduced	16.0.R1

Platforms All

### **rib-priority** *keyword*

Synopsis RIB priority for OSPF  
 Context **configure** [router](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* **rib-priority** *keyword*  
 Tree [rib-priority](#)  
 Options high  
 Introduced 16.0.R1  
 Platforms All

### **sid-protection** *boolean*

Synopsis Allow adjacency SID protection by LFA and remote LFA  
 Context **configure** [router](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* **sid-protection** *boolean*  
 Tree [sid-protection](#)  
 Default true  
 Introduced 16.0.R4  
 Platforms All

### **transit-delay** *number*

Synopsis Required LSA transmit time  
 Context **configure** [router](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* **transit-delay** *number*  
 Tree [transit-delay](#)  
 Range 1 to 1800  
 Units seconds  
 Default 1  
 Introduced 16.0.R1  
 Platforms All

### **key-rollover-interval** *number*

Synopsis Key rollover interval  
 Context **configure** [router](#) *string* [ospf3](#) *number* [area](#) *string* **key-rollover-interval** *number*

Tree	<a href="#">key-rollover-interval</a>
Range	10 to 300
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate-exclude** *boolean*

Synopsis	Exclude interfaces in OSPF areas in SPF LFA computation
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3 number area string loopfree-alternate-exclude boolean</i>
Tree	<a href="#">loopfree-alternate-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **nssa**

Synopsis	Enable the <b>nssa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3 number area string nssa</i>
Tree	<a href="#">nssa</a>
Introduced	16.0.R1
Platforms	All

### **area-range** [[ip-prefix-mask](#)] (*ipv4-prefix | ipv6-prefix*)

Synopsis	Enter the <b>area-range</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3 number area string nssa area-range (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">area-range</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix-mask]** (*ipv4-prefix | ipv6-prefix*)

Synopsis	Addresses on ABR for route summarization or suppression
----------	---

Context	<b>configure router</b> <i>string ospf3 number area string nssa area-range (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">area-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertise** *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	<b>configure router</b> <i>string ospf3 number area string nssa area-range (ipv4-prefix   ipv6-prefix) advertise boolean</i>
Tree	<a href="#">advertise</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **originate-default-route**

Synopsis	Enable the <b>originate-default-route</b> context
Context	<b>configure router</b> <i>string ospf3 number area string nssa originate-default-route</i>
Tree	<a href="#">originate-default-route</a>
Introduced	16.0.R1
Platforms	All

### **adjacency-check** *boolean*

Synopsis	Default route to remove if there is no adjacency
Context	<b>configure router</b> <i>string ospf3 number area string nssa originate-default-route adjacency-check boolean</i>
Tree	<a href="#">adjacency-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **type-nssa** *boolean*

Synopsis	Generate a default route using NSSA-LSA type
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string nssa originate-default-route type-nssa boolean</i>
Tree	<a href="#">type-nssa</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **redistribute-external** *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string nssa redistribute-external boolean</i>
Tree	<a href="#">redistribute-external</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string nssa summaries boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **stub**

Synopsis	Enable the <b>stub</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub</i>
Tree	<a href="#">stub</a>
Introduced	16.0.R1
Platforms	All

**default-metric** *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub default-metric number</i>
Tree	<a href="#">default-metric</a>
Range	1 to 16777214
Default	1
Introduced	16.0.R1
Platforms	All

**summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub summaries boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

**virtual-link** [**router-id**] *string transit-area reference*

Synopsis	Enter the <b>virtual-link</b> list instance
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string virtual-link string transit-area reference</i>
Tree	<a href="#">virtual-link</a>
Introduced	16.0.R1
Platforms	All

**[router-id]** *string*

Synopsis	Router ID of the virtual link neighbor
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string virtual-link string transit-area reference</i>
Tree	<a href="#">virtual-link</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**transit-area** *reference*

Synopsis	Transit area linking backbone and non-connected area
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i>
Tree	<b>virtual-link</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**authentication**

Synopsis	Enable the <b>authentication</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>authentication</b>
Tree	<b>authentication</b>
Introduced	16.0.R6
Platforms	All

**inbound** *reference*

Synopsis	sa-name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>authentication</b> <b>inbound</b> <i>reference</i>
Tree	<b>inbound</b>

Reference	<b>configure ipsec static-sa string</b>
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

### **outbound reference**

Synopsis	sa-name
Context	<b>configure router string ospf3 number area string virtual-link string transit-area reference authentication outbound reference</b>
Tree	<a href="#">outbound</a>
Reference	<b>configure ipsec static-sa string</b>
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

### **dead-interval number**

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure router string ospf3 number area string virtual-link string transit-area reference dead-interval number</b>
Tree	<a href="#">dead-interval</a>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **hello-interval number**

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure router string ospf3 number area string virtual-link string transit-area reference hello-interval number</b>
Tree	<a href="#">hello-interval</a>
Range	1 to 65535
Units	seconds

Default	10
Introduced	16.0.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string virtual-link string transit-area reference retransmit-interval number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 1800
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

### **transit-delay** *number*

Synopsis	Required LSA transmit time
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string virtual-link string transit-area reference transit-delay number</i>
Tree	<a href="#">transit-delay</a>
Range	1 to 1800
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **asbr**

Synopsis	Enable the <b>asbr</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number asbr</i>
Tree	<a href="#">asbr</a>
Introduced	16.0.R1
Platforms	All

## database-export

Synopsis	Enable the <b>database-export</b> context
Context	<b>configure</b> <i>router string ospf3 number database-export</i>
Tree	<a href="#">database-export</a>
Introduced	16.0.R4
Platforms	All

## bgp-ls-identifier

Synopsis	Enable the <b>bgp-ls-identifier</b> context
Context	<b>configure</b> <i>router string ospf3 number database-export bgp-ls-identifier</i>
Tree	<a href="#">bgp-ls-identifier</a>
Introduced	16.0.R4
Platforms	All

## value *number*

Synopsis	BGP-LS identifier sent in the BGP-LS NLRI
Context	<b>configure</b> <i>router string ospf3 number database-export bgp-ls-identifier value number</i>
Tree	<a href="#">value</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	All

## igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	<b>configure</b> <i>router string ospf3 number database-export igp-identifier number</i>
Tree	<a href="#">igp-identifier</a>
Description	This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a given IGP domain when the router sends the IGP link state information using BGP-LS.

Max. Range	0 to 18446744073709551615
Introduced	16.0.R4
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <i>router string ospf3 number export-limit</i>
Tree	<a href="#">export-limit</a>
Introduced	16.0.R1
Platforms	All

### **log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <i>router string ospf3 number export-limit log-percent number</i>
Tree	<a href="#">log-percent</a>
Range	1 to 100
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <i>router string ospf3 number export-limit number number</i>
Tree	<a href="#">number</a>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <i>router string ospf3 number export-policy reference</i>

Tree	<a href="#">export-policy</a>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **extended-lsa** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Extended LSA format in an OSPFv3 area
Context	<b>configure router</b> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">extended-lsa</a> <i>keyword</i>
Tree	<a href="#">extended-lsa</a>
Options	sparse, only
Default	sparse
Introduced	16.0.R1
Platforms	All

### **external-db-overflow**

Synopsis	Enable the <b>external-db-overflow</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">external-db-overflow</a>
Tree	<a href="#">external-db-overflow</a>
Introduced	16.0.R1

Platforms All

### **interval** *number*

Synopsis Time during which the router operates in overload  
Context **configure** *router string ospf3 number external-db-overflow interval number*  
Tree [interval](#)  
Range 0 to 2147483647  
Units seconds  
Default 0  
Introduced 16.0.R1  
Platforms All

### **limit** *number*

Synopsis Number of external LSA at which overload is triggered  
Context **configure** *router string ospf3 number external-db-overflow limit number*  
Tree [limit](#)  
Range 0 to 2147483647  
Default 0  
Introduced 16.0.R1  
Platforms All

### **external-preference** *number*

Synopsis Preference for OSPF external routes  
Context **configure** *router string ospf3 number external-preference number*  
Tree [external-preference](#)  
Range 1 to 255  
Default 150  
Introduced 16.0.R1  
Platforms All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">helper-mode</a> <i>boolean</i>
Tree	<a href="#">helper-mode</a>
Default	true
Introduced	16.0.R1
Platforms	All

## strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">strict-lsa-checking</a> <i>boolean</i>
Tree	<a href="#">strict-lsa-checking</a>
Default	true
Introduced	16.0.R1
Platforms	All

## igp-shortcut

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop</i>
Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R4
Platforms	All

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R4
Platforms	All

**[family-type]** *keyword*

Synopsis	Address family type for the tunnel next hop
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<a href="#">family</a>
Options	ipv4, ipv6, srv4, srv6
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**resolution keyword**

Synopsis	Resolution state for IGP shortcut tunnels
Context	<b>configure router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution keyword</i>
Tree	<b>resolution</b>
Options	none, filter, any, match-family-ip
Default	none
Introduced	16.0.R4
Platforms	All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter</i>
Tree	<b>resolution-filter</b>
Introduced	16.0.R4
Platforms	All

**rsvp boolean**

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp boolean</i>
Tree	<b>rsvp</b>
Default	false
Introduced	16.0.R4
Platforms	All

**sr-te boolean**

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter sr-te boolean</i>
Tree	<b>sr-te</b>

Default	false
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **ldp-sync** *boolean*

Synopsis	Configure IGP-LDP synchronization for interfaces
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">ldp-sync</a> <i>boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

## exclude

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>loopfree-alternate</i> <b>exclude</b>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

## prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>loopfree-alternate</i> <b>exclude</b> <a href="#">prefix-policy</a> <i>reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

## remote-lfa

Synopsis	Enable the <b>remote-lfa</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>loopfree-alternate</i> <b>remote-lfa</b>
Tree	<a href="#">remote-lfa</a>
Introduced	16.0.R4
Platforms	All

## max-pq-cost *number*

Synopsis	Destination max cost for reverse SPF calculation
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>loopfree-alternate</i> <a href="#">remote-lfa</a> <b>max-pq-cost</b> <i>number</i>
Tree	<a href="#">max-pq-cost</a>

Max. Range	0 to 4294967295
Default	65535
Introduced	16.0.R4
Platforms	All

## node-protect

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <i>router string ospf3 number loopfree-alternate remote-lfa node-protect</i>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R6
Platforms	All

## max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF's
Context	<b>configure</b> <i>router string ospf3 number loopfree-alternate remote-lfa node-protect max-pq-nodes number</i>
Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R6
Platforms	All

## ti-lfa

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <i>router string ospf3 number loopfree-alternate ti-lfa</i>
Tree	<a href="#">ti-lfa</a>
Introduced	16.0.R5
Platforms	All

## max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	<b>configure</b> <i>router string ospf3 number loopfree-alternate ti-lfa max-sr-frr-labels number</i>

Tree	<a href="#">max-sr-frr-labels</a>
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	16.0.R5
Platforms	All

### **node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <a href="#">node-protect</a>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R6
Platforms	All

### **multicast-import** *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">multicast-import</a> <i>boolean</i>
Tree	<a href="#">multicast-import</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload** *boolean*

Synopsis	Change local router state to appear overloaded
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">overload</a> <i>boolean</i>
Tree	<a href="#">overload</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-include-ext-1** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure router</b> <i>string ospf3 number overload-include-ext-1 boolean</i>
Tree	<a href="#">overload-include-ext-1</a>
Default	false
Introduced	19.7.R1
Platforms	All

**overload-include-ext-2** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure router</b> <i>string ospf3 number overload-include-ext-2 boolean</i>
Tree	<a href="#">overload-include-ext-2</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-include-stub** *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	<b>configure router</b> <i>string ospf3 number overload-include-stub boolean</i>
Tree	<a href="#">overload-include-stub</a>
Default	false
Introduced	16.0.R1
Platforms	All

**overload-on-boot**

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure router</b> <i>string ospf3 number overload-on-boot</i>
Tree	<a href="#">overload-on-boot</a>
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Router interval in overload before normal operations
Context	<b>configure</b> <i>router string ospf3 number overload-on-boot timeout number</i>
Tree	<a href="#">timeout</a>
Range	60 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

**preference** *number*

Synopsis	Preference for OSPF internal routes
Context	<b>configure</b> <i>router string ospf3 number preference number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	10
Introduced	16.0.R1
Platforms	All

**reference-bandwidth** *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	<b>configure</b> <i>router string ospf3 number reference-bandwidth number</i>
Tree	<a href="#">reference-bandwidth</a>
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	16.0.R1
Platforms	All

**rib-priority**

### **adj-sid-hold** (*number | keyword*)

Synopsis Adjacency SID hold time

Context **configure** *router string ospf3 number segment-routing adj-sid-hold (number | keyword)*

Tree [adj-sid-hold](#)

Description This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.

- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 300
Units	seconds
Options	none
Default	15
Introduced	16.0.R4
Platforms	All

## adjacency-sid

Synopsis	Enter the <b>adjacency-sid</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>adjacency-sid</b>
Tree	<b>adjacency-sid</b>
Introduced	22.7.R1
Platforms	All

## allocate-dual-sids *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>adjacency-sid</b> <b>allocate-dual-sids</b> <i>boolean</i>
Tree	<b>allocate-dual-sids</b>

Description	When configured to <b>true</b> , the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.  When configured to <b>false</b> , the router disables the support of two SR-MPLS adjacency SIDs per interface.
Default	false
Introduced	22.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">segment-routing</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>

### **tunnel-table-pref** *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>tunnel-table-pref</b> <i>number</i>
Tree	<b>tunnel-table-pref</b>

**Description** This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the **any** value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

**Note:** The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8
- ROUTE\_PREF\_LDP 9
- ROUTE\_PREF\_OSPF\_TTM 10
- ROUTE\_PREF\_ISIS\_TTM 11
- ROUTE\_PREF\_BGP\_TTM 12
- ROUTE\_PREF\_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-IS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

### **lsa-second-wait** *number*

Synopsis Hold time between the first and second LSA generation

Context	<b>configure router</b> <i>string ospf3 number timers lsa-generate lsa-second-wait number</i>
Tree	<a href="#">lsa-second-wait</a>
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

### **max-lsa-wait** *number*

Synopsis	Max time between two LSAs being generated
Context	<b>configure router</b> <i>string ospf3 number timers lsa-generate max-lsa-wait number</i>
Tree	<a href="#">max-lsa-wait</a>
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

### **redistribute-delay** *number*

Synopsis	Hold down timer for external routes into OSPF
Context	<b>configure router</b> <i>string ospf3 number timers redistribute-delay number</i>
Tree	<a href="#">redistribute-delay</a>
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

### **spf-wait**

Synopsis	Enter the <b>spf-wait</b> context
Context	<b>configure router</b> <i>string ospf3 number timers spf-wait</i>
Tree	<a href="#">spf-wait</a>

---

Introduced	16.0.R1
Platforms	All

**spf-initial-wait** *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers</i> <b>spf-wait</b> <b>spf-initial-wait</b> <i>number</i>
Tree	<a href="#">spf-initial-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**spf-max-wait** *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers</i> <b>spf-wait</b> <b>spf-max-wait</b> <i>number</i>
Tree	<a href="#">spf-max-wait</a>
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

**spf-second-wait** *number*

Synopsis	Hold time between the first and second SPF calculation
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers</i> <b>spf-wait</b> <b>spf-second-wait</b> <i>number</i>
Tree	<a href="#">spf-second-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**unicast-import** *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>unicast-import</b> <i>boolean</i>
Tree	<b>unicast-import</b>
Default	true
Introduced	16.0.R1
Platforms	All

**p2mp-sr-tree**

Synopsis	Enable the <b>p2mp-sr-tree</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b>
Tree	<b>p2mp-sr-tree</b>
Introduced	21.5.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the P2MP SR tree
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	All

**bfd-liveness** *keyword*

Synopsis	BFD-liveness for P2MP SR tree status entry
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>bfd-liveness</b> <i>keyword</i>
Tree	<b>bfd-liveness</b>
Options	ipv4, ipv6
Max. Instances	2

Introduced 21.5.R1  
 Platforms All

### **p2mp-policy** [[p2mp-policy-name](#)] *string*

Synopsis Enter the **p2mp-policy** list instance  
 Context **configure** [router](#) *string* [p2mp-sr-tree](#) [p2mp-policy](#) *string*  
 Tree [p2mp-policy](#)  
 Introduced 21.5.R1  
 Platforms All

### **[p2mp-policy-name]** *string*

Synopsis P2MP policy name  
 Context **configure** [router](#) *string* [p2mp-sr-tree](#) [p2mp-policy](#) *string*  
 Tree [p2mp-policy](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 21.5.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the P2MP policy  
 Context **configure** [router](#) *string* [p2mp-sr-tree](#) [p2mp-policy](#) *string* [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 21.5.R1  
 Platforms All

### **candidate-path** [[candidate-path-name](#)] *string*

Synopsis Enter the **candidate-path** list instance  
 Context **configure** [router](#) *string* [p2mp-sr-tree](#) [p2mp-policy](#) *string* [candidate-path](#) *string*

Tree	<a href="#">candidate-path</a>
Introduced	21.5.R1
Platforms	All

**[candidate-path-name]** *string*

Synopsis	Candidate path name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">p2mp-policy</a> <i>string</i> <a href="#">candidate-path</a> <i>string</i>
Tree	<a href="#">candidate-path</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	All

**active-instance** *reference*

Synopsis	Candidate path active instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">p2mp-policy</a> <i>string</i> <a href="#">candidate-path</a> <i>string</i> <a href="#">active-instance</a> <i>reference</i>
Tree	<a href="#">active-instance</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">p2mp-policy</a> <i>string</i> <a href="#">candidate-path</a> <i>string</i> <a href="#">path-instances</a> <i>number</i>
Introduced	21.5.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the P2MP SR tree
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">p2mp-policy</a> <i>string</i> <a href="#">candidate-path</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	All

**path-instances** [*index*] *number*

Synopsis	Enter the <b>path-instances</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>candidate-path</b> <i>string</i> <b>path-instances</b> <i>number</i>
Tree	<b>path-instances</b>
Introduced	21.5.R1
Platforms	All

**[index]** *number*

Synopsis	Instance index
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>candidate-path</b> <i>string</i> <b>path-instances</b> <i>number</i>
Tree	<b>path-instances</b>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	All

**instance-id** *number*

Synopsis	Instance value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>candidate-path</b> <i>string</i> <b>path-instances</b> <i>number</i> <b>instance-id</b> <i>number</i>
Tree	<b>instance-id</b>
Max. Range	0 to 4294967295
Introduced	21.5.R1
Platforms	All

**preference** *number*

Synopsis	Candidate-path preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>candidate-path</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>

Range	0 to 1024
Default	100
Introduced	21.5.R1
Platforms	All

### **root-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Root address for the P2MP policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>root-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>root-address</b>
Default	0.0.0.0
Introduced	21.5.R1
Platforms	All

### **tree-id** *number*

Synopsis	Tree ID for the P2MP policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>p2mp-policy</b> <i>string</i> <b>tree-id</b> <i>number</i>
Tree	<b>tree-id</b>
Range	0   8193 to 16286
Default	0
Introduced	21.5.R1
Platforms	All

### **replication-segment** [**policy-name**] *string*

Synopsis	Enter the <b>replication-segment</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i>
Tree	<b>replication-segment</b>
Introduced	21.5.R1
Platforms	All

### **[policy-name]** *string*

Synopsis	P2MP policy name
----------	------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">replication-segment</a> <i>string</i>
Tree	<a href="#">replication-segment</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the replication segment
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">replication-segment</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	All

### **downstream-nodes** [[downstream-index](#)] *number*

Synopsis	Enter the <b>downstream-nodes</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">replication-segment</a> <i>string</i> <a href="#">downstream-nodes</a> <i>number</i>
Tree	<a href="#">downstream-nodes</a>
Introduced	21.5.R1
Platforms	All

### **[downstream-index]** *number*

Synopsis	Downstream index
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">replication-segment</a> <i>string</i> <a href="#">downstream-nodes</a> <i>number</i>
Tree	<a href="#">downstream-nodes</a>
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	21.5.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of next-hop entries

Context **configure** *router* *string* *p2mp-sr-tree* *replication-segment* *string* *downstream-nodes* *number* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.5.R1

Platforms All

### **label**

Synopsis Enter the **label** context

Context **configure** *router* *string* *p2mp-sr-tree* *replication-segment* *string* *downstream-nodes* *number* **label**

Tree [label](#)

Introduced 21.5.R1

Platforms All

### **sid-list** [[index](#)] *number*

Synopsis Enter the **sid-list** list instance

Context **configure** *router* *string* *p2mp-sr-tree* *replication-segment* *string* *downstream-nodes* *number* **label** **sid-list** *number*

Tree [sid-list](#)

Introduced 21.5.R1

Platforms All

### [[index](#)] *number*

Synopsis SID list index

Context **configure** *router* *string* *p2mp-sr-tree* *replication-segment* *string* *downstream-nodes* *number* **label** **sid-list** *number*

Tree [sid-list](#)

Range	1 to 11
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	All

### **replication-sid** *number*

Synopsis	Segment ID for the SID list entry
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>downstream-nodes</b> <i>number</i> <b>label</b> <b>sid-list</b> <i>number</i> <b>replication-sid</b> <i>number</i>
Tree	<a href="#">replication-sid</a>
Range	3   16 to 1048575   4294967295
Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	All

### **next-hop-address** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Next-hop address for replication segment next hops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>downstream-nodes</b> <i>number</i> <b>next-hop-address</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<a href="#">next-hop-address</a>
Default	0.0.0.0
Introduced	21.5.R1
Platforms	All

### **next-hop-interface-name** *string*

Synopsis	Interface name for replication segment next-hops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>downstream-nodes</b> <i>number</i> <b>next-hop-interface-name</b> <i>string</i>
Tree	<a href="#">next-hop-interface-name</a>
String Length	1 to 32
Introduced	21.5.R1
Platforms	All

**protect-nexthop-id** *reference*

Synopsis	ID of the protection next hop used for FRR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>downstream-nodes</b> <i>number</i> <b>protect-nexthop-id</b> <i>reference</i>
Tree	<b>protect-nexthop-id</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>downstream-nodes</b> <i>number</i>
Introduced	21.5.R1
Platforms	All

**instance-id** *number*

Synopsis	Instance ID for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>instance-id</b> <i>number</i>
Tree	<b>instance-id</b>
Max. Range	0 to 4294967295
Default	0
Introduced	21.5.R1
Platforms	All

**replication-sid** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment ID of the replication segment
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>replication-sid</b> <i>number</i>
Tree	<b>replication-sid</b>
Max. Range	0 to 4294967295
Default	0
Introduced	21.5.R1
Platforms	All

**root-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Root address for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>root-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>root-address</b>
Introduced	21.5.R1
Platforms	All

**sid-action** *keyword*

Synopsis	SID action for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>sid-action</b> <i>keyword</i>
Tree	<b>sid-action</b>
Options	none, push, pop, swap
Default	none
Introduced	21.5.R1
Platforms	All

**tree-id** *number*

Synopsis	Tree ID for the replication segment of the P2MP SR tree
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>tree-id</b> <i>number</i>
Tree	<b>tree-id</b>
Range	0   8193 to 16286
Default	0
Introduced	21.5.R1
Platforms	All

**reserved-label-block** *reference*

Synopsis	Reserved label block name for the P2MP SR tree
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>reserved-label-block</b> <i>reference</i>
Tree	<b>reserved-label-block</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>mpls-labels</b> <b>reserved-label-block</b> <i>string</i>
Introduced	21.5.R1

Platforms All

## pcep

Synopsis Enter the **pcep** context  
 Context **configure router string pcep**  
 Tree [pcep](#)  
 Introduced 16.0.R4  
 Platforms All

## pcc

Synopsis Enable the **pcc** context  
 Context **configure router string pcep pcc**  
 Tree [pcc](#)  
 Introduced 16.0.R4  
 Platforms All

## admin-state *keyword*

Synopsis Administrative state of the PCEP session element  
 Context **configure router string pcep pcc admin-state keyword**  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R4  
 Platforms All

## dead-timer *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure dead timer  
 Context **configure router string pcep pcc dead-timer number**

Tree	<a href="#">dead-timer</a>
Range	1 to 255
Units	seconds
Default	120
Introduced	16.0.R4
Platforms	All

### **keepalive** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">keepalive</a> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	1 to 255
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	All

### **local-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">local-address</a> <i>string</i>
Tree	<a href="#">local-address</a>
Description	This command configures the local IPv4 address of the PCEP speaker. See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv4 address to establish a PCEP session.
Introduced	16.0.R4
Platforms	All

## local-address-ipv6 *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">local-address-ipv6</a> <i>string</i>
Tree	<a href="#">local-address-ipv6</a>
Description	This command configures the local IPv6 address of the PCEP speaker. See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv6 address to establish a PCEP session.
Introduced	20.2.R1
Platforms	All

## max-srte-pce-init-lsps *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure max sr te pce init LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">max-srte-pce-init-lsps</a> <i>number</i>
Tree	<a href="#">max-srte-pce-init-lsps</a>
Range	0 to 8191
Default	8191
Introduced	16.0.R5
Platforms	All

## pce-associations

Synopsis	Enter the <b>pce-associations</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a>
Tree	<a href="#">pce-associations</a>
Description	Commands in this context configure PCE association groups.
Introduced	22.5.R1

Platforms All

### **diversity** [*assoc-name*] *string*

Synopsis Enter the **diversity** list instance

Context **configure** *router string pcep pcc pce-associations diversity string*

Tree *diversity*

Description Commands in this context create a named diversity association from which the parameters for the specified diversity association are configured.

Introduced 22.5.R1

Platforms All

### **[assoc-name]** *string*

Synopsis Name of the association group

Context **configure** *router string pcep pcc pce-associations diversity string*

Tree *diversity*

String Length 1 to 32

Notes This element is part of a list key.

Introduced 22.5.R1

Platforms All

### **association-id** *number*

Synopsis Association ID for the diversity association group

Context **configure** *router string pcep pcc pce-associations diversity string association-id number*

Tree *association-id*

Description This command configures the diversity association ID. The user must specify an association ID.

Range 0 to 65535

Default 0

Introduced 22.5.R1

Platforms All

**association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>association-source</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>association-source</b>
Description	This command configures the source IP address of the diversity association.
Introduced	22.5.R1
Platforms	All

**disjointness-reference** *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>disjointness-reference</b> <i>boolean</i>
Tree	<b>disjointness-reference</b>
Description	When configured to <b>true</b> , the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID.  When configured to <b>false</b> , the router does not set the P-flag in the disjointness configuration TLV.
Default	false
Introduced	22.5.R1
Platforms	All

**disjointness-type** *keyword*

Synopsis	Disjointness type for the association group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>disjointness-type</b> <i>keyword</i>
Tree	<b>disjointness-type</b>
Description	This command configures the disjointness type for the association group.
Options	strict, loose
Default	loose
Introduced	22.5.R1
Platforms	All

**diversity-type** *keyword*

Synopsis	Diversity type for the association group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i> <a href="#">diversity-type</a> <i>keyword</i>
Tree	<a href="#">diversity-type</a>
Description	This command configures the diversity type for the association group.
Options	none, link, node, srlg-link, srlg-node
Default	none
Introduced	22.5.R1
Platforms	All

**policy** [[assoc-name](#)] *string*

Synopsis	Enter the <b>policy</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">policy</a> <i>string</i>
Tree	<a href="#">policy</a>
Description	Commands in this context create a named policy association from which the parameters for the specified policy association are configured.
Introduced	22.5.R1
Platforms	All

**[assoc-name]** *string*

Synopsis	Name of the association group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">policy</a> <i>string</i>
Tree	<a href="#">policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**association-id** *number*

Synopsis	Association ID for the policy association group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">policy</a> <i>string</i> <a href="#">association-id</a> <i>number</i>

Tree	<a href="#">association-id</a>
Description	This command configures the policy association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	22.5.R1
Platforms	All

### **association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <b>policy</b> <i>string</i> <a href="#">association-source</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">association-source</a>
Description	This command configures the source IP address of the policy association.
Introduced	22.5.R1
Platforms	All

### **peer** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Max. Instances	2
Introduced	16.0.R4
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address of a PCE peer in a PCEP session
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Notes	This element is part of a list key.
Introduced	16.0.R4

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the PCC peer

Context **configure** **router** *string* **pcep pcc peer** (*ipv4-address-no-zone | ipv6-address-no-zone*) **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 16.0.R4

Platforms All

### **preference** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Preference value of the peer

Context **configure** **router** *string* **pcep pcc peer** (*ipv4-address-no-zone | ipv6-address-no-zone*) **preference** *number*

Tree **preference**

Range 0 to 100

Default 0

Introduced 16.0.R4

Platforms All

### **route-preference** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Route preference to reach the PCE server

Context **configure** **router** *string* **pcep pcc peer** (*ipv4-address-no-zone | ipv6-address-no-zone*) **route-preference** *keyword*

Tree **route-preference**

Description	This command specifies the routing preference to reach the PCE server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the management routing instance are used to reach the PCE server before the in-band routes in the Base routing instance.
Options	inband, outband, both
Default	both
Introduced	21.10.R1
Platforms	All

### tls-client-profile *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS client profile name assigned to this PCC peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tls-client-profile</b> <i>reference</i>
Tree	<b>tls-client-profile</b>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>tls</b> <b>client-tls-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	All

### tls-wait-timer *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time the PCC waits until declaring handshake failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tls-wait-timer</b> <i>number</i>
Tree	<b>tls-wait-timer</b>
Range	60 to 255
Units	seconds
Default	60
Introduced	21.10.R1
Platforms	All

**redelegation-timer** *number*

Synopsis	Configure redelegation-timer
Context	<b>configure</b> <i>router string pcep pcc redelegation-timer number</i>
Tree	<a href="#">redelegation-timer</a>
Range	1 to 3600
Units	seconds
Default	90
Introduced	16.0.R4
Platforms	All

**report-path-constraints** *boolean*

Synopsis	Include LSP path constraints in PCE report messages
Context	<b>configure</b> <i>router string pcep pcc report-path-constraints boolean</i>
Tree	<a href="#">report-path-constraints</a>
Default	true
Introduced	16.0.R4
Platforms	All

**state-timer**

Synopsis	Enter the <b>state-timer</b> context
Context	<b>configure</b> <i>router string pcep pcc state-timer</i>
Tree	<a href="#">state-timer</a>
Introduced	16.0.R4
Platforms	All

**timer** *number*

Synopsis	Configure state-timer
Context	<b>configure</b> <i>router string pcep pcc state-timer timer number</i>
Tree	<a href="#">timer</a>
Range	1 to 3600
Units	seconds

Default	180
Introduced	16.0.R4
Platforms	All

**timer-action** *keyword*

Synopsis	State timer action remove/none
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">state-timer</a> <a href="#">timer-action</a> <i>keyword</i>
Tree	<a href="#">timer-action</a>
Options	none, remove
Default	remove
Introduced	16.0.R4
Platforms	All

**unknown-message-rate** *number*

Synopsis	Configure unknown message rate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">unknown-message-rate</a> <i>number</i>
Tree	<a href="#">unknown-message-rate</a>
Range	1 to 255
Default	10
Introduced	16.0.R4
Platforms	All

**pcp**

Synopsis	Enter the <b>pcp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp</a>
Tree	<a href="#">pcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**server** [*name*] *string*

Synopsis	Enter the <b>server</b> list instance
----------	---------------------------------------

Context	<b>configure</b> <i>router string pcp server string</i>
Tree	<i>server</i>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	PCP server name
Context	<b>configure</b> <i>router string pcp server string</i>
Tree	<i>server</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the PCP server
Context	<b>configure</b> <i>router string pcp server string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string pcp server string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dual-stack-lite-address** *string*

Synopsis	Inside Dual Stack Lite AFTR address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp</b> <b>server</b> <i>string</i> <b>dual-stack-lite-address</b> <i>string</i>
Tree	<b>dual-stack-lite-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fwd-inside-router** *string*

Synopsis	PCP forwarding inside virtual router instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp</b> <b>server</b> <i>string</i> <b>fwd-inside-router</b> <i>string</i>
Tree	<b>fwd-inside-router</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface** [**name**] *reference*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp</b> <b>server</b> <i>string</i> <b>interface</b> <i>reference</i>
Tree	<b>interface</b>
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *reference*

Synopsis	Interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp</b> <b>server</b> <i>string</i> <b>interface</b> <i>reference</i>
Tree	<b>interface</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy reference**

Synopsis	PCP server policy
Context	<b>configure</b> <i>router string</i> <b>pcp server</b> <i>string</i> <b>policy reference</b>
Tree	<b>policy</b>
Reference	<b>configure service nat</b> <b>pcp-server-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pim**

Synopsis	Enable the <b>pim</b> context
Context	<b>configure</b> <i>router string</i> <b>pim</b>
Tree	<b>pim</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of PIM
Context	<b>configure</b> <i>router string</i> <b>pim admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**apply-to** *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
Context	<b>configure</b> <i>router string</i> <b>pim apply-to</b> <i>keyword</i>
Tree	<b>apply-to</b>
Options	ies, non-ies, all, none
Default	none
Introduced	16.0.R1

Platforms All

## import

Synopsis Enter the **import** context  
 Context **configure** [router](#) *string* [pim](#) **import**  
 Tree [import](#)  
 Introduced 16.0.R1  
 Platforms All

## join-policy *reference*

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim](#) **import** [join-policy](#) *reference*  
 Tree [join-policy](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

## register-policy *reference*

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim](#) **import** [register-policy](#) *reference*  
 Tree [register-policy](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

**interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

**[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the PIM interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**assert-period** *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">assert-period</a> <i>number</i>
Tree	<a href="#">assert-period</a>
Range	1 to 300
Default	60
Introduced	16.0.R1

Platforms All

### **bfd-liveness**

Synopsis Enter the **bfd-liveness** context  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [bfd-liveness](#)  
 Tree [bfd-liveness](#)  
 Introduced 16.0.R1  
 Platforms All

### **ipv4** *boolean*

Synopsis Use Bidirectional Forwarding Detection for IPv4 on PIM interface  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [bfd-liveness](#) [ipv4](#) *boolean*  
 Tree [ipv4](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **ipv6** *boolean*

Synopsis Use Bidirectional Forwarding Detection for IPv6 on PIM interface  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [bfd-liveness](#) [ipv6](#) *boolean*  
 Tree [ipv6](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **bier-signaling-type**

Synopsis Enter the **bier-signaling-type** context  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [bier-signaling-type](#)  
 Tree [bier-signaling-type](#)  
 Introduced 19.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv4** *boolean*

Synopsis	Enable PIM IPv4 signaling through a BIER domain
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bier-signaling-type</b> <b>ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6** *boolean*

Synopsis	Enable PIM IPv6 signaling through a BIER domain
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bier-signaling-type</b> <b>ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bsm-check-rtr-alert** *boolean*

Synopsis	Check router alert option in bootstrap messages received
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bsm-check-rtr-alert</b> <i>boolean</i>
Tree	<b>bsm-check-rtr-alert</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>hello-interval</b> <i>number</i>
Tree	<b>hello-interval</b>
Range	0 to 255
Default	30
Introduced	16.0.R1

Platforms All

### **hello-multiplier** *number*

Synopsis Multiplier to determine the hold time for PIM neighbor

Context **configure** *router string pim interface string hello-multiplier number*

Tree [hello-multiplier](#)

Range 20 to 100

Default 35

Introduced 16.0.R1

Platforms All

### **improved-assert** *boolean*

Synopsis Allow improved assert processing on interface

Context **configure** *router string pim interface string improved-assert boolean*

Tree [improved-assert](#)

Default true

Introduced 16.0.R1

Platforms All

### **instant-prune-echo** *boolean*

Synopsis Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface

Context **configure** *router string pim interface string instant-prune-echo boolean*

Tree [instant-prune-echo](#)

Default false

Introduced 16.0.R1

Platforms All

### **ipv4**

Synopsis Enter the **ipv4** context

Context **configure** *router string pim interface string ipv4*

Tree [ipv4](#)

Introduced 16.0.R1  
 Platforms All

### **monitor-oper-group**

Synopsis Enter the **monitor-oper-group** context  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#)  
 Tree [monitor-oper-group](#)  
 Introduced 16.0.R1  
 Platforms All

### **name** *reference*

Synopsis Operational group identifier  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) [name](#) *reference*  
 Tree [name](#)  
 Reference **configure** [service](#) [oper-group](#) *string*  
 Introduced 16.0.R1  
 Platforms All

### **operation** *keyword*

Synopsis Operation performed when operational group is active  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) [operation](#) *keyword*  
 Tree [operation](#)  
 Options add, subtract, set  
 Introduced 16.0.R1  
 Platforms All

### **priority-delta** *number*

Synopsis Delta priority with operation when operational group is active  
 Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) [priority-delta](#) *number*  
 Tree [priority-delta](#)

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **multicast** *boolean*

Synopsis	Enable PIM interface operation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>multicast</b> <i>boolean</i>
Tree	<a href="#">multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group**

Synopsis	Enter the <b>monitor-oper-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <b>monitor-oper-group</b>
Tree	<a href="#">monitor-oper-group</a>
Introduced	16.0.R1
Platforms	All

### **name** *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <b>monitor-oper-group</b> <i>name</i> <i>reference</i>
Tree	<a href="#">name</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>

Introduced 16.0.R1  
Platforms All

### **operation** *keyword*

Synopsis Operation performed when operational group is active  
Context **configure** *router string pim interface string ipv6 monitor-oper-group operation keyword*  
Tree [operation](#)  
Options add, subtract, set  
Introduced 16.0.R1  
Platforms All

### **priority-delta** *number*

Synopsis Delta priority with operation when operational group is active  
Context **configure** *router string pim interface string ipv6 monitor-oper-group priority-delta number*  
Tree [priority-delta](#)  
Range 1 to 4294967295  
Introduced 16.0.R1  
Platforms All

### **multicast** *boolean*

Synopsis Enable PIM interface operation  
Context **configure** *router string pim interface string ipv6 multicast boolean*  
Tree [multicast](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **max-groups** *number*

Synopsis Maximum number of groups for the interface  
Context **configure** *router string pim interface string max-groups number*  
Tree [max-groups](#)

Range	0   1 to 16000
Default	0
Introduced	16.0.R1
Platforms	All

## mcac

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <b>mcac</b>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	All

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

## total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
----------	---------------------------

Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac bandwidth total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure mcac interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **mc-constraints**

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac mc-constraints</b>
Tree	<b>mc-constraints</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the multicast CAC constraints
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac mc-constraints admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**level** [*level-id*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<i>level</i>
Introduced	16.0.R1
Platforms	All

**[level-id]** *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<i>level</i>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bandwidth** *number*

Synopsis	Bandwidth available for this level
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number bandwidth number</i>
Tree	<i>bandwidth</i>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**number-down** [*number-lag-port-down*] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints number-down number</i>
Tree	<i>number-down</i>

Introduced 16.0.R1  
 Platforms All

### **[number-lag-port-down]** *number*

Synopsis Number of ports that are down in this LAG link  
 Context **configure** *router string pim interface string mcac mc-constraints number-down number*  
 Tree [number-down](#)  
 Range 1 to 64  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **level** *number*

Synopsis Level ID to associate with number of down LAG ports  
 Context **configure** *router string pim interface string mcac mc-constraints number-down number level number*  
 Tree [level](#)  
 Description This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.  
 Range 1 to 8  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **use-lag-port-weight** *boolean*

Synopsis Use LAG port weight in calculating MCAC constraints  
 Context **configure** *router string pim interface string mcac mc-constraints use-lag-port-weight boolean*  
 Tree [use-lag-port-weight](#)  
 Description When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.

Default	false
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <b>mcac</b> <b>policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **multicast-senders** *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>multicast-senders</b> <i>keyword</i>
Tree	<b>multicast-senders</b>
Options	auto, always, never
Default	auto
Introduced	16.0.R1
Platforms	All

## p2mp-ldp-tree-join

Synopsis	Enter the <b>p2mp-ldp-tree-join</b> context
Context	<b>configure</b> <i>router string pim interface string</i> <b>p2mp-ldp-tree-join</b>
Tree	<b>p2mp-ldp-tree-join</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv4 *boolean*

Synopsis	Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Context	<b>configure</b> <i>router string pim interface string</i> <b>p2mp-ldp-tree-join ipv4 <i>boolean</i></b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv6 *boolean*

Synopsis	Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Context	<b>configure</b> <i>router string pim interface string</i> <b>p2mp-ldp-tree-join ipv6 <i>boolean</i></b>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	DR election priority for this interface
Context	<b>configure</b> <i>router string pim interface string</i> <b>priority <i>number</i></b>
Tree	<b>priority</b>
Range	1 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

## **sticky-dr**

Synopsis	Enable the <b>sticky-dr</b> context
Context	<b>configure</b> <i>router string pim interface string sticky-dr</i>
Tree	<a href="#">sticky-dr</a>
Introduced	16.0.R1
Platforms	All

## **priority number**

Synopsis	DR election priority for this interface
Context	<b>configure</b> <i>router string pim interface string sticky-dr priority number</i>
Tree	<a href="#">priority</a>
Range	1 to 4294967295
Default	1024
Introduced	16.0.R1
Platforms	All

## **three-way-hello boolean**

Synopsis	Allow three-way hello compatibility mode
Context	<b>configure</b> <i>router string pim interface string three-way-hello boolean</i>
Tree	<a href="#">three-way-hello</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **tracking-support boolean**

Synopsis	Allow upstream routers to explicitly track join membership
Context	<b>configure</b> <i>router string pim interface string tracking-support boolean</i>
Tree	<a href="#">tracking-support</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ipv4</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## gtm

Synopsis	Enter the <b>gtm</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ipv4</a> <a href="#">gtm</a>
Tree	<a href="#">gtm</a>
Introduced	16.0.R1
Platforms	All

## auto-discovery *keyword*

Synopsis	Method for multicast VPN membership auto-discovery
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ipv4</a> <a href="#">gtm</a> <a href="#">auto-discovery</a> <i>keyword</i>
Tree	<a href="#">auto-discovery</a>
Options	bgp
Introduced	16.0.R1
Platforms	All

**multicast-fast-failover** *boolean*

Synopsis	Use Multicast-Only Fast Reroute (MoFRR) functionality
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>multicast-fast-failover</b> <i>boolean</i>
Tree	<b>multicast-fast-failover</b>
Default	false
Introduced	16.0.R1
Platforms	All

**rpf-table** *keyword*

Synopsis	Route tables for RPF lookup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>rpf-table</b> <i>keyword</i>
Tree	<b>rpf-table</b>
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	16.0.R1
Platforms	All

**ssm-assert-compatible-mode** *boolean*

Synopsis	Enable SSM assert compatible mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>ssm-assert-compatible-mode</b> <i>boolean</i>
Tree	<b>ssm-assert-compatible-mode</b>
Default	false
Introduced	16.0.R1
Platforms	All

**ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>ssm-default-range</b> <i>boolean</i>
Tree	<b>ssm-default-range</b>
Default	true
Introduced	16.0.R1

Platforms All

## ipv6

Synopsis Enter the **ipv6** context  
Context **configure router string pim ipv6**  
Tree **ipv6**  
Introduced 16.0.R1  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of PIM operation for IPv6  
Context **configure router string pim ipv6 admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Default disable  
Introduced 16.0.R1  
Platforms All

## multicast-fast-failover *boolean*

Synopsis Use Multicast-Only Fast Reroute (MoFRR) functionality  
Context **configure router string pim ipv6 multicast-fast-failover boolean**  
Tree **multicast-fast-failover**  
Default false  
Introduced 16.0.R1  
Platforms All

## rpf-table *keyword*

Synopsis Route tables for RPF lookup  
Context **configure router string pim ipv6 rpf-table keyword**  
Tree **rpf-table**  
Options rtable-m, rtable-u, both

---

Default	rtable-u
Introduced	16.0.R1
Platforms	All

### **ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv6</b> <b>ssm-default-range</b> <i>boolean</i>
Tree	<a href="#">ssm-default-range</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **lag-usage-optimization** *boolean*

Synopsis	Optimize LAG usage
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>lag-usage-optimization</b> <i>boolean</i>
Tree	<a href="#">lag-usage-optimization</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-balance** *boolean*

Synopsis	Enable multicast balancing of traffic over ECMP links
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>mc-ecmp-balance</b> <i>boolean</i>
Tree	<a href="#">mc-ecmp-balance</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-balance-hold** *number*

Synopsis	Hold time for multicast balancing over ECMP links
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>mc-ecmp-balance-hold</b> <i>number</i>

---

Tree	<a href="#">mc-ecmp-balance-hold</a>
Range	2 to 600
Units	minutes
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-hashing**

Synopsis	Enable the <b>mc-ecmp-hashing</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mc-ecmp-hashing</a>
Tree	<a href="#">mc-ecmp-hashing</a>
Introduced	16.0.R1
Platforms	All

### **rebalance** *boolean*

Synopsis	Rebalance flows to newly added links immediately instead of waiting until they are pruned
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mc-ecmp-hashing rebalance</a> <i>boolean</i>
Tree	<a href="#">rebalance</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mdt-spt** *boolean*

Synopsis	Use SPT switchover for default MDT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mdt-spt</a> <i>boolean</i>
Tree	<a href="#">mdt-spt</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **non-dr-attract-traffic** *boolean*

Synopsis	Attract traffic when the router is not the designated one
----------	---

Context	<b>configure router</b> <i>string</i> <b>pim non-dr-attract-traffic</b> <i>boolean</i>
Tree	<b>non-dr-attract-traffic</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **pim-ssm-scaling** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PIM-SSM scaling
Context	<b>configure router</b> <i>string</i> <b>pim pim-ssm-scaling</b> <i>boolean</i>
Tree	<b>pim-ssm-scaling</b>
Description	<p>When configured to <b>true</b>, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.</p> <p>When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to <b>dynamic</b>, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.</p> <p>When PIM SSM scaling is enabled, the following multicast features are disabled:• DM• MoFRR• JP policy• SSM groups• InBand features (BIER and MLDP)• Extranet• ASM</p> <p>When configured to <b>false</b>, there is no increase of PIM SSM (S,G) scaling.</p>
Default	false
Introduced	19.7.R1
Platforms	All

### **rp**

Synopsis	Enter the <b>rp</b> context
Context	<b>configure router</b> <i>string</i> <b>pim rp</b>
Tree	<b>rp</b>

Introduced 16.0.R1  
 Platforms All

## bootstrap

Synopsis Enter the **bootstrap** context  
 Context **configure** [router](#) *string* [pim rp bootstrap](#)  
 Tree [bootstrap](#)  
 Introduced 16.0.R1  
 Platforms All

## export reference

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim rp bootstrap export reference](#)  
 Tree [export](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

## import reference

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim rp bootstrap import reference](#)  
 Tree [import](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string pim rp ipv4</i>
Tree	<i>ipv4</i>
Introduced	16.0.R1
Platforms	All

**anycast** [*ipv4-address*] *string rp-set-peer string*

Synopsis	Add a list entry for <b>anycast</b>
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Introduced	16.0.R1
Platforms	All

**[ipv4-address]** *string*

Synopsis	Loopback IP address shared by routes in RP set
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**rp-set-peer** *string*

Synopsis	Configure a peer in the anycast rp-set.
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **auto-rp-discovery** *boolean*

Synopsis	Enable auto RP discovery
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 auto-rp-discovery</i> <i>boolean</i>
Tree	<a href="#">auto-rp-discovery</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bsr-candidate**

Synopsis	Enter the <b>bsr-candidate</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 bsr-candidate</i>
Tree	<a href="#">bsr-candidate</a>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 bsr-candidate</i> <i>address</i> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 bsr-candidate</i> <i>admin-state</i> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**hash-mask-len** *number*

Synopsis	Length for bootstrap hash mask
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 bsr-candidate</b> <b>hash-mask-len</b> <i>number</i>
Tree	<b>hash-mask-len</b>
Range	0 to 32
Default	30
Introduced	16.0.R1
Platforms	All

**priority** *number*

Synopsis	Bootstrap priority of the router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 bsr-candidate</b> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

**candidate** *boolean*

Synopsis	Enable auto-RP to advertise candidate RP information
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 candidate</b> <i>boolean</i>
Tree	<b>candidate</b>
Description	When configured to <b>true</b> , the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.  When configured to <b>false</b> , the candidate RP information is not specified.
Default	false
Introduced	20.10.R1
Platforms	All

**mapping-agent** *boolean*

Synopsis	Enable the mapping agent on the node
----------	--------------------------------------

Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 mapping-agent</b> <i>boolean</i>
Tree	<a href="#">mapping-agent</a>
Description	When configured to <b>true</b> , the mapping agent is enabled on the node. The auto-RP MA observes the <b>auto-rp-announcement</b> messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	20.10.R1
Platforms	All

### rp-candidate

Synopsis	Enter the <b>rp-candidate</b> context
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate</b>
Tree	<a href="#">rp-candidate</a>
Introduced	16.0.R1
Platforms	All

### address *string*

Synopsis	Local RP address
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate</b> <b>address</b> <i>string</i>
Tree	<a href="#">address</a>
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
Introduced	16.0.R1
Platforms	All

### admin-state *keyword*

Synopsis	Administrative state of the Candidate RP
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms All

### **group-range** [ipv4-prefix] *string*

Synopsis Add a list entry for **group-range**  
Context **configure** **router** *string* **pim** **rp** **ipv4** **rp-candidate** **group-range** *string*  
Tree [group-range](#)  
Introduced 16.0.R1  
Platforms All

### **[ipv4-prefix]** *string*

Synopsis IPv4 address and prefix length  
Context **configure** **router** *string* **pim** **rp** **ipv4** **rp-candidate** **group-range** *string*  
Tree [group-range](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **holdtime** *number*

Synopsis Time during which the neighboring router considers this router to be up  
Context **configure** **router** *string* **pim** **rp** **ipv4** **rp-candidate** **holdtime** *number*  
Tree [holdtime](#)  
Range 5 to 255  
Units seconds  
Default 150  
Introduced 16.0.R1  
Platforms All

### **priority** *number*

Synopsis Candidate RP priority  
Context **configure** **router** *string* **pim** **rp** **ipv4** **rp-candidate** **priority** *number*  
Tree [priority](#)

Range	0 to 255
Default	192
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <i>router string pim rp ipv4 static</i>
Tree	<i>static</i>
Introduced	16.0.R1
Platforms	All

**address** [*ipv4-address*] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <i>router string pim rp ipv4 static address string</i>
Tree	<i>address</i>
Introduced	16.0.R1
Platforms	All

**[ipv4-address]** *string*

Synopsis	IPv4 address for the static RP
Context	<b>configure</b> <i>router string pim rp ipv4 static address string</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**group-prefix** [*ipv4-prefix*] *string*

Synopsis	Add a list entry for <b>group-prefix</b>
Context	<b>configure</b> <i>router string pim rp ipv4 static address string group-prefix string</i>
Tree	<i>group-prefix</i>

Introduced 16.0.R1  
 Platforms All

### **[ipv4-prefix]** *string*

Synopsis IPv4 address and prefix length  
 Context **configure** *router string pim rp ipv4 static address string group-prefix string*  
 Tree *group-prefix*  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **override** *boolean*

Synopsis Change the precedence for static RP over dynamically learnt RP  
 Context **configure** *router string pim rp ipv4 static address string override boolean*  
 Tree *override*  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **ipv6**

Synopsis Enter the **ipv6** context  
 Context **configure** *router string pim rp ipv6*  
 Tree *ipv6*  
 Introduced 16.0.R1  
 Platforms All

### **anycast** [*ipv6-address*] *string rp-set-peer string*

Synopsis Add a list entry for **anycast**  
 Context **configure** *router string pim rp ipv6 anycast string rp-set-peer string*  
 Tree *anycast*  
 Introduced 16.0.R1

Platforms All

### **[ipv6-address] string**

Synopsis Loopback IP address shared by routes in RP set  
Context **configure** [router string](#) [pim rp ipv6 anycast string](#) [rp-set-peer string](#)  
Tree [anycast](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **rp-set-peer string**

Synopsis Peer in the anycast RP set  
Context **configure** [router string](#) [pim rp ipv6 anycast string](#) [rp-set-peer string](#)  
Tree [anycast](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **bsr-candidate**

Synopsis Enter the **bsr-candidate** context  
Context **configure** [router string](#) [pim rp ipv6 bsr-candidate](#)  
Tree [bsr-candidate](#)  
Introduced 16.0.R1  
Platforms All

### **address string**

Synopsis Candidate BSR IP address for Bootstrap Router election  
Context **configure** [router string](#) [pim rp ipv6 bsr-candidate address string](#)  
Tree [address](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 bsr-candidate</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **hash-mask-len** *number*

Synopsis	Length for bootstrap hash mask
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 bsr-candidate</b> <b>hash-mask-len</b> <i>number</i>
Tree	<b>hash-mask-len</b>
Range	0 to 128
Default	126
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Bootstrap priority of the router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 bsr-candidate</b> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **embedded-rp**

Synopsis	Enable the <b>embedded-rp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6</b> <b>embedded-rp</b>
Tree	<b>embedded-rp</b>

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of embedded RP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 embedded-rp admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **group-range** [**ipv6-prefix**] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 embedded-rp group-range</b> <i>string</i>
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

### **[ipv6-prefix]** *string*

Synopsis	IPv6 address and prefix length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 embedded-rp group-range</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **rp-candidate**

Synopsis	Enter the <b>rp-candidate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv6 rp-candidate</b>
Tree	<b>rp-candidate</b>

Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Local RP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv6</b> <b>rp-candidate</b> <b>address</b> <i>string</i>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Candidate RP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv6</b> <b>rp-candidate</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **group-range** [**ipv6-prefix**] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv6</b> <b>rp-candidate</b> <b>group-range</b> <i>string</i>
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

### [**ipv6-prefix**] *string*

Synopsis	IPv6 address and prefix length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv6</b> <b>rp-candidate</b> <b>group-range</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

**holdtime** *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate holdtime number</i>
Tree	<a href="#">holdtime</a>
Range	5 to 255
Units	seconds
Default	150
Introduced	16.0.R1
Platforms	All

**priority** *number*

Synopsis	Candidate RP priority
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	192
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <i>router string pim rp ipv6 static</i>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

**address** [[ipv6-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv6 static address</i> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

**[ipv6-address]** *string*

Synopsis	Static IP address of the RP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv6 static address</i> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**group-prefix** [[ipv6-prefix](#)] *string*

Synopsis	Add a list entry for <b>group-prefix</b>
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv6 static address</i> <i>string</i> <i>group-prefix</i> <i>string</i>
Tree	<a href="#">group-prefix</a>
Introduced	16.0.R1
Platforms	All

**[ipv6-prefix]** *string*

Synopsis	IPv6 address and prefix length
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv6 static address</i> <i>string</i> <i>group-prefix</i> <i>string</i>
Tree	<a href="#">group-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**override** *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv6 static address</i> <i>string</i> <i>override</i> <i>boolean</i>

Tree	<a href="#">override</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **rpfv**

Synopsis	Enter the <b>rpfv</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">rpfv</a>
Tree	<a href="#">rpfv</a>
Introduced	16.0.R1
Platforms	All

## **core** *boolean*

Synopsis	Include proxy RPF vector for core
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">rpfv</a> <a href="#">core</a> <i>boolean</i>
Tree	<a href="#">core</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **mvpn** *boolean*

Synopsis	Include proxy RPF vector for Inter-AS Rosen MVPN
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">rpfv</a> <a href="#">mvpn</a> <i>boolean</i>
Tree	<a href="#">mvpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **spt-switchover** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>spt-switchover</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">spt-switchover</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )

Tree	<a href="#">spt-switchover</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">spt-switchover</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">spt-switchover</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **threshold** (*number* | *keyword*)

Synopsis	SPT switchover threshold
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">spt-switchover</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">threshold</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">threshold</a>
Range	1 to 4294967294
Units	kilobps
Options	infinity
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **ssm-groups**

Synopsis	Enter the <b>ssm-groups</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ssm-groups</a>
Tree	<a href="#">ssm-groups</a>
Introduced	16.0.R1
Platforms	All

**group-range** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ssm-groups</a> <a href="#">group-range</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">group-range</a>
Introduced	16.0.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">ssm-groups</a> <a href="#">group-range</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**radius**

Synopsis	Enter the <b>radius</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius</a>
Tree	<a href="#">radius</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**proxy** [[name](#)] *string*

Synopsis	Enter the <b>proxy</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius</a> <a href="#">proxy</a> <i>string</i>
Tree	<a href="#">proxy</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	RADIUS proxy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i>
Tree	<a href="#">proxy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of RADIUS proxy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-matching**

Synopsis	Enter the <b>attribute-matching</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <b>attribute-matching</b>
Tree	<a href="#">attribute-matching</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**entry** [[index](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <b>attribute-matching</b> <b>entry</b> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[index] number**

Synopsis	Index of this entry
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accounting-server-policy string**

Synopsis	Accounting server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i> <a href="#">accounting-server-policy</a> <i>string</i>
Tree	<a href="#">accounting-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**authentication-server-policy string**

Synopsis	Authentication server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i> <a href="#">authentication-server-policy</a> <i>string</i>
Tree	<a href="#">authentication-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**prefix-string string**

Synopsis	Prefix string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i> <a href="#">prefix-string</a> <i>string</i>
Tree	<a href="#">prefix-string</a>

String Length 1 to 128  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **suffix-string** *string*

Synopsis Prefix string  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching](#) *entry* *number* **suffix-string** *string*  
 Tree [suffix-string](#)  
 String Length 1 to 128  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis Matching attribute type to RADIUS server policy  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching](#) *type* *number*  
 Tree [type](#)  
 Range 1 to 255  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis Matching Vendor ID to RADIUS server policy  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching](#) **vendor** (*number* | *keyword*)  
 Tree [vendor](#)  
 Range 1 to 16777215  
 Options nokia  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cache**

Synopsis Enter the **cache** context

---

Context	<b>configure</b> <i>router string radius proxy string cache</i>
Tree	<i>cache</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the RADIUS proxy cache
Context	<b>configure</b> <i>router string radius proxy string cache admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **key**

Synopsis	Enable the <b>key</b> context
Context	<b>configure</b> <i>router string radius proxy string cache key</i>
Tree	<i>key</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-type** *number*

Synopsis	RADIUS attribute type to cache for this RADIUS proxy server
Context	<b>configure</b> <i>router string radius proxy string cache key attribute-type number</i>
Tree	<i>attribute-type</i>
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**packet-type** *keyword*

Synopsis	Packet type of the RADIUS messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache key</b> <b>packet-type</b> <i>keyword</i>
Tree	<b>packet-type</b>
Options	access-request, access-accept
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor** (*number* | *keyword*)

Synopsis	RADIUS Vendor ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache key</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>vendor</b>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**timeout** *number*

Synopsis	Idle timeout value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	60 to 3600
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**track-accounting**

Synopsis	Enter the <b>track-accounting</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>track-accounting</b>
Tree	<b>track-accounting</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-off** *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client  
Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting](#) **accounting-off** *boolean*  
Tree [accounting-off](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-on** *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client  
Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting](#) **accounting-on** *boolean*  
Tree [accounting-on](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interim-update** *boolean*

Synopsis Update the ESM host with the RADIUS client that generated the interim update  
Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting](#) **interim-update** *boolean*  
Tree [interim-update](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start** *boolean*

Synopsis Update host with client that generated accounting-start

Context	<b>configure</b> <i>router string radius proxy string cache track-accounting start</i> <i>boolean</i>
Tree	<a href="#">start</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**stop** *boolean*

Synopsis	Remove ESM host and forward accounting-stop packet
Context	<b>configure</b> <i>router string radius proxy string cache track-accounting stop</i> <i>boolean</i>
Tree	<a href="#">stop</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**track-authentication**

Synopsis	Enter the <b>track-authentication</b> context
Context	<b>configure</b> <i>router string radius proxy string cache track-authentication</i>
Tree	<a href="#">track-authentication</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accept** *boolean*

Synopsis	Track Access-Accept message for mobility
Context	<b>configure</b> <i>router string radius proxy string cache track-authentication accept</i> <i>boolean</i>
Tree	<a href="#">accept</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**track-delete-hold-time** *number*

Synopsis	Delete hold time
----------	------------------

Context	<b>configure</b> <i>router string radius proxy string cache track-delete-hold-time number</i>
Tree	<a href="#">track-delete-hold-time</a>
Range	0 to 6000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <i>router string radius proxy string defaults</i>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## accounting-server-policy *string*

Synopsis	Default accounting RADIUS server policy
Context	<b>configure</b> <i>router string radius proxy string defaults accounting-server-policy string</i>
Tree	<a href="#">accounting-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## authentication-server-policy *string*

Synopsis	Default authentication RADIUS server policy
Context	<b>configure</b> <i>router string radius proxy string defaults authentication-server-policy string</i>
Tree	<a href="#">authentication-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface** [[interface-name](#)] *string*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**load-balance-key**

Synopsis	Enter the <b>load-balance-key</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a>
Tree	<a href="#">load-balance-key</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-1**

Synopsis	Enter the <b>attribute-1</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a>
Tree	<a href="#">attribute-1</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a> <a href="#">type</a> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor (number | keyword)**

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a> <a href="#">vendor</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-2**

Synopsis	Enter the <b>attribute-2</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-2</a>
Tree	<a href="#">attribute-2</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-2</a> <i>type</i> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor (number | keyword)**

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-2</a> <i>vendor</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-3**

Synopsis	Enter the <b>attribute-3</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a>
Tree	<a href="#">attribute-3</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
----------	--

Context	<b>configure</b> <i>router string radius proxy string load-balance-key attribute-3 type number</i>
Tree	<i>type</i>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number | keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <i>router string radius proxy string load-balance-key attribute-3 vendor (number   keyword)</i>
Tree	<i>vendor</i>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-4**

Synopsis	Enter the <b>attribute-4</b> context
Context	<b>configure</b> <i>router string radius proxy string load-balance-key attribute-4</i>
Tree	<i>attribute-4</i>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <i>router string radius proxy string load-balance-key attribute-4 type number</i>
Tree	<i>type</i>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor** (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key</b> <b>attribute-4</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>vendor</b>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-5**

Synopsis	Enter the <b>attribute-5</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key</b> <b>attribute-5</b>
Tree	<b>attribute-5</b>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type** *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key</b> <b>attribute-5</b> <b>type</b> <i>number</i>
Tree	<b>type</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor** (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key</b> <b>attribute-5</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>vendor</b>

Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### source-ip-udp

Synopsis	Key to consist of the source IP address and source UDP port of the RADIUS message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key</b> <b>source-ip-udp</b>
Tree	<a href="#">source-ip-udp</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### purpose *keyword*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Purpose of the RADIUS proxy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>purpose</b> <i>keyword</i>
Tree	<a href="#">purpose</a>
Options	accounting, authentication, accounting-authentication
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### python-policy *reference*

Synopsis	Python policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>python-policy</b> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <b>python</b> <b>python-policy</b> <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret string**

Synopsis Format of the secret key to access the RADIUS proxy server

Context **configure** *router string radius proxy string secret string*

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **send-accounting-response boolean**

Synopsis Allow RADIUS proxy server to respond to Accounting-Response messages

Context **configure** *router string radius proxy string send-accounting-response boolean*

Tree [send-accounting-response](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw**

Synopsis Enter the **wlan-gw** context

Context **configure** *router string radius proxy string wlan-gw*

Tree [wlan-gw](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis IPv4 address of the distributed RADIUS proxy server

Context **configure** *router string radius proxy string wlan-gw address string*

Tree [address](#)

Description This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.

Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6-address** *string*

Synopsis IPv6 address of the distributed RADIUS proxy server  
 Context **configure** *router string radius proxy string wlan-gw ipv6-address string*  
 Tree [ipv6-address](#)  
 Description This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis ISA WLAN gateway group  
 Context **configure** *router string radius proxy string wlan-gw-group reference*  
 Tree [wlan-gw-group](#)  
 Reference **configure** *isa wlan-gw-group number*  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **server** [*name*] *string*

Synopsis Enter the **server** list instance  
 Context **configure** *router string radius server string*  
 Tree [server](#)  
 Max. Instances 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	External RADIUS server name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accept-coa** *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>accept-coa</b> <i>boolean</i>
Tree	<b>accept-coa</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**acct-port** *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>acct-port</b> <i>number</i>
Tree	<b>acct-port</b>
Range	1 to 65535
Default	1813
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auth-port** *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>auth-port</b> <i>number</i>
Tree	<b>auth-port</b>
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pending-requests-limit** *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>pending-requests-limit</b> <i>number</i>
Tree	<b>pending-requests-limit</b>
Range	1 to 4096
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python script policy to modify CoA messages
----------	---

Context	<b>configure</b> <i>router string radius server string python-policy reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis	Secret key associated with this RADIUS server
Context	<b>configure</b> <i>router string radius server string secret string</i>
Tree	<a href="#">secret</a>
String Length	1 to 115
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reassemble**

Synopsis	Enable the <b>reassemble</b> context
Context	<b>configure</b> <i>router string reassemble</i>
Tree	<a href="#">reassemble</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-group** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group (including WLAN Gateway group) that executes the reassemble
Context	<b>configure</b> <i>router string reassemble nat-group number</i>
Tree	<a href="#">nat-group</a>
Max. Range	0 to 4294967295
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **to-base-network** *boolean*

Synopsis Allow reassembled traffic sent to network interface  
Context **configure** *router* *string* *reassemble* **to-base-network** *boolean*  
Tree [to-base-network](#)  
Default false  
Introduced 19.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rib-api**

Synopsis Enter the **rib-api** context  
Context **configure** *router* *string* *rib-api*  
Tree [rib-api](#)  
Introduced 16.0.R4  
Platforms All

### **mpls**

Synopsis Enter the **mpls** context  
Context **configure** *router* *string* *rib-api* *mpls*  
Tree [mpls](#)  
Introduced 16.0.R4  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of MPLS for RIB-API gRPC service  
Context **configure** *router* *string* *rib-api* *mpls* **admin-state** *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 16.0.R4

Platforms All

### label-name *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure reserved label block.

Context **configure** [router](#) *string* [rib-api](#) [mpls](#) [label-name](#) *reference*

Tree [label-name](#)

Reference **configure** [router](#) *string* [mpls-labels](#) [reserved-label-block](#) *string*

Introduced 16.0.R4

Platforms All

### rip

Synopsis Enable the **rip** context

Context **configure** [router](#) *string* [rip](#)

Tree [rip](#)

Introduced 16.0.R4

Platforms All

### admin-state *keyword*

Synopsis Administrative state of the RIP instance

Context **configure** [router](#) *string* [rip](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R4

Platforms All

### authentication-key *string*

Synopsis Authentication password passed between RIP neighbors

Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <i>authentication-key</i> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <i>authentication-type</i> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Default	none
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <i>bfd-liveness</i> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to <b>false</b>, this command removes BFD from the associated protocol adjacency.</p>

---

Default	false
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <b>check-zero</b> <i>boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <b>export-limit</b>
Tree	<a href="#">export-limit</a>
Introduced	16.0.R4
Platforms	All

**log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>export-limit</b> <b>log-percent</b> <i>number</i>
Tree	<b>log-percent</b>
Range	1 to 100
Introduced	16.0.R4
Platforms	All

**number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>export-limit</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**export-policy** *reference*

Synopsis	Policies to determine exported routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

**group** [*group-name*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i>
Tree	<b>group</b>

Introduced 16.0.R4  
Platforms All

### **[group-name]** *string*

Synopsis RIP group name  
Context **configure** **router** *string* **rip** **group** *string*  
Tree **group**  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of RIP neighbor interface group  
Context **configure** **router** *string* **rip** **group** *string* **admin-state** *keyword*  
Tree **admin-state**  
Options enable, disable  
Default enable  
Introduced 16.0.R4  
Platforms All

### **authentication-key** *string*

Synopsis Authentication password passed between RIP neighbors  
Context **configure** **router** *string* **rip** **group** *string* **authentication-key** *string*  
Tree **authentication-key**  
Description This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.  
  
The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.  
  
When unconfigured, this command removes the authentication password from the configuration and disables authentication.  
  
String Length 1 to 51

Introduced	16.0.R4
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>authentication-type</b> <i>keyword</i>
Tree	<b>authentication-type</b>
Description	This command configures the type of authentication to be used.  The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.  When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency.  When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>check-zero</b> <i>boolean</i>
Tree	<b>check-zero</b>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.

When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes per RIP update message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">message-size</a> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">metric-in</a> <i>number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">metric-out</a> <i>number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**neighbor** [[interface-name](#)] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i>
Tree	<a href="#">neighbor</a>
Introduced	16.0.R4
Platforms	All

**[interface-name]** *string*

Synopsis	Neighbor added through the interface to the RIP group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i>
Tree	<a href="#">neighbor</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**authentication-key** *string*

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication password from the configuration and disables authentication.

String Length 1 to 51

Introduced 16.0.R4

Platforms All

### **authentication-type** *keyword*

Synopsis Authentication type

Context **configure** *router string rip group string neighbor string authentication-type keyword*

Tree [authentication-type](#)

Description This command configures the type of authentication to be used.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

Options none, password, md5, md20

Introduced 16.0.R4

Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD to control the state of protocol adjacency

Context **configure** *router string rip group string neighbor string bfd-liveness boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.

When configured to **false**, this command removes BFD from the associated protocol adjacency.

Introduced 16.0.R4

Platforms All

### **check-zero** *boolean*

Synopsis Enable checking of mandatory zero fields

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">check-zero</a> <i>boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">description</a> <i>string</i>

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <i>router string rip group string neighbor string preference number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <i>router string rip group string neighbor string receive keyword</i>
Tree	<a href="#">receive</a>
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <i>router string rip group string neighbor string send keyword</i>
Tree	<a href="#">send</a>
Options	none, version-1, broadcast, multicast, unicast
Introduced	16.0.R4
Platforms	All

**split-horizon *boolean***

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <i>router string rip group string neighbor string split-horizon boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

**timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <i>router string rip group string neighbor string timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

**flush *number***

Synopsis	RIP flush timer
Context	<b>configure</b> <i>router string rip group string neighbor string timers flush number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string rip group string neighbor string timers</i> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <i>router string rip group string neighbor string timers</i> <b>update</b> <i>number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**unicast-address** [*address*] *string*

Synopsis	Add a list entry for <b>unicast-address</b>
Context	<b>configure</b> <i>router string rip group string neighbor string</i> <b>unicast-address</b> <i>string</i>
Tree	<b>unicast-address</b>
Introduced	16.0.R4
Platforms	All

**[address] string**

Synopsis	Unicast address for the neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>unicast-address</b> <i>string</i>
Tree	<b>unicast-address</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**preference number**

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R4

Introduced	16.0.R4
Platforms	All

## flush number

Synopsis	RIP flush timer
Context	<b>configure</b> <i>router string ripng group string timers flush number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## timeout number

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string ripng group string timers timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">timers</a> <a href="#">update</a> <i>number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policies to decide routes for routing table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">message-size</a> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Default	25
Introduced	16.0.R4
Platforms	All

**metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>metric-in</b> <i>number</i>
Tree	<b>metric-in</b>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

**metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>metric-out</b> <i>number</i>
Tree	<b>metric-out</b>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

**preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	100
Introduced	16.0.R4
Platforms	All

**receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	none, ripng

Default	ripng
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <i>router string ripng send keyword</i>
Tree	<a href="#">send</a>
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <i>router string ripng split-horizon boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	16.0.R4
Platforms	All

### **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <i>router string ripng timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R4

Platforms All

### **flush** *number*

Synopsis RIP flush timer

Context **configure** *router string ripng timers flush number*

Tree [flush](#)

Description This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range 1 to 1200

Units seconds

Notes This element is mandatory.

Introduced 16.0.R4

Platforms All

### **timeout** *number*

Synopsis RIP timeout timer

Context **configure** *router string ripng timers timeout number*

Tree [timeout](#)

Description This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

Range 1 to 1200

Units seconds

Notes This element is mandatory.

Introduced 16.0.R4

Platforms All

### **update** *number*

Synopsis Timer that controls the frequency of updates

Context **configure** *router string ripng timers update number*

Tree [update](#)

Range 1 to 600

---

Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **router-id** *string*

Synopsis	Unique router ID for the router in the AS
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">router-id</a> <i>string</i>
Tree	<a href="#">router-id</a>
Introduced	16.0.R1
Platforms	All

### **rsvp**

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a>
Tree	<a href="#">rsvp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **authentication-over-bypass** *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">authentication-over-bypass</a> <i>boolean</i>

Tree	<a href="#">authentication-over-bypass</a>
Description	<p>When configured to <b>true</b>, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, PathErr, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.</p> <p>When configured to <b>false</b>, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.</p>
Default	false
Introduced	22.10.R1
Platforms	All

## dbw-accounting

Synopsis	Enable the <b>dbw-accounting</b> context
Context	<b>configure router</b> <i>string</i> <b>rsvp dbw-accounting</b>
Tree	<a href="#">dbw-accounting</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

Tree	<a href="#">authentication-key</a>

**Description** This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.

When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.

An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, *RSVP Cryptographic Authentication*.

The MD5 implementation does not support the authentication challenge procedures in RFC 2747.

**bw number**

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-down-threshold</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**percent number**

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-down-threshold</a> <a href="#">percent</a> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**dbw-multiplier number**

Synopsis	Configure the Dark Bandwidth multiplier.
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-multiplier</a> <i>number</i>
Tree	<a href="#">dbw-multiplier</a>
Range	0 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## dbw-up-threshold

Synopsis	Enable the <b>dbw-up-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-up-threshold</a>
Tree	<a href="#">dbw-up-threshold</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## bw number

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-up-threshold</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## percent number

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">dbw-up-threshold</a> <a href="#">percent</a> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## graceful-restart-helper-mode boolean

Synopsis	Enable graceful restart helper for the RSVP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">graceful-restart-helper-mode</a> <i>boolean</i>
Tree	<a href="#">graceful-restart-helper-mode</a>
Default	false

Introduced 16.0.R1  
 Platforms All

### **graceful-shutdown** *boolean*

Synopsis Initiate a graceful shutdown of RSVP interface  
 Context **configure** *router string rsvp interface reference graceful-shutdown boolean*  
 Tree [graceful-shutdown](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **hello-interval** *number*

Synopsis Time between RSVP Hello messages  
 Context **configure** *router string rsvp interface reference hello-interval number*  
 Tree [hello-interval](#)  
 Range 0 to 60  
 Units seconds  
 Default 3  
 Introduced 16.0.R1  
 Platforms All

### **implicit-null-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Signal the implicit null label value for all LSPs  
 Context **configure** *router string rsvp interface reference implicit-null-label boolean*  
 Tree [implicit-null-label](#)  
 Introduced 16.0.R1  
 Platforms All

## refresh-reduction

Synopsis	Enable the <b>refresh-reduction</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">refresh-reduction</a>
Tree	<a href="#">refresh-reduction</a>
Introduced	16.0.R1
Platforms	All

## reliable-delivery *boolean*

Synopsis	Reliable delivery of RSVP messages over the RSVP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">refresh-reduction</a> <a href="#">reliable-delivery</a> <i>boolean</i>
Tree	<a href="#">reliable-delivery</a>
Default	false
Introduced	16.0.R1
Platforms	All

## subscription *number*

Synopsis	Percentage of the link bandwidth to use for reservation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">subscription</a> <i>number</i>
Tree	<a href="#">subscription</a>
Range	0 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

## te-down-threshold

Synopsis	Enable the <b>te-down-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-down-threshold</a>
Tree	<a href="#">te-down-threshold</a>
Introduced	16.0.R1
Platforms	All

**value number**

Synopsis	Threshold level per interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rsvp</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">te-down-threshold</a> <a href="#">value</a> <a href="#">number</a>
Tree	<a href="#">value</a>
Range	0 to 100
Max. Instances	16
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R2
Platforms	All

**te-up-threshold**

Synopsis	Enable the <b>te-up-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rsvp</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">te-up-threshold</a>
Tree	<a href="#">te-up-threshold</a>
Introduced	16.0.R1
Platforms	All

**value number**

Synopsis	Threshold level per interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rsvp</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">te-up-threshold</a> <a href="#">value</a> <a href="#">number</a>
Tree	<a href="#">value</a>
Range	0 to 100
Max. Instances	16
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R2
Platforms	All

### **keep-multiplier** *number*

Synopsis	Value for the keep-multiplier to declare a reservation or neighbor as down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>keep-multiplier</b> <i>number</i>
Tree	<b>keep-multiplier</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **msg-pacing**

Synopsis	Enable the <b>msg-pacing</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>msg-pacing</b>
Tree	<b>msg-pacing</b>
Introduced	16.0.R1
Platforms	All

### **max-burst** *number*

Synopsis	Maximum RSVP messages that are sent over a specified period when message pacing is enabled
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>msg-pacing</b> <b>max-burst</b> <i>number</i>
Tree	<b>max-burst</b>
Range	100 to 1000
Default	650
Introduced	16.0.R1
Platforms	All

### **period** *number*

Synopsis	Time for RSVP message pacing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>msg-pacing</b> <b>period</b> <i>number</i>
Tree	<b>period</b>
Range	100 to 1000
Units	milliseconds

---

Default	100
Introduced	16.0.R1
Platforms	All

### **p2mp-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for abort timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>p2mp-merge-point-abort-timer</b> <i>number</i>
Tree	<b>p2mp-merge-point-abort-timer</b>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **p2p-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for P2P paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>p2p-merge-point-abort-timer</b> <i>number</i>
Tree	<b>p2p-merge-point-abort-timer</b>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **preemption-timer** *number*

Synopsis	Preemption timer for the MPLS instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>preemption-timer</b> <i>number</i>
Tree	<b>preemption-timer</b>
Range	0 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	All

**rapid-retransmit-time** *number*

Synopsis	Rapid retransmission interval to reliably deliver RSVP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>rapid-retransmit-time</b> <i>number</i>
Tree	<b>rapid-retransmit-time</b>
Range	1 to 100
Units	deciseconds
Default	5
Introduced	16.0.R1
Platforms	All

**rapid-retry-limit** *number*

Synopsis	Rapid retry limit to reliably deliver RSVP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>rapid-retry-limit</b> <i>number</i>
Tree	<b>rapid-retry-limit</b>
Range	1 to 6
Default	3
Introduced	16.0.R1
Platforms	All

**refresh-reduction-over-bypass** *boolean*

Synopsis	Enable refresh reduction capabilities over tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>refresh-reduction-over-bypass</b> <i>boolean</i>
Tree	<b>refresh-reduction-over-bypass</b>
Default	false
Introduced	16.0.R1
Platforms	All

**refresh-time** *number*

Synopsis	Interval between refresh messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>refresh-time</b> <i>number</i>
Tree	<b>refresh-time</b>

Range	1 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **te-down-threshold** *number*

Synopsis	Value for the te-down-threshold
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">te-down-threshold</a> <i>number</i>
Tree	<a href="#">te-down-threshold</a>
Range	0 to 100
Max. Instances	16
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **te-threshold-update**

Synopsis	Enable the <b>te-threshold-update</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">te-threshold-update</a>
Tree	<a href="#">te-threshold-update</a>
Introduced	16.0.R1
Platforms	All

### **on-cac-failure** *boolean*

Synopsis	CAC (Call Admission Control) failure-triggered IGP update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">te-threshold-update</a> <a href="#">on-cac-failure</a> <i>boolean</i>
Tree	<a href="#">on-cac-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

**update-timer** *number*

Synopsis	Timer-based IGP updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>te-threshold-update</b> <b>update-timer</b> <i>number</i>
Tree	<b>update-timer</b>
Range	1 to 300
Units	seconds
Introduced	16.0.R1
Platforms	All

**te-up-threshold** *number*

Synopsis	Value for the te-up-threshold
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>te-up-threshold</b> <i>number</i>
Tree	<b>te-up-threshold</b>
Range	0 to 100
Max.	16
Instances	
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**segment-routing**

Synopsis	Enter the <b>segment-routing</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b>
Tree	<b>segment-routing</b>
Introduced	16.0.R1
Platforms	All

**maintenance-policy** [*policy-name*] *string*

Synopsis	Enter the <b>maintenance-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i>
Tree	<b>maintenance-policy</b>

Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	20.10.R1
Platforms	All

**[policy-name]** *string*

Synopsis	Maintenance policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i>
Tree	<b>maintenance-policy</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the maintenance policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command sets the administrative state of the maintenance policy. A maintenance policy must be administratively disabled to change any of the parameters. When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**bfd-liveness** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
----------	---

Context	<b>configure</b> <i>router string segment-routing maintenance-policy string bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session. When configured to <b>false</b> , seamless BFD is disabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **bfd-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string bfd-template reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	<b>configure</b> <i>bfd bfd-template string</i>
Introduced	20.10.R1
Platforms	All

### **hold-down-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string hold-down-timer number</i>
Tree	<a href="#">hold-down-timer</a>

Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000
Units	deciseconds
Default	0
Introduced	20.10.R1
Platforms	All

### **mode** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>mode</b> <i>keyword</i>
Tree	<b>mode</b>
Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Options	none, ecmp-protected, linear
Default	none
Introduced	20.10.R1
Platforms	All

### **return-path-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>maintenance-policy</i> <i>string</i> <i>return-path-label</i> <i>number</i>
Tree	<i>return-path-label</i>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.10.R1
Platforms	All

### **revert-timer** *number*

Synopsis	Revert timer for SR policy candidate paths
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>maintenance-policy</i> <i>string</i> <i>revert-timer</i> <i>number</i>
Tree	<i>revert-timer</i>
Description	<p>This command configures the revert timer for SR Policy candidate paths.</p> <p>The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.</p>
Range	0 to 4320
Units	minutes
Default	0
Introduced	20.10.R1
Platforms	All

### **threshold** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing maintenance-policy string</a> <a href="#">threshold number</a>
Tree	<a href="#">threshold</a>
Description	This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system.  This command is only valid in the <b>ecmp-protected</b> mode.
Range	1 to 32
Default	1
Introduced	20.10.R1
Platforms	All

### segment-routing-v6

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### base-routing-instance

Synopsis	Enter the <b>base-routing-instance</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing segment-routing-v6 base-routing-instance</a>
Tree	<a href="#">base-routing-instance</a>
Description	Commands in this context configure SRv6 SID functions for End, End.X, and service SIDs for IPv4 and IPv6 prefixes in the base routing instance.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### locator [[locator-name](#)] *reference*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing segment-routing-v6 base-routing-instance locator reference</a>

Tree	<a href="#">locator</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis	Enter the <b>function</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <b>function</b>
Tree	<a href="#">function</a>
Description	Commands in this context configure the function value of SRv6 SIDs. The <b>end-dt46</b> command is mutually exclusive with the <b>end-dt4</b> and <b>end-dt6</b> commands.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end** [[value](#)] *number*

Synopsis	Enter the <b>end</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end</b> <i>number</i>
Tree	<a href="#">end</a>
Description	Commands in this context configure the attributes of SRv6 End SID function. The End SID functions for each SRH mode must be statically allocated. The value is not automatically allocated by default for a locator.
Max. Instances	8

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[value]** *number*

Synopsis	SRv6 SID function value
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end</b> <i>number</i> <b>srh-mode</b> <i>keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Options	psp, usp
Default	psp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt4**

Synopsis	Enable the <b>end-dt4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end-dt4</b>
Tree	<a href="#">end-dt4</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <a href="#">end-dt4</a> <a href="#">value</a> <a href="#">number</a>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt46**

Synopsis	Enable the <b>end-dt46</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <a href="#">end-dt46</a>
Tree	<a href="#">end-dt46</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <a href="#">end-dt46</a> <a href="#">value</a> <a href="#">number</a>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt6**

Synopsis	Enable the <b>end-dt6</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <a href="#">end-dt6</a>
Tree	<a href="#">end-dt6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value** *number*

Synopsis	SRv6 function value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-dt6</b> <b>value</b> <i>number</i>
Tree	<b>value</b>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-x** [*value*] *number*

Synopsis	Enter the <b>end-x</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-x</b> <i>number</i>
Tree	<b>end-x</b>
Description	<p>Commands in this context configure the attributes of the End.X SID function associated with a P2P interface.</p> <p>A static function value can be configured for each combination of SRH mode and protection type. For a specific interface, the static function value associated with the same combination of protection type and SRH mode overrides any corresponding function value that is automatically allocated (<b>end.x-auto-allocate</b> list configuration).</p> <p>If more than one value is configured for an interface and combination of SRH mode and protection type, they are all advertised in IS-IS.</p> <p>When used in remote TI-LFA repair tunnel programming, IS-IS uses rules to select one End.X value from the multiple values received in IS-IS link advertisements.</p> <p>Values assigned to loopback and system interfaces are not advertised in IS-IS.</p> <p>End.X SID functions for adjacencies over broadcast interfaces are always automatically allocated based on the configuration of the <b>end.x-auto-allocate</b> list.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[value]** *number*

Synopsis	SRv6 SID function value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-x</b> <i>number</i>
Tree	<b>end-x</b>

Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **interface-name** *reference*

Synopsis	Interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <b>interface-name</b> <i>reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for SID function
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <b>protection</b> <i>keyword</i>
Tree	<a href="#">protection</a>
Description	This command configures the adjacency protection type for the SID function.
Options	unprotected, protected
Default	protected
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <b>srh-mode</b> <i>keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Options	psp, usp

Default	psp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-x-auto-allocate** [*srh-mode*] *keyword* *protection keyword*

Synopsis	Add a list entry for <b>end-x-auto-allocate</b>
Context	<b>configure</b> <i>router string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>base-routing-instance</i> <i>locator reference</i> <i>function</i> <b>end-x-auto-allocate</b> <i>keyword</i> <i>protection keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command adds a list entry for the automatic allocation of the End.X SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces). A list entry is a combination of the protection type and the SRH mode. Any combinations in addition to the maximum supported by this command must be allocated statically under each P2P interface ( <b>end.x</b> configuration). When no list entries are configured, no End.X function values are automatically allocated by default for a locator.
Max. Instances	2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[srh-mode]** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>base-routing-instance</i> <i>locator reference</i> <i>function</i> <b>end-x-auto-allocate</b> <i>keyword</i> <i>protection keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for automatic SID function
----------	---

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the adjacency protection for the automatically allocated SID function.
Options	unprotected, protected
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis	SRv6 micro-segment locator name
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Description	This command references a micro-segment locator name defined in the <b>configure router segment-routing segment-routing-v6</b> context. This command assigns a micro-segment locator to BGP for use with Base router routes.
Reference	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis	Enter the <b>function</b> context
----------	-----------------------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**ua** [*value*] *number*

Synopsis	Enter the <b>ua</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>ua</b> <i>number</i>
Tree	<a href="#">ua</a>
Description	Commands in this context configure the attributes of the uA micro-SID function associated with a P2P interface. The uA micro-SID function encodes the behavior of an adjacency SID.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[value]** *number*

Synopsis	SRv6 SID function value
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>ua</b> <i>number</i>
Tree	<a href="#">ua</a>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**interface-name** *reference*

Synopsis	Interface name
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>ua</b> <i>number</i> <b>interface-name</b> <i>reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <i>router string</i> <a href="#">interface</a> <i>string</i>
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis Adjacency protection for SID function

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua number protection keyword*

Tree [protection](#)

Description This command configures the adjacency protection type for the SID function.

Options unprotected, protected

Default protected

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis Segment Routing Header (SRH) mode

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua number srh-mode keyword*

Tree [srh-mode](#)

Description This command configures the popping mode for the SID.

Options psp, usp

Default psp

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ua-auto-allocate** [[srh-mode](#)] *keyword protection keyword*

Synopsis Add a list entry for **ua-auto-allocate**

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua-auto-allocate keyword protection keyword*

Tree [ua-auto-allocate](#)

Description Commands in this context define a list entry for the automatic allocation of the uA micro-SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).

Max. Instances 2

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[srh-mode]** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">ua-auto-allocate</a>
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for automatic SID function
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">ua-auto-allocate</a>
Description	This command specifies the adjacency protection for the automatically allocated SID function.
Options	unprotected, protected
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **udt4**

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the locator

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <i>locator</i> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **algorithm** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <i>locator</i> <i>string</i> <a href="#">algorithm</a> <i>number</i>
Tree	<a href="#">algorithm</a>
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block-length** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator block address length
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <i>locator</i> <i>string</i> <a href="#">block-length</a> <i>number</i>
Tree	<a href="#">block-length</a>
Range	0 to 96
Default	0
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Function length
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>locator</i> <i>string</i> <b>function-length</b> <i>number</i>
Tree	<b>function-length</b>
Description	This command configures the size of the function length. The sum of the function length and the locator prefix length must not exceed 128 bits. Operators can configure the locator level <b>label-block</b> command before they configure a function length of 16. If the function length is configured as 16, the locator level <b>label-block</b> must be configured rather than the static-function level <b>label-block</b> . The validation occurs when committed.
Range	16   20 to 96
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**label-block** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block name for service termination
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>locator</i> <i>string</i> <b>label-block</b> <i>reference</i>
Tree	<b>label-block</b>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>mpls-labels</i> <i>reserved-label-block</i> <i>string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**prefix**

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>locator</i> <i>string</i> <b>prefix</b>
Tree	<b>prefix</b>

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-prefix *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <b>locator</b> <i>string</i> <b>prefix</b> <a href="#">ip-prefix</a> <i>string</i>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <b>locator</b> <i>string</i> <b>static-function</b>
Tree	<a href="#">static-function</a>
Description	Commands in this context configure the attributes of the function field range reserved for static End.d, End.X, and service SID assignment.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## label-block *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label block for the service SIDs of the SRv6 locator
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i> <a href="#">static-function</a> <a href="#">label-block</a> <i>reference</i>
Tree	<a href="#">label-block</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **max-entries** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i> <a href="#">static-function</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **termination-fpe** *reference*

Synopsis	List of the SRv6 termination FPE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i> <a href="#">termination-fpe</a> <i>reference</i>
Tree	<a href="#">termination-fpe</a>
Description	This command associates the Forwarding Path Extension (FPE) with the locator for terminating SRv6 in local services. Multiple locators can share the same FPE or each locator can use a different FPE. The FPE can be the same or different from the origination FPE.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## micro-segment

Synopsis Enable the **micro-segment** context

Context **configure** *router* *string* [segment-routing](#) [segment-routing-v6](#) [micro-segment](#)

Tree [admin-state](#)

Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## label-block *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <b>micro-segment</b> <b>block</b> <i>string</i> <a href="#">label-block</a> <i>reference</i>
Tree	<a href="#">label-block</a>
Description	This command associates a pre-configured reserved label block with the micro-SID block.
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## prefix

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <b>micro-segment</b> <b>block</b> <i>string</i> <a href="#">prefix</a>
Tree	<a href="#">prefix</a>
Description	Commands in this context configure the IPv6 prefix for an SRv6 micro-segment locator.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-prefix *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block</a> <i>string</i> <a href="#">prefix ip-prefix</a> <i>string</i>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block</a> <i>string</i> <a href="#">static-function</a>
Tree	<a href="#">static-function</a>
Description	Commands in this context configure the function field parameters of a static uA or service micro-SID assignment.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### max-entries *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block</a> <i>string</i> <a href="#">static-function</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **termination-fpe** *reference*

Synopsis FPE ID for SRv6 termination

Context **configure** **router** *string* [segment-routing](#) [segment-routing-v6](#) [micro-segment](#) **block** *string* [termination-fpe](#) *reference*

Tree [termination-fpe](#)

Description This command associates the FPE ID with the locator for SRv6 termination in local services.

Reference **configure** [fwd-path-ext](#) [fpe](#) *number*

Max. Instances 1

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block-length** *number*

Synopsis Micro-SID block length

Context **configure** **router** *string* [segment-routing](#) [segment-routing-v6](#) [micro-segment](#) **block-length** *number*

Tree [block-length](#)

Description This command configures the length of the micro-SID blocks.

Range 8 | 16 | 24 | 32 | 40 | 48 | 56 | 64

Default 32

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **global-sid-entries** *number*

Synopsis Maximum number of micro-segment locators network wide

Context **configure** **router** *string* [segment-routing](#) [segment-routing-v6](#) [micro-segment](#) **global-sid-entries** *number*

Tree [global-sid-entries](#)

Description This command defines the maximum number of unique micro-segment locators that can be configured network wide. The value is expressed in multiples of 1024 and must be the same on every platform network wide.

Range	4 to 60
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sid-length** *number*

Synopsis	Micro-SID length
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <b>sid-length</b> <i>number</i>
Tree	<a href="#">sid-length</a>
Description	This command configures the length of the micro-SIDs.
Range	16
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator** [[locator-name](#)] *string*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Tree	<a href="#">micro-segment-locator</a>
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *string*

Synopsis	SRv6 locator name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Tree	<a href="#">micro-segment-locator</a>
String Length	1 to 64
Notes	This element is part of a list key.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the locator
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **algorithm** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>algorithm</b> <i>number</i>
Tree	<a href="#">algorithm</a>
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-defined micro-SID block
----------	-----------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">block</a> <i>reference</i>
Tree	<a href="#">block</a>
Description	This command associates a pre-defined micro-SID block with the micro-segment SRv6 locator.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**un**

Synopsis	Enter the <b>un</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">un</a>
Tree	<a href="#">un</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**srh-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">un</a> <a href="#">srh-mode</a> <i>keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Options	psp, usp
Default	psp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 function value
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>un</b> <i>value number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## origination-fpe reference

Synopsis	List of the SRv6 origination FPEs
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">origination-fpe</a> <i>reference</i>
Tree	<a href="#">origination-fpe</a>
Description	This command configures the origination Forwarding Path Extension (FPE) for SRv6 tunnels on local services. The origination FPE must be different from any of the SRv6 termination FPEs.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## source-address string

Synopsis	Source address used in the SRv6 packet
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">source-address</a> <i>string</i>
Tree	<a href="#">source-address</a>
Description	This command specifies the global default source IPv6 address used in the SA field of the outerIPv6 header of the SRv6 encapsulated packet.  The value is inherited in the BGP and services contexts (for example, <b>configure router "base" bgp segment-routing-v6 source-address</b> and <b>configure service vprn bgp-ipvprn segment-routing-v6 source-address</b> ), but is overwritten by the value configured in those contexts.

A source IPv6 address must be configured in the global context or in the BGP or services context.

The system does not check if the entered address is a valid local address.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## sr-mpls

Synopsis	Enter the <b>sr-mpls</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing sr-mpls</a>
Tree	<a href="#">sr-mpls</a>
Introduced	21.10.R1
Platforms	All

## prefix-sids [[interface-name](#)] *reference*

Synopsis	Enter the <b>prefix-sids</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing sr-mpls prefix-sids reference</a>
Tree	<a href="#">prefix-sids</a>
Description	Commands in this context configure the prefix SIDs for an interface.
Introduced	21.10.R1
Platforms	All

## [\[interface-name\]](#) *reference*

Synopsis	Loopback interface name that owns prefix to advertise
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing sr-mpls prefix-sids reference</a>
Tree	<a href="#">prefix-sids</a>
Reference	<b>configure router</b> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

## ipv4-sid

Synopsis	Enable the <b>ipv4-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a>
Tree	<a href="#">ipv4-sid</a>
Introduced	21.10.R1
Platforms	All

## index number

Synopsis	Node SID index for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

## label number

Synopsis	Label value for the node SID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	32 to 1048575
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

## ipv6-sid

Synopsis	Enable the <b>ipv6-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv6-sid</a>
Tree	<a href="#">ipv6-sid</a>
Introduced	21.10.R1

Platforms All

### **index number**

Synopsis Node SID index for the interface

Context **configure** [router](#) *string* [segment-routing sr-mpls prefix-sids](#) *reference* [ipv6-sid index number](#)

Tree [index](#)

Range 0 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 21.10.R1

Platforms All

### **label number**

Synopsis Label value for the node SID

Context **configure** [router](#) *string* [segment-routing sr-mpls prefix-sids](#) *reference* [ipv6-sid label number](#)

Tree [label](#)

Range 32 to 1048575

Notes The following elements are part of a choice: **index** or **label**.

Introduced 21.10.R1

Platforms All

### **node-sid boolean**

Synopsis Assign a node SID to the prefix referencing the router

Context **configure** [router](#) *string* [segment-routing sr-mpls prefix-sids](#) *reference* [node-sid boolean](#)

Tree [node-sid](#)

Default true

Introduced 21.10.R1

Platforms All

### **sr-policies**

Synopsis Enter the **sr-policies** context

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a>
Tree	<a href="#">sr-policies</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing policies
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **egress-statistics**

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the traffic statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	All

## ingress-statistics

Synopsis	Enable the <b>ingress-statistics</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">ingress-statistics</a>
Tree	<a href="#">ingress-statistics</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the traffic statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">ingress-statistics</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## reserved-label-block *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved local block for segment routing policies
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">reserved-label-block</a> <i>reference</i>
Tree	<a href="#">reserved-label-block</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## static-policy [*name*] *string*

Synopsis	Enter the <b>static-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i>
Tree	<a href="#">static-policy</a>

Max. Instances	8192
Introduced	16.0.R1
Platforms	All

**[name]** *string*

Synopsis	Name for the segment routing static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i>
Tree	<b>static-policy</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**binding-sid** *number*

Synopsis	Segment ID that opaquely represents an SR policy to upstream routers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>binding-sid</b> <i>number</i>
Tree	<b>binding-sid</b>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

## color number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Traffic flows to be steered by this policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>color</b> <i>number</i>
Tree	<b>color</b>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

## distinguisher number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique value for a policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>distinguisher</b> <i>number</i>
Tree	<b>distinguisher</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination of the source-routed path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>endpoint</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>endpoint</b>
Introduced	16.0.R1

Platforms All

### head-end (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Head end address for this static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">head-end</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i>   <i>keyword</i> )
Tree	<a href="#">head-end</a>
Options	local
Introduced	16.0.R1
Platforms	All

### maintenance-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">maintenance-policy</a> <i>reference</i>
Tree	<a href="#">maintenance-policy</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### preference *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference value of this static policy
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

### **segment-list** [[seg-list-index](#)] *number*

Synopsis	Enter the <b>segment-list</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[seg-list-index]** *number*

Synopsis	Index for identifying a particular segment list
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment list for static policy
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **segment** [[segment-index](#)] *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>segment</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i>
Tree	<a href="#">segment</a>
Max. Instances	11
Introduced	16.0.R1
Platforms	All

### **[segment-index]** *number*

Synopsis	Index for identifying a particular segment list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i>
Tree	<a href="#">segment</a>
Range	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mpls-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Value for the MPLS label
----------	--------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <i>segment</i> <i>number</i> <i>mpls-label</i> <i>number</i>
Tree	<a href="#">mpls-label</a>
Range	0 to 1048575
Introduced	16.0.R1
Platforms	All

### **srv6-sid** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment ID for segment routing IPv6
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <i>segment</i> <i>number</i> <i>srv6-sid</i> <i>string</i>
Tree	<a href="#">srv6-sid</a>
Description	This command defines the 128-bit SRv6 SID for the segment.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **weight** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of this segment list
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <i>weight</i> <i>number</i>
Tree	<a href="#">weight</a>
Max. Range	0 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Description	Commands in this context configure a static SRv6 policy.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## binding-sid [[index](#)] *number*

Synopsis	Enter the <b>binding-sid</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## [\[index\]](#) *number*

Synopsis	Binding SID index
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Range	1
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**ip-address string**

Synopsis	Remote SRv6 binding SID
Context	<b>configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number ip-address string</b>
Tree	<a href="#">ip-address</a>
Description	This command configures an SRv6 binding SID for a remote SRv6 policy. The command cannot be used with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ). This command and the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid locator</b> command for a local SRv6 policy are mutually exclusive.  The format of the binding SID is a 128-bit IPv6 address.
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>locator</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**locator**

Synopsis	Enable the <b>locator</b> context
Context	<b>configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number locator</b>
Tree	<a href="#">locator</a>
Description	Commands in this context configure a binding SID locator for a local SRv6 policy. This command and the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid ip-address</b> command for a non-local SRv6 policy are mutually exclusive.
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>locator</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function keyword**

Synopsis	Local SRv6 binding SID locator function
Context	<b>configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number locator function keyword</b>
Tree	<a href="#">function</a>
Description	This command configures an SRv6 binding SID function for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ).

Options	end-b6-encaps-red
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function-value** *number*

Synopsis	Local SRv6 binding SID locator function value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-routing-v6</b> <b>binding-sid</b> <i>number</i> <b>locator</b> <b>function-value</b> <i>number</i>
Tree	<b>function-value</b>
Description	This command configures the function value for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ). If a function value is configured, the router checks whether this function value is available for the named locator. If no function value is configured, the router dynamically allocates a value.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator-name** *reference*

Synopsis	Local SRv6 binding SID locator name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-routing-v6</b> <b>binding-sid</b> <i>number</i> <b>locator</b> <b>locator-name</b> <i>reference</i>
Tree	<b>locator-name</b>
Description	This command configures an SRv6 binding SID locator for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ). A corresponding locator must exist in the <b>configure router segment-routing segment-routing-v6</b> context.
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**type** *keyword*

Synopsis	Static policy type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command configures the type of static policy. Only commands relevant to the type of the static policy can be executed. The type of the static policy can only be changed to a new type if there is no configuration present for the old type, or if all configuration for the old type is deleted.
Options	sr-mpls, srv6
Default	sr-mpls
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**selective-fib** *boolean*

Synopsis	Enable selective FIB
Context	<b>configure</b> <b>router</b> <i>string</i> <b>selective-fib</b> <i>boolean</i>
Tree	<b>selective-fib</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sfm-overload**

Synopsis	Enable the <b>sfm-overload</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sfm-overload</b>
Tree	<b>sfm-overload</b>
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

**holdoff-time** *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sfm-overload</b> <b>holdoff-time</b> <i>number</i>
Tree	<b>holdoff-time</b>

Range	1 to 600
Units	seconds
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

## sgt-qos

Synopsis	Enter the <b>sgt-qos</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a>
Tree	<a href="#">sgt-qos</a>
Introduced	16.0.R1
Platforms	All

## dot1p

Synopsis	Enter the <b>dot1p</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

## application [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

## [[dot1p-app-name](#)] *keyword*

Synopsis	Dot1p application ID that generates control traffic
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Options	arp, isis, pppoe

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **dot1p** (*keyword | number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	<b>configure router</b> <i>string sgt-qos dot1p application keyword dot1p</i> ( <i>keyword   number</i> )
Tree	<a href="#">dot1p</a>
Range	0 to 7
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### **dscp**

Synopsis	Enter the <b>dscp</b> context
Context	<b>configure router</b> <i>string sgt-qos dscp</i>
Tree	<a href="#">dscp</a>
Introduced	16.0.R1
Platforms	All

### **application** [[dscp-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure router</b> <i>string sgt-qos dscp application keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

### **[dscp-app-name]** *keyword*

Synopsis	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	<b>configure router</b> <i>string sgt-qos dscp application keyword</i>

Tree	<a href="#">application</a>
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, mpls-udp-return, pfc, ibcp
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **dscp** (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">application</a> <i>keyword</i> <a href="#">dscp</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">dscp</a>
Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

### **dscp-map** [[dscp-name](#)] *keyword*

Synopsis	Enter the <b>dscp-map</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">dscp-map</a> <i>keyword</i>
Tree	<a href="#">dscp-map</a>
Introduced	16.0.R2
Platforms	All

### **[dscp-name]** *keyword*

Synopsis	DSCP name mapped to forwarding class
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">dscp-map</a> <i>keyword</i>
Tree	<a href="#">dscp-map</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31,

cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **fc keyword**

Synopsis	Value for the forwarding class for this mapping
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos dscp dscp-map</a> <i>keyword</i> <b>fc</b> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2
Platforms	All

### **static-routes**

Synopsis	Enter the <b>static-routes</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">static-routes</a>
Tree	<a href="#">static-routes</a>
Introduced	16.0.R1
Platforms	All

### **hold-down**

Synopsis	Enable the <b>hold-down</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">static-routes hold-down</a>
Tree	<a href="#">hold-down</a>
Introduced	16.0.R1
Platforms	All

### **initial number**

Synopsis	Value for the initial hold down time
Context	<b>configure router</b> <i>string</i> <a href="#">static-routes hold-down</a> <i>initial number</i>

Tree	<a href="#">initial</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **max-value** *number*

Synopsis	Maximum value of the hold down time
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <a href="#">hold-down</a> <a href="#">max-value</a> <i>number</i>
Tree	<a href="#">max-value</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Value by which the previous hold-down time is multiplied to calculate the new one
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <a href="#">hold-down</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **route** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [route-type](#) *keyword*

Synopsis	Enter the <b>route</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i>
Tree	<a href="#">route</a>
Introduced	16.0.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i>
Tree	<b>route</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**route-type** *keyword*

Synopsis	Static route type for unicast or multicast RPF
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i>
Tree	<b>route</b>
Options	unicast, multicast
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**backup-tag** *number*

Synopsis	Static route backup tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>backup-tag</b> <i>number</i>
Tree	<b>backup-tag</b>
Description	<p>This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.</p> <p>The tag specified at this level of the static route causes the tag values that are configured under the <b>next-hop</b>, <b>black-hole</b>, and <b>indirect</b> contexts of the static route to be ignored.</p>
Range	1 to 4294967295
Introduced	21.2.R1
Platforms	All

## blackhole

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b>
Tree	<b>blackhole</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## community *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1

Platforms All

### **dynamic-bgp** *boolean*

Synopsis Derive static route next hop from BGP next hop value

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole** **dynamic-bgp** *boolean*

Tree **dynamic-bgp**

Default false

Introduced 16.0.R1

Platforms All

### **generate-icmp** *boolean*

Synopsis Send ICMP unreachable messages when received packets match a static route with black-hole next-hop

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole** **generate-icmp** *boolean*

Tree **generate-icmp**

Default false

Introduced 16.0.R1

Platforms All

### **metric** *number*

Synopsis Static route metric

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **blackhole** **metric** *number*

Tree **metric**

Range 0 to 65535

Default 1

Introduced 16.0.R1

Platforms All

### **preference** *number*

Synopsis Priority of this static route over the routes from different sources

Context	<b>configure</b> <i>router string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword</b> <b>blackhole preference number</b>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

## prefix-list

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure</b> <i>router string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword</b> <b>blackhole prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

## flag keyword

Synopsis	Static route match condition from prefix list
Context	<b>configure</b> <i>router string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword</b> <b>blackhole prefix-list flag keyword</b>
Tree	<b>flag</b>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

## name reference

Synopsis	Prefix list name
Context	<b>configure</b> <i>router string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword</b> <b>blackhole prefix-list name reference</b>
Tree	<b>name</b>
Reference	<b>configure</b> <b>policy-options prefix-list string</b>
Introduced	16.0.R1

Platforms All

### **tag number**

Synopsis Static route tag

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword blackhole tag number**

Tree **tag**

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

### **community string**

Synopsis Community ID associated with the static route

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword community string**

Tree **community**

String Length 1 to 72

Max. Instances 12

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **indirect [ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Enter the **indirect** list instance

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree **indirect**

Introduced 16.0.R1

Platforms All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address used to reach the destination
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>indirect</b>
Description	This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

**cpe-check** [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
----------	--

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p><b>Note:</b> A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of <b>cpe-ping</b>, the node paces these minor events.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>

Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 255
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Range	0 to 16384

Units	bytes
Default	56
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

**preference number**

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>preference number</b>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

**prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

**flag keyword**

Synopsis	Static route match condition from prefix list
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>prefix-list flag keyword</b>
Tree	<b>flag</b>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

**name reference**

Synopsis	Prefix list name
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>prefix-list name reference</b>

---

Tree	<a href="#">name</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## forwarding-class *keyword*

Synopsis	Forwarding class associated with the static route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">qos</a> <a href="#">forwarding-class</a> <i>keyword</i>
Tree	<a href="#">forwarding-class</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">qos</a> <a href="#">priority</a> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**source-class** *number*

Synopsis	Source class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>source-class</b> <b>number</b>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tag</b> <b>number</b>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b>
Tree	<b>tunnel-next-hop</b>
Introduced	16.0.R1
Platforms	All

**disallow-igp** *boolean*

Synopsis	Do not resolve indirect static routes using IGP next-hops in RTM if no tunnel next-hops found in TTM
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>disallow-igp</b> <b>boolean</b>
Tree	<b>disallow-igp</b>
Default	false

Introduced	16.0.R1
Platforms	All

### **flex-algo** *number*

Synopsis	Flexible Algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255
Introduced	20.7.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Tunnel next hop resolution to resolve indirect static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Options	none, filter, any
Default	none
Introduced	16.0.R1
Platforms	All

### **resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b>
Tree	<b>resolution-filter</b>
Introduced	16.0.R1
Platforms	All

### **ldp boolean**

Synopsis	Use LDP Route Forwarding Equivalence Class (FEC) tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>ldp</b> <b>boolean</b>
Tree	<b>ldp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for tunnel-next-hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>mpls-fwd-policy</b> <b>boolean</b>
Tree	<b>mpls-fwd-policy</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **rib-api boolean**

Synopsis	Set RIB API type for use with tunnel next-hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rib-api</b> <b>boolean</b>
Tree	<b>rib-api</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **rsvp-te**

Synopsis	Enable the <b>rsvp-te</b> context
----------	-----------------------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rsvp-te</b>
Tree	<b>rsvp-te</b>
Introduced	16.0.R1
Platforms	All

### **lsp** [**lsp-name**] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rsvp-te</b> <b>lsp</b> <i>string</i>
Tree	<b>lsp</b>
Introduced	16.0.R1
Platforms	All

### **[lsp-name]** *string*

Synopsis	Labeled Switch Path name
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rsvp-te</b> <b>lsp</b> <i>string</i>
Tree	<b>lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use the SR ISIS tunneling mechanism to resolve next hop for the static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Default	false

Introduced	16.0.R1
Platforms	All

### **sr-ospf boolean**

Synopsis	Use SR OSPF tunneling for next-hop resolution
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-ospf boolean</b>
Tree	<b>sr-ospf</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3 boolean**

Synopsis	Use SR OSPFv3 tunneling mechanism to resolve next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-ospf3 boolean</b>
Tree	<b>sr-ospf3</b>
Default	false
Introduced	16.0.R6
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te</b>
Tree	<b>sr-te</b>
Introduced	16.0.R1
Platforms	All

**lsp** [**lsp-name**] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te lsp</b> <i>string</i>
Tree	<b>lsp</b>
Introduced	16.0.R1
Platforms	All

**[lsp-name]** *string*

Synopsis	Labeled Switch Path name
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te lsp</b> <i>string</i>
Tree	<b>lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**interface** [**interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

**[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

### **cpe-check** [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 255
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

## log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <b>boolean</b>
Tree	<b>log</b>
Default	false
Introduced	16.0.R1
Platforms	All

## padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <b>number</b>
Tree	<b>padding-size</b>
Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>description</b> <b>string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## destination-class *number*

Synopsis	Destination class for this static route
----------	---

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **load-balancing-weight** *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5

Introduced	16.0.R1
Platforms	All

## prefix-list

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <a href="#">prefix-list</a>
Tree	<a href="#">prefix-list</a>
Introduced	16.0.R1
Platforms	All

## flag keyword

Synopsis	Static route match condition from prefix list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <a href="#">prefix-list</a> <a href="#">flag</a> <i>keyword</i>
Tree	<a href="#">flag</a>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

## name reference

Synopsis	Prefix list name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <a href="#">prefix-list</a> <a href="#">name</a> <i>reference</i>
Tree	<a href="#">name</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
----------	------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <b>static-routes</b> <i>route</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <i>route-type</i> <i>keyword</i> <i>interface</i> <i>string</i> <i>qos</i>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **forwarding-class** *keyword*

Synopsis	Forwarding class associated with the static route
Context	<b>configure</b> <i>router</i> <i>string</i> <b>static-routes</b> <i>route</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <i>route-type</i> <i>keyword</i> <i>interface</i> <i>string</i> <b>qos</b> <b>forwarding-class</b> <i>keyword</i>
Tree	<b>forwarding-class</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <i>router</i> <i>string</i> <b>static-routes</b> <i>route</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <i>route-type</i> <i>keyword</i> <i>interface</i> <i>string</i> <b>qos</b> <b>priority</b> <i>keyword</i>
Tree	<b>priority</b>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source-class** *number*

Synopsis	Source class for this static route
Context	<b>configure</b> <i>router</i> <i>string</i> <b>static-routes</b> <i>route</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <i>route-type</i> <i>keyword</i> <i>interface</i> <i>string</i> <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**tag number**

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**ipsec-tunnel [ipsec-tunnel-name] string**

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i>
Tree	<b>ipsec-tunnel</b>
Introduced	22.7.R1
Platforms	VSR

**[ipsec-tunnel-name] string**

Synopsis	IPsec tunnel name.
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i>
Tree	<b>ipsec-tunnel</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**admin-state keyword**

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable

Introduced 22.7.R1  
Platforms VSR

### **community** *string*

Synopsis Community ID associated with the static route  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string* **community** *string*  
Tree **community**  
String Length 1 to 72  
Introduced 22.7.R1  
Platforms VSR

### **description** *string*

Synopsis Text description  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string* **description** *string*  
Tree **description**  
String Length 1 to 80  
Introduced 22.7.R1  
Platforms VSR

### **metric** *number*

Synopsis Static route metric  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string* **metric** *number*  
Tree **metric**  
Range 0 to 65535  
Default 1  
Introduced 22.7.R1  
Platforms VSR

**preference number**

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>preference number</b>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	22.7.R1
Platforms	VSR

**tag number**

Synopsis	Static route tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>tag number</b>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	22.7.R1
Platforms	VSR

**next-hop** [**ip-address**] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the <b>next-hop</b> list instance
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>next-hop</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the directly-connected next hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>next-hop</b>
Description	This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address

must be associated with a network directly connected to a network configured on the node.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **backup-next-hop**

Synopsis	Enter the <b>backup-next-hop</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>backup-next-hop</b>
Tree	<b>backup-next-hop</b>
Description	Commands in this context configure static route entry fast failover.
Introduced	21.2.R1
Platforms	All

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Backup next-hop IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>backup-next-hop</b> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Description	This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.  The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the

Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.

One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.

The configured IP address can be either on the network or the access side.

Introduced	21.2.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

### **cpe-check** [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Description	When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.

This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

**Note:** A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

Max. Instances	1
Introduced	16.0.R1
Platforms	All

### [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 255
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

**log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Default	false
Introduced	16.0.R1
Platforms	All

**padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**ldp-sync** *boolean*

Synopsis	Use LDP synchronization feature for a static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ldp-sync</b> <i>boolean</i>
Tree	<b>ldp-sync</b>
Default	false
Introduced	16.0.R1
Platforms	All

**load-balancing-weight** *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **metric number**

Synopsis	Static route metric
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>metric number</b>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference number**

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>preference number</b>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

### **prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

**flag keyword**

Synopsis	Static route match condition from prefix list
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-list flag</b> <i>keyword</i>
Tree	<b>flag</b>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

**name reference**

Synopsis	Prefix list name
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-list name</b> <i>reference</i>
Tree	<b>name</b>
Reference	<b>configure</b> <b>policy-options prefix-list</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**forwarding-class keyword**

Synopsis	Forwarding class associated with the static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>qos forwarding-class</b> <i>keyword</i>
Tree	<b>forwarding-class</b>

Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>qos</b> <b>priority</b> <i>keyword</i>
Tree	<b>priority</b>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source-class** *number*

Synopsis	Source class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**validate-next-hop** *boolean*

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>validate-next-hop</b> <i>boolean</i>
Tree	<a href="#">validate-next-hop</a>
Default	false
Introduced	16.0.R1
Platforms	All

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>tag</b> <i>number</i>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**triggered-policy** *boolean*

Synopsis	Trigger route policy re-evaluation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>triggered-policy</b> <i>boolean</i>
Tree	<a href="#">triggered-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ttl-propagate**

Synopsis	Enter the <b>ttl-propagate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ttl-propagate</b>
Tree	<a href="#">ttl-propagate</a>
Introduced	16.0.R1
Platforms	All

**label-route-local** *keyword*

Synopsis	TTL propagation from IP header into label stack for local packets
Context	<b>configure router</b> <i>string</i> <a href="#">ttl-propagate label-route-local</a> <i>keyword</i>
Tree	<a href="#">label-route-local</a>
Options	none, all
Default	none
Introduced	16.0.R1
Platforms	All

**label-route-transit** *keyword*

Synopsis	TTL propagation from IP header into label stack for transit packets
Context	<b>configure router</b> <i>string</i> <a href="#">ttl-propagate label-route-transit</a> <i>keyword</i>
Tree	<a href="#">label-route-transit</a>
Options	none, all
Default	none
Introduced	16.0.R1
Platforms	All

**lsr-label-route** *keyword*

Synopsis	TTL propagation from IP header into label stack
Context	<b>configure router</b> <i>string</i> <a href="#">ttl-propagate lsr-label-route</a> <i>keyword</i>
Tree	<a href="#">lsr-label-route</a>
Options	none, all
Default	none
Introduced	16.0.R1
Platforms	All

**vprn-local** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN local packets
Context	<b>configure router</b> <i>string</i> <a href="#">ttl-propagate vprn-local</a> <i>keyword</i>
Tree	<a href="#">vprn-local</a>

Options	none, all, vc-only
Default	vc-only
Introduced	16.0.R1
Platforms	All

### **vprn-transit** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN transit packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tli-propagate</b> <b>vprn-transit</b> <i>keyword</i>
Tree	<b>vprn-transit</b>
Options	none, all, vc-only
Default	vc-only
Introduced	16.0.R1
Platforms	All

### **tunnel-interface**

Synopsis	Enter the <b>tunnel-interface</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tunnel-interface</b>
Tree	<b>tunnel-interface</b>
Introduced	16.0.R1
Platforms	All

### **ldp-p2mp-leaf** [**p2mp-id**] *number* **sender-address** *string*

Synopsis	Enter the <b>ldp-p2mp-leaf</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tunnel-interface</b> <b>ldp-p2mp-leaf</b> <i>number</i> <b>sender-address</b> <i>string</i>
Tree	<b>ldp-p2mp-leaf</b>
Introduced	16.0.R1
Platforms	All

### **[p2mp-id]** *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tunnel-interface</b> <b>ldp-p2mp-leaf</b> <i>number</i> <b>sender-address</b> <i>string</i>

Tree	<a href="#">ldp-p2mp-leaf</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sender-address** *string*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-leaf</a> <i>number</i> <a href="#">sender-address</a> <i>string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description

Synopsis Enter the **twamp-light** context  
Context **configure** [router](#) *string* [twamp-light](#)  
Tree [twamp-light](#)  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### reflector

Synopsis Enable the **reflector** context  
Context **configure** [router](#) *string* [twamp-light](#) [reflector](#)  
Tree [reflector](#)  
Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of TWAMP Light functionality  
 Context **configure** *router string twamp-light reflector admin-state keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **allow-ipv6-udp-checksum-zero** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Process IPv6 packets with a zero UDP checksum  
 Context **configure** *router string twamp-light reflector allow-ipv6-udp-checksum-zero boolean*  
 Tree [allow-ipv6-udp-checksum-zero](#)  
 Description When configured to **true**, this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.  
 When configured to **false**, IPv6 packets that arrive with a UDP checksum of zero are discarded.  
 Default false  
 Introduced 21.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **type** *keyword*

Synopsis Processing behavior type for the reflector

Context **configure** [router](#) *string* [twamp-light](#) [reflector](#) [type](#) *keyword*

Tree [type](#)

Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is <b>twamp-light</b> the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is <b>stamp</b>, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to <b>stamp</b>. When the reflector is operating in <b>stamp</b> mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp, twamp-light
Default	twamp-light
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### udp-port *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	<b>configure</b> router <i>string</i> twamp-light reflector udp-port <i>number</i>
Tree	udp-port
Range	862   64364 to 64373
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### vrgw

Synopsis	Enter the <b>vrgw</b> context
Context	<b>configure</b> router <i>string</i> vrgw
Tree	vrgw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lanext

Synopsis	Enable the <b>lanext</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>vrgw lanext</b>
Tree	<b>lanext</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of Home LAN Extension
Context	<b>configure</b> <b>router</b> <i>string</i> <b>vrgw lanext admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vxlan-port *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port to be used by local or remote VXLAN VTEP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>vrgw lanext vxlan-port</b> <i>number</i>
Tree	<b>vxlan-port</b>
Range	4789   8472
Default	4789
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vxlan-vtep-range

Synopsis	Enter the <b>vxlan-vtep-range</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>vrgw lanext vxlan-vtep-range</b>
Tree	<b>vxlan-vtep-range</b>

Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Upper bound of the VXLAN VTEP range  
 Context **configure** **router** *string* **vrgw** **lanext** **vxlan-vtep-range** **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree **end**  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Lower bound of the VXLAN VTEP range  
 Context **configure** **router** *string* **vrgw** **lanext** **vxlan-vtep-range** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree **start**  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

## wlan-gw-group *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN-GW Group
Context	<b>configure router</b> <i>string</i> <a href="#">wlan-gw xconnect wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure isa</b> <a href="#">wlan-gw-group</a> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wpp

Synopsis	Enable the <b>wpp</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">wpp</a>
Tree	<a href="#">wpp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of WPP
Context	<b>configure router</b> <i>string</i> <a href="#">wpp admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**portal** [*name*] *string*

Synopsis	Enter the <b>portal</b> list instance
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i>
Tree	<b>portal</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Web portal name
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i>
Tree	<b>portal</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ack-auth-retry-count** *number*

Synopsis	Number of retransmissions of an ACK_OUT message
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>ack-auth-retry-count</b> <i>number</i>
Tree	<b>ack-auth-retry-count</b>
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WPP portal address
----------	--------------------

Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the WPP portal server
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ntf-logout-retry-count** *number*

Synopsis	Number of retransmissions of an NTF_LOGOUT message
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>ntf-logout-retry-count</b> <i>number</i>
Tree	<b>ntf-logout-retry-count</b>
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **port-format** *keyword*

Synopsis	Format of the port in the ACK_INO message
Context	<b>configure router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>port-format</b> <i>keyword</i>
Tree	<b>port-format</b>
Options	standard, vendor-specific
Default	standard
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retry-interval** *number*

Synopsis Time between two consecutive retransmissions

Context **configure** *router string wpp portal string retry-interval number*

Tree [retry-interval](#)

Range 10 to 2000

Units milliseconds

Default 2000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis Message authentication between portal and BRAS by applying the secret used by WPPv2

Context **configure** *router string wpp portal string secret string*

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### admin-tag [[tag](#)] *string*

Synopsis	Add a list entry for <b>admin-tag</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Tree	<a href="#">admin-tag</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

#### [[tag](#)] *string*

Synopsis	Administrative tag value
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Tree	<a href="#">admin-tag</a>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R1  
 Platforms All

### **route-admin-tag-policy** [[policy-name](#)] *string*

Synopsis Enter the **route-admin-tag-policy** list instance  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*  
 Tree [route-admin-tag-policy](#)  
 Max. Instances 2048  
 Introduced 16.0.R1  
 Platforms All

### **[policy-name]** *string*

Synopsis Name of the route admin tag policy  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*  
 Tree [route-admin-tag-policy](#)  
 String Length 1 to 64  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **exclude** [[tag](#)] *reference*

Synopsis Add a list entry for **exclude**  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string* [exclude](#) *reference*  
 Tree [exclude](#)  
 Max. Instances 8  
 Introduced 16.0.R1  
 Platforms All

### **[tag]** *reference*

Synopsis Administrative tag value

Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">exclude</a> <a href="#">reference</a>
Tree	<a href="#">exclude</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **include** [[tag](#)] [reference](#)

Synopsis	Add a list entry for <b>include</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">include</a> <a href="#">reference</a>
Tree	<a href="#">include</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[tag]** [reference](#)

Synopsis	Administrative tag value
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">include</a> <a href="#">reference</a>
Tree	<a href="#">include</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **flexible-algorithm-definitions**

Synopsis	Enter the <b>flexible-algorithm-definitions</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a>
Tree	<a href="#">flexible-algorithm-definitions</a>
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	20.7.R1

Platforms All

### **flex-algo** [[flex-algo-name](#)] *string*

Synopsis Enter the **flex-algo** list instance

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).

Max. Instances 256

Introduced 20.7.R1

Platforms All

### **[flex-algo-name]** *string*

Synopsis Flexible Algorithm Definition (FAD) name

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 20.7.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the FAD

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 20.7.R1

Platforms All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.7.R1
Platforms	All

**exclude****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>exclude</b>
Tree	<a href="#">exclude</a>
Description	<p>Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.</p>
Introduced	20.7.R1
Platforms	All

**admin-group** [[group-name](#)] *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>exclude</b> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

**[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">exclude</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

**flags-tlv** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">flags-tlv</a> <i>boolean</i>
Tree	<a href="#">flags-tlv</a>
Description	<p>When configured to <b>true</b>, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to <b>false</b>, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	20.10.R1
Platforms	All

**include-all****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-all</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a>

Tree	<a href="#">include-all</a>
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.</p>
Introduced	20.7.R1
Platforms	All

### **admin-group** [[group-name](#)] *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

## include-any

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-any</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a>
Tree	<a href="#">include-any</a>
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph</p>
Introduced	20.7.R1
Platforms	All

## admin-group [[group-name](#)] *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

## [[group-name](#)] *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1

Platforms All

### **metric-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>metric-type</b> <i>keyword</i>
Tree	<a href="#">metric-type</a>
Options	igp, delay, te-metric
Default	igp
Introduced	20.7.R1
Platforms	All

### **priority** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	20.7.R1
Platforms	All

### **if-attribute**

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <b>if-attribute</b>

Tree	<a href="#">if-attribute</a>
Introduced	16.0.R1
Platforms	All

### **admin-group** [[group-name](#)] *string*

Synopsis	Enter the <b>admin-group</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Tree	<a href="#">admin-group</a>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

### **[group-name]** *string*

Synopsis	Interface group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Tree	<a href="#">admin-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **value** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the group
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **srlg-group** [*name*] *string*

Synopsis Enter the **srlg-group** list instance  
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*  
 Tree [srlg-group](#)  
 Max. Instances 1024  
 Introduced 16.0.R1  
 Platforms All

### **[name]** *string*

Synopsis SRLG name  
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*  
 Tree [srlg-group](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **penalty-weight** *number*

Synopsis Integer value of the penalty weight assigned to SRLG  
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string* [penalty-weight](#) *number*  
 Tree [penalty-weight](#)  
 Description This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.  
 Range 0 to 65535  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

**value** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute srlg-group</a> <i>string</i> <b>value</b> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**ip-fast-reroute** *boolean*

Synopsis	Enable IP fast reroute capability
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">ip-fast-reroute</a> <i>boolean</i>
Tree	<a href="#">ip-fast-reroute</a>
Default	false
Introduced	16.0.R1
Platforms	All

**policy-accounting**

Synopsis	Enter the <b>policy-accounting</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a>
Tree	<a href="#">policy-accounting</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**policy-acct-template** [[name](#)] *string*

Synopsis	Enter the <b>policy-acct-template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>

Max. Instances	1024
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[name]** *string*

Synopsis	Policy accounting template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**destination-class** [[index](#)] *number*

Synopsis	Enter the <b>destination-class</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<a href="#">destination-class</a>
Max. Instances	255
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[index]** *number*

Synopsis	Destination class index
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<a href="#">destination-class</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**policer reference**

Synopsis	Policer ID
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">destination-class</a> <i>number</i> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**policer [policer-id] number**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Description	Commands in this context configure the policer definition for the instance. Policing by action of a policy accounting template is only supported by cards and systems that are FP4 and later.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[policer-id] number**

Synopsis	Policer ID
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**max-burst-size (number | keyword)**

Synopsis	Exceed threshold to drop packets from PIR leaky bucket
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">max-burst-size</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">max-burst-size</a>
Description	This command specifies the maximum burst size for the policer. When this value is exceeded, packets are considered violating and are dropped.
Range	0 to 16777216
Units	bytes
Options	auto
Default	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **peak-rate** (*number* | *keyword*)

Synopsis	Peak rate of the policy accounting policer
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">peak-rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">peak-rate</a>
Description	This command configures the peak rate of the policy accounting policer, which is the fill or drain rate of the bucket.
Range	1 to 6400000000
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **source-class** [[index](#)] *number*

Synopsis	Add a list entry for <b>source-class</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Max. Instances	255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[index] number**

Synopsis	Source-class index
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**route-next-hop-policy**

Synopsis	Enter the <b>route-next-hop-policy</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a>
Tree	<a href="#">route-next-hop-policy</a>
Introduced	16.0.R1
Platforms	All

**template [template-name] string**

Synopsis	Enter the <b>template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
Introduced	16.0.R1
Platforms	All

**[template-name] string**

Synopsis	Template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**exclude-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>exclude-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Description	This command specifies the name of the administrative group.  If the same group name is part of both include and exclude statements, the exclude statement will win. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**include-group** [[group-name](#)] *reference*

Synopsis	Enter the <b>include-group</b> list instance
----------	--

Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i>
Tree	<a href="#">include-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i>
Tree	<a href="#">include-group</a>
Description	This command specifies the name of the administrative group.  If the same group name is part of both include and exclude statements, the exclude statement will win. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Preference number for configured admin-group.
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

### **nh-type** *keyword*

Synopsis	Preferred next hop
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">nh-type</a> <i>keyword</i>

---

Tree	<a href="#">nh-type</a>
Options	ip, tunnel
Default	ip
Introduced	16.0.R1
Platforms	All

### **protection-type** *keyword*

Synopsis	Protection type used
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">protection-type</a> <i>keyword</i>
Tree	<a href="#">protection-type</a>
Options	link, node
Default	node
Introduced	16.0.R1
Platforms	All

### **srlg** *boolean*

Synopsis	Select next hops from the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">srlg</a> <i>boolean</i>
Tree	<a href="#">srlg</a>
Default	false
Introduced	16.0.R1
Platforms	All

### 3.41 saa commands

```

configure
- saa
- apply-groups reference
- apply-groups-exclude reference
- owner string test string
- accounting-policy reference
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- continuous boolean
- description string
- jitter-event keyword threshold-type keyword
- apply-groups reference
- apply-groups-exclude reference
- threshold number
- latency-event keyword threshold-type keyword
- apply-groups reference
- apply-groups-exclude reference
- threshold number
- loss-event keyword threshold-type keyword
- apply-groups reference
- apply-groups-exclude reference
- threshold number
- probe-history keyword
- type
- dns
- apply-groups reference
- apply-groups-exclude reference
- count number
- interval number
- name-server (ipv4-address-no-zone | ipv6-address-no-zone)
- record-type keyword
- router-instance string
- source-address (ipv4-address-no-zone | ipv6-address-no-zone)
- target-address string
- timeout number
- trap-generation
- probe-fail boolean
- probe-fail-threshold number
- test-complete boolean
- test-fail boolean
- test-fail-threshold number
- icmp-ping
- apply-groups reference
- apply-groups-exclude reference
- bypass-routing boolean
- count number
- destination-address (ipv4-address-no-zone | ipv6-address-no-zone | string-
not-all-spaces)
- do-not-fragment boolean
- interface string
- interval (number | decimal-number)
- next-hop-address (ipv4-address-no-zone | ipv6-address-no-zone)
- pattern (keyword | number)
- qos
- fc keyword
- tos number
- router-instance string
- size number

```

configure saa owner type icmp-ping source-address

```

- source-address (ipv4-address-no-zone | ipv6-address-no-zone)
- timeout number
- trap-generation
  - probe-fail boolean
  - probe-fail-threshold number

  - probe-fail-threshold number
  - test-complete boolean
  - test-fail boolean
  - test-fail-threshold number
- ttl number
```

### 3.41.1 saa command descriptions

#### **saa**

Synopsis	Enter the <b>saa</b> context
Context	<b>configure saa</b>
Tree	<b>saa</b>
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	16.0.R4
Platforms	All

#### **owner** [**owner-name**] *string test string*

Synopsis	Enter the <b>owner</b> list instance
Context	<b>configure saa owner string test string</b>
Tree	<b>owner</b>
Introduced	16.0.R4
Platforms	All

#### **[owner-name]** *string*

Synopsis	Optional owner name of the SAA operation
Context	<b>configure saa owner string test string</b>
Tree	<b>owner</b>
Description	This command configures the owner associated with the SAA operation. The owner is optional and "TIMOS CLI" is used if an owner is not specified.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

#### **test string**

Synopsis	SAA test name
Context	<b>configure saa owner string test string</b>

Tree	<a href="#">owner</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **accounting-policy** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	<b>configure</b> <a href="#">saa owner string test string accounting-policy reference</a>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log accounting-policy number</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SAA test
Context	<b>configure</b> <a href="#">saa owner string test string admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **continuous** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
----------	-------------------------------------

Context	<b>configure</b> <i>saa owner string test string continuous boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to <b>true</b>, the SAA test execution is continuous, that is, it cannot be started or stopped with the <b>oam saa test start</b> or <b>stop</b> commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none"> <li>• <b>cpe-ping</b></li> <li>• <b>dns</b></li> <li>• <b>eth-cfm-loopback</b></li> <li>• <b>eth-cfm-two-way-delay</b></li> <li>• <b>eth-cfm-two-way-slm</b></li> <li>• <b>icmp-ping</b> (not applicable to <b>rapid</b> type)</li> <li>• <b>lsp-ping</b></li> <li>• <b>mac-ping</b></li> <li>• <b>sdp-ping</b></li> <li>• <b>vccv-ping</b></li> <li>• <b>vprn-ping</b></li> </ul>
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>saa owner string test string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **jitter-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>jitter-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>

Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### [**direction**] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>jitter-event</b> <i>keyword</i> <b>threshold-type</b> <i>keyword</i>
Tree	<b>jitter-event</b>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>jitter-event</b> <i>keyword</i> <b>threshold-type</b> <i>keyword</i>
Tree	<b>jitter-event</b>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold** *number*

Synopsis	Threshold jitter value
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>jitter-event</b> <i>keyword</i> <b>threshold-type</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **latency-event** [*direction*] *keyword* *threshold-type* *keyword*

Synopsis	Enter the <b>latency-event</b> list instance
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <b>latency-event</b> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<b>latency-event</b>
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <b>latency-event</b> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<b>latency-event</b>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <b>latency-event</b> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<b>latency-event</b>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold** *number*

Synopsis	Threshold latency value
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword threshold number</i>
Tree	<b>threshold</b>
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**loss-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>loss-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

**[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<a href="#">loss-event</a>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold** *number*

Synopsis	Threshold loss event value
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword threshold number</i>
Tree	<a href="#">threshold</a>
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**probe-history** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	<b>configure</b> <i>saa owner string test string probe-history keyword</i>
Tree	<a href="#">probe-history</a>
Options	keep, drop, auto
Default	auto
Introduced	16.0.R4
Platforms	All

## type

Synopsis	Enter the <b>type</b> context
Context	<b>configure</b> <i>saa owner string test string type</i>
Tree	<i>type</i>
Introduced	16.0.R4
Platforms	All

## dns

Synopsis	Enable the <b>dns</b> context
Context	<b>configure</b> <i>saa owner string test string type dns</i>
Tree	<i>dns</i>
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	22.10.R1
Platforms	All

## count *number*

Synopsis	Number of messages to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type dns count number</i>
Tree	<i>count</i>
Description	This command specifies the number of messages to send. Each message request must either time out or receive a reply before the next message request is sent.
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

## interval *number*

Synopsis	Minimum time before the next message request is sent
Context	<b>configure</b> <i>saa owner string test string type dns interval number</i>
Tree	<i>interval</i>

Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

### **name-server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the DNS name server used for the test
Context	<b>configure</b> <i>saa owner string test string type dns name-server</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">name-server</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **record-type** *keyword*

Synopsis	Record type
Context	<b>configure</b> <i>saa owner string test string type dns record-type keyword</i>
Tree	<a href="#">record-type</a>
Options	ipv4-a-record, ipv6-aaaa-record
Default	ipv4-a-record
Introduced	22.10.R1
Platforms	All

### **router-instance** *string*

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type dns router-instance string</i>
Tree	<a href="#">router-instance</a>
Default	_Base_and_management
Introduced	22.10.R1
Platforms	All

**source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address on the local system
Context	<b>configure</b> <i>saa owner string test string type dns source-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-address</a>
Description	This command configures the IP address on the local system. If unconfigured, the router uses a system selected local IP address.
Introduced	22.10.R1
Platforms	All

**target-address** *string*

Synopsis	DNS name to be resolved to an IP address
Context	<b>configure</b> <i>saa owner string test string type dns target-address string</i>
Tree	<a href="#">target-address</a>
String Length	1 to 255
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**timeout** *number*

Synopsis	Maximum time to wait for a reply message
Context	<b>configure</b> <i>saa owner string test string type dns timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the maximum time the router waits for a message response after sending the message request. When the timeout expires, the requesting router assumes the message response is not received. Any response received after the request times out is silently discarded.
Range	1 to 120
Units	seconds
Default	5
Introduced	22.10.R1
Platforms	All

## trap-generation

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type dns trap-generation</a>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1
Platforms	All

## probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <a href="#">saa owner string test string type dns trap-generation probe-fail boolean</a>
Tree	<a href="#">probe-fail</a>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

## probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <a href="#">saa owner string test string type dns trap-generation probe-fail-threshold number</a>
Tree	<a href="#">probe-fail-threshold</a>
Description	This command configures the number of consecutive ping probe failures required to generate a trap.  This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when <b>test-fail</b> is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**icmp-ping**

Synopsis	Enable the <b>icmp-ping</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping</i>
Tree	<a href="#">icmp-ping</a>
Description	Commands in this context configure an ICMP ping test.
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	16.0.R4
Platforms	All

**bypass-routing** *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	<b>configure</b> <i>saa owner string test string type icmp-ping bypass-routing boolean</i>
Tree	<a href="#">bypass-routing</a>
Default	false
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

**count** *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type icmp-ping count number</i>
Tree	<a href="#">count</a>
Range	1 to 100000
Units	packets
Default	5
Introduced	16.0.R4
Platforms	All

**destination-address** (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
----------	---

Context	<b>configure</b> <i>saa owner string test string type icmp-ping destination-address</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone   string-not-all-spaces</i> )
Tree	<a href="#">destination-address</a>
String Length	1 to 128
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **do-not-fragment** *boolean*

Synopsis	Prevent fragmentation of the ICMP Echo Request packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping do-not-fragment boolean</i>
Tree	<a href="#">do-not-fragment</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **interface** *string*

Synopsis	Interface name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **interval** (*number | decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interval</i> ( <i>number   decimal-number</i> )
Tree	<a href="#">interval</a>
Range	1 to 10000
Units	seconds

Default	1
Introduced	16.0.R4
Platforms	All

### **next-hop-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	<b>configure</b> <i>saa owner string test string type icmp-ping next-hop-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop-address</a>
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **pattern** (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping pattern</i> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">pattern</a>
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	16.0.R4
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos</i>
Tree	<a href="#">qos</a>
Introduced	16.0.R4
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	nc
Introduced	16.0.R4
Platforms	All

**tos number**

Synopsis	Type of service
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos tos number</i>
Tree	<b>tos</b>
Range	0 to 255
Default	0
Introduced	16.0.R4
Platforms	All

**router-instance string**

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping router-instance string</i>
Tree	<b>router-instance</b>
Default	Base
Introduced	16.0.R4
Platforms	All

**size number**

Synopsis	Packet padding size
Context	<b>configure</b> <i>saa owner string test string type icmp-ping size number</i>
Tree	<b>size</b>
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.

Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R4
Platforms	All

### **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <i>saa owner string test string type icmp-ping source-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-address</a>
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	Time router waits for a reply after sending last probe
Context	<b>configure</b> <i>saa owner string test string type icmp-ping timeout number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Units	seconds
Default	5
Introduced	16.0.R4
Platforms	All

### **trap-generation**

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation</i>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1

Platforms All

### **probe-fail** *boolean*

Synopsis Enable the generation of probe fail notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail boolean*

Tree [probe-fail](#)

Description When configured to **true**, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  
This command is not applicable to SAA traceroute tests.

Default false

Introduced 22.10.R1

Platforms All

### **probe-fail-threshold** *number*

Synopsis Consecutive probe failure count

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail-threshold number*

Tree [probe-fail-threshold](#)

Description This command configures the number of consecutive ping probe failures required to generate a trap.  
This command has no effect if the **probe-fail** command is set to **false**.  
This command is not applicable to SAA traceroute tests.

Range 0 to 15

Default 1

Introduced 22.10.R1

Platforms All

### **test-complete** *boolean*

Synopsis Enable generation of test complete notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation test-complete boolean*

Tree [test-complete](#)

Default false

Introduced	22.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap.  This command has no effect when <b>test-fail</b> is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**tll** *number*

Synopsis	Time to live in the IP header
Context	<b>configure</b> <i>saa owner string test string type icmp-ping tll number</i>
Tree	<a href="#">tll</a>
Range	1 to 128

Default	64
Introduced	16.0.R4
Platforms	All

## **lsp-ping**

Synopsis	Enable the <b>lsp-ping</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping</a>
Tree	<a href="#">lsp-ping</a>
Description	Commands in this context configure the command options to perform in-band LSP connectivity tests.  LSP ping uses the protocol and data structures defined in RFC 8029, <i>Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures</i> .
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	22.10.R1
Platforms	All

## **interval number**

Synopsis	Minimum time before the next lsp-ping request is sent
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping interval number</a>
Tree	<a href="#">interval</a>
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

## **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos</a>
Tree	<a href="#">qos</a>
Introduced	22.10.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos fc keyword</a>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	22.10.R1
Platforms	All

**profile keyword**

Synopsis	Profile
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos profile keyword</a>
Tree	<a href="#">profile</a>
Options	in, out
Default	out
Introduced	22.10.R1
Platforms	All

**send-count number**

Synopsis	Number of request packets to send in a sample window
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping send-count number</a>
Tree	<a href="#">send-count</a>
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

**size number**

Synopsis	Packet pad size
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping size number</a>

Tree	<a href="#">size</a>
Range	1 to 9786
Units	bytes
Default	1
Introduced	22.10.R1
Platforms	All

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Introduced	22.10.R1
Platforms	All

### **sub-type**

Synopsis	Enter the <b>sub-type</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a>
Tree	<a href="#">sub-type</a>
Introduced	22.10.R1
Platforms	All

### **bgp-label**

Synopsis	Enable the <b>bgp-label</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a> <a href="#">bgp-label</a>
Tree	<a href="#">bgp-label</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

## path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <b>lsp-ping sub-type bgp-label path-destination</b>
Tree	<b>path-destination</b>
Introduced	22.10.R1
Platforms	All

## interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <b>lsp-ping sub-type bgp-label path-destination interface string</b>
Tree	<b>interface</b>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

## ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <b>lsp-ping sub-type bgp-label path-destination ip-address (<i>ipv4-address-no-zone   ipv6-address-no-zone</i>)</b>
Tree	<b>ip-address</b>
Introduced	22.10.R1
Platforms	All

## next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <b>lsp-ping sub-type bgp-label path-destination next-hop (<i>ipv4-address-no-zone   ipv6-address-no-zone</i>)</b>
Tree	<b>next-hop</b>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1

Platforms All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test

Context **configure** *saa owner string test string type lsp-ping sub-type bgp-label prefix* (*ipv4-prefix* | *ipv6-prefix*)

Tree [prefix](#)

Notes This element is mandatory.

Introduced 22.10.R1

Platforms All

### **ldp**

Synopsis Enable the **ldp** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp*

Tree [ldp](#)

Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 22.10.R1

Platforms All

### **path-destination**

Synopsis Enter the **path-destination** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination*

Tree [path-destination](#)

Introduced 22.10.R1

Platforms All

### **interface** *string*

Synopsis Egress router interface used with the path destination

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination interface string*

Tree [interface](#)

---

String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>path-destination</b> <b>ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>path-destination</b> <b>next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**rsvp-te**

Synopsis	Enable the <b>rsvp-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te</i>
Tree	<a href="#">rsvp-te</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**lsp-name string**

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te lsp-name string</i>
Tree	<a href="#">lsp-name</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**path string**

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te path string</i>
Tree	<a href="#">path</a>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

**sr-isis**

Synopsis	Enable the <b>sr-isis</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis</i>
Tree	<a href="#">sr-isis</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .

---

Introduced	22.10.R1
Platforms	All

### **igp-instance** *number*

Synopsis	IGP instance for the SR IS-IS test
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-isis igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 127
Default	0
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-isis path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-isis path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix | ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis prefix (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **sr-ospf**

Synopsis	Enable the <b>sr-ospf</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf</i>
Tree	<a href="#">sr-ospf</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**igp-instance** *number*

Synopsis	IGP instance for the SR OSPF test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31
Default	0
Introduced	22.10.R1
Platforms	All

**path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

**interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

**ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>

Introduced 22.10.R1  
 Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf path-destination next-hop (ipv4-address-no-zone | ipv6-address-no-zone)*  
 Tree [next-hop](#)  
 Notes The following elements are part of a choice: **interface** or **next-hop**.  
 Introduced 22.10.R1  
 Platforms All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf prefix (ipv4-prefix | ipv6-prefix)*  
 Tree [prefix](#)  
 Notes This element is mandatory.  
 Introduced 22.10.R1  
 Platforms All

### **sr-ospf3**

Synopsis Enable the **sr-ospf3** context  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf3*  
 Tree [sr-ospf3](#)  
 Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.  
 Introduced 22.10.R1  
 Platforms All

### **igp-instance** *number*

Synopsis IGP instance for the SR OSPFv3 test

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31   64 to 95
Default	0
Introduced	22.10.R1
Platforms	All

## path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

## interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

## ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

**next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination next-hop</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 prefix</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**sr-policy**

Synopsis	Enable the <b>sr-policy</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy</i>
Tree	<a href="#">sr-policy</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**color number**

Synopsis	Segment Routing color for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy color number</i>
Tree	<a href="#">color</a>
Range	0 to 4294967295

Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **endpoint** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy endpoint</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">endpoint</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **segment-list** *number*

Synopsis	Segment Routing segment list for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy segment-list number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32
Introduced	22.10.R1
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te</i>
Tree	<a href="#">sr-te</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**lsp-name** *string*

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te lsp-name string</i>
Tree	<i>lsp-name</i>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**path** *string*

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path string</i>
Tree	<i>path</i>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

**path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination</i>
Tree	<i>path-destination</i>
Introduced	22.10.R1
Platforms	All

**interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination interface string</i>
Tree	<i>interface</i>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .

Introduced 22.10.R1  
 Platforms All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination ip-address* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [ip-address](#)  
 Introduced 22.10.R1  
 Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [next-hop](#)  
 Notes The following elements are part of a choice: **interface** or **next-hop**.  
 Introduced 22.10.R1  
 Platforms All

### **timeout** *number*

Synopsis Time router waits for a reply to an echo request  
 Context **configure** *saa owner string test string type lsp-ping timeout number*  
 Tree [timeout](#)  
 Range 1 to 10  
 Units seconds  
 Default 5  
 Introduced 22.10.R1  
 Platforms All

### **trap-generation**

Synopsis Enter the **trap-generation** context

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	22.10.R1
Platforms	All

### **probe-fail** *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

### **probe-fail-threshold** *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

### **test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
----------	--

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap.  This command has no effect when <b>test-fail</b> is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**ttl number**

Synopsis	TTL value for the echo request MPLS label
Context	<b>configure</b> <i>saa owner string test string type lsp-ping ttl number</i>
Tree	<i>tll</i>
Range	1 to 255
Default	255
Introduced	22.10.R1
Platforms	All

## 3.42 satellite commands

```

configure
- satellite
  - apply-groups reference
  - apply-groups-exclude reference
  - ethernet-satellite number
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - client-down-delay number
    - console-access keyword
    - description string
    - dynamic-uplink boolean
    - feature keyword
    - mac-address string
    - port-map reference
      - apply-groups reference
      - apply-groups-exclude reference
      - primary reference
      - secondary reference
    - port-template string
    - ptp-tc boolean
    - sat-type keyword
    - software-repository reference
    - sync-e boolean
    - uplink-distribution keyword
  - file-transfer
    - apply-groups reference
    - apply-groups-exclude reference
    - ftp boolean
    - scp boolean
  - port-template string
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - description string
    - port string
      - apply-groups reference
      - apply-groups-exclude reference
      - role keyword
      - uplink reference
    - sat-type keyword
  - port-topology reference
    - apply-groups reference
    - apply-groups-exclude reference
    - far-end-port-id reference

```

### 3.42.1 satellite command descriptions

#### satellite

Synopsis	Enter the <b>satellite</b> context
Context	<b>configure satellite</b>
Tree	<a href="#">satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### ethernet-satellite [[satellite-id](#)] *number*

Synopsis	Enter the <b>ethernet-satellite</b> list instance
Context	<b>configure satellite ethernet-satellite number</b>
Tree	<a href="#">ethernet-satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### [\[satellite-id\]](#) *number*

Synopsis	The unique index identifying this satellite
Context	<b>configure satellite ethernet-satellite number</b>
Tree	<a href="#">ethernet-satellite</a>
Range	1 to 20
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **admin-state** *keyword*

Synopsis	Administrative state of the satellite
Context	<b>configure satellite ethernet-satellite number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-down-delay** *number*

Synopsis Delay between uplink as unavailable and disabling ports  
Context **configure** [satellite ethernet-satellite](#) *number* **client-down-delay** *number*  
Tree [client-down-delay](#)  
Range 0 to 1800  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **console-access** *keyword*

Synopsis Satellite console interface access  
Context **configure** [satellite ethernet-satellite](#) *number* **console-access** *keyword*  
Tree [console-access](#)  
Options enable, disable  
Default disable  
Introduced 20.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [satellite ethernet-satellite](#) *number* **description** *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**dynamic-uplink** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable dynamic uplink resilience for Ethernet satellite
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <b>dynamic-uplink</b> <i>boolean</i>
Tree	<a href="#">dynamic-uplink</a>
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**feature** *keyword*

Synopsis	Functionality to enable
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <b>feature</b> <i>keyword</i>
Tree	<a href="#">feature</a>
Options	local-forward, ptp-tc
Max. Instances	2
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address for the satellite chassis
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**port-map** [[client-port-id](#)] *reference*

Synopsis	Enter the <b>port-map</b> list instance
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <b>port-map</b> <i>reference</i>
Tree	<a href="#">port-map</a>

---

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[client-port-id] reference**

Synopsis	Satellite client port associated with the port mapping
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i>
Tree	<a href="#">port-map</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary reference**

Synopsis	Primary satellite uplink for the associate client port
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i> <a href="#">primary</a> <i>reference</i>
Tree	<a href="#">primary</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**secondary reference**

Synopsis	Secondary satellite uplink for associate client port
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i> <a href="#">secondary</a> <i>reference</i>
Tree	<a href="#">secondary</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**port-template** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port template name
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-template</a> <i>string</i>
Tree	<a href="#">port-template</a>
String Length	1 to 32
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ptp-tc** *boolean*

Synopsis	Enable the 1EEE 1588 transparent clock function
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">ptp-tc</a> <i>boolean</i>
Tree	<a href="#">ptp-tc</a>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sat-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of satellite variant for the associated chassis
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**software-repository** *reference*

Synopsis	Software repository bound to the associated satellite
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">software-repository</a> <i>reference</i>
Tree	<a href="#">software-repository</a>
Reference	<b>configure</b> <a href="#">system software-repository</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sync-e** *boolean*

Synopsis	Enable the synchronous Ethernet operation
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sync-e</a> <i>boolean</i>
Tree	<a href="#">sync-e</a>
Description	<p>When configured to <b>true</b>, this command enables the Ethernet satellite for synchronous Ethernet operation so that the transmit timing of the satellite access ports use the frequency of the central clock of the host router.</p> <p>To enable this functionality, both host ports on the router that connect to the U1 and U2 ports of the satellite must be synchronous Ethernet-capable ports.</p> <p>When configured to <b>false</b>, the command disables the Ethernet satellite for synchronous Ethernet operation.</p>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**uplink-distribution** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding complex type for uplink distribution
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">uplink-distribution</a> <i>keyword</i>
Tree	<a href="#">uplink-distribution</a>
Description	<p>This command specifies the forwarding complex used for the satellite uplink association to the ports.</p> <p>With <b>single-complex</b>, all uplinks for the associated satellite must be connected to ports using a single forwarding complex.</p>

With **dual-complex**, all uplinks for the associated satellite must be connected to ports using a double forwarding complex. This option optimizes the resources across the two complexes.

Options	single-complex, dual-complex
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## file-transfer

Synopsis	Enter the <b>file-transfer</b> context
Context	<b>configure</b> <a href="#">satellite file-transfer</a>
Tree	<a href="#">file-transfer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ftp boolean

Synopsis	Use FTP between host and satellite
Context	<b>configure</b> <a href="#">satellite file-transfer ftp boolean</a>
Tree	<a href="#">ftp</a>
Description	When configured to <b>true</b> , the file transfer FTP is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## scp boolean

Synopsis	Use FTP between host and satellite
Context	<b>configure</b> <a href="#">satellite file-transfer scp boolean</a>
Tree	<a href="#">scp</a>
Description	When configured to <b>true</b> , the file transfer SCP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.  When configured to <b>false</b> , the file transfer FTP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	false

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port-template** [[template-name](#)] *string*

Synopsis Enter the **port-template** list instance  
 Context **configure satellite port-template** *string*  
 Tree [port-template](#)  
 Introduced 19.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[template-name]** *string*

Synopsis Associated port template name  
 Context **configure satellite port-template** *string*  
 Tree [port-template](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 19.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of the port template  
 Context **configure satellite port-template** *string admin-state* *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 19.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
 Context **configure satellite port-template** *string description* *string*

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port** [[sat-phys-port-id](#)] *string*

Synopsis	Enter the <b>port</b> list instance
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Tree	<a href="#">port</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sat-phys-port-id]** *string*

Synopsis	Satellite physical port ID
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Tree	<a href="#">port</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **role** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite port role
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">role</a> <i>keyword</i>
Tree	<a href="#">role</a>
Options	none, uplink, client
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## uplink reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Uplink association used for associated satellite port
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">uplink</a> <i>reference</i>
Tree	<a href="#">uplink</a>
Reference	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## sat-type keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	The satellite type for the port template to use.
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## port-topology [[local-port-id](#)] reference

Synopsis	Enter the <b>port-topology</b> list instance
Context	<b>configure</b> <a href="#">satellite port-topology</a> <i>reference</i>
Tree	<a href="#">port-topology</a>

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[local-port-id] reference**

Synopsis Local port identifier  
Context **configure** [satellite port-topology reference](#)  
Tree [port-topology](#)  
Reference **configure** [port string](#)  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **far-end-port-id reference**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Far end port identifier.  
Context **configure** [satellite port-topology reference](#) [far-end-port-id reference](#)  
Tree [far-end-port-id](#)  
Reference **configure** [port string](#)  
Notes This element is mandatory.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### 3.43.1 service command descriptions

#### **service**

|            |                                  |
|------------|----------------------------------|
| Synopsis   | Enter the <b>service</b> context |
| Context    | <b>configure service</b>         |
| Tree       | <a href="#">service</a>          |
| Introduced | 16.0.R1                          |
| Platforms  | All                              |

#### **cpipe** [[service-name](#)] *string*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>cpipe</b> list instance                         |
| Context    | <b>configure service cpipe string</b>                        |
| Tree       | <a href="#">cpipe</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

#### **[service-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Administrative service name                                  |
| Context       | <b>configure service cpipe string</b>                        |
| Tree          | <a href="#">cpipe</a>  |
| String Length | 1 to 64  |
| Notes         | This element is part of a list key.                          |
| Introduced    | 20.10.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

#### **admin-state** *keyword*

|          |   |
|----------|---|
| Synopsis | Administrative state of the service                       |
| Context  | <b>configure service cpipe string admin-state keyword</b> |
| Tree     | <a href="#">admin-state</a>                               |
| Options  | enable, disable   |
| Default  | disable   |

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **customer** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| Tree       | <a href="#">packet</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**jitter-buffer** *number*

|            |  |
|------------|--|
| Synopsis   | Jitter buffer size   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b> <b>packet</b> <b>jitter-buffer</b> <i>number</i> |
| Tree       | <a href="#">jitter-buffer</a>  |
| Range      | 1 to 250   |
| Units      | milliseconds   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**payload-size** *number*

|            |  |
|------------|--|
| Synopsis   | Size of payload packets transmitted to PSN by CEM SAP  |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem packet</a> <a href="#">payload-size</a> <i>number</i> |
| Tree       | <a href="#">payload-size</a>   |
| Range      | 16 to 2048   |
| Units      | bytes  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**report-alarm**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>report-alarm</b> context   |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> |
| Tree       | <a href="#">report-alarm</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**buffer-overflow** *boolean*

|            |  |
|------------|--|
| Synopsis   | Report alarm for buffer overrun  |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-overflow</a> <i>boolean</i> |
| Tree       | <a href="#">buffer-overflow</a>  |
| Default    | true   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**buffer-underrun** *boolean*

|            |  |
|------------|--|
| Synopsis   | Report alarm for buffer underrun   |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-underrun</a> <i>boolean</i> |
| Tree       | <a href="#">buffer-underrun</a>  |
| Default    | true   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**malformed-packets** *boolean*

|            |  |
|------------|--|
| Synopsis   | Report alarm for malformed packets   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">malformed-packets</a> <i>boolean</i> |
| Tree       | <a href="#">malformed-packets</a>  |
| Default    | true   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**packet-loss** *boolean*

|            |  |
|------------|--|
| Synopsis   | Report remote peer is currently in packet loss status  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">packet-loss</a> <i>boolean</i> |
| Tree       | <a href="#">packet-loss</a>  |
| Default    | true   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**remote-fault** *boolean*

|            |   |
|------------|---|
| Synopsis   | Report remote TDM interface is currently not in service   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-fault</a> <i>boolean</i> |
| Tree       | <a href="#">remote-fault</a>  |
| Default    | false   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**remote-packet-loss** *boolean*

|            |   |
|------------|---|
| Synopsis   | Report remote peer is currently in packet loss status   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-packet-loss</a> <i>boolean</i> |
| Tree       | <a href="#">remote-packet-loss</a>  |
| Default    | false   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**remote-rdi** *boolean*

|            |   |
|------------|---|
| Synopsis   | Report remote TDM interface is currently in RDI status  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-rdi</a> <i>boolean</i> |
| Tree       | <a href="#">remote-rdi</a>  |
| Default    | false   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**stray-packets** *boolean*

|            |  |
|------------|--|
| Synopsis   | Report alarm for stray packets   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">stray-packets</a> <i>boolean</i> |
| Tree       | <a href="#">stray-packets</a>  |
| Default    | true   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**rtp-header** *boolean*

|            |  |
|------------|--|
| Synopsis   | Use RTP header for transmitted packets to the PSN  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">rtp-header</a> <i>boolean</i> |
| Tree       | <a href="#">rtp-header</a>   |
| Default    | false  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e   |

**collect-stats** *boolean*

|            |   |
|------------|---|
| Synopsis   | Collect accounting statistics   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">collect-stats</a> <i>boolean</i> |
| Tree       | <a href="#">collect-stats</a>   |
| Default    | false   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i> |
| Tree          | <a href="#">description</a>  |
| String Length | 1 to 160   |
| Introduced    | 20.10.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **dist-cpu-protection** *reference*

|            |   |
|------------|---|
| Synopsis   | Distributed CPU protection policy for SAP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i> |
| Tree       | <a href="#">dist-cpu-protection</a>   |
| Reference  | <b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <i>policy</i> <i>string</i>                                    |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **egress**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>egress</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> |
| Tree       | <a href="#">egress</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **agg-rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>agg-rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> |
| Tree       | <a href="#">agg-rate</a>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**adaptation-rule** *keyword*

|            |   |
|------------|---|
| Synopsis   | Adaptation rule to compute the operational PIR value when an aggregate shaper is used   |
| Context    | <b>configure</b> <b>service</b> <b>cpipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>adaptation-rule</b> <i>keyword</i> |
| Tree       | <a href="#">adaptation-rule</a>   |
| Options    | max, min, closest   |
| Default    | closest   |
| Introduced | 22.10.R1  |
| Platforms  | 7750 SR-1, 7750 SR-s  |

**burst-limit** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Shaping burst size when an aggregate shaper is used   |
| Context    | <b>configure</b> <b>service</b> <b>cpipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">burst-limit</a>   |
| Range      | 1 to 14000000   |
| Units      | bytes   |
| Options    | auto  |
| Default    | auto  |
| Introduced | 22.10.R1  |
| Platforms  | 7750 SR-1, 7750 SR-s  |

**limit-unused-bandwidth** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable aggregate rate overrun protection   |
| Context    | <b>configure</b> <b>service</b> <b>cpipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>limit-unused-bandwidth</b> <i>boolean</i> |
| Tree       | <a href="#">limit-unused-bandwidth</a>   |
| Default    | false  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**rate** *number*

|          |   |
|----------|---|
| Synopsis | Enforced aggregate rate for all queues  |
| Context  | <b>configure</b> <b>service</b> <b>cpipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>rate</b> <i>number</i> |

|            |  |
|------------|--|
| Tree       | <a href="#">rate</a>   |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

## qos

|            |   |
|------------|---|
| Synopsis   | Enter the <b>qos</b> context  |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> |
| Tree       | <a href="#">qos</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## policer-control-policy

|            |  |
|------------|--|
| Synopsis   | Enter the <b>policer-control-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a> |
| Tree       | <a href="#">policer-control-policy</a>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## overrides

|            |  |
|------------|--|
| Synopsis   | Enable the <b>overrides</b> context  |
| Context    | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## root

|          |   |
|----------|---|
| Synopsis | Enter the <b>root</b> context   |
| Context  | <b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> |
| Tree     | <a href="#">root</a>  |

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rate** (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[max-rate](#) (*number* | *keyword*)  
 Tree [max-rate](#)  
 Range 1 to 6400000000  
 Options max  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority-mbs-thresholds**

Synopsis Enter the **priority-mbs-thresholds** context  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[priority-mbs-thresholds](#)  
 Tree [priority-mbs-thresholds](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **min-thresh-separation** (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[priority-mbs-thresholds](#) [min-thresh-separation](#) (*number* | *keyword*)  
 Tree [min-thresh-separation](#)  
 Range 0 to 16777216  
 Units bytes  
 Options auto  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority** [*priority-level*] *number*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>priority</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> |
| Tree       | <a href="#">priority</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**[priority-level]** *number*

|            |   |
|------------|---|
| Synopsis   | Priority level  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> |
| Tree       | <a href="#">priority</a>  |
| Range      | 1 to 8  |
| Notes      | This element is part of a list key.   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**mbs-contribution** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Minimum amount of cumulative buffer space allowed  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">mbs-contribution</a>   |
| Range      | 0 to 16777216  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**policy-name** *reference*

|          |  |
|----------|--|
| Synopsis | Policer control policy name  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <b>policy-name</b> <i>reference</i> |

|            |   |
|------------|---|
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i> |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## sap-egress

|            |  |
|------------|--|
| Synopsis   | Enter the <b>sap-egress</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> |
| Tree       | <a href="#">sap-egress</a>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## overrides

|            |  |
|------------|--|
| Synopsis   | Enter the <b>overrides</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## policer [[policer-id](#)] *reference*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>policer</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> |
| Tree       | <a href="#">policer</a>   |
| Introduced | 20.10.R1  |

| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## rate

|          |                               |
|----------|-------------------------------|
| Synopsis | Enter the <b>rate</b> context |
|----------|-------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides policer reference rate</b> |
| Tree       | <a href="#">rate</a>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .                       |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**cir** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | CIR rate   |
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides policer reference rate cir (number   keyword)</b> |
| Tree       | <a href="#">cir</a>  |
| Range      | 0 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**pir** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | PIR rate   |
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides policer reference rate pir (number   keyword)</b> |
| Tree       | <a href="#">pir</a>  |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**stat-mode** *keyword*

|          |  |
|----------|--|
| Synopsis | Mode of statistics collected by the policer  |
| Context  | <b>configure service cpipe string sap string egress qos sap-egress overrides policer reference stat-mode keyword</b> |

|            |  |
|------------|--|
| Tree       | <a href="#">stat-mode</a>  |
| Options    | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **queue** [[queue-id](#)] *reference*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>queue</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> |

| Notes      | This element is part of a list key.   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **adaptation-rule**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>adaptation-rule</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> |
| Tree       | <a href="#">adaptation-rule</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cir keyword**

|            |   |
|------------|---|
| Synopsis   | Constraint used when deriving the operational CIR value   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a> |
| Tree       | <a href="#">cir</a>   |
| Options    | max, min, closest   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**pir keyword**

|            |   |
|------------|---|
| Synopsis   | Constraint used when deriving the operational PIR value   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a> |
| Tree       | <a href="#">pir</a>   |
| Options    | max, min, closest   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**avg-frame-overhead decimal-number**

|            |   |
|------------|---|
| Synopsis   | Average packet-to-frame encapsulation overhead  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><a href="#">reference</a> <a href="#">avg-frame-overhead</a> <a href="#">decimal-number</a> |
| Tree       | <a href="#">avg-frame-overhead</a>  |
| Range      | 0.00 to 100.00  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**burst-limit (number | keyword)**

|          |  |
|----------|--|
| Synopsis | Explicit shaping burst size for the queue  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><a href="#">reference</a> <a href="#">burst-limit</a> <a href="#">(number   keyword)</a> |
| Tree     | <a href="#">burst-limit</a>  |
| Range    | 1 to 14000000  |

|            |  |
|------------|--|
| Units      | bytes  |
| Options    | auto   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **cbs** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cbs</a>   |
| Range      | 0 to 1048576  |
| Units      | kilobytes   |
| Options    | auto  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **drop-tail**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>drop-tail</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">drop-tail</a> |
| Tree       | <a href="#">drop-tail</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **low**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>low</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> |
| Tree       | <a href="#">low</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**percent-reduction-from-mbs** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Percentage reduction from the MBS for a queue drop tail  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">percent-reduction-from-mbs</a>   |
| Range      | 0 to 100   |
| Options    | auto   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**hs-class-weight** *number*

|            |  |
|------------|--|
| Synopsis   | Class weight override for the queue  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-class-weight</a> <i>number</i> |
| Tree       | <a href="#">hs-class-weight</a>  |
| Range      | 1   2   4   8  |
| Introduced | 20.10.R1   |
| Platforms  | 7750 SR-7/12/12e   |

**hs-wred-queue**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>hs-wred-queue</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a> |
| Tree       | <a href="#">hs-wred-queue</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7750 SR-7/12/12e   |

**policy** *reference*

|           |  |
|-----------|--|
| Synopsis  | Slope policy applied to the HSQ queue group queue  |
| Context   | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a> <a href="#">policy</a> <i>reference</i> |
| Tree      | <a href="#">policy</a>   |
| Reference | <b>configure</b> <a href="#">qos</a> <a href="#">slope-policy</a> <i>string</i>  |

Introduced 20.10.R1  
 Platforms 7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis WRR weight to parent with the queue into the scheduler  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wrr-weight](#) *number*  
 Tree [hs-wrr-weight](#)  
 Range 1 to 127  
 Default 1  
 Introduced 20.10.R1  
 Platforms 7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis MBS  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [mbs](#) (*number* | *keyword*)  
 Tree [mbs](#)  
 Range 0 to 1073741824  
 Units bytes  
 Options auto  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **monitor-queue-depth**

Synopsis Enable the **monitor-queue-depth** context  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [monitor-queue-depth](#)  
 Tree [monitor-queue-depth](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fast-polling** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enable fast polling of the queue depth  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i> |
| Tree        | <a href="#">fast-polling</a>  |
| Description | When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.<br>When configured to <b>false</b> , fast queue polling is not enabled.  |
| Default     | false   |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**violation-threshold** *decimal-number*

|             |   |
|-------------|---|
| Synopsis    | Threshold for queue depth before violation is raised  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i> |
| Tree        | <a href="#">violation-threshold</a>   |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.  |
| Range       | 0.01 to 99.99   |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**parent**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>parent</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b> |
| Tree       | <a href="#">parent</a>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**cir-weight** *number*

|          |   |
|----------|---|
| Synopsis | CIR parameter that overrides parent for queue group |
|----------|---|

|            |   |
|------------|---|
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides queue reference parent cir-weight number</b> |
| Tree       | <b>cir-weight</b>   |
| Range      | 0 to 100  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **weight number**

|            |   |
|------------|---|
| Synopsis   | PIR parameter that overrides parent for queue group   |
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides queue reference parent weight number</b> |
| Tree       | <b>weight</b>   |
| Range      | 0 to 100  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **percent-rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>percent-rate</b> context   |
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides queue reference percent-rate</b> |
| Tree       | <b>percent-rate</b>   |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .                             |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **cir decimal-number**

|            |  |
|------------|--|
| Synopsis   | CIR percent rate   |
| Context    | <b>configure service cpipe string sap string egress qos sap-egress overrides queue reference percent-rate cir decimal-number</b> |
| Tree       | <b>cir</b>   |
| Range      | 0.00 to 100.00   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pir** *decimal-number*

|            |  |
|------------|--|
| Synopsis   | PIR percent rate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i> |
| Tree       | <a href="#">pir</a>  |
| Range      | 0.01 to 100.00   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b> |
| Tree       | <a href="#">rate</a>   |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**cir** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CIR rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cir</a>   |
| Range      | 0 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**pir** (*number* | *keyword*)

|          |          |
|----------|----------|
| Synopsis | PIR rate |
|----------|----------|

| Units      | kilobps   |
| Options    | max   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Policy ID to associate with SAP for mirrored service  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">string</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **scheduler-policy**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>scheduler-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> |
| Tree       | <a href="#">scheduler-policy</a>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **overrides**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>overrides</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**scheduler** [[scheduler-name](#)] *string*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>scheduler</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a><br><a href="#">scheduler</a> <i>string</i> |
| Tree       | <a href="#">scheduler</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**[scheduler-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Scheduler name   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a><br><a href="#">scheduler</a> <i>string</i>  |
| Tree          | <a href="#">scheduler</a>  |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 20.10.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**parent**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>parent</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a><br><a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> |
| Tree       | <a href="#">parent</a>   |
| Introduced | 20.10.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [parent](#) **cir-weight** *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [parent](#) **weight** *number*

Tree [weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis Enter the **rate** context

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* **rate**

Tree [rate](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* **rate** **cir** (*number* | *keyword*)

Tree [cir](#)

|            |  |
|------------|--|
| Range      | 0 to 6400000000  |
| Units      | kilobps  |
| Options    | sum, max   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **pir** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | PIR at which the queue is to operate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">pir</a>  |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Scheduler policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i> |

## ip-criteria

|            |  |
|------------|--|
| Synopsis   | Enter the <b>ip-criteria</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ip-criteria</a> |
| Tree       | <a href="#">ip-criteria</a>  |
| Introduced | 20.10.R2   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**activate-entry-tag** *number*

|            |   |
|------------|---|
| Synopsis   | Tag ID activated for IPv4 criteria  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ip-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i> |
| Tree       | <a href="#">activate-entry-tag</a>  |
| Range      | 1 to 255  |
| Introduced | 20.10.R2  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**ipv6-criteria**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>ipv6-criteria</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ipv6-criteria</a> |
| Tree       | <a href="#">ipv6-criteria</a>  |
| Introduced | 20.10.R2   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**activate-entry-tag** *number*

|            |   |
|------------|---|
| Synopsis   | Tag ID activated for IPv6 criteria  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ipv6-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i> |
| Tree       | <a href="#">activate-entry-tag</a>  |
| Range      | 1 to 255  |
| Introduced | 20.10.R2  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**policer** [[policer-id](#)] *reference*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>policer</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> |
| Tree       | <a href="#">policer</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**[policer-id] reference**

|            |  |
|------------|--|
| Synopsis   | Policer unique ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> |
| Tree       | <a href="#">policer</a>  |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">string</a> <a href="#">policer</a> <a href="#">number</a>   |
| Notes      | This element is part of a list key.  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cbs (number | keyword)**

|            |   |
|------------|---|
| Synopsis   | CBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">cbs</a> ( <a href="#">number</a>   <a href="#">keyword</a> ) |
| Tree       | <a href="#">cbs</a>   |
| Range      | 0 to 268435456  |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**mbs (number | keyword)**

|            |   |
|------------|---|
| Synopsis   | MBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">mbs</a> ( <a href="#">number</a>   <a href="#">keyword</a> ) |
| Tree       | <a href="#">mbs</a>   |
| Range      | 0 to 268435456  |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**packet-byte-offset** *number*

|            |   |
|------------|---|
| Synopsis   | Packet size modification for policing information   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">packet-byte-offset</a> <i>number</i> |
| Tree       | <a href="#">packet-byte-offset</a>  |
| Range      | -32 to 31   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**percent-rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>percent-rate</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> |
| Tree       | <a href="#">percent-rate</a>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**cir** *decimal-number*

|            |   |
|------------|---|
| Synopsis   | CIR percent rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i> |
| Tree       | <a href="#">cir</a>   |
| Range      | 0.00 to 100.00  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pir** *decimal-number*

|          |   |
|----------|---|
| Synopsis | PIR percent rate  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i> |
| Tree     | <a href="#">pir</a>   |
| Range    | 0.01 to 100.00  |

|            |   |
|------------|---|
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

**rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> |
| Tree       | <a href="#">rate</a>   |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cir** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CIR rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cir</a>   |
| Range      | 0 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pir** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | PIR rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">pir</a>   |
| Range      | 1 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**stat-mode** *keyword*

|            |  |
|------------|--|
| Synopsis   | Mode of statistics collected by the policer  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i> |
| Tree       | <a href="#">stat-mode</a>  |
| Options    | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**queue** [[queue-id](#)] *reference*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>queue</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> |
| Tree       | <a href="#">queue</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**[queue-id]** *reference*

|            |  |
|------------|--|
| Synopsis   | Policer unique ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> |
| Tree       | <a href="#">queue</a>  |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>   |
| Notes      | This element is part of a list key.  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**adaptation-rule**

|          |   |
|----------|---|
| Synopsis | Enter the <b>adaptation-rule</b> context  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>adaptation-rule</b> |

|            |  |
|------------|--|
| Tree       | <a href="#">adaptation-rule</a>                              |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

**cir keyword**

|            |  |
|------------|--|
| Synopsis   | Constraint used when deriving the operational CIR value  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a> |
| Tree       | <a href="#">cir</a>  |
| Options    | max, min, closest  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pir keyword**

|            |  |
|------------|--|
| Synopsis   | Constraint used when deriving the operational PIR value  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a> |
| Tree       | <a href="#">pir</a>  |
| Options    | max, min, closest  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**cbs (number | keyword)**

|            |   |
|------------|---|
| Synopsis   | CBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">cbs</a> <a href="#">(number   keyword)</a> |
| Tree       | <a href="#">cbs</a>   |
| Range      | 0 to 1048576  |
| Units      | kilobytes   |
| Options    | auto  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## drop-tail

|            |  |
|------------|--|
| Synopsis   | Enter the <b>drop-tail</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">drop-tail</a> |
| Tree       | <a href="#">drop-tail</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## low

|            |  |
|------------|--|
| Synopsis   | Enter the <b>low</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> |
| Tree       | <a href="#">low</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## percent-reduction-from-mbs (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Percentage reduction from the MBS for a queue drop tail  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">percent-reduction-from-mbs</a>   |
| Range      | 0 to 100   |
| Options    | auto   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## mbs (*number* | *keyword*)

|          |   |
|----------|---|
| Synopsis | MBS   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a><br><i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <a href="#">mbs</a>   |
| Range    | 0 to 1073741824   |

|            |  |
|------------|--|
| Units      | bytes  |
| Options    | auto   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### monitor-queue-depth

|            |   |
|------------|---|
| Synopsis   | Enable the <b>monitor-queue-depth</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b> |
| Tree       | <a href="#">monitor-queue-depth</a>   |
| Introduced | 21.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### fast-polling *boolean*

|            |   |
|------------|---|
| Synopsis   | Enable fast polling of the queue depth  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i> |
| Tree       | <a href="#">fast-polling</a>  |
| Default    | false   |
| Introduced | 21.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### parent

|            |  |
|------------|--|
| Synopsis   | Enter the <b>parent</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b> |
| Tree       | <a href="#">parent</a>   |
| Introduced | 20.10.R1   |

| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <a href="#">pir</a> ( <i>number   keyword</i> ) |
| Tree       | <a href="#">pir</a>   |
| Range      | 1 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Policy ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">string</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **queuing-type** *keyword*

|            |  |
|------------|--|
| Synopsis   | Queuing type   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">queuing-type</a> <i>keyword</i> |
| Tree       | <a href="#">queuing-type</a>   |
| Options    | shared, multipoint-shared  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e   |

### **scheduler-policy**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>scheduler-policy</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> |
| Tree       | <a href="#">scheduler-policy</a>  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**overrides**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>overrides</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**scheduler** [[scheduler-name](#)] *string*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>scheduler</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a><br><a href="#">scheduler</a> <i>string</i> |
| Tree       | <a href="#">scheduler</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**[scheduler-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Scheduler name   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a><br><a href="#">scheduler</a> <i>string</i>   |
| Tree          | <a href="#">scheduler</a>  |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 20.10.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler** [[scheduler-name](#)] *string*

Synopsis Enter the **scheduler** list instance

Context **configure service customer** *string* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Tree [scheduler](#)

Introduced 16.0.R1

Platforms All

### **[scheduler-name]** *string*

Synopsis Scheduler name

Context **configure service customer** *string* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Tree [scheduler](#)

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (**#**, **\$**, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

### **adv-service-mtu** *number*

Synopsis Advertised service MTU value

Context **configure service epipe** *string* **bgp** *number* **adv-service-mtu** *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.

Range 0 to 9782

Introduced 22.2.R1

Platforms All

| Tree        | <a href="#">bgp</a>  |
| Description | When configured to <b>true</b> , BGP searches the BGP LSP for the address of the BGP next hop.   |

When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **ldp boolean**

|             |  |
|-------------|--|
| Synopsis    | Use LDP tunneling for next-hop resolution  |
| Context     | <b>configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean</b>  |
| Tree        | <b>ldp</b>   |
| Description | When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.<br>When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution. |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **mpls-fwd-policy boolean**

|             |   |
|-------------|---|
| Synopsis    | Use MPLS forwarding policy for next-hop resolution  |
| Context     | <b>configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean</b>   |
| Tree        | <b>mpls-fwd-policy</b>  |
| Description | When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.<br>When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution. |
| Default     | false   |
| Introduced  | 19.5.R1   |
| Platforms   | All   |

### **rib-api boolean**

|          |  |
|----------|--|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
|----------|--|

|             |   |
|-------------|---|
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter rib-api</b> <i>boolean</i>  |
| Tree        | <b>rib-api</b>  |
| Description | When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.<br>When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution. |
| Default     | false   |
| Introduced  | 19.5.R1   |
| Platforms   | All   |

### **rsvp** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Use RSVP tunneling for next-hop resolution  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter rsvp</b> <i>boolean</i>   |
| Tree        | <b>rsvp</b>   |
| Description | When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.<br>When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution. |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **sr-isis** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Use IS-IS SR tunneling for next-hop resolution  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-isis</b> <i>boolean</i>  |
| Tree        | <b>sr-isis</b>  |
| Description | When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.<br>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.<br>When configured to <b>false</b> , IS-IS tunneling is not used for next-hop resolution. |

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **sr-ospf** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Use OSPF SR tunneling for next-hop resolution  |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-ospf</b> <i>boolean</i>  |
| Tree        | <b>sr-ospf</b>   |
| Description | When configured to <b>true</b> , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.<br><br>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.<br><br>When configured to <b>false</b> , OSPF tunneling is not used for next-hop resolution. |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **sr-ospf3** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Use OSPFv3 SR tunneling for next-hop resolution   |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-ospf3</b> <i>boolean</i>  |
| Tree        | <b>sr-ospf3</b>   |
| Description | When configured to <b>true</b> , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.<br><br>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.<br><br>When configured to <b>false</b> , OSPF3 tunneling is not used for next-hop resolution. |
| Default     | false   |
| Introduced  | 19.10.R1  |
| Platforms   | All   |

### **sr-policy** *boolean*

|          |   |
|----------|---|
| Synopsis | Use SR policies for next-hop resolution |
|----------|---|

|             |  |
|-------------|--|
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-policy</b> <i>boolean</i>   |
| Tree        | <b>sr-policy</b>   |
| Description | When configured to <b>true</b> , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.<br><br>When configured to <b>false</b> , SR policies are not used for next-hop resolution. |
| Default     | false  |
| Introduced  | 19.5.R1  |
| Platforms   | All  |

**sr-te** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Use SR-TE tunneling for next-hop resolution  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-te</b> <i>boolean</i>   |
| Tree        | <b>sr-te</b>   |
| Description | When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.<br><br>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.<br><br>When configured to <b>false</b> , SR-TE tunneling is not used for next-hop resolution. |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**udp** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Use MPLS over UDP tunneling for next-hop resolution  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter udp</b> <i>boolean</i>   |
| Tree        | <b>udp</b>   |
| Description | When configured to <b>true</b> , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.<br><br>When configured to <b>false</b> , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default     | false  |
| Introduced  | 16.0.R1  |

Platforms All

### **weighted-ecmp** *boolean*

Synopsis Allow weighted load balancing

Context **configure** *service* *epipe string* *bgp-evpn mpls number* *auto-bind-tunnel* *weighted-ecmp boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default false

Introduced 22.7.R1

Platforms All

### **control-word** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the CW bit in the label message

Context **configure** *service* *epipe string* *bgp-evpn mpls number* *control-word boolean*

Tree [control-word](#)

Default false

Introduced 16.0.R1

Platforms All

### **default-route-tag** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Default route tag

|             |  |
|-------------|--|
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>default-route-tag</b> <i>string</i>   |
| Tree        | <b>default-route-tag</b>   |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced  | 16.0.R4  |
| Platforms   | All  |

### **dynamic-egress-label-limit** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enables dynamic egress label limit  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>dynamic-egress-label-limit</b> <i>boolean</i>  |
| Tree        | <b>dynamic-egress-label-limit</b>   |
| Description | <p>When configured to <b>true</b>, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to <b>false</b> this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p> |
| Default     | false   |
| Introduced  | 22.2.R1   |
| Platforms   | All   |

**ecmp number**

|-------------|--|
| Synopsis    | Enter the <b>segment-routing-v6</b> list instance  |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> |
| Tree        | <b>segment-routing-v6</b>  |
| Description | Commands in this context configure the SRv6 instance that is used in the service.                                  |
| Introduced  | 21.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**[bgp-instance]** *number*

|            |  |
|------------|--|
| Synopsis   | BGP instance   |
| Context    | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> |
| Tree       | <b>segment-routing-v6</b>  |
| Range      | 1  |
| Notes      | This element is part of a list key.  |
| Introduced | 21.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of segment routing over IPv6  |
| Context    | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 21.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**default-route-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Default route tag  |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>default-route-tag</b> <i>string</i>  |
| Tree        | <b>default-route-tag</b>   |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced  | 21.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**ecmp number**

|            |  |
|------------|--|
| Synopsis   | Maximum ECMP value configured on the service   |
| Context    | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>ecmp</b> <i>number</i> |
| Tree       | <b>ecmp</b>  |
| Range      | 1 to 32  |
| Default    | 1  |
| Introduced | 21.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**evi-three-byte-auto-rt boolean****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Auto-derive the BGP EVPN route target   |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>evi-three-byte-auto-rt</b> <i>boolean</i>   |
| Tree        | <b>evi-three-byte-auto-rt</b>   |
| Description | <p>When configured to <b>true</b>, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).<br/>Where:</p> <ul style="list-style-type: none"> <li>• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken</li> <li>• A=0 (for auto-derivation)</li> <li>• Type=4 (EVI-based route-target)</li> <li>• D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance</li> <li>• Service ID=3-octet EVI</li> </ul> <p>When configured to <b>false</b>, route target derivation is not allowed.</p> |
| Default     | false   |
| Introduced  | 21.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR   |

**force-vc-forwarding** *keyword*

|             |  |
|-------------|--|
| Synopsis    | Datapath forwarding to force vlan-vc-type  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">segment-routing-v6</a> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>   |
| Tree        | <a href="#">force-vc-forwarding</a>  |
| Description | <p>This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.</p> <p>This command may be used in conjunction with the <b>sap ingress vlan-translation</b> command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.</p> |
| Options     | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag   |
| Introduced  | 21.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**oper-group** *reference*

|             |  |
|-------------|--|
| Synopsis    | Operational group  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">segment-routing-v6</a> <i>number</i> <b>oper-group</b> <i>reference</i>  |
| Tree        | <a href="#">oper-group</a>   |
| Description | <p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.</p> |
| Reference   | <b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>  |
| Introduced  | 21.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR  |

**default-route-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Default route tag   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">vxlan</a> <i>number</i> <a href="#">default-route-tag</a> <i>string</i> |
| Tree     | <a href="#">default-route-tag</a>   |

|             |  |
|-------------|--|
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced  | 16.0.R4  |
| Platforms   | All  |

### **ecmp number**

|            |   |
|------------|---|
| Synopsis   | Maximum ECMP routes information   |
| Context    | <b>configure</b> <i>service epipe string bgp-evpn vxlan number</i> <b>ecmp number</b> |
| Tree       | <b>ecmp</b>   |
| Range      | 1 to 32   |
| Default    | 1   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Auto-derive the BGP EVPN route target   |
| Context     | <b>configure</b> <i>service epipe string bgp-evpn vxlan number</i> <b>evi-three-byte-auto-rt boolean</b>  |
| Tree        | <b>evi-three-byte-auto-rt</b>   |
| Description | When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). |

Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

|            |          |
|------------|----------|
| Default    | false    |
| Introduced | 21.10.R1 |
| Platforms  | All      |

### send-tunnel-encap *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Send VXLAN value in encapsulation extended community   |
| Context     | <b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>vxlan</i> <i>number</i> <i>send-tunnel-encap</i> <i>boolean</i>  |
| Tree        | <i>send-tunnel-encap</i>   |
| Description | When configured to <b>true</b> , this command sends the VXLAN value in the encapsulation that is advertised with the EVPN routes for the service. The encapsulation is encoded in RFC5512-based tunnel encapsulation extended communities.<br><br>When configured to <b>false</b> , no encapsulation extended community is sent. |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### vxlan-instance *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**oper-group** *reference*

|            |   |
|------------|---|
| Synopsis   | Oper-group name   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string oper-group reference</i> |
| Tree       | <a href="#">oper-group</a>  |
| Reference  | <b>configure</b> <a href="#">service oper-group</a> <i>string</i>                 |
| Introduced | 16.0.R1   |

Platforms All

## **pbb**

Synopsis Enter the **pbb** context  
 Context **configure service epipe string pbb**  
 Tree [pbb](#)  
 Introduced 16.0.R1  
 Platforms All

## **force-qtag-forwarding boolean**

Synopsis Add an IEEE 802.1q tag after CMAC addresses PBB header  
 Context **configure service epipe string pbb force-qtag-forwarding boolean**  
 Tree [force-qtag-forwarding](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

## **local-switch-service-state keyword**

Synopsis Endpoint state used to determine PBB-Epipe state  
 Context **configure service epipe string pbb local-switch-service-state keyword**  
 Tree [local-switch-service-state](#)  
 Description In a PBB Epipe with two SAPs and a PBB tunnel, this command controls whether the operational state of the PBB-Epipe service depends on the state of the PBB tunnel only, or on the state of two of the three endpoints (PBB tunnel and two SAPs). The second case implies that at least one of the SAPs must be up for the PBB-Epipe service to be operationally up.  
 Options sap, pbb-tunnel  
 Default sap  
 Introduced 21.7.R1  
 Platforms All

## tunnel

|            |   |
|------------|---|
| Synopsis   | Enable the <b>tunnel</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <a href="#">tunnel</a> |
| Tree       | <a href="#">tunnel</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## backbone-dest-mac *string*

|            |   |
|------------|---|
| Synopsis   | Backbone Destination MAC address  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <a href="#">tunnel</a> <a href="#">backbone-dest-mac</a> <i>string</i> |
| Tree       | <a href="#">backbone-dest-mac</a>   |
| Notes      | The following elements are part of a mandatory choice: <b>backbone-dest-mac</b> or <b>backbone-dest-mac-name</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## backbone-dest-mac-name *reference*

|            |   |
|------------|---|
| Synopsis   | Backbone destination MAC name for PBB packets   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <a href="#">tunnel</a> <a href="#">backbone-dest-mac-name</a> <i>reference</i> |

| Introduced | 16.0.R1                             |
| Platforms  | All                                 |

## **aarp**

|            |   |
|------------|---|
| Synopsis   | Enable the <b>aarp</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> |
| Tree       | <a href="#">aarp</a>  |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## **id reference**

|            |  |
|------------|--|
| Synopsis   | AARP instance ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <i>id</i> <i>reference</i> |
| Tree       | <a href="#">id</a>   |
| Reference  | <b>configure</b> <a href="#">application-assurance</a> <a href="#">aarp</a> <i>number</i>  |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## **type keyword**

|            |  |
|------------|--|
| Synopsis   | Role referenced by the AARP  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <i>type</i> <i>keyword</i> |
| Tree       | <a href="#">type</a>   |
| Options    | dual-homed, dual-homed-secondary   |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## **accounting-policy reference**

|          |   |
|----------|---|
| Synopsis | Accounting policy   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i> |
| Tree     | <a href="#">accounting-policy</a>   |

|            |  |
|------------|--|
| Reference  | <b>configure</b> <a href="#">log accounting-policy</a> <i>number</i> |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of the SAP  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**app-profile** *reference*

|            |  |
|------------|--|
| Synopsis   | Application profile name   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>app-profile</b> <i>reference</i>   |
| Tree       | <a href="#">app-profile</a>  |
| Reference  | <b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i> |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

**bandwidth** *number*

|            |   |
|------------|---|
| Synopsis   | SAP bandwidth   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>bandwidth</b> <i>number</i> |
| Tree       | <a href="#">bandwidth</a>   |
| Range      | 1 to 6400000000   |
| Units      | kilobps   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **cflowd** *boolean*

|            |   |
|------------|---|
| Synopsis   | Enable Cflowd collection and analysis on this SAP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>cflowd</b> <i>boolean</i> |
| Tree       | <a href="#">cflowd</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **collect-stats** *boolean*

|            |  |
|------------|--|
| Synopsis   | Collect accounting statistics  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>collect-stats</b> <i>boolean</i> |
| Tree       | <a href="#">collect-stats</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **cpu-protection**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>cpu-protection</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>cpu-protection</b> |
| Tree       | <a href="#">cpu-protection</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

### **eth-cfm-monitoring**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>eth-cfm-monitoring</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>cpu-protection</b> <b>eth-cfm-monitoring</b> |
| Tree       | <a href="#">eth-cfm-monitoring</a>   |
| Notes      | The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

## aggregate

|            |  |
|------------|--|
| Synopsis   | Apply rate limit to the sum of the per peer packet rates   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">aggregate</a> |
| Tree       | <a href="#">aggregate</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

## car

|            |  |
|------------|--|
| Synopsis   | Ignore Ethernet CFM packets when enforcing overall rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a> |
| Tree       | <a href="#">car</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

## mac-monitoring

|            |  |
|------------|--|
| Synopsis   | Monitor MAC for CPU protection   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a> |
| Tree       | <a href="#">mac-monitoring</a>   |
| Notes      | The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

## policy-id *reference*

|            |  |
|------------|--|
| Synopsis   | CPM protection policy  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <i>reference</i> |
| Tree       | <a href="#">policy-id</a>  |
| Reference  | <b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <i>number</i>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

**description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i> |
| Tree          | <a href="#">description</a>  |
| String Length | 1 to 160   |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

**dist-cpu-protection** *reference*

|            |   |
|------------|---|
| Synopsis   | Distributed CPU protection policy for SAP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i> |
| Tree       | <a href="#">dist-cpu-protection</a>   |
| Reference  | <b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <i>policy</i> <i>string</i>                                    |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**egress**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>egress</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> |
| Tree       | <a href="#">egress</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**agg-rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>agg-rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> |
| Tree       | <a href="#">agg-rate</a>   |
| Notes      | The following elements are part of a choice: <b>agg-rate</b> or <b>percent-agg-rate</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**adaptation-rule** *keyword*

|            |   |
|------------|---|
| Synopsis   | Adaptation rule to compute the operational PIR value when an aggregate shaper is used   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <i>keyword</i> |
| Tree       | <a href="#">adaptation-rule</a>   |
| Options    | max, min, closest   |
| Default    | closest   |
| Introduced | 22.10.R1  |
| Platforms  | 7750 SR-1, 7750 SR-s  |

**burst-limit** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Shaping burst size when an aggregate shaper is used   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">burst-limit</a>   |
| Range      | 1 to 14000000   |
| Units      | bytes   |
| Options    | auto  |
| Default    | auto  |
| Introduced | 22.10.R1  |
| Platforms  | 7750 SR-1, 7750 SR-s  |

**limit-unused-bandwidth** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable aggregate rate overrun protection   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i> |
| Tree       | <a href="#">limit-unused-bandwidth</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**queue-frame-based-accounting** *boolean*

|          |  |
|----------|--|
| Synopsis | Enable frame based accounting on policers and queues |
|----------|--|

|            |  |
|------------|--|
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>queue-frame-based-accounting</b> <i>boolean</i> |
| Tree       | <a href="#">queue-frame-based-accounting</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **rate number**

|            |   |
|------------|---|
| Synopsis   | Enforced aggregate rate for all queues  |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>rate</b> <i>number</i> |
| Tree       | <a href="#">rate</a>  |
| Range      | 1 to 6400000000   |
| Units      | kilobps   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **filter**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>filter</b> context  |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <a href="#">filter</a> |
| Tree       | <a href="#">filter</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **ip reference**

|            |   |
|------------|---|
| Synopsis   | IPv4 filter policy name   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <a href="#">filter</a> <b>ip</b> <i>reference</i> |
| Tree       | <a href="#">ip</a>  |
| Reference  | <b>configure filter</b> <a href="#">ip-filter</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## ipv6 reference

|            |   |
|------------|---|
| Synopsis   | IPv6 filter policy name   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter ipv6 reference</a> |
| Tree       | <a href="#">ipv6</a>  |
| Reference  | <b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## mac reference

|            |  |
|------------|--|
| Synopsis   | MAC filter policy name   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter mac reference</a> |
| Tree       | <a href="#">mac</a>  |
| Reference  | <b>configure</b> <a href="#">filter mac-filter</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## qos

|            |   |
|------------|---|
| Synopsis   | Enter the <b>qos</b> context  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> |
| Tree       | <a href="#">qos</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## policer-control-policy

|            |  |
|------------|--|
| Synopsis   | Enter the <b>policer-control-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a> |
| Tree       | <a href="#">policer-control-policy</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**overrides**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>overrides</b> context  |
| Context    | <b>configure service epipe string sap string egress qos policer-control-policy overrides</b> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR                                       |

**root**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>root</b> context   |
| Context    | <b>configure service epipe string sap string egress qos policer-control-policy overrides root</b> |
| Tree       | <a href="#">root</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**max-rate** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Maximum frame-based bandwidth limit  |
| Context    | <b>configure service epipe string sap string egress qos policer-control-policy overrides root</b><br><a href="#">max-rate</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">max-rate</a>   |
| Range      | 1 to 6400000000  |
| Options    | max  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**priority-mbs-thresholds**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>priority-mbs-thresholds</b> context   |
| Context    | <b>configure service epipe string sap string egress qos policer-control-policy overrides root</b><br><a href="#">priority-mbs-thresholds</a> |
| Tree       | <a href="#">priority-mbs-thresholds</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**min-thresh-separation** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Minimum amount of separation buffer space  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">min-thresh-separation</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">min-thresh-separation</a>  |
| Range      | 0 to 16777216  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**priority** [[priority-level](#)] *number*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>priority</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> |
| Tree       | <a href="#">priority</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**[priority-level]** *number*

|            |  |
|------------|--|
| Synopsis   | Priority level   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> |
| Tree       | <a href="#">priority</a>   |
| Range      | 1 to 8   |
| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**mbs-contribution** (*number* | *keyword*)

|          |  |
|----------|--|
| Synopsis | Minimum amount of cumulative buffer space allowed  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> ) |

|            |  |
|------------|--|
| Tree       | <a href="#">mbs-contribution</a>                       |
| Range      | 0 to 16777216  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

### **policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Policer control policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **qinq-mark-top-only** *boolean*

|            |   |
|------------|---|
| Synopsis   | Mark top Q-tags   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i> |
| Tree       | <a href="#">qinq-mark-top-only</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **sap-egress**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>sap-egress</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> |
| Tree       | <a href="#">sap-egress</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**overrides**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>overrides</b> context   |
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides</b> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**hs-secondary-shaper string**

|               |   |
|---------------|---|
| Synopsis      | HS Secondary Shaper   |
| Context       | <b>configure service epipe string sap string egress qos sap-egress overrides hs-secondary-shaper string</b> |
| Tree          | <a href="#">hs-secondary-shaper</a>   |
| String Length | 1 to 32   |
| Introduced    | 16.0.R1   |
| Platforms     | 7750 SR-7/12/12e  |

**hs-wrr-group [group-id] reference**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>hs-wrr-group</b> list instance   |
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides hs-wrr-group reference</b> |
| Tree       | <a href="#">hs-wrr-group</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR-7/12/12e  |

**[group-id] reference**

|            |   |
|------------|---|
| Synopsis   | HS WRR group identifier   |
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides hs-wrr-group reference</b> |
| Tree       | <a href="#">hs-wrr-group</a>  |
| Reference  | <b>configure qos sap-egress string hs-wrr-group number</b>  |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |

Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Class weight override of the WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [hs-class-weight](#) *number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [percent-rate](#) *decimal-number*

Tree [percent-rate](#)

Range 0.01 to 100.00

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [rate](#) (*number* | *keyword*)

Tree [rate](#)

Range 1 to 2000000000

Units kilobps

Options max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

**policer** [*policer-id*] *reference*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>policer</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> |
| Tree       | <a href="#">policer</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**[policer-id]** *reference*

|            |   |
|------------|---|
| Synopsis   | Policer unique ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> |
| Tree       | <a href="#">policer</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**cbs** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | CBS  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cbs</a>  |
| Range      | 0 to 268435456   |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**mbs** (*number* | *keyword*)

|          |     |
|----------|-----|
| Synopsis | MBS |
|----------|-----|

|            |   |
|------------|---|
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides policer</b><br><i>reference mbs (number   keyword)</i> |
| Tree       | <a href="#">mbs</a>   |
| Range      | 0 to 268435456  |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **packet-byte-offset** *number*

|            |  |
|------------|--|
| Synopsis   | Packet size modification for policing information  |
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides policer</b><br><i>reference packet-byte-offset number</i> |
| Tree       | <a href="#">packet-byte-offset</a>   |
| Range      | -64 to 31  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **percent-rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>percent-rate</b> context   |
| Context    | <b>configure service epipe string sap string egress qos sap-egress overrides policer</b><br><i>reference percent-rate</i> |
| Tree       | <a href="#">percent-rate</a>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **cir** *decimal-number*

|          |  |
|----------|--|
| Synopsis | CIR percent rate   |
| Context  | <b>configure service epipe string sap string egress qos sap-egress overrides policer</b><br><i>reference percent-rate cir decimal-number</i> |
| Tree     | <a href="#">cir</a>  |
| Range    | 0.00 to 100.00   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

### **pir** *decimal-number*

|            |  |
|------------|--|
| Synopsis   | PIR percent rate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a><br><i>reference</i> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i> |
| Tree       | <a href="#">pir</a>  |
| Range      | 0.01 to 100.00   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a><br><i>reference</i> <b>rate</b> |
| Tree       | <a href="#">rate</a>   |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **cir** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CIR rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a><br><i>reference</i> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cir</a>   |
| Range      | 0 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**pir** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | PIR rate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">pir</a>  |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**stat-mode** *keyword*

|            |  |
|------------|--|
| Synopsis   | Mode of statistics collected by the policer  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i> |
| Tree       | <a href="#">stat-mode</a>  |
| Options    | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**queue** [[queue-id](#)] *reference*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>queue</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> |
| Tree       | <a href="#">queue</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**[queue-id]** *reference*

|          |  |
|----------|--|
| Synopsis | Policer unique ID  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> |

|            |   |
|------------|---|
| Tree       | <a href="#">queue</a>   |
| Reference  | <b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## adaptation-rule

|            |  |
|------------|--|
| Synopsis   | Enter the <b>adaptation-rule</b> context   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a> |
| Tree       | <a href="#">adaptation-rule</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## cir keyword

|            |   |
|------------|---|
| Synopsis   | Constraint used when deriving the operational CIR value   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i> |
| Tree       | <a href="#">cir</a>   |
| Options    | max, min, closest   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## pir keyword

|            |   |
|------------|---|
| Synopsis   | Constraint used when deriving the operational PIR value   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i> |
| Tree       | <a href="#">pir</a>   |
| Options    | max, min, closest   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**avg-frame-overhead** *decimal-number*

|            |  |
|------------|--|
| Synopsis   | Average packet-to-frame encapsulation overhead   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">queue reference</a> <b>avg-frame-overhead</b> <i>decimal-number</i> |
| Tree       | <a href="#">avg-frame-overhead</a>   |

| Platforms  | All  |

**burst-limit** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Explicit shaping burst size for the queue  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">queue reference</a> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">burst-limit</a>  |
| Range      | 1 to 14000000  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**cbs** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | CBS  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">queue reference</a> <b>cbs</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cbs</a>  |
| Range      | 0 to 1048576   |
| Units      | kilobytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**drop-tail**

|          |                                    |
|----------|------------------------------------|
| Synopsis | Enter the <b>drop-tail</b> context |
|----------|------------------------------------|

|            |  |
|------------|--|
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail</b> |
| Tree       | <b>drop-tail</b>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## low

|            |  |
|------------|--|
| Synopsis   | Enter the <b>low</b> context   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail low</b> |
| Tree       | <b>low</b>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## percent-reduction-from-mbs (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Percentage reduction from the MBS for a queue drop tail  |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <b>percent-reduction-from-mbs</b>  |
| Range      | 0 to 100   |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## hs-class-weight *number*

|            |  |
|------------|--|
| Synopsis   | Class weight override for the queue  |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference hs-class-weight</b> <i>number</i> |
| Tree       | <b>hs-class-weight</b>   |
| Range      | 1   2   4   8  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

**hs-wred-queue**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>hs-wred-queue</b> context   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue</b><br><i>reference</i> <a href="#">hs-wred-queue</a> |
| Tree       | <a href="#">hs-wred-queue</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

**policy reference**

|            |   |
|------------|---|
| Synopsis   | Slope policy applied to the HSQ queue group queue   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue</b><br><i>reference</i> <a href="#">hs-wred-queue</a> <a href="#">policy reference</a> |
| Tree       | <a href="#">policy</a>  |
| Reference  | <b>configure qos slope-policy</b> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR-7/12/12e  |

**hs-wrr-weight** *number*

|            |  |
|------------|--|
| Synopsis   | WRR weight to parent with the queue into the scheduler   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue</b><br><i>reference</i> <a href="#">hs-wrr-weight</a> <i>number</i> |
| Tree       | <a href="#">hs-wrr-weight</a>  |
| Range      | 1 to 127   |
| Default    | 1  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

**mbs** (*number* | *keyword*)

|          |   |
|----------|---|
| Synopsis | MBS   |
| Context  | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue</b><br><i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <a href="#">mbs</a>   |
| Range    | 0 to 1073741824   |

|            |         |
|------------|---------|
| Units      | bytes   |
| Options    | auto    |
| Introduced | 16.0.R1 |
| Platforms  | All     |

## monitor-queue-depth

|            |   |
|------------|---|
| Synopsis   | Enable the <b>monitor-queue-depth</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b> |
| Tree       | <a href="#">monitor-queue-depth</a>   |
| Introduced | 20.10.R1  |
| Platforms  | All   |

## fast-polling *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enable fast polling of the queue depth  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i> |
| Tree        | <a href="#">fast-polling</a>  |
| Description | When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.<br>When configured to <b>false</b> , fast queue polling is not enabled.  |
| Default     | false   |
| Introduced  | 20.10.R1  |
| Platforms   | All   |

## violation-threshold *decimal-number*

|             |   |
|-------------|---|
| Synopsis    | Threshold for queue depth before violation is raised  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i> |
| Tree        | <a href="#">violation-threshold</a>   |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.  |
| Range       | 0.01 to 99.99   |

Introduced 20.10.R1  
 Platforms All

## parent

Synopsis Enter the **parent** context  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **parent**

| Introduced | 16.0.R1  |
| Platforms  | All  |

### **scheduler** [**scheduler-name**] *string*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>scheduler</b> list instance  |
| Context    | <b>configure service epipe string sap string egress qos scheduler-policy overrides scheduler string</b> |
| Tree       | <b>scheduler</b>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **[scheduler-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Scheduler name   |
| Context       | <b>configure service epipe string sap string egress qos scheduler-policy overrides scheduler string</b>  |
| Tree          | <b>scheduler</b>   |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

**parent**

|            |  |
|------------|--|

## endpoint *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Name of the endpoint  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">reference</a> |
| Tree       | <a href="#">endpoint</a>  |
| Reference  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## eth-cfm

|            |  |
|------------|--|
| Synopsis   | Enter the <b>eth-cfm</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> |
| Tree       | <a href="#">eth-cfm</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## ais *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable the generation and the reception of AIS messages  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">ais</a> <a href="#">boolean</a> |
| Tree       | <a href="#">ais</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## collect-lmm-fc-stats

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>collect-lmm-fc-stats</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> |
| Tree        | <a href="#">collect-lmm-fc-stats</a>  |
| Description | Commands in this context configure per forwarding class (FC) LMM information collection.  |

The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.

This command and the **collect-imm-stats** command are mutually exclusive when there is entity resource contention.

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **fc** keyword

|                |   |
|----------------|---|
| Synopsis       | Forwarding class name for profile-unaware counter   |
| Context        | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-imm-fc-stats</a> <a href="#">fc</a> <a href="#">keyword</a>  |
| Tree           | <a href="#">fc</a>  |
| Description    | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-imm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options        | be, l2, af, l1, h2, ef, h1, nc  |
| Max. Instances | 8   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **fc-in-profile** keyword

|             |   |
|-------------|---|
| Synopsis    | Forwarding class name for profile-aware counter   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-imm-fc-stats</a> <a href="#">fc-in-profile</a> <a href="#">keyword</a>   |
| Tree        | <a href="#">fc-in-profile</a>   |
| Description | <p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-imm-fc-stats</b> context.</p> |

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

|                |  |
|----------------|--|
| Options        | be, l2, af, l1, h2, ef, h1, nc                               |
| Max. Instances | 8  |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **collect-lmm-stats** *boolean*

|            |  |
|------------|--|
| Synopsis   | Collect statistics for loss measurement message tests  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i> |
| Tree       | <a href="#">collect-lmm-stats</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>mep</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **md-admin-name** *reference*

|            |  |
|------------|--|
| Synopsis   | Maintenance Domain (MD) name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>  |
| Reference  | <b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>  |
| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**ma-admin-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Maintenance Association (MA) name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Reference  | <b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i> <a href="#">association</a> <i>string</i>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**mep-id** *number*

|            |   |
|------------|---|
| Synopsis   | Maintenance Endpoint (MEP) ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Range      | 1 to 8191   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of the MEP  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**ais**

|          |                               |
|----------|-------------------------------|
| Synopsis | Enable the <b>ais</b> context |
|----------|-------------------------------|

|            |  |
|------------|--|
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais</b> |
| Tree       | <a href="#">ais</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **client-meg-level** *number*

|                |   |
|----------------|---|
| Synopsis       | Client MEG level for AIS message generation   |
| Context        | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais client-meg-level</b> <i>number</i> |
| Tree           | <a href="#">client-meg-level</a>  |
| Range          | 1 to 7  |
| Max. Instances | 7   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **interface-support** *boolean*

|            |   |
|------------|---|
| Synopsis   | Enable generation of AIS PDUs based on endpoint state   |
| Context    | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais interface-support</b> <i>boolean</i> |
| Tree       | <a href="#">interface-support</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **interval** *number*

|          |   |
|----------|---|
| Synopsis | Transmission interval for AIS messages  |
| Context  | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais interval</b> <i>number</i> |
| Tree     | <a href="#">interval</a>  |
| Range    | 1   60  |
| Units    | seconds   |
| Default  | 1   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **low-priority-defect** *keyword*

|            |   |
|------------|---|
| Synopsis   | Lowest priority defect allowed to generate fault alarm  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>low-priority-defect</b> <i>keyword</i> |
| Tree       | <a href="#">low-priority-defect</a>   |
| Options    | all-def, mac-rem-err-xcon   |
| Default    | all-def   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **priority** *number*

|            |   |
|------------|---|
| Synopsis   | Priority of the AIS messages generated by the node  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>priority</b> <i>number</i> |
| Tree       | <a href="#">priority</a>  |
| Range      | 0 to 7  |
| Default    | 7   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **alarm-notification**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>alarm-notification</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>  |
| Tree        | <a href="#">alarm-notification</a>   |
| Description | <p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p> |
| Introduced  | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification](#) [fng-alarm-time](#) *number*

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification](#) [fng-reset-time](#) *number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis Generate CCM messages

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [ccm](#) *boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority** *number*

|            |   |
|------------|---|
| Synopsis   | Priority of CCM and LTM messages transmitted by the MEP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i> |
| Tree       | <a href="#">ccm-ltm-priority</a>  |
| Range      | 0 to 7  |
| Default    | 7   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**ccm-padding-size** *number*

|             |   |
|-------------|---|
| Synopsis    | Number of octets of padding to insert in CCM packets  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>   |
| Tree        | <a href="#">ccm-padding-size</a>  |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.<br><br>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second. |
| Range       | 3 to 1500   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cfm-vlan-tag** *string*

|               |   |
|---------------|---|
| Synopsis      | VLAN tags to apply to CFM PDUs for egress processing  |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i> |
| Tree          | <a href="#">cfm-vlan-tag</a>  |
| String Length | 1 to 9  |
| Introduced    | 21.10.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**csf**

|            |   |
|------------|---|
| Synopsis   | Enable the <b>csf</b> context   |
| Context    | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i> |
| Tree       | <a href="#">csf</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**multiplier** *decimal-number*

|            |   |
|------------|---|
| Synopsis   | Multiplication factor used to clear the CSF condition   |
| Context    | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i> |
| Tree       | <a href="#">multiplier</a>  |
| Range      | 0.0   2.0 to 30.0   |
| Default    | 3.5   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**description** *string*

|               |  |

|          |                         |
|----------|-------------------------|
| Synopsis | Direction the MEP faces |
|----------|-------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword</i> |
| Tree       | <a href="#">direction</a>   |
| Options    | down, up  |
| Default    | down  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## eth-test

|             |   |
|-------------|---|
| Synopsis    | Enable the <b>eth-test</b> context  |
| Context     | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>  |
| Tree        | <a href="#">eth-test</a>  |
| Description | Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command. |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## bit-error-threshold *number*

|            |   |
|------------|---|
| Synopsis   | Lowest priority defect allowed to generate fault alarm  |
| Context    | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i> |
| Tree       | <a href="#">bit-error-threshold</a>   |
| Range      | 0 to 11840  |
| Units      | bit errors  |
| Default    | 1   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## test-pattern

|          |   |
|----------|---|
| Synopsis | Enter the <b>test-pattern</b> context   |
| Context  | <b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i> |

|             |  |
|-------------|--|
| Tree        | <a href="#">test-pattern</a>   |
| Description | Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver. |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **crc-tlv** *boolean*

|            |   |
|------------|---|
| Synopsis   | Generate a CRC checksum   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i> |
| Tree       | <a href="#">crc-tlv</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **pattern** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Test pattern for Ethernet Test frames   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>pattern</b> <i>keyword</i> |
| Tree        | <a href="#">pattern</a>   |
| Description | This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.   |
| Options     | all-zeros, all-ones   |
| Default     | all-zeros   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **fault-propagation** *keyword*

|          |  |
|----------|--|
| Synopsis | Fault propagation for the MEP  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">fault-propagation</a> <i>keyword</i> |
| Tree     | <a href="#">fault-propagation</a>  |
| Options  | use-if-status-tlv, suspend-ccm   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

## grace

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>grace</b> context  |
| Context     | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</b>      |
| Tree        | <a href="#">grace</a>   |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function. |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## eth-ed

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>eth-ed</b> context   |
| Context     | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</b> |
| Tree        | <a href="#">eth-ed</a>  |
| Description | Commands in this context configure the ITU-T Y.1731 ETH-ED function.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

## max-rx-defect-window *number*

|            |   |
|------------|---|
| Synopsis   | Maximum received ETH-ED expected defect window duration   |
| Context    | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</b> |
| Tree       | <a href="#">max-rx-defect-window</a>  |
| Range      | 1 to 86400  |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**priority number**

|            |   |
|------------|---|
| Synopsis   | Transmission priority for ETH-ED PDUs   |
| Context    | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</b> |
| Tree       | <a href="#">priority</a>  |
| Range      | 0 to 7  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**rx-eth-ed boolean**

|             |   |
|-------------|---|
| Synopsis    | Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP   |
| Context     | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</b> |
| Tree        | <a href="#">rx-eth-ed</a>   |
| Description | This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.  |
| Default     | true  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**tx-eth-ed boolean**

|            |   |
|------------|---|
| Synopsis   | Transmit ETH-ED PDUs from the MEP   |
| Context    | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</b> |
| Tree       | <a href="#">tx-eth-ed</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**eth-vsm-grace**

|          |  |
|----------|--|
| Synopsis | Enter the <b>eth-vsm-grace</b> context   |
| Context  | <b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</b> |

|             |  |
|-------------|--|
| Tree        | <a href="#">eth-vsm-grace</a>  |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS         |

### **rx-eth-vsm-grace** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Receive and process Nokia ETH-CFM Grace PDU on the MEP  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i> |
| Tree        | <a href="#">rx-eth-vsm-grace</a>  |
| Description | When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.<br><br>When configured to <b>false</b> , the router disables the Nokia Grace function.   |
| Default     | true  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **tx-eth-vsm-grace** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Transmit ETH-ED PDUs from the MEP  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">tx-eth-vsm-grace</a> <i>boolean</i>  |
| Tree        | <a href="#">tx-eth-vsm-grace</a>   |
| Description | When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.<br><br>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.<br><br>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).<br><br>When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**lbm-svc-act-responder** *boolean*

|            |   |
|------------|---|
| Synopsis   | Process service activation streams in ETH-CFM LBM   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>lbm-svc-act-responder</b> <i>boolean</i> |
| Tree       | <a href="#">lbm-svc-act-responder</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**low-priority-defect** *keyword*

|            |   |
|------------|---|
| Synopsis   | Lowest priority defect allowed to generate fault alarm  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>low-priority-defect</b> <i>keyword</i> |
| Tree       | <a href="#">low-priority-defect</a>   |
| Options    | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon  |
| Default    | mac-rem-err-xcon  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**mac-address** *string*

|             |  |
|-------------|--|
| Synopsis    | MAC address of the MEP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>mac-address</b> <i>string</i> |
| Tree        | <a href="#">mac-address</a>  |
| Description | This command specifies the MAC address of the MEP.<br>When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.   |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**one-way-delay-threshold** *number*

|          |  |
|----------|--|
| Synopsis | Threshold time limit for the one-way delay test  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i> |

|            |  |
|------------|--|
| Tree       | <a href="#">one-way-delay-threshold</a>                      |
| Range      | 0 to 600   |
| Units      | seconds  |
| Default    | 3  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### primary-vlan *boolean*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | MEP provisioned using MA primary VLAN ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">primary-vlan</a> <i>boolean</i> |
| Tree       | <a href="#">primary-vlan</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### mip [primary-vlan](#) (*number* | *keyword*)

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>mip</b> list instance   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mip</a> <a href="#">primary-vlan</a> ( <i>number</i>   <i>keyword</i> )   |
| Tree        | <a href="#">mip</a>  |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type</b> <b>vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| Introduced  | 21.5.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**primary-vlan** (*number* | *keyword*)

|             |   |
|-------------|---|
| Synopsis    | VLAN ID to which the MIP is attached  |
| Context     | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )      |
| Tree        | <b>mip</b>  |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan. |
| Range       | 1 to 4094   |
| Options     | none  |
| Notes       | This element is part of a list key.   |
| Introduced  | 21.5.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cfm-vlan-tag** *string*

|               |  |
|---------------|--|
| Synopsis      | VLAN tags to apply to CFM PDUs for egress processing   |
| Context       | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )<br><b>cfm-vlan-tag</b> <i>string</i>  |
| Tree          | <b>cfm-vlan-tag</b>  |
| Description   | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9   |
| Introduced    | 21.10.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**mac-address** *string*

|            |  |
|------------|--|
| Synopsis   | MAC address of the MIP   |
| Context    | <b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )<br><b>mac-address</b> <i>string</i> |
| Tree       | <b>mac-address</b>   |
| Introduced | 21.5.R1  |

### **squelch-ingress-ctag-levels** *number*

**Synopsis** Squelch levels using additional VLAN C-Tag space

**Context** **configure** **service** **epipe** *string* **sap** *string* **eth-cfm** **squelch-ingress-ctag-levels** *number*

**Tree** [squelch-ingress-ctag-levels](#)

**Description** This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.

**Range** 0 to 7

**Max.** 8

**Instances**

**Introduced** 21.2.R1

**Platforms** 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

**Synopsis** Levels for which ETH-CFM packets are silently discarded

Tree [llf](#)

Description Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.

The Ethernet port must be configured for null encapsulation.

This feature is also supported in Epipes with BGP-EVPN enabled. In this case, upon removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains operationally up). The port transitions to the operationally up state when the EVPN destination is created.

Introduced 20.5.R1

Platforms All

## admin-state *keyword*

Synopsis Administrative state of Link Loss Forwarding

Context **configure service epipe string sap string ethernet llf admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 20.5.R1

Platforms All

### **ignore-oper-down** *boolean*

Synopsis Ignore operational down state of the SAP on SAP failure

Context **configure service epipe** *string sap string ignore-oper-down boolean*

Tree [ignore-oper-down](#)

Description When configured to **true**, the Epipe service does not transition to the operational down state when the SAP fails. This command can only be set to **true** for a single SAP in an Epipe. The command can be used in Epipes with or without EVPN enabled.

When configured to **false**, the Epipe service transitions to the operational down state when SAP fails.

Default false

Introduced 16.0.R1

## [[scheduler-name](#)] *string*

|          |  |
|----------|--|
| Synopsis | Scheduler name   |
| Context  | <b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy overrides</b><br><a href="#">scheduler</a> <i>string</i> |

|               |  |
|---------------|--|
| Tree          | <a href="#">scheduler</a>  |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

**service-mtu** *number*

|             |   |
|-------------|---|
| Synopsis    | MTU size  |
| Context     | <b>configure</b> <i>service epipe</i> <i>string</i> <i>service-mtu</i> <i>number</i>  |
| Tree        | <i>service-mtu</i>  |
| Description | This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type. |

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

### **adv-service-mtu** *number*

Synopsis Service MTU used in signaling

Context **configure service epipe** *string* **spoke-sdp** *string* **adv-service-mtu** *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP, instead of the service MTU. However, the configuration does not affect the locally enforced value, which is still based on the service MTU.

This MTU value cannot be configured on a spoke-SDP that is bound to an SDP with the **adv-mtu-override** command (**configure service sdp** context).

When unconfigured, an adjusted service MTU is used (**service-mtu** command).

Range 0 to 9782

Introduced 21.5.R1

| Synopsis    | Time waited for BFD up status  |
| Context     | <b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>bfd wait-for-up-timer</b> <i>number</i>   |
| Tree        | <a href="#">wait-for-up-timer</a>  |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.<br><br>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |

| Introduced | 16.0.R1   |
| Platforms  | All   |

**precedence** (*number* | *keyword*)

|          |   |
|----------|---|
| Synopsis | Precedence when multiple SDP binds are on one endpoint  |
| Context  | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">endpoint precedence</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <a href="#">precedence</a>  |
| Range    | 1 to 4  |

|            |         |
|------------|---------|
| Options    | primary |
| Default    | 4       |
| Introduced | 16.0.R1 |
| Platforms  | All     |

## entropy-label

|            |  |
|------------|--|
| Synopsis   | Enable the use of entropy labels for spoke SDPs  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">entropy-label</a> |
| Tree       | <a href="#">entropy-label</a>  |
| Notes      | The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## eth-cfm

|            |  |
|------------|--|
| Synopsis   | Enter the <b>eth-cfm</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> |
| Tree       | <a href="#">eth-cfm</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## collect-lmm-fc-stats

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>collect-lmm-fc-stats</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>  |
| Tree        | <a href="#">collect-lmm-fc-stats</a>   |
| Description | <p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p> |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**fc keyword**

|                |   |
|----------------|---|
| Synopsis       | Forwarding class name for profile-unaware counter   |
| Context        | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <i>keyword</i>   |
| Tree           | <a href="#">fc</a>  |
| Description    | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options        | be, l2, af, l1, h2, ef, h1, nc  |
| Max. Instances | 8   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**fc-in-profile keyword**

|                |   |
|----------------|---|
| Synopsis       | Forwarding class name for profile-aware counter   |
| Context        | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>  |
| Tree           | <a href="#">fc-in-profile</a>   |
| Description    | <p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options        | be, l2, af, l1, h2, ef, h1, nc  |
| Max. Instances | 8   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**collect-lmm-stats** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Collect statistics for loss measurement message tests  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>   |
| Tree        | <a href="#">collect-lmm-stats</a>  |
| Description | <p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p> |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* **mep-id** *number*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>mep</b> list instance  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <b>mep-id</b> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**md-admin-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Maintenance Domain (MD) name  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <b>mep-id</b> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Reference  | <b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**ma-admin-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Maintenance Association (MA) name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>   |

| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**mep-id** *number*

|            |   |
|------------|---|
| Synopsis   | Maintenance Endpoint (MEP) ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Range      | 1 to 8191   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of the MEP  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**ais**

|          |                               |
|----------|-------------------------------|
| Synopsis | Enable the <b>ais</b> context |
|----------|-------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais</i> |
| Tree       | <a href="#">ais</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **client-meg-level** *number*

|                   |   |
|-------------------|---|
| Synopsis          | Client MEG level for AIS message generation   |
| Context           | <b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level number</i> |
| Tree              | <a href="#">client-meg-level</a>  |
| Range             | 1 to 7  |
| Max.<br>Instances | 7   |
| Introduced        | 16.0.R1   |
| Platforms         | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **interface-support** *boolean*

|            |   |
|------------|---|
| Synopsis   | Enable generation of AIS PDUs based on endpoint state   |
| Context    | <b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support boolean</i> |
| Tree       | <a href="#">interface-support</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **interval** *number*

|          |   |
|----------|---|
| Synopsis | Transmission interval for AIS messages  |
| Context  | <b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number</i> |
| Tree     | <a href="#">interval</a>  |
| Range    | 1   60  |
| Units    | seconds   |
| Default  | 1   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **low-priority-defect** *keyword*

|            |  |
|------------|--|
| Synopsis   | Lowest priority defect allowed to generate fault alarm   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>low-priority-defect</b> <i>keyword</i> |
| Tree       | <a href="#">low-priority-defect</a>  |
| Options    | all-def, mac-rem-err-xcon  |
| Default    | all-def  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **priority** *number*

|            |  |
|------------|--|
| Synopsis   | Priority of the AIS messages generated by the node   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>priority</b> <i>number</i> |
| Tree       | <a href="#">priority</a>   |
| Range      | 0 to 7   |
| Default    | 7  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **alarm-notification**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>alarm-notification</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>  |
| Tree        | <a href="#">alarm-notification</a>   |
| Description | <p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p> |
| Introduced  | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis Time that must expire before an FNG alarm is raised

| Tree        | <a href="#">mip</a>   |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan. |
| Range       | 1 to 4094   |
| Options     | none  |
| Notes       | This element is part of a list key.   |
| Introduced  | 21.5.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **cfm-vlan-tag** *string*

|               |  |
|---------------|--|
| Synopsis      | VLAN tags to apply to CFM PDUs for egress processing   |
| Context       | <b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>   |
| Tree          | <a href="#">cfm-vlan-tag</a>   |
| Description   | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9   |
| Introduced    | 21.10.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

| Tree       | <a href="#">mac-address</a>   |
| Introduced | 21.5.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**snelch- ingress-ctag-levels *number***

|                |   |
|----------------|---|
| Synopsis       | Snelch levels using additional VLAN C-Tag space   |
| Context        | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">snelch- ingress-ctag-levels</a> <a href="#">number</a>   |
| Tree           | <a href="#">snelch- ingress-ctag-levels</a>   |
| Description    | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p> |
| Range          | 0 to 7  |
| Max. Instances | 8   |
| Introduced     | 21.2.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**snelch- ingress-levels *number***

|                |  |

### **force-vc-forwarding** *keyword*

|            |  |
|------------|--|
| Synopsis   | VC forwarding action   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>force-vc-forwarding</b> <i>keyword</i> |
| Tree       | <a href="#">force-vc-forwarding</a>  |
| Options    | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **hash-label**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>hash-label</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>hash-label</b> |
| Tree       | <a href="#">hash-label</a>   |
| Notes      | The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **signal-capability**

|            |  |
|------------|--|
| Synopsis   | Enable the signaling of the hash label between PE nodes  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">hash-label</a> <b>signal-capability</b> |
| Tree       | <a href="#">signal-capability</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **ingress**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>ingress</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>ingress</b> |
| Tree       | <a href="#">ingress</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## filter

|            |   |
|------------|---|
| Synopsis   | Enter the <b>filter</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> |
| Tree       | <a href="#">filter</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## ip reference

|            |   |
|------------|---|
| Synopsis   | IPv4 filter policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i> |
| Tree       | <a href="#">ip</a>  |
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## ipv6 reference

|            |   |
|------------|---|
| Synopsis   | IPv6 filter policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ipv6</a> <i>reference</i> |
| Tree       | <a href="#">ipv6</a>  |
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## mac reference

|            |  |
|------------|--|
| Synopsis   | MAC filter policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">mac</a> <i>reference</i> |
| Tree       | <a href="#">mac</a>  |
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">mac-filter</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## **l2tpv3**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>l2tpv3</b> context                                       |
| Context    | <b>configure service epipe string spoke-sdp string ingress l2tpv3</b> |
| Tree       | <b>l2tpv3</b>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## **cookie**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>cookie</b> context  |
| Context    | <b>configure service epipe string spoke-sdp string ingress l2tpv3 cookie</b> |
| Tree       | <b>cookie</b>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## **cookie1 string**

|               |   |
|---------------|---|
| Synopsis      | Value of cookie-1 for the tunnel  |
| Context       | <b>configure service epipe string spoke-sdp string ingress l2tpv3 cookie cookie1 string</b> |
| Tree          | <b>cookie1</b>  |
| String Length | 18 to 23  |
| Introduced    | 16.0.R1   |
| Platforms     | All   |

## **cookie2 string**

|               |   |
|---------------|---|
| Synopsis      | Value of cookie-1 for the tunnel  |
| Context       | <b>configure service epipe string spoke-sdp string ingress l2tpv3 cookie cookie2 string</b> |
| Tree          | <b>cookie2</b>  |
| String Length | 18 to 23  |
| Introduced    | 16.0.R1   |
| Platforms     | All   |

## qos

|            |  |
|------------|--|
| Synopsis   | Enter the <b>qos</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> |
| Tree       | <a href="#">qos</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## network

|            |  |
|------------|--|
| Synopsis   | Enter the <b>network</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> |
| Tree       | <a href="#">network</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## fp-redirect-group

|            |  |
|------------|--|
| Synopsis   | Enter the <b>fp-redirect-group</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> |
| Tree       | <a href="#">fp-redirect-group</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## group-name *reference*

|            |  |
|------------|--|
| Synopsis   | Name of the forwarding plane queue group template  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i> |
| Tree       | <a href="#">group-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**instance number**

|            |   |
|------------|---|
| Synopsis   | Instance of FP ingress queue group for the SDP binding  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <i>instance number</i> |
| Tree       | <a href="#">instance</a>  |
| Range      | 1 to 65535  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**policy-name reference**

|            |   |
|------------|---|
| Synopsis   | Network policy ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">network</a> <i>string</i>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**vc-label number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Ingress MPLS VC label to send packets to the far end  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">vc-label</a> <i>number</i> |
| Tree       | <a href="#">vc-label</a>  |
| Range      | 1 to 1048575  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**monitor-oper-group reference**

|          |  |
|----------|--|
| Synopsis | Operational group that affects state of the SDP bind   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i> |

|            |   |
|------------|---|
| Tree       | <a href="#">monitor-oper-group</a>  |
| Reference  | <b>configure</b> <a href="#">service oper-group</a> <i>string</i>                             |
| Notes      | The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> . |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **oper-group** *reference*

|            |  |
|------------|--|
| Synopsis   | Operational group identifier   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i> |
| Tree       | <a href="#">oper-group</a>   |
| Reference  | <b>configure</b> <a href="#">service oper-group</a> <i>string</i>  |
| Notes      | The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **pw-status**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>pw-status</b> context   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> |
| Tree       | <a href="#">pw-status</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **block-on-peer-fault** *boolean*

|            |   |
|------------|---|
| Synopsis   | Block transmit direction of PW based on status code   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">block-on-peer-fault</a> <i>boolean</i> |
| Tree       | <a href="#">block-on-peer-fault</a>   |
| Default    | false   |
| Notes      | The following elements are part of a choice: <b>block-on-peer-fault</b> or <b>standby-signaling-slave</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **signaling** *boolean*

|            |   |
|------------|---|
| Synopsis   | Allow SDP binding to support pseudowire status signaling  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">signaling</a> <i>boolean</i> |
| Tree       | <a href="#">signaling</a>   |
| Default    | true  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **standby-signaling-slave** *boolean*

|            |   |
|------------|---|
| Synopsis   | Block spoke transmission based on PW standby status   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">standby-signaling-slave</a> <i>boolean</i> |
| Tree       | <a href="#">standby-signaling-slave</a>   |
| Default    | false   |
| Notes      | The following elements are part of a choice: <b>block-on-peer-fault</b> or <b>standby-signaling-slave</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **source-bmac**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>source-bmac</b> context   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">source-bmac</a> |
| Tree       | <a href="#">source-bmac</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **use-sdp-bmac-lsb** *boolean*

|          |  |
|----------|--|
| Synopsis | Allow the spoke SDP to be part of a redundant pseudo-wire within PBB Epipe service   |
| Context  | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">source-bmac</a> <a href="#">use-sdp-bmac-lsb</a> <i>boolean</i> |
| Tree     | <a href="#">use-sdp-bmac-lsb</a>   |
| Default  | false  |

|            |         |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms  | All     |

## transit-policy

|            |   |
|------------|---|
| Synopsis   | Enable the <b>transit-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> |
| Tree       | <a href="#">transit-policy</a>  |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## ip reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | IP transit policy ID   |
| Context    | <b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">ip reference</a>   |

| Synopsis   | Ingress policy accounting template name   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress</a> <a href="#">policy-accounting</a> <i>reference</i> |
| Tree       | <a href="#">policy-accounting</a>   |
| Reference  | <b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>   |
| Introduced | 19.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS  |

### **ingress-stats** *boolean*

|            |   |
|------------|---|
| Synopsis   | Collect ingress statistics  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress-stats</a> <i>boolean</i> |
| Tree       | <a href="#">ingress-stats</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **ip-mtu** *number*

|            |   |
|------------|---|
| Synopsis   | IP MTU applied to outgoing packets  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i> |
| Tree       | <a href="#">ip-mtu</a>  |
| Range      | 512 to 9786   |
| Units      | bytes   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **ipsec**

|             |  |
|-------------|--|
| Synopsis    | Enable the <b>ipsec</b> context  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> |
| Tree        | <a href="#">ipsec</a>  |
| Description | Commands in this context configure an IPsec secured interface.   |
| Introduced  | 22.7.R1  |

Platforms VSR

### **admin-state** *keyword*

Synopsis Administrative state of IPsec secured interface  
 Context **configure service ies** *string* **interface** *string* **ipsec admin-state** *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 22.7.R1  
 Platforms VSR

### **ip-exception** *reference*

Synopsis IP exception filter  
 Context **configure service ies** *string* **interface** *string* **ipsec ip-exception** *reference*  
 Tree [ip-exception](#)  
 Description This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.  
 Reference **configure filter ip-exception** *string*  
 Introduced 22.7.R1  
 Platforms VSR

### **ipsec-tunnel** [[name](#)] *string*

Synopsis Enter the **ipsec-tunnel** list instance  
 Context **configure service ies** *string* **interface** *string* **ipsec ipsec-tunnel** *string*  
 Tree [ipsec-tunnel](#)  
 Description Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.  
 Introduced 22.7.R1  
 Platforms VSR

### **[name]** *string*

Synopsis IPsec tunnel name

|               |   |
|---------------|---|
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> |
| Tree          | <b>ipsec-tunnel</b>   |
| String Length | 1 to 32   |
| Notes         | This element is part of a list key.   |
| Introduced    | 22.7.R1   |
| Platforms     | VSR   |

### **admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the IPsec tunnel  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

### **bfd**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enter the <b>bfd</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd</b> |
| Tree       | <b>bfd</b>   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

### **bfd-designate** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Designate IPsec tunnel to carry BFD traffic |
|----------|---|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd bfd-designate</b> <i>boolean</i> |
| Tree       | <a href="#">bfd-designate</a>   |
| Default    | false   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

## bfd-liveness

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enable the <b>bfd-liveness</b> context  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness</b>   |
| Tree        | <a href="#">bfd-liveness</a>  |
| Description | <p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p> |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

## dest-ip *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Destination address used for the BFD session   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness</b> <b>dest-ip</b> <i>string</i> |
| Tree       | <a href="#">dest-ip</a>  |
| Notes      | This element is mandatory.   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

## interface *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Name of the interface used by the BFD session  |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">bfd bfd-liveness interface string</a> |
| Tree          | <a href="#">interface</a>  |
| String Length | 1 to 32  |
| Notes         | This element is mandatory.   |
| Introduced    | 22.7.R1  |
| Platforms     | VSR  |

## service-name *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Administrative service name   |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">bfd bfd-liveness service-name string</a> |
| Tree          | <a href="#">service-name</a>  |
| Description   | This command configures the name of the service where BFD traffic is forwarded to.  |
| String Length | 1 to 64   |
| Notes         | This element is mandatory.  |
| Introduced    | 22.7.R1   |
| Platforms     | VSR   |

## clear-df-bit *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Reset the DF bit to 0 in all payload IP packets |
|----------|---|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>           |
| Tree        | <b>clear-df-bit</b>  |
| Description | When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs. |
| Default     | false  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **copy-traffic-class-upon-decapsulation** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enable traffic class copy upon decapsulation  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>copy-traffic-class-upon-decapsulation</b> <i>boolean</i>                   |
| Tree        | <b>copy-traffic-class-upon-decapsulation</b>  |
| Description | When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). |
| Default     | false   |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

### **description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i> |
| Tree          | <b>description</b>   |
| String Length | 1 to 80  |
| Introduced    | 22.7.R1  |
| Platforms     | VSR  |

**encapsulated-ip-mtu** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Maximum size of the encapsulated tunnel packet  |
| Context     | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">encapsulated-ip-mtu number</a>   |
| Tree        | <a href="#">encapsulated-ip-mtu</a>   |
| Description | This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet. |
| Range       | 512 to 9000   |
| Units       | bytes   |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

**icmp-generation****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>icmp-generation</b> context   |
| Context     | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> |
| Tree        | <a href="#">icmp-generation</a>  |
| Description | Commands in this context configure settings for ICMPv4 message generation.   |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

**frag-required****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | Enter the <b>frag-required</b> context |
|----------|--|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b>   |
| Tree        | <b>frag-required</b>   |
| Description | Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **admin-state** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Administrative state of sending ICMP messages  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required admin-state</b> <i>keyword</i>  |
| Tree        | <b>admin-state</b>   |
| Description | This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Options     | enable, disable  |
| Default     | enable   |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **interval** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Interval for sending ICMP messages  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required interval</b> <i>number</i> |
| Tree     | <b>interval</b>   |

|             |   |
|-------------|---|
| Description | This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4). |
| Range       | 1 to 60   |
| Units       | seconds   |
| Default     | 10  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

### message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Maximum number of ICMP messages that can be sent  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation frag-required</a> <a href="#">message-count</a> <i>number</i> |
| Tree        | <a href="#">message-count</a>   |
| Description | This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.  |
| Range       | 10 to 1000  |
| Default     | 100   |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

### icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>icmp6-generation</b> context  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> |
| Tree        | <a href="#">icmp6-generation</a>   |
| Description | Commands in this context configure settings for ICMPv6 message generation.   |
| Introduced  | 22.7.R1  |

Platforms VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>packet-too-big</b> context   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a>   |
| Tree        | <a href="#">packet-too-big</a>  |
| Description | <p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.</p> |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Administrative state of Packet Too Big message sends   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

## interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Interval for sending Packet Too Big messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i> |
| Tree       | <b>interval</b>  |
| Range      | 1 to 60  |
| Units      | seconds  |
| Default    | 10   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

## message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Maximum number of ICMPv6 PTB messages that can be sent  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>message-count</b> <i>number</i> |
| Tree        | <b>message-count</b>  |
| Description | This command configures the maximum number of PTB messages that can be sent during the configured interval.   |
| Range       | 10 to 1000  |
| Default     | 100   |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

## ip-mtu *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Private MTU of the IPsec tunnel   |
| Context     | <b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string ip-mtu number</i>   |
| Tree        | <i>ip-mtu</i>   |
| Description | This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet. |
| Range       | 512 to 9000   |
| Units       | bytes   |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

## key-exchange

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enter the <b>key-exchange</b> context  |
| Context    | <b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string key-exchange</i> |
| Tree       | <i>key-exchange</i>  |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enable the <b>dynamic</b> context  |
| Context    | <b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic</i> |
| Tree       | <i>dynamic</i>   |
| Notes      | The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .                             |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

**auto-establish** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Attempt to establish a phase 1 exchange automatically  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic auto-establish</a> <i>boolean</i> |
| Tree       | <a href="#">auto-establish</a>   |
| Default    | false  |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

**cert****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>cert</b> context   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic cert</a> |
| Tree        | <a href="#">cert</a>  |
| Description | Commands in this context configure the attributes of the dynamic keying certificate.  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

**cert-profile** *reference*

|            |   |
|------------|---|
| Synopsis   | Certificate profile name  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic cert cert-profile</a> <i>reference</i> |
| Tree       | <a href="#">cert-profile</a>  |
| Reference  | <b>configure</b> <a href="#">ipsec cert-profile</a> <i>string</i>   |
| Introduced | 22.7.R1   |

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>status-verify</b> context   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert status-verify</b> |
| Tree        | <b>status-verify</b>   |
| Description | Commands in this context configure attributes of Certificate Status Verification (CSV).  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

## default-result *keyword*

|             |  |
|-------------|--|
| Synopsis    | Default result for Certificate Status Verification   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert status-verify default-result</b> <i>keyword</i> |
| Tree        | <b>default-result</b>  |
| Description | This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.  |
| Options     | revoked, good  |
| Default     | revoked  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

## primary *keyword*

|             |   |
|-------------|---|
| Synopsis    | Primary method of CSV to verify the revocation status   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert status-verify primary</b> <i>keyword</i> |
| Tree        | <b>primary</b>  |
| Description | This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.                        |
| Options     | crl, ocsp   |
| Default     | crl   |

Introduced 22.7.R1  
 Platforms VSR

### **secondary** *keyword*

Synopsis Secondary method used to verify certificate revocation  
 Context **configure** [service ies string](#) [interface string ipsec ipsec-tunnel string](#) [key-exchange dynamic cert status-verify secondary keyword](#)  
 Tree [secondary](#)  
 Description This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.  
 Options none, crl, ocsp  
 Default none  
 Introduced 22.7.R1  
 Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
 Context **configure** [service ies string](#) [interface string ipsec ipsec-tunnel string](#) [key-exchange dynamic cert trust-anchor-profile reference](#)  
 Tree [trust-anchor-profile](#)  
 Reference **configure** [ipsec trust-anchor-profile string](#)  
 Introduced 22.7.R1  
 Platforms VSR

### **id**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
 Context **configure** [service ies string](#) [interface string ipsec ipsec-tunnel string](#) [key-exchange dynamic id](#)  
 Tree [id](#)  
 Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation.

The default behavior depends on the local authentication method as follows:

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

Introduced 22.7.R1

Platforms VSR

### **fqdn string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context **configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic id fqdn string**

Tree **fqdn**

String Length 1 to 255

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 22.7.R1

Platforms VSR

### **ipv4 string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv4 as the local ID type

Context **configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic id ipv4 string**

Tree **ipv4**

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 22.7.R1

Platforms VSR

**ipv6** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | IPv6 used as the local IKE ID type   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic id ipv6</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) |
| Tree       | <a href="#">ipv6</a>   |
| Notes      | The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .  |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

**ike-policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | IKE policy ID  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ike-policy</a> <i>reference</i> |
| Tree        | <a href="#">ike-policy</a>   |
| Description | This command specifies the ID of the IKE policy used for IKE negotiation.<br>The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.  |
| Reference   | <b>configure</b> <a href="#">ipsec ike-policy</a> <i>number</i>  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

**ipsec-transform** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | IPsec transform IDs used by the dynamic key   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ipsec-transform</a> <i>reference</i> |

|                |   |
|----------------|---|
| Tree           | <a href="#">ipsec-transform</a>   |
| Description    | This command specifies IPsec transform IDs used for CHILD_SA negotiation. |
| Reference      | <b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>      |
| Max. Instances | 4   |
| Introduced     | 22.7.R1   |
| Platforms      | VSR   |

### pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Pre-shared key for authentication   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic pre-shared-key</a> <i>string</i> |
| Tree          | <a href="#">pre-shared-key</a>  |
| String Length | 1 to 115  |
| Introduced    | 22.7.R1   |
| Platforms     | VSR   |

### manual

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enable the <b>manual</b> context  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual</a> |
| Tree        | <a href="#">manual</a>  |
| Description | Commands in this context configure settings for manually configured security associations for the IPsec tunnel.   |
| Notes       | The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

**keys** [[security-association](#)] *number* [direction](#) *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>keys</b> list instance   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> |
| Tree        | <a href="#">keys</a>  |
| Description | Commands in this context configure the security association list for the tunnel.  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

**[security-association]** *number*

|            |   |
|------------|---|
| Synopsis   | SA entry ID   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> |
| Tree       | <a href="#">keys</a>  |
| Range      | 1 to 16   |
| Notes      | This element is part of a list key.   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

**direction** *keyword*

|            |   |
|------------|---|
| Synopsis   | Direction of the IPsec tunnel   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> |
| Tree       | <a href="#">keys</a>  |
| Options    | inbound, outbound   |
| Notes      | This element is part of a list key.   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

**authentication-key *string*****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Key used for the authentication algorithm  |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">key-exchange manual keys number direction keyword authentication-key string</a> |
| Tree          | <a href="#">authentication-key</a>   |
| String Length | 1 to 130   |
| Introduced    | 22.7.R1  |
| Platforms     | VSR  |

**encryption-key *string*****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Key used for the encryption algorithm  |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">key-exchange manual keys number direction keyword encryption-key string</a> |
| Tree          | <a href="#">encryption-key</a>   |
| String Length | 1 to 66  |
| Introduced    | 22.7.R1  |
| Platforms     | VSR  |

**ipsec-transform** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Transform entry used by manual SAs   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">ipsec-transform</a> <i>reference</i> |
| Tree       | <a href="#">ipsec-transform</a>  |

| Notes      | This element is mandatory.   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

**spi** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | SPI of inbound and outbound packets  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">spi</a> <i>number</i>  |
| Tree        | <a href="#">spi</a>  |
| Description | This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.<br><br>The remote node can use the SPI to look up the instruction to verify and decrypt the packet. |
| Range       | 256 to 16383   |

|            |                            |
|------------|----------------------------|
| Notes      | This element is mandatory. |
| Introduced | 22.7.R1                    |
| Platforms  | VSR                        |

### local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Local IPsec tunnel endpoint address  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>local-gateway-address-override</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) |
| Tree        | <a href="#">local-gateway-address-override</a>   |
| Description | This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### max-history-key-records

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>max-history-key-records</b> context  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>max-history-key-records</b> |
| Tree        | <a href="#">max-history-key-records</a>   |
| Description | Commands in this context configure the settings for recording historical IPsec keys.  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

## esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Maximum number of recent records  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">esp</a> <i>number</i> |
| Tree       | <a href="#">esp</a>   |
| Range      | 1 to 48   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

## ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Maximum number of historical IKE key records  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">ike</a> <i>number</i> |
| Tree       | <a href="#">ike</a>   |
| Range      | 1 to 3  |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

## pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | Aging out time of the learned path MTU   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">pmtu-discovery-aging</a> <i>number</i> |
| Tree     | <a href="#">pmtu-discovery-aging</a>   |

|             |  |
|-------------|--|
| Description | This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation. |
| Range       | 900 to 3600  |
| Units       | seconds  |
| Default     | 900  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Private SAP ID   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>private-sap</b> <i>number</i> |
| Tree       | <a href="#">private-sap</a>  |
| Range      | 0 to 4094  |
| Notes      | This element is mandatory.   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

### **private-service** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | Private service name   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>private-service</b> <i>string</i> |

|               |   |
|---------------|---|
| Tree          | <a href="#">private-service</a>   |
| Description   | This command configures the private service name.<br>If unconfigured, the private service is the service where the secured interface resides. |
| String Length | 1 to 64   |
| Introduced    | 22.7.R1   |
| Platforms     | VSR   |

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | TCP maximum segment size (MSS) adjustment  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">private-tcp-mss-adjust</a> <i>number</i>       |
| Tree        | <a href="#">private-tcp-mss-adjust</a>   |
| Description | This command specifies the TCP MSS to adjust for the tunnel on the private side.<br>When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side. |
| Range       | 512 to 9000  |
| Units       | bytes  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Enable propagation of the path MTU to IPv4 hosts   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">propagate-pmtu-v4</a> <i>boolean</i> |
| Tree        | <a href="#">propagate-pmtu-v4</a>  |
| Description | When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).   |
| Default     | true   |

Introduced 22.7.R1  
 Platforms VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv6 hosts

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* **propagate-pmtu-v6** *boolean*

Tree [propagate-pmtu-v6](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

### **public-tcp-mss-adjust** (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) on the public network

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* **public-tcp-mss-adjust** (*number | keyword*)

Tree [public-tcp-mss-adjust](#)

Description This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.

Range 512 to 9000

Units bytes

Options auto

Introduced 22.7.R1

Platforms VSR

**remote-gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Remote IPsec tunnel endpoint address   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">remote-gateway-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) |
| Tree       | <a href="#">remote-gateway-address</a>   |
| Introduced | 22.7.R1  |
| Platforms  | VSR  |

**replay-window number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Anti-replay window size  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">replay-window number</a> |
| Tree        | <a href="#">replay-window</a>  |
| Description | This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.  |
| Range       | 32   64   128   256   512  |
| Units       | packets  |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

**security-policy****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Enter the <b>security-policy</b> context  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">security-policy</a> |

|             |  |
|-------------|--|
| Tree        | <a href="#">security-policy</a>  |
| Description | Commands in this context specify a security policy used by the tunnel. |
| Introduced  | 22.7.R1  |
| Platforms   | VSR  |

### **id number**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Security policy ID for use by the tunnel  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">security-policy id number</a> |
| Tree       | <a href="#">id</a>  |
| Max. Range | 0 to 4294967295   |
| Introduced | 22.7.R1   |
| Platforms  | VSR   |

### **strict-match boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enable strict match of the security policy entry  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">security-policy strict-match boolean</a>  |
| Tree        | <a href="#">strict-match</a>  |
| Description | <p>When configured to <b>true</b>, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p> |

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 22.7.R1 |
| Platforms  | VSR     |

### **ipv6-exception** *reference*

|             |   |
|-------------|---|
| Synopsis    | IPv6 filter exception used to bypass encryption   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipv6-exception</a> <i>reference</i>  |
| Tree        | <a href="#">ipv6-exception</a>  |
| Description | This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface. |
| Reference   | <b>configure</b> <a href="#">filter</a> <a href="#">ipv6-exception</a> <i>string</i>  |
| Introduced  | 22.7.R1   |
| Platforms   | VSR   |

| Tree       | <a href="#">allow-directed-broadcasts</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **bfd**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>bfd</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd</b> |
| Tree       | <a href="#">bfd</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of BFD sessions   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**echo-receive** *number*

|            |  |
|------------|--|
| Synopsis   | Minimum echo interval over this interface  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd echo-receive</b> <i>number</i> |
| Tree       | <b>echo-receive</b>  |
| Range      | 100 to 100000  |
| Units      | milliseconds   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**multiplier** *number*

|             |   |
|-------------|---|
| Synopsis    | Number of consecutive BFD messages missed from the peer   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd multiplier</b> <i>number</i>  |
| Tree        | <b>multiplier</b>   |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range       | 1 to 20   |
| Default     | 3   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**receive** *number*

|          |  |
|----------|--|
| Synopsis | BFD receive interval over this interface |
|----------|--|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd receive</b> <i>number</i>  |
| Tree        | <b>receive</b>   |
| Description | This command specifies the receive interval for the BFD session.<br>On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> . |
| Range       | 10 to 100000   |
| Units       | milliseconds   |
| Default     | 100  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **transmit-interval** *number*

|             |   |
|-------------|---|
| Synopsis    | BFD transmit interval over this interface   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd transmit-interval</b> <i>number</i>   |
| Tree        | <b>transmit-interval</b>  |
| Description | This command configures the transmit intervals.<br>On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> . |
| Range       | 10 to 100000  |
| Units       | milliseconds  |
| Default     | 100   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **type** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Local termination point for the BFD session   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd type</b> <i>keyword</i>   |
| Tree        | <b>type</b>   |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.<br>The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> </ul> |

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

|            |  |
|------------|--|
| Options    | cpm-np, auto, fp   |
| Default    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

## dhcp

|            |  |
|------------|--|
| Synopsis   | Enter the <b>dhcp</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> |
| Tree       | <a href="#">dhcp</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## admin-state *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of DHCP  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## description *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">description</a> <i>string</i> |
| Tree          | <a href="#">description</a>  |
| String Length | 1 to 80  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

**gi-address** *string*

|             |   |
|-------------|---|
| Synopsis    | GI address for the DHCP relay   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">gi-address</a> <i>string</i>   |
| Tree        | <a href="#">gi-address</a>  |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**lease-populate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>lease-populate</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">lease-populate</a> |
| Tree       | <a href="#">lease-populate</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**max-leases** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of DHCPv4 leases allowed  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">lease-populate</a> <a href="#">max-leases</a> <i>number</i> |
| Tree       | <a href="#">max-leases</a>   |
| Range      | 0 to 511999  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**option-82**

|          |  |
|----------|--|
| Synopsis | Enter the <b>option-82</b> context   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">option-82</a> |

|             |   |
|-------------|---|
| Tree        | <a href="#">option-82</a>   |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **action** *keyword*

|            |  |
|------------|--|
| Synopsis   | Action to take with received DHCP Option 82  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">action</a> <i>keyword</i> |
| Tree       | <a href="#">action</a>   |
| Options    | replace, drop, keep  |
| Default    | keep   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **circuit-id**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>circuit-id</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> |
| Tree       | <a href="#">circuit-id</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **ascii-tuple**

|            |   |
|------------|---|
| Synopsis   | Use the ASCII-encoded tuple for the circuit ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">ascii-tuple</a> |
| Tree       | <a href="#">ascii-tuple</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## ifindex

|            |   |
|------------|---|
| Synopsis   | Use the interface index for the circuit ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">ifindex</a> |
| Tree       | <a href="#">ifindex</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## none

|            |  |
|------------|--|
| Synopsis   | Do not include the circuit ID  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">none</a> |
| Tree       | <a href="#">none</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## sap-id

|            |  |
|------------|--|
| Synopsis   | Use the SAP ID   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">sap-id</a> |
| Tree       | <a href="#">sap-id</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## vlan-ascii-tuple

|          |  |
|----------|--|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">vlan-ascii-tuple</a> |
| Tree     | <a href="#">vlan-ascii-tuple</a>   |

|             |   |
|-------------|---|
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.<br>When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes       | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### remote-id

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>remote-id</b> context   |
| Context     | <b>configure service ies string interface string ipv4 dhcp option-82 remote-id</b>   |
| Tree        | <a href="#">remote-id</a>  |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### ascii-string *string*

|               |  |
|---------------|--|
| Synopsis      | User-defined ASCII string for the remote ID  |
| Context       | <b>configure service ies string interface string ipv4 dhcp option-82 remote-id ascii-string string</b> |
| Tree          | <a href="#">ascii-string</a>   |
| String Length | 1 to 32  |
| Notes         | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .       |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

### mac

|          |  |
|----------|--|
| Synopsis | Use the MAC address for the remote ID  |
| Context  | <b>configure service ies string interface string ipv4 dhcp option-82 remote-id mac</b> |
| Tree     | <a href="#">mac</a>  |

|            |  |
|------------|--|
| Notes      | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> . |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**none**

|            |  |
|------------|--|
| Synopsis   | Do not include the remote ID   |
| Context    | <b>configure service ies string interface string ipv4 dhcp option-82 remote-id none</b>          |
| Tree       | <a href="#">none</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> . |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**vendor-specific-option**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>vendor-specific-option</b> context   |
| Context     | <b>configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option</b> |
| Tree        | <a href="#">vendor-specific-option</a>  |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**client-mac-address *boolean***

|            |   |
|------------|---|
| Synopsis   | Send the MAC address in the VSO   |
| Context    | <b>configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i></b> |
| Tree       | <a href="#">client-mac-address</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**pool-name *boolean***

|          |                               |
|----------|-------------------------------|
| Synopsis | Send the pool name in the VSO |
|----------|-------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>pool-name</b> <i>boolean</i> |
| Tree       | <b>pool-name</b>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**sap-id** *boolean*

|            |  |
|------------|--|
| Synopsis   | Send SAP ID in the sub-option of the DHCP relay packet   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>sap-id</b> <i>boolean</i> |
| Tree       | <b>sap-id</b>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**service-id** *boolean*

|            |  |
|------------|--|
| Synopsis   | Send the service ID in the Vendor Specific Option  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>service-id</b> <i>boolean</i> |
| Tree       | <b>service-id</b>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**string** *string*

|               |   |
|---------------|---|
| Synopsis      | User-defined ASCII string for the VSO   |
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>string</b> <i>string</i> |
| Tree          | <b>string</b>   |
| String Length | 1 to 32   |
| Introduced    | 16.0.R1   |
| Platforms     | All   |

**system-id** *boolean*

|            |  |
|------------|--|
| Synopsis   | Send the system ID in the VSO  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">system-id</a> <i>boolean</i> |
| Tree       | <a href="#">system-id</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**proxy-server**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>proxy-server</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp proxy-server</a> |
| Tree       | <a href="#">proxy-server</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of the DHCP proxy server  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp proxy-server</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**emulated-server** *string*

|          |   |
|----------|---|
| Synopsis | IP address used as the DHCP server address for the SAP  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp proxy-server</a> <a href="#">emulated-server</a> <i>string</i> |
| Tree     | <a href="#">emulated-server</a>   |

|             |  |
|-------------|--|
| Description | This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service. |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### lease-time

|            |  |
|------------|--|
| Synopsis   | Enter the <b>lease-time</b> context  |
| Context    | <b>configure service ies string interface string ipv4 dhcp proxy-server lease-time</b> |
| Tree       | <a href="#">lease-time</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### radius-override *boolean*

|            |  |
|------------|--|
| Synopsis   | Use lease time information provided by RADIUS server   |
| Context    | <b>configure service ies string interface string ipv4 dhcp proxy-server lease-time radius-override boolean</b> |
| Tree       | <a href="#">radius-override</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### value *number*

|            |   |
|------------|---|
| Synopsis   | DHCP lease time   |
| Context    | <b>configure service ies string interface string ipv4 dhcp proxy-server lease-time value number</b> |
| Tree       | <a href="#">value</a>   |
| Range      | 300 to 315446399  |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **python-policy** *reference*

|            |  |
|------------|--|
| Synopsis   | Python policy  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">python-policy</a> <a href="#">reference</a> |
| Tree       | <a href="#">python-policy</a>  |
| Reference  | <b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **relay-plain-bootp** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable relaying of plain BOOTP packets   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-plain-bootp</a> <a href="#">boolean</a> |
| Tree       | <a href="#">relay-plain-bootp</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **relay-proxy**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>relay-proxy</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> |
| Tree       | <a href="#">relay-proxy</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **release-update-src-ip** *boolean*

|            |  |
|------------|--|
| Synopsis   | Update the source IP address of a DHCP RELEASE message   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">release-update-src-ip</a> <a href="#">boolean</a> |
| Tree       | <a href="#">release-update-src-ip</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**siaddr-override** *string*

|            |   |
|------------|---|
| Synopsis   | DHCP server IP address for address hiding function  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-proxy</a> <b>siaddr-override</b> <i>string</i> |
| Tree       | <a href="#">siaddr-override</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**release-include-gi-address** *boolean*

|            |   |
|------------|---|
| Synopsis   | Include gateway IP address in DHCP Release messages   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <b>release-include-gi-address</b> <i>boolean</i> |
| Tree       | <a href="#">release-include-gi-address</a>  |
| Default    | false   |
| Introduced | 21.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**server** *string*

|                |  |
|----------------|--|
| Synopsis       | IP addresses for DHCP server requests  |
| Context        | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <b>server</b> <i>string</i>   |
| Tree           | <a href="#">server</a>   |
| Description    | This command configures a list of servers that this interface forwards requests to.<br>The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8  |
| Notes          | This element is ordered by the user.   |
| Introduced     | 16.0.R1  |
| Platforms      | All  |

**src-ip-addr** *keyword*

|          |  |
|----------|--|
| Synopsis | Type of source address to use for DHCP relay |
|----------|--|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp src-ip-addr</b> <i>keyword</i> |
| Tree       | <b>src-ip-addr</b>  |
| Options    | auto, gi-address  |
| Default    | auto  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **trusted** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Relay untrusted packets   |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp trusted</b> <i>boolean</i>   |
| Tree        | <b>trusted</b>  |
| Description | <p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **use-arp** *boolean*

|            |   |
|------------|---|
| Synopsis   | Use ARP to determine the destination hardware address   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp use-arp</b> <i>boolean</i> |
| Tree       | <b>use-arp</b>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **icmp**

|          |  |
|----------|--|
| Synopsis | Enter the <b>icmp</b> context  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp</b> |

|            |                      |
|------------|----------------------|
| Tree       | <a href="#">icmp</a> |
| Introduced | 16.0.R1              |
| Platforms  | All                  |

### **mask-reply** *boolean*

|            |  |
|------------|--|
| Synopsis   | Allow responses to ICMP mask requests on the interface   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp mask-reply</a> <i>boolean</i> |
| Tree       | <a href="#">mask-reply</a>   |
| Default    | true   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **param-problem**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>param-problem</b> context   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem</a> |
| Tree        | <a href="#">param-problem</a>  |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.                              |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of sent Parameter Problem messages   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**number** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of Parameter Problem messages to send   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a> <b>number</b> <i>number</i> |
| Tree       | <a href="#">number</a>   |
| Range      | 10 to 1000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit number of Parameter Problem messages   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a> <b>seconds</b> <i>number</i> |
| Tree       | <a href="#">seconds</a>   |
| Range      | 1 to 60   |
| Units      | seconds   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**redirects**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>redirects</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <b>redirects</b>   |
| Tree        | <a href="#">redirects</a>   |
| Description | <p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p> |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**admin-state** *keyword*

|          |  |
|----------|--|
| Synopsis | Administrative state of sending ICMP redirect messages |
|----------|--|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **number** *number*

|            |   |
|------------|---|
| Synopsis   | Maximum number of ICMP redirect messages to send  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects number</b> <i>number</i> |
| Tree       | <b>number</b>   |
| Range      | 10 to 1000  |
| Default    | 100   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **seconds** *number*

|            |  |
|------------|--|
| Synopsis   | Time used to limit the number of ICMP redirect messages  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>   |
| Range      | 1 to 60  |
| Units      | seconds  |
| Default    | 10   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **ttl-expired**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>ttl-expired</b> context  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp ttl-expired</b>    |
| Tree        | <b>ttl-expired</b>  |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |

---

|            |         |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms  | All     |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of sending TTL expired messages   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**number** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of TTL expired messages to send   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a> <b>number</b> <i>number</i> |
| Tree       | <a href="#">number</a>   |
| Range      | 10 to 2000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit the number of TTL expired messages   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a> <b>seconds</b> <i>number</i> |
| Tree       | <a href="#">seconds</a>   |
| Range      | 1 to 60   |
| Units      | seconds   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## unreachables

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>unreachables</b> context   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables</a> |
| Tree        | <a href="#">unreachables</a>  |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.      |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

## admin-state *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of sending unreachable messages   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## number *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of unreachable messages to send   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables number</a> <i>number</i> |
| Tree       | <a href="#">number</a>   |
| Range      | 10 to 2000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## seconds *number*

|          |   |
|----------|---|
| Synopsis | Time to limit the number of ICMP unreachable messages   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables seconds</a> <i>number</i> |
| Tree     | <a href="#">seconds</a>   |

|            |         |
|------------|---------|
| Range      | 1 to 60 |
| Units      | seconds |
| Default    | 10      |
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **ip-helper-address** *string*

|            |   |
|------------|---|
| Synopsis   | Gateway address   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 ip-helper-address</a> <i>string</i> |
| Tree       | <a href="#">ip-helper-address</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **local-dhcp-server** *reference*

|            |  |
|------------|--|
| Synopsis   | DHCP server for the interface  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 local-dhcp-server</a> <i>reference</i> |
| Tree       | <a href="#">local-dhcp-server</a>  |
| Reference  | <b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **neighbor-discovery**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>neighbor-discovery</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> |
| Tree       | <a href="#">neighbor-discovery</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **host-route**

|          |   |
|----------|---|
| Synopsis | Enter the <b>host-route</b> context   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">host-route</a> |

|            |                            |
|------------|----------------------------|
| Tree       | <a href="#">host-route</a> |
| Introduced | 19.10.R1                   |
| Platforms  | All                        |

### **populate** [[route-type](#)] *keyword*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>populate</b> list instance   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> |
| Tree       | <a href="#">populate</a>  |
| Introduced | 19.10.R1  |
| Platforms  | All   |

### **[route-type]** *keyword*

|            |   |
|------------|---|
| Synopsis   | Type of ARP or ND entries that generate host routes   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> |
| Tree       | <a href="#">populate</a>  |
| Options    | static, dynamic, evpn   |
| Notes      | This element is part of a list key.   |
| Introduced | 19.10.R1  |
| Platforms  | All   |

### **route-tag** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Tag value used with the host route from an ARP/ND entry   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> <a href="#">route-tag</a> <i>number</i> |
| Tree        | <a href="#">route-tag</a>   |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.  |
| Range       | 1 to 255  |

|            |          |
|------------|----------|
| Introduced | 19.10.R1 |
| Platforms  | All      |

### **learn-unsolicited** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Learn new entries from any received NA message   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>boolean</i>  |
| Tree        | <a href="#">learn-unsolicited</a>  |
| Description | <p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.</li> </ul> |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **limit**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>limit</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">limit</a> |
| Tree       | <a href="#">limit</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **log-only** *boolean*

|          |  |
|----------|--|
| Synopsis | Generate log entries only if limit is reached  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">limit</a> <a href="#">log-only</a> <i>boolean</i> |
| Tree     | <a href="#">log-only</a>   |

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 16.0.R1 |
| Platforms  | All     |

**max-entries** *number*

|            |   |
|------------|---|
| Synopsis   | Maximum number of entries learned on an IP interface  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>limit</b> <b>max-entries</b> <i>number</i> |
| Tree       | <a href="#">max-entries</a>   |
| Range      | 0 to 524288   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**threshold** *number*

|            |   |
|------------|---|
| Synopsis   | Threshold value that triggers a warning message   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>limit</b> <b>threshold</b> <i>number</i> |
| Tree       | <a href="#">threshold</a>   |
| Range      | 1 to 100  |
| Units      | percent   |
| Default    | 90  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**local-proxy-arp** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Enable local proxy ARP on interface  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>local-proxy-arp</b> <i>boolean</i>                                      |
| Tree        | <a href="#">local-proxy-arp</a>  |
| Description | When configured to <b>true</b> , the router enables local proxy ARP on the interface.<br>When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced  | 16.0.R1  |

Platforms All

### populate *boolean*

Synopsis Allow static and dynamic hosts to be populated in system ARP cache

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery populate](#) *boolean*

Tree [populate](#)

Default false

Introduced 16.0.R1

Platforms All

### proactive-refresh *boolean*

Synopsis Send a single refresh message before entry timeout

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery proactive-refresh](#) *boolean*

Tree [proactive-refresh](#)

Description When configured to **true**, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).

When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default false

Introduced 16.0.R1

Platforms All

### proxy-arp-policy *reference*

Synopsis Proxy ARP policy name

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery proxy-arp-policy](#) *reference*

Tree [proxy-arp-policy](#)

Reference **configure** [policy-options policy-statement](#) *string*

Max. Instances 5

**admin-state keyword**

|             |  |
|-------------|--|
| Synopsis    | Administrative state of VRRP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">admin-state</a> <a href="#">keyword</a>  |
| Tree        | <a href="#">admin-state</a>  |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p> |
| Options     | enable, disable  |
| Default     | enable   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**authentication-key string**

|          |   |
|----------|---|
| Synopsis | Password for simple text authentication   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">authentication-key</a> <a href="#">string</a> |

|               |   |
|---------------|---|
| Tree          | <a href="#">authentication-key</a>  |
| Description   | <p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p> |
| String Length | 1 to 38   |
| Introduced    | 16.0.R1   |
| Platforms     | All   |

### **backup string**

|                |  |
|----------------|--|
| Synopsis       | Virtual router IP addresses for the interface  |
| Context        | <b>configure service ies</b> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4 vrrp</a> <a href="#">number</a> <a href="#">backup</a> <a href="#">string</a>  |
| Tree           | <a href="#">backup</a>   |
| Description    | <p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p> |
| Max. Instances | 16   |
| Introduced     | 16.0.R1  |
| Platforms      | All  |

### **bfd-liveness**

|          |  |
|----------|--|
| Synopsis | Enable the <b>bfd-liveness</b> context |
|----------|--|

|            |  |
|------------|--|

| Introduced    | 16.0.R1  |
| Platforms     | All  |

**service-name** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Administrative service name   |
| Context       | <b>configure</b> <i>service ies string interface string ipv4 vrrp number bfd-liveness service-name string</i> |
| Tree          | <i>service-name</i>   |
| String Length | 1 to 64   |
| Introduced    | 16.0.R1   |
| Platforms     | All   |

**init-delay** *number*

|            |  |
|------------|--|
| Synopsis   | VRRP initialization delay timer  |
| Context    | <b>configure</b> <i>service ies string interface string ipv4 vrrp number init-delay number</i> |
| Tree       | <i>init-delay</i>  |
| Range      | 1 to 65535   |
| Units      | seconds  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**mac** *string*

|             |  |
|-------------|--|
| Synopsis    | Virtual MAC address to use in ARP responses  |
| Context     | <b>configure</b> <i>service ies string interface string ipv4 vrrp number mac string</i>  |
| Tree        | <i>mac</i>   |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p> |

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

|            |         |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **master-int-inherit** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow master instance to dictate the master down timer  |
| Context     | <b>configure</b> <i>service ies string interface string ipv4 vrrp number master-int-inherit boolean</i>   |
| Tree        | <a href="#">master-int-inherit</a>  |
| Description | <p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **message-interval** *number*

|             |  |
|-------------|--|
| Synopsis    | Interval for sending VRRP advertisement messages   |
| Context     | <b>configure</b> <i>service ies string interface string ipv4 vrrp number message-interval number</i>   |
| Tree        | <a href="#">message-interval</a>   |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming</li> </ul> |

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

|            |             |
|------------|-------------|
| Range      | 1 to 2559   |
| Units      | deciseconds |
| Default    | 10          |
| Introduced | 16.0.R1     |
| Platforms  | All         |

### **monitor-oper-group** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | VRRP instance to follow a specified operational group   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <b>monitor-oper-group</b> <a href="#">reference</a>   |
| Tree        | <a href="#">monitor-oper-group</a>  |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference   | <b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>  |
| Introduced  | 22.2.R1   |
| Platforms   | All   |

### **ntp-reply** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow processing of NTP requests   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <b>ntp-reply</b> <a href="#">boolean</a> |
| Tree        | <a href="#">ntp-reply</a>  |
| Description | When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.  |

When configured to **false**, the router does not process NTP requests.

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 20.2.R1 |
| Platforms  | All     |

### **oper-group** *reference*

|             |   |
|-------------|---|
| Synopsis    | Operational group name associated with the VRRP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">oper-group</a> <a href="#">reference</a>  |
| Tree        | <a href="#">oper-group</a>  |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference   | <b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>  |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **owner** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Designate the virtual router instance as owner  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">owner</a> <a href="#">boolean</a>   |
| Tree        | <a href="#">owner</a>   |
| Description | When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.<br><br>When configured to <b>false</b> , this virtual router instance is designated as a non-owner. |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**passive** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Suppress the processing of VRRP advertisement messages  |
| Context     | <b>configure</b> <i>service ies string interface string ipv4 vrrp number</i> <b>passive</b> <i>boolean</i>  |
| Tree        | <b>passive</b>  |
| Description | <p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**ping-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow non-owner master to reply to ICMP echo requests   |
| Context     | <b>configure</b> <i>service ies string interface string ipv4 vrrp number</i> <b>ping-reply</b> <i>boolean</i>   |
| Tree        | <b>ping-reply</b>   |
| Description | <p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**policy** *reference*

|          |                              |
|----------|------------------------------|
| Synopsis | VRRP priority control policy |
|----------|------------------------------|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>policy</b> <i>reference</i>  |
| Tree        | <b>policy</b>  |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference   | <b>configure vrrp policy</b> <i>number</i>   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **preempt** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow the VRRP to override an existing non-owner master  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>preempt</b> <i>boolean</i>   |
| Tree        | <b>preempt</b>   |
| Description | <p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **priority** *number*

|             |   |
|-------------|---|
| Synopsis    | Base priority for the VRRP  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>priority</b> <i>number</i>                                    |
| Tree        | <b>priority</b>   |
| Description | This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process. |

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

|            |          |
|------------|----------|
| Range      | 1 to 255 |
| Introduced | 16.0.R1  |
| Platforms  | All      |

### **ssh-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow the non-owner master to reply to SSH requests   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>ssh-reply</b> <i>boolean</i>  |
| Tree        | <a href="#">ssh-reply</a>   |
| Description | <p>When configured to <b>true</b>, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to <b>false</b>, SSH requests to non-owner master virtual IP addresses are silently discarded.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **standby-forwarding** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow standby router to forward traffic  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>standby-forwarding</b> <i>boolean</i>  |
| Tree        | <a href="#">standby-forwarding</a>   |
| Description | <p>When configured to <b>true</b>, the standby router forwards all traffic.</p> <p>When configured to <b>false</b>, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**telnet-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow non-owner master to reply to Telnet requests  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>telnet-reply</b> <i>boolean</i>   |
| Tree        | <a href="#">telnet-reply</a>  |
| Description | <p>When configured to <b>true</b>, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to <b>false</b>, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**traceroute-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow non-owner master to reply to traceroute requests  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>   |
| Tree        | <a href="#">traceroute-reply</a>  |
| Description | <p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**ipv6**

|            |  |
|------------|--|

| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ipv6</b> |
| Tree       | <a href="#">ipv6</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**address** [ipv6-address] *string*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>address</b> list instance  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i> |
| Tree       | <a href="#">address</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**[ipv6-address]** *string*

|            |   |
|------------|---|
| Synopsis   | IPv6 address assigned to the interface  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i> |
| Tree       | <a href="#">address</a>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**duplicate-address-detection** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Enable Duplicate Address Detection  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i> <a href="#">duplicate-address-detection</a> <i>boolean</i>      |
| Tree        | <a href="#">duplicate-address-detection</a>   |
| Description | When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD).<br>When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default     | true  |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**eui-64** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Form IPv6 address from prefix and 64-bit interface ID  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>eui-64</b> <i>boolean</i>  |
| Tree        | <b>eui-64</b>  |
| Description | When configured to <b>true</b> , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis. |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**prefix-length** *number*

|            |   |
|------------|---|
| Synopsis   | IPv6 address prefix length  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>prefix-length</b> <i>number</i> |
| Tree       | <b>prefix-length</b>  |
| Range      | 4 to 128  |
| Notes      | This element is mandatory.  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**primary-preference** *number*

|             |   |
|-------------|---|
| Synopsis    | Index assigned to the IPv6 address of the interface   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>primary-preference</b> <i>number</i>  |
| Tree        | <b>primary-preference</b>   |
| Description | This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected. |

If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.

|            |                 |
|------------|-----------------|
| Range      | 1 to 4294967295 |

| Platforms  | All             |

### **track-srrp** *number*

|            |   |
|------------|---|
| Synopsis   | SRRP ID whose state is tracked on this IP address   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i> <b>track-srrp</b> <i>number</i> |
| Tree       | <a href="#">track-srrp</a>  |
| Range      | 1 to 4294967295   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **bfd**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>bfd</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <b>bfd</b> |
| Tree       | <a href="#">bfd</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of BFD sessions   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <b>bfd</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**echo-receive** *number*

|            |  |
|------------|--|
| Synopsis   | Minimum echo interval over this interface  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">bfd</a> <a href="#">echo-receive</a> <i>number</i> |
| Tree       | <a href="#">echo-receive</a>   |
| Range      | 100 to 100000  |
| Units      | milliseconds   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**multiplier** *number*

|             |   |
|-------------|---|
| Synopsis    | Number of consecutive BFD messages missed from the peer   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">bfd</a> <a href="#">multiplier</a> <i>number</i>                                    |
| Tree        | <a href="#">multiplier</a>  |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range       | 1 to 20   |
| Default     | 3   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**receive** *number*

|             |  |
|-------------|--|
| Synopsis    | BFD receive interval over this interface   |

| Tree        | <a href="#">receive</a>  |
| Description | This command specifies the receive interval for the BFD session.<br>On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> . |
| Range       | 10 to 100000   |
| Units       | milliseconds   |
| Default     | 100  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**transmit-interval** *number*

|             |   |
|-------------|---|
| Synopsis    | BFD transmit interval over this interface   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>transmit-interval</b> <i>number</i>   |
| Tree        | <b>transmit-interval</b>  |
| Description | This command configures the transmit intervals.<br>On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> . |
| Range       | 10 to 100000  |
| Units       | milliseconds  |
| Default     | 100   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**type** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Local termination point for the BFD session   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>type</b> <i>keyword</i>   |
| Tree        | <b>type</b>   |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.<br>The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul> |
| Options     | cpm-np, auto, fp  |
| Default     | auto  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**dhcp6**

| Synopsis      | Requesting router ID   |
| Context       | <b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id duid string</b> |
| Tree          | <a href="#">duid</a>   |
| String Length | 1 to 130   |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

**iaid number**

|             |  |
|-------------|--|
| Synopsis    | IAID from the requesting router to match   |
| Context     | <b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id iaid number</b>   |
| Tree        | <a href="#">iaid</a>   |
| Description | This command configures the Identity Association ID (IAID) associated with a prefix delegation entry and must match the IAID sent by the requesting router for the prefix delegation to succeed. |
| Range       | 1 to 4294967295  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**preferred-lifetime (number | keyword)**

|             |  |
|-------------|--|
| Synopsis    | Preferred lifetime of the prefix   |
| Context     | <b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string preferred-lifetime (number   keyword)</b> |
| Tree        | <a href="#">preferred-lifetime</a>   |
| Description | This command configures the preferred lifetime of the prefix. The value cannot be greater than the valid lifetime value.                     |
| Range       | 1 to 4294967294  |
| Units       | seconds  |
| Options     | infinite   |
| Default     | 604800   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**valid-lifetime** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Valid lifetime of the prefix  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">server</a> <a href="#">prefix-delegation</a> <a href="#">prefix</a> <a href="#">string</a> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">valid-lifetime</a>  |
| Range      | 1 to 4294967294   |
| Units      | seconds   |
| Options    | infinite  |
| Default    | 2592000   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**duplicate-address-detection** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable Duplicate Address Detection per interface   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">duplicate-address-detection</a> <i>boolean</i> |
| Tree       | <a href="#">duplicate-address-detection</a>  |
| Default    | true   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**forward-ipv4-packets** *boolean*

|            |   |
|------------|---|
| Synopsis   | Forward unencapsulated IPv4 packets   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">forward-ipv4-packets</a> <i>boolean</i> |
| Tree       | <a href="#">forward-ipv4-packets</a>  |
| Default    | false   |
| Introduced | 19.5.R1   |
| Platforms  | All   |

**icmp6**

|          |  |
|----------|--|
| Synopsis | Enter the <b>icmp6</b> context   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <b>icmp6</b> |

|            |                       |
|------------|-----------------------|
| Tree       | <a href="#">icmp6</a> |
| Introduced | 16.0.R1               |
| Platforms  | All                   |

## packet-too-big

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>packet-too-big</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> |
| Tree        | <a href="#">packet-too-big</a>   |
| Description | Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

## admin-state *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of Packet Too Big message sends  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## number *number*

|            |   |
|------------|---|
| Synopsis   | Number of Packet Too big Messages issued per time frame   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> <a href="#">number</a> <i>number</i> |
| Tree       | <a href="#">number</a>  |
| Range      | 10 to 1000  |
| Default    | 100   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**seconds** *number*

|            |  |
|------------|--|
| Synopsis   | Time used to limit Packet Too Big messages   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> <a href="#">seconds</a> <i>number</i> |
| Tree       | <a href="#">seconds</a>  |
| Range      | 1 to 60  |
| Default    | 10   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**param-problem**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>param-problem</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">param-problem</a> |
| Tree       | <a href="#">param-problem</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of Parameter Problem message sends  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">param-problem</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**number** *number*

|          |  |
|----------|--|
| Synopsis | Number used to limit ICMPv6 Parameter Problem messages   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">param-problem</a> <a href="#">number</a> <i>number</i> |
| Tree     | <a href="#">number</a>   |
| Range    | 10 to 1000   |
| Default  | 100  |

---

|            |         |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit ICMPv6 Parameter Problem messages  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>  |
| Range      | 1 to 60   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **redirects**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>redirects</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 redirects</b> |
| Tree       | <b>redirects</b>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of Redirect message sends   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 redirects admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **number** *number*

|          |  |
|----------|--|
| Synopsis | Number to limit ICMPv6 Redirect messages per time frame  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 redirects number</b> <i>number</i> |

|            |                        |
|------------|------------------------|
| Tree       | <a href="#">number</a> |
| Range      | 10 to 1000             |
| Default    | 100                    |
| Introduced | 16.0.R1                |
| Platforms  | All                    |

### **seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit ICMPv6 Redirect messages   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 redirects</a> <a href="#">seconds</a> <i>number</i> |
| Tree       | <a href="#">seconds</a>   |
| Range      | 1 to 60   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **time-exceeded**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>time-exceeded</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 time-exceeded</a> |
| Tree       | <a href="#">time-exceeded</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of Time Exceeded message sends  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 time-exceeded admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**number** *number*

|            |  |
|------------|--|
| Synopsis   | Number to limit Time Exceeded messages per time frame  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">time-exceeded</a> <a href="#">number</a> <i>number</i> |
| Tree       | <a href="#">number</a>   |
| Range      | 10 to 2000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit ICMPv6 Time Exceeded messages  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">time-exceeded</a> <a href="#">seconds</a> <i>number</i> |
| Tree       | <a href="#">seconds</a>   |
| Range      | 1 to 60   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**unreachables**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>unreachables</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">unreachables</a> |
| Tree       | <a href="#">unreachables</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**admin-state** *keyword*

|          |   |
|----------|---|
| Synopsis | Administrative state of Unreachable message sends   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">unreachables</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree     | <a href="#">admin-state</a>   |
| Options  | enable, disable   |
| Default  | enable  |

Introduced 16.0.R1  
 Platforms All

### **number** *number*

Synopsis Number to limit Unreachable messages per time frame  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 icmp6 unreachable](#) *number* *number*  
 Tree [number](#)  
 Range 10 to 2000  
 Default 100  
 Introduced 16.0.R1  
 Platforms All

### **seconds** *number*

Synopsis Time used to limit ICMPv6 Unreachable messages  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 icmp6 unreachable](#) *seconds* *number*  
 Tree [seconds](#)  
 Range 1 to 60  
 Default 10  
 Introduced 16.0.R1  
 Platforms All

### **link-local-address**

Synopsis Enter the **link-local-address** context  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 link-local-address](#)  
 Tree [link-local-address](#)  
 Introduced 16.0.R1  
 Platforms All

### **address** *string*

Synopsis IPv6 link-local address  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 link-local-address](#) *address* *string*

|            |                         |
|------------|-------------------------|
| Tree       | <a href="#">address</a> |
| Introduced | 16.0.R1                 |
| Platforms  | All                     |

### **duplicate-address-detection** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Enable Duplicate Address Detection   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 link-local-address duplicate-address-detection</a> <i>boolean</i>  |
| Tree        | <a href="#">duplicate-address-detection</a>  |
| Description | When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD) on the interface.<br>When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **local-dhcp-server** *reference*

|            |  |
|------------|--|
| Synopsis   | DHCP server for the interface  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 local-dhcp-server</a> <i>reference</i> |
| Tree       | <a href="#">local-dhcp-server</a>  |
| Reference  | <b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **neighbor-discovery**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>neighbor-discovery</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery</a> |
| Tree       | <a href="#">neighbor-discovery</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**host-route**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>host-route</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route</b> |
| Tree       | <b>host-route</b>   |
| Introduced | 20.2.R1   |
| Platforms  | All   |

**populate** [*route-type*] *keyword*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>populate</b> list instance   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route populate</b> <i>keyword</i> |
| Tree       | <b>populate</b>   |
| Introduced | 20.2.R1   |
| Platforms  | All   |

**[route-type]** *keyword*

|            |   |
|------------|---|
| Synopsis   | Type of ARP or ND entries that generate host routes   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route populate</b> <i>keyword</i> |
| Tree       | <b>populate</b>   |
| Options    | static, dynamic, evpn   |
| Notes      | This element is part of a list key.   |
| Introduced | 20.2.R1   |
| Platforms  | All   |

**route-tag** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | Tag value used with the host route from an ARP/ND entry  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route populate</b> <i>keyword</i> <b>route-tag</b> <i>number</i> |
| Tree     | <b>route-tag</b>   |

|             |  |
|-------------|--|
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range       | 1 to 255   |
| Introduced  | 20.2.R1  |
| Platforms   | All  |

### **learn-unsolicited** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Type of entries learned from unsolicited NA messages  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <a href="#">keyword</a>  |
| Tree        | <a href="#">learn-unsolicited</a>   |
| Description | This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.<br><br>When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior. |
| Options     | global, link-local, both  |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **limit**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>limit</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> |
| Tree       | <a href="#">limit</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **log-only** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Generate log entries when limit is reached  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">log-only</a> <a href="#">boolean</a> |
| Tree        | <a href="#">log-only</a>  |
| Description | When configured to <b>true</b> , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.   |

When configured to **false**, the router does not send the warning message.

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **max-entries** *number*

|             |   |
|-------------|---|
| Synopsis    | Maximum number of entries learned on an IP interface  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">max-entries</a> <a href="#">number</a> |
| Tree        | <a href="#">max-entries</a>   |
| Description | This command configures the maximum number of entries that can be learned on an IP interface.<br>When unconfigured, no maximum limit is imposed.  |
| Range       | 0 to 102400   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **threshold** *number*

|            |   |
|------------|---|
| Synopsis   | Threshold percentage that triggers a warning message  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">threshold</a> <a href="#">number</a> |
| Tree       | <a href="#">threshold</a>   |
| Range      | 1 to 100  |
| Units      | percent   |
| Default    | 90  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **local-proxy-nd** *boolean*

|          |   |
|----------|---|
| Synopsis | Enable local proxy neighbor discovery on the interface  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-nd</a> <a href="#">boolean</a> |
| Tree     | <a href="#">local-proxy-nd</a>  |

|             |   |
|-------------|---|
| Description | <p>When configured to <b>true</b>, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to <b>false</b>, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **proactive-refresh** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Proactive refresh of neighbor entries   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <b>proactive-refresh</b> <i>keyword</i>  |
| Tree        | <a href="#">proactive-refresh</a>   |
| Description | This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed. |
| Options     | global, link-local, both  |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **proxy-nd-policy** *reference*

|                |  |
|----------------|--|
| Synopsis       | Proxy Neighbor Discovery policy name for the interface   |
| Context        | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <b>proxy-nd-policy</b> <i>reference</i> |
| Tree           | <a href="#">proxy-nd-policy</a>  |
| Reference      | <b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>   |
| Max. Instances | 5  |
| Notes          | This element is ordered by the user.   |
| Introduced     | 16.0.R1  |
| Platforms      | All  |

**reachable-time** *number*

|            |  |
|------------|--|
| Synopsis   | Neighbor reachability detection timer  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">reachable-time</a> <a href="#">number</a> |
| Tree       | <a href="#">reachable-time</a>   |
| Range      | 30 to 3600   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**secure-nd**

### **admin-state** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Administrative state of VRRP  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>admin-state</b> <i>keyword</i>  |
| Tree        | <b>admin-state</b>  |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> |

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

|            |                 |
|------------|-----------------|
| Options    | enable, disable |
| Default    | enable          |
| Introduced | 16.0.R1         |
| Platforms  | All             |

### **backup string**

|                |  |
|----------------|--|
| Synopsis       | Virtual router IP addresses for the interface  |
| Context        | <b>configure service ies string interface string ipv6 vrrp number backup string</b>  |
| Tree           | <b>backup</b>  |
| Description    | <p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p> |
| Max. Instances | 4  |
| Introduced     | 16.0.R1  |
| Platforms      | All  |

### **bfd-liveness**

| Platforms  | All  |

**mac** *string*

|             |  |
|-------------|--|
| Synopsis    | Virtual MAC address to use in ARP responses  |
| Context     | <b>configure</b> <i>service ies string interface string ipv6 vrrp number mac string</i>  |
| Tree        | <i>mac</i>   |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p> |

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

|            |         |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms  | All     |

### **master-int-inherit** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow master instance to dictate the master down timer   |
| Context     | <b>configure</b> <i>service ies string interface string ipv6 vrrp number master-int-inherit boolean</i>  |
| Tree        | <a href="#">master-int-inherit</a>   |
| Description | When configured to <b>true</b> , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.<br><br>When configured to <b>false</b> , the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded. |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **message-interval** *number*

|             |   |
|-------------|---|
| Synopsis    | Interval for sending VRRP advertisement messages  |
| Context     | <b>configure</b> <i>service ies string interface string ipv6 vrrp number message-interval number</i>  |
| Tree        | <a href="#">message-interval</a>  |
| Description | This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.<br><br>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command: <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as the master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming</li> </ul> |

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

|            |              |
|------------|--------------|
| Range      | 10 to 4095   |
| Units      | centiseconds |
| Default    | 100          |
| Introduced | 16.0.R1      |
| Platforms  | All          |

### **monitor-oper-group** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | VRRP instance to follow a specified operational group   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <b>monitor-oper-group</b> <a href="#">reference</a>   |
| Tree        | <a href="#">monitor-oper-group</a>  |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference   | <b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>  |
| Introduced  | 22.2.R1   |
| Platforms   | All   |

### **ntp-reply** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow processing of NTP requests   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <b>ntp-reply</b> <a href="#">boolean</a> |
| Tree        | <a href="#">ntp-reply</a>  |
| Description | When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.  |

When configured to **false**, the router does not process NTP requests.

|            |         |
|------------|---------|
| Default    | false   |
| Introduced | 20.2.R1 |
| Platforms  | All     |

### **oper-group** *reference*

|             |   |
|-------------|---|
| Synopsis    | Operational group name associated with the VRRP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">oper-group</a> <a href="#">reference</a>  |
| Tree        | <a href="#">oper-group</a>  |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference   | <b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>  |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **owner** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|-------------|---|
| Synopsis    | Designate the virtual router instance as owner  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">owner</a> <a href="#">boolean</a>   |
| Tree        | <a href="#">owner</a>   |
| Description | When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.<br><br>When configured to <b>false</b> , this virtual router instance is designated as a non-owner. |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**passive** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Suppress the processing of VRRP advertisement messages  |
| Context     | <b>configure</b> <i>service ies string interface string ipv6 vrrp number</i> <b>passive</b> <i>boolean</i>  |
| Tree        | <b>passive</b>  |
| Description | <p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**ping-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow non-owner master to reply to ICMP echo requests   |
| Context     | <b>configure</b> <i>service ies string interface string ipv6 vrrp number</i> <b>ping-reply</b> <i>boolean</i>   |
| Tree        | <b>ping-reply</b>   |
| Description | <p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**policy** *reference*

|          |                              |
|----------|------------------------------|
| Synopsis | VRRP priority control policy |
|----------|------------------------------|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>policy</b> <i>reference</i>  |
| Tree        | <b>policy</b>  |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference   | <b>configure vrrp policy</b> <i>number</i>   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **preempt** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow the VRRP to override an existing non-owner master  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>preempt</b> <i>boolean</i>   |
| Tree        | <b>preempt</b>   |
| Description | <p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### **priority** *number*

|             |   |
|-------------|---|
| Synopsis    | Base priority for the VRRP  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>priority</b> <i>number</i>                                    |
| Tree        | <b>priority</b>   |
| Description | This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process. |

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

|            |          |
|------------|----------|
| Range      | 1 to 255 |
| Introduced | 16.0.R1  |
| Platforms  | All      |

### **standby-forwarding** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow standby router to forward traffic   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp number</a> <a href="#">standby-forwarding</a> <i>boolean</i>   |
| Tree        | <a href="#">standby-forwarding</a>  |
| Description | When configured to <b>true</b> , the standby router forwards all traffic.<br>When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address. |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

### **telnet-reply** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Allow non-owner master to reply to Telnet requests   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp number</a> <a href="#">telnet-reply</a> <i>boolean</i>  |
| Tree        | <a href="#">telnet-reply</a>   |
| Description | When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).<br>When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses. |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

**traceroute-reply** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Allow non-owner master to reply to traceroute requests  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">traceroute-reply</a> <i>boolean</i>  |
| Tree        | <a href="#">traceroute-reply</a>  |
| Description | <p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**load-balancing**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>load-balancing</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> |
| Tree       | <a href="#">load-balancing</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**flow-label-load-balancing** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enable flow label load balancing  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">flow-label-load-balancing</a> <i>boolean</i>  |
| Tree        | <a href="#">flow-label-load-balancing</a>   |
| Description | <p>When configured to <b>true</b>, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.</p> <p>When configured to <b>false</b>, the router disables load balancing in ECMP and LAG.</p> |
| Default     | false   |
| Introduced  | 21.5.R1   |
| Platforms   | All   |

**ip-load-balancing** *keyword*

|             |  |
|-------------|--|
| Synopsis    | IP load-balancing algorithm  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">ip-load-balancing</a> <i>keyword</i>   |
| Tree        | <a href="#">ip-load-balancing</a>  |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the <b>l4-load-balancing</b> command is enabled, this command also includes the source or destination port in the hash inputs. |
| Options     | both, destination, source, inner-ip  |
| Default     | both   |
| Introduced  | 16.0.R3  |
| Platforms   | All  |

**spi-load-balancing** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enable SPI use in hashing   |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">spi-load-balancing</a> <i>boolean</i> |
| Tree        | <a href="#">spi-load-balancing</a>  |
| Description | When configured to <b>true</b> , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.     |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | All   |

**teid-load-balancing** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable use of TEID in hashing  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">teid-load-balancing</a> <i>boolean</i> |
| Tree       | <a href="#">teid-load-balancing</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**loopback** *boolean*

|          |                                       |
|----------|---------------------------------------|
| Synopsis | Use interface as a loopback interface |
|----------|---------------------------------------|

---

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string interface string loopback boolean</i> |
| Tree       | <a href="#">loopback</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **mac string**

|            |  |
|------------|--|
| Synopsis   | MAC address for the interface  |
| Context    | <b>configure service ies</b> <i>string interface string mac string</i> |
| Tree       | <a href="#">mac</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **mac-accounting boolean**

|            |  |
|------------|--|
| Synopsis   | Enable MAC accounting functionality  |
| Context    | <b>configure service ies</b> <i>string interface string mac-accounting boolean</i> |
| Tree       | <a href="#">mac-accounting</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **monitor-oper-group reference**

|            |  |
|------------|--|
| Synopsis   | Operational group to monitor   |
| Context    | <b>configure service ies</b> <i>string interface string monitor-oper-group reference</i> |
| Tree       | <a href="#">monitor-oper-group</a>   |
| Reference  | <b>configure service oper-group</b> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **multi-chassis-shunting-profile reference**

|          |                                     |
|----------|-------------------------------------|
| Synopsis | Multi-chassis shunting profile name |
|----------|-------------------------------------|

|             |   |
|-------------|---|
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">multi-chassis-shunting-profile</a> <i>reference</i>            |
| Tree        | <a href="#">multi-chassis-shunting-profile</a>  |
| Description | This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.   |
| Reference   | <b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec</a> <a href="#">multi-chassis-shunting-profile</a> <i>string</i>                                      |
| Notes       | The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ). |
| Introduced  | 22.5.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **multicast-network-domain** *reference*

|            |  |
|------------|--|
| Synopsis   | Network domain name  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">multicast-network-domain</a> <i>reference</i> |
| Tree       | <a href="#">multicast-network-domain</a>   |

| Introduced | 16.0.R1  |
| Platforms  | All  |

### **ping-template**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>ping-template</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> |
| Tree       | <a href="#">ping-template</a>  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the ping template   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 20.10.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## destination-address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ping template destination address

Context **configure** [service ies](#) *string* [interface](#) *string* [ping-template](#) [destination-address](#) *string*

Tree [destination-address](#)

Description This command configures the address to where the ICMP echo requests are directed to test connectivity. The source of the ICMP echo request is the primary IPv4 address of the interface under which the ping-template is configured. The destination address must be on the same subnet as the source IP address. A configuration warning message displays if the primary IPv4 address and the destination are not on the same subnet, INFO: PIP #2092 Ping template misconfiguration - destination-address and primary IP address should fall in the same subnet.

Unnumbered interfaces and loopback addresses are not supported.

The config service ies|vprn interface ping-template must be administratively disabled to remove or change the destination-address ip-address.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## name *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Ping template name

Context **configure** [service ies](#) *string* [interface](#) *string* [ping-template](#) [name](#) *reference*

Tree [name](#)

Description This command configures the name of the ping template to be assigned to the IP interface.

Reference **configure** [test-oam icmp ping-template](#) *string*

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ptp-hw-assist**

| Introduced | 16.0.R1   |
| Platforms  | All   |

**anti-spoof keyword**

|            |  |
|------------|--|
| Synopsis   | Anti-spoof filtering   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">anti-spoof</a> <i>keyword</i> |
| Tree       | <a href="#">anti-spoof</a>   |
| Options    | source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**app-profile** *reference*

|            |   |
|------------|---|
| Synopsis   | Application profile name  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>   |
| Tree       | <a href="#">app-profile</a>   |
| Reference  | <b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i> |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**bandwidth** *number*

|            |  |
|------------|--|
| Synopsis   | SAP bandwidth  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">bandwidth</a> <i>number</i> |
| Tree       | <a href="#">bandwidth</a>  |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**calling-station-id** *string*

|               |   |
|---------------|---|
| Synopsis      | Calling station ID  |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">calling-station-id</a> <i>string</i> |
| Tree          | <a href="#">calling-station-id</a>  |
| String Length | 1 to 64   |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**collect-stats** *boolean*

|            |   |
|------------|---|
| Synopsis   | Collect accounting statistics   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i> |
| Tree       | <a href="#">collect-stats</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |

Platforms All

## cpu-protection

Synopsis Enter the **cpu-protection** context

Context **configure service ies string interface string sap string cpu-protection**

Tree [cpu-protection](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure service ies string interface string sap string cpu-protection eth-cfm-monitoring**

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure service ies string interface string sap string cpu-protection eth-cfm-monitoring aggregate**

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure service ies string interface string sap string cpu-protection eth-cfm-monitoring car**

Tree [car](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis Enable IP source monitoring for CPU protection

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [cpu-protection ip-src-monitoring](#)

Tree [ip-src-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis Monitor MAC for CPU protection

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [cpu-protection mac-monitoring](#)

Tree [mac-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis CPM protection policy

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [cpu-protection policy-id reference](#)

Tree [policy-id](#)

Reference **configure** [system security cpu-protection policy number](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis Text description

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [description string](#)

Tree [description](#)

String Length 1 to 160  
 Introduced 16.0.R1  
 Platforms All

### **dist-cpu-protection** *reference*

Synopsis Distributed CPU protection policy for SAP  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [dist-cpu-protection reference](#)  
 Tree [dist-cpu-protection](#)  
 Reference **configure** [system security dist-cpu-protection policy string](#)  
 Introduced 16.0.R1  
 Platforms All

### **egress**

Synopsis Enter the **egress** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#)  
 Tree [egress](#)  
 Introduced 16.0.R1  
 Platforms All

### **agg-rate**

Synopsis Enter the **agg-rate** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#) [agg-rate](#)  
 Tree [agg-rate](#)  
 Notes The following elements are part of a choice: **agg-rate** or **percent-agg-rate**.  
 Introduced 16.0.R1  
 Platforms All

### **adaptation-rule** *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#) [agg-rate](#) [adaptation-rule keyword](#)

|            |                                 |
|------------|---------------------------------|
| Tree       | <a href="#">adaptation-rule</a> |
| Options    | max, min, closest               |
| Default    | closest                         |
| Introduced | 22.10.R1                        |
| Platforms  | 7750 SR-1, 7750 SR-s            |

### **burst-limit** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Shaping burst size when an aggregate shaper is used   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">burst-limit</a>   |
| Range      | 1 to 14000000   |
| Units      | bytes   |
| Options    | auto  |
| Default    | auto  |
| Introduced | 22.10.R1  |
| Platforms  | 7750 SR-1, 7750 SR-s  |

### **limit-unused-bandwidth** *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable aggregate rate overrun protection   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i> |
| Tree       | <a href="#">limit-unused-bandwidth</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **queue-frame-based-accounting** *boolean*

|          |  |
|----------|--|
| Synopsis | Enable frame based accounting on policers and queues   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">queue-frame-based-accounting</a> <i>boolean</i> |
| Tree     | <a href="#">queue-frame-based-accounting</a>   |
| Default  | false  |

Introduced 16.0.R1  
 Platforms All

### **rate number**

Synopsis Enforced aggregate rate for all queues  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress agg-rate rate number](#)  
 Tree [rate](#)  
 Range 1 to 6400000000  
 Units kilobps  
 Introduced 16.0.R1  
 Platforms All

### **filter**

Synopsis Enter the **filter** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter](#)  
 Tree [filter](#)  
 Introduced 16.0.R1  
 Platforms All

### **ip reference**

Synopsis IPv4 filter policy name  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter ip reference](#)  
 Tree [ip](#)  
 Reference **configure** [filter ip-filter string](#)  
 Introduced 16.0.R1  
 Platforms All

### **ipv6 reference**

Synopsis IPv6 filter policy name  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter ipv6 reference](#)  
 Tree [ipv6](#)

|            |   |
|------------|---|
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <i>string</i> |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## qos

|            |   |
|------------|---|
| Synopsis   | Enter the <b>qos</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> |
| Tree       | <a href="#">qos</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## policer-control-policy

|            |  |
|------------|--|
| Synopsis   | Enter the <b>policer-control-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> |
| Tree       | <a href="#">policer-control-policy</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

## overrides

|            |  |
|------------|--|
| Synopsis   | Enable the <b>overrides</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

## root

|            |   |
|------------|---|
| Synopsis   | Enter the <b>root</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> |
| Tree       | <a href="#">root</a>  |
| Introduced | 16.0.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **max-rate** (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context **configure service ies** *string* **interface** *string* **sap** *string* **egress qos policer-control-policy overrides root max-rate** (*number* | *keyword*)

Tree [max-rate](#)

Range 1 to 6400000000

Options max

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority-mbs-thresholds**

Synopsis Enter the **priority-mbs-thresholds** context

Context **configure service ies** *string* **interface** *string* **sap** *string* **egress qos policer-control-policy overrides root priority-mbs-thresholds**

Tree [priority-mbs-thresholds](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **min-thresh-separation** (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space

Context **configure service ies** *string* **interface** *string* **sap** *string* **egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation** (*number* | *keyword*)

Tree [min-thresh-separation](#)

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority** [*priority-level*] *number*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>priority</b> list instance   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>policer-control-policy</b> <b>overrides</b> <b>root</b> <b>priority-mbs-thresholds</b> <b>priority</b> <i>number</i> |
| Tree       | <b>priority</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**[priority-level]** *number*

|            |   |
|------------|---|
| Synopsis   | Priority level  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>policer-control-policy</b> <b>overrides</b> <b>root</b> <b>priority-mbs-thresholds</b> <b>priority</b> <i>number</i> |
| Tree       | <b>priority</b>   |
| Range      | 1 to 8  |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**mbs-contribution** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Minimum amount of cumulative buffer space allowed  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>policer-control-policy</b> <b>overrides</b> <b>root</b> <b>priority-mbs-thresholds</b> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <b>mbs-contribution</b>  |
| Range      | 0 to 16777216  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**policy-name** *reference*

|          |                             |
|----------|-----------------------------|
| Synopsis | Policer control policy name |
|----------|-----------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos policer-control-policy</b> <i>policy-name</i> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure qos policer-control-policy</b> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **qinq-mark-top-only** *boolean*

|            |  |
|------------|--|
| Synopsis   | Mark top Q-tags  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos qinq-mark-top-only</b> <i>boolean</i> |
| Tree       | <a href="#">qinq-mark-top-only</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **sap-egress**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>sap-egress</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress</b> |
| Tree       | <a href="#">sap-egress</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **overrides**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>overrides</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> |
| Tree       | <a href="#">overrides</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **hs-secondary-shaper** *string*

|          |                     |
|----------|---------------------|
| Synopsis | HS Secondary Shaper |
|----------|---------------------|

|               |   |
|---------------|---|
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>hs-secondary-shaper</b> <i>string</i> |
| Tree          | <b>hs-secondary-shaper</b>  |
| String Length | 1 to 32   |
| Introduced    | 16.0.R1   |
| Platforms     | 7750 SR-7/12/12e  |

### **hs-wrr-group** [**group-id**] *reference*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>hs-wrr-group</b> list instance   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>hs-wrr-group</b> <i>reference</i> |
| Tree       | <b>hs-wrr-group</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR-7/12/12e  |

### **[group-id]** *reference*

|            |   |
|------------|---|
| Synopsis   | HS WRR group identifier   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>hs-wrr-group</b> <i>reference</i> |
| Tree       | <b>hs-wrr-group</b>   |
| Reference  | <b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR-7/12/12e  |

### **hs-class-weight** *number*

|            |  |
|------------|--|
| Synopsis   | Class weight override of the WRR group   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>hs-wrr-group</b> <i>reference</i> <b>hs-class-weight</b> <i>number</i> |
| Tree       | <b>hs-class-weight</b>   |
| Range      | 1   2   4   8  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

**percent-rate** *decimal-number*

|            |   |
|------------|---|
| Synopsis   | Percent rate override applied to the HS WRR group   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <a href="#">reference</a> <b>percent-rate</b> <i>decimal-number</i> |
| Tree       | <a href="#">percent-rate</a>  |
| Range      | 0.01 to 100.00  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR-7/12/12e  |

**rate** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Scheduling rate override applied to the HS WRR group   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <a href="#">reference</a> <b>rate</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">rate</a>   |
| Range      | 1 to 2000000000  |
| Units      | kilobps  |
| Options    | max  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

**policer** [[policer-id](#)] *reference*

|            |   |

| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**cbs** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">cbs</a>   |
| Range      | 0 to 268435456  |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**mbs** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | MBS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">mbs</a>   |
| Range      | 0 to 268435456  |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**packet-byte-offset** *number*

|          |   |
|----------|---|
| Synopsis | Packet size modification for policing information |
|----------|---|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>policer reference packet-byte-offset</b> <i>number</i> |
| Tree       | <b>packet-byte-offset</b>  |
| Range      | -64 to 31  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **percent-rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>percent-rate</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>policer reference percent-rate</b> |
| Tree       | <b>percent-rate</b>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **cir decimal-number**

|            |  |
|------------|--|
| Synopsis   | CIR percent rate   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>policer reference percent-rate cir</b> <i>decimal-number</i> |
| Tree       | <b>cir</b>   |
| Range      | 0.00 to 100.00   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **pir decimal-number**

|            |  |
|------------|--|
| Synopsis   | PIR percent rate   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b><br><b>policer reference percent-rate pir</b> <i>decimal-number</i> |
| Tree       | <b>pir</b>   |
| Range      | 0.01 to 100.00   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

## rate

|            |  |
|------------|--|
| Synopsis   | Enter the <b>rate</b> context  |
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate</b> |
| Tree       | <b>rate</b>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .                                      |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

## cir (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | CIR rate  |
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate cir (<i>number</i>   <i>keyword</i>)</b> |
| Tree       | <b>cir</b>  |
| Range      | 0 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

## pir (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | PIR rate  |
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate pir (<i>number</i>   <i>keyword</i>)</b> |
| Tree       | <b>pir</b>  |
| Range      | 1 to 6400000000   |
| Units      | kilobps   |
| Options    | max   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**stat-mode** *keyword*

|            |   |
|------------|---|
| Synopsis   | Mode of statistics collected by the policer   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides policer reference</a> <a href="#">stat-mode</a> <i>keyword</i> |
| Tree       | <a href="#">stat-mode</a>   |
| Options    | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile                |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**queue** [[queue-id](#)] *reference*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>queue</b> list instance   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides queue reference</a> |
| Tree       | <a href="#">queue</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**[queue-id]** *reference*

|            |  |
|------------|--|
| Synopsis   | Policer unique ID  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides queue reference</a> |
| Tree       | <a href="#">queue</a>  |
| Reference  | <b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>  |
| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**adaptation-rule**

|          |  |
|----------|--|
| Synopsis | Enter the <b>adaptation-rule</b> context   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides queue reference</a> <a href="#">adaptation-rule</a> |
| Tree     | <a href="#">adaptation-rule</a>  |

Introduced 16.0.R1  
 Platforms All

### **cir** *keyword*

Synopsis Constraint used when deriving the operational CIR value  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos](#) [sap-egress overrides](#) [queue reference](#) [adaptation-rule](#) [cir keyword](#)  
 Tree [cir](#)  
 Options max, min, closest  
 Introduced 16.0.R1  
 Platforms All

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos](#) [sap-egress overrides](#) [queue reference](#) [adaptation-rule](#) [pir keyword](#)  
 Tree [pir](#)  
 Options max, min, closest  
 Introduced 16.0.R1  
 Platforms All

### **avg-frame-overhead** *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos](#) [sap-egress overrides](#) [queue reference](#) [avg-frame-overhead decimal-number](#)  
 Tree [avg-frame-overhead](#)  
 Range 0.00 to 100.00  
 Introduced 16.0.R1  
 Platforms All

### **burst-limit** (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue

|            |  |
|------------|--|
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference burst-limit (number   keyword)</b> |
| Tree       | <a href="#">burst-limit</a>  |
| Range      | 1 to 14000000  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **cbs (number | keyword)**

|            |  |
|------------|--|
| Synopsis   | CBS  |
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference cbs (number   keyword)</b> |
| Tree       | <a href="#">cbs</a>  |
| Range      | 0 to 1048576   |
| Units      | kilobytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **drop-tail**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>drop-tail</b> context  |
| Context    | <b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail</b> |
| Tree       | <a href="#">drop-tail</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **low**

|          |   |
|----------|---|
| Synopsis | Enter the <b>low</b> context  |
| Context  | <b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail low</b> |
| Tree     | <a href="#">low</a>   |

Introduced 16.0.R1  
 Platforms All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail  
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [drop-tail](#) [low](#) [percent-reduction-from-mbs](#) (*number* | *keyword*)  
 Tree [percent-reduction-from-mbs](#)  
 Range 0 to 100  
 Options auto  
 Introduced 16.0.R1  
 Platforms All

### **hs-class-weight** *number*

Synopsis Class weight override for the queue  
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [hs-class-weight](#) *number*  
 Tree [hs-class-weight](#)  
 Range 1 | 2 | 4 | 8  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context  
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [hs-wred-queue](#)  
 Tree [hs-wred-queue](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy applied to the HSQ queue group queue

|            |  |
|------------|--|
| Context    | <b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference</a> |
| Tree       | <a href="#">policy</a>   |
| Reference  | <b>configure</b> <a href="#">qos slope-policy string</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

### **hs-wrr-weight** *number*

|            |  |
|------------|--|
| Synopsis   | WRR weight to parent with the queue into the scheduler   |
| Context    | <b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number</a> |
| Tree       | <a href="#">hs-wrr-weight</a>  |
| Range      | 1 to 127   |
| Default    | 1  |
| Introduced | 16.0.R1  |
| Platforms  | 7750 SR-7/12/12e   |

### **mbs** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | MBS  |
| Context    | <b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference mbs (number   keyword)</a> |
| Tree       | <a href="#">mbs</a>  |
| Range      | 0 to 1073741824  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **monitor-queue-depth**

|          |   |
|----------|---|
| Synopsis | Enable the <b>monitor-queue-depth</b> context   |
| Context  | <b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth</a> |
| Tree     | <a href="#">monitor-queue-depth</a>   |

|            |          |
|------------|----------|
| Introduced | 20.10.R1 |
| Platforms  | All      |

### **fast-polling** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Enable fast polling of the queue depth   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i> |
| Tree        | <a href="#">fast-polling</a>   |
| Description | When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.<br>When configured to <b>false</b> , fast queue polling is not enabled.   |
| Default     | false  |
| Introduced  | 20.10.R1   |
| Platforms   | All  |

### **violation-threshold** *decimal-number*

|             |  |
|-------------|--|
| Synopsis    | Threshold for queue depth before violation is raised   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i> |
| Tree        | <a href="#">violation-threshold</a>  |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.   |
| Range       | 0.01 to 99.99  |
| Introduced  | 20.10.R1   |
| Platforms   | All  |

### **parent**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>parent</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b> |
| Tree       | <a href="#">parent</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **cir-weight** *number*

|            |  |
|------------|--|
| Synopsis   | CIR parameter that overrides parent for queue group  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i> |
| Tree       | <a href="#">cir-weight</a>   |
| Range      | 0 to 100   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **weight** *number*

|            |  |
|------------|--|
| Synopsis   | PIR parameter that overrides parent for queue group  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>weight</b> <i>number</i> |
| Tree       | <a href="#">weight</a>   |
| Range      | 0 to 100   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **percent-rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>percent-rate</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>percent-rate</b> |
| Tree       | <a href="#">percent-rate</a>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **cir** *decimal-number*

|          |   |
|----------|---|
| Synopsis | CIR percent rate  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i> |
| Tree     | <a href="#">cir</a>   |

|            |                |
|------------|----------------|
| Range      | 0.00 to 100.00 |
| Introduced | 16.0.R1        |
| Platforms  | All            |

### **pir** *decimal-number*

|            |  |
|------------|--|
| Synopsis   | PIR percent rate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i> |
| Tree       | <a href="#">pir</a>  |
| Range      | 0.01 to 100.00   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **rate**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>rate</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b> |

| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Policy ID to associate with SAP for mirrored service  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress</a> <a href="#">policy-name reference</a> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos sap-egress string</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**port-redirect-group**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>port-redirect-group</b> context  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress</a> <a href="#">port-redirect-group</a> |
| Tree       | <a href="#">port-redirect-group</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**group-name** *reference*

|          |  |
|----------|--|
| Synopsis | Name of the queue group redirect list policy   |
| Context  | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name reference</a> |

|            |   |
|------------|---|
| Tree       | <a href="#">group-name</a>  |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **instance** *number*

|            |   |
|------------|---|
| Synopsis   | Instance of port queue group  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i> |
| Tree       | <a href="#">instance</a>  |
| Range      | 1 to 65535  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **scheduler-policy**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>scheduler-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> |
| Tree       | <a href="#">scheduler-policy</a>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **overrides**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>overrides</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **scheduler** [[scheduler-name](#)] *string*

|          |  |
|----------|--|
| Synopsis | Enter the <b>scheduler</b> list instance |
|----------|--|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> |
| Tree       | <b>scheduler</b>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **[scheduler-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Scheduler name   |
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i>  |
| Tree          | <b>scheduler</b>   |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<b>#</b>, <b>\$</b>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

### **parent**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>parent</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> <b>parent</b> |
| Tree       | <b>parent</b>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**cir-weight** *number*

|            |  |
|------------|--|
| Synopsis   | Weight used at the within-CIR port priority level  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a><br><a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <b>cir-weight</b> <i>number</i> |
| Tree       | <a href="#">cir-weight</a>   |
| Range      | 0 to 100   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**weight** *number*

|            |  |
|------------|--|
| Synopsis   | Relative weight of the scheduler to feed the queue   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a><br><a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <b>weight</b> <i>number</i> |
| Tree       | <a href="#">weight</a>   |
| Range      | 0 to 100   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>rate</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a><br><a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> |
| Tree       | <a href="#">rate</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**cir** (*number* | *keyword*)

|          |   |
|----------|---|
| Synopsis | CIR at which the queue it to operate  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a><br><a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <a href="#">cir</a>   |
| Range    | 0 to 6400000000   |

|            |          |
|------------|----------|
| Units      | kilobps  |
| Options    | sum, max |
| Introduced | 16.0.R1  |
| Platforms  | All      |

### **pir** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | PIR at which the queue is to operate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">pir</a>  |
| Range      | 1 to 6400000000  |
| Units      | kilobps  |
| Options    | max  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **policy-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Scheduler policy name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>   |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **queue-group-redirect-list** *reference*

|            |  |
|------------|--|
| Synopsis   | Assign queue-group redirect list   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">queue-group-redirect-list</a> <i>reference</i> |
| Tree       | <a href="#">queue-group-redirect-list</a>  |
| Reference  | <b>configure</b> <a href="#">qos</a> <a href="#">queue-group-redirect-list</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**eth-cfm**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>eth-cfm</b> context  |
| Context    | <b>configure service ies string interface string sap string eth-cfm</b> |
| Tree       | <b>eth-cfm</b>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS            |

**collect-lmm-fc-stats**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>collect-lmm-fc-stats</b> context  |
| Context     | <b>configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats</b>   |
| Tree        | <b>collect-lmm-fc-stats</b>  |
| Description | <p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p> |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**fc keyword**

|             |   |
|-------------|---|
| Synopsis    | Forwarding class name for profile-unaware counter   |
| Context     | <b>configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats fc keyword</b>   |
| Tree        | <b>fc</b>   |
| Description | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options     | be, l2, af, l1, h2, ef, h1, nc  |

|                |  |
|----------------|--|
| Max. Instances | 8  |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **fc-in-profile** *keyword*

|                |   |
|----------------|---|
| Synopsis       | Forwarding class name for profile-aware counter   |
| Context        | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>   |
| Tree           | <b>fc-in-profile</b>  |
| Description    | <p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options        | be, l2, af, l1, h2, ef, h1, nc  |
| Max. Instances | 8   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **collect-lmm-stats** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Collect statistics for loss measurement message tests  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-stats</b> <i>boolean</i>  |
| Tree        | <b>collect-lmm-stats</b>   |
| Description | <p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p> |
| Default     | false  |
| Introduced  | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis Enter the **mep** list instance

### **ccm** *boolean*

|          |   |
|----------|---|
| Synopsis | Generate CCM messages   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>ccm</b> <i>boolean</i> |
| Tree     | <a href="#">ccm</a>   |
| Default  | false   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **ccm-ltm-priority** *number*

|            |   |
|------------|---|
| Synopsis   | Priority of CCM and LTM messages transmitted by the MEP   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i> |
| Tree       | <a href="#">ccm-ltm-priority</a>  |
| Range      | 0 to 7  |
| Default    | 7   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **ccm-padding-size** *number*

|             |   |
|-------------|---|
| Synopsis    | Number of octets of padding to insert in CCM packets  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>   |
| Tree        | <a href="#">ccm-padding-size</a>  |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.<br><br>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second. |
| Range       | 3 to 1500   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **csf**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>csf</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <i>number</i> <b>csf</b> |
| Tree       | <a href="#">csf</a>  |
| Introduced | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number*

Tree [multiplier](#)

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis Enable the **eth-test** context

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test*

Tree [eth-test](#)

Description Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold** *number*

|            |  |
|------------|--|
| Synopsis   | Lowest priority defect allowed to generate fault alarm   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <i>number</i> |
| Tree       | <a href="#">bit-error-threshold</a>  |
| Range      | 0 to 11840   |
| Units      | bit errors   |
| Default    | 1  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**test-pattern**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>test-pattern</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> |
| Tree        | <a href="#">test-pattern</a>  |
| Description | Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**crc-tlv** *boolean*

|            |  |
|------------|--|
| Synopsis   | Generate a CRC checksum  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <i>boolean</i> |
| Tree       | <a href="#">crc-tlv</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pattern** *keyword*

|          |                                       |
|----------|---------------------------------------|
| Synopsis | Test pattern for Ethernet Test frames |
|----------|---------------------------------------|

|             |   |
|-------------|---|
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <a href="#">keyword</a> |
| Tree        | <a href="#">pattern</a>   |
| Description | This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.   |
| Options     | all-zeros, all-ones   |
| Default     | all-zeros   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **fault-propagation** *keyword*

|            |   |
|------------|---|
| Synopsis   | Fault propagation for the MEP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">fault-propagation</a> <a href="#">keyword</a> |
| Tree       | <a href="#">fault-propagation</a>   |
| Options    | use-if-status-tlv, suspend-ccm  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **grace**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>grace</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> |
| Tree        | <a href="#">grace</a>   |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **eth-ed**

|          |  |
|----------|--|
| Synopsis | Enter the <b>eth-ed</b> context  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> |

|             |  |
|-------------|--|
| Tree        | <a href="#">eth-ed</a>   |
| Description | Commands in this context configure the ITU-T Y.1731 ETH-ED function. |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS         |

### **max-rx-defect-window** *number*

|            |   |
|------------|---|
| Synopsis   | Maximum received ETH-ED expected defect window duration   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i> |
| Tree       | <a href="#">max-rx-defect-window</a>  |
| Range      | 1 to 86400  |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **priority** *number*

|            |   |
|------------|---|
| Synopsis   | Transmission priority for ETH-ED PDUs   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <i>number</i> |
| Tree       | <a href="#">priority</a>  |
| Range      | 0 to 7  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **rx-eth-ed** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i> |
| Tree        | <a href="#">rx-eth-ed</a>   |
| Description | This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.  |
| Default     | true  |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **tx-eth-ed** *boolean*

|            |  |
|------------|--|
| Synopsis   | Transmit ETH-ED PDUs from the MEP  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <a href="#">boolean</a> |
| Tree       | <a href="#">tx-eth-ed</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **eth-vsm-grace**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>eth-vsm-grace</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> |
| Tree        | <a href="#">eth-vsm-grace</a>   |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **rx-eth-vsm-grace** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Receive and process Nokia ETH-CFM Grace PDU on the MEP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <a href="#">boolean</a> |
| Tree        | <a href="#">rx-eth-vsm-grace</a>   |
| Description | When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.<br><br>When configured to <b>false</b> , the router disables the Nokia Grace function.  |
| Default     | true   |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**tx-eth-vsm-grace** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Transmit ETH-ED PDUs from the MEP   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">tx-eth-vsm-grace</a> <i>boolean</i>   |
| Tree        | <a href="#">tx-eth-vsm-grace</a>  |
| Description | <p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p> |
| Default     | true  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**low-priority-defect** *keyword*

|            |  |
|------------|--|
| Synopsis   | Lowest priority defect allowed to generate fault alarm   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">low-priority-defect</a> <i>keyword</i> |
| Tree       | <a href="#">low-priority-defect</a>  |
| Options    | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon   |
| Default    | mac-rem-err-xcon   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**one-way-delay-threshold** *number*

|          |   |
|----------|---|
| Synopsis | Threshold time limit for the one-way delay test   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">one-way-delay-threshold</a> <i>number</i> |
| Tree     | <a href="#">one-way-delay-threshold</a>   |

|            |  |
|------------|--|
| Range      | 0 to 600   |
| Units      | seconds  |
| Default    | 3  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **squelch-ingress-levels** *number*

|             |  |
|-------------|--|
| Synopsis    | Levels for which ETH-CFM packets are silently discarded  |
| Context     | <b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-levels</b> <i>number</i>   |
| Tree        | <a href="#">squelch-ingress-levels</a>   |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range       | 0 to 7   |
| Max.        | 8  |
| Instances   |  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **fwd-wholesale**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>fwd-wholesale</b> context   |
| Context    | <b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale</b> |
| Tree       | <a href="#">fwd-wholesale</a>  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **pppoe-service** *reference*

|          |                    |
|----------|--------------------|
| Synopsis | PPPoE service name |
|----------|--------------------|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale pppoe-service</b> <i>reference</i> |
| Tree       | <a href="#">pppoe-service</a>  |
| Reference  | <b>configure service epipe</b> <i>string</i>   |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **host-admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of host creation on the SAP  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">host-admin-state</a>  |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **host-lockout-policy** *reference*

|            |  |
|------------|--|
| Synopsis   | Host lockout policy  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-lockout-policy</b> <i>reference</i> |
| Tree       | <a href="#">host-lockout-policy</a>  |
| Reference  | <b>configure subscriber-mgmt</b> <b>host-lockout-policy</b> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **ingress**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>ingress</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress</b> |
| Tree       | <a href="#">ingress</a>   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## filter

|            |   |
|------------|---|
| Synopsis   | Enter the <b>filter</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> |
| Tree       | <a href="#">filter</a>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

## ip reference

|            |  |
|------------|--|
| Synopsis   | IPv4 filter policy name  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ip</a> <a href="#">reference</a> |
| Tree       | <a href="#">ip</a>   |
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## ipv6 reference

|            |  |
|------------|--|
| Synopsis   | IPv6 filter policy name  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ipv6</a> <a href="#">reference</a> |
| Tree       | <a href="#">ipv6</a>   |
| Reference  | <b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

## qos

|            |  |
|------------|--|
| Synopsis   | Enter the <b>qos</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> |
| Tree       | <a href="#">qos</a>  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**match-qinq-dot1p** *keyword*

|            |   |
|------------|---|
| Synopsis   | Ingress match QinQ Dot1p  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">match-qinq-dot1p</a> <i>keyword</i> |
| Tree       | <a href="#">match-qinq-dot1p</a>  |
| Options    | top, bottom   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**policer-control-policy**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>policer-control-policy</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> |
| Tree       | <a href="#">policer-control-policy</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**overrides**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>overrides</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> |
| Tree       | <a href="#">overrides</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**root**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>root</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> |
| Tree       | <a href="#">root</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**max-rate** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Maximum frame-based bandwidth limit   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <b>max-rate</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">max-rate</a>  |
| Range      | 1 to 6400000000   |
| Options    | max   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**priority-mbs-thresholds**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>priority-mbs-thresholds</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <b>priority-mbs-thresholds</b> |
| Tree       | <a href="#">priority-mbs-thresholds</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**min-thresh-separation** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Minimum amount of separation buffer space  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">min-thresh-separation</a>  |
| Range      | 0 to 16777216  |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

**priority** [[priority-level](#)] *number*

|          |  |
|----------|--|
| Synopsis | Enter the <b>priority</b> list instance  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> |

|            |  |
|------------|--|
| Tree       | <a href="#">priority</a>                               |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

**[priority-level]** *number*

|            |   |
|------------|---|
| Synopsis   | Priority level  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos policer-control-policy overrides root priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> |
| Tree       | <a href="#">priority</a>  |
| Range      | 1 to 8  |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**mbs-contribution** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Minimum amount of cumulative buffer space allowed   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos policer-control-policy overrides root priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">mbs-contribution</a>  |
| Range      | 0 to 16777216   |
| Units      | bytes   |
| Options    | auto  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

**policy-name** *reference*

|            |  |
|------------|--|
| Synopsis   | Policer control policy name  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i> |
| Tree       | <a href="#">policy-name</a>  |
| Reference  | <b>configure</b> <a href="#">qos policer-control-policy</a> <i>string</i>  |
| Introduced | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## sap-ingress

Synopsis Enter the **sap-ingress** context

Context **configure** *service ies string interface string sap string ingress qos sap-ingress*

Tree [sap-ingress](#)

Introduced 16.0.R1

Platforms All

## fp-redirect-group

Synopsis Enter the **fp-redirect-group** context

Context **configure** *service ies string interface string sap string ingress qos sap-ingress fp-redirect-group*

Tree [fp-redirect-group](#)

Introduced 16.0.R1

Platforms All

## group-name *reference*

Synopsis Queue group template name created on forwarding plane

Context **configure** *service ies string interface string sap string ingress qos sap-ingress fp-redirect-group group-name reference*

Tree [group-name](#)

Reference **configure** *qos queue-group-templates ingress queue-group string*

Introduced 16.0.R1

Platforms All

## instance *number*

Synopsis Queue group instance

Context **configure** *service ies string interface string sap string ingress qos sap-ingress fp-redirect-group instance number*

Tree [instance](#)

Range 1 to 65535

Introduced 16.0.R1  
 Platforms All

### overrides

Synopsis Enter the **overrides** context  
 Context **configure service ies string interface string sap string ingress qos sap-ingress overrides**  
 Tree [overrides](#)  
 Introduced 16.0.R1  
 Platforms All

### ip-criteria

Synopsis Enter the **ip-criteria** context  
 Context **configure service ies string interface string sap string ingress qos sap-ingress overrides ip-criteria**  
 Tree [ip-criteria](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### activate-entry-tag *number*

Synopsis Tag ID activated for IPv4 criteria  
 Context **configure service ies string interface string sap string ingress qos sap-ingress overrides ip-criteria activate-entry-tag number**  
 Tree [activate-entry-tag](#)  
 Range 1 to 255  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### ipv6-criteria

Synopsis Enter the **ipv6-criteria** context  
 Context **configure service ies string interface string sap string ingress qos sap-ingress overrides ipv6-criteria**  
 Tree [ipv6-criteria](#)

|            |  |

### **[policer-id]** *reference*

|            |   |
|------------|---|
| Synopsis   | Policer unique ID   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides policer</a> <i>reference</i> |
| Tree       | <a href="#">policer</a>   |
| Reference  | <b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i>  |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **cbs** (*number* | *keyword*)

|          |     |
|----------|-----|
| Synopsis | CBS |
|----------|-----|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b><br><b>policer reference cbs</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <b>cbs</b>   |
| Range      | 0 to 268435456   |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **mbs** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | MBS  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b><br><b>policer reference mbs</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <b>mbs</b>   |
| Range      | 0 to 268435456   |
| Units      | bytes  |
| Options    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **packet-byte-offset** *number*

|            |  |
|------------|--|
| Synopsis   | Packet size modification for policing information  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b><br><b>policer reference packet-byte-offset</b> <i>number</i> |
| Tree       | <b>packet-byte-offset</b>  |
| Range      | -32 to 31  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR   |

### **percent-rate**

|          |  |
|----------|--|
| Synopsis | Enter the <b>percent-rate</b> context  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b><br><b>policer reference percent-rate</b> |

|            |   |
|------------|---|
| Tree       | <a href="#">percent-rate</a>  |
| Notes      | The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> . |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR                            |

### **cir** *decimal-number*

|            |   |
|------------|---|
| Synopsis   | CIR percent rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i> |
| Tree       | <a href="#">cir</a>   |
| Range      | 0.00 to 100.00  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **pir** *decimal-number*

|            |   |
|------------|---|
| Synopsis   | PIR percent rate  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i> |
| Tree       | <a href="#">pir</a>   |
| Range      | 0.01 to 100.00  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR  |

### **rate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>rate</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> |
| Tree       | <a href="#">rate</a>  |

**scheduler** [*scheduler-name*] *string*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>scheduler</b> list instance   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b><br><b>overrides scheduler</b> <i>string</i> |
| Tree       | <b>scheduler</b>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**[scheduler-name]** *string*

|               |  |
|---------------|--|
| Synopsis      | Scheduler name   |
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b><br><b>overrides scheduler</b> <i>string</i>   |
| Tree          | <b>scheduler</b>   |
| Description   | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32  |
| Notes         | This element is part of a list key.  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

### **ip-mtu** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | IP MTU for the interface  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>   |
| Tree        | <b>ip-mtu</b>   |
| Description | <p>This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.</p> <p>When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.</p> |
| Range       | 512 to 9000   |
| Units       | bytes   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **ipsec-transport-mode-profile** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | IPsec transport mode profile name  |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ipsec-transport-mode-profile</b> <i>reference</i> |
| Tree     | <b>ipsec-transport-mode-profile</b>  |

|            |   |
|------------|---|
| Reference  | <b>configure ipsec ipsec-transport-mode-profile</b> <i>string</i> |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR                      |

### local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | Local IP address of this tunnel  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>local-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )  |
| Tree        | <b>local-ip-address</b>  |
| Description | This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).<br><br>When this command specifies an IPv6 address, it must be a global unicast address. |
| Introduced  | 16.0.R1  |
| Platforms   | All  |

### pmtu-discovery-aging *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | Time to age out the learned path MTU  |
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i> |
| Tree        | <b>pmtu-discovery-aging</b>   |
| Description | This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.   |
| Range       | 900 to 3600   |
| Units       | seconds   |
| Default     | 900   |

|            |  |
|------------|--|
| Introduced | 21.5.R1                                      |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |   |
|-------------|---|
| Synopsis    | TCP Maximum Segment Size (MSS) on the private side  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>private-tcp-mss-adjust</b> <i>number</i> |
| Tree        | <b>private-tcp-mss-adjust</b>   |
| Description | This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.   |
| Range       | 512 to 9000   |
| Units       | bytes   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Enable propagation of the path MTU to IPv4 hosts  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>propagate-pmtu-v4</b> <i>boolean</i> |
| Tree       | <b>propagate-pmtu-v4</b>  |
| Introduced | 21.5.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

| Tree       | <a href="#">propagate-pmtu-v6</a>  |
| Introduced | 21.5.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

**public-tcp-mss-adjust** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|             |  |
|-------------|--|
| Synopsis    | TCP Maximum Segment Size (MSS) on the public side  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree        | <a href="#">public-tcp-mss-adjust</a>  |
| Description | This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.  |
| Range       | 512 to 9000  |
| Units       | bytes  |
| Options     | auto   |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

**reassemble** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |                              |
|----------|------------------------------|
| Synopsis | Maximum reassembly wait time |
|----------|------------------------------|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>reassemble</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree        | <b>reassemble</b>  |
| Description | This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.  |
| Range       | 1 to 5000  |
| Units       | milliseconds   |
| Options     | use-tunnel-group-setting, none   |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### **remote-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Remote IP address of the tunnel  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) |
| Tree       | <b>remote-ip-address</b>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **ipsec-gateway** [**name**] *string*

|                |   |
|----------------|---|
| Synopsis       | Enter the <b>ipsec-gateway</b> list instance  |
| Context        | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> |
| Tree           | <b>ipsec-gateway</b>  |
| Max. Instances | 1   |
| Introduced     | 16.0.R4   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **[name]** *string*

|          |                    |
|----------|--------------------|
| Synopsis | IPsec gateway name |
|----------|--------------------|

|               |   |
|---------------|---|
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> |
| Tree          | <a href="#">ipsec-gateway</a>   |
| String Length | 1 to 32   |
| Notes         | This element is part of a list key.   |
| Introduced    | 16.0.R4   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the IPsec gateway   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **cert**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>cert</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> |
| Tree       | <a href="#">cert</a>  |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **cert-profile** *reference*

|            |  |
|------------|--|
| Synopsis   | Certificate profile name   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>cert-profile</b> <i>reference</i> |
| Tree       | <a href="#">cert-profile</a>   |
| Reference  | <b>configure ipsec</b> <b>cert-profile</b> <i>string</i>   |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## status-verify

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>status-verify</b> context  |
| Context     | <b>configure service ies string interface string sap string ipsec-gateway string cert status-verify</b> |
| Tree        | <b>status-verify</b>  |
| Description | Commands in this context configure certificate revocation status verification.                          |
| Introduced  | 19.7.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## default-result *keyword*

|             |  |
|-------------|--|
| Synopsis    | Default result of Certificate Status Verification (CSV)  |
| Context     | <b>configure service ies string interface string sap string ipsec-gateway string cert status-verify default-result keyword</b> |
| Tree        | <b>default-result</b>  |
| Description | This command specifies the default result when both the primary and secondary methods fail to provide an answer.               |
| Options     | revoked, good  |
| Default     | revoked  |
| Introduced  | 19.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## primary *keyword*

|            |   |
|------------|---|
| Synopsis   | Primary method of CSV to verify the revocation status   |
| Context    | <b>configure service ies string interface string sap string ipsec-gateway string cert status-verify primary keyword</b> |
| Tree       | <b>primary</b>  |
| Options    | crl, ocsp   |
| Default    | crl   |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**secondary** *keyword*

|            |   |
|------------|---|
| Synopsis   | Secondary method of CSV to verify the revocation status   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert</a> <a href="#">status-verify</a> <b>secondary</b> <i>keyword</i> |
| Tree       | <a href="#">secondary</a>   |
| Options    | none, <a href="#">crl</a> , <a href="#">ocsp</a>  |
| Default    | none  |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**trust-anchor-profile** *reference*

|            |   |
|------------|---|
| Synopsis   | Trust anchor profile name   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert</a> <a href="#">trust-anchor-profile</a> <i>reference</i> |
| Tree       | <a href="#">trust-anchor-profile</a>  |
| Reference  | <b>configure</b> <a href="#">ipsec</a> <a href="#">trust-anchor-profile</a> <i>string</i>   |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**client-db**

|             |  |
|-------------|--|
| Synopsis    | Enable the <b>client-db</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">client-db</a> |
| Tree        | <a href="#">client-db</a>  |
| Description | Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.   |
| Introduced  | 19.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

**fallback** *boolean*

|          |  |
|----------|--|
| Synopsis | Fall back to the default authentication policy   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">client-db</a> <a href="#">fallback</a> <i>boolean</i> |
| Tree     | <a href="#">fallback</a>   |

|             |  |
|-------------|--|
| Description | When configured to <b>true</b> , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.<br><br>When configured to <b>false</b> and the client database lookup fails to return a matched result, the system fails the tunnel setup. |
| Default     | true   |
| Introduced  | 19.7.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### name reference

|            |  |
|------------|--|
| Synopsis   | Client database name   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>client-db</b> <i>name reference</i> |
| Tree       | <b>name</b>  |
| Reference  | <b>configure ipsec client-db</b> <i>string</i>   |
| Notes      | This element is mandatory.   |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### default-secure-service

|            |   |
|------------|---|
| Synopsis   | Enable the <b>default-secure-service</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service</b> |
| Tree       | <b>default-secure-service</b>   |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### interface string

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | Private IPsec tunnel interface name   |
| Context  | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service interface</b> <i>string</i> |

|----------------|--|
| Synopsis       | DHCPv6 server addresses  |
| Context        | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6 server address</a> <i>string</i> |
| Tree           | <a href="#">address</a>  |
| Description    | This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.  |
| Max. Instances | 8  |
| Introduced     | 19.7.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Router instance to reach the DHCPv6 server   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6 server router-instance</a> <i>string</i> |
| Tree          | <a href="#">router-instance</a>  |
| String Length | 1 to 64  |
| Introduced    | 19.7.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### ike-policy *reference*

|          |               |
|----------|---------------|
| Synopsis | IKE policy ID |
|----------|---------------|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>ike-policy</b> <i>reference</i> |
| Tree       | <a href="#">ike-policy</a>   |
| Reference  | <b>configure ipsec ike-policy</b> <i>number</i>  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## local

|            |  |
|------------|--|
| Synopsis   | Enter the <b>local</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> |
| Tree       | <a href="#">local</a>  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## address-assignment

|            |  |
|------------|--|
| Synopsis   | Enable the <b>address-assignment</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> |
| Tree       | <a href="#">address-assignment</a>   |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## admin-state *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of local address assignments  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## ipv4

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enable the <b>ipv4</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> |
| Tree       | <a href="#">ipv4</a>   |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Local DHCPv4 server name   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4 dhcp-server</a> <i>string</i> |
| Tree          | <a href="#">dhcp-server</a>  |
| String Length | 1 to 32  |
| Notes         | This element is mandatory.   |
| Introduced    | 19.7.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Name of the pool defined in the specified DHCPv4 server   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4 pool</a> <i>string</i> |
| Tree          | <a href="#">pool</a>  |
| String Length | 1 to 32   |

|            |  |
|------------|--|
| Notes      | This element is mandatory.                   |
| Introduced | 19.7.R1                                      |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Router instance ID for the local DHCPv4 server   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">router-instance</a> <i>string</i> |
| Tree          | <a href="#">router-instance</a>  |
| String Length | 1 to 64  |
| Notes         | This element is mandatory.   |
| Introduced    | 19.7.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### secondary-pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Name of the secondary pool defined in the DHCPv4 server   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">secondary-pool</a> <i>string</i> |
| Tree          | <a href="#">secondary-pool</a>  |
| String Length | 1 to 32   |
| Introduced    | 19.7.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enable the <b>ipv6</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">local</a> <a href="#">address-assignment</a> <a href="#">ipv6</a> |
| Tree       | <a href="#">ipv6</a>   |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | Local DHCPv6 server name  |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">local</a> <a href="#">address-assignment</a> <a href="#">ipv6</a> <a href="#">dhcp-server</a> <a href="#">string</a> |
| Tree          | <a href="#">dhcp-server</a>   |
| String Length | 1 to 32   |
| Notes         | This element is mandatory.  |
| Introduced    | 19.7.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Secondary pool name defined in the DHCPv6 server   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">local</a> <a href="#">address-assignment</a> <a href="#">ipv6</a> <a href="#">pool</a> <a href="#">string</a> |
| Tree          | <a href="#">pool</a>   |
| String Length | 1 to 32  |

|            |  |
|------------|--|
| Notes      | This element is mandatory.                   |
| Introduced | 19.7.R1                                      |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |  |
|---------------|--|
| Synopsis      | Router instance ID hosting the DHCPv6 connection   |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv6</a> <a href="#">router-instance</a> <i>string</i> |
| Tree          | <a href="#">router-instance</a>  |
| String Length | 1 to 64  |
| Notes         | This element is mandatory.   |
| Introduced    | 19.7.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Local gateway address of the IPsec gateway   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local gateway-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) |
| Tree       | <a href="#">gateway-address</a>  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### id

|          |   |
|----------|---|
| Synopsis | Enter the <b>id</b> context   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local id</a> |
| Tree     | <a href="#">id</a>  |

|             |  |
|-------------|--|
| Description | Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel. |
| Introduced  | 16.0.R4  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## auto

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Select ID based on authentication method in IKE policy   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string ipsec-gateway string</a> <a href="#">local id auto</a> |
| Tree       | <a href="#">auto</a>   |
| Notes      | The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## fqdn string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|               |   |
|---------------|---|
| Synopsis      | FQDN as the local ID type   |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string ipsec-gateway string</a> <a href="#">local id fqdn string</a> |
| Tree          | <a href="#">fqdn</a>  |
| String Length | 1 to 255  |
| Notes         | The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .   |
| Introduced    | 16.0.R4   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## ipv4 string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | IPv4 address as the local ID type   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv4 string</a> |
| Tree       | <a href="#">ipv4</a>  |
| Notes      | The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .   |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## ipv6 ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#))

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | IPv6 address as the local ID type  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv6 (<a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a>)</a> |
| Tree       | <a href="#">ipv6</a>   |
| Notes      | The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## max-history-key-records

|            |  |
|------------|--|
| Synopsis   | Enter the <b>max-history-key-records</b> context   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">max-history-key-records</a> |
| Tree       | <a href="#">max-history-key-records</a>  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### esp number

|            |  |
|------------|--|
| Synopsis   | Maximum number of recent records   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">esp</a> <i>number</i> |
| Tree       | <a href="#">esp</a>  |
| Range      | 1 to 48  |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### ike number

|            |  |
|------------|--|
| Synopsis   | Maximum number of historical IKE keys recorded   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">ike</a> <i>number</i> |
| Tree       | <a href="#">ike</a>  |
| Range      | 1 to 3   |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### pre-shared-key string

|               |   |
|---------------|---|
| Synopsis      | Pre-shared key for the IPsec gateway  |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">pre-shared-key</a> <i>string</i> |
| Tree          | <a href="#">pre-shared-key</a>  |
| String Length | 1 to 115  |
| Introduced    | 16.0.R4   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### radius

|            |   |
|------------|---|
| Synopsis   | Enter the <b>radius</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">radius</a> |
| Tree       | <a href="#">radius</a>  |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### accounting-policy *reference*

|            |   |
|------------|---|
| Synopsis   | RADIUS accounting policy  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">radius accounting-policy reference</a> |
| Tree       | <a href="#">accounting-policy</a>   |
| Reference  | <b>configure</b> <a href="#">ipsec radius accounting-policy string</a>  |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### authentication-policy *reference*

|            |   |
|------------|---|
| Synopsis   | RADIUS authentication policy  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">radius authentication-policy reference</a> |
| Tree       | <a href="#">authentication-policy</a>   |
| Reference  | <b>configure</b> <a href="#">ipsec radius authentication-policy string</a>  |
| Introduced | 19.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### ts-list *reference*

|            |  |
|------------|--|
| Synopsis   | TS list used for IKEv2 TS negotiation  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">ts-list reference</a> |
| Tree       | <a href="#">ts-list</a>  |
| Reference  | <b>configure</b> <a href="#">ipsec ts-list string</a>  |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

### lag

|            |   |
|------------|---|
| Synopsis   | Enter the <b>lag</b> context  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">lag</a> |
| Tree       | <a href="#">lag</a>   |
| Introduced | 16.0.R1   |

Platforms All

### **link-map-profile** *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure** *service ies string interface string sap string lag link-map-profile number*

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

### **per-link-hash**

Synopsis Enter the **per-link-hash** context

Context **configure** *service ies string interface string sap string lag per-link-hash*

Tree [per-link-hash](#)

Introduced 16.0.R1

Platforms All

### **class** *number*

Synopsis Class used on LAG egress using weighted per-link-hash

Context **configure** *service ies string interface string sap string lag per-link-hash class number*

Tree [class](#)

Range 1 to 3

Default 1

Introduced 16.0.R1

Platforms All

**weight** *number*

|            |   |
|------------|---|
| Synopsis   | Weight used on LAG egress using weighted per-link-hash  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a> <a href="#">per-link-hash</a> <a href="#">weight</a> <i>number</i> |
| Tree       | <a href="#">weight</a>  |
| Range      | 1 to 1024   |
| Default    | 1   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**multi-service-site** *reference*

|            |  |
|------------|--|
| Synopsis   | Multi service site name  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <i>reference</i> |
| Tree       | <a href="#">multi-service-site</a>   |
| Reference  | <b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**static-host**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>static-host</b> context   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> |
| Tree       | <a href="#">static-host</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ipv4** [[ip](#)] *string* [mac](#) *string*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>ipv4</b> list instance   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> |
| Tree       | <a href="#">ipv4</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**[ip] string**

|            |  |
|------------|--|
| Synopsis   | IP address   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> |
| Tree       | <a href="#">ipv4</a>   |
| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**mac string**

|            |  |
|------------|--|
| Synopsis   | MAC address  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> |
| Tree       | <a href="#">ipv4</a>   |
| Notes      | This element is part of a list key.  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state keyword**

|            |  |
|------------|--|
| Synopsis   | Administrative state of the static host  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">admin-state keyword</a> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ancp-string string**

|               |   |
|---------------|---|
| Synopsis      | ANCP string   |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">ancp-string string</a> |
| Tree          | <a href="#">ancp-string</a>   |
| String Length | 1 to 63   |

|            |   |
|------------|---|
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

## app-profile

|            |  |
|------------|--|
| Synopsis   | Enter the <b>app-profile</b> context   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">app-profile</a> |
| Tree       | <a href="#">app-profile</a>  |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## profile reference

|            |  |
|------------|--|
| Synopsis   | Application profile used by the static host  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">app-profile profile reference</a> |
| Tree       | <a href="#">profile</a>  |
| Reference  | <b>configure</b> <a href="#">application-assurance group number</a> <a href="#">partition number</a> <a href="#">policy app-profile string</a>   |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## int-dest-id string

|               |   |
|---------------|---|
| Synopsis      | Intermediate destination ID   |
| Context       | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">int-dest-id string</a> |
| Tree          | <a href="#">int-dest-id</a>   |
| String Length | 1 to 32   |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## sla-profile reference

|          |                  |
|----------|------------------|
| Synopsis | SLA profile name |
|----------|------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sla-profile</b> <i>reference</i> |
| Tree       | <b>sla-profile</b>  |
| Reference  | <b>configure subscriber-mgmt sla-profile</b> <i>string</i>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **sub-profile** *reference*

|            |   |
|------------|---|
| Synopsis   | Sub-profile name  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sub-profile</b> <i>reference</i> |
| Tree       | <b>sub-profile</b>  |
| Reference  | <b>configure subscriber-mgmt sub-profile</b> <i>string</i>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **subscriber-id**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>subscriber-id</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> |
| Tree       | <b>subscriber-id</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **string** *string*

|               |  |
|---------------|--|
| Synopsis      | Subscriber identification  |
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <i>string</i> <i>string</i> |
| Tree          | <b>string</b>  |
| String Length | 1 to 64  |
| Notes         | The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .  |
| Introduced    | 16.0.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## use-sap-id

|            |  |
|------------|--|
| Synopsis   | Use the SAP id as subscriber ID  |
| Context    | <b>configure</b> <i>service ies string interface string sap string static-host ipv4 string mac string subscriber-id use-sap-id</i> |
| Tree       | <i>use-sap-id</i>  |
| Notes      | The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## transit-policy

|            |   |
|------------|---|
| Synopsis   | Enable the <b>transit-policy</b> context  |
| Context    | <b>configure</b> <i>service ies string interface string sap string transit-policy</i> |
| Tree       | <i>transit-policy</i>   |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## ip reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | IP transit policy ID   |
| Context    | <b>configure</b> <i>service ies string interface string sap string transit-policy ip reference</i>   |
| Tree       | <i>ip</i>  |
| Reference  | <b>configure</b> <i>application-assurance group number partition number transit-ip-policy number</i> |
| Notes      | The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .                  |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | IP prefix policy ID   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">prefix</a> <i>reference</i> |
| Tree       | <a href="#">prefix</a>  |
| Reference  | <b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>                      |
| Notes      | The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .   |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## shcv-policy-ipv4 reference

|            |  |
|------------|--|
| Synopsis   | Host connectivity IPv4 policy  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">shcv-policy-ipv4</a> <i>reference</i> |
| Tree       | <a href="#">shcv-policy-ipv4</a>   |
| Reference  | <b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">shcv-policy</a> <i>string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## spoke-sdp [[sdp-bind-id](#)] *string*

|                |  |
|----------------|--|
| Synopsis       | Enter the <b>spoke-sdp</b> list instance   |
| Context        | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> |
| Tree           | <a href="#">spoke-sdp</a>  |
| Max. Instances | 1  |
| Introduced     | 16.0.R1  |
| Platforms      | All  |

## [[sdp-bind-id](#)] *string*

|          |                |
|----------|----------------|
| Synopsis | SDP binding ID |
|----------|----------------|

|               |  |
|---------------|--|
| Context       | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> |
| Tree          | <b>spoke-sdp</b>   |
| String Length | 3 to 16  |
| Notes         | This element is part of a list key.  |
| Introduced    | 16.0.R1  |
| Platforms     | All  |

## **aarp**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>aarp</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp</b> |
| Tree       | <b>aarp</b>  |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## **id reference**

|            |   |
|------------|---|
| Synopsis   | AARP instance ID  |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp id reference</b> |
| Tree       | <b>id</b>   |
| Reference  | <b>configure application-assurance aarp</b> <i>number</i>   |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

## **type keyword**

|            |   |
|------------|---|
| Synopsis   | Role referenced by the AARP   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp type keyword</b> |
| Tree       | <b>type</b>   |
| Options    | dual-homed, dual-homed-secondary  |
| Introduced | 21.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**accounting-policy** *reference*

|            |   |
|------------|---|
| Synopsis   | Policy to collect accounting statistics   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i> |
| Tree       | <a href="#">accounting-policy</a>   |
| Reference  | <b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the SDP binding to the service  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | All   |

**app-profile** *reference*

|            |  |
|------------|--|
| Synopsis   | Application profile name for this SDP  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>    |
| Tree       | <a href="#">app-profile</a>  |
| Reference  | <b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i> |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

**bfd**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>bfd</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> |
| Tree       | <a href="#">bfd</a>  |
| Introduced | 21.2.R1  |
| Platforms  | All  |

**bfd-liveness**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>bfd-liveness</b> context   |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a> |
| Tree       | <a href="#">bfd-liveness</a>   |
| Introduced | 21.2.R1  |
| Platforms  | All  |

**encap keyword**

|            |  |
|------------|--|
| Synopsis   | BFD encapsulation used on the SDP binding  |
| Context    | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <a href="#">encap keyword</a> |
| Tree       | <a href="#">encap</a>  |
| Options    | ipv4   |
| Default    | ipv4   |
| Introduced | 21.2.R1  |
| Platforms  | All  |

**bfd-template reference**

|             |   |
|-------------|---|
| Synopsis    | BFD template associated with the SDP binding  |
| Context     | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-template</a> <a href="#">reference</a>  |
| Tree        | <a href="#">bfd-template</a>  |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context. |
| Reference   | <b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <a href="#">string</a>  |
| Introduced  | 21.2.R1   |
| Platforms   | All   |

**failure-action keyword**

|          |  |
|----------|--|
| Synopsis | VCCV BFD action taken on the SDP binding   |
| Context  | <b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">failure-action</a> <a href="#">keyword</a> |

|             |   |
|-------------|---|
| Tree        | <a href="#">failure-action</a>  |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context. |
| Options     | none, down  |
| Default     | none  |
| Introduced  | 21.2.R1   |
| Platforms   | All   |

### **wait-for-up-timer** *number*

|             |  |
|-------------|--|
| Synopsis    | Time waited for BFD up status  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>bfd</b> <a href="#">wait-for-up-timer</a> <i>number</i>  |
| Tree        | <a href="#">wait-for-up-timer</a>  |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.<br><br>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range       | 1 to 60  |
| Units       | seconds  |
| Introduced  | 21.2.R1  |
| Platforms   | All  |

### **collect-stats** *boolean*

|            |  |
|------------|--|
| Synopsis   | Allow agent to collect accounting statistics   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>collect-stats</b> <i>boolean</i> |
| Tree       | <a href="#">collect-stats</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**control-word** *boolean*

|            |   |
|------------|---|
| Synopsis   | Use the control word as preferred   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>control-word</b> <i>boolean</i> |
| Tree       | <a href="#">control-word</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**cpu-protection**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>cpu-protection</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>cpu-protection</b> |
| Tree       | <a href="#">cpu-protection</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

**eth-cfm-monitoring**

|            |   |
|------------|---|
| Synopsis   | Enable the <b>eth-cfm-monitoring</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <b>eth-cfm-monitoring</b> |
| Tree       | <a href="#">eth-cfm-monitoring</a>  |
| Notes      | The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS   |

**aggregate**

|            |   |
|------------|---|
| Synopsis   | Apply rate limit to the sum of the per peer packet rates  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <b>aggregate</b> |
| Tree       | <a href="#">aggregate</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS   |

## car

|            |   |
|------------|---|
| Synopsis   | Ignore Ethernet CFM packets when enforcing overall rate   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a> |
| Tree       | <a href="#">car</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS   |

## ip-src-monitoring

|            |  |
|------------|--|
| Synopsis   | Enable IP source monitoring for CPU protection   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">ip-src-monitoring</a> |
| Tree       | <a href="#">ip-src-monitoring</a>  |
| Notes      | The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS  |

## mac-monitoring

|            |   |
|------------|---|
| Synopsis   | Monitor MAC for CPU protection  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a> |
| Tree       | <a href="#">mac-monitoring</a>  |
| Notes      | The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS   |

## policy-id *reference*

|          |  |
|----------|--|
| Synopsis | CPM protection policy  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <a href="#">reference</a> |
| Tree     | <a href="#">policy-id</a>  |

|            |   |
|------------|---|
| Reference  | <b>configure system security cpu-protection policy number</b> |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

### description *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |

| Introduced | 16.0.R1  |
| Platforms  | All  |

**entropy-label**

|            |  |
|------------|--|
| Synopsis   | Enable the use of entropy labels for spoke SDPs  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">entropy-label</a> |
| Tree       | <a href="#">entropy-label</a>  |
| Notes      | The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | All  |

**eth-cfm**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>eth-cfm</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> |
| Tree       | <a href="#">eth-cfm</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**collect-lmm-fc-stats**

|          |   |
|----------|---|
| Synopsis | Enter the <b>collect-lmm-fc-stats</b> context   |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> |
| Tree     | <a href="#">collect-lmm-fc-stats</a>  |

|             |  |
|-------------|--|
| Description | <p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p> |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **fc** keyword

|                |   |
|----------------|---|
| Synopsis       | Forwarding class name for profile-unaware counter   |
| Context        | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc</b> <i>keyword</i>  |
| Tree           | <b>fc</b>   |
| Description    | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options        | be, l2, af, l1, h2, ef, h1, nc  |
| Max. Instances | 8   |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **fc-in-profile** keyword

|             |   |
|-------------|---|
| Synopsis    | Forwarding class name for profile-aware counter   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>                       |
| Tree        | <b>fc-in-profile</b>  |
| Description | <p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> |

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

|                |  |
|----------------|--|
| Options        | be, l2, af, l1, h2, ef, h1, nc                               |
| Max. Instances | 8  |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **collect-lmm-stats** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Collect statistics for loss measurement message tests  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>   |
| Tree        | <a href="#">collect-lmm-stats</a>  |
| Description | <p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p> |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

|            |  |
|------------|--|
| Synopsis   | Enter the <b>mep</b> list instance   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**md-admin-name** *reference*

|            |   |
|------------|---|
| Synopsis   | Maintenance Domain (MD) name  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> |
| Tree       | <a href="#">mep</a>   |
| Reference  | <b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i>   |
| Notes      | This element is part of a list key.   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**ma-admin-name** *reference*

|            |   |
|------------|---|

| Range      | 250   500   1000   |
| Units      | centiseconds   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **ccm** *boolean*

|            |   |
|------------|---|
| Synopsis   | Generate CCM messages   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm</a> <a href="#">boolean</a> |
| Tree       | <a href="#">ccm</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **ccm-ltm-priority** *number*

|          |   |
|----------|---|
| Synopsis | Priority of CCM and LTM messages transmitted by the MEP   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm-ltm-priority</a> <a href="#">number</a> |
| Tree     | <a href="#">ccm-ltm-priority</a>  |
| Range    | 0 to 7  |
| Default  | 7   |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **ccm-padding-size** *number*

|             |   |
|-------------|---|
| Synopsis    | Number of octets of padding to insert in CCM packets  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>   |
| Tree        | <a href="#">ccm-padding-size</a>  |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.<br><br>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second. |
| Range       | 3 to 1500   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

### **csf**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>csf</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b> |
| Tree       | <a href="#">csf</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **multiplier** *decimal-number*

|          |  |
|----------|--|
| Synopsis | Multiplication factor used to clear the CSF condition  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b> <b>multiplier</b> <i>decimal-number</i> |
| Tree     | <a href="#">multiplier</a>   |
| Range    | 0.0   2.0 to 30.0  |
| Default  | 3.5  |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">description</a> <a href="#">string</a> |
| Tree          | <a href="#">description</a>  |
| String Length | 1 to 80  |
| Introduced    | 16.0.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **eth-test**

|             |  |
|-------------|--|
| Synopsis    | Enable the <b>eth-test</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> |
| Tree        | <a href="#">eth-test</a>   |
| Description | Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

### **bit-error-threshold** *number*

|            |   |
|------------|---|
| Synopsis   | Lowest priority defect allowed to generate fault alarm  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <a href="#">number</a> |
| Tree       | <a href="#">bit-error-threshold</a>   |
| Range      | 0 to 11840  |
| Units      | bit errors  |
| Default    | 1   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**test-pattern**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>test-pattern</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> |
| Tree        | <a href="#">test-pattern</a>  |
| Description | Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**crc-tlv** *boolean*

|            |  |
|------------|--|
| Synopsis   | Generate a CRC checksum  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <i>boolean</i> |
| Tree       | <a href="#">crc-tlv</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**pattern** *keyword*

|             |  |
|-------------|--|
| Synopsis    | Test pattern for Ethernet Test frames  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i> |
| Tree        | <a href="#">pattern</a>  |
| Description | This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.  |
| Options     | all-zeros, all-ones  |
| Default     | all-zeros  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**fault-propagation** *keyword*

|            |   |
|------------|---|
| Synopsis   | Fault propagation for the MEP   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>fault-propagation</b> <i>keyword</i> |
| Tree       | <a href="#">fault-propagation</a>   |
| Options    | use-if-status-tlv, suspend-ccm  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS  |

**grace**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>grace</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>grace</b> |
| Tree        | <a href="#">grace</a>  |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

**eth-ed**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>eth-ed</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <b>eth-ed</b> |

## eth-vsm-grace

Synopsis Enter the **eth-vsm-grace** context

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#)

Tree [eth-vsm-grace](#)

Description Commands in this context configure the Nokia ETH-CFM Grace function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis Receive and process Nokia ETH-CFM Grace PDU on the MEP

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [rx-eth-vsm-grace](#) *boolean*

Tree [rx-eth-vsm-grace](#)

Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

|            |  |
|------------|--|
| Default    | true   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

### **low-priority-defect** *keyword*

|            |   |

| Context        | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm squelch-ingress-levels</b> <i>number</i>   |
| Tree           | <a href="#">squelch-ingress-levels</a>   |
| Description    | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range          | 0 to 7   |
| Max. Instances | 8  |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS   |

## hash-label

|            |  |
|------------|--|
| Synopsis   | Enable the <b>hash-label</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label</b> |
| Tree       | <a href="#">hash-label</a>   |

| Notes      | The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .  |
| Introduced | 21.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## vc-type keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|          |  |
|----------|--|
| Synopsis | Virtual circuit type associated with the SDP binding |
|----------|--|

|            |   |
|------------|---|
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vc-type</a> <i>keyword</i> |
| Tree       | <a href="#">vc-type</a>   |
| Options    | ether, ipipe  |
| Default    | ether   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **static-tunnel-redundant-nextthop** *string*

|             |   |
|-------------|---|
| Synopsis    | Address for the static ISA tunnel redundant next-hop  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">static-tunnel-redundant-nextthop</a> <i>string</i>   |
| Tree        | <a href="#">static-tunnel-redundant-nextthop</a>  |
| Description | This command specifies the redundant next-hop address on public or private IPsec interfaces (with a public or private tunnel SAP) for the static IPsec tunnel.<br>The next-hop address is resolved in the routing table of the corresponding service. |
| Notes       | The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nextthop</b> and <b>static-tunnel-redundant-nextthop</b> ).   |
| Introduced  | 19.7.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **tos-marking-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | TOS marking state   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">tos-marking-state</a> <i>keyword</i> |
| Tree       | <a href="#">tos-marking-state</a>   |
| Options    | trusted, untrusted  |
| Default    | untrusted   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **tunnel** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Enable/disable tunnel interface  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>tunnel</b> <i>boolean</i> |
| Tree       | <b>tunnel</b>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | All  |

### **vas-if-type** *keyword*

|            |   |
|------------|---|
| Synopsis   | VAS interface type  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vas-if-type</b> <i>keyword</i> |
| Tree       | <b>vas-if-type</b>  |
| Options    | to-from-access, to-from-network, to-from-both   |
| Introduced | 16.0.R1   |
| Platforms  | All   |

### **vpls** [**vpls-name**] *string*

|                |   |
|----------------|---|
| Synopsis       | Enter the <b>vpls</b> list instance   |
| Context        | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> |
| Tree           | <b>vpls</b>   |

| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp advertise</a> <i>keyword</i>  |
| Tree        | <a href="#">advertise</a>  |
| Description | Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.<br><br>The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality. |
| Introduced  | 19.10.R1   |

Platforms All

### **[route-type]** *keyword*

Synopsis Type of ARP or ND entries that generate host routes

Context **configure** **service** **ies** *string* **interface** *string* **vpls** *string* **evpn** **arp** **advertise** *keyword*

Tree **advertise**

Description This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.

Options static, dynamic

Notes This element is part of a list key.

Introduced 19.10.R1

Platforms All

### **route-tag** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tag value used with the host route from an ARP/ND entry

Context **configure** **service** **ies** *string* **interface** *string* **vpls** *string* **evpn** **arp** **advertise** *keyword* **route-tag** *number*

Tree **route-tag**

Description This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.

Range 0 to 255

Introduced 19.10.R1

Platforms All

### **flood-garp-and-unknown-req** *boolean*

Synopsis Allow CPM originated ARP frames to flood R-VPLS service

Context **configure** **service** **ies** *string* **interface** *string* **vpls** *string* **evpn** **arp** **flood-garp-and-unknown-req** *boolean*

Tree **flood-garp-and-unknown-req**

|             |   |
|-------------|---|
| Description | When configured to <b>true</b> , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command.<br>When configured to <b>false</b> , CPM-originated ARP flooding is suppressed. |
| Default     | true  |
| Introduced  | 19.10.R1  |
| Platforms   | All   |

### **learn-dynamic** *boolean*

|            |  |
|------------|--|
| Synopsis   | Process ARP or ND messages on EVPN tunnels   |

|-------------|---|
| Synopsis    | Tag value used with the host route from an ARP/ND entry   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">evpn</a> <a href="#">nd</a> <a href="#">advertise</a> <i>keyword</i> <a href="#">route-tag</a> <i>number</i> |
| Tree        | <a href="#">route-tag</a>   |
| Description | This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.   |
| Range       | 0 to 255  |
| Introduced  | 20.5.R1   |
| Platforms   | All   |

**learn-dynamic boolean**

|            |   |
|------------|---|
| Synopsis   | Process ARP or ND messages on EVPN tunnels  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">evpn</a> <a href="#">nd</a> <a href="#">learn-dynamic</a> <i>boolean</i> |
| Tree       | <a href="#">learn-dynamic</a>   |
| Default    | true  |
| Introduced | 20.5.R1   |

### **redundant-interface** *[interface-name] string*

Synopsis Enter the **redundant-interface** list instance  
 Context **configure service ies string redundant-interface string**  
 Tree [redundant-interface](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name] string**

Synopsis Interface name  
 Context **configure service ies string redundant-interface string**  
 Tree [redundant-interface](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis Administrative state of the interface  
 Context **configure service ies string redundant-interface string admin-state keyword**  
 Tree [admin-state](#)  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis Text description  
 Context **configure service ies string redundant-interface string description string**  
 Tree [description](#)

String Length 1 to 255  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## hold-time

Synopsis Enter the **hold-time** context  
 Context **configure service ies string redundant-interface string hold-time**  
 Tree **hold-time**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis Enter the **ipv4** context  
 Context **configure service ies string redundant-interface string hold-time ipv4**  
 Tree **ipv4**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## down

Synopsis Enter the **down** context  
 Context **configure service ies string redundant-interface string hold-time ipv4 down**  
 Tree **down**  
 Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down</b> <b>init-only</b> <i>boolean</i> |
| Tree        | <b>init-only</b>   |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot.  |
| Default     | false  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Down hold time for the IP interface   |
| Context    | <b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down</b> <b>seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>  |
| Range      | 1 to 1200   |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **up**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>up</b> context   |
| Context     | <b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 up</b>  |
| Tree        | <b>up</b>   |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **seconds** *number*

|          |   |
|----------|---|
| Synopsis | Up hold time for the IP interface   |
| Context  | <b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 up</b> <b>seconds</b> <i>number</i> |
| Tree     | <b>seconds</b>  |

|            |   |
|------------|---|
| Range      | 1 to 1200   |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **ip-mtu** *number*

|            |   |
|------------|---|
| Synopsis   | IP MTU applied to outgoing packets  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i> |
| Tree       | <a href="#">ip-mtu</a>  |
| Range      | 512 to 9786   |
| Units      | bytes   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **ipv4**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>ipv4</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ipv4</a> |
| Tree       | <a href="#">ipv4</a>  |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **primary**

|            |   |
|------------|---|
| Synopsis   | Enable the <b>primary</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">primary</a> |
| Tree       | <a href="#">primary</a>   |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **address** *string*

|          |   |
|----------|---|
| Synopsis | IPv4 address to be assigned to the interface  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">primary</a> <a href="#">address</a> <i>string</i> |

### **[group-interface-name]** *string*

|               |   |
|---------------|---|
| Synopsis      | Group interface name  |
| Context       | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> |
| Tree          | <a href="#">group-interface</a>   |
| String Length | 1 to 32   |
| Notes         | This element is part of a list key.   |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the interface   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**bonding-parameters**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>bonding-parameters</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> |
| Tree       | <b>bonding-parameters</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of ESM connection bonding  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**connection** [**connection-index**] *number*

|          |   |
|----------|---|
| Synopsis | Enter the <b>connection</b> list instance   |
| Context  | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>connection</b> <i>number</i> |
| Tree     | <b>connection</b>   |

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[connection-index] number**

Synopsis Bonding connection index  
 Context **configure service ies string subscriber-interface string group-interface string bonding-parameters connection number**  
 Tree [connection](#)  
 Range 1 to 2  
 Notes This element is part of a list key.  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service string**

Synopsis Connection service  
 Context **configure service ies string subscriber-interface string group-interface string bonding-parameters connection number service string**  
 Tree [service](#)  
 String Length 1 to 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fpe reference**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FPE that provisions bonding functionality  
 Context **configure service ies string subscriber-interface string group-interface string bonding-parameters fpe reference**  
 Tree [fpe](#)  
 Reference **configure fwd-path-ext fpe number**  
 Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multicast

Synopsis Enter the **multicast** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [bonding-parameters](#) **multicast**

Tree [multicast](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## connection (*number* | *keyword*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Multicast connection

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [bonding-parameters](#) **multicast** [connection](#) (*number* | *keyword*)

Tree [connection](#)

Range 1 to 2

Options use-incoming

Default use-incoming

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## brg

Synopsis Enter the **brg** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **brg**

Tree [brg](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of BRG  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">brg</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**authenticated-brg-only** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Allow BRGs that have been pre-authenticated   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">brg</a> <a href="#">authenticated-brg-only</a> <i>boolean</i> |
| Tree       | <a href="#">authenticated-brg-only</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**default-brg-profile** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Default BRG profile for new BRGs   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">brg</a> <a href="#">default-brg-profile</a> <i>reference</i> |
| Tree       | <a href="#">default-brg-profile</a>  |
| Reference  | <b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">vrgw</a> <a href="#">brg-profile</a> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**cflowd-parameters**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>cflowd-parameters</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> |
| Tree       | <b>cflowd-parameters</b>   |
| Introduced | 16.0.R4  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**sampling** [**sampling-type**] *keyword*

|            |   |
|------------|---|
| Synopsis   | Enter the <b>sampling</b> list instance   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i> |
| Tree       | <b>sampling</b>   |
| Introduced | 16.0.R4   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**[sampling-type]** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Traffic sampling type   |
| Context     | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i> |
| Tree        | <b>sampling</b>   |
| Description | This command configures the type of traffic to be sampled on the associated IP interface.   |
| Options     | unicast, multicast, both  |
| Notes       | This element is part of a list key.   |
| Introduced  | 16.0.R4   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**direction** *keyword*

|          |   |
|----------|---|
| Synopsis | Direction of traffic for cflowd sampling  |
| Context  | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i> <b>direction</b> <i>keyword</i> |

|             |   |
|-------------|---|
| Tree        | <a href="#">direction</a>   |
| Description | This command configures the direction in which sampling occurs on the associated IP interfaces. |
| Options     | ingress-only, egress-only, both   |
| Default     | ingress-only  |
| Introduced  | 16.0.R4   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **sample-profile** (*keyword* | *number*)

|             |   |
|-------------|---|
| Synopsis    | Sample profile ID   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>sample-profile</b> ( <i>keyword</i>   <i>number</i> ) |
| Tree        | <a href="#">sample-profile</a>  |
| Description | This command defines the sampling rate profile associated with this interface.  |
| Max. Range  | 0 to 4294967295   |
| Options     | 1   |
| Introduced  | 19.5.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **type** *keyword*

|             |   |
|-------------|---|
| Synopsis    | Type of cflowd analysis   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>type</b> <i>keyword</i> |
| Tree        | <a href="#">type</a>  |
| Description | This command configures the cflowd sampling type on the associated IP interface.  |
| Options     | acl, interface  |
| Notes       | This element is mandatory.  |
| Introduced  | 16.0.R4   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **data-trigger**

|          |                                       |
|----------|---------------------------------------|
| Synopsis | Enter the <b>data-trigger</b> context |
|----------|---------------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger</b> |
| Tree       | <b>data-trigger</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of data-triggered host creation   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>description</b> <i>string</i> |
| Tree          | <b>description</b>   |
| String Length | 1 to 255   |
| Introduced    | 16.0.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **dynamic-routes-track-srrp**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>dynamic-routes-track-srrp</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>dynamic-routes-track-srrp</b> |
| Tree       | <b>dynamic-routes-track-srrp</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**hold-time** *number*

|            |   |
|------------|---|
| Synopsis   | Time before route state updated after SRRP transition   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>dynamic-routes-track-srrp</b> <b>hold-time</b> <i>number</i> |
| Tree       | <b>hold-time</b>  |
| Range      | 1 to 50   |
| Units      | deciseconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**gtp-parameters**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>gtp-parameters</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>gtp-parameters</b> |
| Tree       | <b>gtp-parameters</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of GTP access  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>gtp-parameters</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

**fpe** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|          |   |
|----------|---|
| Synopsis | PE that provisions the GTP user interface |
|----------|---|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gtp-parameters fpe reference</i> |
| Tree       | <a href="#">fpe</a>   |
| Reference  | <b>configure fwd-path-ext</b> <a href="#">fpe</a> <i>number</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7750 SR, 7750 SR-e, 7750 SR-s, VSR  |

### **gx-policy** *reference*

|            |  |
|------------|--|
| Synopsis   | Diameter application policy  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gx-policy reference</i> |
| Tree       | <a href="#">gx-policy</a>  |
| Reference  | <b>configure subscriber-mgmt</b> <a href="#">diameter-gx-policy</a> <i>string</i>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **ingress**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>ingress</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ingress</i> |
| Tree       | <a href="#">ingress</a>  |
| Introduced | 19.7.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **policy-accounting** *reference*

|            |  |
|------------|--|
| Synopsis   | Ingress policy accounting template name  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ingress policy-accounting reference</i> |
| Tree       | <a href="#">policy-accounting</a>  |
| Reference  | <b>configure routing-options</b> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>                                  |
| Introduced | 19.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-s   |

**ingress-stats** *boolean*

|            |  |
|------------|--|
| Synopsis   | Collect ingress interface statistics   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ingress-stats</a> <i>boolean</i> |
| Tree       | <a href="#">ingress-stats</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ip-mtu** *number*

|            |  |
|------------|--|
| Synopsis   | Interface IP MTU   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i> |
| Tree       | <a href="#">ip-mtu</a>   |
| Range      | 512 to 9786  |
| Units      | bytes  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ipoe-linking**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>ipoe-linking</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-linking</a> |
| Tree       | <a href="#">ipoe-linking</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|          |   |
|----------|---|
| Synopsis | Administrative state of IPoE host linking   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-linking</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree     | <a href="#">admin-state</a>   |
| Options  | enable, disable   |
| Default  | disable   |

|            |   |
|------------|---|
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **gratuitous-router-advertisement** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Send unsolicited router advertisement after DHCP setup  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-linking</b> <b>gratuitous-router-advertisement</b> <i>boolean</i> |
| Tree       | <a href="#">gratuitous-router-advertisement</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **shared-circuit-id** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Enable circuit ID in DHCPv4 Option82 to validate DHCPv6   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-linking</b> <b>shared-circuit-id</b> <i>boolean</i> |
| Tree       | <a href="#">shared-circuit-id</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **ipoe-session**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>ipoe-session</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-session</b> |
| Tree       | <a href="#">ipoe-session</a>  |
| Introduced | 16.0.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of IPoE session management

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **description** *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-auth**

Synopsis Enter the **force-auth** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **force-auth**

Tree [force-auth](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cid-change** *boolean*

Synopsis Ignore min-auth-interval when circuit ID changed

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **force-auth** **cid-change** *boolean*

Tree [cid-change](#)

|            |   |

| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **ipoe-session-policy** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | IPoE Session policy to be used for new sessions   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">ipoe-session-policy</a> <i>reference</i> |
| Tree       | <a href="#">ipoe-session-policy</a>   |
| Reference  | <b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ipoe-session-policy</a> <i>string</i>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **min-auth-interval** (*keyword | number*)

|            |   |
|------------|---|
| Synopsis   | Minimum time between two authentication attempts  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-session</a> <b>min-auth-interval</b> ( <i>keyword   number</i> ) |
| Tree       | <a href="#">min-auth-interval</a>   |
| Range      | 1 to 32000000   |
| Units      | seconds   |
| Options    | infinite, always-reauthenticate   |
| Default    | infinite  |
| Introduced | 16.0.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-session-timeout** *keyword*

Synopsis Session timeout attribute to be interpreted

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **radius-session-timeout** *keyword*

Tree **radius-session-timeout**

Options absolute, ignore, backwards-compatible

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-session-limit** *number*

Synopsis Maximum number of sessions per SAP

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **sap-session-limit** *number*

Tree **sap-session-limit**

Range 1 to 131071

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis Maximum number of sessions on this group interface

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **session-limit** *number*

Tree **session-limit**

Range 1 to 500000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**stateless-redundancy** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |   |
|------------|---|
| Synopsis   | Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup                                     |
| Context    | <b>configure</b> <i>service ies string subscriber-interface string group-interface string ipoe-session stateless-redundancy boolean</i> |
| Tree       | <a href="#">stateless-redundancy</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**user-db** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|
| Synopsis   | Local user database for IPoE session authentication  |
| Context    | <b>configure</b> <i>service ies string subscriber-interface string group-interface string ipoe-session user-db reference</i> |
| Tree       | <a href="#">user-db</a>  |
| Reference  | <b>configure</b> <i>subscriber-mgmt local-user-db string</i>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ipv4**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>ipv4</b> context  |
| Context    | <b>configure</b> <i>service ies string subscriber-interface string group-interface string ipv4</i> |
| Tree       | <a href="#">ipv4</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## arp-host

|            |  |
|------------|--|
| Synopsis   | Enter the <b>arp-host</b> context  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host</b> |
| Tree       | <a href="#">arp-host</a>   |
| Introduced | 16.0.R6  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## admin-state *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of ARP hosts  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host admin-state keyword</b> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Introduced | 16.0.R6  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## host-limit *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of ARP hosts  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host host-limit number</b> |
| Tree       | <a href="#">host-limit</a>   |
| Range      | 1 to 524287  |
| Introduced | 16.0.R6  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## min-auth-interval *number*

|          |   |
|----------|---|
| Synopsis | Minimum authentication interval   |
| Context  | <b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host min-auth-interval number</b> |
| Tree     | <a href="#">min-auth-interval</a>   |
| Range    | 1 to 6000   |
| Units    | minutes   |

|            |   |
|------------|---|
| Default    | 15  |
| Introduced | 16.0.R6   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **sap-host-limit** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of ARP hosts per SAP  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 arp-host sap-host-limit</a> <i>number</i> |
| Tree       | <a href="#">sap-host-limit</a>   |
| Range      | 1 to 131071  |
| Default    | 1  |
| Introduced | 16.0.R6  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **dhcp**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>dhcp</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> |
| Tree       | <a href="#">dhcp</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of DHCP   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp admin-state</a> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **client-applications**

|          |  |
|----------|--|
| Synopsis | Enter the <b>client-applications</b> context |
|----------|--|

|            |  |
|------------|--|
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications</b> |
| Tree       | <b>client-applications</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **dhcp boolean**

|            |   |
|------------|---|
| Synopsis   | Enable IPoE clients to use DHCP relay or proxy server   |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications dhcp boolean</b> |
| Tree       | <b>dhcp</b>   |
| Default    | true  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **ppp boolean**

|            |  |
|------------|--|
| Synopsis   | Enable PPPoE clients to use DHCP relay or proxy server   |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications ppp boolean</b> |
| Tree       | <b>ppp</b>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **description string**

|               |   |
|---------------|---|
| Synopsis      | Text description  |
| Context       | <b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp description string</b> |
| Tree          | <b>description</b>  |
| String Length | 1 to 80   |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**filter reference**

|            |   |
|------------|---|
| Synopsis   | DHCP filter ID for the group interface  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp filter reference</i> |
| Tree       | <i>filter</i>   |
| Reference  | <b>configure filter dhcp-filter</b> <i>number</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**gi-address string**

|             |   |
|-------------|---|
| Synopsis    | GI address for the DHCP relay   |
| Context     | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp gi-address string</i>  |
| Tree        | <i>gi-address</i>   |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**lease-populate**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>lease-populate</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp lease-populate</i> |
| Tree       | <i>lease-populate</i>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**I2-header**

|          |                                     |
|----------|-------------------------------------|
| Synopsis | Enable the <b>I2-header</b> context |
|----------|-------------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate l2-header</b> |
| Tree       | <b>l2-header</b>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**mac string**

|            |   |
|------------|---|
| Synopsis   | IEEE address used in anti-spoofing entries for the SAP  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate l2-header mac</b> <i>string</i> |
| Tree       | <b>mac</b>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**max-leases number**

|            |  |
|------------|--|
| Synopsis   | Maximum number of DHCPv4 leases  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate max-leases</b> <i>number</i> |
| Tree       | <b>max-leases</b>  |
| Range      | 1 to 511999  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**match-circuit-id boolean**

|            |  |
|------------|--|
| Synopsis   | Enable Option 82 circuit ID on relayed DHCP packets  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp match-circuit-id</b> <i>boolean</i> |
| Tree       | <b>match-circuit-id</b>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## offer-selection

|            |  |
|------------|--|
| Synopsis   | Enter the <b>offer-selection</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection</i> |
| Tree       | <i>offer-selection</i>   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## client-mac

|            |   |
|------------|---|
| Synopsis   | Enter the <b>client-mac</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac</i> |
| Tree       | <i>client-mac</i>   |
| Notes      | The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## discover-delay *number*

|             |  |
|-------------|--|
| Synopsis    | Delay before sending DHCP Discover messages  |
| Context     | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac discover-delay</i> <i>number</i> |
| Tree        | <i>discover-delay</i>  |
| Description | This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.   |
| Range       | 1 to 100   |
| Units       | deciseconds  |
| Introduced  | 20.10.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## mac-address *keyword*

|          |  |
|----------|--|
| Synopsis | Designated client MAC addresses for Offer selection  |
| Context  | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac mac-address</i> <i>keyword</i> |

|             |   |
|-------------|---|
| Tree        | <a href="#">mac-address</a>   |
| Description | This command specifies the client MAC addresses for which the Discover delay applies. |
| Options     | odd, even   |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR                               |

### **discover-delay** *number*

|             |  |
|-------------|--|
| Synopsis    | Delay before sending DHCP Discover messages  |
| Context     | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">discover-delay</a> <i>number</i> |
| Tree        | <a href="#">discover-delay</a>   |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.   |
| Range       | 1 to 100   |
| Units       | deciseconds  |
| Introduced  | 20.10.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **server** [[ipv4-address](#)] *string*

|                |  |
|----------------|--|
| Synopsis       | Enter the <b>server</b> list instance  |
| Context        | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">server</a> <i>string</i> |
| Tree           | <a href="#">server</a>   |
| Max. Instances | 8  |
| Notes          | The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .  |
| Introduced     | 20.10.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **[ipv4-address]** *string*

|          |  |
|----------|--|
| Synopsis | IP address of the DHCP server  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">server</a> <i>string</i> |

|            |   |
|------------|---|
| Tree       | <a href="#">server</a>                                  |
| Notes      | This element is part of a list key.                     |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **discover-delay** *number*

|             |  |
|-------------|--|
| Synopsis    | Delay before sending DHCP Discover messages  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">offer-selection</a> <a href="#">server</a> <i>string</i> <b>discover-delay</b> <i>number</i> |
| Tree        | <a href="#">discover-delay</a>   |
| Description | This command configures the time to delay DHCP Discover messages sent to the server.   |
| Range       | 1 to 100   |
| Units       | deciseconds  |
| Introduced  | 20.10.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **option-82**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>option-82</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>option-82</b> |
| Tree        | <a href="#">option-82</a>  |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **action** *keyword*

|          |  |
|----------|--|
| Synopsis | Action to take with received DHCP Option 82  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <b>action</b> <i>keyword</i> |
| Tree     | <a href="#">action</a>   |
| Options  | replace, drop, keep  |

|            |   |
|------------|---|
| Default    | keep  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

## circuit-id

|            |   |
|------------|---|
| Synopsis   | Enter the <b>circuit-id</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id</b> |
| Tree       | <b>circuit-id</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## ascii-tuple

|            |   |
|------------|---|
| Synopsis   | Use the ASCII-encoded tuple for the circuit ID  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id ascii-tuple</b> |
| Tree       | <b>ascii-tuple</b>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .                               |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## ifindex

|            |   |
|------------|---|
| Synopsis   | Use the interface index for the circuit ID  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id ifindex</b> |
| Tree       | <b>ifindex</b>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .                           |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## none

|            |  |
|------------|--|
| Synopsis   | Do not include the circuit ID  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>circuit-id</b> <b>none</b> |
| Tree       | <b>none</b>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## sap-id

|            |  |
|------------|--|
| Synopsis   | Use the SAP ID   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>circuit-id</b> <b>sap-id</b> |
| Tree       | <b>sap-id</b>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## vlan-ascii-tuple

|             |   |
|-------------|---|
| Synopsis    | Include the VLAN ID and dot1p bits in the ASCII tuple   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>circuit-id</b> <b>vlan-ascii-tuple</b>  |
| Tree        | <b>vlan-ascii-tuple</b>   |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.<br><br>When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes       | The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**remote-id**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>remote-id</b> context  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>remote-id</b> |
| Tree        | <b>remote-id</b>  |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**ascii-string** *string*

|               |   |
|---------------|---|
| Synopsis      | User-defined ASCII string for the remote ID   |
| Context       | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>remote-id</b> <b>ascii-string</b> <i>string</i> |
| Tree          | <b>ascii-string</b>   |
| String Length | 1 to 32   |
| Notes         | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .  |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**mac**

|            |  |
|------------|--|
| Synopsis   | Use the MAC address for the remote ID  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>remote-id</b> <b>mac</b> |
| Tree       | <b>mac</b>   |
| Notes      | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**none**

|          |   |
|----------|---|
| Synopsis | Do not include the remote ID  |
| Context  | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>remote-id</b> <b>none</b> |

|            |  |
|------------|--|
| Tree       | <a href="#">none</a>   |
| Notes      | The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> . |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## vendor-specific-option

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>vendor-specific-option</b> context   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> |
| Tree        | <a href="#">vendor-specific-option</a>  |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## client-mac-address *boolean*

|            |   |
|------------|---|
| Synopsis   | Send the MAC address in the VSO   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">client-mac-address</a> <i>boolean</i> |
| Tree       | <a href="#">client-mac-address</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## pool-name *boolean*

|            |  |
|------------|--|
| Synopsis   | Send the pool name in the VSO  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">pool-name</a> <i>boolean</i> |
| Tree       | <a href="#">pool-name</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**sap-id** *boolean*

|            |   |
|------------|---|
| Synopsis   | Send SAP ID in the sub-option of the DHCP relay packet  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>sap-id</b> <i>boolean</i> |
| Tree       | <b>sap-id</b>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**service-id** *boolean*

|            |   |
|------------|---|
| Synopsis   | Send the service ID in the Vendor Specific Option   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>service-id</b> <i>boolean</i> |
| Tree       | <b>service-id</b>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**string** *string*

|               |  |
|---------------|--|
| Synopsis      | User-defined ASCII string for the VSO  |
| Context       | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>string</b> <i>string</i> |
| Tree          | <b>string</b>  |
| String Length | 1 to 32  |
| Introduced    | 16.0.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**system-id** *boolean*

|          |  |
|----------|--|
| Synopsis | Send the system ID in the VSO  |
| Context  | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>system-id</b> <i>boolean</i> |
| Tree     | <b>system-id</b>   |

|            |   |
|------------|---|
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

## proxy-server

|            |   |
|------------|---|
| Synopsis   | Enter the <b>proxy-server</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>proxy-server</b> |
| Tree       | <b>proxy-server</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## admin-state *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of the DHCP proxy server   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>proxy-server</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## emulated-server *string*

|            |  |
|------------|--|
| Synopsis   | IP address used as DHCP server address in SAP context  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>proxy-server</b> <b>emulated-server</b> <i>string</i> |
| Tree       | <b>emulated-server</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## lease-time

|          |                                     |
|----------|-------------------------------------|
| Synopsis | Enter the <b>lease-time</b> context |
|----------|-------------------------------------|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time</i> |
| Tree       | <a href="#">lease-time</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **radius-override** *boolean*

|            |  |
|------------|--|
| Synopsis   | Use lease time information provided by RADIUS server   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time radius-override boolean</i> |
| Tree       | <a href="#">radius-override</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **value** *number*

|            |   |
|------------|---|
| Synopsis   | DHCP lease time   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp proxy-server lease-time value number</i> |
| Tree       | <a href="#">value</a>   |
| Range      | 300 to 315446399  |
| Units      | seconds   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **python-policy** *reference*

|             |  |
|-------------|--|
| Synopsis    | Python policy name   |
| Context     | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp python-policy reference</i> |
| Tree        | <a href="#">python-policy</a>  |
| Description | This command associates a Python policy name with the interface.   |
| Reference   | <b>configure python</b> <i>python-policy string</i>  |
| Introduced  | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## relay-proxy

Synopsis Enable the **relay-proxy** context

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp relay-proxy*

Tree [relay-proxy](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## release-update-src-ip *boolean*

Synopsis Update the source IP address of a DHCP RELEASE message

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp relay-proxy release-update-src-ip* *boolean*

Tree [release-update-src-ip](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## siaddr-override *string*

Synopsis DHCP server IP address for address hiding function

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp relay-proxy siaddr-override* *string*

Tree [siaddr-override](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## release-include-gi-address *boolean*

Synopsis Include gateway IP address in DHCP Release messages

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp release-include-gi-address* *boolean*

Tree [release-include-gi-address](#)

Default false

|            |   |
|------------|---|
| Introduced | 21.7.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

**server string**

|                |  |
|----------------|--|
| Synopsis       | IP addresses for DHCP server requests  |
| Context        | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp server</a> <i>string</i>   |
| Tree           | <a href="#">server</a>   |
| Description    | This command configures a list of servers that this interface forwards requests to.<br>The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8  |
| Notes          | This element is ordered by the user.   |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**src-ip-addr keyword**

|            |  |
|------------|--|
| Synopsis   | Type of source address to use for DHCP relay   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp src-ip-addr</a> <i>keyword</i> |
| Tree       | <a href="#">src-ip-addr</a>  |
| Options    | auto, gi-address   |
| Default    | auto   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**trusted boolean**

|          |  |
|----------|--|
| Synopsis | Relay untrusted packets  |
| Context  | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp trusted</a> <i>boolean</i> |
| Tree     | <a href="#">trusted</a>  |

|             |   |
|-------------|---|
| Description | <p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default     | false   |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### user-db *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

|            |  |
|------------|--|

| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### number *number*

|          |   |
|----------|---|
| Synopsis | Maximum number of Parameter Problem messages to send  |
| Context  | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem number</b> <i>number</i> |
| Tree     | <b>number</b>   |
| Range    | 10 to 1000  |

|            |   |
|------------|---|
| Default    | 100   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit number of Parameter Problem messages   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem</b> <b>seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>  |
| Range      | 1 to 60   |
| Units      | seconds   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **redirects**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>redirects</b> context  |
| Context     | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp redirects</b>  |
| Tree        | <b>redirects</b>  |
| Description | <p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p> |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **admin-state** *keyword*

|          |   |
|----------|---|
| Synopsis | Administrative state of sending ICMP redirect messages  |
| Context  | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp redirects admin-state</b> <i>keyword</i> |
| Tree     | <b>admin-state</b>  |
| Options  | enable, disable   |
| Default  | enable  |

|            |   |
|------------|---|
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **number** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of ICMP redirect messages to send   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b> <b>number</b> <i>number</i> |
| Tree       | <b>number</b>  |
| Range      | 10 to 1000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit the number of ICMP redirect messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b> <b>seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>  |
| Range      | 1 to 60   |
| Units      | seconds   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **ttl-expired**

|             |  |
|-------------|--|
| Synopsis    | Enter the <b>ttl-expired</b> context   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>ttl-expired</b> |
| Tree        | <b>ttl-expired</b>   |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.  |
| Introduced  | 16.0.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of sending TTL expired messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | enable   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**number** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum number of TTL expired messages to send   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>number</b> <i>number</i> |
| Tree       | <b>number</b>  |
| Range      | 10 to 2000   |
| Default    | 100  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**seconds** *number*

|            |   |
|------------|---|
| Synopsis   | Time used to limit the number of TTL expired messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>  |
| Range      | 1 to 60   |
| Units      | seconds   |
| Default    | 10  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**use-matching-address** *boolean*

|             |   |
|-------------|---|
| Synopsis    | Use the subscriber interface address as source address  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>use-matching-address</b> <i>boolean</i>   |
| Tree        | <b>use-matching-address</b>   |
| Description | When configured to <b>true</b> , the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.<br><br>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.<br><br>When configured to <b>false</b> , the system uses the first configured address. |
| Default     | false   |
| Introduced  | 22.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**unreachables**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>unreachables</b> context   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> |
| Tree        | <b>unreachables</b>   |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of sending unreachable messages  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | enable  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**number** *number*

|            |   |
|------------|---|
| Synopsis   | Maximum number of unreachable messages to send  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>number</b> <i>number</i> |
| Tree       | <b>number</b>   |
| Range      | 10 to 2000  |
| Default    | 100   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**seconds** *number*

|            |  |
|------------|--|
| Synopsis   | Time to limit the number of ICMP unreachable messages  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>seconds</b> <i>number</i> |
| Tree       | <b>seconds</b>   |
| Range      | 1 to 60  |
| Units      | seconds  |
| Default    | 10   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**ignore-df-bit** *boolean*

|             |  |
|-------------|--|
| Synopsis    | Ignore DF bit in the IPv4 header when fragmenting  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>ignore-df-bit</b> <i>boolean</i>  |
| Tree        | <b>ignore-df-bit</b>   |
| Description | <p>When configured to <b>true</b>, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.</p> <p>When configured to <b>false</b>, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.</p> |
| Default     | false  |
| Introduced  | 20.5.R1  |
| Platforms   | 7750 SR, 7750 SR-e, 7750 SR-s, VSR   |

## neighbor-discovery

|            |  |
|------------|--|
| Synopsis   | Enter the <b>neighbor-discovery</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> |
| Tree       | <a href="#">neighbor-discovery</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## local-proxy-arp *boolean*

|             |   |
|-------------|---|
| Synopsis    | Enable local proxy ARP on interface   |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-arp</a> <i>boolean</i> |
| Tree        | <a href="#">local-proxy-arp</a>   |
| Description | When configured to <b>true</b> , the router enables local proxy ARP on the interface.<br>When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.  |
| Introduced  | 16.0.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## populate *boolean*

|            |  |
|------------|--|
| Synopsis   | Allow population of static and dynamic hosts   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">populate</a> <i>boolean</i> |
| Tree       | <a href="#">populate</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## proxy-arp-policy *reference*

|          |  |
|----------|--|
| Synopsis | Proxy ARP policy name  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-arp-policy</a> <i>reference</i> |
| Tree     | <a href="#">proxy-arp-policy</a>   |

|                |  |
|----------------|--|
| Reference      | <b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i> |
| Max. Instances | 5  |
| Notes          | This element is ordered by the user.   |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **remote-proxy-arp** *boolean*

|            |   |
|------------|---|
| Synopsis   | Enable remote proxy ARP on the interface  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">remote-proxy-arp</a> <i>boolean</i> |
| Tree       | <a href="#">remote-proxy-arp</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **timeout** *number*

|            |   |
|------------|---|
| Synopsis   | Timeout for an ARP entry learned on the interface   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">timeout</a> <i>number</i> |
| Tree       | <a href="#">timeout</a>   |
| Range      | 0 to 65535  |
| Units      | seconds   |
| Default    | 14400   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **qos-route-lookup** *keyword*

|          |  |
|----------|--|
| Synopsis | QoS route lookup   |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">qos-route-lookup</a> <i>keyword</i> |
| Tree     | <a href="#">qos-route-lookup</a>   |
| Options  | destination  |

|            |  |
|------------|--|
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

## urpf-check

|            |  |
|------------|--|
| Synopsis   | Enable the <b>urpf-check</b> context   |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 urpf-check</b> |
| Tree       | <a href="#">urpf-check</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## mode keyword

|            |   |
|------------|---|
| Synopsis   | Unicast RPF check mode  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv4 urpf-check mode keyword</b> |
| Tree       | <a href="#">mode</a>  |
| Options    | strict, loose, strict-no-ecmp   |
| Default    | strict  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## ipv6

|            |   |
|------------|---|
| Synopsis   | Enable the <b>ipv6</b> context  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6</b> |
| Tree       | <a href="#">ipv6</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR                                     |

## allow-multiple-wan-addresses boolean

|          |  |
|----------|--|
| Synopsis | Allow multiple WAN addresses   |
| Context  | <b>configure service ies string subscriber-interface string group-interface string ipv6 allow-multiple-wan-addresses boolean</b> |

|            |   |
|------------|---|
| Tree       | <a href="#">allow-multiple-wan-addresses</a>            |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

## auto-reply

|            |  |
|------------|--|
| Synopsis   | Enter the <b>auto-reply</b> context  |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <b>auto-reply</b> |
| Tree       | <a href="#">auto-reply</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## neighbor-solicitation *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable auto-reply for NS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <b>auto-reply</b> <b>neighbor-solicitation</b> <i>boolean</i> |
| Tree       | <a href="#">neighbor-solicitation</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## router-solicitation *boolean*

|            |  |
|------------|--|
| Synopsis   | Enable auto-reply for RS   |
| Context    | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <b>auto-reply</b> <b>router-solicitation</b> <i>boolean</i> |
| Tree       | <a href="#">router-solicitation</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## dhcp6

|            |   |
|------------|---|
| Synopsis   | Enter the <b>dhcp6</b> context  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6</b> |
| Tree       | <b>dhcp6</b>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## filter reference

|            |  |
|------------|--|
| Synopsis   | DHCPv6 filter  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 filter reference</b> |
| Tree       | <b>filter</b>  |
| Reference  | <b>configure filter dhcp6-filter number</b>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## option

|            |  |
|------------|--|
| Synopsis   | Enter the <b>option</b> context  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option</b> |
| Tree       | <b>option</b>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## interface-id

|            |   |
|------------|---|
| Synopsis   | Enter the <b>interface-id</b> context   |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id</b> |
| Tree       | <b>interface-id</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## ascii-tuple

|            |  |
|------------|--|
| Synopsis   | Use ASCII-encoded concatenated tuple   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>ascii-tuple</b> |
| Tree       | <a href="#">ascii-tuple</a>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## if-index

|            |   |
|------------|---|
| Synopsis   | Use interface index in the DHCPv6 relay packet  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>if-index</b> |
| Tree       | <a href="#">if-index</a>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## sap-id

|            |   |
|------------|---|
| Synopsis   | Use SAP ID in interface ID option in relay packet   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>sap-id</b> |
| Tree       | <a href="#">sap-id</a>  |
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## string *string*

|               |   |
|---------------|---|
| Synopsis      | String for interface ID option in DHCPv6 relay packet   |
| Context       | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>string</b> <i>string</i> |
| Tree          | <a href="#">string</a>  |
| String Length | 1 to 80   |

|            |  |
|------------|--|
| Notes      | The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> . |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **remote-id** *boolean*

|            |   |
|------------|---|
| Synopsis   | Send remote ID option in the DHCPv6 relay packet  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 option remote-id</b> <i>boolean</i> |
| Tree       | <a href="#">remote-id</a>   |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **override-slaac** *boolean*

|            |   |
|------------|---|
| Synopsis   | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 override-slaac</b> <i>boolean</i> |
| Tree       | <a href="#">override-slaac</a>  |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **pd-managed-route**

|            |  |
|------------|--|
| Synopsis   | Enable the <b>pd-managed-route</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 pd-managed-route</b> |
| Tree       | <a href="#">pd-managed-route</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**next-hop** *keyword*

|            |   |
|------------|---|
| Synopsis   | Next hop type   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>pd-managed-route</b> <b>next-hop</b> <i>keyword</i> |
| Tree       | <b>next-hop</b>   |
| Options    | ipv4, ipv6  |
| Default    | ipv6  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**proxy-server**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>proxy-server</b> context  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> |
| Tree       | <b>proxy-server</b>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of the DHCPv6 proxy server  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**client-applications**

|          |   |
|----------|---|
| Synopsis | Enter the <b>client-applications</b> context  |
| Context  | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b> |
| Tree     | <b>client-applications</b>  |

|            |   |
|------------|---|
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **dhcp boolean**

|            |   |
|------------|---|
| Synopsis   | Enable IPoE clients to use DHCP relay or proxy server   |
| Context    | <b>configure</b> <a href="#">service ies</a> <a href="#">string subscriber-interface</a> <a href="#">string group-interface</a> <a href="#">string ipv6 dhcp6 proxy-server client-applications dhcp boolean</a> |
| Tree       | <a href="#">dhcp</a>  |
| Default    | true  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **ppp boolean**

|            |  |
|------------|--|
| Synopsis   | Allow PPPoE clients to use DHCP relay functionality  |
| Context    | <b>configure</b> <a href="#">service ies</a> <a href="#">string subscriber-interface</a> <a href="#">string group-interface</a> <a href="#">string ipv6 dhcp6 proxy-server client-applications ppp boolean</a> |
| Tree       | <a href="#">ppp</a>  |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **preferred-lifetime (number | keyword)**

|            |  |
|------------|--|
| Synopsis   | Time for prefix to remain preferred on this interface  |
| Context    | <b>configure</b> <a href="#">service ies</a> <a href="#">string subscriber-interface</a> <a href="#">string group-interface</a> <a href="#">string ipv6 dhcp6 proxy-server preferred-lifetime (number   keyword)</a> |
| Tree       | <a href="#">preferred-lifetime</a>   |
| Range      | 300 to 4294967294  |
| Units      | seconds  |
| Options    | infinite   |
| Default    | 3600   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**rebind-timer** *number*

|            |   |
|------------|---|
| Synopsis   | Rebind timer (T2) for this interface  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server rebind-timer</b> <i>number</i> |
| Tree       | <b>rebind-timer</b>   |
| Range      | 0 to 1209600  |
| Units      | seconds   |
| Default    | 2880  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**renew-timer** *number*

|            |  |
|------------|--|
| Synopsis   | Renew timer (T1)   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server renew-timer</b> <i>number</i> |
| Tree       | <b>renew-timer</b>   |
| Range      | 0 to 604800  |
| Units      | seconds  |
| Default    | 1800   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**server-id**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>server-id</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> |
| Tree       | <b>server-id</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**duid-en-ascii** *string*

|          |   |
|----------|---|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
|----------|---|

|               |   |
|---------------|---|
| Context       | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-en-ascii</b> <i>string</i> |
| Tree          | <b>duid-en-ascii</b>  |
| String Length | 1 to 58   |
| Notes         | The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .  |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **duid-en-hex** *string*

|               |   |
|---------------|---|
| Synopsis      | DUID system ID in hexadecimal format  |
| Context       | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-en-hex</b> <i>string</i> |
| Tree          | <b>duid-en-hex</b>  |
| String Length | 1 to 118  |
| Notes         | The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .  |
| Introduced    | 16.0.R1   |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **duid-ll**

|            |   |
|------------|---|
| Synopsis   | Use link-layer address (DUID-LL) as DUID  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-ll</b> |
| Tree       | <b>duid-ll</b>  |
| Notes      | The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **valid-lifetime** (*number* | *keyword*)

|          |   |
|----------|---|
| Synopsis | Time for prefix to remain valid on this interface   |
| Context  | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server</b> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <b>valid-lifetime</b>   |
| Range    | 300 to 4294967294   |

|            |   |
|------------|---|
| Units      | seconds   |
| Options    | infinite  |
| Default    | 86400   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **python-policy** *reference*

|            |   |
|------------|---|
| Synopsis   | Python policy   |
| Context    | <b>configure</b> <a href="#">service ies string subscriber-interface string group-interface string ipv6 dhcp6 python-policy reference</a> |
| Tree       | <a href="#">python-policy</a>   |
| Reference  | <b>configure</b> <a href="#">python python-policy string</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **relay**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>relay</b> context  |
| Context    | <b>configure</b> <a href="#">service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay</a> |
| Tree       | <a href="#">relay</a>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of DHCPv6 Relay  |
| Context    | <b>configure</b> <a href="#">service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay admin-state keyword</a> |
| Tree       | <a href="#">admin-state</a>   |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## advertise-selection

|            |   |
|------------|---|
| Synopsis   | Enter the <b>advertise-selection</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection</i> |
| Tree       | <a href="#">advertise-selection</a>   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## client-mac

|            |  |
|------------|--|
| Synopsis   | Enter the <b>client-mac</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac</i> |
| Tree       | <a href="#">client-mac</a>   |
| Notes      | The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .  |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## mac-address *keyword*

|            |   |
|------------|---|
| Synopsis   | Designated client MAC addresses for Advertise selection   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac mac-address</i> <i>keyword</i> |
| Tree       | <a href="#">mac-address</a>   |
| Options    | odd, even   |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## preference-option

|          |  |
|----------|--|
| Synopsis | Enter the <b>preference-option</b> context   |
| Context  | <b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac preference-option</i> |
| Tree     | <a href="#">preference-option</a>  |

|             |   |
|-------------|---|
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **value** *number*

|            |  |
|------------|--|
| Synopsis   | Preference option value for DHCPv6 Advertise messages  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection client-mac preference-option value</b> <i>number</i> |
| Tree       | <b>value</b>   |
| Range      | 0 to 255   |
| Introduced | 20.10.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **solicit-delay** *number*

|             |  |
|-------------|--|
| Synopsis    | Delay before sending DHCPv6 Solicit messages   |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection client-mac solicit-delay</b> <i>number</i> |
| Tree        | <b>solicit-delay</b>   |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.   |
| Range       | 1 to 100   |
| Units       | deciseconds  |
| Introduced  | 20.10.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **preference-option**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>preference-option</b> context  |
| Context     | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection preference-option</b> |
| Tree        | <b>preference-option</b>  |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.   |
| Introduced  | 20.10.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value** *number*

Synopsis Preference option value for DHCPv6 Advertise messages

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection preference-option value number*

Tree *value*

Range 0 to 255

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** [*ipv6-address*] *string*

Synopsis Enter the **server** list instance

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv6-address]** *string*

Synopsis IP address of the DHCPv6 server

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preference-option**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>preference-option</b> context  |
| Context     | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>preference-option</b> |
| Tree        | <b>preference-option</b>  |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.   |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**value number**

|            |   |
|------------|---|
| Synopsis   | Preference option value for DHCPv6 Advertise messages   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>preference-option value</b> <i>number</i> |
| Tree       | <b>value</b>  |
| Range      | 0 to 255  |
| Introduced | 20.10.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**solicit-delay number**

|             |   |
|-------------|---|
| Synopsis    | Delay before sending DHCPv6 Solicit messages  |
| Context     | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>solicit-delay</b> <i>number</i> |
| Tree        | <b>solicit-delay</b>  |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent to the server.   |
| Range       | 1 to 100  |
| Units       | deciseconds   |
| Introduced  | 20.10.R1  |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**solicit-delay number**

|          |  |
|----------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
|----------|--|

|             |  |
|-------------|--|
| Context     | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection solicit-delay</b> <i>number</i>                              |
| Tree        | <b>solicit-delay</b>   |
| Description | This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the <b>server</b> instance or the <b>client-mac</b> context. |
| Range       | 1 to 100   |
| Units       | deciseconds  |
| Introduced  | 20.10.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### client-applications

|            |   |
|------------|---|
| Synopsis   | Enter the <b>client-applications</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay client-applications</b> |
| Tree       | <b>client-applications</b>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### dhcp boolean

|            |   |
|------------|---|
| Synopsis   | Enable IPoE clients to use DHCP relay or proxy server   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay client-applications dhcp</b> <i>boolean</i> |
| Tree       | <b>dhcp</b>   |
| Default    | true  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### ppp boolean

|          |  |
|----------|--|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality  |
| Context  | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay client-applications ppp</b> <i>boolean</i> |
| Tree     | <b>ppp</b>   |
| Default  | false  |

|            |   |
|------------|---|
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **description** *string*

|               |  |
|---------------|--|
| Synopsis      | Text description   |
| Context       | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">description</a> <i>string</i> |
| Tree          | <a href="#">description</a>  |
| String Length | 1 to 80  |
| Introduced    | 16.0.R1  |
| Platforms     | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **lease-split**

|             |   |
|-------------|---|
| Synopsis    | Enter the <b>lease-split</b> context  |
| Context     | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">lease-split</a>  |
| Tree        | <a href="#">lease-split</a>   |
| Description | <p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> <li>• the renew time T1 committed by the server (long renew time)</li> <li>• half of the preferred lifetime committed by the server when T1 committed by the server equals zero</li> </ul> |
| Introduced  | 21.2.R1   |
| Platforms   | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **admin-state** *keyword*

|          |   |
|----------|---|
| Synopsis | Administrative state of DHCPv6 lease split  |
| Context  | <b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">lease-split</a> <a href="#">admin-state</a> <i>keyword</i> |
| Tree     | <a href="#">admin-state</a>   |
| Options  | enable, disable   |
| Default  | disable   |

|            |   |
|------------|---|
| Introduced | 21.2.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

**valid-lifetime** *number*

|            |  |
|------------|--|
| Synopsis   | DHCPv6 lease split valid lifetime (short lease time)   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay lease-split valid-lifetime</b> <i>number</i> |
| Tree       | <b>valid-lifetime</b>  |
| Range      | 300 to 315446399   |
| Units      | seconds  |
| Default    | 3600   |
| Introduced | 21.2.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**link-address** *string*

|            |  |
|------------|--|
| Synopsis   | Link address for the DHCPv6 relay messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay link-address</b> <i>string</i> |
| Tree       | <b>link-address</b>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**server** *string*

|                |  |
|----------------|--|
| Synopsis       | DHCP6 server(s) to which the DHCP6 requests are forwarded  |
| Context        | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay server</b> <i>string</i> |
| Tree           | <b>server</b>  |
| Max. Instances | 8  |
| Notes          | This element is ordered by the user.   |
| Introduced     | 16.0.R1  |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**source-address** *string*

|            |   |
|------------|---|
| Synopsis   | Source IPv6 address for the DHCPv6 relay messages   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>source-address</b> <i>string</i> |
| Tree       | <a href="#">source-address</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**snooping**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>snooping</b> context  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>snooping</b> |
| Tree       | <a href="#">snooping</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s   |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of DHCPv6 snooping  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>snooping</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <a href="#">admin-state</a>  |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s   |

**user-db** *reference*

|            |  |
|------------|--|
| Synopsis   | Local user database for authentication   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>user-db</b> <i>reference</i> |
| Tree       | <a href="#">user-db</a>  |
| Reference  | <b>configure</b> <b>subscriber-mgmt</b> <b>local-user-db</b> <i>string</i>   |
| Introduced | 16.0.R1  |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-ident** *keyword*

Synopsis DHCP6 user identification for this interface

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **dhcp6** **user-ident** *keyword*

Tree **user-ident**

Options mac, mac-interface-id

Default mac

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-bridged-mode** *boolean*

Synopsis Enable IPv6 IPoE bridged mode

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **ipoe-bridged-mode** *boolean*

Tree **ipoe-bridged-mode**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **neighbor-discovery**

Synopsis Enter the **neighbor-discovery** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **neighbor-discovery**

Tree **neighbor-discovery**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dad-snooping** *boolean*

Synopsis Populate table via duplicate address detection packets

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **neighbor-discovery** **dad-snooping** *boolean*

|            |   |
|------------|---|
| Tree       | <a href="#">dad-snooping</a>                            |
| Default    | false   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **neighbor-limit** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum neighbor entries learned per SLAAC host  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">neighbor-limit</a> <i>number</i> |
| Tree       | <a href="#">neighbor-limit</a>   |
| Range      | 1 to 8   |
| Default    | 1  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **qos-route-lookup** *keyword*

|            |  |
|------------|--|
| Synopsis   | QoS route lookup   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">qos-route-lookup</a> <i>keyword</i> |
| Tree       | <a href="#">qos-route-lookup</a>   |
| Options    | destination  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s   |

### **router-advertisements**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>router-advertisements</b> context   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> |
| Tree       | <a href="#">router-advertisements</a>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**admin-state** *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of router advertisements  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**force-mcast** *keyword*

|            |  |
|------------|--|
| Synopsis   | Protocol with forced multicast   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>force-mcast</b> <i>keyword</i> |
| Tree       | <b>force-mcast</b>   |
| Options    | ip, ip-mac   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**max-advertisement-interval** *number*

|            |  |
|------------|--|
| Synopsis   | Maximum advertisement interval   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>max-advertisement-interval</b> <i>number</i> |
| Tree       | <b>max-advertisement-interval</b>  |
| Range      | 900 to 1800  |
| Units      | seconds  |
| Default    | 1800   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**min-advertisement-interval** *number*

|          |                                |
|----------|--------------------------------|
| Synopsis | Minimum advertisement interval |
|----------|--------------------------------|

|            |   |
|------------|---|
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements</b> <b>min-advertisement-interval</b> <i>number</i> |
| Tree       | <b>min-advertisement-interval</b>   |
| Range      | 900 to 1350   |
| Units      | seconds   |
| Default    | 900   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## options

|            |  |
|------------|--|
| Synopsis   | Enter the <b>options</b> context   |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements</b> <b>options</b> |
| Tree       | <b>options</b>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## current-hop-limit *number*

|            |   |
|------------|---|
| Synopsis   | Hop limit to be advertised  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements</b> <b>options</b> <b>current-hop-limit</b> <i>number</i> |
| Tree       | <b>current-hop-limit</b>  |
| Range      | 0 to 255  |
| Default    | 64  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

## dns

|            |   |
|------------|---|
| Synopsis   | Enter the <b>dns</b> context  |
| Context    | <b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements</b> <b>options</b> <b>dns</b> |
| Tree       | <b>dns</b>  |
| Introduced | 16.0.R1   |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **include-rdnss** *boolean*

Synopsis Include the RDNSS server option 25

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 router-advertisements options dns include-rdnss** *boolean*

Tree [include-rdnss](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis Maximum time for the RDNSS address to remain valid

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 router-advertisements options dns rdnss-lifetime** (*number* | *keyword*)

Tree [rdnss-lifetime](#)

Range 900 to 3600

Units seconds

Options infinite

Default 3600

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-configuration** *boolean*

Synopsis Managed address configuration flag

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 router-advertisements options managed-configuration** *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mtu** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Advertised MTU value  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>mtu</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">mtu</a>   |
| Range      | 1280 to 9212  |
| Units      | bytes   |
| Options    | not-included  |
| Default    | not-included  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**other-stateful-configuration** *boolean*

|            |  |
|------------|--|
| Synopsis   | Other stateful configuration flag  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>other-stateful-configuration</b> <i>boolean</i> |
| Tree       | <a href="#">other-stateful-configuration</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**reachable-time** *number*

|            |   |
|------------|---|
| Synopsis   | Reachable time for advertisements   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>reachable-time</b> <i>number</i> |
| Tree       | <a href="#">reachable-time</a>  |
| Range      | 0 to 3600000  |
| Units      | milliseconds  |
| Default    | 0   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**retransmit-timer** *number*

|            |   |
|------------|---|
| Synopsis   | Retransmit time in router advertisements from interface   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>retransmit-timer</b> <i>number</i> |
| Tree       | <a href="#">retransmit-timer</a>  |
| Range      | 0 to 1800000  |
| Units      | seconds   |
| Default    | 0   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**router-lifetime** (*number* | *keyword*)

|            |   |
|------------|---|
| Synopsis   | Router lifetime   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>router-lifetime</b> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">router-lifetime</a>   |
| Range      | 2700 to 9000  |
| Units      | seconds   |
| Options    | no-default-router   |
| Default    | 4500  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**prefix-options**

|            |  |
|------------|--|
| Synopsis   | Enter the <b>prefix-options</b> context  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> |
| Tree       | <a href="#">prefix-options</a>   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**autonomous** *boolean*

|          |                              |
|----------|------------------------------|
| Synopsis | Value of the autonomous flag |
|----------|------------------------------|

|            |  |
|------------|--|
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements prefix-options autonomous</i> <i>boolean</i> |
| Tree       | <a href="#">autonomous</a>   |
| Default    | false  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **on-link** *boolean*

|            |   |
|------------|---|
| Synopsis   | Assign the prefix to an interface on the specified link   |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements prefix-options on-link</i> <i>boolean</i> |
| Tree       | <a href="#">on-link</a>   |
| Default    | true  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **preferred-lifetime** (*number* | *keyword*)

|            |  |
|------------|--|
| Synopsis   | Time for a prefix to remain preferred  |
| Context    | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements prefix-options preferred-lifetime</i> ( <i>number</i>   <i>keyword</i> ) |
| Tree       | <a href="#">preferred-lifetime</a>   |
| Range      | 0 to 4294967294  |
| Units      | seconds  |
| Options    | infinite   |
| Default    | 3600   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **valid-lifetime** (*number* | *keyword*)

|          |  |
|----------|--|
| Synopsis | Time for a prefix to remain valid  |
| Context  | <b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements prefix-options valid-lifetime</i> ( <i>number</i>   <i>keyword</i> ) |
| Tree     | <a href="#">valid-lifetime</a>   |

|            |   |
|------------|---|
| Range      | 0 to 4294967294   |
| Units      | seconds   |
| Options    | infinite  |
| Default    | 86400   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

## router-solicit

|            |  |
|------------|--|
| Synopsis   | Enter the <b>router-solicit</b> context  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit</b> |
| Tree       | <b>router-solicit</b>  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## admin-state *keyword*

|            |  |
|------------|--|
| Synopsis   | Administrative state of router-solicit authentication  |
| Context    | <b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit admin-state keyword</b> |
| Tree       | <b>admin-state</b>   |
| Options    | enable, disable  |
| Default    | disable  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

## inactivity-timer (*number* | *keyword*)

|          |  |
|----------|--|
| Synopsis | Time before an inactive host is removed  |
| Context  | <b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit inactivity-timer (<i>number</i>   <i>keyword</i>)</b> |
| Tree     | <b>inactivity-timer</b>  |
| Range    | 1 to 31536000  |
| Units    | seconds  |
| Options  | infinite   |

|            |   |
|------------|---|
| Default    | 300   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### **min-auth-interval** *number*

|            |  |
|------------|--|
| Synopsis   | Minimum time between successive authentication attempts  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 router-solicit</a> <b>min-auth-interval</b> <i>number</i> |
| Tree       | <a href="#">min-auth-interval</a>  |
| Range      | 1 to 360000  |
| Units      | seconds  |
| Default    | 300  |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

### **user-db** *reference*

|            |   |
|------------|---|
| Synopsis   | Local user database used for authentication   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 router-solicit</a> <b>user-db</b> <i>reference</i> |
| Tree       | <a href="#">user-db</a>   |
| Reference  | <b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

### **urpf-check**

|            |   |
|------------|---|
| Synopsis   | Enable the <b>urpf-check</b> context  |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 urpf-check</a> |
| Tree       | <a href="#">urpf-check</a>  |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**mode** *keyword*

|            |  |
|------------|--|
| Synopsis   | Unicast RPF check mode   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>urpf-check</b> <b>mode</b> <i>keyword</i> |
| Tree       | <b>mode</b>  |
| Options    | strict, loose, strict-no-ecmp  |
| Default    | strict   |
| Introduced | 16.0.R1  |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR  |

**local-address-assignment**

|            |   |
|------------|---|
| Synopsis   | Enter the <b>local-address-assignment</b> context   |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> |
| Tree       | <b>local-address-assignment</b>   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**admin-state** *keyword*

|            |   |
|------------|---|
| Synopsis   | Administrative state of Local Address Assignment  |
| Context    | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>admin-state</b> <i>keyword</i> |
| Tree       | <b>admin-state</b>  |
| Options    | enable, disable   |
| Default    | disable   |
| Introduced | 16.0.R1   |
| Platforms  | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR   |

**ipv4**

|          |   |
|----------|---|
| Synopsis | Enter the <b>ipv4</b> context   |
| Context  | <b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>ipv4</b> |
| Tree     | <b>ipv4</b>   |

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis Enter the **client-applications** context  
 Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *local-address-assignment* *ipv4* **client-applications**  
 Tree [client-applications](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe *boolean*

Synopsis Request local addresses for non-DHCP/managed IPoE hosts  
 Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *local-address-assignment* *ipv4* **client-applications ipoe** *boolean*  
 Tree [ipoe](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ppp *boolean*

Synopsis Request local addresses for PPP IPCP hosts  
 Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *local-address-assignment* *ipv4* **client-applications ppp** *boolean*  
 Tree [ppp](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## default-pool *string*

Synopsis Default pools  
 Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *local-address-assignment* *ipv4* **default-pool** *string*

|                |   |
|----------------|---|
| Tree           | <a href="#">default-pool</a>                            |
| String Length  | 1 to 32   |
| Max. Instances | 2   |
| Notes          | This element is ordered by the user.                    |
| Introduced     | 16.0.R1   |
| Platforms      | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

### server reference

|            |  |
|------------|--|
| Synopsis   | Local DHCPv4 server for local pools management   |
| Context    | <b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">local-address-assignment ipv4</a> <a href="#">server reference</a> |
