Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter-name string**

Synopsis	Arbiter name
Context	<b>configure qos policer-control-policy string tier number arbiter string arbiter-parent arbiter-name string</b>
Tree	<b>arbiter-name</b>
Description	This command specifies the arbiter name. In tier 1, the arbiter name is not allowed and only the system reversed name "root" is accepted. The specified arbiter name must exist within the policer control policy at tier 1 or the parent command fails. When a tiered arbiter is acting as a parent for another tiered arbiter, the parent arbiter cannot be removed from the policy. The child arbiter receives all bandwidth directly from its parent arbiter (that receives bandwidth from the root arbiter).
String Length	1 to 32
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**level number**

Synopsis	Level the child arbiter uses on its parent
Context	<b>configure qos policer-control-policy string tier number arbiter string arbiter-parent level number</b>
Tree	<b>level</b>
Range	1 to 8
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight** *number*

Synopsis	Weight attribute at parent level applied to children
Context	<b>configure</b> qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> arbiter-parent <b>weight</b> <i>number</i>
Tree	<b>weight</b>
Description	This command defines how multiple children at the same parent strict level compete when insufficient bandwidth exists on the parent for that level. Each child's weight is divided by the sum of the active children's weights and the result is multiplied by the available bandwidth. If a child cannot receive its entire weighted fair share of bandwidth due to a defined child rate limit, the remainder of its bandwidth is distributed between the other children based on their weights.
Range	1 to 100
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Platforms All

### **monitor-threshold** *number*

Synopsis Congestion monitoring threshold

Context **configure** qos port-scheduler-policy *string* group *string* monitor-threshold *number*

Tree [monitor-threshold](#)

Description This command defines the congestion monitoring threshold for the desired monitoring entity under the port scheduler for per aggregate port scheduler rate, per individual level, and per group that is aggregating multiple levels.

The congestion threshold is specified as a percentage of the configured PIR for the entity for which congestion monitoring is desired. For example, if the configured PIR for level 1 is 100000 kb/s, and the monitoring threshold is set to 90%, an event where the offered rate is greater than 90,000 kb/s is recorded. This event is shown as part of the cumulative count of congestion threshold exceeds since the last clearing of the counters.

Range 0 to 100

Default 0

Introduced 16.0.R1

Platforms All

**instance number**

Synopsis	Queue group instance for traffic redirection
Context	<b>configure qos queue-group-redirect-list string match number instance number</b>
Tree	<b>instance</b>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Type for queue-group redirect list
Context	<b>configure qos queue-group-redirect-list string type keyword</b>
Tree	<b>type</b>
Options	vxlan-vni
Default	vxlan-vni
Introduced	16.0.R1
Platforms	All

**queue-group-templates**

Synopsis	Enter the <b>queue-group-templates</b> context
----------	--

Context	<b>configure qos queue-group-templates</b>
Tree	<a href="#">queue-group-templates</a>
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure qos queue-group-templates egress</b>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

## queue-group [[egress-queue-group-name](#)] *string*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure qos queue-group-templates egress queue-group <i>string</i></b>
Tree	<a href="#">queue-group</a>
Introduced	16.0.R1
Platforms	All

## [\[egress-queue-group-name\]](#) *string*

Synopsis	Egress queue group template name
Context	<b>configure qos queue-group-templates egress queue-group <i>string</i></b>
Tree	<a href="#">queue-group</a>
Description	This command specifies the name of the egress queue group template. Each ingress queue group template must be uniquely named within the system. Multiple ingress queue group templates may not share the same name. An ingress and egress queue group template may share the same name.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	0 to 80
Introduced	16.0.R1
Platforms	All

**fc** [*fc-name*] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**queue**

Synopsis	Enter the <b>queue</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i> <b>queue</b>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

**none**

Synopsis	No mid-pool is associated with this parent-pool
Context	<b>configure</b> qos queue-group-templates egress queue-group string fc keyword queue none
Tree	none
Notes	The following elements are part of a choice: <b>none</b> or <b>queue-id</b> .
Introduced	16.0.R1
Platforms	All

**queue-id** *reference*

Synopsis	Queue defined in forwarding class mapping
Context	<b>configure</b> qos queue-group-templates egress queue-group string fc keyword queue queue-id <i>reference</i>
Tree	queue-id
Reference	<b>configure</b> qos queue-group-templates egress queue-group string queue number
Notes	The following elements are part of a choice: <b>none</b> or <b>queue-id</b> .
Introduced	16.0.R1
Platforms	All

**hs-attachment-policy** *reference*

Synopsis	HS attachment policy applied
Context	<b>configure</b> qos queue-group-templates egress queue-group string hs-attachment-policy <i>reference</i>
Tree	hs-attachment-policy
Reference	<b>configure</b> qos hs-attachment-policy string
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-group** [group-id] *number*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group string hs-wrr-group <i>number</i>
Tree	hs-wrr-group

Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **[group-id]** *number*

Synopsis HS WRR group identifier  
 Context **configure** qos queue-group-templates egress queue-group *string* hs-wrr-group *number*  
 Tree [hs-wrr-group](#)  
 Range 1 to 2  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **adaptation-rule**

Synopsis Enter the **adaptation-rule** context  
 Context **configure** qos queue-group-templates egress queue-group *string* hs-wrr-group *number* [adaptation-rule](#)  
 Tree [adaptation-rule](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value  
 Context **configure** qos queue-group-templates egress queue-group *string* hs-wrr-group *number* [adaptation-rule](#) *pir* *keyword*  
 Tree [pir](#)  
 Options max, min, closest  
 Default closest  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Weight of scheduling class

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [*policer-id*] *number*

Synopsis	Enter the <b>policer</b> list instance
----------	--

Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string policer number</i>
Tree	<a href="#">policer</a>
Description	Commands in this context configure a QoS egress queue-group policer.
Introduced	16.0.R1
Platforms	All

### **[policer-id]** *number*

Synopsis	Egress queue-group policer ID
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string policer number</i>
Tree	<a href="#">policer</a>
Description	This command specifies the queue-group policer that will either be created or edited within the queue group template. For VSR, the queue group template may only have up to eight policers (numbered 1 through 8).
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string policer number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir** *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string policer number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest

Introduced 16.0.R1  
Platforms All

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value  
Context **configure** qos queue-group-templates egress queue-group *string* policer *number* adaptation-rule **pir** *keyword*  
Tree [pir](#)  
Options max, min, closest  
Default closest  
Introduced 16.0.R1  
Platforms All

### **adv-config-policy** *reference*

Synopsis Advanced QoS policy name  
Context **configure** qos queue-group-templates egress queue-group *string* policer *number* adv-config-policy *reference*  
Tree [adv-config-policy](#)  
Reference **configure** qos adv-config-policy *string*  
Introduced 16.0.R1  
Platforms All

### **arbiter-parent**

Synopsis Enter the **arbiter-parent** context  
Context **configure** qos queue-group-templates egress queue-group *string* policer *number* arbiter-parent  
Tree [arbiter-parent](#)  
Introduced 16.0.R1  
Platforms All

### **arbiter-name** *string*

Synopsis Arbiter name

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent arbiter-name <i>string</i>
Tree	arbiter-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**level** *number*

Synopsis	Priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight in the priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent weight <i>number</i>
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> cbs ( <i>number</i>   <i>keyword</i> )
Tree	cbs
Range	0 to 268435456

Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **exceed-pir** *boolean*

Synopsis	Forward packets exceeding the PIR as exceed-profile
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number exceed-pir</a> <i>boolean</i>
Tree	<a href="#">exceed-pir</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **high-prio-only** (*number | keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number high-prio-only</a> ( <i>number   keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1

Platforms All

### **mbs** (*number* | *keyword*)

Synopsis Maximum buffer size for the template queue

Context **configure** qos queue-group-templates egress queue-group *string* policer *number* mbs (*number* | *keyword*)

Tree [mbs](#)

Range 0 to 268435456

Units bytes

Options auto

Default auto

Introduced 16.0.R1

Platforms All

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information

Context **configure** qos queue-group-templates egress queue-group *string* policer *number* packet-byte-offset *number*

Tree [packet-byte-offset](#)

Range -64 to 31

Default 0

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** qos queue-group-templates egress queue-group *string* policer *number* percent-rate

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms All

**cir** *decimal-number*

Synopsis	Administrative CIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	20.10.R1
Platforms	All

**pir** *decimal-number*

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	<a href="#">reference-rate</a>
Options	local-limit, reference-port-limit
Default	local-limit
Introduced	20.10.R1
Platforms	All

**profile-capped** *boolean*

Synopsis	Enforce a limit on the profile
----------	--------------------------------

Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string</i> <b>policer number profile-capped</b> <i>boolean</i>
Tree	<a href="#">profile-capped</a>
Default	false
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string</i> <b>policer number rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string</i> <b>policer number rate</b> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string</i> <b>policer number rate</b> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 2000000000

Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Default	minimal
Introduced	16.0.R1
Platforms	All

### **queue** [**queue-id**] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *number*

Synopsis	Egress Queue-Group queue identifier
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

## adv-config-policy *reference*

Synopsis	Name of the advanced configuration policy
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adv-config-policy <i>reference</i>

Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure</b> <a href="#">qos adv-config-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>drop-tail</b>

Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## exceed

Synopsis	Enter the <b>exceed</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">drop-tail exceed</a>
Tree	<a href="#">exceed</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">drop-tail exceed percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## high

Synopsis	Enter the <b>high</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">drop-tail high</a>
Tree	<a href="#">high</a>
Introduced	16.0.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail high percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**highplus**

Synopsis	Enter the <b>highplus</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail highplus
Tree	<a href="#">highplus</a>
Introduced	16.0.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail highplus percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
----------	------------------------------

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail low percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **dynamic-mbs** *boolean*

Synopsis	Allow MBS size modification to maintain maximum latency
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> dynamic-mbs <i>boolean</i>
Tree	dynamic-mbs
Default	false
Introduced	16.0.R1
Platforms	All

### **hs-alt-port-class-pool** *boolean*

Synopsis	Use HS alternate class port pool buffer for traffic
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> hs-alt-port-class-pool <i>boolean</i>
Tree	hs-alt-port-class-pool
Default	false
Introduced	16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Scheduling class weight

Context **configure** qos queue-group-templates egress queue-group *string* queue *number* **hs-class-weight** *number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Default 1

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context

Context **configure** qos queue-group-templates egress queue-group *string* queue *number* **hs-wred-queue**

Tree [hs-wred-queue](#)

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy name

Context **configure** qos queue-group-templates egress queue-group *string* queue *number* **hs-wred-queue** *policy* *reference*

Tree [policy](#)

Reference **configure** qos slope-policy *string*

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis WRR weight with which queue parents into the scheduler

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <b>hs-wrr-weight</b> <i>number</i>
Tree	<b>hs-wrr-weight</b>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mbs</b>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **packet-byte-offset** *number*

Synopsis	Packet byte offset for addition of policing information
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<b>packet-byte-offset</b>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
----------	---------------------------------------

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	Administrative CIR percent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit

---

Introduced	20.10.R1
Platforms	All

## port-parent

Synopsis	Enable the <b>port-parent</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent
Tree	port-parent
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

## cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

**level number**

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent <i>level</i> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Weight used at above-CIR port priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent <i>weight</i> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**queue-delay number**

Synopsis	Target queue delay for forwarding packets through queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> queue-delay <i>number</i>
Tree	<a href="#">queue-delay</a>
Range	1 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

**queue-type keyword**

Synopsis	Method used to service queue from hardware perspective
----------	--

Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queue number queue-type keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, best-effort
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queue number rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queue number rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

## pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queue number rate pir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 2000000000

Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

### **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> scheduler-parent
Tree	scheduler-parent
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

### **cir-level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> scheduler-parent cir-level <i>number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

### **cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> scheduler-parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Default	1
Introduced	16.0.R1

Platforms All

### **level** *number*

Synopsis Level of priority while feeding to the parent

Context **configure qos queue-group-templates egress queue-group** *string queue number scheduler-parent level number*

Tree [level](#)

Range 1 to 8

Default 1

Introduced 16.0.R1

Platforms All

### **scheduler-name** *string*

Synopsis Parent scheduler name

Context **configure qos queue-group-templates egress queue-group** *string queue number scheduler-parent scheduler-name string*

Tree [scheduler-name](#)

Description This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **weight** *number*

Synopsis Weight used by the scheduler for feeding the queue

Context **configure qos queue-group-templates egress queue-group** *string queue number scheduler-parent weight number*

Tree [weight](#)

Range 0 to 100

Default 1

---

Introduced	16.0.R1
Platforms	All

### wred-queue

Synopsis	Enter the <b>wred-queue</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue
Tree	wred-queue
Introduced	16.0.R1
Platforms	All

### mode keyword

Synopsis	Pool association to allow queue-specific WRED slopes
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue mode <i>keyword</i>
Tree	mode
Options	native, pool-per-queue
Introduced	16.0.R1
Platforms	All

### policy reference

Synopsis	Slope policy name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue policy <i>reference</i>
Tree	policy
Reference	<b>configure</b> qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

### usage keyword

Synopsis	Congestion control type
----------	-------------------------

Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queue number wred-queue usage keyword</i>
Tree	<a href="#">usage</a>
Options	auto, exceed-low
Introduced	16.0.R1
Platforms	All

### **queues-hqos-manageable** *boolean*

Synopsis	Manage queues through the Hierarchical QoS process
Context	<b>configure qos queue-group-templates egress queue-group</b> <i>string queues-hqos-manageable boolean</i>
Tree	<a href="#">queues-hqos-manageable</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure qos queue-group-templates ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

### **queue-group** [[ingress-queue-group-name](#)] *string*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i>
Tree	<a href="#">queue-group</a>
Introduced	16.0.R1
Platforms	All

**[ingress-queue-group-name] string**

Synopsis	Ingress queue group template name
Context	<b>configure</b> qos queue-group-templates ingress queue-group string
Tree	queue-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure</b> qos queue-group-templates ingress queue-group string description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**policer [policer-id] number**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> qos queue-group-templates ingress queue-group string policer number
Tree	policer
Introduced	16.0.R1
Platforms	All

**[policer-id] number**

Synopsis	Ingress Queue-Group Policer identifier
Context	<b>configure</b> qos queue-group-templates ingress queue-group string policer number
Tree	policer
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

## adaptation-rule

Synopsis Enter the **adaptation-rule** context

Context **configure** qos queue-group-templates ingress queue-group *string* policer *number*  
adaptation-rule

Tree adaptation-rule

Introduced 16.0.R1

Platforms All

## cir keyword

Synopsis Constraint used when deriving the operational CIR value

Context **configure** qos queue-group-templates ingress queue-group *string* policer *number*  
adaptation-rule cir *keyword*

Tree cir

Options max, min, closest

Default closest

Introduced 16.0.R1

Platforms All

## pir keyword

Synopsis Constraint used when deriving the operational PIR value

Context **configure** qos queue-group-templates ingress queue-group *string* policer *number*  
adaptation-rule pir *keyword*

Tree pir

Options max, min, closest

Default closest

Introduced 16.0.R1

Platforms All

## adv-config-policy *reference*

Synopsis Advanced QoS policy name

Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number adv-config-policy reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure qos adv-config-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## arbiter-parent

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number arbiter-parent</i>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	All

## arbiter-name *string*

Synopsis	Arbiter name
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number arbiter-parent arbiter-name</i> <i>string</i>
Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## level *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number arbiter-parent level</i> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> <i>arbiter-parent weight number</i>
Tree	<a href="#">weight</a>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> cbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> <i>description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> high-prio-only ( <i>number</i>   <i>keyword</i> )
Tree	high-prio-only
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**mbs** (*number* | *keyword*)

Synopsis	Maximum buffer size for the template queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> mbs ( <i>number</i>   <i>keyword</i> )
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	All

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.2.R1
Platforms	All

## cir decimal-number

Synopsis	Administrative CIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	20.2.R1
Platforms	All

## pir decimal-number

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.2.R1
Platforms	All

## profile-capped boolean

Synopsis	Enforce a limit on the profile
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> profile-capped <i>boolean</i>
Tree	profile-capped

Default	false
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 2000000000
Units	kilobps
Options	max

Default	max
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Default	minimal
Introduced	16.0.R1
Platforms	All

### **queue** [**queue-id**] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *number*

Synopsis	Ingress Queue-Group Queue identifier
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint for deriving operational CIR for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

## fir keyword

Synopsis	Constraint for deriving operational FIR for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule fir <i>keyword</i>
Tree	fir
Options	max, min, closest
Default	closest
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## pir keyword

Synopsis	Constraint for deriving operational FIR for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	pir

Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

### **adv-config-policy** *reference*

Synopsis	Advanced QoS policy name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number <b>adv-config-policy</b> <i>reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure</b> qos <a href="#">adv-config-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes

Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cir-non-profiling** *boolean*

Synopsis	Prevent profile modification of CIR dependent packet
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> cir-non-profiling <i>boolean</i>
Tree	<a href="#">cir-non-profiling</a>
Description	<p>When configured to <b>true</b>, the system prevents the modification of the profile of a packet-dependent queue rate compared to its configured CIR. The CIR continues to be used to affect the scheduling priority of a queue.</p> <p>This command is only supported on hardware that is FP4-based and later and is ignored when the related policy is applied to FP3-based hardware.</p> <p>This command should not be configured under an ingress queue group template queue associated with a LAG which spans FP4-based and later and FP3-based hardware as the resulting operation could be different depending on which hardware type the traffic ingresses.</p>
Default	false
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> drop-tail
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> drop-tail low

Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string queue number drop-tail low percent-reduction-from-mbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **mbs** (*number* | *keyword*)

Synopsis	Maximum buffer space that is allowed for queue
Context	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string queue number mbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **multipoint** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create an ingress multipoint queue
----------	------------------------------------

Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> multipoint <i>boolean</i>
Tree	<a href="#">multipoint</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **packet-byte-offset** *number*

Synopsis	Packet size modification for queue accounting
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> packet-byte-offset <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	Administrative CIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00

Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	20.10.R1
Platforms	All

### **fir** *decimal-number*

Synopsis	Administrative FIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">percent-rate</a> <b>fir</b> <i>decimal-number</i>
Tree	<a href="#">fir</a>
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	20.10.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	Administrative PIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

### **police**

Synopsis	Drop out-of-profile traffic feeding into physical queue
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">percent-rate</a> <b>police</b>
Tree	<a href="#">police</a>
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	20.10.R1
Platforms	All

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	20.10.R1
Platforms	All

**queue-mode** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Queue operational mode for explicitly profiled packets
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> queue-mode <i>keyword</i>
Tree	queue-mode
Options	priority, profile
Default	priority
Introduced	16.0.R1
Platforms	All

**queue-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority that this queue receives from the hardware level schedulers
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> queue-type <i>keyword</i>
Tree	queue-type
Options	expedited, best-effort

Default	best-effort
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

**fir** (*number* | *keyword*)

Synopsis	Administrative FIR

Synopsis Level of priority while feeding to the parent

Context **configure** qos queue-group-templates ingress queue-group *string* queue *number*  
scheduler-parent level *number*

Tree [level](#)

Range 1 to 8

Default 1

Introduced 16.0.R1

Platforms All

**scheduler-name** *string*

Synopsis	Scheduler name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> scheduler-parent scheduler-name <i>string</i>
Tree	<a href="#">scheduler-name</a>
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used by the scheduler for feeding the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> scheduler-parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**sap-egress** [[sap-egress-policy-name](#)] *string*

Synopsis	Enter the <b>sap-egress</b> list instance
Context	<b>configure</b> qos sap-egress <i>string</i>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

**[sap-egress-policy-name]** *string*

Synopsis	Policy name
Context	<b>configure</b> qos sap-egress <i>string</i>

Tree	<a href="#">sap-egress</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dot1p** [[dot1p-value](#)] *number*

Synopsis	Enter the <b>dot1p</b> list instance
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">dot1p</a> <i>number</i>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

### **[dot1p-value]** *number*

Synopsis	Dot1p value to match in the packet
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">dot1p</a> <i>number</i>
Tree	<a href="#">dot1p</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string dot1p number fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile keyword**

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos sap-egress</b> <i>string dot1p number profile keyword</i>
Tree	<b>profile</b>
Options	in, out, de, exceed, inplus
Introduced	16.0.R1
Platforms	All

**dscp [dscp-name] keyword**

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure qos sap-egress</b> <i>string dscp keyword</i>
Tree	<b>dscp</b>
Introduced	16.0.R1
Platforms	All

**[dscp-name] keyword**

Synopsis	DSCP name to perform reclassification actions
Context	<b>configure qos sap-egress</b> <i>string dscp keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **fc** *keyword*

Synopsis Forwarding class  
Context **configure** qos sap-egress string dscp keyword fc keyword  
Tree fc  
Options be, l2, af, l1, h2, ef, h1, nc  
Introduced 16.0.R1  
Platforms All

### **profile** *keyword*

Synopsis Default profile for the ingressing traffic  
Context **configure** qos sap-egress string dscp keyword profile keyword  
Tree profile  
Options in, out, exceed, inplus  
Introduced 16.0.R1  
Platforms All

### **ethernet-ctag** *boolean*

Synopsis Tag value for dot1p and DE (Drop-Eligible) that are used by all dot1-p entries  
Context **configure** qos sap-egress string ethernet-ctag boolean  
Tree ethernet-ctag  
Default false  
Introduced 16.0.R1  
Platforms All

### **fc** [*fc-name*] *keyword*

Synopsis Enter the **fc** list instance  
Context **configure** qos sap-egress string fc keyword  
Tree fc

---

Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string fc keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**de-mark**

Synopsis	Enable the <b>de-mark</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark</i>
Tree	<a href="#">de-mark</a>
Introduced	16.0.R1
Platforms	All

**force number**

Synopsis	DE value
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark force number</i>
Tree	<a href="#">force</a>
Range	0 to 1
Introduced	16.0.R1
Platforms	All

**de-mark-inner**

Synopsis	Enable the <b>de-mark-inner</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark-inner</i>
Tree	<a href="#">de-mark-inner</a>

Introduced 16.0.R1  
Platforms All

### **force number**

Synopsis DE value to set in inner VLAN tag  
Context **configure qos sap-egress** *string fc keyword de-mark-inner force number*  
Tree [force](#)  
Range 0 to 1  
Introduced 16.0.R1  
Platforms All

### **de-mark-outer**

Synopsis Enable the **de-mark-outer** context  
Context **configure qos sap-egress** *string fc keyword de-mark-outer*  
Tree [de-mark-outer](#)  
Introduced 16.0.R1  
Platforms All

### **force number**

Synopsis DE value to set in outer VLAN tag  
Context **configure qos sap-egress** *string fc keyword de-mark-outer force number*  
Tree [force](#)  
Range 0 to 1  
Introduced 16.0.R1  
Platforms All

### **dot1p**

Synopsis Enter the **dot1p** context  
Context **configure qos sap-egress** *string fc keyword dot1p*  
Tree [dot1p](#)  
Introduced 16.0.R1

Platforms All

### **exceed-profile** *number*

Synopsis Dot1p value for exceed-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p exceed-profile number*  
Tree [exceed-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **in-profile** *number*

Synopsis Dot1p value for in-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p in-profile number*  
Tree [in-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **out-profile** *number*

Synopsis Dot1p value for out-of-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p out-profile number*  
Tree [out-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **dot1p-inner**

Synopsis Enter the **dot1p-inner** context  
Context **configure qos sap-egress** *string fc keyword dot1p-inner*  
Tree [dot1p-inner](#)  
Introduced 16.0.R1

Platforms All

### **in-profile** *number*

Synopsis Inner Dot1p value for in-profile frames

Context **configure** qos sap-egress *string* fc *keyword* dot1p-inner in-profile *number*

Tree [in-profile](#)

Range 0 to 7

Introduced 16.0.R1

Platforms All

### **out-profile** *number*

Synopsis Inner Dot1p value for out-of-profile frames

Context **configure** qos sap-egress *string* fc *keyword* dot1p-inner out-profile *number*

Tree [out-profile](#)

Range 0 to 7

Introduced 16.0.R1

Platforms All

### **dot1p-outer**

Synopsis Enter the **dot1p-outer** context

Context **configure** qos sap-egress *string* fc *keyword* dot1p-outer

Tree [dot1p-outer](#)

Introduced 16.0.R1

Platforms All

### **exceed-profile** *number*

Synopsis Outer Dot1p value for exceed-profile frames

Context **configure** qos sap-egress *string* fc *keyword* dot1p-outer exceed-profile *number*

Tree [exceed-profile](#)

Range 0 to 7

Introduced 16.0.R1

Platforms All

### **in-profile** *number*

Synopsis Outer Dot1p value for in-profile frames  
 Context **configure qos sap-egress** *string fc keyword dot1p-outer in-profile number*  
 Tree [in-profile](#)  
 Range 0 to 7  
 Introduced 16.0.R1  
 Platforms All

### **out-profile** *number*

Synopsis Outer Dot1p value for out-of-profile frames  
 Context **configure qos sap-egress** *string fc keyword dot1p-outer out-profile number*  
 Tree [out-profile](#)  
 Range 0 to 7  
 Introduced 16.0.R1  
 Platforms All

### **dscp**

Synopsis Enter the **dscp** context  
 Context **configure qos sap-egress** *string fc keyword dscp*  
 Tree [dscp](#)  
 Notes The following elements are part of a choice: **dscp** or **prec**.  
 Introduced 16.0.R1  
 Platforms All

### **exceed-profile** *keyword*

Synopsis DSCP name for exceed-profile frames  
 Context **configure qos sap-egress** *string fc keyword dscp exceed-profile keyword*  
 Tree [exceed-profile](#)  
 Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31,

cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

### **in-profile** *keyword*

Synopsis DSCP name for in-profile frames

Context **configure** qos sap-egress *string* fc *keyword* dscp in-profile *keyword*

Tree [in-profile](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

### **out-profile** *keyword*

Synopsis DSCP name for out-of-profile frames

Context **configure** qos sap-egress *string* fc *keyword* dscp out-profile *keyword*

Tree [out-profile](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

### **policer** *reference*

Synopsis Policer to forward the traffic

Context **configure** qos sap-egress *string* fc *keyword* policer *reference*

Tree [policer](#)

Reference **configure** qos sap-egress *string* policer *number*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **port-redirect-group-queue**

Synopsis	Enable the <b>port-redirect-group-queue</b> context
Context	<b>configure qos sap-egress string fc keyword port-redirect-group-queue</b>
Tree	<a href="#">port-redirect-group-queue</a>
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **queue number**

Synopsis	Queue to forward the traffic
Context	<b>configure qos sap-egress string fc keyword port-redirect-group-queue queue number</b>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

### **prec**

Synopsis	Enter the <b>prec</b> context
Context	<b>configure qos sap-egress string fc keyword prec</b>
Tree	<a href="#">prec</a>
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **exceed-profile number**

Synopsis	Precedence for exceed-profile frames
Context	<b>configure qos sap-egress string fc keyword prec exceed-profile number</b>

---

Tree	<a href="#">exceed-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **in-profile** *number*

Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

## queue-group-queue

Synopsis	Enable the <b>queue-group-queue</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> queue-group-queue
Tree	queue-group-queue
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

## instance *number*

Synopsis	Instance ID
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> queue-group-queue <i>instance number</i>
Tree	instance
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## queue *reference*

Synopsis	SAP egress queue ID
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> queue-group-queue <i>queue reference</i>
Tree	queue
Reference	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <i>queue number</i>
Introduced	16.0.R1
Platforms	All

## queue-group-name *reference*

Synopsis	Queue group to forward traffic
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> queue-group-queue <i>queue-group-name reference</i>
Tree	queue-group-name
Reference	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i>
Notes	This element is mandatory.

Introduced 16.0.R1  
 Platforms All

### **hs-attachment-policy** *reference*

Synopsis HS attachment policy applied  
 Context **configure qos sap-egress** *string* **hs-attachment-policy** *reference*  
 Tree [hs-attachment-policy](#)  
 Reference **configure qos** **hs-attachment-policy** *string*  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *number*

Synopsis Enter the **hs-wrr-group** list instance  
 Context **configure qos sap-egress** *string* **hs-wrr-group** *number*  
 Tree [hs-wrr-group](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### [[group-id](#)] *number*

Synopsis HS WRR group identifier  
 Context **configure qos sap-egress** *string* **hs-wrr-group** *number*  
 Tree [hs-wrr-group](#)  
 Range 1 to 2  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **adaptation-rule**

Synopsis Enter the **adaptation-rule** context  
 Context **configure qos sap-egress** *string* **hs-wrr-group** *number* **adaptation-rule**  
 Tree [adaptation-rule](#)

Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value  
Context **configure** [qos sap-egress](#) *string* [hs-wrr-group](#) *number* [adaptation-rule](#) **pir** *keyword*  
Tree [pir](#)  
Options max, min, closest  
Default closest  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Weight of scheduling class  
Context **configure** [qos sap-egress](#) *string* [hs-wrr-group](#) *number* [hs-class-weight](#) *number*  
Tree [hs-class-weight](#)  
Range 1 | 2 | 4 | 8  
Default 1  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis Administrative PIR percent  
Context **configure** [qos sap-egress](#) *string* [hs-wrr-group](#) *number* [percent-rate](#) *decimal-number*  
Tree [percent-rate](#)  
Range 0.01 to 100.00  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

**rate** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos sap-egress <i>string</i> hs-wrr-group <i>number</i> rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria
Tree	ip-criteria
Introduced	16.0.R1
Platforms	All

**entry** [*entry-id*] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i>
Tree	entry
Introduced	16.0.R1
Platforms	All

**[entry-id]** *number*

Synopsis	IP Criteria Entry Index
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.

Introduced 16.0.R1  
 Platforms All

### **action**

Synopsis Enter the **action** context  
 Context **configure** qos sap-egress *string* ip-criteria entry number action  
 Tree [action](#)  
 Introduced 16.0.R1  
 Platforms All

### **fc keyword**

Synopsis Forwarding class  
 Context **configure** qos sap-egress *string* ip-criteria entry number action fc keyword  
 Tree [fc](#)  
 Options be, l2, af, l1, h2, ef, h1, nc  
 Introduced 16.0.R1  
 Platforms All

### **policer reference**

Synopsis Policer identifier for the matched traffic  
 Context **configure** qos sap-egress *string* ip-criteria entry number action policer reference  
 Tree [policer](#)  
 Reference **configure** qos sap-egress *string* policer number  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **port-redirect-group-queue boolean**

Synopsis Use queue specified in egress access port queue group  
 Context **configure** qos sap-egress *string* ip-criteria entry number action port-redirect-group-queue boolean  
 Tree [port-redirect-group-queue](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **profile** *keyword*

Synopsis	Default profile for the matching traffic
Context	<b>configure</b> qos sap-egress <i>string ip-criteria entry number action profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

### **queue** *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	<b>configure</b> qos sap-egress <i>string ip-criteria entry number action queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> qos sap-egress <i>string ip-criteria entry number action type keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

### **use-fc-mapped-queue** *boolean*

Synopsis	Redirect policer output to the configured queues
----------	--

Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number action use-fc-mapped-queue boolean</i>
Tree	<a href="#">use-fc-mapped-queue</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match</i>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

Synopsis	DSCP value to match in the packet
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match dscp keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**dst-ip**

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match</i> <b>dst-ip</b>
Tree	<b>dst-ip</b>
Introduced	16.0.R1
Platforms	All

**address** (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match</i> <b>dst-ip address</b> ( <i>ipv4-address</i>   <i>ipv4-prefix-with-host-bits</i> )
Tree	<b>address</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix-list** *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match</i> <b>dst-ip ip-prefix-list reference</b>
Tree	<b>ip-prefix-list</b>
Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match</i> <b>dst-ip mask</b> <i>string</i>
Tree	<b>mask</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .

---

Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos sap-egress string ip-criteria entry number match dst-port</b>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' as match condition
Context	<b>configure qos sap-egress string ip-criteria entry number match dst-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, or range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' as match condition
Context	<b>configure qos sap-egress string ip-criteria entry number match dst-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, or range</b> .
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Value 'less than' as match condition
Context	<b>configure qos sap-egress string ip-criteria entry number match dst-port lt number</b>

Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">dst-port</a> <a href="#">range</a>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">dst-port</a> <a href="#">range</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">dst-port</a> <a href="#">range</a> <a href="#">start</a> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment** *keyword*

Synopsis	Fragmented packets as the match criterion
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match fragment <i>keyword</i>
Tree	fragment
Options	false, true
Introduced	16.0.R1
Platforms	All

**protocol** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match protocol ( <i>number</i>   <i>keyword</i> )
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

**address** (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-ip address ( <i>ipv4-address</i>   <i>ipv4-prefix-with-host-bits</i> )
Tree	address
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .

Introduced	16.0.R1
Platforms	All

### **ip-prefix-list** *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	<b>configure qos sap-egress string ip-criteria entry number match src-ip ip-prefix-list reference</b>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure qos match-list ip-prefix-list string</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure qos sap-egress string ip-criteria entry number match src-ip mask string</b>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos sap-egress string ip-criteria entry number match src-port</b>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Value 'equal to' as match condition
Context	<b>configure qos sap-egress string ip-criteria entry number match src-port eq number</b>

Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt** *number*

Synopsis	Value 'greater than' as match condition
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">gt</a> <i>number</i>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt** *number*

Synopsis	Value 'less than' as match condition
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">lt</a> <i>number</i>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **end number**

Synopsis	Upper bound of the port range
Context	<b>configure qos sap-egress string ip-criteria entry number match src-port range end number</b>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-egress string ip-criteria entry number match src-port range start number</b>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure qos sap-egress string ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

### **entry [entry-id] number**

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos sap-egress string ipv6-criteria entry number</b>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

**[entry-id]** *number*

Synopsis	IP Criteria Entry Index
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">action</a>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">action fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**policer** *reference*

Synopsis	Policer identifier for the matched traffic
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">action policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**port-redirect-group-queue** *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry number</a> <a href="#">action port-redirect-group-queue</a> <i>boolean</i>
Tree	<a href="#">port-redirect-group-queue</a>
Default	false
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the matching traffic
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry number</a> <a href="#">action profile</a> <i>keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**queue** *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry number</a> <a href="#">action queue</a> <i>number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry number</a> <a href="#">action type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match

Introduced 16.0.R1  
 Platforms All

### **use-fc-mapped-queue** *boolean*

Synopsis Redirect policer output to the configured queues  
 Context **configure qos sap-egress** *string ipv6-criteria entry number action use-fc-mapped-queue boolean*  
 Tree [use-fc-mapped-queue](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **description** *string*

Synopsis Text description  
 Context **configure qos sap-egress** *string ipv6-criteria entry number description string*  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R1  
 Platforms All

### **match**

Synopsis Enter the **match** context  
 Context **configure qos sap-egress** *string ipv6-criteria entry number match*  
 Tree [match](#)  
 Introduced 16.0.R1  
 Platforms All

### **dscp** *keyword*

Synopsis DSCP value to match in the packet  
 Context **configure qos sap-egress** *string ipv6-criteria entry number match dscp keyword*  
 Tree [dscp](#)

Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

## dst-ip

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip</b>
Tree	<b>dst-ip</b>
Introduced	16.0.R1
Platforms	All

## address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	Destination IPv6 address for SAP QoS policy match
Context	<b>configure qos sap-egress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip address</b> ( <i>ipv6-address</i>   <i>ipv6-prefix-with-host-bits</i> )
Tree	<b>address</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure qos sap-egress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip ipv6-prefix-list reference</b>
Tree	<b>ipv6-prefix-list</b>
Reference	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask string**

Synopsis	IP address mask to match with destination IP of packet
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-ip mask string</b>
Tree	<b>mask</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port</b>
Tree	<b>dst-port</b>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' as match condition
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port eq number</b>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' as match condition
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port gt number</b>
Tree	<b>gt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **lt number**

Synopsis Value 'less than' as match condition

Context **configure qos sap-egress string ipv6-criteria entry number match dst-port lt number**

Tree **lt**

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **range**

Synopsis Enter the **range** context

Context **configure qos sap-egress string ipv6-criteria entry number match dst-port range**

Tree **range**

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the port range

Context **configure qos sap-egress string ipv6-criteria entry number match dst-port range end number**

Tree **end**

Range 0 to 65535

Introduced 16.0.R1

Platforms All

### **start number**

Synopsis Lower bound of the port range

Context **configure qos sap-egress string ipv6-criteria entry number match dst-port range start number**

Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match next-header</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">next-header</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

### **src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-ip</a>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

### **address** (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	Source IPv6 address for SAP QoS policy match
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-ip address</a> ( <i>ipv6-address</i>   <i>ipv6-prefix-with-host-bits</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure</b> qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	<b>configure</b> qos match-list ipv6-prefix-list <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure</b> qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip mask <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-port
Tree	src-port
Introduced	16.0.R1
Platforms	All

**eq** *number*

Synopsis	Value 'equal to' as match condition
Context	<b>configure</b> qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **gt number**

Synopsis Value 'greater than' as match condition

Context **configure qos sap-egress string ipv6-criteria entry number match src-port gt number**

Tree [gt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **lt number**

Synopsis Value 'less than' as match condition

Context **configure qos sap-egress string ipv6-criteria entry number match src-port lt number**

Tree [lt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **range**

Synopsis Enter the **range** context

Context **configure qos sap-egress string ipv6-criteria entry number match src-port range**

Tree [range](#)

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the port range

Context	<b>configure qos sap-egress</b> <i>string</i> <b>ipv6-criteria entry number match src-port range end number</b>
Tree	<b>end</b>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-egress</b> <i>string</i> <b>ipv6-criteria entry number match src-port range start number</b>
Tree	<b>start</b>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**parent-location keyword**

Synopsis	Location where queues look to find parent scheduler
Context	<b>configure qos sap-egress</b> <i>string</i> <b>parent-location keyword</b>
Tree	<b>parent-location</b>
Options	auto, sla
Default	auto
Introduced	16.0.R1
Platforms	All

**policer [policer-id] number**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer number</b>
Tree	<b>policer</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id] number**

Synopsis	SAP egress policer ID
Context	<b>configure qos sap-egress</b> <i>string policer number</i>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-egress</b> <i>string policer number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-egress</b> <i>string policer number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-egress</b> <i>string policer number adaptation-rule pir keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **adv-config-policy** *reference*

Synopsis Advanced QoS policy name  
 Context **configure qos sap-egress** *string* *policer number* **adv-config-policy** *reference*  
 Tree **adv-config-policy**  
 Reference **configure qos adv-config-policy** *string*  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-parent**

Synopsis Enter the **arbiter-parent** context  
 Context **configure qos sap-egress** *string* *policer number* **arbiter-parent**  
 Tree **arbiter-parent**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-name** *string*

Synopsis Arbiter name  
 Context **configure qos sap-egress** *string* *policer number* **arbiter-parent** **arbiter-name** *string*  
 Tree **arbiter-name**  
 Description This command specifies an arbiter name. The policer is intended to become a child to one of the tiered arbiters with the specified arbiter name where an instance of the policer is created. If the specified arbiter name does not exist, the policer is placed in the orphan state.  
 String Length 1 to 32  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level** *number*

Synopsis Level of priority while feeding to the parent  
 Context **configure qos sap-egress** *string* *policer number* **arbiter-parent** **level** *number*

Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **weight** *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">arbiter-parent</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **dscp-prec-remarking** *boolean*

Synopsis Remark DSCP/precedence based on packet profile state  
 Context **configure qos sap-egress** *string* **policer** *number* **dscp-prec-remarking** *boolean*  
 Tree [dscp-prec-remarking](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **exceed-pir** *boolean*

Synopsis Forward packets exceeding the PIR as exceed-profile  
 Context **configure qos sap-egress** *string* **policer** *number* **exceed-pir** *boolean*  
 Tree [exceed-pir](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **high-prio-only** (*number* | *keyword*)

Synopsis Percentage of MBS reserved for high priority traffic  
 Context **configure qos sap-egress** *string* **policer** *number* **high-prio-only** (*number* | *keyword*)  
 Tree [high-prio-only](#)  
 Range 0 to 100  
 Options auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis Maximum burst tolerance allowed by the policer  
 Context **configure qos sap-egress** *string* **policer** *number* **mbs** (*number* | *keyword*)

Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	Administrative CIR percent
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis Administrative PIR percent  
 Context **configure qos sap-egress** *string* **policer** *number* **percent-rate** **pir** *decimal-number*  
 Tree **pir**  
 Range 0.01 to 100.00  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **reference-rate** *keyword*

Synopsis Reference rate  
 Context **configure qos sap-egress** *string* **policer** *number* **percent-rate** **reference-rate** *keyword*  
 Tree **reference-rate**  
 Options local-limit, reference-port-limit  
 Default local-limit  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **port-parent**

Synopsis Enable the **port-parent** context  
 Context **configure qos sap-egress** *string* **policer** *number* **port-parent**  
 Tree **port-parent**  
 Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir-level** *number*

Synopsis Port priority level for within-CIR offered load  
 Context **configure qos sap-egress** *string* **policer** *number* **port-parent** **cir-level** *number*  
 Tree **cir-level**

Description	This command defines the port priority that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the port schedulers with-CIR pass and the <b>cir-weight</b> command is ignored.
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir-weight** *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> port-parent cir-weight <i>number</i>
Tree	<a href="#">cir-weight</a>
Description	<p>This command defines the weight that the policer uses at the within-CIR port priority level.</p> <p>All CIR weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to the default value, the policer receives bandwidth only after other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level** *number*

Synopsis	Port priority level for above-CIR behavior
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> port-parent level <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight** *number*

Synopsis	Weight to use in the above-CIR port priority level
Context	<b>configure</b> <b>qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>port-parent</b> <b>weight</b> <i>number</i>
Tree	<b>weight</b>
Description	<p>This command defines the weight that the policer uses at the above-CIR port priority level.</p> <p>All weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after other children with a non-zero weight at this level.</p>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile-capped** *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	<b>configure</b> <b>qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>profile-capped</b> <i>boolean</i>
Tree	<b>profile-capped</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile-out-preserve** *boolean*

Synopsis	Preserve the color of offered out-of-profile traffic
Context	<b>configure</b> <b>qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>profile-out-preserve</b> <i>boolean</i>
Tree	<b>profile-out-preserve</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos sap-egress string policer number rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir (number | keyword)**

Synopsis	Administrative CIR
Context	<b>configure qos sap-egress string policer number rate cir (number   keyword)</b>
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir (number | keyword)**

Synopsis	Administrative PIR
Context	<b>configure qos sap-egress string policer number rate pir (number   keyword)</b>
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure qos sap-egress string policer number scheduler-parent</b>
Tree	<b>scheduler-parent</b>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **cir-level number**

Synopsis	Port priority level for within-CIR offered load
Context	<b>configure qos sap-egress string policer number scheduler-parent cir-level number</b>
Tree	<b>cir-level</b>
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the schedulers within-CIR pass and the <b>cir-weight</b> command is ignored.
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **cir-weight number**

Synopsis	Weight to use in the within-CIR port priority level
Context	<b>configure qos sap-egress string policer number scheduler-parent cir-weight number</b>
Tree	<b>cir-weight</b>
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**level number**

Synopsis	Priority level for bandwidth on the parent scheduler
Context	<b>configure</b> qos sap-egress string policer number scheduler-parent level number
Tree	level
Description	This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.  Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**scheduler-name string**

Synopsis	Scheduler name
Context	<b>configure</b> qos sap-egress string policer number scheduler-parent scheduler-name string
Tree	scheduler-name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight number**

Synopsis	Policer weight at the above-CIR priority level
Context	<b>configure</b> qos sap-egress string policer number scheduler-parent weight number
Tree	weight
Range	0 to 100
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policers-hqos-manageable** *boolean*

Synopsis	Manage policers through the Hierarchical QoS process
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policers-hqos-manageable</a> <i>boolean</i>
Tree	<a href="#">policers-hqos-manageable</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, VSR

**policy-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Egress SAP QoS policy ID
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policy-id</a> <i>number</i>
Tree	<a href="#">policy-id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**post-policer-mapping** *reference*

Synopsis	Post policer mapping policy applied to this policy
Context	<b>configure qos sap-egress</b> <i>string</i> <b>post-policer-mapping</b> <i>reference</i>
Tree	<b>post-policer-mapping</b>
Reference	<b>configure qos post-policer-mapping</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**prec** [**prec-value**] *number*

Synopsis	Enter the <b>prec</b> list instance
Context	<b>configure qos sap-egress</b> <i>string</i> <b>prec</b> <i>number</i>
Tree	<b>prec</b>
Introduced	16.0.R1
Platforms	All

**[prec-value]** *number*

Synopsis	Precedence value for which mapping is performed
Context	<b>configure qos sap-egress</b> <i>string</i> <b>prec</b> <i>number</i>
Tree	<b>prec</b>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string</i> <b>prec</b> <i>number</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos sap-egress</b> <i>string prec number profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**queue** [[queue-id](#)] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos sap-egress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *number*

Synopsis	Egress Queue-Group queue identifier
Context	<b>configure qos sap-egress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule pir keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**adv-config-policy reference**

Synopsis	Name of the advanced configuration policy
Context	<b>configure qos sap-egress</b> <i>string queue number adv-config-policy reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure qos adv-config-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**agg-shaper-weight number**

Synopsis	Aggregate shaper weight of the sap-egress queue
Context	<b>configure qos sap-egress</b> <i>string queue number agg-shaper-weight number</i>
Tree	<a href="#">agg-shaper-weight</a>
Range	1 to 100

Default	1
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>avg-frame-overhead</b> <i>decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto

Introduced 16.0.R1  
 Platforms All

## drop-tail

Synopsis Enter the **drop-tail** context  
 Context **configure qos sap-egress** *string queue number drop-tail*  
 Tree [drop-tail](#)  
 Introduced 16.0.R1  
 Platforms All

## exceed

Synopsis Enter the **exceed** context  
 Context **configure qos sap-egress** *string queue number drop-tail exceed*  
 Tree [exceed](#)  
 Introduced 16.0.R1  
 Platforms All

## percent-reduction-from-mbs (*number | keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail  
 Context **configure qos sap-egress** *string queue number drop-tail exceed percent-reduction-from-mbs* (*number | keyword*)  
 Tree [percent-reduction-from-mbs](#)  
 Range 0 to 100  
 Options auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms All

## high

Synopsis Enter the **high** context  
 Context **configure qos sap-egress** *string queue number drop-tail high*  
 Tree [high](#)

Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure qos sap-egress</b> <i>string</i> <b>queue</b> <i>number</i> <b>drop-tail high percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **highplus**

Synopsis	Enter the <b>highplus</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>queue</b> <i>number</i> <b>drop-tail highplus</b>
Tree	<a href="#">highplus</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure qos sap-egress</b> <i>string</i> <b>queue</b> <i>number</i> <b>drop-tail highplus percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number drop-tail low</i>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number | keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure qos sap-egress</b> <i>string queue number drop-tail low percent-reduction-from-mbs (number   keyword)</i>
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## fir-burst-limit (*number | keyword*)

Synopsis	Burst limit for FIR
Context	<b>configure qos sap-egress</b> <i>string queue number fir-burst-limit (number   keyword)</i>
Tree	<a href="#">fir-burst-limit</a>
Description	This command configures a burst limit for the FIR of the specified queue. If the keyword <b>auto</b> is used, the FIR burst limit is based on the PIR. In this case, it is recommended to use the explicit PIR value in the queue configuration.
Range	1 to 102400
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **hs-alt-port-class-pool** *boolean*

Synopsis	Use HS alternate class port pool buffer for traffic
Context	<b>configure</b> qos sap-egress <i>string queue number</i> <b>hs-alt-port-class-pool</b> <i>boolean</i>
Tree	<a href="#">hs-alt-port-class-pool</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Scheduling class weight
Context	<b>configure</b> qos sap-egress <i>string queue number</i> <b>hs-class-weight</b> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure</b> qos sap-egress <i>string queue number</i> <b>hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policy** *reference*

Synopsis	Slope policy name
Context	<b>configure</b> qos sap-egress <i>string queue number</i> <b>hs-wred-queue</b> <b>policy</b> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-weight** *number*

Synopsis	WRR weight with which queue parents into the scheduler
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>hs-wrr-weight</b> <i>number</i>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**mbs** (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**packet-byte-offset** *number*

Synopsis	Packet byte offset for addition of policing information
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 32
Default	0
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
----------	---------------------------------------

Context	<b>configure qos sap-egress</b> <i>string queue number percent-rate</i>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	Administrative CIR percent
Context	<b>configure qos sap-egress</b> <i>string queue number percent-rate cir decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure qos sap-egress</b> <i>string queue number percent-rate pir decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure qos sap-egress</b> <i>string queue number percent-rate reference-rate keyword</i>
Tree	<a href="#">reference-rate</a>
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	16.0.R1
Platforms	All

## port-parent

Synopsis	Enable the <b>port-parent</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number</i> <b>port-parent</b>
Tree	<b>port-parent</b>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

## cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	<b>configure qos sap-egress</b> <i>string queue number</i> <b>port-parent</b> <i>cir-level number</i>
Tree	<b>cir-level</b>
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure qos sap-egress</b> <i>string queue number</i> <b>port-parent</b> <i>cir-weight number</i>
Tree	<b>cir-weight</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

## level *number*

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	<b>configure qos sap-egress</b> <i>string queue number</i> <b>port-parent</b> <i>level number</i>
Tree	<b>level</b>
Range	1 to 8

Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used at above-CIR port priority level
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> port-parent <b>weight</b> <i>number</i>
Tree	<b>weight</b>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **queue-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> <b>queue-type</b> <i>keyword</i>
Tree	<b>queue-type</b>
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> <b>rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos sap-egress</b> <i>string queue number rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos sap-egress</b> <i>string queue number rate pir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**sched-class** (*number* | *keyword*)

Synopsis	Scheduler class for the sap-egress queue
Context	<b>configure qos sap-egress</b> <i>string queue number sched-class</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">sched-class</a>
Description	This command configures a scheduling class for the specified queue. If the keyword <b>auto</b> is used, the scheduling class mapping is done automatically.
Range	1 to 6
Options	auto
Default	auto
Introduced	21.7.R1

Platforms 7750 SR-1, 7750 SR-s

### **scheduler-parent**

Synopsis Enable the **scheduler-parent** context

Context **configure qos sap-egress** *string queue number scheduler-parent*

Tree [scheduler-parent](#)

Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.

Introduced 16.0.R1

Platforms All

### **cir-level number**

Synopsis Level of priority while feeding to the parent

Context **configure qos sap-egress** *string queue number scheduler-parent cir-level number*

Tree [cir-level](#)

Range 0 to 8

Default 0

Introduced 16.0.R1

Platforms All

### **cir-weight number**

Synopsis Weight used at the within-CIR port priority level

Context **configure qos sap-egress** *string queue number scheduler-parent cir-weight number*

Tree [cir-weight](#)

Range 0 to 100

Default 1

Introduced 16.0.R1

Platforms All

### **level number**

Synopsis Level of priority while feeding to the parent

Context **configure qos sap-egress** *string queue number scheduler-parent level number*

Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

### **scheduler-name** *string*

Synopsis	Parent scheduler name
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a> <b>scheduler-name</b> <i>string</i>
Tree	<a href="#">scheduler-name</a>
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used by the scheduler for feeding the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **wred-queue**

Synopsis	Enter the <b>wred-queue</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>wred-queue</b>
Tree	<a href="#">wred-queue</a>

Introduced 16.0.R1  
Platforms All

### **mode** *keyword*

Synopsis Pool association to allow queue-specific WRED slopes  
Context **configure qos sap-egress** *string queue number wred-queue mode keyword*  
Tree [mode](#)  
Options native, pool-per-queue  
Introduced 16.0.R1  
Platforms All

### **policy** *reference*

Synopsis Slope policy name  
Context **configure qos sap-egress** *string queue number wred-queue policy reference*  
Tree [policy](#)  
Reference **configure qos slope-policy** *string*  
Introduced 16.0.R1  
Platforms All

### **usage** *keyword*

Synopsis Congestion control type  
Context **configure qos sap-egress** *string queue number wred-queue usage keyword*  
Tree [usage](#)  
Options auto, exceed-low  
Introduced 16.0.R1  
Platforms All

### **sched-class-elevation**

Synopsis Enter the **sched-class-elevation** context  
Context **configure qos sap-egress** *string sched-class-elevation*  
Tree [sched-class-elevation](#)

Introduced 21.7.R1  
 Platforms 7750 SR-1, 7750 SR-s

### **sched-class** [*class-id*] *number*

Synopsis Enter the **sched-class** list instance  
 Context **configure qos sap-egress** *string* [sched-class-elevation](#) [sched-class](#) *number*  
 Tree [sched-class](#)  
 Introduced 21.7.R1  
 Platforms 7750 SR-1, 7750 SR-s

### **[class-id]** *number*

Synopsis Scheduling class associated with this SAP egress  
 Context **configure qos sap-egress** *string* [sched-class-elevation](#) [sched-class](#) *number*  
 Tree [sched-class](#)  
 Range 1 to 6  
 Notes This element is part of a list key.  
 Introduced 21.7.R1  
 Platforms 7750 SR-1, 7750 SR-s

### **weight** *number*

Synopsis Weight of the schedule class  
 Context **configure qos sap-egress** *string* [sched-class-elevation](#) [sched-class](#) *number* [weight](#) *number*  
 Tree [weight](#)  
 Range 1 to 8  
 Default 1  
 Introduced 21.7.R1  
 Platforms 7750 SR-1, 7750 SR-s

### **scope** *keyword*

Synopsis Scope of the policy

Context	<b>configure qos sap-egress</b> <i>string scope keyword</i>
Tree	<a href="#">scope</a>
Options	exclusive, template
Default	template
Introduced	16.0.R1
Platforms	All

## subscriber-mgmt

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure qos sap-egress</b> <i>string subscriber-mgmt</i>
Tree	<a href="#">subscriber-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dynamic-policer

Synopsis	Enter the <b>dynamic-policer</b> context
Context	<b>configure qos sap-egress</b> <i>string subscriber-mgmt dynamic-policer</i>
Tree	<a href="#">dynamic-policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-parent

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos sap-egress</b> <i>string subscriber-mgmt dynamic-policer arbiter-parent</i>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-name *string*

Synopsis	Arbiter name
Context	<b>configure qos sap-egress</b> <i>string subscriber-mgmt dynamic-policer arbiter-parent arbiter-name string</i>

Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> <a href="#">qos sap-egress string subscriber-mgmt dynamic-policer arbiter-parent level number</a>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**weight number**

Synopsis	Weight to be used by the arbiter for feeding this policer
Context	<b>configure</b> <a href="#">qos sap-egress string subscriber-mgmt dynamic-policer arbiter-parent weight number</a>
Tree	<a href="#">weight</a>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cbs (number | keyword)**

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> <a href="#">qos sap-egress string subscriber-mgmt dynamic-policer cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto

Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mbs** (*number* | *keyword*)

Synopsis	High priority 'violate' threshold of PIR leaky bucket of this policer
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer mbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer packet-byte-offset <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policer-id-range**

Synopsis	Enable the <b>policer-id-range</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range
Tree	<a href="#">policer-id-range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**end number**

Synopsis	Upper bound of the dynamic policer ID range
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range end number
Tree	end
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the dynamic policer ID range
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range start number
Tree	start
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**stat-mode keyword**

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer stat-mode keyword
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pcc-rule-entry**

Synopsis	Enter the <b>pcc-rule-entry</b> context
----------	---

---

Context	<b>configure qos sap-egress</b> <i>string</i> <i>subscriber-mgmt</i> <i>pcc-rule-entry</i>
Tree	<a href="#">pcc-rule-entry</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **range**

Synopsis	Enable the <b>range</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <i>subscriber-mgmt</i> <i>pcc-rule-entry</i> <b>range</b>
Tree	<a href="#">range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **end number**

Synopsis	Upper bound of the filter and QoS policy entries range
Context	<b>configure qos sap-egress</b> <i>string</i> <i>subscriber-mgmt</i> <i>pcc-rule-entry</i> <b>range end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **start number**

Synopsis	Lower bound of the filter and QoS policy entries range
Context	<b>configure qos sap-egress</b> <i>string</i> <i>subscriber-mgmt</i> <i>pcc-rule-entry</i> <b>range start</b> <i>number</i>
Tree	<a href="#">start</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-ingress** [[sap-ingress-policy-name](#)] *string*

Synopsis	Enter the <b>sap-ingress</b> list instance
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i>
Tree	<a href="#">sap-ingress</a>
Introduced	16.0.R1
Platforms	All

**[sap-ingress-policy-name]** *string*

Synopsis	Policy name
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i>
Tree	<a href="#">sap-ingress</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**default-fc** *string*

Synopsis	Default forwarding class for non-matching traffic
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">default-fc</a> <i>string</i>
Tree	<a href="#">default-fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**default-priority** *keyword*

Synopsis	Priority for packets received on an ingress SAP
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">default-priority</a> <i>keyword</i>
Tree	<a href="#">default-priority</a>
Options	low, high
Default	low
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dot1p** [**dot1p-value**] *number*

Synopsis	Enter the <b>dot1p</b> list instance
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>dot1p</b> <i>number</i>
Tree	<b>dot1p</b>
Introduced	16.0.R1
Platforms	All

**[dot1p-value]** *number*

Synopsis	Dot1p value to match in the packet
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>dot1p</b> <i>number</i>
Tree	<b>dot1p</b>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching specified dot1p
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>dot1p</b> <i>number</i> <b>fc</b> <i>string</i>
Tree	<b>fc</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**priority** *keyword*

Synopsis	Priority for packets that match the Dot1p value
Context	<b>configure qos sap-ingress</b> <i>string dot1p number priority keyword</i>
Tree	<i>priority</i>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**dscp** [*dscp-name*] *keyword*

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword</i>
Tree	<i>dscp</i>
Introduced	16.0.R1
Platforms	All

**[dscp-name]** *keyword*

Synopsis	Name for the Differentiated Services Code Point (DSCP)
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword</i>
Tree	<i>dscp</i>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching specified DSCP
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword fc string</i>

---

Tree	<a href="#">fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **priority** *keyword*

Synopsis	Priority for the packet
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">dscp</a> <i>keyword</i> <a href="#">priority</a> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **fc** [[fc-name](#)] *string*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i>
Tree	<a href="#">fc</a>
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *string*

Synopsis	Forwarding class (and optional subclass) name
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i>
Tree	<a href="#">fc</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**broadcast-policer** *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string broadcast-policer number</i>
Tree	<a href="#">broadcast-policer</a>
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**broadcast-queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string broadcast-queue reference</i>
Tree	<a href="#">broadcast-queue</a>
Reference	<b>configure qos sap-ingress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**broadcast-queue-group-queue**

Synopsis	Enable the <b>broadcast-queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string fc string broadcast-queue-group-queue</i>
Tree	<a href="#">broadcast-queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string broadcast-queue-group-queue queue reference</i>

Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **queue-group-name** *reference*

Synopsis	Queue group name to forward traffic
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">broadcast-queue-group-queue</a> <a href="#">queue-group-name</a> <i>reference</i>
Tree	<a href="#">queue-group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **de-1-out-profile** *boolean*

Synopsis	Frames with DE value to be assigned as out of profile
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">de-1-out-profile</a> <i>boolean</i>
Tree	<a href="#">de-1-out-profile</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **egress-fc** *keyword*

Synopsis	Forwarding class for egress QoS processing
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">egress-fc</a> <i>keyword</i>
Tree	<a href="#">egress-fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### fp-redirect-group-broadcast-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-broadcast-policer</b>
Tree	<a href="#">fp-redirect-group-broadcast-policer</a>
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### fp-redirect-group-multicast-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-multicast-policer</b>
Tree	<a href="#">fp-redirect-group-multicast-policer</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### fp-redirect-group-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-policer</b>
Tree	<a href="#">fp-redirect-group-policer</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### fp-redirect-group-unknown-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-unknown-policer</b>
Tree	<a href="#">fp-redirect-group-unknown-policer</a>

Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **in-remark**

Synopsis	Enter the <b>in-remark</b> context
Context	<b>configure</b> qos sap-ingress string fc string in-remark
Tree	in-remark
Introduced	16.0.R1
Platforms	All

### **dscp keyword**

Synopsis	DSCP to override DSCP bits of the matching packet
Context	<b>configure</b> qos sap-ingress string fc string in-remark dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **prec number**

Synopsis	Value to override precedence bits of matching packet
Context	<b>configure</b> qos sap-ingress string fc string in-remark prec number
Tree	prec
Range	0 to 7
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

**multicast-policer** *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-policer number</i>
Tree	<a href="#">multicast-policer</a>
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**multicast-queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-queue reference</i>
Tree	<a href="#">multicast-queue</a>
Reference	<b>configure qos sap-ingress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**multicast-queue-group-queue**

Synopsis	Enable the <b>multicast-queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-queue-group-queue</i>
Tree	<a href="#">multicast-queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
----------	---

Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>multicast-queue-group-queue</b> <i>queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i> <b>queue</b> <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **queue-group-name** *reference*

Synopsis	Queue group name to forward traffic
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>multicast-queue-group-queue</b> <b>queue-group-name</b> <i>reference</i>
Tree	<a href="#">queue-group-name</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **out-remark**

Synopsis	Enter the <b>out-remark</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>out-remark</b>
Tree	<a href="#">out-remark</a>
Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

Synopsis	DSCP to override DSCP bits of the matching packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>out-remark</b> <b>dscp</b> <i>keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

**prec number**

Synopsis	Value to override precedence bits of matching packet
Context	<b>configure qos sap-ingress string fc string out-remark prec number</b>
Tree	<a href="#">prec</a>
Range	0 to 7
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

**policer number**

Synopsis	Policer ID for unicast traffic in the forwarding class
Context	<b>configure qos sap-ingress string fc string policer number</b>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile keyword**

Synopsis	Packets profile associated with the forwarding class
Context	<b>configure qos sap-ingress string fc string profile keyword</b>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**queue reference**

Synopsis	Queue to assign for packets in this forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos sap-ingress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue-group-queue**

Synopsis	Enable the <b>queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string fc string queue-group-queue</i>
Tree	<a href="#">queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue reference**

Synopsis	Queue to assign for packets in this forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string queue-group-queue queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**queue-group-name reference**

Synopsis	Queue group to forward traffic
----------	--------------------------------

Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>queue-group-queue</b> <b>queue-group-name</b> <i>reference</i>
Tree	<b>queue-group-name</b>
Reference	<b>configure qos queue-group-templates ingress</b> <b>queue-group</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **unknown-policer** *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>unknown-policer</b> <i>number</i>
Tree	<b>unknown-policer</b>
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **unknown-queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>unknown-queue</b> <i>reference</i>
Tree	<b>unknown-queue</b>
Reference	<b>configure qos sap-ingress</b> <i>string</i> <b>queue</b> <i>number</i>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **unknown-queue-group-queue**

Synopsis	Enable the <b>unknown-queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>unknown-queue-group-queue</b>
Tree	<b>unknown-queue-group-queue</b>

Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### queue reference

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure</b> qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue-group-queue queue <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### queue-group-name reference

Synopsis	Queue group name to forward traffic
Context	<b>configure</b> qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue-group-queue queue-group-name <i>reference</i>
Tree	<a href="#">queue-group-name</a>
Reference	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### ip-criteria

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria
Tree	<a href="#">ip-criteria</a>
Introduced	16.0.R1
Platforms	All

**entry** [*entry-id*] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number</i>
Tree	<i>entry</i>
Introduced	16.0.R1
Platforms	All

**[entry-id]** *number*

Synopsis	IP criteria entry to create or edit for the policy
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number</i>
Tree	<i>entry</i>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number action</i>
Tree	<i>action</i>
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching the criteria
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number action fc string</i>
Tree	<i>fc</i>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**policer** *reference*

Synopsis	Policer ID for traffic matching the criteria
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action policer <i>reference</i>
Tree	policer
Reference	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority** *keyword*

Synopsis	Priority for the packet
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action priority <i>keyword</i>
Tree	priority
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1

Platforms All

## match

Synopsis Enter the **match** context

Context **configure qos sap-ingress** *string ip-criteria entry number match*

Tree [match](#)

Introduced 16.0.R1

Platforms All

## dscp keyword

Synopsis DSCP value to match in the packet

Context **configure qos sap-ingress** *string ip-criteria entry number match dscp keyword*

Tree [dscp](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

## dst-ip

Synopsis Enter the **dst-ip** context

Context **configure qos sap-ingress** *string ip-criteria entry number match dst-ip*

Tree [dst-ip](#)

Introduced 16.0.R1

Platforms All

## address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis Destination IPv4 address for SAP QoS policy match

Context **configure qos sap-ingress** *string ip-criteria entry number match dst-ip address (ipv4-address | ipv4-prefix-with-host-bits)*

Tree [address](#)

Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ip-prefix-list** *reference*

Synopsis	IP-prefix list as match criterion
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">ip-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-ip</a> <a href="#">ip-prefix-list</a> <a href="#">reference</a>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">match-list</a> <a href="#">ip-prefix-list</a> <a href="#">string</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">ip-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-ip</a> <a href="#">mask</a> <a href="#">string</a>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">ip-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-port</a>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Value 'equal to' assigned as match condition
----------	--

Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-port eq number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-port gt number</i>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-port lt number</i>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-port range</i>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the port range

Context **configure qos sap-ingress string ip-criteria entry number match dst-port range end number**

Tree **end**

Range 0 to 65535

Introduced 16.0.R1

Platforms All

### **start number**

Synopsis Lower bound of the port range

Context **configure qos sap-ingress string ip-criteria entry number match dst-port range start number**

Tree **start**

Range 0 to 65535

Introduced 16.0.R1

Platforms All

### **fragment keyword**

Synopsis Fragmented packets as the match criterion

Context **configure qos sap-ingress string ip-criteria entry number match fragment keyword**

Tree **fragment**

Options false, true

Introduced 16.0.R1

Platforms All

### **protocol (number | keyword)**

Synopsis IP protocol to match

Context **configure qos sap-ingress string ip-criteria entry number match protocol (number | keyword)**

Tree	<a href="#">protocol</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

## src-ip

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <b>src-ip</b>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

## address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <b>src-ip</b> <i>address</i> ( <i>ipv4-address</i>   <i>ipv4-prefix-with-host-bits</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## ip-prefix-list *reference*

Synopsis	IP-prefix list as match criterion
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <b>src-ip</b> <a href="#">ip-prefix-list</a> <i>reference</i>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure qos match-list</b> <a href="#">ip-prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **mask string**

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-ip mask string</b>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port</b>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **lt number**

Synopsis Value 'less than' assigned as match condition  
 Context **configure qos sap-ingress string ip-criteria entry number match src-port lt number**  
 Tree **lt**  
 Range 0 to 65535  
 Notes The following elements are part of a choice: **eq, gt, lt, or range**.  
 Introduced 16.0.R1  
 Platforms All

### **range**

Synopsis Enter the **range** context  
 Context **configure qos sap-ingress string ip-criteria entry number match src-port range**  
 Tree **range**  
 Notes The following elements are part of a choice: **eq, gt, lt, or range**.  
 Introduced 16.0.R1  
 Platforms All

### **end number**

Synopsis Upper bound of the port range  
 Context **configure qos sap-ingress string ip-criteria entry number match src-port range end number**  
 Tree **end**  
 Range 0 to 65535  
 Introduced 16.0.R1  
 Platforms All

### **start number**

Synopsis Lower bound of the port range  
 Context **configure qos sap-ingress string ip-criteria entry number match src-port range start number**

---

Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## **vxlan-vni**

Synopsis	Enter the <b>vxlan-vni</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni</a>
Tree	<a href="#">vxlan-vni</a>
Introduced	16.0.R1
Platforms	All

## **eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni eq</a> <i>number</i>
Tree	<a href="#">eq</a>
Range	1 to 16777215
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni range</a>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## **end number**

Synopsis	Upper bound of the VNI range
----------	------------------------------

Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match vxlan-vni range end number</i>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the VNI range
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match vxlan-vni range start number</i>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**tag number**

Synopsis	Tag ID associated with the criteria entry
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number tag number</i>
Tree	<b>tag</b>
Description	This command associates a tag with the criteria entry. Tag identifiers are not supported in SAP ingress QoS policies, MAC criteria statements, or in SAP egress QoS policies.
Range	0 to 255
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type keyword****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 criteria entry type
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria type keyword</i>

Tree	<a href="#">type</a>
Description	This command specifies the type of entries that can be configured for IPv4 match criteria.
Options	normal, vxlan-vni, tagged-entries
Default	normal
Introduced	16.0.R1
Platforms	All

## ipv6-criteria

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

## entry [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

## [[entry-id](#)] *number*

Synopsis	IPv6 criteria entry to create or edit for the policy
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure</b> qos sap-ingress string ipv6-criteria entry number action
Tree	action
Introduced	16.0.R1
Platforms	All

**fc string**

Synopsis	Forwarding class for traffic matching the criteria
Context	<b>configure</b> qos sap-ingress string ipv6-criteria entry number action fc string
Tree	fc
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**policer reference**

Synopsis	Policer ID for traffic matching the criteria
Context	<b>configure</b> qos sap-ingress string ipv6-criteria entry number action policer reference
Tree	policer
Reference	<b>configure</b> qos sap-ingress string policer number
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority keyword**

Synopsis	Priority for the packet
Context	<b>configure</b> qos sap-ingress string ipv6-criteria entry number action priority keyword
Tree	priority
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Action for criteria entry
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action type keyword</b>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure qos sap-ingress string ipv6-criteria entry number description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match</b>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

**dscp keyword**

Synopsis	DSCP value to match in the packet
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match dscp keyword</b>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

## dst-ip

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip</b>
Tree	<b>dst-ip</b>
Introduced	16.0.R1
Platforms	All

## address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	IPv6 address to match destination IP of the packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip address</b> ( <i>ipv6-address</i>   <i>ipv6-prefix-with-host-bits</i> )
Tree	<b>address</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>ipv6-criteria entry number match dst-ip ipv6-prefix-list reference</b>
Tree	<b>ipv6-prefix-list</b>
Reference	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask string**

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match dst-ip mask string</b>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match dst-port</b>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match dst-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match dst-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **lt number**

Synopsis Value 'less than' assigned as match condition

Context **configure qos sap-ingress string ipv6-criteria entry number match dst-port lt number**

Tree **lt**

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **range**

Synopsis Enter the **range** context

Context **configure qos sap-ingress string ipv6-criteria entry number match dst-port range**

Tree **range**

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the port range

Context **configure qos sap-ingress string ipv6-criteria entry number match dst-port range end number**

Tree **end**

Range 0 to 65535

Introduced 16.0.R1

Platforms All

### **start number**

Synopsis Lower bound of the port range

Context **configure qos sap-ingress string ipv6-criteria entry number match dst-port range start number**

Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **fragment** *keyword*

Synopsis	Fragmented packets as the match criterion
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <b>fragment</b> <i>keyword</i>
Tree	<a href="#">fragment</a>
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

### **next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <b>next-header</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">next-header</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

### **src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <b>src-ip</b>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

**address** (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	IPv4 address to match
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">address</a> ( <i>ipv6-address</i>   <i>ipv6-prefix-with-host-bits</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">ipv6-prefix-list</a> <a href="#">reference</a>
Tree	<a href="#">ipv6-prefix-list</a>
Reference	<b>configure qos match-list</b> <a href="#">ipv6-prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-port</a>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1

Platforms All

### **eq** *number*

Synopsis Value 'equal to' assigned as match condition  
Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* match src-port eq *number*  
Tree [eq](#)  
Range 0 to 65535  
Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
Introduced 16.0.R1  
Platforms All

### **gt** *number*

Synopsis Value 'greater than' assigned as match condition  
Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* match src-port gt *number*  
Tree [gt](#)  
Range 0 to 65535  
Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
Introduced 16.0.R1  
Platforms All

### **lt** *number*

Synopsis Value 'less than' assigned as match condition  
Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* match src-port lt *number*  
Tree [lt](#)  
Range 0 to 65535  
Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
Introduced 16.0.R1  
Platforms All

### **range**

Synopsis Enter the **range** context

Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>src-port</i> <i>range</i>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **end number**

Synopsis	Upper bound of the port range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>src-port</i> <i>range</i> <i>end</i> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>src-port</i> <i>range</i> <i>start</i> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **vxlan-vni**

Synopsis	Enter the <b>vxlan-vni</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>vxlan-vni</i>
Tree	<a href="#">vxlan-vni</a>
Introduced	16.0.R1
Platforms	All

**eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match vxlan-vni eq number</b>
Tree	<a href="#">eq</a>
Range	1 to 16777215
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match vxlan-vni range</b>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the VNI range
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match vxlan-vni range end number</b>
Tree	<a href="#">end</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the VNI range
Context	<b>configure qos sap-ingress string ipv6-criteria entry number match vxlan-vni range start number</b>
Tree	<a href="#">start</a>
Range	1 to 16777215

Introduced	16.0.R1
Platforms	All

**tag** *number*

Synopsis	Tag ID associated with the criteria entry
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>ipv6-criteria entry</b> <i>number</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Description	This command associates a tag with the criteria entry. Tag identifiers are not supported in SAP ingress QoS policies, MAC criteria statements, or in SAP egress QoS policies.
Range	0 to 255
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 criteria entry type
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>ipv6-criteria type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command specifies the type of entries that can be configured for IPv6 match criteria.
Options	normal, vxlan-vni, tagged-entries
Default	normal
Introduced	16.0.R1
Platforms	All

**lsp-exp** [**lsp-exp-value**] *number*

Synopsis	Enter the <b>lsp-exp</b> list instance
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>lsp-exp</b> <i>number</i>
Tree	<b>lsp-exp</b>

Introduced	16.0.R1
Platforms	All

### **[lsp-exp-value]** *number*

Synopsis	LSP EXP value to match the LSP EXP rule
Context	<b>configure qos sap-ingress</b> <i>string lsp-exp number</i>
Tree	<a href="#">lsp-exp</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **fc** *string*

Synopsis	Forwarding class for traffic matching the LSP EXP value
Context	<b>configure qos sap-ingress</b> <i>string lsp-exp number fc string</i>
Tree	<a href="#">fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **priority** *keyword*

Synopsis	Priority for the matching traffic
Context	<b>configure qos sap-ingress</b> <i>string lsp-exp number priority keyword</i>
Tree	<a href="#">priority</a>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **mac-criteria**

Synopsis	Enter the <b>mac-criteria</b> context
----------	---------------------------------------

Context	<b>configure qos sap-ingress string mac-criteria</b>
Tree	<b>mac-criteria</b>
Introduced	16.0.R1
Platforms	All

### **entry** [**entry-id**] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos sap-ingress string mac-criteria entry number</b>
Tree	<b>entry</b>
Introduced	16.0.R1
Platforms	All

### **[entry-id]** *number*

Synopsis	Entry ID
Context	<b>configure qos sap-ingress string mac-criteria entry number</b>
Tree	<b>entry</b>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos sap-ingress string mac-criteria entry number action</b>
Tree	<b>action</b>
Introduced	16.0.R1
Platforms	All

### **fc** *string*

Synopsis	Forwarding class for traffic matching the criteria
Context	<b>configure qos sap-ingress string mac-criteria entry number action fc string</b>

---

Tree	<a href="#">fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **policer** *reference*

Synopsis	Policer ID for traffic matching the criteria
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** *keyword*

Synopsis	Priority for the packet
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <a href="#">priority</a> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> description <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

### **atm-vci** *number*

Synopsis	ATM VC Identifier to match as part of the MAC match criteria
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match atm-vci <i>number</i>
Tree	<a href="#">atm-vci</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

### **dot1p**

Synopsis	Enable the <b>dot1p</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match dot1p
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

### **mask number**

Synopsis	3-bit mask for the 802.1p value
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match dot1p mask number
Tree	mask
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

### **priority number**

Synopsis	802.1P priority value to use as the match criterion
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match dot1p priority number
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **dst-mac**

Synopsis	Enable the <b>dst-mac</b> context
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match dst-mac
Tree	dst-mac
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	Destination MAC address as QoS policy match criterion
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match dst-mac address string
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### mask string

Synopsis Mask for destination MAC address

Context **configure qos sap-ingress string mac-criteria entry number match dst-mac mask string**

Tree [mask](#)

Default ff:ff:ff:ff:ff:ff

Introduced 16.0.R1

Platforms All

### etype string

Synopsis Ethernet type

Context **configure qos sap-ingress string mac-criteria entry number match etype string**

Tree [etype](#)

String Length 5 to 6

Introduced 16.0.R1

Platforms All

### frame-type keyword

Synopsis Match MAC criteria for ingress SAP QoS policy

Context **configure qos sap-ingress string mac-criteria entry number match frame-type keyword**

Tree [frame-type](#)

Options 802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, atm

Introduced 16.0.R1

Platforms All

### inner-tag

Synopsis Enable the **inner-tag** context

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag**

Tree [inner-tag](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask number**

Synopsis Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag mask number**

Tree [mask](#)

Range 1 to 4095

Default 4095

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vlan number**

Synopsis Value to match against the VID of the second VLAN tag

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag vlan number**

Tree [vlan](#)

Range 0 to 4095

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **llc-dsap**

Synopsis Enable the **llc-dsap** context

Context **configure qos sap-ingress string mac-criteria entry number match llc-dsap**

Tree [llc-dsap](#)

Introduced 16.0.R1

Platforms All

### **dsap number**

Synopsis DSAP value

Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match llc-dsap dsap number</i>
Tree	<a href="#">dsap</a>
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**mask number**

Synopsis	DSAP mask
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match llc-dsap mask number</i>
Tree	<a href="#">mask</a>
Range	0 to 255
Default	255
Introduced	16.0.R1
Platforms	All

**llc-ssap**

Synopsis	Enable the <b>llc-ssap</b> context
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match llc-ssap</i>
Tree	<a href="#">llc-ssap</a>
Introduced	16.0.R1
Platforms	All

**mask number**

Synopsis	Source SAP mask
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match llc-ssap mask number</i>
Tree	<a href="#">mask</a>
Range	0 to 255
Default	255
Introduced	16.0.R1

Platforms All

### **ssap number**

Synopsis SSAP value

Context **configure qos sap-ingress string mac-criteria entry number match llc-ssap ssap number**

Tree [ssap](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **outer-tag**

Synopsis Enable the **outer-tag** context

Context **configure qos sap-ingress string mac-criteria entry number match outer-tag**

Tree [outer-tag](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask number**

Synopsis First tag carried transparently through the service

Context **configure qos sap-ingress string mac-criteria entry number match outer-tag mask number**

Tree [mask](#)

Range 1 to 4095

Default 4095

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vlan number**

Synopsis Match against VID of the first VLAN tag in the packet carried transparently through service

Context	<b>configure qos sap-ingress string mac-criteria entry number match outer-tag vlan number</b>
Tree	<a href="#">vlan</a>
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snap-oui** *keyword*

Synopsis	Parameter snap-oui as MAC filter match criteria
Context	<b>configure qos sap-ingress string mac-criteria entry number match snap-oui keyword</b>
Tree	<a href="#">snap-oui</a>
Options	zero, non-zero
Introduced	16.0.R1
Platforms	All

### **snap-pid** *number*

Synopsis	Parameter snap-pid as MAC filter match criteria
Context	<b>configure qos sap-ingress string mac-criteria entry number match snap-pid number</b>
Tree	<a href="#">snap-pid</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **src-mac**

Synopsis	Enable the <b>src-mac</b> context
Context	<b>configure qos sap-ingress string mac-criteria entry number match src-mac</b>
Tree	<a href="#">src-mac</a>
Introduced	16.0.R1
Platforms	All

**address string**

Synopsis	Source MAC address as QoS policy match criterion
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match src-mac address string
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**mask string**

Synopsis	Mask for source MAC address
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match src-mac mask string
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

**type keyword****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC criteria filter type
Context	<b>configure</b> qos sap-ingress string mac-criteria type keyword
Tree	type
Options	normal, vid
Default	normal
Introduced	16.0.R1
Platforms	All

**policer [policer-id] number**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> qos sap-ingress string policer number

Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id] number**

Synopsis	SAP-ingress policer identifier
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
----------	---

Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adaptation-rule</b> <b>pir</b> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **adv-config-policy** *reference*

Synopsis	Advanced QoS policy name
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adv-config-policy</b> <i>reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure qos adv-config-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>arbiter-parent</b>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-name** *string*

Synopsis	Arbiter name
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>arbiter-parent</b> <b>arbiter-name</b> <i>string</i>
Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-ingress string policer number arbiter-parent level number</b>
Tree	<b>level</b>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight number**

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure qos sap-ingress string policer number arbiter-parent weight number</b>
Tree	<b>weight</b>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs (number | keyword)**

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure qos sap-ingress string policer number cbs (number   keyword)</b>
Tree	<b>cbs</b>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**description string**

Synopsis	Text description
Context	<b>configure qos sap-ingress string policer number description string</b>

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>high-prio-only</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	High priority violate threshold of PIR leaky bucket
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Default	0

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure qos sap-ingress string policer number percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir decimal-number**

Synopsis	Administrative CIR percent
Context	<b>configure qos sap-ingress string policer number percent-rate cir decimal-number</b>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir decimal-number**

Synopsis	Administrative PIR percent
Context	<b>configure qos sap-ingress string policer number percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **reference-rate keyword**

Synopsis	Reference rate
Context	<b>configure qos sap-ingress string policer number percent-rate reference-rate keyword</b>

Tree	<a href="#">reference-rate</a>
Options	local-limit, reference-port-limit
Default	local-limit
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **profile-capped** *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>profile-capped</b> <i>boolean</i>
Tree	<a href="#">profile-capped</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**scheduler-parent**

Synopsis	Enter the <b>scheduler-parent</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent
Tree	scheduler-parent
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**cir-level** *number*

Synopsis	Port priority level for within-CIR offered load
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent cir-level <i>number</i>
Tree	cir-level
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the within-CIR pass of the scheduler and the <b>cir-weight</b> command is ignored.
Range	0 to 8
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**cir-weight** *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b> <b>cir-weight</b> <i>number</i>
Tree	<b>cir-weight</b>
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**level** *number*

Synopsis	Priority level for bandwidth on the parent scheduler
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b> <b>level</b> <i>number</i>
Tree	<b>level</b>
Description	<p>This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.</p> <p>Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.</p>
Range	1 to 8
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**scheduler-name** *string*

Synopsis	Scheduler name
----------	----------------

Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b> <b>scheduler-name</b> <i>string</i>
Tree	<b>scheduler-name</b>
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

### **weight** *number*

Synopsis	Policer weight at the above-CIR priority level
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b> <b>weight</b> <i>number</i>
Tree	<b>weight</b>
Range	0 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir, offered-profile-with-discards
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policers-hqos-manageable** *boolean*

Synopsis	Manage policers through the hierarchical QoS process
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policers-hqos-manageable</b> <i>boolean</i>
Tree	<b>policers-hqos-manageable</b>
Default	false
Introduced	22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

### **policy-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Ingress SAP QoS policy ID

Context **configure qos sap-ingress** *string policy-id number*

Tree [policy-id](#)

Range 1 to 65535

Introduced 16.0.R1

Platforms All

### **prec** [[prec-value](#)] *number*

Synopsis Enter the **prec** list instance

Context **configure qos sap-ingress** *string prec number*

Tree [prec](#)

Introduced 16.0.R1

Platforms All

### **[prec-value]** *number*

Synopsis Precedence value for which mapping is performed

Context **configure qos sap-ingress** *string prec number*

Tree [prec](#)

Range 0 to 7

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

**fc string**

Synopsis	Forwarding class for traffic matching precedence value
Context	<b>configure qos sap-ingress string prec number fc string</b>
Tree	<b>fc</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**priority keyword**

Synopsis	Priority for the matching traffic
Context	<b>configure qos sap-ingress string prec number priority keyword</b>
Tree	<b>priority</b>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**queue [queue-id] number**

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos sap-ingress string queue number</b>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

**[queue-id] number**

Synopsis	SAP-ingress policer identifier
Context	<b>configure qos sap-ingress string queue number</b>
Tree	<b>queue</b>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

## fir keyword

Synopsis	Constraint used when deriving the operational FIR value
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule fir keyword</i>
Tree	<a href="#">fir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R2
Platforms	All

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule pir keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest

Introduced 16.0.R1  
 Platforms All

### **adv-config-policy** *reference*

Synopsis Advanced QoS policy name  
 Context **configure qos sap-ingress** *string queue number adv-config-policy reference*  
 Tree [adv-config-policy](#)  
 Reference **configure qos adv-config-policy** *string*  
 Introduced 16.0.R1  
 Platforms All

### **burst-limit** (*number | keyword*)

Synopsis Explicit shaping burst size of a queue  
 Context **configure qos sap-ingress** *string queue number burst-limit (number | keyword)*  
 Tree [burst-limit](#)  
 Range 1 to 14000000  
 Units bytes  
 Options auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms All

### **cbs** (*number | keyword*)

Synopsis Reserved buffer space for the queue  
 Context **configure qos sap-ingress** *string queue number cbs (number | keyword)*  
 Tree [cbs](#)  
 Range 0 to 1048576  
 Units kilobytes  
 Options auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms All

### **cir-non-profiling** *boolean*

Synopsis	Prevent profile modification of CIR dependent packets
Context	<b>configure qos sap-ingress</b> <i>string queue number cir-non-profiling boolean</i>
Tree	<a href="#">cir-non-profiling</a>
Default	false
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number drop-tail low</i>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number | keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure qos sap-ingress</b> <i>string queue number drop-tail low percent-reduction-from-mbs (number   keyword)</i>
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1

Platforms All

### **mbs** (*number* | *keyword*)

Synopsis Maximum buffer space that is allowed for queue  
 Context **configure qos sap-ingress** *string* *queue* *number* **mbs** (*number* | *keyword*)  
 Tree [mbs](#)  
 Range 0 to 1073741824  
 Units bytes  
 Options auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms All

### **multipoint** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Apply as a multicast queue  
 Context **configure qos sap-ingress** *string* *queue* *number* **multipoint** *boolean*  
 Tree [multipoint](#)  
 Introduced 16.0.R1  
 Platforms All

### **packet-byte-offset** *number*

Synopsis Packet size modification for queue accounting  
 Context **configure qos sap-ingress** *string* *queue* *number* **packet-byte-offset** *number*  
 Tree [packet-byte-offset](#)  
 Range -32 to 30  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

## **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate</i>
Tree	<i>percent-rate</i>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## **cir decimal-number**

Synopsis	Administrative CIR percent
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate cir decimal-number</i>
Tree	<i>cir</i>
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

## **fir decimal-number**

Synopsis	Administrative FIR percent
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate fir decimal-number</i>
Tree	<i>fir</i>
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R2
Platforms	All

## **pir decimal-number**

Synopsis	Administrative PIR percent
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate pir decimal-number</i>

Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

## police

Synopsis	Drop out-of-profile traffic feeding into queue instance
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">percent-rate</a> <a href="#">police</a>
Tree	<a href="#">police</a>
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

## reference-rate *keyword*

Synopsis	Reference rate
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">percent-rate</a> <a href="#">reference-rate</a> <i>keyword</i>
Tree	<a href="#">reference-rate</a>
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	16.0.R1
Platforms	All

## queue-mode *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operating mode for this queue
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <a href="#">string</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">queue-mode</a> <i>keyword</i>
Tree	<a href="#">queue-mode</a>
Options	priority, profile
Default	priority
Introduced	16.0.R1

Platforms All

## queue-type *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Method used to service queue from hardware perspective  
 Context **configure** qos sap-ingress *string* queue number queue-type *keyword*  
 Tree [queue-type](#)  
 Options expedited, auto-expedited, best-effort  
 Default auto-expedited  
 Introduced 16.0.R1  
 Platforms All

## rate

Synopsis Enter the **rate** context  
 Context **configure** qos sap-ingress *string* queue number rate  
 Tree [rate](#)  
 Notes The following elements are part of a choice: **percent-rate** or **rate**.  
 Introduced 16.0.R1  
 Platforms All

## cir (*number* | *keyword*)

Synopsis Administrative CIR  
 Context **configure** qos sap-ingress *string* queue number rate cir (*number* | *keyword*)  
 Tree [cir](#)  
 Range 0 to 6400000000  
 Units kilobps  
 Options max  
 Default 0  
 Notes The following elements are part of a choice: (**cir** and **fir**) or **police**.  
 Introduced 16.0.R1

Platforms All

### **fir** (*number* | *keyword*)

Synopsis Administrative FIR

Context **configure qos sap-ingress** *string queue number rate fir* (*number* | *keyword*)

Tree [fir](#)

Range 0 to 6400000000

Units kilobps

Options max

Default 0

Notes The following elements are part of a choice: (**cir** and **fir**) or **police**.

Introduced 16.0.R2

Platforms All

### **pir** (*number* | *keyword*)

Synopsis Administrative PIR

Context **configure qos sap-ingress** *string queue number rate pir* (*number* | *keyword*)

Tree [pir](#)

Range 1 to 6400000000

Units kilobps

Options max

Default max

Introduced 16.0.R1

Platforms All

### **police**

Synopsis Drop the traffic feeding into queue above the PIR rate

Context **configure qos sap-ingress** *string queue number rate police*

Tree [police](#)

Notes The following elements are part of a choice: (**cir** and **fir**) or **police**.

Introduced 16.0.R1

Platforms All

## **scheduler-parent**

Synopsis	Enter the <b>scheduler-parent</b> context
Context	<b>configure qos sap-ingress string queue number scheduler-parent</b>
Tree	<a href="#">scheduler-parent</a>
Introduced	16.0.R1
Platforms	All

## **cir-level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-ingress string queue number scheduler-parent cir-level number</b>
Tree	<a href="#">cir-level</a>
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

## **cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure qos sap-ingress string queue number scheduler-parent cir-weight number</b>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

## **level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-ingress string queue number scheduler-parent level number</b>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1

Introduced 16.0.R1  
Platforms All

### **scheduler-name** *string*

Synopsis Scheduler name  
Context **configure qos sap-ingress** *string queue number scheduler-parent scheduler-name string*  
Tree [scheduler-name](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms All

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue  
Context **configure qos sap-ingress** *string queue number scheduler-parent weight number*  
Tree [weight](#)  
Range 0 to 100  
Default 1  
Introduced 16.0.R1  
Platforms All

### **scope** *keyword*

Synopsis Scope of the policy  
Context **configure qos sap-ingress** *string scope keyword*  
Tree [scope](#)  
Options exclusive, template  
Default template  
Introduced 16.0.R1  
Platforms All

### **subscriber-mgmt**

Synopsis Enter the **subscriber-mgmt** context

Context	<b>configure qos sap-ingress string subscriber-mgmt</b>
Tree	<a href="#">subscriber-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dynamic-policer

Synopsis	Enter the <b>dynamic-policer</b> context
Context	<b>configure qos sap-ingress string subscriber-mgmt dynamic-policer</b>
Tree	<a href="#">dynamic-policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-parent

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos sap-ingress string subscriber-mgmt dynamic-policer arbiter-parent</b>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-name *string*

Synopsis	Arbiter name
Context	<b>configure qos sap-ingress string subscriber-mgmt dynamic-policer arbiter-parent arbiter-name string</b>
Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## level *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-ingress string subscriber-mgmt dynamic-policer arbiter-parent level number</b>

Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **weight number**

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer arbiter-parent weight number</a>
Tree	<a href="#">weight</a>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cbs (number | keyword)**

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mbs (number | keyword)**

Synopsis	High priority violate threshold of PIR leaky bucket of this policer
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer mbs (number   keyword)</a>
Tree	<a href="#">mbs</a>

Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer packet-byte-offset <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policer-id-range**

Synopsis	Enable the <b>policer-id-range</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range
Tree	<a href="#">policer-id-range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end** *number*

Synopsis	Upper bound of the dynamic policer ID range
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range end <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis Lower bound of the dynamic policer ID range

Context **configure qos sap-ingress** *string* **subscriber-mgmt dynamic-policer policer-id-range start number**

Tree [start](#)

Range 1 to 63

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stat-mode keyword**

Synopsis Mode of statistics collected by the policer

Context **configure qos sap-ingress** *string* **subscriber-mgmt dynamic-policer stat-mode keyword**

Tree [stat-mode](#)

Options no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir

Default minimal

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pcc-rule-entry**

Synopsis Enter the **pcc-rule-entry** context

Context **configure qos sap-ingress** *string* **subscriber-mgmt pcc-rule-entry**

Tree [pcc-rule-entry](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **range**

Synopsis Enable the **range** context

Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt pcc-rule-entry range</a>
Tree	<a href="#">range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**end number**

Synopsis	Upper bound of the filter and QoS policy entries range
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt pcc-rule-entry range end number</a>
Tree	<a href="#">end</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the filter and QoS policy entries range
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt pcc-rule-entry range start number</a>
Tree	<a href="#">start</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**scheduler-policy** [[scheduler-policy-name](#)] *string*

Synopsis	Enter the <b>scheduler-policy</b> list instance
Context	<b>configure qos scheduler-policy</b> <i>string</i>
Tree	<a href="#">scheduler-policy</a>
Max. Instances	2047
Introduced	16.0.R1
Platforms	All

**[scheduler-policy-name] string**

Synopsis	Scheduler policy name
Context	<b>configure qos scheduler-policy string</b>
Tree	<a href="#">scheduler-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure qos scheduler-policy string description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**frame-based-accounting boolean**

Synopsis	Use frame-based accounting for queues and schedulers
Context	<b>configure qos scheduler-policy string frame-based-accounting boolean</b>
Tree	<a href="#">frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

**tier [tier-id] number**

Synopsis	Enter the <b>tier</b> list instance
Context	<b>configure qos scheduler-policy string tier number</b>
Tree	<a href="#">tier</a>
Introduced	16.0.R1
Platforms	All

**[tier-id]** *number*

Synopsis	Tier for scheduler-policy scheduler
Context	<b>configure qos scheduler-policy</b> <i>string tier number</i>
Tree	<a href="#">tier</a>
Range	1 to 3
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**parent-location** *keyword*

Synopsis	Expected location of parent schedulers
Context	<b>configure qos scheduler-policy</b> <i>string tier number parent-location keyword</i>
Tree	<a href="#">parent-location</a>
Options	auto, sub, vport
Default	auto
Introduced	16.0.R1
Platforms	All

**scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string</i>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

**[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string</i>
Tree	<a href="#">scheduler</a>
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a

unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> scheduler <i>string</i> description <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> scheduler <i>string</i> limit-unused-bandwidth <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> scheduler <i>string</i> percent-rate

Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

### **cir** (*keyword* | *decimal-number*)

Synopsis	Scheduler CIR
Context	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i> <a href="#">tier</a> <i>number</i> <a href="#">scheduler</a> <i>string</i> <a href="#">percent-rate</a> <a href="#">cir</a> ( <i>keyword</i>   <i>decimal-number</i> )
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Options	sum
Default	sum
Introduced	20.10.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	Scheduler PIR
Context	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i> <a href="#">tier</a> <i>number</i> <a href="#">scheduler</a> <i>string</i> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

### **reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i> <a href="#">tier</a> <i>number</i> <a href="#">scheduler</a> <i>string</i> <a href="#">percent-rate</a> <a href="#">reference-rate</a> <i>keyword</i>
Tree	<a href="#">reference-rate</a>
Options	local-limit, reference-port-limit
Default	reference-port-limit
Introduced	20.10.R1

Platforms All

## port-parent

Synopsis Enable the **port-parent** context

Context **configure qos scheduler-policy** *string tier number scheduler string port-parent*

Tree [port-parent](#)

Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.

Introduced 16.0.R1

Platforms All

## cir-level *number*

Synopsis Port priority to receive bandwidth for within-CIR pass

Context **configure qos scheduler-policy** *string tier number scheduler string port-parent cir-level number*

Tree [cir-level](#)

Range 0 to 8

Default 0

Introduced 16.0.R1

Platforms All

## cir-weight *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure qos scheduler-policy** *string tier number scheduler string port-parent cir-weight number*

Tree [cir-weight](#)

Range 0 to 100

Default 0

Introduced 16.0.R1

Platforms All

## level *number*

Synopsis Port priority for bandwidth for above-CIR offered load

Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string port-parent level number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used at the above-CIR port priority level
Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string port-parent weight number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos scheduler-policy</b> <i>string tier number scheduler string rate cir (number   keyword)</i>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps

Options	sum, max
Default	sum
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos scheduler-policy <i>string tier number scheduler string rate pir (number   keyword)</i>
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

### **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure</b> qos scheduler-policy <i>string tier number scheduler string scheduler-parent</i>
Tree	<a href="#">scheduler-parent</a>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

### **cir-level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos scheduler-policy <i>string tier number scheduler string scheduler-parent cir-level number</i>
Tree	<a href="#">cir-level</a>
Range	0 to 8
Default	0

Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level  
Context **configure qos scheduler-policy** *string tier number scheduler string scheduler-parent cir-weight number*  
Tree [cir-weight](#)  
Range 0 to 100  
Default 1  
Introduced 16.0.R1  
Platforms All

### **level** *number*

Synopsis Level of priority while feeding to the parent  
Context **configure qos scheduler-policy** *string tier number scheduler string scheduler-parent level number*  
Tree [level](#)  
Range 1 to 8  
Default 1  
Introduced 16.0.R1  
Platforms All

Platforms All

### **fc** [**fc-name**] *keyword*

Synopsis Enter the **fc** list instance  
Context **configure qos shared-queue** *string fc keyword*  
Tree **fc**  
Introduced 16.0.R1  
Platforms All

### **[fc-name]** *keyword*

Synopsis Forwarding class mapping to queue mapping  
Context **configure qos shared-queue** *string fc keyword*  
Tree **fc**  
Options be, l2, af, l1, h2, ef, h1, nc  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **broadcast-queue** *number*

Synopsis ID of queue to forward all broadcast traffic  
Context **configure qos shared-queue** *string fc keyword broadcast-queue number*  
Tree **broadcast-queue**  
Range 9 to 32  
Introduced 16.0.R1  
Platforms All

### **multicast-queue** *number*

Synopsis ID of queue to forward multicast traffic  
Context **configure qos shared-queue** *string fc keyword multicast-queue number*  
Tree **multicast-queue**

Range	9 to 32
Introduced	16.0.R1
Platforms	All

**queue number**

Synopsis	ID of queue to forward all traffic
Context	<b>configure qos shared-queue</b> <i>string fc keyword queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**unknown-queue number**

Synopsis	ID of queue to forward unknown unicast traffic
Context	<b>configure qos shared-queue</b> <i>string fc keyword unknown-queue number</i>
Tree	<a href="#">unknown-queue</a>
Range	9 to 32
Introduced	16.0.R1
Platforms	All

**queue [queue-id] number**

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos shared-queue</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id] number**

Synopsis	Shared queue identifier
Context	<b>configure qos shared-queue</b> <i>string queue number</i>
Tree	<a href="#">queue</a>

---

Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **cbs number**

Synopsis	Committed burst size as a percentage of the MBS
Context	<b>configure qos shared-queue</b> <i>string queue number cbs number</i>
Tree	<a href="#">cbs</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure qos shared-queue</b> <i>string queue number drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure qos shared-queue</b> <i>string queue number drop-tail low</i>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number | keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
----------	--

Context	<b>configure qos shared-queue</b> <i>string queue number drop-tail low percent-reduction-from-mbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **mbs** *number*

Synopsis	Maximum buffers for the ingress shared queue
Context	<b>configure qos shared-queue</b> <i>string queue number mbs number</i>
Tree	<a href="#">mbs</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **multipoint** *boolean*

Synopsis	Apply as a multicast queue
Context	<b>configure qos shared-queue</b> <i>string queue number multipoint boolean</i>
Tree	<a href="#">multipoint</a>
Introduced	16.0.R1
Platforms	All

### **queue-type** *keyword*

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure qos shared-queue</b> <i>string queue number queue-type keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1

---

Platforms All

### **rate**

Synopsis Enter the **rate** context

Context **configure qos shared-queue** *string queue number rate*

Tree [rate](#)

Introduced 16.0.R1

Platforms All

### **cir number**

Synopsis CIR percentage rate

Context **configure qos shared-queue** *string queue number rate cir number*

Tree [cir](#)

Range 0 to 100

Units percent

Introduced 16.0.R1

Platforms All

### **fir number**

Synopsis FIR percentage rate

Context **configure qos shared-queue** *string queue number rate fir number*

Tree [fir](#)

Range 0 to 100

Units percent

Default 0

Introduced 16.0.R2

Platforms All

### **pir number**

Synopsis PIR percentage rate

Context **configure qos shared-queue** *string queue number rate pir number*

Tree	<a href="#">pir</a>
Range	1 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

### **slope-policy** [[slope-policy-name](#)] *string*

Synopsis	Enter the <b>slope-policy</b> list instance
Context	<b>configure qos slope-policy</b> <i>string</i>
Tree	<a href="#">slope-policy</a>
Max. Instances	511
Introduced	16.0.R1
Platforms	All

### **[slope-policy-name]** *string*

Synopsis	Slope policy name
Context	<b>configure qos slope-policy</b> <i>string</i>
Tree	<a href="#">slope-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos slope-policy</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## **exceed-slope**

Synopsis	Enter the <b>exceed-slope</b> context
Context	<b>configure qos slope-policy string exceed-slope</b>
Tree	<a href="#">exceed-slope</a>
Introduced	16.0.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of the exceed-priority RED slope
Context	<b>configure qos slope-policy string exceed-slope admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **max-avg number**

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure qos slope-policy string exceed-slope max-avg number</b>
Tree	<a href="#">max-avg</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## **max-prob number**

Synopsis	Drop probability to increase at exceed start-average
Context	<b>configure qos slope-policy string exceed-slope max-prob number</b>
Tree	<a href="#">max-prob</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure</b> qos slope-policy <i>string</i> exceed-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**high-slope**

Synopsis	Enter the <b>high-slope</b> context
Context	<b>configure</b> qos slope-policy <i>string</i> high-slope
Tree	high-slope
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the high priority RED slope
Context	<b>configure</b> qos slope-policy <i>string</i> high-slope admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**max-avg** *number*

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure</b> qos slope-policy <i>string</i> high-slope max-avg <i>number</i>
Tree	max-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **max-prob** *number*

Synopsis	Drop probability to increase at high start-average
Context	<b>configure</b> qos slope-policy <i>string</i> high-slope max-prob <i>number</i>
Tree	max-prob
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure</b> qos slope-policy <i>string</i> high-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **highplus-slope**

Synopsis	Enter the <b>highplus-slope</b> context
Context	<b>configure</b> qos slope-policy <i>string</i> highplus-slope
Tree	highplus-slope
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the highplus priority RED slope
Context	<b>configure</b> qos slope-policy <i>string</i> highplus-slope admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **max-avg** *number*

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure</b> qos slope-policy <i>string</i> highplus-slope max-avg <i>number</i>
Tree	max-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **max-prob** *number*

Synopsis	Drop probability increase at highplus start-average
Context	<b>configure</b> qos slope-policy <i>string</i> highplus-slope max-prob <i>number</i>
Tree	max-prob
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure</b> qos slope-policy <i>string</i> highplus-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **low-slope**

Synopsis	Enter the <b>low-slope</b> context
Context	<b>configure</b> qos slope-policy <i>string</i> low-slope
Tree	low-slope
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the low priority RED slope
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <a href="#">low-slope</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**max-avg** *number*

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <a href="#">low-slope</a> <a href="#">max-avg</a> <i>number</i>
Tree	<a href="#">max-avg</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**max-prob** *number*

Synopsis	Drop probability to increase at low start-average
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <a href="#">low-slope</a> <a href="#">max-prob</a> <i>number</i>
Tree	<a href="#">max-prob</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <a href="#">low-slope</a> <a href="#">start-avg</a> <i>number</i>
Tree	<a href="#">start-avg</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**time-average-factor** *number*

Synopsis	Weighting factor to calculate shared buffer utilization
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <b>time-average-factor</b> <i>number</i>
Tree	<a href="#">time-average-factor</a>
Range	0 to 15
Default	7
Introduced	16.0.R1
Platforms	All

### 3.38 redundancy commands

```

configure
- redundancy
  - apply-groups reference
  - apply-groups-exclude reference
  - bgp-evpn
    - ethernet-segment

### 3.38.1 redundancy command descriptions

#### redundancy

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure</b> <a href="#">redundancy</a>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	All

#### bgp-evpn

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

#### ethernet-segment

Synopsis	Enter the <b>ethernet-segment</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a> <a href="#">ethernet-segment</a>
Tree	<a href="#">ethernet-segment</a>
Introduced	16.0.R1
Platforms	All

#### activation-timer *number*

Synopsis	Time before Ethernet segment activated on DF-elected PE
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a> <a href="#">ethernet-segment</a> <a href="#">activation-timer</a> <i>number</i>
Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Default	3
Introduced	16.0.R1

Platforms All

### **boot-timer** *number*

Synopsis	Time before BGP EVPN multi-homing DF election algorithm
Context	<b>configure</b> <b>redundancy</b> <b>bgp-evpn</b> <b>ethernet-segment</b> <b>boot-timer</b> <i>number</i>
Tree	<b>boot-timer</b>
Description	<p>This command allows the necessary time for the control plane protocols to come up upon PE boot-up before bringing up the ESs and running the DF algorithm.</p> <p>The following considerations apply to this command:</p> <ul style="list-style-type: none"> <li>• The <b>boot-timer</b> command must provide enough time to allow the IOMs and BGP sessions to come up before exchanging ES routes and running the DF election for each EVI or ISID.</li> <li>• The boot-timer is synchronized across CPMs and is relative to the system up time; it is not changed or reset upon CPM switchover.</li> <li>• The boot-timer is never interrupted (the <b>es-activation-timer</b>, however, can be interrupted if there is a new event triggering the DF election).</li> <li>• The boot-timer runs per EVI or ISID on the ESs in the system. If the system up time (time the system has been up since the last reboot) is less than the <b>boot-timer</b> value, the system does not run the DF election for any EVI or ISID. When the <b>boot-timer</b> value expires, the DF election runs, and if the system is elected DF for the EVI or ISID, the <b>es-activation-timer</b> is triggered.</li> <li>• The system does not advertise ES routes until the boot timer expires, which guarantees that the peer ES PEs only run the DF election when the PE is ready to become the DF, if required.</li> </ul>
Range	0 to 1800
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **bgp-mh**

Synopsis	Enter the <b>bgp-mh</b> context
Context	<b>configure</b> <b>redundancy</b> <b>bgp-mh</b>
Tree	<b>bgp-mh</b>
Introduced	16.0.R1
Platforms	All

## site

Synopsis	Enter the <b>site</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a>
Tree	<a href="#">site</a>
Introduced	16.0.R1
Platforms	All

## activation-timer *number*

Synopsis	Time to wait for BGP updates from remote PEs
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">activation-timer</a> <i>number</i>
Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Default	2
Introduced	16.0.R1
Platforms	All

## boot-timer *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">boot-timer</a> <i>number</i>
Tree	<a href="#">boot-timer</a>
Range	0 to 600
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

## min-down-timer *number*

Synopsis	Min downtime for BGP multi-homing site after transition
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">min-down-timer</a> <i>number</i>
Tree	<a href="#">min-down-timer</a>

Description	<p>This command configures the BGP multi-homing site minimum down time. When this value is set and the site goes operationally down, it remains operationally down for at least the length of time configured by this timer, regardless of whether other state changes might cause the site to go operationally up. This timer is restarted every time the site transitions from operationally up to down.</p> <p>This timer is optimized in the following circumstances:</p> <ul style="list-style-type: none"> <li>• If the site goes down on the DF but there are no BGP multi-homing peers with the same site in an up state, this timer is not used.</li> <li>• If the site goes down on the DF but there are no active BGP multi-homing peers, this timer is not used.</li> <li>• If this timer is active and a BGP multihoming update is received from the DF indicating its site is down, this timer is immediately terminated and the BGP multihoming algorithm is triggered to determine whether this PE should become the DF.</li> </ul>
Range	1 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

### **cert-sync** *boolean*

Synopsis	Automatically synchronize certificate files
Context	<b>configure</b> <a href="#">redundancy</a> <b>cert-sync</b> <i>boolean</i>
Tree	<a href="#">cert-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mgmt-ethernet**

Synopsis	Enable the <b>mgmt-ethernet</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <b>mgmt-ethernet</b>
Tree	<a href="#">mgmt-ethernet</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**revert *number***

Synopsis	Time before reverting standby CPM management Ethernet port to active CPM
Context	<b>configure</b> <a href="#">redundancy mgmt-ethernet</a> <a href="#">revert</a> <i>number</i>
Tree	<a href="#">revert</a>
Range	1 to 300
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**multi-chassis**

Synopsis	Enter the <b>multi-chassis</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis</a>
Tree	<a href="#">multi-chassis</a>
Description	Commands in this context configure the attributes of multi-chassis redundancy.
Introduced	16.0.R1
Platforms	All

**ipsec-domain [*id*] *number***

Synopsis	Enter the <b>ipsec-domain</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis ipsec-domain</a> <i>number</i>
Tree	<a href="#">ipsec-domain</a>
Description	Commands in this context configure an IPsec domain used for N:M IPsec redundancy.
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[*id*] *number***

Synopsis	IPsec domain ID
Context	<b>configure</b> <a href="#">redundancy multi-chassis ipsec-domain</a> <i>number</i>
Tree	<a href="#">ipsec-domain</a>

Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **designated-role** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designated role for the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <b>designated-role</b> <i>keyword</i>
Tree	<a href="#">designated-role</a>
Description	This command configures the designated role of the tunnel group in the IPsec domain.
Options	standby, active
Default	standby
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **priority** *number*

Synopsis	Priority for the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>

Description	This command configures the priority for the tunnel group in the IPsec domain. The node with the higher priority is more likely to be elected as active within the domain.
Range	0 to 255
Default	100
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### revertive *boolean*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable revertive behavior for the tunnel group
Context	<b>configure</b> <a href="#">redundancy multi-chassis ipsec-domain</a> <i>number</i> <a href="#">revertive</a> <i>boolean</i>
Tree	<a href="#">revertive</a>
Description	When configured to <b>true</b> , the router enables the revertive behavior of the tunnel group, which allows a router in an N:M domain to automatically take over as the active router in the domain when it becomes eligible to do so.  When configured to <b>false</b> , the revertive behavior of the tunnel group is disabled.
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### tunnel-group *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID for an IPsec domain
Context	<b>configure</b> <a href="#">redundancy multi-chassis ipsec-domain</a> <i>number</i> <a href="#">tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Description	This command specifies the tunnel group ID for the IPsec domain.
Reference	<b>configure</b> <a href="#">isa tunnel-group</a> <i>number</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis options</a>
Tree	<a href="#">options</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-mgmt

Synopsis	Enter the <b>sub-mgmt</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis options sub-mgmt</a>
Tree	<a href="#">sub-mgmt</a>
Description	Commands in this context configure subscriber management options for multi-chassis redundancy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp-lease-time-threshold *number*

Synopsis	DHCP lease threshold to skip MCS synchronization
Context	<b>configure</b> <a href="#">redundancy multi-chassis options sub-mgmt dhcp-lease-time-threshold</a> <i>number</i>
Tree	<a href="#">dhcp-lease-time-threshold</a>
Description	This command configures the DHCP lease time threshold to skip MCS synchronization. DHCP leases for the <b>sub-mgmt</b> MCS applications are eligible to skip synchronization if the committed lease time is less than the active threshold on a multi-chassis peer. The active threshold is the minimum value of the thresholds configured on the nodes at each end of a multi-chassis peer. The threshold is inactive when it is unconfigured on at least one end of the multi-chassis peer.
Range	0 to 86400
Units	seconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer** [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Description	This command configures the IP address of the peer in a redundant multi-chassis setup, and enters the context for further application-specific configuration options.
Max. Instances	20
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer IP address
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the MC redundancy peer
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## authentication-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Authentication key used between the node and MC peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 54
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## mc-endpoint

Synopsis	Enable the <b>mc-endpoint</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint</a>
Tree	<a href="#">mc-endpoint</a>
Introduced	22.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the MC-EP
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	All

### **bfd boolean**

Synopsis	Enable BFD detection for the MC-EP peering tunnel
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint bfd boolean</a>
Tree	<a href="#">bfd</a>
Description	When configured to <b>true</b> , the system uses Bidirectional Forwarding Detection (BFD) to control the state of the associated protocol interface, where the state of the protocol interface is tied to the state of the BFD session between the local and remote nodes.  The BFD settings are configured in the IP interface contexts.
Default	false
Introduced	22.10.R1
Platforms	All

### **boot-timer number**

Synopsis	Time to attempt connection before declaring failure
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint boot-timer number</a>
Tree	<a href="#">boot-timer</a>
Description	This command configures the time interval to attempt connection that applies after the node reboots. This command specifies the time the multi-chassis endpoint (MC-EP) protocol takes to establish a connection before declaring a connection failure with the remote peer. When the time interval expires, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	1 to 600
Units	seconds
Default	300
Introduced	22.10.R1
Platforms	All

**hold-on-neighbor-failure** *number*

Synopsis	Number of keepalive intervals to wait for packets
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>hold-on-neighbor-failure</b> <i>number</i>
Tree	<a href="#">hold-on-neighbor-failure</a>
Description	This command configures the number of keepalive intervals that the local node waits for packets from the MC-EP peer before declaring a connection failure. When the number of intervals is reached, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	2 to 25
Default	3
Introduced	22.10.R1
Platforms	All

**keep-alive-interval** *number*

Synopsis	Interval for exchange of keepalive messages
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>keep-alive-interval</b> <i>number</i>
Tree	<a href="#">keep-alive-interval</a>
Description	This command configures the interval for which keepalive messages are exchanged between two systems participating as MC-EP when BFD is not active. The fast keepalive messages are used to detect remote node failure.
Range	5 to 500
Default	10
Introduced	22.10.R1
Platforms	All

**passive-mode** *boolean*

Synopsis	Enable passive mode for the MC-EP tunnel
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>passive-mode</b> <i>boolean</i>
Tree	<a href="#">passive-mode</a>
Description	When configured to <b>true</b> , the system enables passive mode behavior for the MC-EP protocol. Assuming the remote pair is configured with regular MC-EP in passive mode, the MC-EP pair remains dormant until two of the pseudowires in an MC-EP are activated by the remote PEs.

When one pseudowire is active, the dormant MC-EP pair becomes active. The regular mechanism to select the best pseudowire between the active pair is initiated, and the system blocks the Rx and Tx directions of the other pseudowire.

Default	false
Introduced	22.10.R1
Platforms	All

### **system-priority** *number*

Synopsis	System priority of the MC-EP
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-endpoint system-priority</a> <i>number</i>
Tree	<a href="#">system-priority</a>
Description	This command configures the system priority of the MC-EP. The peer configured with the lower value is selected as the master. If the system priority values are equal, the peer with the higher system ID (chassis MAC address) becomes the master.
Range	0 to 255
Default	0
Introduced	22.10.R1
Platforms	All

### **mc-ipsec**

Synopsis	Enable the <b>mc-ipsec</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a>
Tree	<a href="#">mc-ipsec</a>
Description	This command enables the context to configure multi-chassis peer parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ipsec bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **discovery-interval**

Synopsis	Enter the <b>discovery-interval</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval</a>
Tree	<a href="#">discovery-interval</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **boot number**

Synopsis	Maximum interval after system bootup
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval boot</a> <i>number</i>
Tree	<a href="#">boot</a>
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval-secs number**

Synopsis	Maximum discovery interval
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval interval-secs</a> <i>number</i>
Tree	<a href="#">interval-secs</a>
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**domain** [*id*] *reference*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i>
Tree	<a href="#">domain</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[id]** *reference*

Synopsis	IPsec domain ID
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i>
Tree	<a href="#">domain</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**hold-on-neighbor-failure** *number*

Synopsis	Hold time on neighbor failure
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">hold-on-neighbor-failure</a> <i>number</i>

Tree	<a href="#">hold-on-neighbor-failure</a>
Range	2 to 25

### **debounce** *boolean*

Synopsis	Enable inband control path debouncing
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">in-band-control-path</a> <b>debounce</b> <i>boolean</i>
Tree	<a href="#">debounce</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **dst-ip** *string*

Synopsis	IP address of the in-band control path peer
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>in-band-control-path</b> <b>dst-ip</b> <i>string</i>
Tree	<b>dst-ip</b>
Introduced	16.0.R1
Platforms	All

### **interface** *string*

Synopsis	Interface to verify in-band control path
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>in-band-control-path</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **max-debounce-time** *number*

Synopsis	Maximum delay after a failure when debouncing is active
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>in-band-control-path</b> <b>max-debounce-time</b> <i>number</i>
Tree	<b>max-debounce-time</b>
Range	5 to 200
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **service-name** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>in-band-control-path</b> <b>service-name</b> <i>string</i>

Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

## path-b

Synopsis	Enter the <b>path-b</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string</i> <b>path-b</b>
Tree	<a href="#">path-b</a>
Introduced	16.0.R1
Platforms	All

## range start number end number

Synopsis	Add a list entry for <b>range</b>
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string</i> <a href="#">path-b</a> <b>range start number end number</b>
Tree	<a href="#">range</a>
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of the VLAN range
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string</i> <a href="#">path-b</a> <b>range start number end number</b>
Tree	<a href="#">range</a>
Range	0 to 4094
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the VLAN range
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring ring</a> <a href="#">string</a> <a href="#">path-b</a> <a href="#">range start number end number</a>
Tree	<a href="#">range</a>
Range	0 to 4094
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**wildcard-saps boolean**

Synopsis	Include the SAPs starting with a wildcard '*'
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring ring</a> <a href="#">string</a> <a href="#">path-b</a> <a href="#">wildcard-saps boolean</a>
Tree	<a href="#">wildcard-saps</a>
Default	false
Introduced	16.0.R4
Platforms	All

**path-excl**

Synopsis	Enter the <b>path-excl</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring ring</a> <a href="#">string</a> <a href="#">path-excl</a>
Tree	<a href="#">path-excl</a>
Introduced	16.0.R1
Platforms	All

**range start number end number**

Synopsis	Add a list entry for <b>range</b>
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring ring</a> <a href="#">string</a> <a href="#">path-excl</a> <a href="#">range start number end number</a>
Tree	<a href="#">range</a>
Introduced	16.0.R1

Platforms All

### **start number**

Synopsis Lower bound of the VLAN range

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ring ring](#) [string](#) [path-excl](#) [range](#) [start number](#) [end number](#)

Tree [range](#)

Range 0 to 4094

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the VLAN range

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ring ring](#) [string](#) [path-excl](#) [range](#) [start number](#) [end number](#)

Tree [range](#)

Range 0 to 4094

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **wildcard-saps boolean**

Synopsis Include the SAPs starting with a wildcard '\*\*'

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ring ring](#) [string](#) [path-excl](#) [wildcard-saps](#) [boolean](#)

Tree [wildcard-saps](#)

Default false

Introduced 16.0.R4

Platforms All

**ring-node** [*name*] *string*

Synopsis	Enter the <b>ring-node</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i>
Tree	<a href="#">ring-node</a>
Introduced	16.0.R1
Platforms	All

**[name]** *string*

Synopsis	Name of the multi-chassis ring access node
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i>
Tree	<a href="#">ring-node</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the ring node verification
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**dst-ip** *string*

Synopsis	Destination IP address for access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <a href="#">dst-ip</a> <i>string</i>
Tree	<a href="#">dst-ip</a>

Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Connection verification interval
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 6000
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

### **service-name** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>service-name</b> <i>string</i>
Tree	<b>service-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **src-ip** *string*

Synopsis	Source IP address for access node connection
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>src-ip</b> <i>string</i>
Tree	<b>src-ip</b>
Introduced	16.0.R1
Platforms	All

**src-mac** (*keyword* | *ring-node-mac-address*)

Synopsis	Source MAC address for the access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string ring-node string src-mac</i> ( <i>keyword</i>   <i>ring-node-mac-address</i> )
Tree	<a href="#">src-mac</a>
Options	system-mac-address
Default	system-mac-address
Introduced	16.0.R1
Platforms	All

**vlan** *string*

Synopsis	VLAN ID for access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string ring-node string vlan string</i>
Tree	<a href="#">vlan</a>
String Length	1 to 11
Introduced	16.0.R1
Platforms	All

**srrp-instance** [*id*] *number*

Synopsis	Add a list entry for <b>srrp-instance</b>
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string srrp-instance number</i>
Tree	<a href="#">srrp-instance</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[id]** *number*

Synopsis	SRRP instance ID
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring ring</a> <i>string srrp-instance number</i>

Tree	<a href="#">srrp-instance</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of the multi-chassis ring
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Options	layer-2, layer-3
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **peer-name** *string*

Synopsis	Multi-chassis peer name
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">peer-name</a> <i>string</i>
Tree	<a href="#">peer-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **source-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source address to communicate with the MC peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">source-address</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> )
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	All

## sync

Synopsis	Enable the <b>sync</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync</a>
Tree	<a href="#">sync</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the peer synchronization
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## diameter-node

Synopsis	Enable the <b>diameter-node</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync diameter-node</a>
Tree	<a href="#">diameter-node</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**node** [*host-name*] *reference*

Synopsis	Enter the <b>node</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i>
Tree	<a href="#">node</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[host-name]** *reference*

Synopsis	Origin-Host of the node
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i>
Tree	<a href="#">node</a>
Reference	<b>configure</b> <a href="#">aaa diameter node</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sync-tag** *string*

Synopsis	Sync tag to be used for synchronization
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**diameter-proxy** *boolean*

Synopsis	Synchronize the Diameter proxy data with the multi-chassis peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-proxy</a> <i>boolean</i>
Tree	<a href="#">diameter-proxy</a>

---

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **igmp *boolean***

Synopsis	Synchronize IGMP protocol information with the MC peer
Context	<b>configure</b> <b>redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync igmp <i>boolean</i></b>
Tree	<a href="#">igmp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-snooping *boolean***

Synopsis	Synchronize IGMP snooping information
Context	<b>configure</b> <b>redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync igmp-snooping <i>boolean</i></b>
Tree	<a href="#">igmp-snooping</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipsec *boolean***

Synopsis	Synchronize IPsec information
Context	<b>configure</b> <b>redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync ipsec <i>boolean</i></b>
Tree	<a href="#">ipsec</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ***l2tp boolean***

Synopsis	Synchronize Layer Two Tunnel Protocol (L2TP)
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync l2tp boolean</a>
Tree	<a href="#">l2tp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***local-dhcp-server boolean***

Synopsis	Synchronize DHCP Server information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync local-dhcp-server boolean</a>
Tree	<a href="#">local-dhcp-server</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***mc-ring boolean***

Synopsis	Synchronize ring information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync mc-ring boolean</a>
Tree	<a href="#">mc-ring</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***mld boolean***

Synopsis	Synchronize MLD protocol information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync mld boolean</a>
Tree	<a href="#">mld</a>
Default	false

Introduced	16.0.R1
Platforms	All

### **mld-snooping** *boolean*

Synopsis	Synchronize MLD snooping information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <b>mld-snooping</b> <i>boolean</i>
Tree	<a href="#">mld-snooping</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **nat**

Synopsis	Enable the <b>nat</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <b>nat</b>
Tree	<a href="#">nat</a>
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-group** [*id*] *reference*

Synopsis	Enter the <b>nat-group</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <b>nat</b> <b>nat-group</b> <i>reference</i>
Tree	<a href="#">nat-group</a>
Description	Commands in this context configure multi-chassis synchronization (MCS) for a NAT group. NAT group health information is exchanged between the pair of redundant NAT nodes. The system elects one of the nodes as the active node for the NAT group and the other node becomes the standby node.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[id] reference**

Synopsis	NAT group ID
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync nat nat-group reference</a>
Tree	<a href="#">nat-group</a>
Reference	<b>configure</b> <a href="#">isa nat-group number</a>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sync-tag string****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group synchronization tag
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync nat nat-group reference</a> <a href="#">sync-tag string</a>
Tree	<a href="#">sync-tag</a>
Description	This command configures the synchronization tag for the NAT group. The tag must match the synchronization tag for the NAT group on the peering node.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pim-snooping**

Synopsis	Enter the <b>pim-snooping</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping</a>
Tree	<a href="#">pim-snooping</a>
Introduced	16.0.R1
Platforms	All

### **saps** *boolean*

Synopsis	Synchronize PIM snooping data with the multi-chassis peer on SDP endpoints
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping saps</a> <i>boolean</i>
Tree	<a href="#">saps</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **spoke-sdps** *boolean*

Synopsis	Synchronize spoke SDPs with the multi-chassis peer
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping spoke-sdps</a> <i>boolean</i>
Tree	<a href="#">spoke-sdps</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **python** *boolean*

Synopsis	Synchronize Python
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync python</a> <i>boolean</i>
Tree	<a href="#">python</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **srrp** *boolean*

Synopsis	Synchronize SRRP information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync srrp</a> <i>boolean</i>
Tree	<a href="#">srrp</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **sub-host-trk** *boolean*

Synopsis Synchronize subscriber host tracking information  
Context **configure** [redundancy](#) [multi-chassis peer](#) (*ipv4-address-no-zone | ipv6-address-no-zone*) [sync sub-host-trk](#) *boolean*  
Tree [sub-host-trk](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-mgmt**

Synopsis Enter the **sub-mgmt** context  
Context **configure** [redundancy](#) [multi-chassis peer](#) (*ipv4-address-no-zone | ipv6-address-no-zone*) [sync sub-mgmt](#)  
Tree [sub-mgmt](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe** *boolean*

Synopsis Synchronize subscriber management IPoE information  
Context **configure** [redundancy](#) [multi-chassis peer](#) (*ipv4-address-no-zone | ipv6-address-no-zone*) [sync sub-mgmt ipoe](#) *boolean*  
Tree [ipoe](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe** *boolean*

Synopsis Synchronize subscriber management PPPoE information  
Context **configure** [redundancy](#) [multi-chassis peer](#) (*ipv4-address-no-zone | ipv6-address-no-zone*) [sync sub-mgmt pppoe](#) *boolean*

Tree	<a href="#">pppoe</a>

Range	1 to 16383
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the L2TP tunnel ID range
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync track-srrp number l2tp-tunnel-id-range start number</a>
Tree	<a href="#">start</a>
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

**transport-encryption**

Synopsis	Enter the <b>transport-encryption</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync transport-encryption</a>
Tree	<a href="#">transport-encryption</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**application** [[application-id](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync transport-encryption application keyword</a>
Tree	<a href="#">application</a>
Description	Commands in this context configure the MCS application for transport encryption. The application-id configures an application and a keychain defines the key used for the encryption.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[application-id]** *keyword*

Synopsis	Application using transport encryption
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync transport-encryption application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Description	This command configures an MCS application for the transport encryption method.
Options	igmp, igmp-snooping, sub-mgmt-ipoe, srrp, mc-ring, mld-snooping, dhcp-server, sub-host-trk, sub-mgmt-pppoe, ipsec, mld, python, l2tp, diam-proxy, pim-snpg-sap, pim-snpg-sdp, diam-node, nat
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keychain** *reference*

Synopsis	Keychain containing the authentication keys
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync transport-encryption application</a> <i>keyword</i> <a href="#">keychain</a> <i>reference</i>
Tree	<a href="#">keychain</a>
Description	This command specifies a keychain that contains authentication keys for the application.
Reference	<b>configure</b> <a href="#">system security keychains</a> <a href="#">keychain</a> <i>string</i>
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-group** [[tunnel-group-id](#)] *number*

Synopsis	Enter the <b>tunnel-group</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync tunnel-group</a> <i>number</i>
Tree	<a href="#">tunnel-group</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[tunnel-group-id] number**

Synopsis Multi-active tunnel group ID

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number*

Tree **tunnel-group**

Range 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag string**

Synopsis Tag to synchronize the tunnel group with the MC peer

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number* **sync-tag** *string*

Tree **sync-tag**

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rollback-sync keyword**

Synopsis Parameters for redundancy rollback synchronization

Context **configure** **redundancy** **rollback-sync** *keyword*

Tree **rollback-sync**

Options rollback-single, rollback-all

Introduced 16.0.R1

Platforms All

### **srrp**

Synopsis Enter the **srrp** context

---

Context	<b>configure</b> <a href="#">redundancy srrp</a>
Tree	<a href="#">srrp</a>
Description	Commands in this context configure system parameters for BNG CUPS inter-UPF resiliency.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-srrp-id-range**

Synopsis	Enable the <b>auto-srrp-id-range</b> context
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range</a>
Tree	<a href="#">auto-srrp-id-range</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the ID range
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range end number</a>
Tree	<a href="#">end</a>
Range	2 to 4294967295
Default	4294967295
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis	Lower bound of the ID range
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range start number</a>
Tree	<a href="#">start</a>
Range	1 to 4294967294
Default	2147483648
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**switchover-exec** *string*

Synopsis	CLI script file executed after a redundancy switchover
Context	<b>configure</b> <b>redundancy</b> <b>switchover-exec</b> <i>string</i>
Tree	<b>switchover-exec</b>
Description	<p>This command specifies the location and name of the CLI script file executed following a redundancy switchover from the previously active CPM card. A switchover can happen because of a fatal failure or by manual action.</p> <p>The CLI script file can contain commands for environment settings, classic CLI debug configuration (excluding mirroring settings), and other commands not maintained by the configuration redundancy.</p> <p>The following commands are not supported in the switchover-exec file: <b>clear</b>, <b>configure</b>, <b>candidate</b>, <b>oam</b>, <b>tools</b>, <b>oam</b>, <b>ping</b>, <b>traceroute</b>, <b>mstat</b>, <b>mtrace</b>, and <b>mrinfo</b>.</p>
String Length	1 to 100
Introduced	16.0.R1
Platforms	All

**synchronize** *keyword*

Synopsis	Parameters for redundancy synchronization
Context	<b>configure</b> <b>redundancy</b> <b>synchronize</b> <i>keyword</i>
Tree	<b>synchronize</b>
Options	config, boot-env
Introduced	16.0.R1
Platforms	All

configure router wpp portal secret

- **secret** *string*
- **version** *number*

### 3.39.1 router command descriptions

#### **router** [**router-name**] *string*

Synopsis	Enter the <b>router</b> list instance
Context	<b>configure router</b> <i>string</i>
Tree	<b>router</b>
Description	Commands in this context configure a router instance that represents a virtual router in the system. There will always be at least two instances in the system. The Base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. Instances	4
Introduced	16.0.R1
Platforms	All

#### **[router-name]** *string*

Synopsis	Administrative router name
Context	<b>configure router</b> <i>string</i>
Tree	<b>router</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

#### **aggregates**

Synopsis	Enter the <b>aggregates</b> context
Context	<b>configure router</b> <i>string aggregates</i>
Tree	<b>aggregates</b>
Introduced	16.0.R1
Platforms	All

**aggregate** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>aggregate</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Description	<p>Commands in this context add aggregate routes to the routing table when there are one or more component routes. A component route is any route installed in the forwarding table that is a more-specific match of the aggregate.</p> <p>The use of aggregate routes can lead to smaller routing table sizes by reducing the number of routes that need to be advertised to neighbor routes.</p>
Introduced	16.0.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**aggregator**

Synopsis	Enter the <b>aggregator</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">aggregator</a>
Tree	<a href="#">aggregator</a>
Description	Commands in this context configure the BGP AGGREGATOR path attribute for the aggregate route.
Introduced	16.0.R1
Platforms	All

**address** *string*

Synopsis	Aggregator IP address
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">aggregator</a> <a href="#">address</a> <i>string</i>

Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

**as-number** *number*

Synopsis	Aggregator AS number
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">aggregator</a> <a href="#">as-number</a> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**as-set** *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">as-set</a> <i>boolean</i>
Tree	<a href="#">as-set</a>
Description	<p>When configured to <b>true</b>, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to <b>false</b>, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**blackhole**

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">blackhole</a>
Tree	<a href="#">blackhole</a>
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1
Platforms	All

**generate-icmp *boolean***

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>blackhole</b> <b>generate-icmp</b> <i>boolean</i>
Tree	<b>generate-icmp</b>
Description	When configured to <b>true</b> , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to <b>false</b> , ICMP unreachable messages are not generated.
Default	false
Introduced	16.0.R2
Platforms	All

**community *string***

Synopsis	Community name that is added to the aggregate route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>community</b> <i>string</i>
Tree	<b>community</b>
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**description *string***

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**discard-component-communities** *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>discard-component-communities</b> <i>boolean</i>
Tree	<b>discard-component-communities</b>
Default	false
Introduced	19.7.R1
Platforms	All

**indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>indirect</b>
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Local preference used when aggregate route is exported
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>local-preference</b> <i>number</i>
Tree	<b>local-preference</b>
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1

Platforms All

### **policy reference**

Synopsis Policy name for the aggregated route

Context **configure router string aggregates aggregate (ipv4-prefix | ipv6-prefix) policy reference**

Tree [policy](#)

Description This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.

If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.

Reference **configure policy-options policy-statement string**

Introduced 20.10.R1

Platforms All

### **summary-only boolean**

Synopsis Advertise the aggregate route only

Context **configure router string aggregates aggregate (ipv4-prefix | ipv6-prefix) summary-only boolean**

Tree [summary-only](#)

Description When configured to **true**, the router suppresses the advertisement of more specific component routes for the aggregate.

When configured to **false**, the router advertises both the aggregate route and its contributing routes.

Default false

Introduced 16.0.R1

Platforms All

### **tunnel-group number**

Synopsis Tunnel group from which to associate the MC IPSec state

Context **configure router string aggregates aggregate (ipv4-prefix | ipv6-prefix) tunnel-group number**

Tree [tunnel-group](#)

Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

### **allow-icmp-redirect** *boolean*

Synopsis	Allow ICMP redirects on the management interface
Context	<b>configure</b> <i>router</i> <i>string</i> <b>allow-icmp-redirect</b> <i>boolean</i>
Tree	<a href="#">allow-icmp-redirect</a>
Description	When configured to <b>true</b> , ICMP redirect messages can be received on the management interface. When configured to <b>false</b> , all received ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **allow-icmp6-redirect** *boolean*

Synopsis	Allow IPv6 ICMP redirects on the management interface
Context	<b>configure</b> <i>router</i> <i>string</i> <b>allow-icmp6-redirect</b> <i>boolean</i>
Tree	<a href="#">allow-icmp6-redirect</a>
Description	When configured to <b>true</b> , IPv6 ICMP redirect messages can be received on the management interface. When configured to <b>false</b> , all received IPv6 ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **autonomous-system** *number*

Synopsis	AS number advertised to peers for this router
Context	<b>configure</b> <i>router</i> <i>string</i> <b>autonomous-system</b> <i>number</i>

Tree	<a href="#">autonomous-system</a>
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.  If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Introduced	19.7.R1
Platforms	All

**seamless-bfd**

Synopsis	Enter the <b>seamless-bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bfd</a> <a href="#">seamless-bfd</a>
Tree	<a href="#">seamless-bfd</a>
Introduced	19.7.R1
Platforms	All

**peer** [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bfd</a> <a href="#">seamless-bfd</a> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Max. Instances	8000
Introduced	19.7.R1
Platforms	All

**[address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Address of the remote node
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bfd</b> <b>seamless-bfd</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

**discriminator** *number*

Synopsis	Discriminator of the remote node
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bfd</b> <b>seamless-bfd</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>discriminator</b> <i>number</i>
Tree	<b>discriminator</b>
Range	1 to 4294967295
Introduced	19.7.R1
Platforms	All

**bgp**

Synopsis	Enable the <b>bgp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b>
Tree	<b>bgp</b>
Introduced	16.0.R1
Platforms	All

**add-paths**

Synopsis	Enable the <b>add-paths</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>add-paths</b>
Tree	<b>add-paths</b>
Description	Commands in this context configure add-paths support for the specified address families of the BGP instance. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.
Introduced	16.0.R1

Platforms All

## evpn

Synopsis Enter the **evpn** context

Context **configure router string bgp add-paths evpn**

Tree **evpn**

Description Commands in this context configure the Add-Paths capability for EVPN routes. By default, Add-Paths is not enabled for EVPN routes.

Introduced 21.10.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple EVPN paths per prefix from a peer

Context **configure router string bgp add-paths evpn receive *boolean***

Tree **receive**

Default false

Introduced 21.10.R1

Platforms All

## send (*number* | *keyword*)

Synopsis Maximum number of EVPN paths to send

Context **configure router string bgp add-paths evpn send (*number* | *keyword*)**

Tree **send**

Range 1 to 16

Options multipaths

Introduced 21.10.R1

Platforms All

## ipv4

Synopsis Enter the **ipv4** context

Context **configure router string bgp add-paths ipv4**

Tree	<a href="#">ipv4</a>
Description	Commands in this context configure add-paths support for the IPv4 unicast address family.
Introduced	16.0.R1
Platforms	All

### **receive *boolean***

Synopsis	Receive multiple routes per unlabeled IPv4 prefix
Context	<b>configure router</b> <i>string</i> <a href="#">bgp add-paths ipv4 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv4 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send (*number* | *keyword*)**

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	<b>configure router</b> <i>string</i> <a href="#">bgp add-paths ipv4 send (<i>number</i>   <i>keyword</i>)</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
----------	-------------------------------

---

Context	<b>configure router string</b> <code>bgp add-paths ipv6</code>
Tree	<code>ipv6</code>
Description	Commands in this context configure add-paths support for the IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

### **receive *boolean***

Synopsis	Receive multiple routes per unlabeled IPv6 prefix
Context	<b>configure router string</b> <code>bgp add-paths ipv6 receive boolean</code>
Tree	<code>receive</code>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send (*number* | *keyword*)**

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	<b>configure router string</b> <code>bgp add-paths ipv6 send (number   keyword)</code>
Tree	<code>send</code>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per unlabeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

**label-ipv4**

Synopsis	Enter the <b>label-ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths label-ipv4</b>
Tree	<b>label-ipv4</b>
Description	Commands in this context configure add-paths support for the labeled IPv4 unicast address family.
Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths label-ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send** (*number* | *keyword*)

Synopsis	Max paths advertised per labeled IPv4 unicast prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths label-ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

## label-ipv6

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure router string</b> <a href="#">bgp add-paths label-ipv6</a>
Tree	<a href="#">label-ipv6</a>
Description	Commands in this context configure add-paths support for the labeled IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths label-ipv6 receive</a> <i>boolean</i>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Max paths advertised per labeled IPv6 unicast prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths label-ipv6 send</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1

Platforms All

## mcast-vpn-ipv4

Synopsis Enter the **mcast-vpn-ipv4** context

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4**

Tree **mcast-vpn-ipv4**

Description Commands in this context configure add-paths support for the multicast IPv4 VPN address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple multicast routes per IPv4 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4 receive *boolean***

Tree **receive**

Description When configured to **true**, this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send *number*

Synopsis Maximum paths advertised per multicast IPv4 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4 send *number***

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for multicast IPv4 VPN routes.

Range 1 to 16

Introduced 16.0.R1

Platforms All

## mcast-vpn-ipv6

Synopsis Enter the **mcast-vpn-ipv6** context

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv6**

Tree **mcast-vpn-ipv6**

Description Commands in this context configure add-paths support for the multicast IPv6 VPN address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple multicast routes per IPv6 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv6 receive** *boolean*

Tree **receive**

Description When configured to **true**, this command allows multiple multicast routes per IPv6 VPN prefix to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send *number*

Synopsis Maximum paths advertised per multicast IPv6 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv6 send** *number*

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv6 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for multicast IPv6 VPN routes.

Range 1 to 16

Introduced 16.0.R1

Platforms All

## mvpn-ipv4

Synopsis Enter the **mvpn-ipv4** context

Context **configure router string** `bgp add-paths mvpn-ipv4`

Tree `mvpn-ipv4`

Description Commands in this context configure add-paths support for the multicast VPN IPv4 address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple routes per multicast VPN IPv4 NRLI

Context **configure router string** `bgp add-paths mvpn-ipv4 receive boolean`

Tree `receive`

Description When configured to **true**, this command allows multiple routes per multicast VPN IPv4 NRLI to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send *number*

Synopsis Maximum paths advertised per multicast VPN IPv4 NRLI

Context **configure router string** `bgp add-paths mvpn-ipv4 send number`

Tree `send`

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv4 NRLI. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for multicast VPN IPv4 routes.

Range 1 to 16

Introduced 16.0.R1

Platforms All

## mvpn-ipv6

Synopsis Enter the **mvpn-ipv6** context

Context **configure router string** `bgp add-paths mvpn-ipv6`

Tree `mvpn-ipv6`

Description Commands in this context configure add-paths support for the multicast VPN IPv6 address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple routes per multicast VPN IPv6 NRLI

Context **configure router string** `bgp add-paths mvpn-ipv6 receive boolean`

Tree `receive`

Description When configured to **true**, this command allows multiple routes per multicast VPN IPv6 NRLI to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send *number*

Synopsis Maximum paths advertised per multicast VPN IPv6 NRLI

Context **configure router string** `bgp add-paths mvpn-ipv6 send number`

Tree `send`

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv6 NRLI. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for multicast VPN IPv6 routes.

Range 1 to 16

Introduced 16.0.R1

Platforms All

## vpn-ipv4

Synopsis Enter the **vpn-ipv4** context

Context **configure** *router string* **bgp add-paths vpn-ipv4**

Tree **vpn-ipv4**

Description Commands in this context configure add-paths support for the VPN-IPv4 address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple routes per VPN-IPv4 prefix

Context **configure** *router string* **bgp add-paths vpn-ipv4 receive boolean**

Tree **receive**

Description When configured to **true**, this command allows multiple routes per VPN-IPv4 prefix to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send (*number* | *keyword*)

Synopsis Maximum paths advertised per VPN-IPv4 prefix

Context **configure** *router string* **bgp add-paths vpn-ipv4 send (*number* | *keyword*)**

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for VPN-IPv4 routes.

Range 1 to 16

Options multipaths

Introduced 16.0.R1

Platforms All

## vpn-ipv6

Synopsis Enter the **vpn-ipv6** context

Context **configure router string bgp add-paths vpn-ipv6**

Tree **vpn-ipv6**

Description Commands in this context configure add-paths support for the VPN-IPv6 address family.

Introduced 16.0.R1

Platforms All

## receive *boolean*

Synopsis Receive multiple routes per VPN-IPv6 prefix

Context **configure router string bgp add-paths vpn-ipv6 receive boolean**

Tree **receive**

Description When configured to **true**, this command allows multiple routes per VPN-IPv6 prefix to be received from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

## send (*number* | *keyword*)

Synopsis Maximum paths advertised per VPN-IPv6 prefix

Context **configure router string bgp add-paths vpn-ipv6 send (*number* | *keyword*)**

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, add-paths send capability is not enabled for VPN-IPv6 routes.

Range 1 to 16

Options multipaths

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the BGP instance  
 Context **configure** *router string bgp admin-state keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R1  
 Platforms All

### **advertise-external**

Synopsis Enter the **advertise-external** context  
 Context **configure** *router string bgp advertise-external*  
 Tree [advertise-external](#)  
 Description Commands in this context allow BGP to advertise its best external route to a destination for specified address families even when its best overall route is an internal route.  
 Introduced 16.0.R1  
 Platforms All

### **ipv4** *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes  
 Context **configure** *router string bgp advertise-external ipv4 boolean*  
 Tree [ipv4](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **ipv6** *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes  
 Context **configure** *router string bgp advertise-external ipv6 boolean*

Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">advertise-external</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">advertise-external</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-inactive** *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">advertise-inactive</a> <i>boolean</i>
Tree	<a href="#">advertise-inactive</a>
Description	When configured to <b>true</b> , this command allows any inactive BGP route to be advertised, even though it is not the used route.  When configured to <b>false</b> , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

## advertise-ipv6-next-hops

Synopsis	Enter the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops</b>
Tree	<b>advertise-ipv6-next-hops</b>
Description	<p>Commands in this context allow specified BGP address family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>This command context has no effect on routes advertised to IPv4 peers.</p>
Introduced	16.0.R1
Platforms	All

## evpn *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops evpn</b> <i>boolean</i>
Tree	<b>evpn</b>
Description	<p>When configured to <b>true</b>, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	19.5.R1
Platforms	All

## ipv4 *boolean*

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Description	<p>When configured to <b>true</b>, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability</p>

was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

Default	false
Introduced	19.5.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp advertise-ipv6-next-hops label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Description	<p>When configured to <b>true</b>, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp advertise-ipv6-next-hops label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	<p>When configured to <b>true</b>, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <a href="#">bgp advertise-ipv6-next-hops</a> <a href="#">vpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Description	<p>When configured to <b>true</b>, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <a href="#">bgp advertise-ipv6-next-hops</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Description	<p>When configured to <b>true</b>, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	<b>configure</b> <i>router string</i> <a href="#">bgp aggregator-id-zero</a> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Description	When configured to <b>true</b> , the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.

When configured to **false**, the AS number and router ID are added to the AGGREGATOR path attribute.

Default	false
Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">asn-4-byte</a> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	BGP authentication key for all peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3

Platforms All

## backup-path

Synopsis Enter the **backup-path** context

Context **configure router string bgp backup-path**

Tree **backup-path**

Description Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.

By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.

Introduced 16.0.R1

Platforms All

## ipv4 boolean

Synopsis Enable support for unlabeled unicast IPv4 routes

Context **configure router string bgp backup-path ipv4 boolean**

Tree **ipv4**

Default false

Introduced 16.0.R1

Platforms All

## ipv6 boolean

Synopsis Enable support for unlabeled unicast IPv6 routes

Context **configure router string bgp backup-path ipv6 boolean**

Tree **ipv6**

Default false

Introduced 16.0.R1

Platforms All

**label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp backup-path label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp backup-path label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**best-path-selection**

Synopsis	Enter the <b>best-path-selection</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection</b>
Tree	<a href="#">best-path-selection</a>
Introduced	16.0.R1
Platforms	All

**always-compare-med**

Synopsis	Enter the <b>always-compare-med</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection always-compare-med</b>
Tree	<a href="#">always-compare-med</a>
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	16.0.R1
Platforms	All

**med-value** *keyword*

Synopsis	Action for a missing MED attribute
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection always-compare-med</a> <b>med-value</b> <i>keyword</i>
Tree	<a href="#">med-value</a>
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	16.0.R1
Platforms	All

**strict-as** *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection always-compare-med</a> <b>strict-as</b> <i>boolean</i>
Tree	<a href="#">strict-as</a>
Description	When configured to <b>true</b> , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS. When configured to <b>false</b> , the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.
Default	true
Introduced	16.0.R1
Platforms	All

**as-path-ignore**

Synopsis	Enter the <b>as-path-ignore</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection</a> <b>as-path-ignore</b>
Tree	<a href="#">as-path-ignore</a>
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection as-path-ignore</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

Synopsis	Ignore AS path length for IPv6 multicast routes
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp best-path-selection as-path-ignore mcast-ipv6</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv4** *boolean*

Synopsis	Ignore AS path length for IPv4 MVPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp best-path-selection as-path-ignore mvpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv6** *boolean*

Synopsis	Ignore AS path length for IPv6 MVPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>best-path-selection</b> <b>as-path-ignore</b> <b>mvpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Ignore AS path length for VPN IPv4 (SAFI 128) routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>best-path-selection</b> <b>as-path-ignore</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Ignore AS path length for VPN IPv6 (SAFI 128) routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>best-path-selection</b> <b>as-path-ignore</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**compare-origin-validation-state** *boolean*

Synopsis	Compare RPKI origin validation state of usable routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>best-path-selection</b> <b>compare-origin-validation-state</b> <i>boolean</i>
Tree	<a href="#">compare-origin-validation-state</a>
Description	When configured to <b>true</b> , the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.

When configured to **false**, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.

Default	false
Introduced	16.0.R1
Platforms	All

### **d-path-length-ignore** *boolean*

Synopsis	Enable D-PATH length ignore
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection d-path-length-ignore</b> <i>boolean</i>
Tree	<a href="#">d-path-length-ignore</a>

**Description** When configured to **true**, this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

### **deterministic-med** *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection deterministic-med</b> <i>boolean</i>
Tree	<a href="#">deterministic-med</a>

**Description** When configured to **true**, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to

select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to **false**, paths are not grouped and the overall best-path selection can depend on the order of route arrival.

Default	false
Introduced	16.0.R1
Platforms	All

## **ebgp-ibgp-equal**

Synopsis	Enter the <b>ebgp-ibgp-equal</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a>
Tree	<a href="#">ebgp-ibgp-equal</a>
Description	<p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p>
Introduced	16.0.R1
Platforms	All

## **evpn boolean**

Synopsis	Consider EBGP and IBGP EVPN routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal evpn boolean</a>
Tree	<a href="#">evpn</a>
Default	false
Introduced	22.7.R1
Platforms	All

## **ipv4 boolean**

Synopsis	Consider EBGP and IBGP IPv4 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal ipv4 boolean</a>
Tree	<a href="#">ipv4</a>

---

Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Consider EBGP and IBGP IPv6 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv4 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a> <a href="#">vpn-ipv4</a> <i>boolean</i>

Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv6 routes equal
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ignore-nh-metric** *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ignore-nh-metric</a> <i>boolean</i>
Tree	<a href="#">ignore-nh-metric</a>
Description	When configured to <b>true</b> , BGP ignores the resolved distance to the BGP next hop in its route selection process.  When configured to <b>false</b> , BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the <b>router</b> context) or IP prefix learned from VPRN BGP peers (in the <b>vprn</b> context).
Default	false
Introduced	16.0.R1
Platforms	All

### **ignore-router-id**

Synopsis	Enable the <b>ignore-router-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ignore-router-id</a>
Tree	<a href="#">ignore-router-id</a>
Description	Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.

By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.

Introduced	16.0.R1
Platforms	All

## include-internal

Synopsis	Enter the <b>include-internal</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">ignore-router-id</a> <a href="#">include-internal</a>
Tree	<a href="#">include-internal</a>
Description	Commands in this context specify the internal address families for which the router ID values are ignored, even when comparing two IBGP paths or an EBGP and an IBGP path.
Introduced	16.0.R1
Platforms	All

## mvpn-ipv4 *boolean*

Synopsis	Ignore the router IDs of MVPN-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">ignore-router-id</a> <a href="#">include-internal</a> <a href="#">mvpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

## mvpn-ipv6 *boolean*

Synopsis	Ignore the router IDs of MVPN-IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">ignore-router-id</a> <a href="#">include-internal</a> <a href="#">mvpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**origin-invalid-unusable** *boolean*

Synopsis	Deem invalid routes unusable for best-path selection
Context	<b>configure</b> <i>router string</i> <i>bgp best-path-selection origin-invalid-unusable boolean</i>
Tree	<a href="#">origin-invalid-unusable</a>
Description	<p>When configured to <b>true</b>, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to <b>false</b>, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix according to the BGP decision process.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <i>router string</i> <i>bgp bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations.</p> <p>When configured to <b>false</b>, BFD is not enabled globally for all BGP sessions.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**bgp-tunnel-metric**

Synopsis	Enter the <b>bgp-tunnel-metric</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp bgp-tunnel-metric</i>
Tree	<a href="#">bgp-tunnel-metric</a>
Description	Commands in this context control the tunnel table metrics associated with BGP label unicast routes.
Introduced	20.5.R1
Platforms	All

**prefer-aigp** *boolean*

Synopsis	Use the AIGP attribute as tunnel metric when present
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>bgp-tunnel-metric</i> <i>prefer-aigp</i> <i>boolean</i>
Tree	<i>prefer-aigp</i>
Description	<p>When configured to <b>true</b>, the TTM metric is based on the AIGP metric if the route has the path attribute. When the BGP-LU route is selected for installation in TTM and it is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the resolved cost to the BGP next-hop of the route; otherwise, the metric is set to the value in the <b>value</b> setting.</p> <p>When configured to <b>false</b>, the AIGP attribute is ignored for purposes to TTM metric derivation.</p>
Default	false
Introduced	20.5.R1
Platforms	All

**value** *number*

Synopsis	BGP tunnel metric value
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>bgp-tunnel-metric</i> <i>value</i> <i>number</i>
Tree	<i>value</i>
Description	<p>This command configures a BGP tunnel metric for label IPv4 routes that do not have their metric set by more specific means.</p> <p>If a BGP-LU route is selected for installation in the TTM and there is no tunnel metric policy action that applies to the route, the TTM metric of the associated tunnel is set to this value if either:</p> <ul style="list-style-type: none"> <li>• <b>prefer-aigp</b> is set to <b>false</b></li> <li>• <b>prefer-aigp</b> is set to <b>true</b> but the BGP-LU route does not have an AIGP attribute</li> </ul>
Range	0 to 4294967295
Default	1000
Introduced	20.5.R1
Platforms	All

**bgp-tunnel-preference** *number*

Synopsis	BGP tunnel table preference
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>bgp-tunnel-preference</i> <i>number</i>

Tree	<a href="#">bgp-tunnel-preference</a>
Description	<p>This command configures the tunnel table preference for BGP-LU tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p>
Range	1 to 255
Default	12
Introduced	21.10.R1
Platforms	All

### **block-prefix-sid** *boolean*

Synopsis	Block the prefix SID attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <b>block-prefix-sid</b> <i>boolean</i>
Tree	<a href="#">block-prefix-sid</a>
Description	<p>When configured to <b>true</b>, all prefix SID attributes are removed from label IPv4 and label IPv6 routes when they are exchanged with EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to <b>false</b>, all prefix SID attributes associated with label IPv4 and label IPv6 routes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <b>client-reflect</b> <i>boolean</i>
Tree	<a href="#">client-reflect</a>
Description	<p>When configured to <b>true</b>, routes received from neighbors considered to be RR clients are reflected to other peers as expected.</p> <p>When configured to <b>false</b>, routes received from neighbors considered to be RR clients are not reflected to other clients.</p>
Default	true

Introduced	16.0.R1
Platforms	All

## cluster

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">cluster</a>
Tree	<a href="#">cluster</a>
Introduced	16.0.R1
Platforms	All

## allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology location for ORR
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">cluster</a> <a href="#">allow-local-fallback</a> <i>boolean</i>
Tree	<a href="#">allow-local-fallback</a>
Description	When configured to <b>true</b> , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to <b>true</b> . When configured to <b>false</b> , no route is advertised to the clients when there are no reachable routes from the client's ORR location.
Default	false
Introduced	16.0.R1
Platforms	All

## cluster-id *string*

Synopsis	Route reflector cluster ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">cluster</a> <a href="#">cluster-id</a> <i>string</i>
Tree	<a href="#">cluster-id</a>
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	16.0.R1
Platforms	All

**orr-location** *number*

Synopsis	Optimal route reflection location for the cluster
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp cluster</b> <b>orr-location</b> <i>number</i>
Tree	<b>orr-location</b>
Description	<p>This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.</p> <p>With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp connect-retry</b> <i>number</i>
Tree	<b>connect-retry</b>
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	16.0.R1
Platforms	All

**convergence**

Synopsis	Enter the <b>convergence</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence</b>
Tree	<b>convergence</b>
Introduced	19.7.R1
Platforms	All

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence family</b> <i>keyword</i>
Tree	<b>family</b>
Description	Commands in this context configure route convergence options for a specific BGP address family, specifically, the maximum amount of time BGP waits until it advertises the routes of the address family to its BGP peers.
Introduced	19.7.R1
Platforms	All

**[family-type]** *keyword*

Synopsis	Address family for which convergence selection applies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

**max-wait-to-advertise** *number*

Synopsis	Maximum wait time before advertising routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence family</b> <i>keyword</i> <b>max-wait-to-advertise</b> <i>number</i>
Tree	<b>max-wait-to-advertise</b>
Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

**min-wait-to-advertise** *number*

Synopsis	Minimum wait time before advertising routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence min-wait-to-advertise</b> <i>number</i>
Tree	<b>min-wait-to-advertise</b>

Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

## damp-peer-oscillations

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.
Introduced	16.0.R1
Platforms	All

## error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp damp-peer-oscillations error-interval</a> <i>number</i>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

## idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp damp-peer-oscillations idle-hold-time</a>
Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1

Platforms All

### **initial-wait** *number*

Synopsis Time session remains in idle state after stabilization

Context **configure** *router string* *bgp damp-peer-oscillations idle-hold-time initial-wait number*

Tree [initial-wait](#)

Range 0 to 2048

Default 0

Introduced 16.0.R1

Platforms All

### **max-wait** *number*

Synopsis Maximum session idle time after repeated instability

Context **configure** *router string* *bgp damp-peer-oscillations idle-hold-time max-wait number*

Tree [max-wait](#)

Range 1 to 2048

Default 60

Introduced 16.0.R1

Platforms All

### **second-wait** *number*

Synopsis Time that doubles after each session failure

Context **configure** *router string* *bgp damp-peer-oscillations idle-hold-time second-wait number*

Tree [second-wait](#)

Description This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.

Range 1 to 2048

Default 5

Introduced 16.0.R1

Platforms All

**damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <i>router string bgp damping boolean</i>
Tree	<a href="#">damping</a>
Description	<p>When configured to <b>true</b>, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none"> <li>• Half-life: 15 minutes</li> <li>• Max-suppress: 60 minutes</li> <li>• Suppress-threshold: 3000</li> <li>• Reuse-threshold: 750</li> </ul> <p>When configured to <b>false</b>, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure</b> <i>router string bgp def-recv-evpn-encap keyword</i>
Tree	<a href="#">def-recv-evpn-encap</a>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
Options	mpls, vxlan
Default	mpls
Introduced	16.0.R1
Platforms	All

**default-label-preference**

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure</b> <i>router string bgp default-label-preference</i>
Tree	<a href="#">default-label-preference</a>
Introduced	19.5.R1

Platforms All

### **ebgp number**

Synopsis Default preference for EBGp

Context **configure** [router](#) *string* [bgp default-label-preference](#) *ebgp number*

Tree [ebgp](#)

Range 0 to 255

Default 0

Introduced 19.5.R1

Platforms All

### **ibgp number**

Synopsis Default preference for IBGP

Context **configure** [router](#) *string* [bgp default-label-preference](#) *ibgp number*

Tree [ibgp](#)

Range 0 to 255

Default 0

Introduced 19.5.R1

Platforms All

### **default-preference**

Synopsis Enter the **default-preference** context

Context **configure** [router](#) *string* [bgp default-preference](#)

Tree [default-preference](#)

Introduced 19.5.R1

Platforms All

### **ebgp number**

Synopsis Default preference for EBGp

Context **configure** [router](#) *string* [bgp default-preference](#) *ebgp number*

Tree [ebgp](#)

Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

**ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp default-preference</b> <b>ibgp</b> <i>number</i>
Tree	<b>ibgp</b>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dynamic-neighbor-limit number**

Synopsis	Max dynamic BGP sessions to accept from remote peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp dynamic-neighbor-limit</b> <i>number</i>
Tree	<b>dynamic-neighbor-limit</b>
Description	This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

## **ebgp-default-reject-policy**

Synopsis	Enter the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp ebgp-default-reject-policy</a>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

## **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <i>router string</i> <a href="#">bgp ebgp-default-reject-policy export</a> <i>boolean</i>
Tree	<a href="#">export</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <i>router string</i> <a href="#">bgp ebgp-default-reject-policy import</a> <i>boolean</i>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **egress-peer-engineering**

Synopsis	Enable the <b>egress-peer-engineering</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp egress-peer-engineering</a>
Tree	<a href="#">egress-peer-engineering</a>
Introduced	21.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	<b>configure</b> <i>router string</i> <i>bgp egress-peer-engineering admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

**enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <i>router string</i> <i>bgp enforce-first-as boolean</i>
Tree	<a href="#">enforce-first-as</a>
Description	<p>When configured to <b>true</b> for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the <b>update-fault-tolerance</b> command in the <b>error-handling</b> context is set to <b>false</b>) or the session is left up but the route is treated as withdrawn (if <b>update-fault-tolerance</b> is set to <b>true</b>).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When configured to <b>false</b>, received routes are not checked for compliance with the rule.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**error-handling**

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp error-handling</i>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

**update-fault-tolerance** *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp error-handling update-fault-tolerance</b> <i>boolean</i>
Tree	<b>update-fault-tolerance</b>
Description	When configured to <b>true</b> , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.  When configured to <b>false</b> , most errors trigger a session reset.
Default	false
Introduced	16.0.R1
Platforms	All

**export**

Synopsis	Enable the <b>export</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp export</b>
Tree	<b>export</b>
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to all peers. Route policies are configured in the <b>configure policy-options</b> context.  When no export policies are specified in this context, BGP-learned routes are advertised by default and non-BGP routes are not advertised.
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	List of export policy names
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp export policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers.  Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.

Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).

When no export policies are specified, BGP-learned routes are advertised by default and non-BGP routes are not advertised.

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### extended-nh-encoding

Synopsis	Enter the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp extended-nh-encoding</a>
Tree	<a href="#">extended-nh-encoding</a>
Description	Commands in this context specify the IPv4-related address families that can receive IPv6 next hops from peers. The peers should not send such routes unless the peers receive notification of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.
Introduced	16.0.R1
Platforms	All

### ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp extended-nh-encoding ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.5.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp extended-nh-encoding label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise encoding capability for VPN-IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp extended-nh-encoding vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**family**

Synopsis	Enter the <b>family</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp family</b>
Tree	<a href="#">family</a>
Description	Commands in this context specify the BGP address families supported by the base router BGP sessions.
Introduced	16.0.R1
Platforms	All

**bgp-ls** *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp family bgp-ls</b> <i>boolean</i>
Tree	<a href="#">bgp-ls</a>
Default	false
Introduced	16.0.R1
Platforms	All

**evpn boolean**

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	<b>configure</b> <i>router string bgp family evpn boolean</i>
Tree	<a href="#">evpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv4 boolean**

Synopsis	Advertise support for the flowspec-IPv4 address family
Context	<b>configure</b> <i>router string bgp family flow-ipv4 boolean</i>
Tree	<a href="#">flow-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv6 boolean**

Synopsis	Advertise support for the flowspec-IPv6 address family
Context	<b>configure</b> <i>router string bgp family flow-ipv6 boolean</i>
Tree	<a href="#">flow-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-vpn-ipv4 boolean**

Synopsis	Advertise support for FlowSpec-VPN IPv4 address family
Context	<b>configure</b> <i>router string bgp family flow-vpn-ipv4 boolean</i>
Tree	<a href="#">flow-vpn-ipv4</a>
Default	false
Introduced	22.7.R1
Platforms	All

**flow-vpn-ipv6** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv6 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>flow-vpn-ipv6</i> <i>boolean</i>
Tree	<a href="#">flow-vpn-ipv6</a>
Default	false
Introduced	22.7.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>ipv4</i> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>ipv6</i> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**l2-vpn** *boolean*

Synopsis	Advertise MP-BGP support for the L2-VPN address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>l2-vpn</i> <i>boolean</i>
Tree	<a href="#">l2-vpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Advertise support for the label-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>mcast-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>mcast-ipv6</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-vpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mcast-vpn-ipv4 boolean</i>
Tree	<a href="#">mcast-vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-vpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mcast-vpn-ipv6 boolean</i>
Tree	<a href="#">mcast-vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mdt-safi** *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mdt-safi boolean</i>
Tree	<a href="#">mdt-safi</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ms-pw** *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	<b>configure</b> <i>router string</i> <i>bgp family ms-pw boolean</i>
Tree	<a href="#">ms-pw</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 MCAST VPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mvpn-ipv4 boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 MCAST VPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mvpn-ipv6 boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**route-target** *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	<b>configure</b> <i>router string</i> <i>bgp family route-target boolean</i>
Tree	<a href="#">route-target</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	<b>configure</b> <i>router string</i> <i>bgp family sr-policy-ipv4 boolean</i>
Tree	<a href="#">sr-policy-ipv4</a>
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false

Introduced 16.0.R1  
Platforms All

### **sr-policy-ipv6** *boolean*

Synopsis Advertise MP-BGP support for the SR-policy-IPv6 family  
Context **configure** *router* *string* *bgp* *family* *sr-policy-ipv6* *boolean*  
Tree [sr-policy-ipv6](#)  
Description This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.  
Default false  
Introduced 19.10.R1  
Platforms All

### **vpn-ipv4** *boolean*

Synopsis Advertise MP-BGP support for IPv4 VPN address family  
Context **configure** *router* *string* *bgp* *family* *vpn-ipv4* *boolean*  
Tree [vpn-ipv4](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **vpn-ipv6** *boolean*

Synopsis Advertise MP-BGP support for IPv6 VPN address family  
Context **configure** *router* *string* *bgp* *family* *vpn-ipv6* *boolean*  
Tree [vpn-ipv6](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **fast-external-failover** *boolean*

Synopsis Drop external BGP session immediately when link fails

Context	<b>configure router</b> <i>string</i> <b>bgp fast-external-failover</b> <i>boolean</i>
Tree	<b>fast-external-failover</b>
Description	When configured to <b>true</b> , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to <b>false</b> , the BGP session remains up until the hold time expires.
Default	true
Introduced	16.0.R1
Platforms	All

## flowspec

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp flowspec</b>
Tree	<b>flowspec</b>
Introduced	16.0.R1
Platforms	All

## validate-dest-prefix *boolean*

Synopsis	Validate destination prefix in FlowSpec-IPv4/IPv6 route
Context	<b>configure router</b> <i>string</i> <b>bgp flowspec validate-dest-prefix</b> <i>boolean</i>
Tree	<b>validate-dest-prefix</b>
Description	When configured to <b>true</b> , this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent. A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true: <ul style="list-style-type: none"> <li>• it was originated outside the local AS of the receiving BGP router</li> <li>• the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix</li> </ul> An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers. When configured to <b>false</b> , destination-prefix validation is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

**validate-redirect-ip** *boolean*

Synopsis	Validate the redirect-to-IPv4 action in FlowSpec route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>flowspec</b> <b>validate-redirect-ip</b> <i>boolean</i>
Tree	<a href="#">validate-redirect-ip</a>
Description	<p>When configured to <b>true</b>, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.</p> <p>A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.</p> <p>When configured to <b>false</b>, the validation check is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>graceful-restart</b>
Tree	<a href="#">graceful-restart</a>
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.
Introduced	16.0.R1
Platforms	All

**gr-notification** *boolean*

Synopsis	Perform Graceful Restart procedures
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>graceful-restart</b> <b>gr-notification</b> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	<p>When configured to <b>true</b>, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to <b>false</b>, NOTIFICATION messages are not supported.</p>
Default	false

Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived</a>
Tree	<a href="#">long-lived</a>
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	16.0.R1
Platforms	All

## advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived advertise-stale-to-all-neighbors</a> <i>boolean</i>
Tree	<a href="#">advertise-stale-to-all-neighbors</a>
Default	false
Introduced	16.0.R1
Platforms	All

## advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived advertised-stale-time</a> <i>number</i>
Tree	<a href="#">advertised-stale-time</a>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

Platforms All

### **helper-override-stale-time** *number*

Synopsis Locally-configured stale routes override time

Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived family keyword helper-override-stale-time number</a>
Tree	<a href="#">helper-override-stale-time</a>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived forwarding-bits-set keyword</a>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

### **helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived helper-override-restart-time number</a>
Tree	<a href="#">helper-override-restart-time</a>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1

Platforms All

### **helper-override-stale-time** *number*

Synopsis Locally-configured stale routes override time

Context **configure** *router string* **bgp graceful-restart long-lived helper-override-stale-time** *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range 0 to 16777215

Introduced 16.0.R1

Platforms All

### **without-no-export** *boolean*

Synopsis Advertise LLGR stale routes to non-LLGR peers

Context **configure** *router string* **bgp graceful-restart long-lived without-no-export** *boolean*

Tree [without-no-export](#)

Description When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO\_EXPORT standard community is automatically added to the routes.

Default false

Introduced 16.0.R1

Platforms All

### **restart-time** *number*

Synopsis Restart time advertised by GR capability

Context **configure** *router string* **bgp graceful-restart restart-time** *number*

Tree [restart-time](#)

Range	0 to 4095
Default	120
Introduced	16.0.R1
Platforms	All

### **stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp graceful-restart stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

### **group** [*group-name*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i>
Tree	<b>group</b>
Description	Commands in this context define BGP peer groups and their group-specific command options. The options in this context are identical to the global BGP options. Any options that are not overridden by the group-specific commands inherit the configuration settings from the BGP global level.
Introduced	16.0.R1
Platforms	All

### [*group-name*] *string*

Synopsis	BGP peer group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## add-paths

Synopsis	Enable the <b>add-paths</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths</b>
Tree	<b>add-paths</b>
Description	<p>Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn</b>
Tree	<b>evpn</b>
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	21.10.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn receive</b> <i>boolean</i>
Tree	<b>receive</b>
Default	false
Introduced	21.10.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn send</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">send</a>
Range	1 to 16
Options	multipaths
Introduced	21.10.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a> <a href="#">receive</a> <i>boolean</i>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a> <a href="#">send</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple routes per IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6 receive boolean</i>
Tree	<i>receive</i>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6 send (number   keyword)</i>
Tree	<i>send</i>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

## label-ipv4

Synopsis	Enter the <b>label-ipv4</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b>
Tree	<b>label-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b> <i>receive boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv4 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b> <i>send (number   keyword)</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

## label-ipv6

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b>
Tree	<b>label-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b> <i>receive boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b> <i>send (number   keyword)</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv4

Synopsis	Enter the <b>mcast-vpn-ipv4</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b>
Tree	<b>mcast-vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast routes per IPv4 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b> <b>receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast IPv4 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b> <b>send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for multicast IPv4 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv6

Synopsis	Enter the <b>mcast-vpn-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv6</b>
Tree	<b>mcast-vpn-ipv6</b>
Introduced	16.0.R1

**receive** *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths vpn-ipv6 receive boolean</i>
Tree	<i>receive</i>
Description	When configured to <b>true</b> , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send** (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths vpn-ipv6 send (number   keyword)</i>
Tree	<i>send</i>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the BGP group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**advertise-inactive** *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>advertise-inactive</b> <i>boolean</i>
Tree	<a href="#">advertise-inactive</a>
Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> <li>• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> <li>• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> </ul> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

**advertise-ipv6-next-hops**

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>

Description	<p>Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### **evpn boolean**

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure</b> <i>router string bgp group string advertise-ipv6-next-hops evpn boolean</i>
Tree	<a href="#">evpn</a>
Description	<p>When configured to <b>true</b>, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	19.5.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string bgp group string advertise-ipv6-next-hops ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Description	<p>When configured to <b>true</b>, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	19.5.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>label-ipv4</i> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Description	<p>When configured to <b>true</b>, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>label-ipv6</i> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	<p>When configured to <b>true</b>, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>vpn-ipv4</i> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>

Description	<p>When configured to <b>true</b>, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">advertise-ipv6-next-hops</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Description	<p>When configured to <b>true</b>, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">aggregator-id-zero</a> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

### **aigp** *boolean*

Synopsis	Add AIGP attribute to advertised routes
----------	---

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>aigp boolean</i>
Tree	<i>aigp</i>
Description	When configured to <b>true</b> , this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance. When configured to <b>false</b> , the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.
Default	false
Introduced	16.0.R1
Platforms	All

### **as-override** *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>as-override boolean</i>
Tree	<i>as-override</i>
Description	When configured to <b>true</b> , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute. This command should be used with caution, as it breaks BGP's loop detection mechanism. When configured to <b>false</b> , no AS override is performed.
Default	false
Introduced	19.7.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>asn-4-byte boolean</i>
Tree	<i>asn-4-byte</i>
Description	When this command inherits a value of <b>true</b> , the use of 4-byte ASNs is supported. When unconfigured, the command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> . When configured to <b>false</b> , this command disables the use of 4-byte ASNs.
Introduced	16.0.R1
Platforms	All

**authentication-key *string***

Synopsis	BGP authentication key for peers in the group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

**authentication-keychain *reference***

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure</b> <a href="#">system security keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

**bfd-liveness *boolean***

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BFD is removed from the associated protocol adjacency.</p>
Introduced	16.0.R1
Platforms	All

### **block-prefix-sid** *boolean*

Synopsis	Block the prefix SID attribute
Context	<b>configure</b> <i>router string bgp group string block-prefix-sid boolean</i>
Tree	<a href="#">block-prefix-sid</a>
Description	<p>When configured to <b>true</b>, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to <b>false</b>, all prefix SID attributes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### **capability-negotiation** *boolean*

Synopsis	Enable capability negotiation
Context	<b>configure</b> <i>router string bgp group string capability-negotiation boolean</i>
Tree	<a href="#">capability-negotiation</a>
Description	<p>When configured to <b>true</b>, this command enables the exchange of capabilities.</p> <p>When configured to <b>false</b> and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	<b>configure</b> <i>router string bgp group string client-reflect boolean</i>
Tree	<a href="#">client-reflect</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When the command inherits a value of <b>true</b>, client reflection of routes is enabled.</p> <p>When configured to <b>false</b>, this command disables client reflection of routes.</p>
Introduced	16.0.R1

Platforms All

## cluster

Synopsis Enter the **cluster** context

Context **configure** *router string bgp group string cluster*

Tree [cluster](#)

Introduced 16.0.R1

Platforms All

## allow-local-fallback *boolean*

Synopsis Allow fallback to RR topology location

Context **configure** *router string bgp group string cluster allow-local-fallback boolean*

Tree [allow-local-fallback](#)

Description When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**.  
When configured to **false**, no route is advertised to the client.

Default false

Introduced 16.0.R1

Platforms All

## cluster-id *string*

Synopsis Route reflector cluster ID

Context **configure** *router string bgp group string cluster cluster-id string*

Tree [cluster-id](#)

Introduced 16.0.R1

Platforms All

## orr-location *number*

Synopsis Optimal route reflection location for the cluster

Context **configure** *router string bgp group string cluster orr-location number*

Tree [orr-location](#)

Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.  With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">connect-retry</a> <i>number</i>
Tree	<a href="#">connect-retry</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.  When unconfigured, command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

### **error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">damp-peer-oscillations</a> <a href="#">error-interval</a> <i>number</i>

Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

### idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a>
Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1
Platforms	All

### initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a> <a href="#">initial-wait</a> <i>number</i>
Tree	<a href="#">initial-wait</a>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

### max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a> <a href="#">max-wait</a> <i>number</i>
Tree	<a href="#">max-wait</a>
Range	1 to 2048
Default	60

Introduced	16.0.R1
Platforms	All

### **second-wait** *number*

Synopsis	Time that doubles after each repeated session failure
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>second-wait number</i>
Tree	<i>second-wait</i>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

### **damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>damping boolean</i>
Tree	<i>damping</i>
Introduced	16.0.R1
Platforms	All

### **def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>def-recv-evpn-encap keyword</i>
Tree	<i>def-recv-evpn-encap</i>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.  When unconfigured, the setting for this command is inherited from the BGP global-level configuration.
Options	<i>mpls, vxlan</i>
Introduced	16.0.R1
Platforms	All

## default-label-preference

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>default-label-preference</i>
Tree	<a href="#">default-label-preference</a>
Introduced	19.5.R1
Platforms	All

## ebgp number

Synopsis	Default preference for EBGp
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>default-label-preference</i> <i>ebgp number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## ibgp number

Synopsis	Default preference for IBGP
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>default-label-preference</i> <i>ibgp number</i>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## default-preference

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>default-preference</i>
Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

**ebgp number**

Synopsis	Default preference for EBGp
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>default-preference</b> <b>ebgp</b> <i>number</i>
Tree	<b>ebgp</b>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>default-preference</b> <b>ibgp</b> <i>number</i>
Tree	<b>ibgp</b>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**default-route-target boolean**

Synopsis	Send default RTC route (zero prefix length) to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>default-route-target</b> <i>boolean</i>
Tree	<b>default-route-target</b>
Description	When configured to <b>true</b> , this command sends the default RTC route (zero prefix length) toward the selected peers. When configured to <b>false</b> , a default RTC route is not sent.
Default	false
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80

Introduced	16.0.R1
Platforms	All

## dynamic-neighbor

Synopsis	Enter the <b>dynamic-neighbor</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>dynamic-neighbor</b>
Tree	<a href="#">dynamic-neighbor</a>
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

## interface [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>dynamic-neighbor</b> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Description	<p>Commands in this context configure an unnumbered base router network interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	22.10.R1
Platforms	All

## [\[interface-name\]](#) *string*

Synopsis	Name of the dynamic neighbor interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>dynamic-neighbor</b> <a href="#">interface</a> <i>string</i>

Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

### **allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor</a> <a href="#">interface</a> <i>string</i> <b>allowed-peer-as</b> <i>string</i>
Tree	<a href="#">allowed-peer-as</a>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .  All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32
Notes	This element is ordered by the user.
Introduced	22.10.R1
Platforms	All

### **max-sessions** *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor</a> <a href="#">interface</a> <i>string</i> <b>max-sessions</b> <i>number</i>
Tree	<a href="#">max-sessions</a>
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	22.10.R1
Platforms	All

**match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>match</b>
Tree	<b>match</b>
Description	Commands in this context configure match conditions for the dynamic neighbors.
Introduced	19.5.R1
Platforms	All

**prefix** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Introduced	19.5.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>allowed-peer-as</b> <i>string</i>
Tree	<b>allowed-peer-as</b>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .

All values greater than or equal to  $n1$  and less than or equal to  $n2$  are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].

Max. Instances	32
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

### **dynamic-neighbor-limit** *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	<b>configure</b> <i>router string bgp group string dynamic-neighbor-limit number</i>
Tree	<a href="#">dynamic-neighbor-limit</a>
Description	This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.  When unconfigured, the setting is inherited from the BGP global-level configuration.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <i>router string bgp group string ebgp-default-reject-policy</i>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

### **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <i>router string bgp group string ebgp-default-reject-policy export boolean</i>
Tree	<a href="#">export</a>
Default	true

Introduced 19.5.R1  
 Platforms All

### **import** *boolean*

Synopsis Enable default reject import policy for external peers  
 Context **configure** *router string bgp group string ebgp-default-reject-policy import boolean*  
 Tree [import](#)  
 Default true  
 Introduced 19.5.R1  
 Platforms All

### **egress-engineering**

Synopsis Enable the **egress-engineering** context  
 Context **configure** *router string bgp group string egress-engineering*  
 Tree [egress-engineering](#)  
 Introduced 21.7.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BGP egress engineering  
 Context **configure** *router string bgp group string egress-engineering admin-state keyword*  
 Tree [admin-state](#)  
 Description This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.  
 Options enable, disable  
 Default disable  
 Introduced 21.7.R1  
 Platforms All

### **egress-peer-engineering-label-unicast** *boolean*

Synopsis Generate EPE label-unicast routes for group

Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>egress-peer-engineering-label-unicast</b> <i>boolean</i>
Tree	<a href="#">egress-peer-engineering-label-unicast</a>
Description	When configured to <b>true</b> , BGP generates a label-unicast route for each /32 or /128 prefix that corresponds to the BGP group address in the scope of the command. These routes can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. They support the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1
Platforms	All

### **enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>enforce-first-as</b> <i>boolean</i>
Tree	<a href="#">enforce-first-as</a>
Introduced	16.0.R1
Platforms	All

### **error-handling**

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>error-handling</b>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

### **update-fault-tolerance** *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>error-handling</b> <b>update-fault-tolerance</b> <i>boolean</i>
Tree	<a href="#">update-fault-tolerance</a>
Description	When configured to <b>true</b> , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.  When unconfigured, the command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> .

When this command inherits a value of **false**, all errors trigger a session reset.

Introduced	16.0.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>export</b>
Tree	<b>export</b>
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>export policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.

Introduced	16.0.R1
Platforms	All

### **extended-nh-encoding**

Synopsis	Enable the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">extended-nh-encoding</a>
Tree	<a href="#">extended-nh-encoding</a>
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">extended-nh-encoding</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.5.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">extended-nh-encoding</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise encoding capability for VPN-IPv4 routes
Context	<b>configure</b> <i>router string bgp group string extended-nh-encoding vpn-ipv4 boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**family**

Synopsis	Enable the <b>family</b> context
Context	<b>configure</b> <i>router string bgp group string family</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

**bgp-ls** *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	<b>configure</b> <i>router string bgp group string family bgp-ls boolean</i>
Tree	<a href="#">bgp-ls</a>
Default	false
Introduced	16.0.R1
Platforms	All

**evpn** *boolean*

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	<b>configure</b> <i>router string bgp group string family evpn boolean</i>
Tree	<a href="#">evpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv4** *boolean*

Synopsis	Advertise support for the flowspec-IPv4 address family
Context	<b>configure</b> <i>router string bgp group string family flow-ipv4 boolean</i>
Tree	<a href="#">flow-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv6** *boolean*

Synopsis	Advertise support for the flowspec-IPv6 address family
Context	<b>configure</b> <i>router string bgp group string family flow-ipv6 boolean</i>
Tree	<a href="#">flow-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-vpn-ipv4** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv4 address family
Context	<b>configure</b> <i>router string bgp group string family flow-vpn-ipv4 boolean</i>
Tree	<a href="#">flow-vpn-ipv4</a>
Default	false
Introduced	22.7.R1
Platforms	All

**flow-vpn-ipv6** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv6 address family
Context	<b>configure</b> <i>router string bgp group string family flow-vpn-ipv6 boolean</i>
Tree	<a href="#">flow-vpn-ipv6</a>
Default	false
Introduced	22.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Add support for the IPv4 address family
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>family ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>family ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **l2-vpn** *boolean*

Synopsis	Advertise MP-BGP support for the L2-VPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>family l2-vpn boolean</i>
Tree	<a href="#">l2-vpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>family label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Advertise support for the label-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>mcast-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>mcast-ipv6</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-vpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>mcast-vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	<b>configure</b> <i>router string bgp group string family mcast-vpn-ipv6 boolean</i>
Tree	<a href="#">mcast-vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mdt-safi** *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	<b>configure</b> <i>router string bgp group string family mdt-safi boolean</i>
Tree	<a href="#">mdt-safi</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ms-pw** *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	<b>configure</b> <i>router string bgp group string family ms-pw boolean</i>
Tree	<a href="#">ms-pw</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 MCAST VPN address family
Context	<b>configure</b> <i>router string bgp group string family mvpn-ipv4 boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 MCAST VPN address family
Context	<b>configure</b> <i>router string bgp group string family mvpn-ipv6 boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**route-target** *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	<b>configure</b> <i>router string bgp group string family route-target boolean</i>
Tree	<a href="#">route-target</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	<b>configure</b> <i>router string bgp group string family sr-policy-ipv4 boolean</i>
Tree	<a href="#">sr-policy-ipv4</a>
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	<b>configure</b> <i>router string bgp group string family sr-policy-ipv6 boolean</i>
Tree	<a href="#">sr-policy-ipv6</a>

Description	This command allows the router to advertise the capability for AF12/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	19.10.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>fast-external-failover</b> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Description	<p>Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.</p> <p>When the context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

## gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">gr-notification</a> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	<p>When configured to <b>true</b>, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to <b>false</b>, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a>
Tree	<a href="#">long-lived</a>
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p>

The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.

Introduced 16.0.R1  
 Platforms All

### **advertise-stale-to-all-neighbors** *boolean*

Synopsis Advertise stale routes to all BGP peers  
 Context **configure** [router](#) *string* [bgp group](#) *string* [graceful-restart long-lived advertise-stale-to-all-neighbors](#) *boolean*  
 Tree [advertise-stale-to-all-neighbors](#)

**[family-type] keyword**

Synopsis	Family type for family-specific LLGR configuration
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertised-stale-time number**

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>family</b> <i>keyword</i> <b>advertised-stale-time</b> <i>number</i>
Tree	<b>advertised-stale-time</b>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

**helper-override-stale-time number**

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<b>helper-override-stale-time</b>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1

Platforms All

### **forwarding-bits-set** *keyword*

**Synopsis** BGP LLGR forwarding-bit behavior for address family

**Context** **configure** *router string* *bgp group string* *graceful-restart long-lived forwarding-bits-set keyword*

**Tree** [forwarding-bits-set](#)

**Description** This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.

This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).

**Options** none, all, non-fwd

**Default** none

**Introduced** 16.0.R1

**Platforms** All

### **helper-override-restart-time** *number*

**Synopsis** Locally-configured override for restart time

**Context** **configure** *router string* *bgp group string* *graceful-restart long-lived helper-override-restart-time number*

**Tree** [helper-override-restart-time](#)

**Description** This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.

**Range** 0 to 4095

**Introduced** 16.0.R1

**Platforms** All

### **helper-override-stale-time** *number*

**Synopsis** Locally-configured stale routes override time

Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>without-no-export</b> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.  When configured to <b>false</b> , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>graceful-restart</b> <b>restart-time</b> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1

Introduced 16.0.R1

Platforms All

### **minimum-hold-time** *number*

Synopsis Minimum hold time between successive messages

Context **configure** *router string* *bgp group string* *hold-time* **minimum-hold-time** *number*

Tree [minimum-hold-time](#)

Description This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.  
When unconfigured, the command value is inherited from the BGP global-level setting.

Range 0 | 3 to 65536

Default 0

Introduced 16.0.R1

Platforms All

**seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure</b> <i>router string bgp group string hold-time seconds number</i>
Tree	<i>seconds</i>
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command setting is inherited from the BGP global-level configuration.</p>
Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

**import**

Synopsis	Enable the <b>import</b> context
Context	<b>configure</b> <i>router string bgp group string import</i>
Tree	<i>import</i>
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	<b>configure</b> <i>router string bgp group string import policy (policy-expr-string   string)</i>

Tree	<a href="#">policy</a>
Description	<p>This command specifies route policies that control the handling of inbound routes received from certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>initial-send-delay-zero</b> <i>boolean</i>
Tree	<a href="#">initial-send-delay-zero</a>
Description	<p>When configured to <b>true</b>, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>keepalive</b> <i>number</i>
Tree	<a href="#">keepalive</a>

Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the <b>hold-time seconds</b> context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> <li>• If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value.</li> <li>• If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval.</li> <li>• If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>label-preference</b> <i>number</i>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### link-bandwidth

Synopsis	Enter the <b>link-bandwidth</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth</b>
Tree	<a href="#">link-bandwidth</a>
Description	<p>Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.</p> <p>When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.</p>
Introduced	16.0.R3

Synopsis	Support Link Bandwidth EC in VPN-IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>link-bandwidth</i> <i>add-to-received-ebgp</i> <i>vpn-ipv4</i> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R3
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Support Link Bandwidth EC in VPN-IPv6 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>link-bandwidth</i> <i>add-to-received-ebgp</i> <i>vpn-ipv6</i> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R3
Platforms	All

**aggregate-used-paths**

Synopsis	Enter the <b>aggregate-used-paths</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>link-bandwidth</i> <i>aggregate-used-paths</i>
Tree	<a href="#">aggregate-used-paths</a>
Introduced	16.0.R4
Platforms	All

**ipv4 boolean**

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**ipv6 boolean**

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

**label-ipv4 boolean**

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**label-ipv6 boolean**

Synopsis	Support Link Bandwidth EC in label-IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>

Default	false
Introduced	16.0.R4
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in VPN-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">vpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Support Link Bandwidth EC in VPN-IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">aggregate-used-paths</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

**send-to-ebgp**

Synopsis	Enter the <b>send-to-ebgp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a>
Tree	<a href="#">send-to-ebgp</a>
Introduced	16.0.R4
Platforms	All

**ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">ipv4</a> <i>boolean</i>

---

Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **ipv6 *boolean***

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **label-ipv4 *boolean***

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **label-ipv6 *boolean***

Synopsis	Support Link Bandwidth EC in label-IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **vpn-ipv4 *boolean***

Synopsis	Support Link Bandwidth EC in VPN-IPv4 routes
----------	--

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>link-bandwidth send-to-ebgp vpn-ipv4 boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Support Link Bandwidth EC in VPN-IPv6 routes
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>link-bandwidth send-to-ebgp vpn-ipv6 boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **local-address** (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>local-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone   interface-name</i> )
Tree	<a href="#">local-address</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **local-as**

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>local-as</b>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

### **as-number** *number*

Synopsis	Local (or virtual) BGP AS number
----------	----------------------------------

Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-as as-number</b> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **prepend-global-as** *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-as prepend-global-as</b> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

### **private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-as private</b> <i>boolean</i>
Tree	<a href="#">private</a>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-preference</b> <i>number</i>
Tree	<a href="#">local-preference</a>

---

Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect</b> <i>keyword</i>
Tree	<b>loop-detect</b>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect-threshold</b> <i>number</i>
Tree	<b>loop-detect-threshold</b>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>med-out</b>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>min-route-advertisement</b> <i>number</i>
Tree	<b>min-route-advertisement</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## monitor

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b>
Tree	<b>monitor</b>
Description	Commands in this context specify BMP-related configurations at the BGP group level. When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>all-stations</b> <i>boolean</i>
Tree	<b>all-stations</b>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to **false**, the command is not used to indicate the stations which can receive BMP messages. The **station** command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.

Default	false
Introduced	16.0.R1
Platforms	All

## route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">monitor</a> <a href="#">route-monitoring</a>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

## post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">monitor</a> <a href="#">route-monitoring</a> <a href="#">post-policy</a> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

## pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">monitor</a> <a href="#">route-monitoring</a> <a href="#">pre-policy</a> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

## station [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
----------	-------------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp station</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">multihop</a> <i>number</i>
Tree	<a href="#">multihop</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **multipath-eligible** *boolean*

Synopsis	Allow routes from group peers in multipath eligibility
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">multipath-eligible</a> <i>boolean</i>
Tree	<a href="#">multipath-eligible</a>
Default	false
Introduced	19.5.R1

Platforms All

### **next-hop-self** *boolean*

Synopsis Advertise routes with local address as next-hop address  
Context **configure** *router string bgp group string next-hop-self boolean*  
Tree [next-hop-self](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **next-hop-unchanged**

Synopsis Enter the **next-hop-unchanged** context  
Context **configure** *router string bgp group string next-hop-unchanged*  
Tree [next-hop-unchanged](#)  
Description Commands in this context specify the IP address families that allow unchanged BGP next-hops when sending BGP routes to peers in the group.  
Introduced 16.0.R1  
Platforms All

### **evpn** *boolean*

Synopsis Advertise EVPN routes with unchanged BGP next hop  
Context **configure** *router string bgp group string next-hop-unchanged evpn boolean*  
Tree [evpn](#)  
Default false  
Introduced 20.2.R1  
Platforms All

### **label-ipv4** *boolean*

Synopsis Advertise label-IPv4 routes with unchanged BGP next hop  
Context **configure** *router string bgp group string next-hop-unchanged label-ipv4 boolean*  
Tree [label-ipv4](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">next-hop-unchanged</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">next-hop-unchanged</a> <a href="#">vpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">next-hop-unchanged</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **origin-validation**

Synopsis	Enter the <b>origin-validation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">origin-validation</a>

---

Tree	<a href="#">origin-validation</a>
Introduced	16.0.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">origin-validation</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6 boolean**

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">origin-validation</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4 boolean**

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">origin-validation</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6 boolean**

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">origin-validation</a> <a href="#">label-ipv6</a> <i>boolean</i>

Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

## outbound-route-filtering

Synopsis	Enable the <b>outbound-route-filtering</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">outbound-route-filtering</a>
Tree	<a href="#">outbound-route-filtering</a>
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).  When this context is unconfigured, the group command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

## extended-community

Synopsis	Enable the <b>extended-community</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a>
Tree	<a href="#">extended-community</a>
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities.  When this context is unconfigured, the command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

## accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a> <a href="#">accept-orf</a> <i>boolean</i>
Tree	<a href="#">accept-orf</a>
Description	When configured to <b>true</b> , the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced	16.0.R1
Platforms	All

## send-orf

Synopsis	Enable the <b>send-orf</b> context
Context	<b>configure</b> <i>router string bgp group string outbound-route-filtering extended-community send-orf</i>
Tree	<i>send-orf</i>
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

## route-target [*community-name*] *string*

Synopsis	Add a list entry for <b>route-target</b>
Context	<b>configure</b> <i>router string bgp group string outbound-route-filtering extended-community send-orf route-target string</i>
Tree	<i>route-target</i>
Introduced	16.0.R1
Platforms	All

## [*community-name*] *string*

Synopsis	Route target community name
Context	<b>configure</b> <i>router string bgp group string outbound-route-filtering extended-community send-orf route-target string</i>
Tree	<i>route-target</i>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Enable passive mode for BGP communication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1
Platforms	All

**path-mtu-discovery** *boolean*

Synopsis	Enable Path MTU Discovery
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<b>path-mtu-discovery</b>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to <b>false</b> and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

**peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>peer-as</b> <i>number</i>

Tree	<a href="#">peer-as</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">peer-ip-tracking</a> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit** [[family](#)] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i>
Tree	<a href="#">prefix-limit</a>
Introduced	16.0.R1

Platforms All

### **[family]** *keyword*

Synopsis Address family to which the limit applies

Context **configure** *router string bgp group string prefix-limit keyword*

Tree [prefix-limit](#)

Options ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **idle-timeout** *number*

Synopsis Time BGP peering remains idle before reconnecting

Context **configure** *router string bgp group string prefix-limit keyword idle-timeout number*

Tree [idle-timeout](#)

Range 1 to 1024

Introduced 16.0.R1

Platforms All

### **log-only** *boolean*

Synopsis Send warning message at threshold instead of take-down

Context **configure** *router string bgp group string prefix-limit keyword log-only boolean*

Tree [log-only](#)

Default false

Introduced 16.0.R1

Platforms All

### **maximum** *number*

Synopsis Maximum number of routes to be learned from a peer

---

Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Description	This command configures the maximum number of BGP routes that can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

### **post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i> <b>post-import</b> <i>boolean</i>
Tree	<b>post-import</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

### **limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>remove-private</b> <b>limited</b> <i>boolean</i>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>remove-private</b> <b>replace</b> <i>boolean</i>
Tree	<b>replace</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>remove-private</b> <b>skip-peer-as</b> <i>boolean</i>
Tree	<b>skip-peer-as</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **segment-routing-v6**

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>segment-routing-v6</b>
Tree	<b>segment-routing-v6</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**route-advertisement**

Synopsis	Enable the <b>route-advertisement</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement</i>
Tree	<a href="#">route-advertisement</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**drop-routes-with-srv6-tlvs** *boolean*

Synopsis	Drop BGP routes with SRv6 TLVs
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement drop-routes-with-srv6-tlvs</i> <i>boolean</i>
Tree	<a href="#">drop-routes-with-srv6-tlvs</a>
Description	When configured to <b>true</b> , the router drops and does not advertise BGP routes (that belong to any address family) with SRv6 TLVs. When configured to <b>false</b> , the router advertises BGP routes with SRv6 TLVs.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement family</i> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[family-type]** *keyword*

Synopsis	IP address type that SRv6 route attributes apply to
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement family</i> <i>keyword</i>
Tree	<a href="#">family</a>

Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **strip-srv6-tlvs** *boolean*

Synopsis	Strip SRv6 TLVs from BGP routes advertised to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i> <b>strip-srv6-tlvs</b> <i>boolean</i>
Tree	<a href="#">strip-srv6-tlvs</a>
Description	When configured to <b>true</b> , BGP routes that belong to the address family specified using the <b>family</b> command are advertised to peers with SRv6 TLVs removed. Locally or remotely added SRv6 TLVs can be removed.  When configured to <b>false</b> , SRv6 TLVs are not stripped from BGP routes advertised to peers.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for bgp label-ipv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>selective-label-ipv4-install</b> <i>boolean</i>
Tree	<a href="#">selective-label-ipv4-install</a>
Introduced	19.10.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

**extended boolean**

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <i>router string bgp group string send-communities extended boolean</i>
Tree	<i>extended</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

**large boolean**

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <i>router string bgp group string send-communities large boolean</i>
Tree	<i>large</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

**standard boolean**

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <i>router string bgp group string send-communities standard boolean</i>
Tree	<i>standard</i>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP standard communities are sent to peers in the Communities attribute.</p>

When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1  
 Platforms All

## send-default

Synopsis Enable the **send-default** context  
 Context **configure** [router](#) *string* [bgp group](#) *string* **send-default**  
 Tree [send-default](#)  
 Introduced 19.7.R1  
 Platforms All

## export-policy *reference*

Synopsis Export policy name  
 Context **configure** [router](#) *string* [bgp group](#) *string* [send-default](#) **export-policy** *reference*  
 Tree [export-policy](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Introduced 19.7.R1  
 Platforms All

## ipv4 *boolean*

Synopsis Generate and advertise an IPv4 default route (0/0)  
 Context **configure** [router](#) *string* [bgp group](#) *string* [send-default](#) **ipv4** *boolean*  
 Tree [ipv4](#)  
 Default false  
 Introduced 19.7.R1  
 Platforms All

## ipv6 *boolean*

Synopsis Generate and advertise an IPv6 default route (::/0)  
 Context **configure** [router](#) *string* [bgp group](#) *string* [send-default](#) **ipv6** *boolean*

Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **static-group** *boolean*

Synopsis	Use group for static peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">static-group</a> <i>boolean</i>
Tree	<a href="#">static-group</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **tcp-mss** (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">tcp-mss</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">tcp-mss</a>

Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

### **third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>third-party-nexthop</i> <i>boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>ttl-security</i> <i>number</i>
Tree	<i>ttl-security</i>

Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Options	no-type, internal, external
Default	no-type
Introduced	16.0.R1
Platforms	All

### **vpn-apply-export** *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>vpn-apply-export</b> <i>boolean</i>
Tree	<b>vpn-apply-export</b>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> . When this command inherits a value of <b>false</b> , the export policies are not applied.
Introduced	16.0.R1
Platforms	All

### **vpn-apply-import** *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>vpn-apply-import</b> <i>boolean</i>
Tree	<b>vpn-apply-import</b>
Description	When configured to <b>true</b> , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the import policies are not applied.

Introduced	16.0.R1
Platforms	All

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

## minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure router</b> <i>string</i> <b>bgp hold-time minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0   3 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure router</b> <i>string</i> <b>bgp hold-time seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.  Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

Range	0   3 to 65535
Default	90
Introduced	16.0.R1
Platforms	All

### **ibgp-multipath** *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>ibgp-multipath</i> <i>boolean</i>
Tree	<a href="#">ibgp-multipath</a>
Description	When configured to <b>true</b> , this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.  When configured to <b>false</b> , this command disables IBGP multipath load balancing.
Default	false
Introduced	16.0.R1
Platforms	All

### **import**

Synopsis	Enable the <b>import</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>import</i>
Tree	<a href="#">import</a>
Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.  When no import policies are specified in this context, BGP routes are accepted by default.
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp import policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies a list of objects, where each object is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by this command is allowed to be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as session comes up
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp initial-send-delay-zero</b> <i>boolean</i>
Tree	<b>initial-send-delay-zero</b>
Default	false
Introduced	16.0.R1
Platforms	All

**inter-as-vpn** *boolean*

Synopsis	Allow advertisement of VPN routes across AS boundaries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp inter-as-vpn</b> <i>boolean</i>
Tree	<b>inter-as-vpn</b>
Description	When configured to <b>true</b> , this command allows VPNs to exchange routes across AS boundaries, providing model B connectivity.

When configured to **false**, ASBRs are prevented from advertising VPN routes to peers in other ASs.

Default	false
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>keepalive number</i>
Tree	<a href="#">keepalive</a>
Range	0 to 21845
Default	30
Introduced	16.0.R1
Platforms	All

### **label-allocation**

Synopsis	Enter the <b>label-allocation</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>label-allocation</i>
Tree	<a href="#">label-allocation</a>
Introduced	20.10.R1
Platforms	All

### **label-ipv6**

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>label-allocation</i> <b>label-ipv6</b>
Tree	<a href="#">label-ipv6</a>
Description	This command controls the label allocation behavior for labeled unicast IPv6 routes. The label options are <b>explicit-null</b> and <b>normal</b> .
Introduced	20.10.R1
Platforms	All

**explicit-null** *boolean*

Synopsis	Apply advertised label and associated programming rules
Context	<b>configure</b> <i>router string</i> <i>bgp label-allocation label-ipv6 explicit-null boolean</i>
Tree	<i>explicit-null</i>
Description	<p>When configured to <b>true</b>, this command uses the advertised label and associated programming rules on this instance of BGP. The following applies:</p> <ul style="list-style-type: none"> <li>• The router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising. It sets the BGP label value to IPv6 explicit null (value 2), forcing a POP behavior for received packets.</li> <li>• The received label-unicast IPv6 routes never create tunnels in TTM that can be used to resolve other BGP routes (with an IPv6 next-hop).</li> <li>• A received label-unicast IPv6 route can be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).</li> </ul> <p>When configured to <b>false</b>, advertised label IPv6 programming rules are not used. The following applies</p> <ul style="list-style-type: none"> <li>• When the router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising, it sets the BGP label value to a proper value in the dynamic label range and programs a POP or SWAP operation for that label, depending on the origin of the route and various import policy actions that could apply to the route.</li> <li>• Received label-unicast IPv6 routes that have a prefix length of 128 bits are automatically installed in TTM so that they can be used to resolve other (non-labeled-unicast) BGP routes (with an IPv6 next-hop).</li> <li>• A received label-unicast IPv6 route cannot be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).</li> <li>• The label-ipv6 routes used for ECMP toward an IPv6 destination cannot be a mix of routes with regular label values and routes with special (IPv6 explicit null) label values.</li> </ul> <p>Changes in the value of this leaf do not cause the BGP sessions of the base router to reset.</p>
Default	true
Introduced	20.10.R1
Platforms	All

**label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <i>router string</i> <i>bgp label-preference number</i>
Tree	<i>label-preference</i>
Range	1 to 255
Default	170

Introduced	16.0.R1
Platforms	All

### **link-state-route-export** *boolean*

Synopsis	Allow the export of the TED NLRI database
Context	<b>configure</b> <i>router string</i> <a href="#">bgp link-state-route-export</a> <i>boolean</i>
Tree	<a href="#">link-state-route-export</a>
Description	When configured to <b>true</b> , this command allows BGP to export link-state information to BGP neighbors. When configured to <b>false</b> , link-state information is not exported.
Default	false
Introduced	16.0.R1
Platforms	All

### **link-state-route-import** *boolean*

Synopsis	Allow the import of the TED NLRI database
Context	<b>configure</b> <i>router string</i> <a href="#">bgp link-state-route-import</a> <i>boolean</i>
Tree	<a href="#">link-state-route-import</a>
Description	When configured to <b>true</b> , this command enables the import of link-state information into the BGP-LS address family for advertisement to other BGP neighbors. When configured to <b>false</b> , this command disables the import of link-state information.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-as**

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp local-as</a>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

**as-number** *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp local-as</b> <b>as-number</b> <i>number</i>
Tree	<b>as-number</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**prepend-global-as** *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp local-as prepend-global-as</b> <i>boolean</i>
Tree	<b>prepend-global-as</b>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.  When configured to <b>false</b> , the global ASN is hidden in paths announced to the EBGp peer.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp local-as private</b> <i>boolean</i>
Tree	<b>private</b>
Description	When configured to <b>true</b> , the local ASN is hidden in paths learned from the peering.  When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Default local preference if not in incoming routes
----------	--

---

Context	<b>configure router</b> <i>string</i> <a href="#">bgp local-preference</a> <i>number</i>
Tree	<a href="#">local-preference</a>
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure router</b> <i>string</i> <a href="#">bgp loop-detect</a> <i>keyword</i>
Tree	<a href="#">loop-detect</a>
Options	drop-peer, ignore-loop, off, discard-route
Default	ignore-loop
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure router</b> <i>string</i> <a href="#">bgp loop-detect-threshold</a> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Default	0
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure router</b> <i>string</i> <a href="#">bgp med-out</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1

Platforms All

### **min-route-advertisement** *number*

Synopsis Minimum time before a prefix can be advertised to peer  
Context **configure** *router string* **bgp min-route-advertisement** *number*  
Tree [min-route-advertisement](#)  
Range 1 to 255  
Default 30  
Introduced 16.0.R1  
Platforms All

### **monitor**

Synopsis Enable the **monitor** context  
Context **configure** *router string* **bgp monitor**  
Tree [monitor](#)  
Description Commands in this context specify BMP-related configurations.  
When this context is unconfigured, the sending of BMP messages to BMP monitoring stations is disabled.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BMP monitoring  
Context **configure** *router string* **bgp monitor admin-state** *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 16.0.R1  
Platforms All

**all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>monitor</b> <b>all-stations</b> <i>boolean</i>
Tree	<a href="#">all-stations</a>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.  When configured to <b>false</b> , the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

**route-monitoring**

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>monitor</b> <b>route-monitoring</b>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

**post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>monitor</b> <b>route-monitoring</b> <b>post-policy</b> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

**pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>monitor</b> <b>route-monitoring</b> <b>pre-policy</b> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false

Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">monitor</a> <a href="#">station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">monitor</a> <a href="#">station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp</a> <a href="#">station</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mp-bgp-keep** *boolean*

Synopsis	Keep rejected VPN-IP routes in RIB-IN
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">mp-bgp-keep</a> <i>boolean</i>
Tree	<a href="#">mp-bgp-keep</a>
Description	When configured to <b>true</b> , the RIB-IN retains all MP-BGP routes, including VPN routes rejected by import policies or not imported by any services. As a result, sending Route Refresh messages is not required when an import policy changes. When configured to <b>false</b> , these VPN routes are deleted from the RIB-IN.
Default	false
Introduced	16.0.R1

Platforms All

### **multihop** *number*

Synopsis TTL in IP packet headers for EBGP peers multi-hops away

Context **configure** *router string* **bgp multihop** *number*

Tree [multihop](#)

Description This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGP peer multiple hops away. This command applies only to EBGP.

Range 1 to 255

Introduced 16.0.R1

Platforms All

### **multipath**

Synopsis Enter the **multipath** context

Context **configure** *router string* **bgp multipath**

Tree [multipath](#)

Introduced 16.0.R1

Platforms All

### **ebgp** *number*

Synopsis Maximum multipaths per prefix for EBGP learned routes

Context **configure** *router string* **bgp multipath ebgp** *number*

Tree [ebgp](#)

Range 1 to 64

Introduced 16.0.R1

Platforms All

### **family** [*family-type*] *keyword*

Synopsis Enter the **family** list instance

Context **configure** *router string* **bgp multipath family** *keyword*

Tree [family](#)

Introduced	19.5.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family for which multipath selection applies
Context	<b>configure</b> <i>router string</i> <i>bgp multipath family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **ebgp** *number*

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	<b>configure</b> <i>router string</i> <i>bgp multipath family keyword</i> <i>ebgp number</i>
Tree	<i>ebgp</i>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	<b>configure</b> <i>router string</i> <i>bgp multipath family keyword</i> <i>ibgp number</i>
Tree	<i>ibgp</i>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1

Platforms All

### **max-paths** *number*

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	<b>configure</b> <i>router string</i> <b>bgp multipath family</b> <i>keyword</i> <b>max-paths</b> <i>number</i>
Tree	<b>max-paths</b>
Description	This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the <b>family</b> command. Consider the following when configuring this command: <ul style="list-style-type: none"> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is configured, the limit configured in the <b>ebgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is configured, the limit configured in the <b>ibgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> </ul>
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **restrict** *keyword*

Synopsis	AS path restriction for the non-best path
Context	<b>configure</b> <i>router string</i> <b>bgp multipath family</b> <i>keyword</i> <b>restrict</b> <i>keyword</i>
Tree	<b>restrict</b>
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	19.5.R1
Platforms	All

### **unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <i>router string</i> <b>bgp multipath family</b> <i>keyword</i> <b>unequal-cost</b> <i>boolean</i>

Tree	<a href="#">unequal-cost</a>
Description	When configured to <b>true</b> , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Maximum multipaths per prefix for IBGP learned routes
Context	<b>configure router</b> <i>string</i> <a href="#">bgp multipath ibgp number</a>
Tree	<a href="#">ibgp</a>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

### **max-paths number**

Synopsis	Maximum multipaths per prefix
Context	<b>configure router</b> <i>string</i> <a href="#">bgp multipath max-paths number</a>
Tree	<a href="#">max-paths</a>
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

### **restrict keyword**

Synopsis	AS path restriction for the non-best path
Context	<b>configure router</b> <i>string</i> <a href="#">bgp multipath restrict keyword</a>
Tree	<a href="#">restrict</a>
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	16.0.R1
Platforms	All

**unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>multipath</i> <b>unequal-cost</b> <i>boolean</i>
Tree	<b>unequal-cost</b>
Default	false
Introduced	19.5.R1
Platforms	All

**mvpn-vrf-import-subtype-new** *boolean*

Synopsis	Encode the IANA value of 0x010b in advertised routes
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>mvpn-vrf-import-subtype-new</i> <i>boolean</i>
Tree	<b>mvpn-vrf-import-subtype-new</b>
Description	When configured to <b>true</b> , this command encodes the value of 0x010b for the type or subtype in advertised routes.  When configured to <b>false</b> , BGP encodes the extended community type or subtype as 0x010a to preserve backwards compatibility.
Default	false
Introduced	16.0.R1
Platforms	All

**neighbor** [*ip-address*] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>neighbor</i> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>neighbor</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the BGP peer router
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp</b> <i>neighbor</i> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>neighbor</b>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## add-paths

Synopsis	Enable the <b>add-paths</b> context
Context	<b>configure router string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>add-paths</b>
Tree	<b>add-paths</b>
Description	Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.  When unconfigured, command settings are inherited from a higher level BGP configuration.
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure router string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>add-paths evpn</b>
Tree	<b>evpn</b>
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	21.10.R1
Platforms	All

## receive boolean

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	<b>configure router string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>add-paths evpn receive boolean</b>
Tree	<b>receive</b>
Default	false
Introduced	21.10.R1

Platforms All

### **send** (*number* | *keyword*)

Synopsis Maximum paths per EVPN prefix to Add-Path peers

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths evpn send** (*number* | *keyword*)

Tree **send**

Range 1 to 16

Options multipaths

Introduced 21.10.R1

Platforms All

### **ipv4**

Synopsis Enter the **ipv4** context

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths ipv4**

Tree **ipv4**

Introduced 16.0.R1

Platforms All

### **receive** *boolean*

Synopsis Receive multiple labeled-unicast routes per IPv4 prefix

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths ipv4 receive** *boolean*

Tree **receive**

Description When configured to **true**, the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

**send** (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Receive multiple routes per IPv6 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send** (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>ipv6</b> <b>send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

**label-ipv4**

Synopsis	Enter the <b>label-ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>label-ipv4</b>
Tree	<b>label-ipv4</b>
Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>label-ipv4</b> <b>receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1

Platforms All

### **send** (*number* | *keyword*)

Synopsis Maximum paths per labeled IPv4 unicast prefix

Context **configure** *router string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths label-ipv4 send** (*number* | *keyword*)

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.

Range 1 to 16

Options multipaths

Introduced 16.0.R1

Platforms All

### **label-ipv6**

Synopsis Enter the **label-ipv6** context

Context **configure** *router string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths label-ipv6**

Tree **label-ipv6**

Introduced 16.0.R1

Platforms All

### **receive** *boolean*

Synopsis Receive multiple labeled-unicast routes per IPv6 prefix

Context **configure** *router string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths label-ipv6 receive** *boolean*

Tree **receive**

Description When configured to **true**, this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths label-ipv6 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv4**

Synopsis	Enter the <b>mcast-vpn-ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv4</b>
Tree	<b>mcast-vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple multicast routes per IPv4 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths per multicast IPv4 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv4 send number</b>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for multicast IPv4 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv6**

Synopsis	Enter the <b>mcast-vpn-ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6</b>
Tree	<b>mcast-vpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple multicast routes per IPv6 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6 receive boolean</b>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv6 VPN prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths per multicast IPv6 VPN prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6 send number</b>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv6 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for multicast IPv6 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv4**

Synopsis	Enter the <b>mvpn-ipv4</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4</b>
Tree	<b>mvpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple multicast VPN routes per IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4 receive boolean</b>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast VPN routes per IPv4 prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths per multicast VPN IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4 send number</b>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv4 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv6**

Synopsis	Enter the <b>mvpn-ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6</b>
Tree	<b>mvpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple multicast VPN routes per IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6 receive boolean</b>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast VPN routes per IPv6 prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths per multicast VPN IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6 send number</b>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv6 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4**

Synopsis	Enter the <b>vpn-ipv4</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4</b>
Tree	<b>vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4 receive boolean</b>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple VPN-IPv4 routes per prefix to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv4 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6**

Synopsis	Enter the <b>vpn-ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6</b>
Tree	<b>vpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>

Description	When configured to <b>true</b> , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **advertise-inactive** *boolean*

Synopsis	Advertise an inactive BGP route to peers
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-inactive</b> <i>boolean</i>
Tree	<b>advertise-inactive</b>
Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> <li>• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> <li>• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> </ul> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

### advertise-ipv6-next-hops

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b>
Tree	<b>advertise-ipv6-next-hops</b>
Description	<p>Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### evpn *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops evpn</b> <i>boolean</i>

Tree	<a href="#">evpn</a>
Description	When configured to <b>true</b> , EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to <b>false</b> , EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.
Default	false
Introduced	19.5.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">advertise-ipv6-next-hops</a> <a href="#">ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Description	When configured to <b>true</b> , IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to <b>false</b> , IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	19.5.R1
Platforms	All

### **label-ipv4 boolean**

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">advertise-ipv6-next-hops</a> <a href="#">label-ipv4 boolean</a>
Tree	<a href="#">label-ipv4</a>
Description	When configured to <b>true</b> , label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to <b>false</b> , label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry

that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	When configured to <b>true</b> , label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.  When configured to <b>false</b> , label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Description	When configured to <b>true</b> , VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.  When configured to <b>false</b> , VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	16.0.R1

Platforms All

### **vpn-ipv6** *boolean*

Synopsis Advertise VPN IPv6 route with IPv6 next-hop address

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**advertise-ipv6-next-hops** **vpn-ipv6** *boolean*

Tree [vpn-ipv6](#)

Description When configured to **true**, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.  
When configured to **false**, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.

Default false

Introduced 16.0.R1

Platforms All

### **advertise-ldp-prefix** *boolean*

Synopsis Advertise active /32 LDP FEC prefixes to BGP peers

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**advertise-ldp-prefix** *boolean*

Tree [advertise-ldp-prefix](#)

Default false

Introduced 16.0.R1

Platforms All

### **aggregator-id-zero** *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to zero

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**aggregator-id-zero** *boolean*

Tree [aggregator-id-zero](#)

Introduced 16.0.R1

Platforms All

**aigp boolean**

Synopsis	Add AIGP attribute to advertised routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>aigp boolean</b>
Tree	<b>aigp</b>
Description	<p>When configured to <b>true</b>, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.</p>
Introduced	16.0.R1
Platforms	All

**as-override boolean**

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>as-override boolean</b>
Tree	<b>as-override</b>
Description	<p>When configured to <b>true</b>, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). This command cannot be explicitly configured to <b>false</b>.</p> <p>When configured to <b>false</b>, no AS override is performed.</p>
Introduced	19.7.R1
Platforms	All

**asn-4-byte boolean**

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>asn-4-byte boolean</b>
Tree	<b>asn-4-byte</b>

Introduced 16.0.R1  
 Platforms All

### **authentication-key** *string*

Synopsis BGP authentication key  
 Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**authentication-key** *string*  
 Tree **authentication-key**  
 String Length 1 to 370  
 Introduced 16.0.R1  
 Platforms All

### **authentication-keychain** *reference*

Synopsis TCP authentication keychain for the session  
 Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**authentication-keychain** *reference*  
 Tree **authentication-keychain**  
 Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.  
 Reference **configure** **system** **security** **keychains** **keychain** *string*  
 Introduced 16.0.R3  
 Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD  
 Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**bfd-liveness** *boolean*  
 Tree **bfd-liveness**  
 Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.  
 When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1  
 Platforms All

### **block-prefix-sid** *boolean*

Synopsis Block the prefix SID attribute

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **block-prefix-sid** *boolean*

Tree **block-prefix-sid**

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGp and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 19.10.R1

Platforms All

### **capability-negotiation** *boolean*

Synopsis Enable capability negotiation

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **capability-negotiation** *boolean*

Tree **capability-negotiation**

Introduced 16.0.R1

Platforms All

### **client-reflect** *boolean*

Synopsis Allow cluster RR to advertise routes to its clients

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **client-reflect** *boolean*

Tree **client-reflect**

Introduced 16.0.R1

Platforms All

**cluster**

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b>
Tree	<b>cluster</b>
Introduced	16.0.R1
Platforms	All

**allow-local-fallback** *boolean*

Synopsis	Allow fallback to RR topology
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster allow-local-fallback</b> <i>boolean</i>
Tree	<b>allow-local-fallback</b>
Description	When configured to <b>true</b> , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to <b>true</b> . When configured to <b>false</b> , this command no route is advertised to the client.
Default	false
Introduced	16.0.R1
Platforms	All

**cluster-id** *string*

Synopsis	Route reflector cluster ID
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster cluster-id</b> <i>string</i>
Tree	<b>cluster-id</b>
Introduced	16.0.R1
Platforms	All

**orr-location** *number*

Synopsis	Optimal route reflection location for the cluster
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster orr-location</b> <i>number</i>

Tree	<a href="#">orr-location</a>
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.  With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>connect-retry</b> <i>number</i>
Tree	<a href="#">connect-retry</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b>
Tree	<a href="#">damp-peer-oscillations</a>
Introduced	16.0.R1
Platforms	All

### **error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations error-interval</b> <i>number</i>
Tree	<a href="#">error-interval</a>

Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

### idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b>
Tree	<b>idle-hold-time</b>
Introduced	16.0.R1
Platforms	All

### initial-wait number

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>initial-wait</b> <i>number</i>
Tree	<b>initial-wait</b>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

### max-wait number

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>max-wait</b> <i>number</i>
Tree	<b>max-wait</b>
Range	1 to 2048
Default	60

Introduced	16.0.R1
Platforms	All

**second-wait** *number*

Synopsis	Time that doubles after each repeated session failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>second-wait</b> <i>number</i>
Tree	<b>second-wait</b>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

**damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damping</b> <i>boolean</i>
Tree	<b>damping</b>
Introduced	16.0.R1
Platforms	All

**def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>def-recv-evpn-encap</b> <i>keyword</i>
Tree	<b>def-recv-evpn-encap</b>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.  When unconfigured, the setting for this command is inherited from the BGP group-level configuration.
Options	mpls, vxlan
Introduced	16.0.R1

Platforms All

### default-label-preference

Synopsis Enter the **default-label-preference** context

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree	<b>ibgp</b>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **default-route-target boolean**

Synopsis	Send default RTC route (zero prefix length) to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-route-target</b> <i>boolean</i>
Tree	<b>default-route-target</b>
Description	When configured to <b>true</b> , this command sends the default RTC route (zero prefix length) toward the selected peers.  When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> .  When this command inherits a value of <b>false</b> , a default RTC route is not sent.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy</b>
Tree	<b>ebgp-default-reject-policy</b>
Introduced	19.5.R1
Platforms	All

### **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy export</b> <i>boolean</i>
Tree	<b>export</b>
Default	true
Introduced	19.5.R1
Platforms	All

### **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy import</b> <i>boolean</i>
Tree	<b>import</b>
Default	true

Introduced	19.5.R1
Platforms	All

## egress-engineering

Synopsis	Enable the <b>egress-engineering</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-engineering</b>
Tree	<b>egress-engineering</b>
Introduced	21.7.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-engineering admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

## egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-peer-engineering-label-unicast</b> <i>boolean</i>
Tree	<b>egress-peer-engineering-label-unicast</b>
Description	When configured to <b>true</b> , BGP generates a label-unicast route for the /32 or /128 prefix that corresponds to the BGP neighbor address. This route can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. This supports the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1

Platforms All

### **enforce-first-as** *boolean*

**Synopsis** Enforce the configured peer AS value in received routes

**Context** **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **enforce-first-as** *boolean*

**Tree** [enforce-first-as](#)

**Description** When configured to **true** for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS\_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the **update-fault-tolerance** command in the **error-handling** context is set to **false**) or the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**).

This command does not flap an established session because it applies only to routes received after the command is issued.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, received routes are not checked for compliance with the rule.

**Introduced** 16.0.R1

**Platforms** All

### **error-handling**

**Synopsis** Enter the **error-handling** context

**Context** **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **error-handling**

**Tree** [error-handling](#)

**Introduced** 16.0.R1

**Platforms** All

### **update-fault-tolerance** *boolean*

**Synopsis** Tolerate non-critical errors in UPDATE messages

**Context** **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **error-handling update-fault-tolerance** *boolean*

**Tree** [update-fault-tolerance](#)

Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure router string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>export</b>
Tree	<b>export</b>
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string | string*)

Synopsis	BGP export policy name
Context	<b>configure router string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>export policy</b> ( <i>policy-expr-string   string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>

### extended-nh-encoding

Synopsis	Enable the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>extended-nh-encoding</b>
Tree	<b>extended-nh-encoding</b>
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### ipv4 boolean

Synopsis	Advertise encoding capability for IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>extended-nh-encoding</b> <b>ipv4 boolean</b>
Tree	<b>ipv4</b>

Introduced	16.0.R1
Platforms	All

**sr-policy-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family sr-policy-ipv4</b> <i>boolean</i>
Tree	<b>sr-policy-ipv4</b>
Description	This command allows the router to advertise the capability for AF11/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family sr-policy-ipv6</b> <i>boolean</i>
Tree	<b>sr-policy-ipv6</b>
Description	This command allows the router to advertise the capability for AF12/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	19.10.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<b>vpn-ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<b>vpn-ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

**fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>fast-external-failover</b> <i>boolean</i>
Tree	<b>fast-external-failover</b>
Description	When this command inherits a value of <b>true</b> , the router drops an external BGP session on a single-hop route immediately when the local interface goes down.  When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> .  When configured to <b>false</b> , the BGP session remains up until the hold time expires.
Introduced	16.0.R1
Platforms	All

**graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart</b>
Tree	<b>graceful-restart</b>
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.  When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.
Introduced	16.0.R1
Platforms	All

### **gr-notification** *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart gr-notification</b> <i>boolean</i>
Tree	<b>gr-notification</b>
Description	When configured to <b>true</b> , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.  When configured to <b>false</b> , NOTIFICATION messages are not supported.
Default	false
Introduced	16.0.R1
Platforms	All

### **long-lived**

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived</b>
Tree	<b>long-lived</b>
Description	Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.  LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.  The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.

Introduced 16.0.R1  
 Platforms All

### **advertise-stale-to-all-neighbors** *boolean*

Synopsis Advertise stale routes to all BGP peers  
 Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*graceful-restart long-lived advertise-stale-to-all-neighbors* *boolean*

 Introduced 16.0.R1  
 Platforms All

### **[family-type]** *keyword*

Synopsis Family type for family-specific LLGR configuration

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>advertised-stale-time</b> <i>number</i>
Tree	<b>advertised-stale-time</b>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<b>helper-override-stale-time</b>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

**forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived forwarding-bits-set</b> <i>keyword</i>
Tree	<b>forwarding-bits-set</b>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

**helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<b>helper-override-restart-time</b>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

**helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-stale-time</b> <i>number</i>

Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived without-no-export</b> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.  When configured to <b>false</b> , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart restart-time</b> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

**stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart</b> <b>stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

**group** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	BGP peer group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>group</b> <i>reference</i>
Tree	<b>group</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1

**hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

**minimum-hold-time** *number*

Synopsis	Minimum time BGP waits between successive messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Maximum hold time between successive messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command setting is inherited from the BGP group-level configuration.</p>
Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

**import**

Synopsis	Enable the <b>import</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>import</b>

Tree	<a href="#">import</a>
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association is inherited from the BGP group-level configuration.</p>
Introduced	16.0.R1
Platforms	All

### **policy** (*policy-expr-string* | *string*)

Synopsis	Names of the BGP import policies
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">import policy</a> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<a href="#">policy</a>
Description	<p>This command specifies route policies that control the handling of inbound routes received from certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">initial-send-delay-zero</a> <i>boolean</i>

Tree	<a href="#">initial-send-delay-zero</a>
Description	When configured to <b>true</b> , BGP updates are sent as soon as the session comes up. When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> . When this command inherits a value of <b>false</b> , BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>keepalive</b> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### **l2vpn-cisco-interop** *boolean*

Synopsis	Allow translation from Cisco non-compliant NLRI format
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>l2vpn-cisco-interop</b> <i>boolean</i>
Tree	<a href="#">l2vpn-cisco-interop</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>label-preference</b> <i>number</i>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Introduced	16.0.R1

Platforms All

## link-bandwidth

Synopsis Enter the **link-bandwidth** context

Context **configure router string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**link-bandwidth**

Tree **link-bandwidth**

Introduced 16.0.R3

Platforms All

## accept-from-ebgp

Synopsis Enable the **accept-from-ebgp** context

Context **configure router string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**link-bandwidth accept-from-ebgp**

Tree **accept-from-ebgp**

Introduced 16.0.R4

Platforms All

## ipv4 boolean

Synopsis Support Link Bandwidth EC in IPv4 routes

Context **configure router string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**link-bandwidth accept-from-ebgp ipv4 boolean**

Tree **ipv4**

Default false

Introduced 16.0.R4

Platforms All

## ipv6 boolean

Synopsis Support Link Bandwidth EC in IPv6 routes

Context **configure router string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**link-bandwidth accept-from-ebgp ipv6 boolean**

Tree **ipv6**

Default false

Introduced 16.0.R4  
Platforms All

### **label-ipv4** *boolean*

Synopsis Support Link Bandwidth EC in label-IPv4 routes  
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*link-bandwidth accept-from-ebgp label-ipv4 boolean*  
Tree [label-ipv4](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **label-ipv6** *boolean*

Synopsis Support Link Bandwidth EC in label-IPv6 routes  
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*link-bandwidth accept-from-ebgp label-ipv6 boolean*  
Tree [label-ipv6](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **vpn-ipv4** *boolean*

Synopsis Support Link Bandwidth EC in VPN-IPv4 routes  
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*link-bandwidth accept-from-ebgp vpn-ipv4 boolean*  
Tree [vpn-ipv4](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **vpn-ipv6** *boolean*

Synopsis Support Link Bandwidth EC in VPN-IPv6 routes

Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>link-bandwidth accept-from-ebgp vpn-ipv6 boolean</b>
Tree	<b>vpn-ipv6</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **add-to-received-ebgp**

Synopsis	Enable the <b>add-to-received-ebgp</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>link-bandwidth add-to-received-ebgp</b>
Tree	<b>add-to-received-ebgp</b>
Introduced	16.0.R3
Platforms	All

### **ipv4 boolean**

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>link-bandwidth add-to-received-ebgp ipv4 boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R3
Platforms	All

### **ipv6 boolean**

Synopsis	Support Link Bandwidth EC in IPv6 routes

Default	false
Introduced	16.0.R4
Platforms	All

## send-to-ebgp

Synopsis	Enable the <b>send-to-ebgp</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp</b>
Tree	<b>send-to-ebgp</b>
Introduced	16.0.R4
Platforms	All

## ipv4 boolean

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp ipv4 boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R4
Platforms	All

## ipv6 boolean

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp ipv6 boolean</b>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R4
Platforms	All

## label-ipv4 boolean

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp label-ipv4 boolean</b>
Tree	<b>label-ipv4</b>
Default	false
Introduced	16.0.R4

Platforms All

### **label-ipv6** *boolean*

Synopsis Support Link Bandwidth EC in label-IPv6 routes

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**link-bandwidth send-to-ebgp label-ipv6** *boolean*

Tree [label-ipv6](#)

Default false

Introduced 16.0.R4

Platforms All

### **vpn-ipv4** *boolean*

Synopsis Support Link Bandwidth EC in VPN-IPv4 routes

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**link-bandwidth send-to-ebgp vpn-ipv4** *boolean*

Tree [vpn-ipv4](#)

Default false

Introduced 16.0.R4

Platforms All

### **vpn-ipv6** *boolean*

Synopsis Support Link Bandwidth EC in VPN-IPv6 routes

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**link-bandwidth send-to-ebgp vpn-ipv6** *boolean*

Tree [vpn-ipv6](#)

Default false

Introduced 16.0.R4

Platforms All

### **local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis Local IP address used when communicating with BGP peers

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Tree	<a href="#">local-address</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## local-as

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">local-as</a>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

## as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">local-as</a> <a href="#">as-number</a> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">local-as</a> <a href="#">prepend-global-as</a> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-as private</b> <i>boolean</i>
Tree	<b>private</b>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.  When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-preference</b> <i>number</i>
Tree	<b>local-preference</b>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

**loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect</b> <i>keyword</i>
Tree	<b>loop-detect</b>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

**loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect-threshold</b> <i>number</i>
Tree	<b>loop-detect-threshold</b>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>med-out</b>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum interval between successive prefix updates
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>min-route-advertisement</b> <i>number</i>
Tree	<b>min-route-advertisement</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor</b>
Tree	<b>monitor</b>
Description	Commands in this context specify BMP-related configurations at the BGP neighbor level.

When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor all-stations</b> <i>boolean</i>
Tree	<a href="#">all-stations</a>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.  When configured to <b>false</b> , the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

### **route-monitoring**

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring</b>
Tree	<a href="#">route-monitoring</a>

Introduced	16.0.R1
Platforms	All

### **post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring post-policy</b> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring pre-policy</b> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor</b> <a href="#">station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command configures the set of BMP monitoring stations for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[station-name] reference**

Synopsis	BMP monitoring station
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor station reference</b>
Tree	<b>station</b>
Reference	<b>configure bmp station</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**multihop number**

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>multihop number</b>
Tree	<b>multihop</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**multipath-eligible boolean**

Synopsis	Allow routes from this peer in multipath eligibility
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>multipath-eligible boolean</b>
Tree	<b>multipath-eligible</b>
Introduced	19.5.R1
Platforms	All

**next-hop-self boolean**

Synopsis	Advertise routes with local address as next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-self boolean</b>
Tree	<b>next-hop-self</b>

Description	<p>When configured to <b>true</b>, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the <b>configure router bgp rr-vpn-forwarding</b> command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, protocol standard behavior is applied to determine whether to set <b>next-hop-self</b> in advertised routes.</p>
Introduced	16.0.R1
Platforms	All

### next-hop-unchanged

Synopsis	Enable the <b>next-hop-unchanged</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged</b>
Tree	<b>next-hop-unchanged</b>
Description	Commands in this context specify the IP address families where the next hop remains unchanged when sending BGP routes to peers of the neighbor.
Introduced	16.0.R1
Platforms	All

### evpn boolean

Synopsis	Advertise EVPN routes with unchanged BGP next hop
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged evpn</b> <i>boolean</i>
Tree	<b>evpn</b>
Default	false
Introduced	20.2.R1
Platforms	All

### label-ipv4 boolean

Synopsis	Advertise label-IPv4 routes with unchanged BGP next hop
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged label-ipv4</b> <i>boolean</i>

---

Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-unchanged</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	20.2.R1
Platforms	All

## origin-validation

Synopsis	Enable the <b>origin-validation</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b>
Tree	<b>origin-validation</b>
Introduced	16.0.R1
Platforms	All

## ipv4 boolean

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation ipv4 boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6 boolean

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation ipv6 boolean</b>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

## label-ipv4 boolean

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation label-ipv4 boolean</b>
Tree	<b>label-ipv4</b>
Default	false
Introduced	16.0.R1

Platforms All

### **label-ipv6** *boolean*

Synopsis Enable support for labeled-unicast IPv6 routes

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **origin-validation label-ipv6** *boolean*

Tree [label-ipv6](#)

Default false

Introduced 16.0.R1

Platforms All

### **outbound-route-filtering**

Synopsis Enable the **outbound-route-filtering** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **outbound-route-filtering**

Tree [outbound-route-filtering](#)

Description Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).  
When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced 16.0.R1

Platforms All

### **extended-community**

Synopsis Enable the **extended-community** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **outbound-route-filtering extended-community**

Tree [extended-community](#)

Description Commands in this context configure the ORF send and receive capabilities based on Extended Communities.  
When this context is unconfigured, the command settings are inherited from the group-level configuration.

Introduced 16.0.R1

Platforms All

**accept-orf** *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	<b>configure</b> <i>router string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) outbound-route-filtering extended-community accept-orf boolean</i>
Tree	<a href="#">accept-orf</a>
Description	<p>When configured to <b>true</b>, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.</p>
Introduced	16.0.R1
Platforms	All

**send-orf**

Synopsis	Enable the <b>send-orf</b> context
Context	<b>configure</b> <i>router string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) outbound-route-filtering extended-community send-orf</i>
Tree	<a href="#">send-orf</a>
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	16.0.R1
Platforms	All

**route-target** [*community-name*] *string*

Synopsis	Add a list entry for <b>route-target</b>
Context	<b>configure</b> <i>router string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) outbound-route-filtering extended-community send-orf route-target string</i>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1
Platforms	All

**[community-name] string**

Synopsis	Route target community name
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>outbound-route-filtering extended-community send-orf route-target</b> <i>string</i>
Tree	<b>route-target</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**passive boolean**

Synopsis	Use passive mode for BGP communication
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Introduced	16.0.R1
Platforms	All

**path-mtu-discovery boolean**

Synopsis	Enable path MTU discovery
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<b>path-mtu-discovery</b>

Description When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-as</b> <i>number</i>
Tree	<b>peer-as</b>
Description	This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.  For EBGp peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.  For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-creation-type** *keyword*

Synopsis	Peer creation type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-creation-type</b> <i>keyword</i>
Tree	<b>peer-creation-type</b>
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-ip-tracking</b> <i>boolean</i>
Tree	<b>peer-ip-tracking</b>

Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit** [*family*] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i>
Tree	<b>prefix-limit</b>
Introduced	16.0.R1
Platforms	All

**[family] keyword**

Synopsis	Address family to which the limit applies
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i>
Tree	<b>prefix-limit</b>
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**idle-timeout number**

Synopsis	Time which BGP peering remains idle before reconnecting
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>idle-timeout</b> <i>number</i>
Tree	<b>idle-timeout</b>
Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.  When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024
Introduced	16.0.R1
Platforms	All

**log-only boolean**

Synopsis	Send warning message at threshold instead of take-down
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>log-only</b> <i>boolean</i>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

**maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

**post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>post-import</b> <i>boolean</i>
Tree	<b>post-import</b>
Default	false
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

**remove-private**

Synopsis	Enable the <b>remove-private</b> context
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

**limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private limited</b> <i>boolean</i>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

**replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private replace</b> <i>boolean</i>
Tree	<b>replace</b>
Default	false
Introduced	19.10.R1
Platforms	All

**skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private skip-peer-as</b> <i>boolean</i>
Tree	<b>skip-peer-as</b>
Default	false
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6</b>
Tree	<b>segment-routing-v6</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## route-advertisement

Synopsis	Enable the <b>route-advertisement</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement</b>
Tree	<b>route-advertisement</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## drop-routes-with-srv6-tlvs *boolean*

Synopsis	Drop BGP routes with SRv6 TLVs
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement drop-routes-with-srv6-tlvs</b> <i>boolean</i>
Tree	<b>drop-routes-with-srv6-tlvs</b>
Description	When configured to <b>true</b> , the router drops and does not advertise BGP routes (that belong to any address family) with SRv6 TLVs. When configured to <b>false</b> , the router advertises BGP routes with SRv6 TLVs.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## family [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i>
Tree	<b>family</b>

Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[family-type]** *keyword*

Synopsis	IP address type that SRv6 route attributes apply to
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **strip-srv6-tlvs** *boolean*

Synopsis	Strip SRv6 TLVs from BGP routes advertised to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i> <b>strip-srv6-tlvs</b> <i>boolean</i>
Tree	<b>strip-srv6-tlvs</b>
Description	When configured to <b>true</b> , BGP routes that belong to the address family specified using the <b>family</b> command are advertised to peers with SRv6 TLVs removed. Locally or remotely added SRv6 TLVs can be removed.  When configured to <b>false</b> , SRv6 TLVs are not stripped from BGP routes advertised to peers.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>selective-label-ipv4-install</b> <i>boolean</i>
Tree	<b>selective-label-ipv4-install</b>
Introduced	19.10.R1
Platforms	All

## send-communities

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b>
Tree	<b>send-communities</b>
Introduced	16.0.R1
Platforms	All

## extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities extended</b> <i>boolean</i>
Tree	<b>extended</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities large</b> <i>boolean</i>
Tree	<b>large</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

**standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b> <b>standard</b> <i>boolean</i>
Tree	<b>standard</b>
Description	When unconfigured, this command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> .  When this command inherits a value of <b>true</b> , BGP standard communities are sent to peers in the Communities attribute.  When configured to <b>false</b> , all standard communities are removed from all routes advertised to BGP peers.
Introduced	16.0.R1
Platforms	All

**send-default**

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b>
Tree	<b>send-default</b>
Introduced	19.7.R1
Platforms	All

**export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Introduced	19.7.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Enable IPv4 family type
----------	-------------------------

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Default	false
Introduced	19.7.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	19.7.R1
Platforms	All

**split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

**tcp-mss** (*number | keyword*)

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>tcp-mss</b> ( <i>number   keyword</i> )
Tree	<b>tcp-mss</b>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

**third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>third-party-nexthop</b> <i>boolean</i>
Tree	<b>third-party-nexthop</b>
Introduced	16.0.R1
Platforms	All

**ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>ttl-security</b> <i>number</i>
Tree	<b>ttl-security</b>
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.

	When unconfigured, the command inherits the value of the group-level setting.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	BGP peer type
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>type keyword</b>
Tree	<b>type</b>
Options	no-type, internal, external
Introduced	16.0.R1
Platforms	All

**vpn-apply-export boolean**

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>vpn-apply-export boolean</b>
Tree	<b>vpn-apply-export</b>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> . When this command inherits a value of <b>false</b> , the export policies are not applied.
Introduced	16.0.R1
Platforms	All

**vpn-apply-import boolean**

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>vpn-apply-import boolean</b>
Tree	<b>vpn-apply-import</b>
Description	When configured to <b>true</b> , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the import policies are not applied.

Introduced 16.0.R1

Platforms All

## neighbor-trust

Synopsis Enter the **neighbor-trust** context

Context **configure** *router string* **bgp neighbor-trust**

Tree **neighbor-trust**

Description Commands in this context enable a label security feature at an inter-AS boundary for the specified IP families.

This label security feature allows the configuration of a router, acting in a PE or in an ASBR role, to accept packets of VPN-IP or EVPN prefixes only from direct EBGP neighbors to which it advertised a service label.

The untrusted state identifies the participating interfaces. The router supports a maximum of 15 network interfaces that can participate in this feature.

At a high level, BGP tracks each direct EBGP neighbor over an untrusted interface and to which it sent a prefix label. For each of those prefixes, BGP programs a bit map in the ILM record that indicates, on a per-untrusted interface basis, whether the matching received packets must be forwarded or dropped.

Introduced 16.0.R4

Platforms All

## vpn-ipv4 *boolean*

Synopsis Enable inter-AS label security for the VPN-IPv4 family

Context **configure** *router string* **bgp neighbor-trust vpn-ipv4 boolean**

Tree **vpn-ipv4**

Default false

Introduced 16.0.R4

Platforms All

## vpn-ipv6 *boolean*

Synopsis Enable inter-AS label security for the VPN-IPv6 family

Context **configure** *router string* **bgp neighbor-trust vpn-ipv6 boolean**

---

Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

## next-hop-resolution

Synopsis	Enter the <b>next-hop-resolution</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a>
Tree	<a href="#">next-hop-resolution</a>
Introduced	16.0.R1
Platforms	All

## allow-unresolved-leaking *boolean*

Synopsis	Allow unresolved BGP routes to be leaked to VPRN routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution allow-unresolved-leaking</a> <i>boolean</i>
Tree	<a href="#">allow-unresolved-leaking</a>
Description	When configured to <b>true</b> , this command instructs BGP in the base router instance to allow its routes to be leaked to other (VPRN) BGP instances even if the routes to be leaked do not have a BGP next-hop that can be resolved by the base instance. When configured to <b>false</b> , VPRN cannot import a route.
Default	false
Introduced	19.10.R1
Platforms	All

## labeled-routes

Synopsis	Enter the <b>labeled-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution labeled-routes</a>
Tree	<a href="#">labeled-routes</a>
Introduced	16.0.R1
Platforms	All

**allow-static** *boolean*

Synopsis	Allow static routes to resolve BGP next-hop
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution labeled-routes allow-static</i> <i>boolean</i>
Tree	<a href="#">allow-static</a>
Description	<p>When configured to <b>true</b>, the BGP next-hop of label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 routes received from any EBGP or IBGP peer can be resolved using static routes, except for static default routes (0/0 and ::/0).</p> <p>A static route is less preferred than a local or interface route for resolving the BGP next-hop of labeled route but is more preferred than other IGP routes or tunnels.</p> <p>When configured to <b>false</b>, BGP next-hop resolution using static routes is not allowed.</p> <p>A label-IPv4 or label-IPv6 route can be resolved by a static blackhole route, even when this command is configured to <b>false</b>, but only if the static blackhole route is the longest prefix match (LPM) static route for the BGP next-hop address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**rr-use-route-table** *boolean*

Synopsis	Use RTM to resolve BGP next-hop if TTM resolution fails
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution labeled-routes rr-use-route-table</i> <i>boolean</i>
Tree	<a href="#">rr-use-route-table</a>
Description	<p>When configured to <b>true</b>, this command enables BGP to perform a lookup of IGP routes in the route table to resolve the BGP next-hop of label-IPv4 and label-IPv6 routes. This is useful for a Route Reflector (RR) that does not participate in tunnel signaling protocols such as LDP and RSVP and therefore, does not have tunnels to resolve the BGP next-hops of label-unicast routes.</p> <p>Disable route table installation (via the <b>route-table-install</b> command) before setting this command to <b>true</b>; otherwise, forwarding of label routes resolved in this way will be incorrect.</p> <p>When configured to <b>false</b>, RTM next-hop resolution is not enabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**transport-tunnel**

Synopsis	Enter the <b>transport-tunnel</b> context
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a>
Tree	<a href="#">transport-tunnel</a>
Description	Commands in this context configure options for the next-hop resolution of BGP labeled routes (VPN-IP and labeled-unicast) using tunnels in TTM.
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for tunnel selection
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Options	vpn, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">allow-flex-algo-fallback</a> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	When configured to <b>true</b> , a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.

When configured to **false**, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.

Default	false
Introduced	20.10.R1
Platforms	All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <i>family</i> <i>keyword</i> <a href="#">enforce-strict-tunnel-tagging</a> <i>boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Description	When configured to <b>true</b> , the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered.  When configured to <b>false</b> , matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	16.0.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <i>family</i> <i>keyword</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	none, filter, any
Default	filter
Introduced	16.0.R1
Platforms	All

### **resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

**bgp boolean**

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">bgp</a> <a href="#">boolean</a>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.  When configured to <b>false</b> , BGP tunneling for next-hop resolution is not enabled.
Introduced	16.0.R1
Platforms	All

**ldp boolean**

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">ldp</a> <a href="#">boolean</a>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , this command enables the selection of LDP tunneling for next-hop resolution and specifies the LDP tunnels in the tunnel table corresponding to /32 IPv4 FECs and /128 IPv6 FECs.  When configured to <b>false</b> , LDP tunneling for next-hop resolution is not enabled.
Default	true
Introduced	16.0.R1
Platforms	All

**mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for next-hop resolution
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">mpls-fwd-policy</a> <i>boolean</i>
Tree	<a href="#">mpls-fwd-policy</a>
Default	false
Introduced	16.0.R4
Platforms	All

**rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">rib-api</a> <i>boolean</i>
Tree	<a href="#">rib-api</a>
Default	false
Introduced	16.0.R4
Platforms	All

**rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">rsvp</a> <i>boolean</i>
Tree	<a href="#">rsvp</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations. This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, this command disables the selection of RSVP tunneling for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
----------	--

Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family keyword</a> <a href="#">resolution-filter</a> <a href="#">sr-isis</a> <i>boolean</i>
Tree	<a href="#">sr-isis</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment-routing tunnel in the tunnel table submitted by the lowest preference IS-IS instance or, in case of a tie, the lowest numbered IS-IS instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family keyword</a> <a href="#">resolution-filter</a> <a href="#">sr-ospf</a> <i>boolean</i>
Tree	<a href="#">sr-ospf</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPF instance or, in case of a tie, the lowest numbered OSPF instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family keyword</a> <a href="#">resolution-filter</a> <a href="#">sr-ospf3</a> <i>boolean</i>
Tree	<a href="#">sr-ospf3</a>

Description	<p>When configured to <b>true</b>, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R6
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution</b> <b>labeled-routes</b> <b>transport-tunnel</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>sr-policy</b> <i>boolean</i>
Tree	<b>sr-policy</b>
Description	<p>When configured to <b>true</b>, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy. Next hop resolution of VPN-IP routes by SR policies is not supported.</p> <p>When configured to <b>false</b>, segment routing policies are not enabled for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution</b> <b>labeled-routes</b> <b>transport-tunnel</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>sr-te</b> <i>boolean</i>
Tree	<b>sr-te</b>
Description	When configured to <b>true</b> , this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.

In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.

When configured to **false**, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.

Default	false
Introduced	16.0.R1
Platforms	All

### **udp boolean**

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	<b>configure router string</b> <a href="#">bgp next-hop-resolution labeled-routes transport-tunnel family keyword resolution-filter udp boolean</a>
Tree	<a href="#">udp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **use-bgp-routes**

Synopsis	Enter the <b>use-bgp-routes</b> context
Context	<b>configure router string</b> <a href="#">bgp next-hop-resolution labeled-routes use-bgp-routes</a>
Tree	<a href="#">use-bgp-routes</a>
Introduced	21.2.R1
Platforms	All

### **label-ipv6-explicit-null boolean**

Synopsis	Use BGP routes to resolve address family routes
Context	<b>configure router string</b> <a href="#">bgp next-hop-resolution labeled-routes use-bgp-routes label-ipv6-explicit-null boolean</a>
Tree	<a href="#">label-ipv6-explicit-null</a>
Description	When configured to <b>true</b> , a labeled IPv6 route with the explicit-null label can be resolved by other routes, and also by unlabeled IPv4 routes and unlabeled IPv6 routes that are resolved by static routes, interface routes, or tunnels. Up to four levels of recursive resolution are supported when the top route is a labeled IPv6 route with an explicit-null label. When disabled, a labeled IPv6 route cannot be resolved by other labeled IPv6 routes.

A labeled IPv6 route with a regular label (not explicit-null) is never resolved by other labeled IPv6 routes.

Default	false
Introduced	21.2.R1
Platforms	All

### **policy** *reference*

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **shortcut-tunnel**

Synopsis	Enter the <b>shortcut-tunnel</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">shortcut-tunnel</a>
Tree	<a href="#">shortcut-tunnel</a>
Description	Commands in this context configure the tunnel types that can be used to resolve unlabeled IPv4 and IPv6 BGP routes.
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">shortcut-tunnel</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for shortcut tunnel selection
----------	---

Context	<b>configure</b> <i>router string</i> <b>bgp next-hop-resolution shortcut-tunnel family keyword</b>
Tree	<b>family</b>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <i>router string</i> <b>bgp next-hop-resolution shortcut-tunnel family keyword</b> <b>allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<b>allow-flex-algo-fallback</b>
Description	<p>When configured to <b>true</b>, a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to <b>false</b>, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	20.10.R1
Platforms	All

### **disallow-igp** *boolean*

Synopsis	Do not perform route table lookup to resolve BGP route
Context	<b>configure</b> <i>router string</i> <b>bgp next-hop-resolution shortcut-tunnel family keyword</b> <b>disallow-igp</b> <i>boolean</i>
Tree	<b>disallow-igp</b>
Description	<p>When configured to <b>true</b>, no attempt is made to resolve the IPv4 or IPv6 BGP route using route table lookup if no resolving tunnel can be found in the tunnel table.</p> <p>When configured to <b>false</b>, route table lookup can be performed if no resolving tunnel is found in the tunnel table.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**enforce-strict-tunnel-tagging** *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family</i> <i>keyword</i> <b>enforce-strict-tunnel-tagging</b> <i>boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Description	When configured to <b>true</b> , the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered.  When configured to <b>false</b> , matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	16.0.R1
Platforms	All

**resolution** *keyword*

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family</i> <i>keyword</i> <b>resolution</b> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	none, filter, any
Default	none
Introduced	16.0.R1
Platforms	All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family</i> <i>keyword</i> <b>resolution-filter</b>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

**bgp *boolean***

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter bgp boolean</i>
Tree	<i>bgp</i>
Description	When configured to <b>true</b> , this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.  When configured to <b>false</b> , BGP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**ldp *boolean***

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter ldp boolean</i>
Tree	<i>ldp</i>
Description	When configured to <b>true</b> , BGP selects the LDP FEC that is the longest prefix match to the BGP next-hop address.  When configured to <b>false</b> , LDP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**mpls-fwd-policy *boolean***

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter mpls-fwd-policy boolean</i>
Tree	<i>mpls-fwd-policy</i>
Default	false
Introduced	16.0.R4
Platforms	All

**rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>next-hop-resolution</b> <b>shortcut-tunnel</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>rib-api</b> <i>boolean</i>
Tree	<b>rib-api</b>
Default	false
Introduced	16.0.R4
Platforms	All

**rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>next-hop-resolution</b> <b>shortcut-tunnel</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>rsvp</b> <i>boolean</i>
Tree	<b>rsvp</b>
Description	<p>When configured to <b>true</b>, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations.</p> <p>This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, this command disables the selection of RSVP tunneling for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>next-hop-resolution</b> <b>shortcut-tunnel</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment-routing tunnel in the tunnel table submitted by the lowest preference IS-IS instance or, in case of a tie, the lowest numbered IS-IS instance.</p>

When configured to **false**, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.

Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-ospf boolean</i>
Tree	<i>sr-ospf</i>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPF instance or, in case of a tie, the lowest numbered OSPF instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-ospf3 boolean</i>
Tree	<i>sr-ospf3</i>
Description	<p>When configured to <b>true</b>, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false

Introduced	16.0.R6
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-policy</b> <i>boolean</i>
Tree	<a href="#">sr-policy</a>
Description	<p>When configured to <b>true</b>, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy.</p> <p>When configured to <b>false</b>, segment routing policies are not enabled for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-te</b> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**use-bgp-routes** *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution use-bgp-routes</b> <i>boolean</i>
Tree	<a href="#">use-bgp-routes</a>
Description	<p>This command enables the use of BGP routes to resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-family-policy** *reference*

Synopsis	Policy to filter routes for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution vpn-family-policy</b> <i>reference</i>
Tree	<a href="#">vpn-family-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>

## location [*location-id*] *number*

Synopsis Enter the **location** list instance

Context **configure** *router string* **bgp optimal-route-reflection location** *number*

Tree **location**

Description Commands in this context configure the location ID for the route reflector. A BGP neighbor can be associated with a location if it is a route-reflector client.

Up to three IPv4 addresses and three IPv6 addresses can be specified per location.

If the TE DB is unable find a node in its topology database that matches a primary address of the location, it tries to find a node matching a secondary address. If this attempt also fails, the TE DB tries to find a node matching a tertiary address.

The IP addresses specified for a location should be topologically “close” to a set of clients that should all receive the same optimal path for that location.

Introduced 16.0.R1

**override-tunnel-elc** *boolean*

Synopsis	Enable entropy label capability on BGP tunnels
Context	<b>configure</b> <i>router string</i> <a href="#">bgp</a> <a href="#">override-tunnel-elc</a> <i>boolean</i>
Tree	<a href="#">override-tunnel-elc</a>
Description	<p>When configured to <b>true</b>, this command renders all far ends for BGP tunnels as entropy-label-capable, regardless of any received capability signaling. This ensures that the entropy label will be inserted on BGP tunnels in the absence of capability signaling support by the far end.</p> <p>This is a system-wide configuration, since efficient entropy label operation requires that all LSRs in a network support entropy labels. This command should be used with care, particularly in inter-AS use cases, as entropy label capability may differ between domains.</p> <p>When configured to <b>false</b>, this command disables all far ends for BGP tunnels as entropy-label-capable.</p>
Default	false
Introduced	16.0.R1

Platforms All

### **path-mtu-discovery** *boolean*

Synopsis Enable Path MTU Discovery

Context **configure** *router* *string* *bgp path-mtu-discovery* *boolean*

Tree [path-mtu-discovery](#)

Description When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Default false

Introduced 16.0.R1

Platforms All

### **peer-ip-tracking** *boolean*

Synopsis Enable BGP peer tracking

### **policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management ipv4 route-table-import policy-name reference</a>

Tree	<a href="#">policy-name</a>
------	-----------------------------

Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.
-------------	--

When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Introduced	16.0.R1
Platforms	All

Description	This command specifies one or more leak import policies.  Policy names are limited to 64 characters except for the first policy. Only one object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).
String Length	1 to 255
Max. Instances	15
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## route-table-import

Synopsis	Enter the <b>route-table-import</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">rib-management</a> <a href="#">label-ipv4</a> <a href="#">route-table-import</a>

Tree	<a href="#">route-table-import</a>
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management label-ipv4 route-table-import policy-name reference</a>
Tree	<a href="#">policy-name</a>
Description	<p>This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.</p> <p>When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.</p> <p>Aggregate routes are always imported into each RIB, independent of the specified policy.</p> <p>Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.</p> <p>When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.</p>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **label-ipv6**

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management label-ipv6</a>
Tree	<a href="#">label-ipv6</a>
Introduced	16.0.R1
Platforms	All

### **route-table-import**

Synopsis	Enter the <b>route-table-import</b> context
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management label-ipv6 route-table-import</a>
Tree	<a href="#">route-table-import</a>
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management label-ipv6 route-table-import policy-name reference</a>
Tree	<a href="#">policy-name</a>
Description	<p>This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.</p> <p>When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.</p> <p>Aggregate routes are always imported into each RIB, independent of the specified policy.</p> <p>Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.</p> <p>When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.</p>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **route-table-install** *boolean*

Synopsis	Install all IPv4 and IPv6 BGP routes in FIB and RTM
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp route-table-install</a> <i>boolean</i>
Tree	<a href="#">route-table-install</a>
Default	true
Introduced	16.0.R1
Platforms	All

**route-target-list** [**community-name**] *string*

Synopsis	Add a list entry for <b>route-target-list</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>route-target-list</b> <i>string</i>
Tree	<b>route-target-list</b>
Description	This command specifies a route target to be accepted from or advertised to peers. This command is only applicable if the router is a route-reflector server.
Introduced	16.0.R1
Platforms	All

**[community-name]** *string*

Synopsis	Route target community name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>route-target-list</b> <i>string</i>
Tree	<b>route-target-list</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**router-id** *string*

Synopsis	Router ID for the BGP instance in the AS
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>router-id</b> <i>string</i>
Tree	<b>router-id</b>
Description	This command specifies the router ID to be used with the BGP instance.  Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID.  When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.
Introduced	16.0.R1
Platforms	All

**rr-vpn-forwarding** *boolean*

Synopsis	Allow route reflector to forward VPN-IP routes
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp rr-vpn-forwarding</b> <i>boolean</i>
Tree	<a href="#">rr-vpn-forwarding</a>
Description	<p>When configured to <b>true</b>, the route reflector resolves VPN-IPv4 and VPN-IPv6 routes, sets itself as the next hop, and generates new labels for all the resolved routes.</p> <p>During this process, all received VPN-IP routes, regardless of route target, are imported into the dummy VRF, where the BGP next hops are resolved. The routes are resolved to next-hop-self, and BGP allocates new VPRN service-label values for the routes, which are then advertised to peers.</p> <p>The <b>transport-tunnel</b> command under the <b>configure router bgp next-hop-resolution labeled-routes</b> context determines what types of tunnels are eligible to resolve the next hops. If a received VPN-IP route from IBGP peer X is resolved and selected as the best path so that it can be re-advertised to an IBGP peer Y, and the BGP next-hop is modified toward peer Y (by using the <b>next-hop-self</b> command in Y's group or neighbor context or by using a next-hop action in an export policy applied to Y), BGP allocates a new VPRN service label value for the route, signals that new label value to Y, and programs the IOM to do the corresponding label swap operation. The supported combinations of X and Y are outlined below:</p> <ul style="list-style-type: none"> <li>• from X (client) to Y (client)</li> <li>• from X (client) to Y (non-client)</li> <li>• from X (non-client) to Y (client)</li> </ul> <p>When configured to <b>false</b>, the routes are re-advertised without signaling new VPRN labels, even if the BGP next hop is changed.</p> <p>Nokia recommends setting this command to <b>false</b> for scaling and convergence reasons.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## segment-routing

Synopsis	Enter the <b>segment-routing</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp segment-routing</b>
Tree	<a href="#">segment-routing</a>
Description	Commands in this context configure options related to BGP segment routing (including prefix SID support).
Introduced	19.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>segment-routing</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	All

**prefix-sid-range**

Synopsis	Enable the <b>prefix-sid-range</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>segment-routing</b> <b>prefix-sid-range</b>
Tree	<a href="#">prefix-sid-range</a>
Introduced	19.10.R1
Platforms	All

**global**

Synopsis	Allow label allocation from entire SRBG space
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>segment-routing</b> <b>prefix-sid-range</b> <b>global</b>
Tree	<a href="#">global</a>
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	19.10.R1
Platforms	All

**max-index** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Last label value available in contiguous range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>segment-routing</b> <b>prefix-sid-range</b> <b>max-index</b> <i>number</i>
Tree	<a href="#">max-index</a>
Range	0 to 524287

Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	19.10.R1
Platforms	All

### **start-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	First label value available in a contiguous range
Context	<b>configure</b> <i>router string</i> <a href="#">bgp segment-routing prefix-sid-range</a> <b>start-label</b> <i>number</i>
Tree	<a href="#">start-label</a>
Range	0 to 524287
Default	0
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	19.10.R1
Platforms	All

### **segment-routing-v6**

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">bgp segment-routing-v6 family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Description	Commands in this context configure family-specific behavior for processing prefix SID attributes containing SRv6 TLVs.
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [family-type] keyword

Synopsis IP address type that SRv6 route attributes apply to

Context **configure** *router* *string* *bgp segment-routing-v6 family keyword*

Tree *family*

Options ipv4, ipv6

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### add-srv6-tlvs

Synopsis Enable the **add-srv6-tlvs** context

Context **configure** *router* *string* *bgp segment-routing-v6 family keyword* *add-srv6-tlvs*

Tree *add-srv6-tlvs*

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### locator-name reference

Synopsis SRv6 locator name

Context **configure** *router* *string* *bgp segment-routing-v6 family keyword* *add-srv6-tlvs locator-name reference*

Tree *locator-name*

Reference **configure** *router* *string* *segment-routing segment-routing-v6 base-routing-instance locator reference*

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### micro-segment-locator-name reference

Synopsis Micro-segment SRv6 locator name

Context **configure** *router* *string* *bgp segment-routing-v6 family keyword* *add-srv6-tlvs micro-segment-locator-name reference*

Tree	<a href="#">micro-segment-locator-name</a>
Description	This command adds a prefix SID attribute containing an SRv6 TLV to routes that belong to the family and that are redistributed from another protocol to BGP. This command also adds a prefix SID attribute with SRv6 TLV to BGP routes that are received from other peers without the SRv6 TLV and that are propagated to other peers with next-hop-self applied.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ignore-received-srv6-tlvs** *boolean*

Synopsis	Ignore SRv6 TLVs for received routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">segment-routing-v6</a> <a href="#">family</a> <i>keyword</i> <a href="#">ignore-received-srv6-tlvs</a> <i>boolean</i>
Tree	<a href="#">ignore-received-srv6-tlvs</a>
Description	<p>When configured to <b>true</b>, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is ignored and the route resolution is based on the BGP next-hop only.</p> <p>When configured to <b>false</b>, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is processed. Such a route is resolved only if its BGP next-hop is reachable and the locator prefix is reachable. The datapath programming and IGP cost to reach the next-hop (used by the BGP decision process) is based on the route to the locator prefix.</p>
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **resolution** *keyword*

Synopsis	Resolution options for routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">segment-routing-v6</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	<a href="#">route-table</a> , <a href="#">tunnel-table</a> , <a href="#">fallback-tunnel-to-route-table</a>
Default	<a href="#">route-table</a>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**source-address** *string*

Synopsis	Source address used in SRv6 packet
Context	<b>configure</b> <i>router string</i> <b>bgp segment-routing-v6 source-address</b> <i>string</i>
Tree	<a href="#">source-address</a>
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**selective-label-ip** *keyword*

Synopsis	Label IP routes installed for local use on NHS router
Context	<b>configure</b> <i>router string</i> <b>bgp selective-label-ip</b> <i>keyword</i>
Tree	<a href="#">selective-label-ip</a>
Description	<p>This command enables selective installation of labeled unicast routes for resolution by local services and IP shortcuts on a labeled unicast Next-hop=self router.</p> <p>This command is supported for labeled unicast for both IPv4 and IPv6 routes.</p> <p>The <b>no-install</b> option installs labeled IP routes that are required by services. This option conserves labeled route table space in addition to RTM table space on BGP-LU next-hop-self route reflectors. The <b>route-table-install-only</b> option ensures that the labeled unicast routes are installed in the RTM in full. When <b>no-install</b> is specified, the download of labeled unicast routes for NHLFE resolution by services continues.</p>
Options	no-install, route-table-install-only
Introduced	22.10.R1
Platforms	All

**selective-label-ip-prioritization** *boolean*

Synopsis	Enable BGP selective prioritization for labeled routes
Context	<b>configure</b> <i>router string</i> <b>bgp selective-label-ip-prioritization</b> <i>boolean</i>
Tree	<a href="#">selective-label-ip-prioritization</a>

Description	<p>When this command is set to <b>true</b>, every labeled IPv4 and IPv6 route that is received and potentially usable by a local service is automatically prioritized for fast control plane reconvergence. When the reachability of a BGP next-hop changes, the labeled IPv4 and IPv6 routes are updated into the route table first, along with other routes manually tagged as high priority by import policies. A /32 or /128 labeled unicast route (and associated BGP-LU tunnel) is determined to be potentially usable by a local service if one of the following conditions applies:</p> <ul style="list-style-type: none"> <li>the route matches the far-end address of a user-provisioned SDP of a Layer 2 service and the SDP is configured to use BGP tunnels as transport</li> <li>the route matches the BGP next-hop address of a BGP-EVPN or IP VPN route, and this VPN route is either imported into a local service or readvertised by the router acting as a next-hop-self route reflector or a model-B ASBR</li> </ul> <p>When this command is set to <b>false</b>, selective-label IP prioritization for BGP is not used.</p>
Default	false
Introduced	21.10.R1
Platforms	All

### **selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	<b>configure</b> <i>router string</i> <b>bgp selective-label-ipv4-install</b> <i>boolean</i>
Tree	<a href="#">selective-label-ipv4-install</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <i>router string</i> <b>bgp send-communities extended</b> <i>boolean</i>

---

Tree	<a href="#">extended</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **large** *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp send-communities large</a> <i>boolean</i>
Tree	<a href="#">large</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp send-communities standard</a> <i>boolean</i>
Tree	<a href="#">standard</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-default**

Synopsis	Enter the <b>send-default</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp send-default</a>
Tree	<a href="#">send-default</a>
Introduced	19.7.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp send-default export-policy</a> <i>reference</i>

Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable IPv4 family type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to <b>false</b>, the use of split-horizon is disabled.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **sr-policy-import** *boolean*

Synopsis	Import all segment routing policies into the BGP RIB
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>sr-policy-import</i> <i>boolean</i>
Tree	<a href="#">sr-policy-import</a>
Description	<p>When configured to <b>true</b>, statically-configured non-local segment routing policies from the segment routing database are imported into the BGP RIB so that they can be advertised as originated routes toward BGP peers supporting segment routing policies (<b>sr-policy-ipv4</b> IP family type).</p> <p>When configured to <b>false</b>, the SR policies are not imported into the BGP RIB.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **subconfed-vpn-forwarding** *boolean*

Synopsis	Allow subconfed route resolution, next hop and labels
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>subconfed-vpn-forwarding</i> <i>boolean</i>
Tree	<a href="#">subconfed-vpn-forwarding</a>
Description	<p>When this is set to <b>true</b>, the base router BGP instance retains all received VPN-IPv4 and VPN-IPv6 routes, including those with route targets not matching any VRF import policy of any locally configured VPRN. In addition, when the base router BGP is configured to apply a <b>next-hop-self</b> command to a peer of any type (EBGP, IBGP, or confed-EBGP), VPN-IPv4 and VPN-IPv6 routes are advertised to the peer with a new BGP label, next hop, and label-swap forwarding entry. These behaviors described above are applied when the <b>enable-inter-as-vpn</b> or <b>enable-rr-vpn-forwarding</b> commands are enabled in the <b>configure router bgp</b> context, in the same BGP instance. This applies regardless of whether the base router has a confederation configuration.</p> <p>When this command is set to <b>false</b>, subconfederation VPN forwarding is not used.</p>
Default	false
Introduced	21.10.R1
Platforms	All

**tcp-mss *number***

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>tcp-mss number</i>
Tree	<b>tcp-mss</b>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Introduced	21.2.R1
Platforms	All

**third-party-nexthop *boolean***

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>third-party-nexthop boolean</i>
Tree	<b>third-party-nexthop</b>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-apply-export *boolean***

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <i>vpn-apply-export boolean</i>

Tree	<a href="#">vpn-apply-export</a>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When configured to <b>false</b> , the export policies are not applied.
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-apply-import** *boolean*

Synopsis	Apply base-instance import route policies to VPN routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">vpn-apply-import</a> <i>boolean</i>
Tree	<a href="#">vpn-apply-import</a>
Description	When configured to <b>true</b> , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When configured to <b>false</b> , the import policies are not applied.
Default	false
Introduced	16.0.R1
Platforms	All

### **bier**

Synopsis	Enable the <b>bier</b> context

### **admin-state** *keyword*

Synopsis	Administrative state of the BIER template
Context	<b>configure router</b> <i>string bier template string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

### **sub-domain** [[start](#)] *number end number*

Synopsis	Enter the <b>sub-domain</b> list instance
Context	<b>configure router</b> <i>string bier template string sub-domain number end number</i>
Tree	<a href="#">sub-domain</a>
Introduced	19.5.R1
Platforms	All

### **[start]** *number*

Synopsis	Lower bound of sub-domain range
Context	<b>configure router</b> <i>string bier template string sub-domain number end number</i>
Tree	<a href="#">sub-domain</a>
Range	0 to 255
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **end number**

Synopsis	Upper bound of sub-domain range
Context	<b>configure router string bier template string sub-domain number end number</b>
Tree	<b>sub-domain</b>
Range	0 to 255
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **bfr-id number**

Synopsis	BIER ID for the sub-domain
Context	<b>configure router string bier template string sub-domain number end number bfr-id number</b>
Tree	<b>bfr-id</b>
Range	1 to 4096
Introduced	19.5.R1
Platforms	All

### **multi-topology keyword**

Synopsis	Multi-topology for the sub-domain
Context	<b>configure router string bier template string sub-domain number end number multi-topology keyword</b>
Tree	<b>multi-topology</b>
Options	ipv4-unicast, ipv6-unicast, ipv4-multicast, ipv6-multicast
Default	ipv4-unicast
Introduced	19.5.R1
Platforms	All

### **prefix string**

Synopsis	IP address used as BFR prefix
Context	<b>configure router string bier template string sub-domain number end number prefix string</b>

Tree	<a href="#">prefix</a>
Description	This command specifies the IP address to be used as the BFR prefix. The prefix can be a loopback interface or system IP address.
Default	0.0.0.0
Introduced	19.5.R1
Platforms	All

### **class-forwarding** *boolean*

Synopsis	Allow class-based forwarding over IGP shortcuts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">class-forwarding</a> <i>boolean</i>
Tree	<a href="#">class-forwarding</a>
Description	When configured to <b>true</b> , this command enables class-based forwarding (CBF) over IGP shortcuts.  Weighted ECMP, at the transport-tunnel level of BGP prefixes over IGP shortcuts, and the CBF feature on a per-BGP next-hop basis are mutually exclusive.  When configured to <b>false</b> , class-based forwarding (CBF) over IGP shortcuts is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **confederation**

Synopsis	Enter the <b>confederation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a>
Tree	<a href="#">confederation</a>
Description	Commands in this context configure members that are to be part of a confederation.  Creating confederation autonomous systems within an AS can be used to reduce the number of IBGP sessions required within an AS.
Introduced	16.0.R1
Platforms	All

### **confed-as-num** *number*

Synopsis	Confederation AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">confed-as-num</a> <i>number</i>

Tree	<a href="#">confed-as-num</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **members** [[as-number](#)] *number*

Synopsis	Add a list entry for <b>members</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">members</a> <i>number</i>
Tree	<a href="#">members</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

### **[as-number]** *number*

Synopsis	Confederation member AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">members</a> <i>number</i>
Tree	<a href="#">members</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dhcp-server**

Synopsis	Enter the <b>dhcp-server</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b>
Tree	<b>dhcp-server</b>
Introduced	16.0.R1
Platforms	All

**dhcpv4** [*name*] *string*

Synopsis	Enter the <b>dhcpv4</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i>
Tree	<b>dhcpv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	DHCP server name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i>
Tree	<b>dhcpv4</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the DHCP server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string failover</i>
Tree	<a href="#">failover</a>
Description	Commands in this context define DHCP failover where two DHCP servers manage the same pool of addresses, enabling them to share the load to assign leases for pool and provide backup for each in the event of network outages.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string failover admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string failover ignore-mclt-on-takeover boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>

Description	When configured to <b>true</b> , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.  When configured to <b>false</b> , the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>failover</b> <b>maximum-client-lead-time</b> <i>number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>failover</b> <b>partner-down-delay</b> <i>number</i>

Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">failover</a> <b>peer</b> <i>reference</i>
Tree	<a href="#">peer</a>
Description	<p>Commands in this context define the peer-related parameters for DHCP failover.</p> <p>DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link.</p> <p>MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.</p> <p>The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[address] reference**

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sync-tag string****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs

**startup-wait-time number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">startup-wait-time</a> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600

---

Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-renews** *boolean*

Synopsis	Send FORCERENEW messages to force renewals of leases
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>force-renews</i> <i>boolean</i>
Tree	<a href="#">force-renews</a>
Description	When configured to <b>true</b> , FORCERENEW messages are enabled for DHCP.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-hold**

Synopsis	Enter the <b>lease-hold</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>lease-hold</i>
Tree	<a href="#">lease-hold</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **additional-scenarios**

Synopsis	Enter the <b>additional-scenarios</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>lease-hold</i> <i>additional-scenarios</i>
Tree	<a href="#">additional-scenarios</a>
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**internal-lease-ipsec** *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b> <b>additional-scenarios</b> <b>internal-lease-ipsec</b> <i>boolean</i>
Tree	<b>internal-lease-ipsec</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**solicited-release** *boolean*

Synopsis	Apply lease hold timer for solicited releases
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b> <b>additional-scenarios</b> <b>solicited-release</b> <i>boolean</i>
Tree	<b>solicited-release</b>
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**time** *number*

Synopsis	Lease hold time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b> <b>time</b> <i>number</i>

Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**minimum-free**

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>minimum-free</b>
Tree	<b>minimum-free</b>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**absolute** *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>minimum-free</b> <b>absolute</b> <i>number</i>
Tree	<b>absolute</b>
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**event-when-depleted** *boolean*

Synopsis	Generate notification when addresses are depleted
----------	---

Context	<b>configure router string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted boolean</b>
Tree	<b>event-when-depleted</b>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted. When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **percent number**

Synopsis	Minimum free addresses as a percentage
Context	<b>configure router string dhcp-server dhcpv4 string pool string minimum-free percent number</b>
Tree	<b>percent</b>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nak-non-matching-subnet boolean**

Synopsis	Send NAK if no match for request address pool range
Context	<b>configure router string dhcp-server dhcpv4 string pool string nak-non-matching-subnet boolean</b>
Tree	<b>nak-non-matching-subnet</b>
Description	When configured to <b>true</b> , a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK. When configured to <b>false</b> or unconfigured, the system drops the DHCP packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**offer-time** *number*

Synopsis	Time interval during which a DHCP offer remains valid
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string offer-time number</i>
Tree	<i>offer-time</i>
Range	10 to 600
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string options</i>
Tree	<i>options</i>
Description	Commands in this context define DHCPv4 pool options.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**option** [*number*] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string options option (number   keyword)</i>
Tree	<i>option</i>
Description	This command configures DHCP options at the pool level. The pool options can be overruled by the value of the same option in the local user database.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[number]** (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string options option (number   keyword)</i>

Tree	<a href="#">option</a>
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option specified as time duration
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">duration</a> <i>number</i>
Tree	<a href="#">duration</a>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Remove DHCP option from configuration
----------	---------------------------------------

Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4-address** *string*

Synopsis	DHCP option specified as a list of IPv4 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<b>ipv4-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **netbios-node-type** *keyword*

Synopsis	DHCP option specified as a NetBIOS node type
----------	--

Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string options option (number   keyword) netbios-node-type keyword</i>
Tree	<a href="#">netbios-node-type</a>
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet** [[ipv4-prefix](#)] *string*

Synopsis	Enter the <b>subnet</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string</i>
Tree	<a href="#">subnet</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [\[ipv4-prefix\]](#) *string*

Synopsis	IPv4 prefix for the subnet
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string</i>
Tree	<a href="#">subnet</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address-range** [[start](#)] *string* [end](#) *string*

Synopsis	Enter the <b>address-range</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string address-range string end string</i>
Tree	<a href="#">address-range</a>
Description	This command configures the range of IP addresses to be served from the pool subnet. The range includes all the IP addresses between the specified start and end addresses, other than specifically excluded addresses. The start and end addresses must be unique within the subnet.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[start]** *string*

Synopsis Lower bound of the IP address range

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **address-range** *string* **end** *string*

Tree **address-range**

Description This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end** *string*

Synopsis Upper bound of the IP address range

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **address-range** *string* **end** *string*

Tree **address-range**

Description This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover-control-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Failover control type for this range

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **address-range** *string* **end** *string* **failover-control-type** *keyword*

Tree **failover-control-type**

Options local, remote, access-driven

Default	local
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**drain** *boolean*

Synopsis	Prevent new lease assignment from this subnet
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string drain boolean</i>
Tree	<a href="#">drain</a>
Description	When configured to <b>true</b> , new leases cannot be assigned and existing leases are kept up until they are released. When configured to <b>false</b> , the subnet is active and new leases can be assigned.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**exclude-addresses** [*start*] *string end string*

Synopsis	Add a list entry for <b>exclude-addresses</b>
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<a href="#">exclude-addresses</a>
Description	This command configures an IP address to be excluded from the pool of IP addresses in the subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[start]** *string*

Synopsis	Lower bound of the IP address range
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<a href="#">exclude-addresses</a>
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end string**

Synopsis	Upper bound of the IP address range
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<i>exclude-addresses</i>
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-declined number**

Synopsis	Maximum number of declined addresses allowed
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string maximum-declined number</i>
Tree	<i>maximum-declined</i>
Max. Range	0 to 4294967295
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum-free**

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free</i>
Tree	<i>minimum-free</i>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**absolute number**

Synopsis	Minimum number of free addresses in this pool or subnet
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free absolute number</i>
Tree	<i>absolute</i>
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**event-when-depleted boolean**

Synopsis	Generate notification when addresses are depleted
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free event-when-depleted boolean</i>
Tree	<i>event-when-depleted</i>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.  When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**percent number**

Synopsis	Minimum free addresses as a percentage
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free percent number</i>
Tree	<i>percent</i>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis Enter the **options** context

Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string options*

Tree [options](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option [number] (*number | keyword*)

Synopsis Enter the **option** list instance

Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string options option (number | keyword)*

Tree [option](#)

Description This command configures DHCP options at the pool subnet level. The options can be overruled by the value of the same option in the local user database.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [number] (*number | keyword*)

Synopsis DHCP option to send identification strings to client

Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string options option (number | keyword)*

Tree [option](#)

Range 1 to 254

Options subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ascii-string</b> <i>string</i>
Tree	<b>ascii-string</b>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## duration *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<b>duration</b>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## empty

Synopsis	Empty DHCP option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv4-address** *string*

Synopsis	DHCP option specified as a list of IPv4 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<b>ipv4-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**netbios-node-type** *keyword*

Synopsis	DHCP option specified as a NetBIOS node type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>netbios-node-type</b> <i>keyword</i>
Tree	<b>netbios-node-type</b>
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pool-selection

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool-selection</i>
Tree	<a href="#">pool-selection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-gi-address

Synopsis	Enable the <b>use-gi-address</b> context
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool-selection use-gi-address</i>
Tree	<a href="#">use-gi-address</a>
Description	<p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scope *keyword*

Synopsis	GI address-matching scope
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool-selection use-gi-address scope keyword</i>
Tree	<a href="#">scope</a>
Options	subnet, pool
Default	subnet
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-pool-from-client

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool-selection use-pool-from-client</a>
Tree	<a href="#">use-pool-from-client</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## delimiter *string*

Synopsis	Delimiter to combine primary and secondary pool names
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool-selection use-pool-from-client delimiter</a> <i>string</i>
Tree	<a href="#">delimiter</a>
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-db *reference*

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">user-db reference</a>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-identification *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
----------	--

Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string user-identification keyword</i>
Tree	<a href="#">user-identification</a>
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcpv6** [[name](#)] *string*

Synopsis	Enter the <b>dhcpv6</b> list instance
Context	<b>configure router</b> <i>string dhcp-server dhcpv6 string</i>
Tree	<a href="#">dhcpv6</a>
Description	Commands in this context configure DHCPv6 parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	DHCP server name
Context	<b>configure router</b> <i>string dhcp-server dhcpv6 string</i>
Tree	<a href="#">dhcpv6</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCP server
Context	<b>configure router</b> <i>string dhcp-server dhcpv6 string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## auto-provisioned *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Auto-provision the pools of this server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">auto-provisioned</a> <i>boolean</i>
Tree	<a href="#">auto-provisioned</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a> <a href="#">options</a>
Tree	<a href="#">options</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option [[number](#)] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>

Description	This command configures DHCP options at the pool level. The pool options defined here can be overruled by the value of the same option in the local user database.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[number]** (*number* | *keyword*)

Synopsis	DHCP option to send as identification string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>option</b>
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ascii-string</b> <i>string</i>
Tree	<b>ascii-string</b>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **domain-string** *string*

Synopsis	DHCP option specified as a domain name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>domain-string</b> <i>string</i>
Tree	<b>domain-string</b>
String Length	1 to 127

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<b>duration</b>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6-address** *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ipv6-address</b> <i>string</i>
Tree	<a href="#">ipv6-address</a>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** *number*

Synopsis	Time this lease remains preferred
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>preferred-lifetime</b> <i>number</i>
Tree	<a href="#">preferred-lifetime</a>
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.  Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-time** *number*

Synopsis Rebind time for the lease

Context **configure** *router string dhcp-server dhcpv6 string defaults rebind-time number*

Tree [rebind-time](#)

Description This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.

The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range 0 to 1209600

Units seconds

Default 2880

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-time** *number*

Synopsis Renew time for the lease

Context **configure** *router string dhcp-server dhcpv6 string defaults renew-time number*

Tree [renew-time](#)

Description This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.

The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to

extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis	Time for the lease to remain valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>valid-lifetime</b> <i>number</i>
Tree	<b>valid-lifetime</b>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <b>failover</b>
Tree	<a href="#">failover</a>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <b>failover</b> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <b>failover</b> <a href="#">ignore-mclt-on-takeover</a> <a href="#">boolean</a>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	<p>When configured to <b>true</b>, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to <b>false</b>, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-client-lead-time** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string failover maximum-client-lead-time number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**partner-down-delay** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string failover partner-down-delay number</i>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### startup-wait-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server dhcpv6</i> <i>string</i> <i>failover startup-wait-time</i> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ignore-rapid-commit *boolean*

Synopsis	Ignore Rapid Commit option
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server dhcpv6</i> <i>string</i> <i>ignore-rapid-commit</i> <i>boolean</i>
Tree	<a href="#">ignore-rapid-commit</a>
Description	When configured to <b>true</b> , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### interface-id-mapping *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string interface-id-mapping boolean</i>
Tree	<a href="#">interface-id-mapping</a>
Description	When configured to <b>true</b> , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-hold

Synopsis	Enter the <b>lease-hold</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string lease-hold</i>
Tree	<a href="#">lease-hold</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## additional-scenarios

Synopsis	Enter the <b>additional-scenarios</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string lease-hold additional-scenarios</i>
Tree	<a href="#">additional-scenarios</a>
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## internal-lease-ipsec *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string lease-hold additional-scenarios internal-lease-ipsec boolean</i>

---

Tree	<a href="#">internal-lease-ipsec</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **solicited-release** *boolean*

Synopsis	Apply lease hold timer for solicited releases
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-hold additional-scenarios solicited-release</a> <i>boolean</i>
Tree	<a href="#">solicited-release</a>
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **time** *number*

Synopsis	Lease hold time
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-hold time</a> <i>number</i>
Tree	<a href="#">time</a>

Synopsis	Prefix length for pool if unspecified by client
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string delegated-prefix length number</i>
Tree	<i>length</i>
Range	48 to 127
Default	64
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum number**

Synopsis Maximum delegated prefix length for this pool

Context **configure** *router string dhcp-server dhcpv6 string pool string delegated-prefix maximum number*

Tree [maximum](#)

Range 48 to 127

Default 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum number**

Synopsis Minimum delegated prefix length for this pool

Context **configure** *router string dhcp-server dhcpv6 string pool string delegated-prefix minimum number*

Tree [minimum](#)

Range 48 to 127

Default 48

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis Text description

Context **configure** *router string dhcp-server dhcpv6 string pool string description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **exclude-prefix [ipv6-prefix] string**

Synopsis Add a list entry for **exclude-prefix**

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string exclude-prefix string</i>
Tree	<a href="#">exclude-prefix</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv6-prefix]** *string*

Synopsis	IPv6 prefix to be excluded from available pool prefixes
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string exclude-prefix string</i>
Tree	<a href="#">exclude-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover</i>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>ignore-mclt-on-takeover</b> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	<p>When configured to <b>true</b>, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to <b>false</b>, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-client-lead-time** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>maximum-client-lead-time</b> <i>number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**partner-down-delay** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover partner-down-delay number</i>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover peer reference</i>
Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover peer reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>peer</b> <i>reference</i> <b>sync-tag</b> <i>string</i>
Tree	<b>sync-tag</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **startup-wait-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>startup-wait-time</b> <i>number</i>
Tree	<b>startup-wait-time</b>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a>
Tree	<a href="#">options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**option** [[number](#)] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[number]** (*number* | *keyword*)

Synopsis	DHCP option to send as identification string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 127

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **domain-string** *string*

Synopsis	DHCP option specified as a domain name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>domain-string</b> <i>string</i>
Tree	<b>domain-string</b>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<b>duration</b>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6-address** *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ipv6-address</b> <i>string</i>
Tree	<b>ipv6-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix** [**ipv6-prefix**] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i>
Tree	<b>prefix</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [**ipv6-prefix**] *string*

Synopsis IPv6 prefix to be excluded from available pool prefixes  
 Context **configure** *router string dhcp-server dhcpv6 string pool string prefix string*  
 Tree [prefix](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **drain** *boolean*

Synopsis No new leases can be assigned  
 Context **configure** *router string dhcp-server dhcpv6 string pool string prefix string drain boolean*  
 Tree [drain](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover-control-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** *number*

Synopsis	Time this lease remains preferred
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>preferred-lifetime</b> <i>number</i>
Tree	<b>preferred-lifetime</b>

Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length-threshold** [*prefix-length*] *number*

Synopsis	Enter the <b>prefix-length-threshold</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number</i>
Tree	<i>prefix-length-threshold</i>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[prefix-length]** *number*

Synopsis	Delegated prefix length for pool thresholds
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number</i>
Tree	<i>prefix-length-threshold</i>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **absolute** *number*

Synopsis	Minimum number of free prefixes for this prefix length
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number absolute number</i>
Tree	<i>absolute</i>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate a notification when this pool is depleted
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number event-when-depleted boolean</i>
Tree	<i>event-when-depleted</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **percent** *number*

Synopsis	Minimum percentage of free prefixes for prefix length
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number percent number</i>
Tree	<i>percent</i>
Range	1 to 100
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-type**

Synopsis	Enter the <b>prefix-type</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-type</i>

Tree	<a href="#">prefix-type</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pd** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-PD prefixes from this prefix pool
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">prefix</a> <a href="#">string</a> <a href="#">prefix-type</a> <a href="#">pd</a> <i>boolean</i>
Tree	<a href="#">pd</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**wan-host** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-NA or SLAAC prefixes from this prefix pool
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">prefix</a> <a href="#">string</a> <a href="#">prefix-type</a> <a href="#">wan-host</a> <i>boolean</i>
Tree	<a href="#">wan-host</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rebind-time** *number*

Synopsis	Rebind time for the lease
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <a href="#">string</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">prefix</a> <a href="#">string</a> <a href="#">rebind-time</a> <i>number</i>
Tree	<a href="#">rebind-time</a>

Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-time** *number*

Synopsis	Renew time for the lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>renew-time</b> <i>number</i>
Tree	<b>renew-time</b>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis	Time for the lease to remain valid
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string valid-lifetime number</i>
Tree	<a href="#">valid-lifetime</a>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length-threshold** [[prefix-length](#)] *number*

Synopsis	Enter the <b>prefix-length-threshold</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix-length-threshold number</i>
Tree	<a href="#">prefix-length-threshold</a>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**event-when-depleted** *boolean*

Synopsis	Generate a notification when this pool is depleted
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i> <b>event-when-depleted</b> <i>boolean</i>
Tree	<a href="#">event-when-depleted</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**minimum-free-percent** *number*

Synopsis	Percentage of free prefixes for this prefix length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i> <b>minimum-free-percent</b> <i>number</i>
Tree	<a href="#">minimum-free-percent</a>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pool-selection**

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool-selection</b>
Tree	<a href="#">pool-selection</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### use-link-address

Synopsis	Enable the <b>use-link-address</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool-selection</b> <b>use-link-address</b>
Tree	<b>use-link-address</b>
Description	This command configures the local pool selection for DHCPv6 address or prefix assignment to use the link address. When configured, the selected pool contains a prefix covering the link address.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### scope *keyword*

Synopsis	Scope of the IP address selection
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool-selection</b> <b>use-link-address</b> <b>scope</b> <i>keyword</i>
Tree	<b>scope</b>
Options	subnet, pool
Default	subnet
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### use-pool-from-client

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool-selection</b> <b>use-pool-from-client</b>
Tree	<b>use-pool-from-client</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### delimiter *string*

Synopsis	Delimiter to combine primary and secondary pool names
----------	---

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool-selection use-pool-from-client delimiter string</i>
Tree	<a href="#">delimiter</a>
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### server-id

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id</i>
Tree	<a href="#">server-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### duid-enterprise

Synopsis	Enter the <b>duid-enterprise</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-enterprise</i>
Tree	<a href="#">duid-enterprise</a>
Notes	The following elements are part of a choice: <b>duid-enterprise</b> or <b>duid-link-local</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ascii-string *string*

Synopsis	DUID enterprise server ID specified as an ASCII string
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-enterprise ascii-string string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>ascii-string</b> or <b>hex-string</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### hex-string *string*

Synopsis DUID enterprise server ID specified as a hex string

Context **configure** **router** *string* **dhcp-server** **dhcpv6** *string* **server-id** **duid-enterprise** **hex-string** *string*

Tree [hex-string](#)

String Length 1 to 118

Notes The following elements are part of a choice: **ascii-string** or **hex-string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### duid-link-local

Synopsis Derive DUID server ID from a system link-layer address

Context **configure** **router** *string* **dhcp-server** **dhcpv6** *string* **server-id** **duid-link-local**

Tree [duid-link-local](#)

Notes The following elements are part of a choice: **duid-enterprise** or **duid-link-local**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### user-identification *keyword*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis User identification method for the DHCP server

Tree	<a href="#">service</a>
Max. Instances	1
Introduced	20.2.R1
Platforms	All

**[service-name]** *reference*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dns</a> <a href="#">redirect-vprn</a> <a href="#">service</a> <i>reference</i>
Tree	<a href="#">service</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i>
Notes	This element is part of a list key.

Introduced	20.2.R1
Platforms	All

### **preference** *number*

Synopsis	Service preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dns redirect-vprn service</b> <i>reference</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	0 to 255
Introduced	20.2.R1
Platforms	All

### **ecmp** *number*

Synopsis	Maximum equal-cost routes for routing table instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ecmp</b> <i>number</i>
Tree	<b>ecmp</b>
Description	<p>This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none"> <li>1. The system selects the lowest next hop router ID.</li> <li>2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.</li> </ol>
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

### **entropy-label** *boolean*

Synopsis	Use entropy label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>entropy-label</b> <i>boolean</i>
Tree	<b>entropy-label</b>
Description	When configured to <b>true</b> , this command enables the use of entropy labels.

The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the **configure router mpls** or **configure router mpls lsp** context.

This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, this command disables the use of entropy labels.

Default	false
Introduced	16.0.R1
Platforms	All

### **fib-priority** *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	<b>configure router</b> <i>string fib-priority keyword</i>
Tree	<a href="#">fib-priority</a>

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">flowspec</a> <a href="#">filter-cam-type</a> <i>keyword</i>
Tree	<a href="#">filter-cam-type</a>

Description	This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.
Options	normal, packet-length
Default	normal
Introduced	20.7.R1
Platforms	All

### **ip-filter-max-size** *number*

Synopsis	Maximum number of flowspec rule entries in IPv4 filter
Context	<b>configure</b> <b>router</b> <i>string</i> <b>flowspec</b> <b>ip-filter-max-size</b> <i>number</i>
Tree	<a href="#">ip-filter-max-size</a>
Description	<p>This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

### **ipv6-filter-max-size** *number*

Synopsis	Maximum number of flowspec rule entries in IPv6 filter
Context	<b>configure</b> <b>router</b> <i>string</i> <b>flowspec</b> <b>ipv6-filter-max-size</b> <i>number</i>
Tree	<a href="#">ipv6-filter-max-size</a>
Description	<p>This command configures the maximum number of IPv6 flowspec routes or rules that can be embedded into an ingress IPv6 filter policy for a specified routing instance. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p>

The sum of the maximum-size value and the highest offset in any IPv6 filter that embeds IPv6 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.

The maximum size can be adjusted up or down at any time. If the current number of IPv6 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.

Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

Introduced	19.5.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of P2MP RSVP as provider tunnel
Context	<b>configure</b> <i>router</i> <i>string</i> <i>gtm</i> <i>provider-tunnel</i> <b>inclusive</b> <b>rsvp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

## lsp-template *reference*

Synopsis	LSP template name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>gtm</i> <i>provider-tunnel</i> <b>inclusive</b> <b>rsvp</b> <b>lsp-template</b> <i>reference</i>
Tree	<b>lsp-template</b>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <b>lsp-template</b> <i>string</i>
Introduced	19.5.R1
Platforms	All

## selective

Synopsis	Enter the <b>selective</b> context
Context	<b>configure</b> <i>router string gtm provider-tunnel selective</i>
Tree	<a href="#">selective</a>
Introduced	19.5.R1
Platforms	All

## data-delay-interval *number*

Synopsis	Delay before a PBR switches traffic to selective tunnel
Context	<b>configure</b> <i>router string gtm provider-tunnel selective data-delay-interval number</i>
Tree	<a href="#">data-delay-interval</a>
Range	3 to 180
Default	3
Introduced	19.5.R1
Platforms	All

## data-threshold

Synopsis	Enter the <b>data-threshold</b> context
Context	<b>configure</b> <i>router string gtm provider-tunnel selective data-threshold</i>
Tree	<a href="#">data-threshold</a>
Introduced	19.5.R1
Platforms	All

## group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>group-prefix</b> list instance
Context	<b>configure</b> <i>router string gtm provider-tunnel selective data-threshold group-prefix (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">group-prefix</a>
Introduced	19.5.R1
Platforms	All

**[ip-group-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Multicast group-prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b> <b>group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>group-prefix</b>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**pe-threshold-add** *number*

Synopsis	Number of receiver PBRs to create S-PMSI
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b> <b>group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>pe-threshold-add</b> <i>number</i>
Tree	<b>pe-threshold-add</b>
Range	1 to 65535
Default	65535
Introduced	19.5.R1
Platforms	All

**pe-threshold-delete** *number*

Synopsis	Number of receiver PBRs to delete S-PMSI
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b> <b>group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>pe-threshold-delete</b> <i>number</i>
Tree	<b>pe-threshold-delete</b>
Range	2 to 65535
Default	65535
Introduced	19.5.R1
Platforms	All

**threshold** *number*

Synopsis	Threshold for a group prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b> <b>group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>threshold</b> <i>number</i>

Tree	<a href="#">threshold</a>
Range	1 to 4294967294
Units	kilobps
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

### **maximum-p2mp-spmsi** *number*

Synopsis	Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <b>maximum-p2mp-spmsi</b> <i>number</i>
Tree	<a href="#">maximum-p2mp-spmsi</a>
Range	1 to 4000
Default	10
Introduced	19.5.R1
Platforms	All

### **rsvp**

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <b>rsvp</b>
Tree	<a href="#">rsvp</a>
Introduced	19.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of P2MP RSVP as provider tunnel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <b>rsvp</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

## **lsp-template** *reference*

Synopsis	LSP template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">rsvp</a> <a href="#">lsp-template</a> <i>reference</i>
Tree	<a href="#">lsp-template</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i>
Introduced	19.5.R1
Platforms	All

## **gtp**

Synopsis	Enter the <b>gtp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a>
Tree	<a href="#">gtp</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **s11**

Synopsis	Enter the <b>s11</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">s11</a>
Tree	<a href="#">s11</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">s11</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[interface-name] reference**

Synopsis	Name for the S11 interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11 interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**apn-policy reference**

Synopsis	Access point name policy for the S11 interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11 interface</a> <i>reference</i> <a href="#">apn-policy</a> <i>reference</i>
Tree	<a href="#">apn-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">gtp</a> <a href="#">apn-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer-profile-map**

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11 peer-profile-map</a>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**prefix [peer-prefix] (ipv4-prefix | ipv6-prefix)**

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11 peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[peer-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the subnet
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>s11</b> <b>peer-profile-map</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer-profile** *reference*

Synopsis	GTP peer profile associated with the address prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>s11</b> <b>peer-profile-map</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>peer-profile</b> <i>reference</i>
Tree	<b>peer-profile</b>
Reference	<b>configure</b> <b>subscriber-mgmt</b> <b>gtp</b> <b>peer-profile</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**upf-data-endpoint**

Synopsis	Enable the <b>upf-data-endpoint</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>upf-data-endpoint</b>
Tree	<b>upf-data-endpoint</b>
Description	Commands in this context configure a GTP - User Plane (GTP-U) endpoint used by BNG CUPS FWA sessions.
Introduced	21.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fpe** *reference*

Synopsis	FPE used to encapsulate and decapsulate GTP-U traffic
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>upf-data-endpoint</b> <b>fpe</b> <i>reference</i>
Tree	<b>fpe</b>
Reference	<b>configure</b> <b>fwd-path-ext</b> <b>fpe</b> <i>number</i>

Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** *reference*

Synopsis	Interface on which the GTP-U packets terminate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>upf-data-endpoint</b> <b>interface</b> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Notes	This element is mandatory.
Introduced	21.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **uplink**

Synopsis	Enable the <b>uplink</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>uplink</b>
Tree	<a href="#">uplink</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **apn** *string*

Synopsis	Network identifier part of the APN for the uplink
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>uplink</b> <b>apn</b> <i>string</i>
Tree	<a href="#">apn</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pdn-type** *keyword*

Synopsis	Default PDN to be signaled in GTP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp</b> <b>uplink</b> <b>pdn-type</b> <i>keyword</i>

Tree	<a href="#">pdn-type</a>
Options	ipv4, ipv6, ipv4v6
Default	ipv4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## peer-profile-map

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix [[peer-prefix](#)] ([ipv4-prefix](#) | [ipv6-prefix](#))

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> )
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[peer-prefix](#)] ([ipv4-prefix](#) | [ipv6-prefix](#))

Synopsis	IP prefix and prefix length for the subnet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> )
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## peer-profile *reference*

Synopsis	GTP peer profile associated with the address prefix
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp uplink peer-profile-map prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">peer-profile reference</a>
Tree	<a href="#">peer-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-tunneling** *boolean*

Synopsis	Allow tunneling of ICMP reply packets over MPLS LSPs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">icmp-tunneling</a> <i>boolean</i>
Tree	<a href="#">icmp-tunneling</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp**

Synopsis	Enable the <b>igmp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a>
Tree	<a href="#">igmp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**forwarding-group-interface forwarding-service *string* group-interface-name *reference***

Synopsis	Enter the <b>forwarding-group-interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i>
Tree	<b>forwarding-group-interface</b>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**forwarding-service *string***

Synopsis	Forwarding service for the subscriber interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i>
Tree	<b>forwarding-group-interface</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**group-interface-name *reference***

Synopsis	Group interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i>
Tree	<b>forwarding-group-interface</b>
Reference	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state *keyword***

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.  When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>maximum-number-group-sources</b> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>maximum-number-groups</b> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>maximum-number-sources</b> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b>
Tree	<a href="#">mcac</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b>
Tree	<a href="#">bandwidth</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac</i> <i>bandwidth</i> <i>mandatory</i> ( <i>number</i>   <i>keyword</i> )
Tree	<i>mandatory</i>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac</i> <i>bandwidth</i> <i>total</i> ( <i>number</i>   <i>keyword</i> )
Tree	<i>total</i>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac</i> <i>interface-policy</i> <i>reference</i>
Tree	<i>interface-policy</i>
Reference	<b>configure</b> <i>mcac</i> <i>interface-policy</i> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac policy reference</b>
Tree	<b>policy</b>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-interval</b> <i>number</i>
Tree	<b>query-interval</b>
Range	2 to 1024
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-last-member-interval</b> <i>number</i>

Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">query-source-address</a> <i>string</i>
Tree	<a href="#">query-source-address</a>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>sub-hosts-only</b> <i>boolean</i>
Tree	<a href="#">sub-hosts-only</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>subnet-check</b> <i>boolean</i>
Tree	<a href="#">subnet-check</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2, 3
Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**group-if-query-source-address** *string*

Synopsis	Default query-source address for all group interfaces
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-if-query-source-address</b> <i>string</i>
Tree	<a href="#">group-if-query-source-address</a>
Introduced	16.0.R1

Platforms All

### **group-interface** [\[group-interface-name\]](#) *reference*

Synopsis Enter the **group-interface** list instance  
 Context **configure** [router](#) *string* [igmp](#) [group-interface](#) *reference*

### **import-policy** *reference*

Synopsis Import policy that filters IGMP packets  
 Context **configure** [router](#) *string* [igmp](#) [group-interface](#) *reference* [import-policy](#) *reference*  
 Tree [import-policy](#)

Description	This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.  When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mcac

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b> <b>total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>mcac</b> <b>interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure</b> <b>mcac</b> <b>interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>mcac</b> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p>

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure router</b> <i>string igmp group-interface reference query-interval number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure router</b> <i>string igmp group-interface reference query-last-member-interval number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure router</b> <i>string igmp group-interface reference query-response-interval number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">query-source-address</a> <i>string</i>
Tree	<a href="#">query-source-address</a>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">sub-hosts-only</a> <i>boolean</i>
Tree	<a href="#">sub-hosts-only</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">subnet-check</a> <i>boolean</i>
Tree	<a href="#">subnet-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<b>version</b>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface** [**ip-interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

**[ip-interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Description	This command configures the interface name, which must be unique within the group of defined IP interfaces for the context. If the IP interface name does not exist or does not have an IP address configured, an error message is returned. If the IP interface exists in a different area, it is moved to this area.  An interface name cannot be in the form of an IP address.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IGMP
----------	------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>

**mc-constraints**

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b>

Tree	<a href="#">mc-constraints</a>
Introduced	16.0.R1
Platforms	All

### **level** [[level-id](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Description	Commands in this context configure the amount of bandwidth available within a given bundle for MC traffic for a specified level.
Introduced	16.0.R1
Platforms	All

### **[level-id]** *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	Bandwidth available for this level
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">level</a> <i>number</i> <a href="#">bandwidth</a> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**number-down** [[number-lag-port-down](#)] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">number-down</a> <i>number</i>
Tree	<a href="#">number-down</a>
Description	Commands in this context configure the number of ports down along with level for the MCAC policy on the interface.
Introduced	16.0.R1
Platforms	All

**[number-lag-port-down]** *number*

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">number-down</a> <i>number</i>
Tree	<a href="#">number-down</a>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**level** *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">number-down</a> <i>number</i> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**use-lag-port-weight** *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
----------	---

Context	<b>configure</b> <i>router string igmp interface string mcac mc-constraints use-lag-port-weight boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### policy reference

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <i>router string igmp interface string mcac policy reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <i>mcac policy string</i>
Introduced	16.0.R1
Platforms	All

### query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <i>router string igmp interface string query-interval number</i>

---

Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

### **redundant-mcast** *boolean*

Synopsis	Use interface as a redundant-pair member for multicast
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">redundant-mcast</a> <i>boolean</i>
Tree	<a href="#">redundant-mcast</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

## ssm-translate

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">ssm-translate</a>
Tree	<a href="#">ssm-translate</a>
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	16.0.R1
Platforms	All

## group-range [start](#) *string* [end](#) *string*

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">group-range</a>
Description	Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.
Introduced	16.0.R1
Platforms	All

## [start](#) *string*

Synopsis	Lower bound of the IP address group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **end string**

Synopsis Upper bound of the IP address group range

Context **configure** [router string](#) [igmp interface string](#) [ssm-translate group-range start string](#) [end string](#)

Tree [group-range](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **source** [[source-address](#)] *string*

Synopsis Add a list entry for **source**

Context **configure** [router string](#) [igmp interface string](#) [ssm-translate group-range start string](#) [end string](#) [source string](#)

Tree [source](#)

Min. Instances 1

Introduced 16.0.R1

Platforms All

### **[source-address]** *string*

Synopsis Source IP address of multicast channel sending data

Context **configure** [router string](#) [igmp interface string](#) [ssm-translate group-range start string](#) [end string](#) [source string](#)

Tree [source](#)

Notes This element is part of a list key.

Introduced 16.0.R2

Platforms All

### **static**

Synopsis Enter the **static** context

Context	<b>configure</b> <i>router string igmp interface string static</i>
Tree	<i>static</i>
Description	Commands in this context configure the testing of multicast forwarding on an interface without a receiver host.
Introduced	16.0.R1
Platforms	All

### **group** [*group-address*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <i>router string igmp interface string static group string</i>
Tree	<i>group</i>
Description	<p>Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records. IGMP static group memberships are used to test multicast forwarding without a receiver host.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p> <p>When the group entries are configured on point-to-point links that connect routers to a rendezvous point (RP), the static IGMP group entries do not generate join messages toward the RP.</p>
Introduced	16.0.R1
Platforms	All

### **[group-address]** *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <i>router string igmp interface string static group string</i>
Tree	<i>group</i>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [*source-address*] *string*

Synopsis	Add a list entry for <b>source</b>
----------	------------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">starg</a>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

### **group-range** [start](#) *string* [end](#) *string* [step](#) *string*

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">step</a> <i>string</i>
Tree	<a href="#">group-range</a>
Description	Commands in this context configure the ranges of IP addresses for the static groups.
Introduced	16.0.R1
Platforms	All

**start string**

Synopsis	IP address for the start of the static group range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end string**

Synopsis	IP address for the end of the static group range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**step string**

Synopsis	Step interval in the group-range address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [**source-address**] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i> <b>source</b> <i>string</i>
Tree	<b>source</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .

Introduced 16.0.R1  
 Platforms All

### **[source-address]** *string*

Synopsis Source IP address of multicast channel sending data  
 Context **configure** *router string igmp interface string static group-range start string end string step string source string*  
 Tree [source](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R2  
 Platforms All

### **starg**

Synopsis Add a starg (\*,G) address entry for the group range  
 Context **configure** *router string igmp interface string static group-range start string end string step string starg*  
 Tree [starg](#)  
 Notes The following elements are part of a mandatory choice: **source** or **starg**.  
 Introduced 16.0.R2  
 Platforms All

### **subnet-check** *boolean*

Synopsis Allow subnet checking  
 Context **configure** *router string igmp interface string subnet-check boolean*  
 Tree [subnet-check](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **version** *keyword*

Synopsis IGMP protocol version  
 Context **configure** *router string igmp interface string version keyword*

Tree	<a href="#">version</a>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Description	This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Description	This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.
Range	1 to 1023
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>query-response-interval</b> <i>number</i>
Tree	<b>query-response-interval</b>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>robust-count</b> <i>number</i>
Tree	<b>robust-count</b>
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, the robust-count can be increased.
Range	2 to 10
Default	2
Introduced	16.0.R1
Platforms	All

**ssm-translate**

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>ssm-translate</b>
Tree	<b>ssm-translate</b>
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	16.0.R1
Platforms	All

**group-range** **start** *string* **end** *string*

Synopsis	Enter the <b>group-range</b> list instance
----------	--

Context	<b>configure</b> <i>router string igmp ssm-translate group-range start string end string</i>
Tree	<i>group-range</i>
Description	Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.
Introduced	16.0.R1
Platforms	All

**start string**

Synopsis	Lower bound of the IP address group range
Context	<b>configure</b> <i>router string igmp ssm-translate group-range start string end string</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end string**

Synopsis	Upper bound of the IP address group range
Context	<b>configure</b> <i>router string igmp ssm-translate group-range start string end string</i>
Tree	<i>group-range</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source [source-address] string**

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <i>router string igmp ssm-translate group-range start string end string source string</i>
Tree	<i>source</i>
Min. Instances	1
Introduced	16.0.R1
Platforms	All

**[source-address] string**

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**tunnel-interface**

Synopsis	Enter the <b>tunnel-interface</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a>
Tree	<a href="#">tunnel-interface</a>
Introduced	16.0.R1
Platforms	All

**ldp-p2mp-root [p2mp-id] reference sender-address reference**

Synopsis	Enter the <b>ldp-p2mp-root</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i>
Tree	<a href="#">ldp-p2mp-root</a>
Description	Commands in this context configure the LDP parameters for the IGMP P2MP LSP tunnel.
Introduced	16.0.R1
Platforms	All

**[p2mp-id] reference**

Synopsis	RSVP P2MP LSP ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i>
Tree	<a href="#">ldp-p2mp-root</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>number</i> <a href="#">sender-address</a> <i>string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sender-address** *reference*

Synopsis	System address of the ingress LER for the P2MP RSVP LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>tunnel-interface</b> <b>ldp-p2mp-root</b> <i>reference</i> <b>sender-address</b> <i>reference</i>
Tree	<a href="#">ldp-p2mp-root</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>tunnel-interface</b> <b>ldp-p2mp-root</b> <i>number</i> <b>sender-address</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>tunnel-interface</b> <b>ldp-p2mp-root</b> <i>reference</i> <b>sender-address</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>tunnel-interface</b> <b>ldp-p2mp-root</b> <i>reference</i> <b>sender-address</b> <i>reference</i> <b>static</b>
Tree	<a href="#">static</a>
Description	<p>Commands in this context configure static multicast receiver hosts on a tunnel interface associated with an RSVP P2MP LSP.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p>

Introduced	16.0.R1
Platforms	All

### **group** [*group-address*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>tunnel-interface</i> <i>ldp-p2mp-root</i> <i>reference</i> <i>sender-address</i> <i>reference</i> <i>static</i> <i>group</i> <i>string</i>
Tree	<i>group</i>
Description	<p>Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records.</p> <p>Static multicast group joins can be assigned to a tunnel interface associated with an RSVP P2MP LSP.</p> <p>A given &lt;*,G&gt; or &lt;S,G&gt; can only be associated with a single tunnel interface.</p> <p>A multicast packet which is received on an interface and which succeeds the RPF check for the source address will be replicated and forwarded to all OIFs which correspond to the branches of the P2MP LSP. The packet is sent on each OIF with the label stack indicated in the NHLFE of this OIF. The packets will also be replicated and forwarded natively on all OIFs which have received IGMP or PIM joins for this &lt;S,G&gt;.</p> <p>The multicast packet can be received over a PIM or IGMP interface which can be an IES interface, a spoke SDP terminated IES interface, or a network interface.</p>
Introduced	16.0.R1
Platforms	All

### **[group-address]** *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>tunnel-interface</i> <i>ldp-p2mp-root</i> <i>reference</i> <i>sender-address</i> <i>reference</i> <i>static</i> <i>group</i> <i>string</i>
Tree	<i>group</i>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**rsvp-p2mp-root** [[lsp-name](#)] *reference*

Synopsis	Enter the <b>rsvp-p2mp-root</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i>
Tree	<a href="#">rsvp-p2mp-root</a>
Description	Commands in this context configure the RSVP parameters for the IGMP P2MP LSP tunnel.

Introduced	16.0.R1
Platforms	All

**[lsp-name]** *reference*

Synopsis	LSP name for the RSVP P2MP LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i>
Tree	<a href="#">rsvp-p2mp-root</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a>
Tree	<a href="#">static</a>
Description	<p>Commands in this context configure static multicast receiver hosts on a tunnel interface associated with an RSVP P2MP LSP.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p>
Introduced	16.0.R1
Platforms	All

**group** [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

**[group-address]** *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>

Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

## starg

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <a href="#">reference</a> <a href="#">static</a> <a href="#">group</a> <a href="#">string</a> <a href="#">starg</a>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

## interface [[interface-name](#)] [string](#)

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a>
Tree	<a href="#">interface</a>
Description	Commands in this context create a logical IP routing or unnumbered MPLS-TP interface. An IP address, port, or system can then be associated with the IP interface.
Introduced	16.0.R1
Platforms	All

## [\[interface-name\]](#) [string](#)

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a>
Tree	<a href="#">interface</a>
Description	This command specifies the name of the router interface. When a user enters a new name, the system creates a new logical interface and the context changes to that interface for more command processing.  When an existing interface name is entered, the user enters the router interface context for editing and configuration.

Nokia recommends using names that are meaningful and unique to remove ambiguity when displaying the state associated with IP interfaces either via show commands or model-driven interfaces.

See "Router configuration overview" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about the interface name.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>cflowd-parameters</b>
Tree	<a href="#">cflowd-parameters</a>
Description	Commands in this context configure cflowd parameters for the associated IP interfaces.
Introduced	16.0.R1
Platforms	All

### **sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	Commands in this context configure cflowd sampling behavior, which configures the collection of traffic flow samples for analysis for this IP interface.
Introduced	16.0.R1

Platforms All

### **[sampling-type]** *keyword*

Synopsis Traffic sampling type

Context **configure** *router string interface string cflowd-parameters sampling keyword*

Tree [sampling](#)

Description This command configures the type of traffic to be sampled on the associated IP interface.

Options unicast, multicast, both

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **direction** *keyword*

Synopsis Direction of traffic for cflowd sampling

Context **configure** *router string interface string cflowd-parameters sampling keyword direction keyword*

Tree [direction](#)

Description This command configures the direction in which sampling occurs on the associated IP interfaces.

Options ingress-only, egress-only, both

Default ingress-only

Introduced 16.0.R1

Platforms All

### **sample-profile** (*keyword | number*)

Synopsis Sample profile ID

Context **configure** *router string interface string cflowd-parameters sampling keyword sample-profile (keyword | number)*

Tree [sample-profile](#)

Description This command defines the sampling rate profile associated with this interface.

Max. Range 0 to 4294967295

Options 1

Introduced	19.5.R1
Platforms	All

**type** *keyword*

Synopsis	Type of cflowd analysis
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**cpu-protection** *reference*

Synopsis	CPU protection policy ID for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cpu-protection</a> <i>reference</i>
Tree	<a href="#">cpu-protection</a>
Description	This command assigns an existing CPU protection policy to the associated interface. For these interface types, the per-source rate limit is not applicable.  If no CPU-protection policy is assigned to an interface, the default policy is used to limit the overall rate.
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <i>policy</i> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**description** *string*

Synopsis	Text description

Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1

Platforms All

### **dist-cpu-protection** *reference*

Synopsis DCP policy name for interface

Context **configure** *router string interface string dist-cpu-protection reference*

Tree [dist-cpu-protection](#)

Description This command configures a Distributed CPU Protection (DCP) policy for the associated IP interface or SAP. The user can only assign a valid created DCP policy to a SAP or network interface (this rule does not apply to templates such as an MSAP policy).  
If the operator does not assign a DCP policy to a router interface, the system uses the default network DCP policy.  
See "Distributed CPU protection" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.

Reference **configure** *system security dist-cpu-protection policy string*

Introduced 16.0.R1

Platforms All

### **egress**

Synopsis Enter the **egress** context

Context **configure** *router string interface string egress*

Tree [egress](#)

Description Commands in this context configure egress network filter policies for the IP interface. The system does not filter unless an operator defines a filter.

Introduced 16.0.R1

Platforms All

### **filter**

Synopsis Enter the **filter** context

Context **configure** *router string interface string egress filter*

Tree [filter](#)

Description Commands in this context configure the names of the egress IPv4 and IPv6 network filter policies for the interface. Filter policies control packet forwarding and dropping based on IP match criteria.

Introduced 16.0.R1

Platforms All

### ip reference

### eth-cfm

Synopsis Enter the **eth-cfm** context  
 Context **configure** [router](#) *string* [interface](#) *string* [eth-cfm](#)  
 Tree [eth-cfm](#)  
 Description Commands in this context configure the Ethernet CFM parameters for the associated IP interface.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### mep [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis Enter the **mep** list instance  
 Context **configure** [router](#) *string* [interface](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*  
 Tree [mep](#)

Description	Commands in this context configure an 802.1ag Maintenance Endpoint (MEP) instance.
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** *router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis Generate CCM messages

Context **configure** *router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure** *router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number*

Tree [ccm-ltm-priority](#)

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-tlv-ignore** *keyword*

Synopsis	TLV to ignore on reception
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-tlv-ignore</b> <i>keyword</i>
Tree	<a href="#">ccm-tlv-ignore</a>
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine.  When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. Instances	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-fc-stats**

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>collect-lmm-fc-stats</b>
Tree	<a href="#">collect-lmm-fc-stats</a>

Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc** keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats fc keyword</i>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** keyword

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats fc-in-profile keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p>

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	<i>eth-test</i>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i>
Tree	<i>bit-error-threshold</i>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i>
Tree	<i>test-pattern</i>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
----------	-------------------------

Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **facility-fault** *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number facility-fault boolean</i>
Tree	<a href="#">facility-fault</a>
Description	When configured to <b>true</b> , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition.  When configured to <b>false</b> , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
----------	--------------------------------

Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</i>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</i>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</i>

Tree	<a href="#">lbm-svc-act-responder</a>
Description	<p>When configured to <b>true</b>, the router enables the MEP to process service activation streams encapsulated in ETH-CFM LBM frames that are directed to it.</p> <p>When configured to <b>false</b>, this command reverts to MEP LBM standard processing.</p> <p>There is interaction between this command and the <b>tools perform service id loopback eth</b> command. Nokia recommends that either the <b>lbm-svc act-responder</b> or the <b>tools perform service id loopback eth</b> command be used within a service. If both commands must be configured, and the target reflection point is the MAC Swap Loopback function, the inbound stream of data must not include ETH-CFM traffic that is equal to or lower than the domain level of any configured MEP that would otherwise extract and process the ETH-CFM message.</p> <p>See "Promiscuous ETH-LBM mode of operation" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Services Overview Guide</i> for more information.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect for fault alarm generation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Description	This command specifies the lowest priority defect that generates a fault alarm and also configures the fault state of the MEP that causes a network reaction.
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	<p>This command specifies the MAC address of the MEP.</p> <p>When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis Threshold time limit for the one-way delay test

Context **configure** *router* *string* *interface* *string* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* **one-way-delay-threshold** *number*

Tree [one-way-delay-threshold](#)

Range 0 to 600

Units seconds

Default 3

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **flavor** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Network interface flavor

Context **configure** *router* *string* *interface* *string* **flavor** *keyword*

Tree [flavor](#)

Options regular, control-tunnel, pdn, unnumbered-mpls-tp, gmpls-loopback

Default regular

Introduced 16.0.R1

Platforms All

### **gre-termination** *boolean*

Synopsis Terminate GRE packets on primary subnet of interface

Context **configure** *router* *string* *interface* *string* **gre-termination** *boolean*

Tree [gre-termination](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure router string interface string hold-time</b>
Tree	<b>hold-time</b>
Description	Commands in this context configure the interface-level up and down hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure router string interface string hold-time ipv4</b>
Tree	<b>ipv4</b>
Description	Commands in this context configure the interface-level IPv4 hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure router string interface string hold-time ipv4 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure router string interface string hold-time ipv4 down init-only boolean</b>

Tree	<a href="#">init-only</a>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">down</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a>
Tree	<a href="#">up</a>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1

Platforms All

## ipv6

Synopsis Enter the **ipv6** context

Context **configure** *router string* *interface string* *hold-time* *ipv6*

Tree *ipv6*

Description Commands in this context configure the interface-level IPv6 hold timers for the associated IP interface.

Introduced 16.0.R1

Platforms All

## down

Synopsis Enter the **down** context

Context **configure** *router string* *interface string* *hold-time* *ipv6* **down**

Tree *down*

Description Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 16.0.R1

Platforms All

## init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context **configure** *router string* *interface string* *hold-time* *ipv6* **down** *init-only* *boolean*

Tree *init-only*

Description This command applies the delay only when when the IP interface is first configured or after a system reboot.

Default false

Introduced 16.0.R1

Platforms All

**seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <i>router string interface string hold-time ipv6 down seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

**up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <i>router string interface string hold-time ipv6 up</i>
Tree	<i>up</i>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <i>router string interface string hold-time ipv6 up seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

**if-attribute**

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <i>router string interface string if-attribute</i>
Tree	<i>if-attribute</i>

Description	Commands in this context configure attributes of the IP interface.
Introduced	16.0.R1
Platforms	All

### **admin-group** *reference*

Synopsis	Administrative group name for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **delay**

Synopsis	Enter the <b>delay</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a>
Tree	<a href="#">delay</a>
Introduced	20.7.R1
Platforms	All

### **delay-selection** *keyword*

Synopsis	Delay source advertised by IGP for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">delay-selection</a> <i>keyword</i>
Tree	<a href="#">delay-selection</a>
Options	static, dynamic, static-preferred, dynamic-preferred
Default	static-preferred
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dynamic

Synopsis	Enter the <b>dynamic</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a>
Tree	<a href="#">dynamic</a>
Description	Commands in this context configure dynamic link delay measurement options for the interface.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## measurement-template *reference*

Synopsis	Link delay measurement template for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">measurement-template</a> <i>reference</i>
Tree	<a href="#">measurement-template</a>
Reference	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## twamp-light

Synopsis	Enter the <b>twamp-light</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">twamp-light</a>
Tree	<a href="#">twamp-light</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">twamp-light</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of IPv4 TWAMP Light packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command specifies the administrative state of the IPv4 encapsulated TWAMP Light measurement packets.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**destination** *string*

Synopsis	TWAMP Light measurement packet destination IPv4 address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv4</b> <b>destination</b> <i>string</i>
Tree	<b>destination</b>
Description	This command specifies the unicast destination address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**source** *string*

Synopsis	TWAMP Light measurement packets source IPv4 address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv4</b> <b>source</b> <i>string</i>
Tree	<b>source</b>
Description	This command specifies the unicast source address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of IPv6 TWAMP Light packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv6</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## destination *string*

Synopsis	TWAMP Light measurement packet destination IPv6 address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv6</b> <b>destination</b> <i>string</i>
Tree	<b>destination</b>
Description	This command specifies the unicast destination address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## source *string*

Synopsis	TWAMP Light measurement packets source IPv6 address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>dynamic</b> <b>twamp-light</b> <b>ipv6</b> <b>source</b> <i>string</i>
Tree	<b>source</b>

Description	This command specifies the unicast source address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **static number**

Synopsis	Unidirectional link delay static information
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>delay</b> <b>static</b> <i>number</i>
Tree	<b>static</b>
Description	This command configures the unidirectional link delay. By default there is no configured delay, and the link delay metric TLV is pruned in the IGP.
Range	1 to 16777214
Units	microseconds
Introduced	20.7.R1
Platforms	All

### **srlg-group [name] reference**

Synopsis	Add a list entry for <b>srlg-group</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>srlg-group</b> <i>reference</i>
Tree	<b>srlg-group</b>
Description	<p>Commands in this context add a list entry for a Shared Risk Link Group (SRLG) that can be associated with an IP or MPLS interface to tag IP or MPLS interfaces that share a specific outcome with the same identifier. For example, an SRLG group identifier could represent all links that use separate fibers but are carried in the same fiber conduit.</p> <p>The name and identifier of each SRLG group must be configured locally on each router before the user configures the SRLG membership of an interface. A maximum of 1024 SRLGs can be configured per system. The user can apply SRLGs to an IES, VPRN, network IP, or MPLS interface. A maximum of 64 SRLGs can be applied to an interface.</p> <p>See "Shared Risk Link Groups" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> for more information about SRLGs.</p>
Introduced	16.0.R1
Platforms	All

**[name] reference**

Synopsis	SRLG name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">srlg-group</a> <i>reference</i>
Tree	<a href="#">srlg-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">srlg-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Description	Commands in this context configure ingress network filter policies for the IP interface. If an ingress filter is not defined, the system performs no filtering.
Introduced	16.0.R1
Platforms	All

**destination-class-lookup *boolean***

Synopsis	Enable BGP destination class lookup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress</a> <a href="#">destination-class-lookup</a> <i>boolean</i>
Tree	<a href="#">destination-class-lookup</a>
Description	When configured to <b>true</b> , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the <b>destination-class</b> match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.  When configured to <b>false</b> , destination class lookup is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

**filter**

Synopsis	Enter the <b>filter</b> context
----------	---------------------------------

Context	<b>configure</b> <i>router string interface string ingress filter</i>
Tree	<i>filter</i>
Description	Commands in this context associate an IP filter policy with an IP interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <i>router string interface string ingress filter ip reference</i>
Tree	<i>ip</i>
Reference	<b>configure</b> <i>filter ip-filter string</i>
Introduced	16.0.R1
Platforms	All

### **ipv6 reference**

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <i>router string interface string ingress filter ipv6 reference</i>
Tree	<i>ipv6</i>
Reference	<b>configure</b> <i>filter ipv6-filter string</i>
Introduced	16.0.R1
Platforms	All

### **policy-accounting reference**

Synopsis	Policy accounting template applied to the interface
Context	<b>configure</b> <i>router string interface string ingress policy-accounting reference</i>
Tree	<i>policy-accounting</i>
Reference	<b>configure</b> <i>routing-options policy-accounting policy-acct-template string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**ingress-stats** *boolean*

Synopsis	Collect ingress statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress-stats</b> <i>boolean</i>
Tree	<a href="#">ingress-stats</a>
Description	<p>When configured to <b>true</b>, the router configures the collection of IPv4 and IPv6 offered packets and octets. This only applies to IP statistics, not to uRPF statistics.</p> <p>Octet statistics for IPv4 and IPv6 bytes at IP interfaces include the Layer 2 frame overhead.</p> <p>When configured to <b>false</b>, the router does not collect the statistics.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**ip-mtu** *number*

Synopsis	Interface IP MTU
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Description	<p>This command configures the IP maximum transmit unit (packet) for the associated router IP interface.</p> <p>The operational IP MTU used for the interface is based on the configured IP MTU and the port MTU of the port bound to this interface; that is, the operational MTU is set to the lesser of the values configured by this command and the port MTU value less the Ethernet header size.</p> <p>If the interface supports IPv6 packets, this command must be set to at least 1280, in accordance with RFC 2460 <i>Internet Protocol, Version 6 (IPv6) Specification</i>.</p>
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

**ip-tunnel**

Synopsis	Enter the <b>ip-tunnel</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ip-tunnel</b>
Tree	<a href="#">ip-tunnel</a>

Description	Commands in this context configure the IP or GRE tunnel on a control-channel loopback interface. The local-end tunnel IP address is configured using the interface primary IP address.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **remote-ip** *string*

Synopsis	IP address of the remote end of the IP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ip-tunnel</b> <b>remote-ip</b> <i>string</i>
Tree	<a href="#">remote-ip</a>
Description	This command configures the destination address of the outer IP header in the IP or GRE encapsulation.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipsec**

Synopsis	Enable the <b>ipsec</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b>
Tree	<a href="#">ipsec</a>
Description	Commands in this context configure an IPsec secured interface.
Introduced	22.7.R1
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

**ip-exception** *reference*

Synopsis	IP exception filter
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ip-exception</b> <i>reference</i>
Tree	<a href="#">ip-exception</a>
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	<b>configure</b> <b>filter</b> <b>ip-exception</b> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

**ipsec-tunnel** [*name*] *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i>
Tree	<a href="#">ipsec-tunnel</a>
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

**[name]** *string*

Synopsis	IPsec tunnel name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i>
Tree	<a href="#">ipsec-tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**admin-state** *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

## bfd

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>bfd</b>
Tree	<b>bfd</b>
Introduced	22.7.R1
Platforms	VSR

## bfd-designate *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>bfd bfd-designate</b> <i>boolean</i>
Tree	<b>bfd-designate</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## bfd-liveness

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>bfd-liveness</b> context
----------	--

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness</i>
Tree	<i>bfd-liveness</i>
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	22.7.R1
Platforms	VSR

### **dest-ip** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness dest-ip string</i>
Tree	<i>dest-ip</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **interface** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness interface string</i>
Tree	<i>interface</i>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**service-name** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>bfd</b> <b>bfd-liveness</b> <b>service-name</b> <i>string</i>
Tree	<b>service-name</b>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**clear-df-bit** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>
Tree	<b>clear-df-bit</b>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

**copy-traffic-class-upon-decapsulation** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
----------	--

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string copy-traffic-class-upon-decapsulation boolean</i>
Tree	<a href="#">copy-traffic-class-upon-decapsulation</a>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **encapsulated-ip-mtu** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string encapsulated-ip-mtu number</i>
Tree	<a href="#">encapsulated-ip-mtu</a>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## icmp-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	22.7.R1
Platforms	VSR

## frag-required

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b> <i>interval</i> <i>number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

### **message-count** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b> <i>message-count</i> <i>number</i>
Tree	<a href="#">message-count</a>

Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a>
Tree	<a href="#">icmp6-generation</a>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a>
Tree	<a href="#">packet-too-big</a>
Description	Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.  The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.  The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.
Introduced	22.7.R1

Platforms VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

## message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string icmp6-generation packet-too-big message-count number</i>
Tree	<a href="#">message-count</a>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## ip-mtu *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string ip-mtu number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## key-exchange

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange</b>
Tree	<a href="#">key-exchange</a>
Introduced	22.7.R1
Platforms	VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange dynamic</b>
Tree	<a href="#">dynamic</a>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange dynamic auto-establish</b> <i>boolean</i>
Tree	<a href="#">auto-establish</a>
Default	false
Introduced	22.7.R1
Platforms	VSR

## cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a>
Tree	<a href="#">cert</a>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	22.7.R1
Platforms	VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a> <a href="#">cert-profile</a> <i>reference</i>
Tree	<a href="#">cert-profile</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">cert-profile</a> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a> <a href="#">status-verify</a>
Tree	<a href="#">status-verify</a>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	22.7.R1
Platforms	VSR

**default-result** *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	22.7.R1
Platforms	VSR

**primary** *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify primary</b> <i>keyword</i>
Tree	<b>primary</b>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsf
Default	crl
Introduced	22.7.R1
Platforms	VSR

**secondary** *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify secondary</b> <i>keyword</i>
Tree	<b>secondary</b>
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsf
Default	none

Introduced 22.7.R1  
 Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
 Context **configure** *router string interface string ipsec ipsec-tunnel string key-exchange dynamic cert trust-anchor-profile reference*  
 Tree [trust-anchor-profile](#)  
 Reference **configure** *ipsec trust-anchor-profile string*  
 Introduced 22.7.R1  
 Platforms VSR

### **id**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
 Context **configure** *router string interface string ipsec ipsec-tunnel string key-exchange dynamic id*  
 Tree [id](#)  
 Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:
 

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

 Introduced 22.7.R1  
 Platforms VSR

### **fqdn** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id fqdn string</i>
Tree	<a href="#">fqdn</a>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv4 string**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id ipv4 string</i>
Tree	<a href="#">ipv4</a>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id ipv6 (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

## ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ike-policy</a> <i>number</i>
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	22.7.R1
Platforms	VSR

## pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">pre-shared-key</a> <i>string</i>
Tree	<a href="#">pre-shared-key</a>
String Length	1 to 115
Introduced	22.7.R1
Platforms	VSR

## manual

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a>
Tree	<a href="#">manual</a>
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## keys [[security-association](#)] *number direction keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number direction keyword</i>
Tree	<a href="#">keys</a>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

**[security-association] number**

Synopsis	SA entry ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>keys</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**direction keyword**

Synopsis	Direction of the IPsec tunnel

 Platforms VSR

**spi number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword spi number</i>
Tree	<i>spi</i>
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**local-gateway-address-override** (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string local-gateway-address-override (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<i>local-gateway-address-override</i>
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

## max-history-key-records

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a>
Tree	<a href="#">max-history-key-records</a>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

## esp number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">esp</a> <i>number</i>
Tree	<a href="#">esp</a>
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

## ike number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">ike</a> <i>number</i>
Tree	<a href="#">ike</a>
Range	1 to 3

Introduced 22.7.R1  
 Platforms VSR

### **pmtu-discovery-aging** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Aging out time of the learned path MTU  
 Context **configure** *router string interface string ipsec ipsec-tunnel string pmtu-discovery-aging number*  
 Tree [pmtu-discovery-aging](#)  
 Description This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.  
 Range 900 to 3600  
 Units seconds  
 Default 900  
 Introduced 22.7.R1  
 Platforms VSR

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Private SAP ID  
 Context **configure** *router string interface string ipsec ipsec-tunnel string private-sap number*  
 Tree [private-sap](#)  
 Range 0 to 4094  
 Notes This element is mandatory.  
 Introduced 22.7.R1  
 Platforms VSR

**private-service** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string private-service string</i>
Tree	<i>private-service</i>
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String Length	1 to 64
Introduced	22.7.R1
Platforms	VSR

**private-tcp-mss-adjust** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string private-tcp-mss-adjust number</i>
Tree	<i>private-tcp-mss-adjust</i>
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

**propagate-pmtu-v4** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string propagate-pmtu-v4 boolean</i>
Tree	<a href="#">propagate-pmtu-v4</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

**propagate-pmtu-v6** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string propagate-pmtu-v6 boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

**public-tcp-mss-adjust** (*number | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
----------	--

Context	<b>configure</b> <i>router string</i> <i>interface string</i> <i>ipsec ipsec-tunnel string</i> <i>public-tcp-mss-adjust (number   keyword)</i>
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	22.7.R1
Platforms	VSR

### **remote-gateway-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	<b>configure</b> <i>router string</i> <i>interface string</i> <i>ipsec ipsec-tunnel string</i> <i>remote-gateway-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">remote-gateway-address</a>
Introduced	22.7.R1
Platforms	VSR

### **replay-window** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	<b>configure</b> <i>router string</i> <i>interface string</i> <i>ipsec ipsec-tunnel string</i> <i>replay-window number</i>
Tree	<a href="#">replay-window</a>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32   64   128   256   512
Units	packets

Introduced 22.7.R1  
 Platforms VSR

## security-policy

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **security-policy** context  
 Context **configure** *router string interface string ipsec ipsec-tunnel string security-policy*  
 Tree [security-policy](#)  
 Description Commands in this context specify a security policy used by the tunnel.  
 Introduced 22.7.R1  
 Platforms VSR

## id number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Security policy ID for use by the tunnel  
 Context **configure** *router string interface string ipsec ipsec-tunnel string security-policy id number*  
 Tree [id](#)  
 Max. Range 0 to 4294967295  
 Introduced 22.7.R1  
 Platforms VSR

## strict-match *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable strict match of the security policy entry

Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>security-policy strict-match</b> <i>boolean</i>
Tree	<b>strict-match</b>
Description	<p>When configured to <b>true</b>, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	22.7.R1
Platforms	VSR

### **ipv6-exception** *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipv6-exception</b> <i>reference</i>
Tree	<b>ipv6-exception</b>
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	<b>configure filter</b> <b>ipv6-exception</b> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

### **public-sap** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec public-sap</b> <i>number</i>

Tree	<a href="#">public-sap</a>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## tunnel-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Reference	<b>configure</b> <a href="#">isa tunnel-group</a> <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 allow-directed-broadcasts</a> <i>boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Description	When configured to <b>true</b> , the router forwards packets received on a local router interface to the subnet broadcast address of another IP interface.

When configured to **false**, this router does not allow directed broadcasts and the packets are discarded.

Allowing directed broadcasts is a well-known mechanism used for denial-of-service attacks.

Default	false
Introduced	16.0.R1
Platforms	All

## bfd

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure the Bidirectional Forwarding Detection (BFD) settings for the associated IP interface.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">bfd</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">bfd</a> <a href="#">echo-receive</a> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

Platforms All

### **multiplier** *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** *router string interface string ipv4 bfd multiplier number*

Tree [multiplier](#)

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 16.0.R1

Platforms All

### **receive** *number*

Synopsis BFD receive interval over this interface

Context **configure** *router string interface string ipv4 bfd receive number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

### **transmit-interval** *number*

Synopsis BFD transmit interval over this interface

Context **configure** *router string interface string ipv4 bfd transmit-interval number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **type** keyword

Synopsis	Local termination point for the BFD session
Context	<b>configure</b> <i>router string</i> <i>interface string</i> <i>ipv4 bfd type keyword</i>
Tree	<i>type</i>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <i>router string</i> <i>interface string</i> <i>ipv4 dhcp</i>
Tree	<i>dhcp</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

**option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b>

Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

### **action** *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">action</a> <i>keyword</i>
Tree	<a href="#">action</a>
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	All

### **circuit-id**

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

### **ascii-tuple**

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">ascii-tuple</a>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## if-name

Synopsis	Use the interface name for the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id if-name</b>
Tree	<a href="#">if-name</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id ifindex</b>
Tree	<a href="#">ifindex</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id none</b>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## port-id

Synopsis	Use the port ID for the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id port-id</b>
Tree	<a href="#">port-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .

Introduced	16.0.R1
Platforms	All

## vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 circuit-id</a> <a href="#">vlan-ascii-tuple</a>
Tree	<a href="#">vlan-ascii-tuple</a>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 remote-id</a>
Tree	<a href="#">remote-id</a>
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

## ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 remote-id ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1

Platforms All

### mac

Synopsis Use the MAC address for the remote ID

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [remote-id](#) [mac](#)

Tree [mac](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

### none

Synopsis Do not include the remote ID

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [remote-id](#) [none](#)

Tree [none](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

### vendor-specific-option

Synopsis Enter the **vendor-specific-option** context

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [vendor-specific-option](#)

Tree [vendor-specific-option](#)

Description Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.

Introduced 16.0.R1

Platforms All

### client-mac-address *boolean*

Synopsis Send the MAC address in the VSO

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [vendor-specific-option](#) [client-mac-address](#) *boolean*

Tree [client-mac-address](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **pool-name** *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>pool-name</b> <i>boolean</i>
Tree	<a href="#">pool-name</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **port-id** *boolean*

Synopsis	Send the port ID in the VSO
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>port-id</b> <i>boolean</i>
Tree	<a href="#">port-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>service-id</b> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">system-id</a> <a href="#">boolean</a>
Tree	<a href="#">system-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**python-policy** *reference*

Synopsis	Python policy name
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">python-policy</a> <a href="#">reference</a>
Tree	<a href="#">python-policy</a>
Description	This command associates a Python policy name with the interface.
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

**relay-plain-bootp** *boolean*

Synopsis	Relay plain BOOTP messages
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-plain-bootp</a> <a href="#">boolean</a>
Tree	<a href="#">relay-plain-bootp</a>
Description	When configured to <b>true</b> , the system relays plain BOOTP messages.

When configured to **false**, the system considers the plain BOOTP packets as malformed DHCP packets; therefore, the system does not relay the messages.

Default	false
Introduced	16.0.R1
Platforms	All

### **release-include-gi-address** *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>dhcp</i> <i>release-include-gi-address</i> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis	IP addresses for DHCP server requests
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>dhcp</i> <i>server</i> <i>string</i>
Tree	<a href="#">server</a>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>dhcp</i> <i>src-ip-addr</i> <i>keyword</i>
Tree	<a href="#">src-ip-addr</a>
Options	auto, gi-address

Default	auto
Introduced	16.0.R1
Platforms	All

### **trusted** *boolean*

Synopsis	Relay untrusted packets
Context	<b>configure</b> <i>router string interface string ipv4 dhcp trusted boolean</i>
Tree	<a href="#">trusted</a>
Description	<p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **icmp**

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <i>router string interface string ipv4 icmp</i>
Tree	<a href="#">icmp</a>
Description	Commands in this context configure Internet Control Message Protocol (ICMP) parameters on a network IP interface.
Introduced	16.0.R1
Platforms	All

### **mask-reply** *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	<b>configure</b> <i>router string interface string ipv4 icmp mask-reply boolean</i>
Tree	<a href="#">mask-reply</a>
Default	true

---

Introduced	16.0.R1
Platforms	All

### **param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem</a>
Tree	<a href="#">param-problem</a>
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp param-problem seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects</b>
Tree	<b>redirects</b>
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum number of ICMP redirect messages to send
----------	--

Context	<b>configure</b> <i>router string interface string ipv4 icmp redirects number number</i>
Tree	<i>number</i>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <i>router string interface string ipv4 icmp redirects seconds number</i>
Tree	<i>seconds</i>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **ttl-expired**

Synopsis	Enter the <b>ttl-expired</b> context
Context	<b>configure</b> <i>router string interface string ipv4 icmp ttl-expired</i>
Tree	<i>ttl-expired</i>
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure</b> <i>router string interface string ipv4 icmp ttl-expired admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable

---

Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure</b> <i>router string interface string ipv4 icmp ttl-expired number number</i>
Tree	<i>number</i>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure</b> <i>router string interface string ipv4 icmp ttl-expired seconds number</i>
Tree	<i>seconds</i>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure</b> <i>router string interface string ipv4 icmp unreachables</i>
Tree	<i>unreachables</i>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum number of unreachable messages to send
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**ip-helper-address** *string*

Synopsis	IP address of the target UDP broadcast gateway
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>ip-helper-address</b> <i>string</i>
Tree	<b>ip-helper-address</b>

Description	This command configures the redirection of broadcast UDP packets received on the associated interface to the specified helper gateway address, and then to the gateway.
Introduced	16.0.R1
Platforms	All

### local-dhcp-server *reference*

Synopsis	DHCP server for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">local-dhcp-server</a> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

### learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>boolean</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in</li> </ul>

the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.

Default	false
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <b>limit</b>
Tree	<a href="#">limit</a>
Description	<p>Commands in this context configure the maximum number of dynamic neighbor entries that can be learned on the interface</p> <p>When the number of entries reaches the threshold (the configured percentage) of this limit, the system sends an SNMP trap.</p> <p>When the limit is exceeded, the system learns no new entries until an entry expires and traffic to these destinations is dropped. Already learned entries are refreshed.</p>
Introduced	16.0.R1
Platforms	All

## log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <b>limit</b> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

## max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <b>limit</b> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Range	0 to 524288
Introduced	16.0.R1

Platforms All

### **threshold** *number*

Synopsis Threshold value that triggers a warning message

Context **configure** *router string interface string ipv4 neighbor-discovery limit threshold number*

Tree [threshold](#)

Range 1 to 100

Units percent

Default 90

Introduced 16.0.R1

Platforms All

### **local-proxy-arp** *boolean*

Synopsis Enable local proxy ARP on interface

Context **configure** *router string interface string ipv4 neighbor-discovery local-proxy-arp boolean*

Tree [local-proxy-arp](#)

Description When configured to **true**, the router enables local proxy ARP on the interface.  
When configured to **false**, the router does not respond to ARP requests for addresses on the same subnet.

Introduced 16.0.R1

Platforms All

### **proactive-refresh** *boolean*

Synopsis Send a single refresh message before entry timeout

Context **configure** *router string interface string ipv4 neighbor-discovery proactive-refresh boolean*

Tree [proactive-refresh](#)

Description When configured to **true**, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).  
When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-arp-policy</a> <i>reference</i>
Tree	<a href="#">proxy-arp-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">remote-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

Synopsis	ARP retry interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">retry-timer</a> <i>number</i>
Tree	<a href="#">retry-timer</a>
Range	1 to 300
Units	deciseconds
Default	50
Introduced	16.0.R1

Platforms All

### **static-neighbor** [*ipv4-address*] *string*

Synopsis Enter the **static-neighbor** list instance

Context **configure** *router string interface string ipv4 neighbor-discovery static-neighbor string*

Tree [static-neighbor](#)

Description Commands in this context configure a static ARP entry that associates an IP address with a MAC address for the core router instance.

Introduced 16.0.R1

Platforms All

### **[ipv4-address]** *string*

Synopsis IPv4 address that corresponds to the physical address

Context **configure** *router string interface string ipv4 neighbor-discovery static-neighbor string*

Tree [static-neighbor](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **mac-address** *string*

Synopsis MAC address for the static neighbor

Context **configure** *router string interface string ipv4 neighbor-discovery static-neighbor string mac-address string*

Tree [mac-address](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **static-neighbor-unnumbered**

Synopsis Enable the **static-neighbor-unnumbered** context

Context **configure** *router string interface string ipv4 neighbor-discovery static-neighbor-unnumbered*

Tree	<a href="#">static-neighbor-unnumbered</a>
Description	Commands in this context configure the static ARP MAC for an unnumbered interface. This entry overrides the dynamic ARP entry on the unnumbered interface.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">static-neighbor-unnumbered</a> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	All

**primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b>
Tree	<a href="#">primary</a>
Introduced	16.0.R1
Platforms	All

**address** *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b> <a href="#">broadcast</a> <i>keyword</i>
Tree	<a href="#">broadcast</a>
Description	This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.  This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.
Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

**gre-termination** *boolean*

Synopsis	Enable GRE termination
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b> <a href="#">gre-termination</a> <i>boolean</i>
Tree	<a href="#">gre-termination</a>

Description	When configured to <b>true</b> , the router terminates MPLS-over-GRE and IP-over-GRE packets for destination IP addresses from a user-defined subnet. The user defines a subnet for the termination of GRE packets by executing this command on a numbered network IP interface or a loopback interface.
Default	false
Introduced	19.10.R1
Platforms	VSR

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>primary</i> <i>prefix-length</i> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>primary</i> <i>track-srrp</i> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **qos-route-lookup** *keyword*

Synopsis	QoS route lookup of ingress IP packets
Context	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <i>qos-route-lookup</i> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Options	destination, source
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**secondary** [[address](#)] *string*

Synopsis	Enter the <b>secondary</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i>
Tree	<a href="#">secondary</a>
Introduced	16.0.R1
Platforms	All

**[address]** *string*

Synopsis	Secondary IPv4 address assigned to the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i>
Tree	<a href="#">secondary</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i> <a href="#">broadcast</a> <i>keyword</i>
Tree	<a href="#">broadcast</a>
Description	This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.  This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.
Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

**igp-inhibit** *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i> <a href="#">igp-inhibit</a> <i>boolean</i>

Tree	<a href="#">igp-inhibit</a>
Description	When configured to <b>true</b> , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i> <a href="#">prefix-length</a> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i> <a href="#">track-srrp</a> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **tcp-mss** *number*

Synopsis	TCP maximum segment size for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">tcp-mss</a> <i>number</i>
Tree	<a href="#">tcp-mss</a>
Range	384 to 9746
Introduced	16.0.R1
Platforms	All

## unnumbered

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <i>router string interface string ipv4 unnumbered</i>
Tree	<i>unnumbered</i>
Description	Commands in this context configure an IP interface as an unnumbered interface and specify the IP address to use for the interface. An operator can configure unnumbered interfaces to conserve IP addresses.
Introduced	16.0.R1
Platforms	All

## ip-address *string*

Synopsis	IP address to associate with unnumbered IP interface
Context	<b>configure</b> <i>router string interface string ipv4 unnumbered ip-address string</i>
Tree	<i>ip-address</i>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## ip-int-name *string*

Synopsis	Unnumbered IP interface name
Context	<b>configure</b> <i>router string interface string ipv4 unnumbered ip-int-name string</i>
Tree	<i>ip-int-name</i>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## system

Synopsis	Use system IP address for the unnumbered IP interface
Context	<b>configure</b> <i>router string interface string ipv4 unnumbered system</i>
Tree	<i>system</i>

Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## urpf-check

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>urpf-check</b>
Tree	<b>urpf-check</b>
Introduced	16.0.R1
Platforms	All

## ignore-default *boolean*

Synopsis	Ignore default routes when performing a uRPF check
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>urpf-check</b> <b>ignore-default</b> <i>boolean</i>
Tree	<b>ignore-default</b>
Description	When configured to <b>true</b> , the router ignores default routes while performing a uRPF check to determine the validity of incoming packets. When configured to <b>false</b> , default routes are considered eligible.
Default	false
Introduced	16.0.R1
Platforms	All

## mode *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>urpf-check</b> <b>mode</b> <i>keyword</i>
Tree	<b>mode</b>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	All

**vrrp** [*virtual-router-id*] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i>
Tree	<i>vrrp</i>
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its Virtual Router Identifier (VRID) and a set of IP addresses.
Introduced	16.0.R1
Platforms	All

**[virtual-router-id]** *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i>
Tree	<i>vrrp</i>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number admin-state keyword</i>
Tree	<i>admin-state</i>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **authentication-key *string***

Synopsis	Password for simple text authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.  If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

### **backup *string***

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>backup</b> <i>string</i>
Tree	<b>backup</b>
Description	This command associates virtual router IP addresses with those of the parental IP interface.  This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.  Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.  For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. Instances	16
Introduced	16.0.R1

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp number</b> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	<p>Commands in this context assign a Bidirectional Forwarding Detection (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism that speeds up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP advertisement message. In addition, the standby VRRP routers transition to a master state to speed up convergence.</p> <p>The VRRP election process takes place based on the advertisement messages sent by all VRRP routers.</p> <p>Only one BFD session can be assigned to any VRRP or SRRP instance, but multiple SRRP or VRRP sessions can use the same BFD session.</p>
Introduced	16.0.R1
Platforms	All

## dest-ip *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

### **mac string**

**Synopsis** Virtual MAC address to use in ARP responses

**Context** **configure** **router** *string* **interface** *string* **ipv4 vrrp** *number* **mac** *string*

**Tree** **mac**

**Description** This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.

Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

**Introduced** 16.0.R1

**Platforms** All

### **master-int-inherit boolean**

**Synopsis** Allow master instance to dictate the master down timer

**Context** **configure** **router** *string* **interface** *string* **ipv4 vrrp** *number* **master-int-inherit** *boolean*

**Tree** **master-int-inherit**

**Description** When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

**Introduced** 16.0.R1

**Platforms** All

**message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number message-interval number</i>
Tree	<a href="#">message-interval</a>
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.</li> </ul>
Range	1 to 2559
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

**monitor-oper-group** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number monitor-oper-group reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other

protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.

Reference	<b>configure service oper-group</b> <i>string</i>
Introduced	22.2.R1
Platforms	All

### **ntp-reply** *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure router</b> <i>string interface string ipv4 vrrp number ntp-reply boolean</i>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure router</b> <i>string interface string ipv4 vrrp number oper-group reference</i>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure service oper-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**owner boolean****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp number</b> <b>owner boolean</b>
Tree	<b>owner</b>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

**passive boolean****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp number</b> <b>passive boolean</b>
Tree	<b>passive</b>
Description	When configured to <b>true</b> , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).  When configured to <b>false</b> , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	16.0.R1
Platforms	All

## ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<a href="#">ping-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## policy *reference*

Synopsis	VRRP priority control policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>policy</b> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <b>vrrp</b> <a href="#">policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

## preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
----------	---

Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>preempt</b> <i>boolean</i>
Tree	<b>preempt</b>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Base priority for the VRRP
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **ssh-reply** *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>ssh-reply</b> <i>boolean</i>
Tree	<b>ssh-reply</b>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to <b>false</b>, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>

Default	false
Introduced	16.0.R1
Platforms	All

### **standby-forwarding** *boolean*

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>standby-forwarding</b> <i>boolean</i>
Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic. When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>

Description	<p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <i>router string interface string ipv6</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	All

## address [*ipv6-address*] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <i>router string interface string ipv6 address string</i>
Tree	<i>address</i>
Introduced	16.0.R1
Platforms	All

## [*ipv6-address*] *string*

Synopsis	IPv6 address assigned to the interface
Context	<b>configure</b> <i>router string interface string ipv6 address string</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**duplicate-address-detection** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <i>router string interface string ipv6 address string duplicate-address-detection boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD). When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

**eui-64** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	<b>configure</b> <i>router string interface string ipv6 address string eui-64 boolean</i>
Tree	<a href="#">eui-64</a>
Description	When configured to <b>true</b> , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

**prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <i>router string interface string ipv6 address string prefix-length number</i>
Tree	<a href="#">prefix-length</a>

Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **primary-preference** *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	<b>configure</b> <i>router string interface string ipv6 address string primary-preference number</i>
Tree	<a href="#">primary-preference</a>
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	<b>configure</b> <i>router string interface string ipv6 address string track-srrp number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string interface string ipv6 bfd</i>

Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">bfd</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">bfd</a> <a href="#">echo-receive</a> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

**multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">bfd</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1

Platforms All

### **receive number**

Synopsis BFD receive interval over this interface

Context **configure router string interface string ipv6 bfd receive number**

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

### **transmit-interval number**

Synopsis BFD transmit interval over this interface

Context **configure router string interface string ipv6 bfd transmit-interval number**

Tree [transmit-interval](#)

Description This command configures the transmit intervals.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

### **type keyword**

Synopsis Local termination point for the BFD session

Context **configure router string interface string ipv6 bfd type keyword**

Tree [type](#)

Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **duplicate-address-detection** *boolean*

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <i>router string interface string ipv6 duplicate-address-detection boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD) on the interface.  When configured to <b>false</b> , the router disables DAD on a per-interface basis. This prevents the router from performing a DAD check on the interface. All IPv6 addresses on an interface with DAD disabled, immediately enter a preferred state, without checking for uniqueness on the interface. This is useful for interfaces that enter a looped state during troubleshooting and are operationally disabled when the loop is detected, requiring manual intervention to clear the DAD violation.
Default	true
Introduced	16.0.R1
Platforms	All

### **forward-ipv4-packets** *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	<b>configure</b> <i>router string interface string ipv6 forward-ipv4-packets boolean</i>
Tree	<a href="#">forward-ipv4-packets</a>
Description	When configured to <b>true</b> , the router can use an IPv6-only interface, with no configured IPv4 addresses, to forward IPv4 packets that originate or terminate locally.

The interface reports that its IPv4 operational state is up if its IPv6 operational state is up. Not all protocols observe the interface as up from an IPv4 perspective. This command mostly supports BGP routing use cases; see RFC 5549 for details.

When configured to **false**, the router prevents IPv4 packets from being forwarded if there are no configured IPv4 subnets.

Default	false
Introduced	19.5.R1
Platforms	All

## icmp6

Synopsis	Enter the <b>icmp6</b> context
Context	<b>configure</b> <i>router string interface string ipv6 icmp6</i>
Tree	<a href="#">icmp6</a>
Introduced	16.0.R1
Platforms	All

## packet-too-big

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big</i>
Tree	<a href="#">packet-too-big</a>
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big number number</i>
Tree	<i>number</i>
Range	10 to 1000
Default	100
Introduced	16.0.R1

 Range 1 to 60  
 Default 10  
 Introduced 16.0.R1  
 Platforms All

### **link-local-address**

Synopsis Enter the **link-local-address** context

Context	<b>configure</b> <i>router string interface string ipv6 link-local-address</i>
Tree	<a href="#">link-local-address</a>
Description	<p>Commands in this context configure the IPv6 link-local address that is used as a virtual SRRP IPv6 address by the master SRRP node. This address is sent in the Router Advertisements initiated by the master SRRP node. Clients use this address as IPv6 default-gateway. Both SRRP nodes, master and backup, must be configured with the same link-local address.</p> <p>Only one link-local address is allowed per interface.</p> <p><b>Caution:</b> Removing a manually configured link-local address may impact routing protocols or static routes that have a dependency on that address. Nokia does not recommend removing a link-local address when there are active IPv6 subscriber hosts on an IES or VPRN interface.</p>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	IPv6 link-local address
Context	<b>configure</b> <i>router string interface string ipv6 link-local-address address string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **duplicate-address-detection** *boolean*

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <i>router string interface string ipv6 link-local-address duplicate-address-detection boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Description	<p>When configured to <b>true</b>, the router enables Duplicate Address Detection (DAD) on the interface.</p> <p>When configured to <b>false</b>, the router disables DAD and sets the address to preferred, even if there is a duplicated address.</p>
Default	true
Introduced	16.0.R1
Platforms	All

**local-dhcp-server** *reference*

Synopsis	DHCP server for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">local-dhcp-server</a> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**neighbor-discovery**

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

**learn-unsolicited** *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>keyword</i>
Tree	<a href="#">learn-unsolicited</a>
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.  When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

**limit**

Synopsis	Enter the <b>limit</b> context
----------	--------------------------------

Context	<b>configure</b> <i>router string interface string ipv6 neighbor-discovery limit</i>
Tree	<a href="#">limit</a>
Description	<p>Commands in this context configure the maximum amount of dynamic IPv6 neighbor entries that can be learned on an IP interface.</p> <p>When the number of dynamic neighbor entries reaches the configured percentage of this limit the system sends an SNMP trap. When the limit is exceeded, no new entries are learned until an entry expires and traffic to these destinations is dropped. Entries that have already been learned are refreshed.</p>
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Generate log entries when limit is reached
Context	<b>configure</b> <i>router string interface string ipv6 neighbor-discovery limit log-only boolean</i>
Tree	<a href="#">log-only</a>
Description	<p>When configured to <b>true</b>, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.</p> <p>When configured to <b>false</b>, the router does not send the warning message.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **max-entries** *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <i>router string interface string ipv6 neighbor-discovery limit max-entries number</i>
Tree	<a href="#">max-entries</a>
Description	<p>This command configures the maximum number of entries that can be learned on an IP interface.</p> <p>When unconfigured, no maximum limit is imposed.</p>
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Threshold percentage that triggers a warning message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>limit</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

**local-proxy-nd** *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>local-proxy-nd</b> <i>boolean</i>
Tree	<b>local-proxy-nd</b>
Description	When configured to <b>true</b> , the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.  When configured to <b>false</b> , the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.
Default	false
Introduced	16.0.R1
Platforms	All

**proactive-refresh** *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>proactive-refresh</b> <i>keyword</i>
Tree	<b>proactive-refresh</b>
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

**proxy-nd-policy** *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-nd-policy</a> <i>reference</i>
Tree	<a href="#">proxy-nd-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**reachable-time** *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">reachable-time</a> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Introduced	16.0.R1
Platforms	All

**secure-nd**

Synopsis	Enter the <b>secure-nd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a>
Tree	<a href="#">secure-nd</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Secure Neighbor Discovery
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **allow-unsecured-msgs** *boolean*

Synopsis	Accept unsecured messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>allow-unsecured-msgs</b> <i>boolean</i>
Tree	<a href="#">allow-unsecured-msgs</a>
Description	When configured to <b>true</b> , the router accepts unsecured messages. When Secure Neighbor Discovery (SeND) is enabled, only secure messages are accepted. When configured to <b>false</b> , the router disables the acceptance of unsecured messages.
Default	true
Introduced	16.0.R1
Platforms	All

### **public-key-min-bits** *number*

Synopsis	Minimum acceptable key length for public keys in CGA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>public-key-min-bits</b> <i>number</i>
Tree	<a href="#">public-key-min-bits</a>
Range	512 to 1024
Default	1024
Introduced	16.0.R1
Platforms	All

### **security-parameter** *number*

Synopsis	Security parameter used in the generation of a CGA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>security-parameter</b> <i>number</i>
Tree	<a href="#">security-parameter</a>
Range	0 to 1

Default	1
Introduced	16.0.R1
Platforms	All

**stale-time** *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>stale-time</b> <i>number</i>
Tree	<b>stale-time</b>
Range	60 to 65535
Introduced	16.0.R1
Platforms	All

**static-neighbor** [**ipv6-address**] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Description	<p>Commands in this context configure an IPv6-to-MAC address mapping on the interface. Use this command if a directly attached IPv6 node does not support ICMPv6 neighbor discovery, or for some reason, a static address must be used. This command can only be used on Ethernet media.</p> <p>The IPv6 address must be on the subnet that was configured from the IPv6 <b>address</b> or a <b>link-local-address</b> commands.</p>
Introduced	16.0.R1
Platforms	All

**[ipv6-address]** *string*

Synopsis	IPv6 address corresponding to the physical address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**qos-route-lookup** *keyword*

Synopsis	QoS route lookup of ingress IP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>qos-route-lookup</b> <i>keyword</i>
Tree	<b>qos-route-lookup</b>
Description	This command enables QoS classification of the ingress IP packets on an interface based on the QoS information associated with routes in the forwarding table.
Options	destination, source
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tcp-mss** *number*

Synopsis	TCP maximum segment size for the IPv6 interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>tcp-mss</b> <i>number</i>
Tree	<b>tcp-mss</b>
Range	1220 to 9726
Introduced	16.0.R1
Platforms	All

**urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>urpf-check</b>
Tree	<b>urpf-check</b>
Introduced	16.0.R1

Platforms All

### **ignore-default** *boolean*

Synopsis Ignore default route when performing a uRPF check  
 Context **configure** *router string interface string ipv6 urpf-check ignore-default boolean*  
 Tree [ignore-default](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **mode** *keyword*

Synopsis Unicast RPF check mode  
 Context **configure** *router string interface string ipv6 urpf-check mode keyword*  
 Tree [mode](#)  
 Options strict, loose, strict-no-ecmp  
 Default strict  
 Introduced 16.0.R1  
 Platforms All

### **vrrp** [[virtual-router-id](#)] *number*

Synopsis Enter the **vrrp** list instance  
 Context **configure** *router string interface string ipv6 vrrp number*  
 Tree [vrrp](#)  
 Description Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its virtual router identifier (VRID) and a set of IP addresses.  
 Max. Instances 4  
 Introduced 16.0.R1  
 Platforms All

### **[virtual-router-id]** *number*

Synopsis Virtual Router Identifier (VRID) for the IP interface

Context	<b>configure</b> <i>router string interface string ipv6 vrrp number</i>
Tree	<a href="#">vrrp</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **backup** *string*

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number backup string</i>
Tree	<a href="#">backup</a>
Description	This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. Instances	4
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure router string interface string ipv6 vrrp number bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	<p>Commands in this context assign a bidirectional forwarding detect (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism for use in speeding up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP Advertisement message. In addition, the standby VRRP routers transition to a Master state to speed convergence.</p> <p>The normal VRRP election process takes place based on the Advertisement messages sent by all VRRP routers.</p> <p>There can be only one BFD session assigned to any specific VRRP or SRRP instance, but there can be multiple SRRP or VRRP sessions using the same BFD session.</p>
Introduced	16.0.R1
Platforms	All

**dest-ip** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for the BFD session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>bfd-liveness</b> <b>dest-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>dest-ip</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**interface-name** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>bfd-liveness</b> <b>interface-name</b> <i>string</i>
Tree	<b>interface-name</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**service-name** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>bfd-liveness</b> <b>service-name</b> <i>string</i>
Tree	<b>service-name</b>

String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **init-delay number**

Synopsis	VRRP initialization delay timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>init-delay</b> <i>number</i>
Tree	<b>init-delay</b>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>mac</b> <i>string</i>
Tree	<b>mac</b>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

**master-int-inherit** *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number</i> <b>master-int-inherit</b> <i>boolean</i>
Tree	<b>master-int-inherit</b>
Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

**message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number</i> <b>message-interval</b> <i>number</i>
Tree	<b>message-interval</b>
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as the master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.</li> </ul>
Range	10 to 4095
Units	centiseconds

Default	100
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>monitor-oper-group</b> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	22.2.R1
Platforms	All

### **ntp-reply** *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>ntp-reply</b> <i>boolean</i>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group name associated with the VRRP
----------	---

Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>oper-group</b> <i>reference</i>
Tree	<b>oper-group</b>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure service</b> <b>oper-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **owner** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>owner</b> <i>boolean</i>
Tree	<b>owner</b>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>

Description	<p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<a href="#">ping-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### policy *reference*

Synopsis	VRRP priority control policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i> <b>policy</b> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p>

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

Reference	<b>configure vrrp policy number</b>
Introduced	16.0.R1
Platforms	All

### **preempt boolean**

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure router string interface string ipv6 vrrp number preempt boolean</b>
Tree	<b>preempt</b>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **priority number**

Synopsis	Base priority for the VRRP
Context	<b>configure router string interface string ipv6 vrrp number priority number</b>
Tree	<b>priority</b>
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**standby-forwarding *boolean***

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number standby-forwarding boolean</i>
Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic.  When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

**telnet-reply *boolean***

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number telnet-reply boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).  When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

**traceroute-reply *boolean***

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number traceroute-reply boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	When configured to <b>true</b> , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.  When configured to <b>false</b> , the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default	false
Introduced	16.0.R1
Platforms	All

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">lag</a>
Tree	<a href="#">lag</a>
Introduced	16.0.R1
Platforms	All

## link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">lag</a> <a href="#">link-map-profile</a> <i>number</i>
Tree	<a href="#">link-map-profile</a>
Description	<p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system reshapes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

## per-link-hash

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">lag</a> <a href="#">per-link-hash</a>
Tree	<a href="#">per-link-hash</a>
Introduced	16.0.R1
Platforms	All

**class number**

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <i>router string interface string lag per-link-hash class number</i>
Tree	<a href="#">class</a>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <i>router string interface string lag per-link-hash weight number</i>
Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

**ldp-sync-timer**

Synopsis	Enter the <b>ldp-sync-timer</b> context
Context	<b>configure</b> <i>router string interface string ldp-sync-timer</i>
Tree	<a href="#">ldp-sync-timer</a>
Description	This command enables the synchronization of an IGP and LDP and enters the context to set associated parameters.
Introduced	16.0.R1
Platforms	All

**end-of-lib boolean**

Synopsis	Terminate LDP synchronization timer
Context	<b>configure</b> <i>router string interface string ldp-sync-timer end-of-lib boolean</i>
Tree	<a href="#">end-of-lib</a>

Description	This command configures the system to terminate the LDP synchronization timer early for a specific session to an LDP peer, if the IGP interface receives LDP End-of-LIB Typed Wildcard FEC messages for every FEC type negotiated.
Default	false
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time interval for the LDP synchronization timer
Context	<b>configure</b> <i>router string interface string ldp-sync-timer seconds number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1800
Introduced	16.0.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure</b> <i>router string interface string load-balancing</i>
Tree	<a href="#">load-balancing</a>
Description	Commands in this context configure interface per-flow load-balancing options that apply to traffic that enters this interface and that egresses over a LAG or ECMP. This is a per-interface setting. Load-balancing options enabled on the interface level overwrite options that can also be enabled on the system level.
Introduced	16.0.R1
Platforms	All

### **flow-label-load-balancing** *boolean*

Synopsis	Enable flow label load balancing
Context	<b>configure</b> <i>router string interface string load-balancing flow-label-load-balancing boolean</i>
Tree	<a href="#">flow-label-load-balancing</a>
Description	When configured to <b>true</b> , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. When configured to <b>false</b> , the router disables load balancing in ECMP and LAG.

Default	false
Introduced	21.5.R1
Platforms	All

### **ip-load-balancing** *keyword*

Synopsis	IP load-balancing algorithm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">ip-load-balancing</a> <i>keyword</i>
Tree	<a href="#">ip-load-balancing</a>
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the <b>l4-load-balancing</b> command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

### **lsr-load-balancing** *keyword*

Synopsis	LSR load-balancing algorithm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">lsr-load-balancing</a> <i>keyword</i>
Tree	<a href="#">lsr-load-balancing</a>
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1
Platforms	All

### **spi-load-balancing** *boolean*

Synopsis	Enable SPI use in hashing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">spi-load-balancing</a> <i>boolean</i>
Tree	<a href="#">spi-load-balancing</a>
Description	When configured to <b>true</b> , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.

Default	false
Introduced	16.0.R1
Platforms	All

### **teid-load-balancing** *boolean*

Synopsis	Enable use of TEID in hashing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">teid-load-balancing</a> <i>boolean</i>
Tree	<a href="#">teid-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **loopback**

Synopsis	Use interface as a loopback interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">loopback</a>
Tree	<a href="#">loopback</a>
Description	When configured, this interface is used as a loopback interface. This command and the <b>vas-if-type</b> command are mutually exclusive.
Notes	The following elements are part of a choice: <b>loopback</b> or <b>port</b> .
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	MAC address of the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Description	This command assigns a specific MAC address to an IP interface. Only one MAC address can be assigned to an IP interface. When multiple <b>mac</b> commands are entered, the last command overwrites the previous command.
Introduced	16.0.R1
Platforms	All

**mac-accounting** *boolean*

Synopsis	Enable MAC accounting functionality
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>mac-accounting</b> <i>boolean</i>
Tree	<a href="#">mac-accounting</a>
Description	When configured to <b>true</b> , the router enables MAC accounting functionality.
Default	false
Introduced	16.0.R1
Platforms	All

**network-domains**

Synopsis	Enter the <b>network-domains</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>network-domains</b>
Tree	<a href="#">network-domains</a>
Introduced	16.0.R4
Platforms	All

**network-domain** [[domain-name](#)] *reference*

Synopsis	Add a list entry for <b>network-domain</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>network-domains</b> <b>network-domain</b> <i>reference</i>
Tree	<a href="#">network-domain</a>
Description	<p>Commands in this context assign an interface to a network domain. The router then takes the network domain into account during SAP ingress queue allocation for VPLS SAP.</p> <p>The network domain association can only be done in the base routing context. An operator can associate a network domain with an interface without a physical port being specified, but the configuration has no effect until a corresponding port, or LAG, is defined.</p> <p>Single interfaces can be associated with multiple network domains.</p>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

**[domain-name] reference**

Synopsis	Network domain name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>network-domains</b> <b>network-domain</b> <i>reference</i>
Tree	<a href="#">network-domain</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>network-domains</b> <b>network-domain</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**port (port-and-encap | keyword)**

Synopsis	Port to bind to this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>port</b> ( <i>port-and-encap</i>   <i>keyword</i> )
Tree	<a href="#">port</a>
Description	This command creates an association between a logical IP interface and a physical port. An operator can also associate an interface with the system (loopback address).
String Length	1 to 45
Options	system
Notes	The following elements are part of a choice: <b>loopback</b> or <b>port</b> .
Introduced	16.0.R1
Platforms	All

**ptp-hw-assist**

Synopsis	Enter the <b>ptp-hw-assist</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ptp-hw-assist</b>
Tree	<a href="#">ptp-hw-assist</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state keyword**

Synopsis	Administrative state of the PTP time stamping assist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ptp-hw-assist</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Description	This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.  Only one interface per physical port can have <code>ptp-hw-assist</code> enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <b>interface</b> <i>string</i> <b>qos</b>
Tree	<b>qos</b>
Description	Commands in this context associate a network QoS policy with a network IP interface. Only one network QoS policy can be associated with an IP interface at one time. Attempts to associate a second QoS policy return an error.
Introduced	16.0.R1
Platforms	All

## egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	<b>configure</b> <i>router</i> <i>string</i> <b>interface</b> <i>string</i> <b>qos</b> <b>egress-instance</b> <i>number</i>
Tree	<b>egress-instance</b>
Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## egress-port-redirect-group *reference*

Synopsis	QoS queue group name
----------	----------------------

Context	<b>configure</b> <i>router string interface string qos egress-port-redirect-group reference</i>
Tree	<a href="#">egress-port-redirect-group</a>
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.
Reference	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group string</a>
Introduced	16.0.R1
Platforms	All

### **ingress-fp-redirect-group** *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	<b>configure</b> <i>router string interface string qos ingress-fp-redirect-group reference</i>
Tree	<a href="#">ingress-fp-redirect-group</a>
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group string</a>
Introduced	16.0.R1
Platforms	All

### **ingress-instance** *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	<b>configure</b> <i>router string interface string qos ingress-instance number</i>
Tree	<a href="#">ingress-instance</a>
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**network-policy** *reference*

Synopsis	Network policy name associated with a network interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>qos</b> <b>network-policy</b> <i>reference</i>
Tree	<a href="#">network-policy</a>
Description	This command associates an existing network policy name with the IP interface.
Reference	<b>configure</b> <b>qos</b> <b>network</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**strip-label** *boolean*

Synopsis	Strip all MPLS labels before PBR processing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>strip-label</b> <i>boolean</i>
Tree	<a href="#">strip-label</a>
Description	<p>When configured to <b>true</b>, the router forces packets to be stripped of all (maximum 5) MPLS labels before the packets are handed over for possible filter (PBR) processing.</p> <p>This command is supported on:</p> <ul style="list-style-type: none"> <li>• optical ports for the 7750 SR and 7450 ESS</li> <li>• IOM3 XP cards for the 7750 SR and 7450 ESS</li> <li>• null/dot1q encaps</li> <li>• network ports</li> <li>• IPv4</li> <li>• IPv6</li> </ul>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tos-marking-state** *keyword*

Synopsis	TOS marking state
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>tos-marking-state</b> <i>keyword</i>
Tree	<a href="#">tos-marking-state</a>
Description	<p>This command configures the ToS marking state.</p> <p>This command is used to alter the default trusted state to a non-trusted state. When configured to <b>trusted</b> or default, the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in</p>

which case the egress network interface treats all VPRN and network IP interfaces as untrusted.

When configured to **untrusted**, all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface.

Options	trusted, untrusted
Default	trusted
Introduced	16.0.R1
Platforms	All

## untrusted

Synopsis	Enable the <b>untrusted</b> context
Context	<b>configure</b> <i>router string interface string untrusted</i>
Tree	<i>untrusted</i>
Description	<p>Commands in this context configure the untrusted state for a network IP interface.</p> <p>The untrusted state identifies the participating interfaces in the label security feature for prefixes of a VPN family at an inter-AS boundary. The router supports a maximum of 15 network interfaces that can participate in this feature.</p> <p>The user normally applies this command to an inter-AS interface. PIP keeps track of the untrusted status of each interface.</p>
Introduced	16.0.R4
Platforms	All

## default-forwarding *keyword*

Synopsis	Default action for selective ILM
Context	<b>configure</b> <i>router string interface string untrusted default-forwarding keyword</i>
Tree	<i>default-forwarding</i>
Description	<p>This command specifies the default forwarding behavior of labeled packets received on this interface.</p> <p>This command sets the default behavior for an untrusted interface in the datapath and for all ILMs. When enabling the label security for VPN IPv4 or VPN IPv6 prefixes, BGP programs the data path to provide an exception to the normal way of forwarding away from the default for those VPRN ILMs.</p> <p>When the default behavior is to forward packets, the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a L2 service context.</p>

When the specified behavior is to drop packets, all labeled packets received on the interface are automatically dropped.

Options	forward, drop
Default	forward
Introduced	16.0.R4
Platforms	All

### **urpf-selected-vprns** *boolean*

Synopsis	Enable uRPF checking of incoming traffic on interface
Context	<b>configure</b> <i>router string interface string urpf-selected-vprns boolean</i>
Tree	<a href="#">urpf-selected-vprns</a>
Description	<p>When configured to <b>true</b>, the router performs uRPF checks of incoming traffic on the network interface for the following:</p> <ul style="list-style-type: none"> <li>• Packets associated with the global routing table (base router) context</li> <li>• Packets associated with VPRNs that have enabled the uRPF check using the <b>configure service vprn network ingress urpf-check</b> command</li> </ul> <p>When configured to <b>false</b>, the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router and all VPRNs) based on the IPv4 and IPv6 <b>urpf-check</b> command configuration options of the network interface.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vas-if-type** *keyword*

Synopsis	VAS interface type
Context	<b>configure</b> <i>router string interface string vas-if-type keyword</i>
Tree	<a href="#">vas-if-type</a>
Description	This command configures the type of a Value Added Service (VAS) facing interface. This command and <b>loopback</b> command
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1
Platforms	All

## ipsec

Synopsis	Enter the <b>ipsec</b> context
Context	<b>configure</b> <i>router string ipsec</i>
Tree	<i>ipsec</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multi-chassis-shunt-interface [*name*] *string*

Synopsis	Enter the <b>multi-chassis-shunt-interface</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string</i>
Tree	<i>multi-chassis-shunt-interface</i>
Description	This command configures the multi-chassis shunting interface name for the peer.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [*name*] *string*

Synopsis	Multi-chassis shunt interface name
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string</i>
Tree	<i>multi-chassis-shunt-interface</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## next-hop

Synopsis	Enter the <b>next-hop</b> context
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string next-hop</i>
Tree	<i>next-hop</i>
Description	Commands in this context configure the next hop for shunting over the interface.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next hop address
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string next-hop address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">address</a>
Description	This command configures the next-hop address for the shunting interface.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**multi-chassis-shunting-profile** [[name](#)] *string*

Synopsis	Enter the <b>multi-chassis-shunting-profile</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Multi-chassis shunting profile name
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer** [[ip-address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string peer reference</i>
Tree	<a href="#">peer</a>

Max. Instances	3
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[ip-address] reference**

Synopsis	Peer address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>multi-chassis-shunting-profile</b> <i>string</i> <b>peer</b> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunt-interface reference**

Synopsis	Multi-chassis shunt interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>multi-chassis-shunting-profile</b> <i>string</i> <b>peer</b> <i>reference</i> <b>multi-chassis-shunt-interface</b> <i>reference</i>
Tree	<a href="#">multi-chassis-shunt-interface</a>
Description	This command configures the shunting interface name for the peer.
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>multi-chassis-shunt-interface</b> <i>string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **security-policy [id] number**

Synopsis	Enter the <b>security-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i>
Tree	<a href="#">security-policy</a>
Introduced	22.7.R1
Platforms	VSR

**[id] number**

Synopsis	IPsec security policy ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i>
Tree	<b>security-policy</b>
Range	1 to 32768
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**entry [entry-id] number**

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i>
Tree	<b>entry</b>
Introduced	22.7.R1
Platforms	VSR

**[entry-id] number**

Synopsis	IPsec security policy entry ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i>
Tree	<b>entry</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**local-ip**

Synopsis	Enter the <b>local-ip</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i> <b>local-ip</b>
Tree	<b>local-ip</b>
Description	Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.

The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.

Introduced 22.7.R1

Platforms VSR

### **address string**

Synopsis Destination IPv4 address of the aggregate route

Context **configure** [router string](#) [ipsec security-policy number entry number local-ip address string](#)

Tree [address](#)

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

### **any boolean**

Synopsis Use any IP address

Context **configure** [router string](#) [ipsec security-policy number entry number local-ip any boolean](#)

Tree [any](#)

Default false

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

### **local-ipv6**

Synopsis Enter the **local-ipv6** context

Context **configure** [router string](#) [ipsec security-policy number entry number local-ipv6](#)

Tree [local-ipv6](#)

Description Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.

The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.

Introduced 22.7.R1

Platforms VSR

### **address string**

Synopsis Destination IPv6 address of the aggregate route

Context **configure** [router string](#) [ipsec security-policy number entry number local-ipv6 address string](#)

Tree [address](#)

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

### **any boolean**

Synopsis Use any IP address

Context **configure** [router string](#) [ipsec security-policy number entry number local-ipv6 any boolean](#)

Tree [any](#)

Default false

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

### **remote-ip**

Synopsis Enter the **remote-ip** context

Context **configure** [router string](#) [ipsec security-policy number entry number remote-ip](#)

Tree [remote-ip](#)

Description Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry.

The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public.

Introduced 22.7.R1

Platforms VSR

**address string**

Synopsis	Destination IPv4 address of the aggregate route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec</a> <a href="#">security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">remote-ip</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

**any boolean**

Synopsis	Use any IP address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec</a> <a href="#">security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">remote-ip</a> <a href="#">any</a> <i>boolean</i>
Tree	<a href="#">any</a>
Default	false
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

**remote-ipv6**

Synopsis	Enter the <b>remote-ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec</a> <a href="#">security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">remote-ipv6</a>
Tree	<a href="#">remote-ipv6</a>
Description	<p>Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.</p>
Introduced	22.7.R1
Platforms	VSR

**address string**

Synopsis	Destination IPv6 address of the aggregate route
----------	---

Context	<b>configure</b> <i>router string ipsec security-policy number entry number remote-ipv6 address string</i>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

### **any** *boolean*

Synopsis	Use any IP address
Context	<b>configure</b> <i>router string ipsec security-policy number entry number remote-ipv6 any boolean</i>
Tree	<a href="#">any</a>
Default	false
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router string ipv6</i>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **neighbor-discovery**

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <i>router string ipv6 neighbor-discovery</i>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure</b> <b>router</b> <i>string ipv6 neighbor-discovery reachable-time number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Default	30
Introduced	16.0.R1
Platforms	All

### **stale-time** *number*

Synopsis	Neighbor discovery cache entry stale time
Context	<b>configure</b> <b>router</b> <i>string ipv6 neighbor-discovery stale-time number</i>
Tree	<a href="#">stale-time</a>
Range	60 to 65535
Default	14400
Introduced	16.0.R1
Platforms	All

### **router-advertisement**

Synopsis	Enter the <b>router-advertisement</b> context
Context	<b>configure</b> <b>router</b> <i>string ipv6 router-advertisement</i>
Tree	<a href="#">router-advertisement</a>
Introduced	16.0.R1
Platforms	All

### **dns-options**

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure</b> <b>router</b> <i>string ipv6 router-advertisement dns-options</i>
Tree	<a href="#">dns-options</a>
Introduced	16.0.R1
Platforms	All

**rdnss-lifetime** (*keyword* | *number*)

Synopsis	Maximum time over which the RDNSS address is valid
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>dns-options</i> <i>rdnss-lifetime</i> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">rdnss-lifetime</a>
Description	This command specifies the maximum time that the RDNSS address is used for name resolution by the client.
Range	0   4 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

**server** *string*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>dns-options</i> <i>server</i> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**interface** [*ip-int-name*] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>interface</i> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

**[ip-int-name]** *string*

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of router advertisement
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**current-hop-limit** *number*

Synopsis	Hop limit advertised in RA messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i> <a href="#">current-hop-limit</a> <i>number</i>
Tree	<a href="#">current-hop-limit</a>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	All

**dns-options**

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i> <a href="#">dns-options</a>
Tree	<a href="#">dns-options</a>

Introduced	16.0.R1
Platforms	All

### **include-rdnss** *boolean*

Synopsis	Include the RDNSS option in the RA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>include-rdnss</b> <i>boolean</i>
Tree	<a href="#">include-rdnss</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis	Maximum time over which the RDNSS address 25 is valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>rdnss-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rdnss-lifetime</a>
Range	0   4 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **server** *string*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>server</b> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**managed-configuration** *boolean*

Synopsis	Set the managed address configuration flag
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>interface</i> <i>string</i> <i>managed-configuration</i> <i>boolean</i>
Tree	<a href="#">managed-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	All

**max-advertisement-interval** *number*

Synopsis	Maximum time between sending advertisement messages
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>interface</i> <i>string</i> <i>max-advertisement-interval</i> <i>number</i>
Tree	<a href="#">max-advertisement-interval</a>
Range	4 to 1800
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

**min-advertisement-interval** *number*

Synopsis	Minimum interval between router advertisement messages
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i> <i>router-advertisement</i> <i>interface</i> <i>string</i> <i>min-advertisement-interval</i> <i>number</i>
Tree	<a href="#">min-advertisement-interval</a>
Range	3 to 1350
Units	seconds
Default	200
Introduced	16.0.R1
Platforms	All

**mtu number**

Synopsis	MTU for sending packets to the router
Context	<b>configure router string ipv6 router-advertisement interface string mtu number</b>
Tree	<a href="#">mtu</a>
Range	1280 to 9800
Introduced	16.0.R1
Platforms	All

**other-stateful-configuration boolean**

Synopsis	Set the other configuration flag
Context	<b>configure router string ipv6 router-advertisement interface string other-stateful-configuration boolean</b>
Tree	<a href="#">other-stateful-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	All

**prefix [ipv6-prefix] string**

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure router string ipv6 router-advertisement interface string prefix string</b>
Tree	<a href="#">prefix</a>
Max. Instances	254
Introduced	16.0.R1
Platforms	All

**[ipv6-prefix] string**

Synopsis	IPv6 address prefix
Context	<b>configure router string ipv6 router-advertisement interface string prefix string</b>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **autonomous** *boolean*

Synopsis Set the autonomous flag value

Context **configure** **router** *string* **ipv6** **router-advertisement** **interface** *string* **prefix** *string* **autonomous** *boolean*

Tree **autonomous**

Default true

Introduced 16.0.R1

Platforms All

### **on-link** *boolean*

Synopsis Use prefix for on-link determination

Context **configure** **router** *string* **ipv6** **router-advertisement** **interface** *string* **prefix** *string* **on-link** *boolean*

Tree **on-link**

Default true

Introduced 16.0.R1

Platforms All

### **preferred-lifetime** (*keyword* | *number*)

Synopsis Remaining time that the prefix remains preferred

Context **configure** **router** *string* **ipv6** **router-advertisement** **interface** *string* **prefix** *string* **preferred-lifetime** (*keyword* | *number*)

Tree **preferred-lifetime**

Range 0 to 4294967294

Units seconds

Options infinite

Default 604800

Introduced 16.0.R1

Platforms All

**valid-lifetime** (*keyword | number*)

Synopsis	Remaining time in which the prefix is still valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>prefix</b> <i>string</i> <b>valid-lifetime</b> ( <i>keyword   number</i> )
Tree	<b>valid-lifetime</b>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	2592000
Introduced	16.0.R1
Platforms	All

**reachable-time** *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>reachable-time</b> <i>number</i>
Tree	<b>reachable-time</b>
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	All

**retransmit-time** *number*

Synopsis	Time to advertise neighbor advertisement messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>retransmit-time</b> <i>number</i>
Tree	<b>retransmit-time</b>
Range	0 to 1800000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	All

**router-lifetime** *number*

Synopsis	Lifetime value in neighbor advertisement messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>router-lifetime</b> <i>number</i>
Tree	<b>router-lifetime</b>
Range	0   4 to 9000
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	All

**use-virtual-mac** *boolean*

Synopsis	Use VRRP virtual MAC address for advertisement message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>use-virtual-mac</b> <i>boolean</i>
Tree	<b>use-virtual-mac</b>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6-te-router-id**

Synopsis	Enter the <b>ipv6-te-router-id</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6-te-router-id</b>
Tree	<b>ipv6-te-router-id</b>
Introduced	19.10.R1
Platforms	All

**interface** *reference*

Synopsis	Network IP interface name to obtain IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6-te-router-id</b> <b>interface</b> <i>reference</i>
Tree	<b>interface</b>

Description	This command specifies the interface name from which to obtain the IP address to use as the IPv6 TE Router ID. This router ID uniquely identifies the router to other routers as IPv6 TE capable in an IGP TE domain. IS-IS advertises this information using the IPv6 TE Router ID TLV.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	19.10.R1
Platforms	All

### isa-service-chaining

Synopsis	Enable the <b>isa-service-chaining</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isa-service-chaining</a>
Tree	<a href="#">isa-service-chaining</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### nat-group [[id](#)] *number*

Synopsis	Add a list entry for <b>nat-group</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isa-service-chaining</a> <a href="#">nat-group</a> <i>number</i>
Tree	<a href="#">nat-group</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [\[id\]](#) *number*

Synopsis	ISA NAT group/ISA WLAN GW group ID for the EVPN pools
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isa-service-chaining</a> <a href="#">nat-group</a> <i>number</i>
Tree	<a href="#">nat-group</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vxlan-vtep-range**

Synopsis	Enable the <b>vxlan-vtep-range</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isa-service-chaining</b> <b>vxlan-vtep-range</b>
Tree	<b>vxlan-vtep-range</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	End address of the VXLAN VTEP range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isa-service-chaining</b> <b>vxlan-vtep-range</b> <b>end</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>end</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Start address of the VXLAN VTEP range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isa-service-chaining</b> <b>vxlan-vtep-range</b> <b>start</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>start</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**isis** [**isis-instance**] *number*

Synopsis	Enter the <b>isis</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i>
Tree	<b>isis</b>
Introduced	16.0.R1
Platforms	All

**[isis-instance] number**

Synopsis	Instance ID for the IS-IS instance
Context	<b>configure router string isis number</b>
Tree	<a href="#">isis</a>
Range	0 to 127
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the IS-IS instance
Context	<b>configure router string isis number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**advertise-passive-only boolean**

Synopsis	Advertise prefixes that belong to passive interfaces
Context	<b>configure router string isis number advertise-passive-only boolean</b>
Tree	<a href="#">advertise-passive-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-router-capability keyword**

Synopsis	Router capabilities advertisement to neighbors
Context	<b>configure router string isis number advertise-router-capability keyword</b>
Tree	<a href="#">advertise-router-capability</a>
Options	area, as
Introduced	16.0.R1

Platforms All

### **advertise-tunnel-link** *boolean*

Synopsis Allow use of forwarding adjacency  
Context **configure** *router string isis number advertise-tunnel-link boolean*  
Tree [advertise-tunnel-link](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **all-l1isis** *string*

Synopsis Destination MAC address for all L1 IS-IS routers  
Context **configure** *router string isis number all-l1isis string*  
Tree [all-l1isis](#)  
Default 01:80:C2:00:00:14  
Introduced 16.0.R1  
Platforms All

### **all-l2isis** *string*

Synopsis Destination MAC address for all L2 IS-IS routers  
Context **configure** *router string isis number all-l2isis string*  
Tree [all-l2isis](#)  
Default 01:80:C2:00:00:15  
Introduced 16.0.R1  
Platforms All

### **area-address** *string*

Synopsis Area address portion of the NSAP address  
Context **configure** *router string isis number area-address string*  
Tree [area-address](#)  
String Length 2 to 38

Max. Instances	3
Introduced	16.0.R1
Platforms	All

### **authentication-check** *boolean*

Synopsis	Perform authentication check to reject mismatch PDUs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-check</b> <i>boolean</i>
Tree	<a href="#">authentication-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication key to verify PDUs sent from neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
----------	---------------------

Context	<b>configure router string isis number authentication-type keyword</b>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **csnp-authentication boolean**

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	<b>configure router string isis number csnp-authentication boolean</b>
Tree	<a href="#">csnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **database-export**

Synopsis	Enable the <b>database-export</b> context
Context	<b>configure router string isis number database-export</b>
Tree	<a href="#">database-export</a>
Introduced	16.0.R1
Platforms	All

### **bgp-ls-identifier**

Synopsis	Enable the <b>bgp-ls-identifier</b> context
Context	<b>configure router string isis number database-export bgp-ls-identifier</b>
Tree	<a href="#">bgp-ls-identifier</a>
Introduced	16.0.R1
Platforms	All

### **value number**

Synopsis	BGP-LS identifier sent in the BGP-LS NLRI
Context	<b>configure router string isis number database-export bgp-ls-identifier value number</b>

Tree	<a href="#">value</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

### **igp-identifier** *number*

Synopsis	Unique ID of the IGP instance in the BGP-LS NLRI
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">database-export</a> <a href="#">igp-identifier</a> <i>number</i>
Tree	<a href="#">igp-identifier</a>
Max. Range	0 to 18446744073709551615
Introduced	16.0.R1
Platforms	All

### **default-route-tag** *number*

Synopsis	Route tag for the default route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">default-route-tag</a> <i>number</i>
Tree	<a href="#">default-route-tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **entropy-label**

Synopsis	Enter the <b>entropy-label</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">entropy-label</a>
Tree	<a href="#">entropy-label</a>
Introduced	16.0.R1
Platforms	All

### **override-tunnel-elic** *boolean*

Synopsis	Enable override of received ELC advertisements
----------	--

Context	<b>configure</b> <i>router string isis number entropy-label override-tunnel-etc boolean</i>
Tree	<i>override-tunnel-etc</i>
Default	false
Introduced	16.0.R1
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <i>router string isis number export-limit</i>
Tree	<i>export-limit</i>
Introduced	16.0.R1
Platforms	All

### **log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <i>router string isis number export-limit log-percent number</i>
Tree	<i>log-percent</i>
Range	1 to 100
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <i>router string isis number export-limit number number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**flexible-algorithms**

Synopsis	Enter the <b>flexible-algorithms</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>flexible-algorithms</b>
Tree	<b>flexible-algorithms</b>
Description	Commands in this context configure IS-IS parameters for flexible algorithm participation.
Introduced	20.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>flexible-algorithms</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.

Options	enable, disable
Default	disable
Introduced	20.7.R1
Platforms	All

### **flex-algo** [**flex-algo-id**] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Description	Commands in this context configure an IS-IS flexible algorithm. When flexible algorithm is configured in an IS-IS instance, the IS-IS instance is configured for all levels (Level 1 and Level 2).
Max. Instances	7
Introduced	20.7.R1
Platforms	All

### **[flex-algo-id]** *number*

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

### **advertise** *reference*

Synopsis	Flexible Algorithm Definition advertisement
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>flex-algo</b> <i>number</i> <b>advertise</b> <i>reference</i>
Tree	<b>advertise</b>
Description	This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).

The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.

Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i>
Introduced	20.7.R1
Platforms	All

### loopfree-alternate

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	20.7.R1
Platforms	All

### micro-loop-avoidance

Synopsis	Enable the <b>micro-loop-avoidance</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">micro-loop-avoidance</a>
Tree	<a href="#">micro-loop-avoidance</a>
Introduced	21.7.R1
Platforms	All

### participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <i>number</i> <a href="#">participate</a> <i>boolean</i>
Tree	<a href="#">participate</a>
Description	When configured to <b>true</b> , the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.  When configured to <b>false</b> , flexible algorithm participation is not enabled.
Default	false

Introduced 20.7.R1  
Platforms All

### **graceful-restart**

Synopsis Enable the **graceful-restart** context  
Context **configure** [router](#) *string* [isis](#) *number* [graceful-restart](#)  
Tree [graceful-restart](#)  
Introduced 16.0.R1  
Platforms All

### **helper-mode** *boolean*

Synopsis Enable the Graceful Restart helper for IS-IS  
Context **configure** [router](#) *string* [isis](#) *number* [graceful-restart](#) [helper-mode](#) *boolean*  
Tree [helper-mode](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-authentication** *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets  
Context **configure** [router](#) *string* [isis](#) *number* [hello-authentication](#) *boolean*  
Tree [hello-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-padding** *keyword*

Synopsis IS-IS Hello message padding  
Context **configure** [router](#) *string* [isis](#) *number* [hello-padding](#) *keyword*  
Tree [hello-padding](#)  
Options adaptive, loose, strict, none

Introduced 16.0.R1  
Platforms All

### **ignore-attached-bit** *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs  
Context **configure** **router** *string isis number* **ignore-attached-bit** *boolean*  
Tree [ignore-attached-bit](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **ignore-lsp-errors** *boolean*

Synopsis Ignore LSP packets with errors  
Context **configure** **router** *string isis number* **ignore-lsp-errors** *boolean*  
Tree [ignore-lsp-errors](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **ignore-narrow-metric** *boolean*

Synopsis Ignore links with narrow metrics  
Context **configure** **router** *string isis number* **ignore-narrow-metric** *boolean*  
Tree [ignore-narrow-metric](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **igp-shortcut**

Synopsis Enter the **igp-shortcut** context  
Context **configure** **router** *string isis number* **igp-shortcut**  
Tree [igp-shortcut](#)

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RSVP-TE or SR-TE shortcut
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">igp-shortcut</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **tunnel-next-hop**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">igp-shortcut</a> <b>tunnel-next-hop</b>
Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">igp-shortcut</a> <b>tunnel-next-hop</b> <b>family</b> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

**[family-type]** *keyword*

Synopsis	Address family type for tunnel next hop
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6, srv4, srv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**resolution** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Resolution mode for IGP shortcut tunnels
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution keyword</i>
Tree	<i>resolution</i>
Options	none, filter, any, match-family-ip
Default	none
Introduced	16.0.R1
Platforms	All

**resolution-filter****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution-filter</i>
Tree	<i>resolution-filter</i>
Introduced	16.0.R1
Platforms	All

**rsvp** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp boolean</i>
Tree	<a href="#">rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-te** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution-filter sr-te boolean</i>
Tree	<a href="#">sr-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

**iid-tlv** *boolean*

Synopsis	Use IID TLVs with IS-IS multi-instance
Context	<b>configure</b> <i>router string isis number iid-tlv boolean</i>
Tree	<a href="#">iid-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy** *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>import-policy</b> <i>reference</i>
Tree	<b>import-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**interface** [**interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

**[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adjacency-set** [**id**] *reference*

Synopsis	Add a list entry for <b>adjacency-set</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>interface</b> <i>string</i> <b>adjacency-set</b> <i>reference</i>
Tree	<b>adjacency-set</b>
Introduced	16.0.R1

Platforms All

### [id] reference

Synopsis Adjacency set ID

Context **configure** **router** *string* **isis** *number* **interface** *string* **adjacency-set** *reference*

Tree [adjacency-set](#)

Reference **configure** **router** *string* **isis** *number* **segment-routing** **adjacency-set** *number*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### admin-state keyword

Synopsis Administrative state of the IS-IS interface

Context **configure** **router** *string* **isis** *number* **interface** *string* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms All

### bfd-liveness

Synopsis Enter the **bfd-liveness** context

Context **configure** **router** *string* **isis** *number* **interface** *string* **bfd-liveness**

Tree [bfd-liveness](#)

Description Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.

Introduced 16.0.R1

Platforms All

## ipv4

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv4</a> <a href="#">include-bfd-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">include-bfd-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

## include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv6</a> <a href="#">include-bfd-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">include-bfd-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

**csnp-interval** *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>csnp-interval</b> <i>number</i>
Tree	<b>csnp-interval</b>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**default-instance** *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>default-instance</b> <i>boolean</i>
Tree	<b>default-instance</b>
Default	false
Introduced	16.0.R1
Platforms	All

**flex-algo** [**flex-algo-id**] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Max. Instances	7
Introduced	20.7.R1
Platforms	All

**[flex-algo-id]** *number*

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255

Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

## ipv4-node-sid

Synopsis	Enable the <b>ipv4-node-sid</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i> <b>ipv4-node-sid</b>
Tree	<a href="#">ipv4-node-sid</a>
Introduced	20.7.R1
Platforms	All

## index *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i> <b>ipv4-node-sid</b> <b>index</b> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

## label *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i> <b>ipv4-node-sid</b> <b>label</b> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

## ipv6-node-sid

Synopsis	Enable the <b>ipv6-node-sid</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i> <b>ipv6-node-sid</b>
Tree	<b>ipv6-node-sid</b>
Introduced	20.7.R1
Platforms	All

## index *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i> <b>ipv6-node-sid</b> <b>index</b> <i>number</i>
Tree	<b>index</b>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

## label *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i> <b>ipv6-node-sid</b> <b>label</b> <i>number</i>
Tree	<b>label</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

## hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>interface</i> <i>string</i> <b>hello-authentication</b> <i>boolean</i>
Tree	<b>hello-authentication</b>
Default	true

Introduced 16.0.R1  
Platforms All

### **hello-authentication-key** *string*

Synopsis Authentication key or hash string for Hello PDUs  
Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication-key** *string*  
Tree [hello-authentication-key](#)  
String Length 1 to 366  
Introduced 16.0.R1  
Platforms All

### **hello-authentication-keychain** *reference*

Synopsis Authentication keychain to use for the session  
Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication-keychain** *reference*  
Tree [hello-authentication-keychain](#)  
Reference **configure** [system](#) [security](#) [keychains](#) **keychain** *string*  
Introduced 16.0.R3  
Platforms All

### **hello-authentication-type** *keyword*

Synopsis Hello authentication type  
Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication-type** *keyword*  
Tree [hello-authentication-type](#)  
Options password, message-digest  
Introduced 16.0.R1  
Platforms All

### **hello-padding** *keyword*

Synopsis Padding on IS-IS Hello packets  
Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* **hello-padding** *keyword*

Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **interface-type** *keyword*

Synopsis	Interface type to broadcast, point-to-point, or to be default
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">interface-type</a> <i>keyword</i>
Tree	<a href="#">interface-type</a>
Options	point-to-point, broadcast
Introduced	16.0.R1
Platforms	All

### **ipv4-adjacency-sid**

Synopsis	Enable the <b>ipv4-adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-adjacency-sid</a>
Tree	<a href="#">ipv4-adjacency-sid</a>
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis	Adjacency SID label
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-adjacency-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast** *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-multicast</a> <i>boolean</i>

Tree	<a href="#">ipv4-multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

## ipv4-node-sid

Synopsis	Enable the <b>ipv4-node-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-node-sid</a>
Tree	<a href="#">ipv4-node-sid</a>
Introduced	16.0.R1
Platforms	All

## clear-n-flag *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-node-sid</a> <b>clear-n-flag</b> <i>boolean</i>
Tree	<a href="#">clear-n-flag</a>
Default	false
Introduced	16.0.R1
Platforms	All

## index *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-node-sid</a> <b>index</b> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

## label *number*

Synopsis	Label value for the node SID
----------	------------------------------

Context	<b>configure router string isis number interface string ipv4-node-sid label number</b>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **ipv6-adjacency-sid**

Synopsis	Enable the <b>ipv6-adjacency-sid</b> context
Context	<b>configure router string isis number interface string ipv6-adjacency-sid</b>
Tree	<a href="#">ipv6-adjacency-sid</a>
Introduced	16.0.R1
Platforms	All

### **label number**

Synopsis	Adjacency SID label
Context	<b>configure router string isis number interface string ipv6-adjacency-sid label number</b>
Tree	<a href="#">label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast boolean**

Synopsis	Enable IPv6 multicast routing for the interface
Context	<b>configure router string isis number interface string ipv6-multicast boolean</b>
Tree	<a href="#">ipv6-multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

## ipv6-node-sid

Synopsis	Enable the <b>ipv6-node-sid</b> context
Context	<b>configure</b> <b>router</b> <i>string isis number interface string</i> <b>ipv6-node-sid</b>
Tree	<b>ipv6-node-sid</b>
Introduced	16.0.R1
Platforms	All

## clear-n-flag *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	<b>configure</b> <b>router</b> <i>string isis number interface string</i> <b>ipv6-node-sid</b> <b>clear-n-flag</b> <i>boolean</i>
Tree	<b>clear-n-flag</b>
Default	false
Introduced	16.0.R1
Platforms	All

## index *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <b>router</b> <i>string isis number interface string</i> <b>ipv6-node-sid</b> <b>index</b> <i>number</i>
Tree	<b>index</b>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

## label *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <b>router</b> <i>string isis number interface string</i> <b>ipv6-node-sid</b> <b>label</b> <i>number</i>
Tree	<b>label</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1

Platforms All

### **ipv6-unicast** *boolean*

Synopsis Enable IPv6 unicast routing for the interface  
 Context **configure** *router string isis number interface string ipv6-unicast boolean*  
 Tree [ipv6-unicast](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **level** [[level-number](#)] *keyword*

Synopsis Enter the **level** list instance  
 Context **configure** *router string isis number interface string level keyword*  
 Tree [level](#)  
 Max. Instances 2  
 Introduced 16.0.R1  
 Platforms All

### **[level-number]** *keyword*

Synopsis ISIS protocol level number  
 Context **configure** *router string isis number interface string level keyword*  
 Tree [level](#)  
 Options 1, 2  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **hello-authentication-key** *string*

Synopsis Authentication key for Hello PDUs  
 Context **configure** *router string isis number interface string level keyword hello-authentication-key string*

Tree	<a href="#">hello-authentication-key</a>
Description	This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.  If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **hello-authentication-keychain** *reference*

Synopsis	Authentication keychain to use for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-authentication-keychain</a> <i>reference</i>
Tree	<a href="#">hello-authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **hello-authentication-type** *keyword*

Synopsis	Hello authentication enabled on the context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-authentication-type</a> <i>keyword</i>
Tree	<a href="#">hello-authentication-type</a>
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello <b>authentication-key</b> statement must also be included.
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Interval between Hello messages sent on this level
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-interval</a> <i>number</i>

Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Units	seconds
Default	9
Introduced	16.0.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-multiplier</a> <i>number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	16.0.R1
Platforms	All

### **hello-padding** *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-padding</a> <i>keyword</i>
Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv4 multicast
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">ipv4-multicast-metric</a> <i>number</i>
Tree	<a href="#">ipv4-multicast-metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**ipv6-multicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv6 multicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-multicast-metric</b> <i>number</i>
Tree	<b>ipv6-multicast-metric</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**ipv6-unicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv6 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-unicast-metric</b> <i>number</i>
Tree	<b>ipv6-unicast-metric</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**metric** *number*

Synopsis	IS-IS interface metric applied for IPv4 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Passive interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1

Platforms All

### **priority** *number*

Synopsis Router to become the designated router on a multi-access network

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [priority](#) *number*

Tree [priority](#)

Range 0 to 127

Default 64

Introduced 16.0.R1

Platforms All

### **sd-offset** *number*

Synopsis Value of the signal degrade offset

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [sd-offset](#) *number*

Tree [sd-offset](#)

Range 1 to 16777215

Introduced 16.0.R1

Platforms All

### **sf-offset** *number*

Synopsis Value of the signal fail offset

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [sf-offset](#) *number*

Tree [sf-offset](#)

Range 1 to 16777215

Introduced 16.0.R1

Platforms All

### **level-capability** *keyword*

Synopsis IS-IS levels for this interface

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [level-capability](#) *keyword*

Tree [level-capability](#)

Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>load-balancing-weight</b> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Max. Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate**

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

### **exclude** *boolean*

Synopsis	Enable/disable Loopfree Alternative at interface level.
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b> <b>exclude</b> <i>boolean</i>
Tree	<a href="#">exclude</a>
Default	false
Introduced	16.0.R3
Platforms	All

### **policy-map**

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b> <b>policy-map</b>

Tree	<a href="#">policy-map</a>
Introduced	16.0.R3
Platforms	All

### **route-nh-template** *reference*

Synopsis	Route next hop policy template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a> <a href="#">route-nh-template</a> <i>reference</i>
Tree	<a href="#">route-nh-template</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

### **lsp-pacing-interval** *number*

Synopsis	Interval for sending LSPs from interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **mesh-group**

Synopsis	Enable the <b>mesh-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">mesh-group</a>
Tree	<a href="#">mesh-group</a>
Introduced	16.0.R1
Platforms	All

**blocked**

Synopsis	Prevent the interface from flooding LSPs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">mesh-group</a> <b>blocked</b>
Tree	<a href="#">blocked</a>
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

**value** *number*

Synopsis	Mesh group for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">mesh-group</a> <b>value</b> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 2000000000
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Passive interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">passive</a> <i>boolean</i>
Tree	<a href="#">passive</a>
Default	false
Introduced	16.0.R1
Platforms	All

**retransmit-interval** *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 65535
Units	seconds
Default	5

Introduced 16.0.R1  
 Platforms All

### **sid-protection** *boolean*

Synopsis Allow adjacency SID protection by LFA and remote LFA  
 Context **configure** *router string isis number interface string sid-protection boolean*  
 Tree [sid-protection](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **tag** *number*

Synopsis Route tag for IP address of interface  
 Context **configure** *router string isis number interface string tag number*  
 Tree [tag](#)  
 Range 1 to 4294967295  
 Introduced 16.0.R1  
 Platforms All

### **ipv4-multicast-routing** *keyword*

Synopsis IS-IS topology for IPv4 multicast routing  
 Context **configure** *router string isis number ipv4-multicast-routing keyword*  
 Tree [ipv4-multicast-routing](#)  
 Options false, native, mt  
 Default native  
 Introduced 16.0.R1  
 Platforms All

### **ipv4-routing** *boolean*

Synopsis Support IPv4 routing for IS-IS instance  
 Context **configure** *router string isis number ipv4-routing boolean*

---

Tree	<a href="#">ipv4-routing</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast-routing** *keyword*

Synopsis	Topology to populate the IPv6 multicast RTM
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv6-multicast-routing</a> <i>keyword</i>
Tree	<a href="#">ipv6-multicast-routing</a>
Options	false, native, mt
Introduced	16.0.R1
Platforms	All

### **ipv6-routing** *keyword*

Synopsis	Routing topology for IPv6
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv6-routing</a> <i>keyword</i>
Tree	<a href="#">ipv6-routing</a>
Options	false, native, mt
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp-over-rsvp** *boolean*

Synopsis	Allow LDP over RSVP processing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ldp-sync** *boolean*

Synopsis	Use IGP-LDP synchronization feature on all interfaces participating in IS-IS routing protocol
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ldp-sync</a> <i>boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

**level** [[level-number](#)] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">advertise-router-capability</a> <i>boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true

Introduced	16.0.R1
Platforms	All

### **authentication-key *string***

Synopsis	Authentication key to verify PDUs sent on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.  Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The <b>authentication-type</b> command must also be included.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **authentication-keychain *reference***

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type *keyword***

Synopsis	Authentication type to be used
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">authentication-type</a> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

**bier**

Synopsis	Enter the <b>bier</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">level</a> <a href="#">keyword</a> <a href="#">bier</a>
Tree	<a href="#">bier</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BIER
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">level</a> <a href="#">keyword</a> <a href="#">bier</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**template** *reference*

Synopsis	BIER template name
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">level</a> <a href="#">keyword</a> <a href="#">bier</a> <a href="#">template</a> <a href="#">reference</a>
Tree	<a href="#">template</a>
Reference	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">bier</a> <a href="#">template</a> <a href="#">string</a>
Introduced	16.0.R4
Platforms	All

**csnp-authentication** *boolean*

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">level</a> <a href="#">keyword</a> <a href="#">csnp-authentication</a> <a href="#">boolean</a>
Tree	<a href="#">csnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

**database-export-exclude** *boolean*

Synopsis	Exclude IGP link-state information of a specific IS-IS level from being exported into extended TE-DB
Context	<b>configure</b> <i>router string isis number level keyword database-export-exclude boolean</i>
Tree	<a href="#">database-export-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

**default-ipv4-multicast-metric** *number*

Synopsis	Default metric for IPv4 unicast
Context	<b>configure</b> <i>router string isis number level keyword default-ipv4-multicast-metric number</i>
Tree	<a href="#">default-ipv4-multicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-ipv6-multicast-metric** *number*

Synopsis	Default metric for IPv6 unicast
Context	<b>configure</b> <i>router string isis number level keyword default-ipv6-multicast-metric number</i>
Tree	<a href="#">default-ipv6-multicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-ipv6-unicast-metric** *number*

Synopsis	Default metric for IPv6 unicast
Context	<b>configure</b> <i>router string isis number level keyword default-ipv6-unicast-metric number</i>
Tree	<a href="#">default-ipv6-unicast-metric</a>

---

Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-metric** *number*

Synopsis	Default metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>default-metric</b> <i>number</i>
Tree	<b>default-metric</b>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**external-preference** *number*

Synopsis	External route preference for IS-IS level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>external-preference</b> <i>number</i>
Tree	<b>external-preference</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**hello-authentication** *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>hello-authentication</b> <i>boolean</i>
Tree	<b>hello-authentication</b>
Default	true
Introduced	16.0.R1
Platforms	All

**hello-padding** *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>hello-padding</b> <i>keyword</i>
Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

**loopfree-alternate-exclude** *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>loopfree-alternate-exclude</b> <i>boolean</i>
Tree	<a href="#">loopfree-alternate-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

**lsp-mtu-size** *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>lsp-mtu-size</b> <i>number</i>
Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Units	bytes
Default	1492
Introduced	16.0.R1
Platforms	All

**preference** *number*

Synopsis	External route preference at level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>preference</b> <i>number</i>

---

Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **psnp-authentication** *boolean*

Synopsis	Enable authentication on PSNP IS-IS protocol packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">psnp-authentication</a> <i>boolean</i>
Tree	<a href="#">psnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **wide-metrics-only** *boolean*

Synopsis	Use wide metrics advertisements in the LSPs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">wide-metrics-only</a> <i>boolean</i>
Tree	<a href="#">wide-metrics-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **level-capability** *keyword*

Synopsis	Routing level for instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level-capability</a> <i>keyword</i>
Tree	<a href="#">level-capability</a>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

**link-group** [[link-group-name](#)] *string*

Synopsis	Enter the <b>link-group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i>
Tree	<a href="#">link-group</a>
Introduced	16.0.R1
Platforms	All

**[link-group-name]** *string*

Synopsis	Link group name for the IS-IS protocol
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i>
Tree	<a href="#">link-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

**level** [[level-number](#)] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure router</b> <i>string isis number link-group string level keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**ipv4-multicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 multicast address family
Context	<b>configure router</b> <i>string isis number link-group string level keyword ipv4-multicast-metric-offset number</i>
Tree	<a href="#">ipv4-multicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**ipv4-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 unicast address family
Context	<b>configure router</b> <i>string isis number link-group string level keyword ipv4-unicast-metric-offset number</i>
Tree	<a href="#">ipv4-unicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**ipv6-multicast-metric-offset** *number*

Synopsis	Offset value for the IPv6 multicast address family
Context	<b>configure router</b> <i>string isis number link-group string level keyword ipv6-multicast-metric-offset number</i>
Tree	<a href="#">ipv6-multicast-metric-offset</a>

Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv6 unicast address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-unicast-metric-offset</b> <i>number</i>
Tree	<a href="#">ipv6-unicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **member** [[interface-name](#)] *reference*

Synopsis	Add a list entry for <b>member</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>member</b> <i>reference</i>
Tree	<a href="#">member</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *reference*

Synopsis	Router interface name for this link group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>member</b> <i>reference</i>
Tree	<a href="#">member</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**oper-members** *number*

Synopsis	Minimum number of operational links
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>oper-members</b> <i>number</i>
Tree	<b>oper-members</b>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**revert-members** *number*

Synopsis	Minimum number of operational links to return link group to normal state and remove offsets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>revert-members</b> <i>number</i>
Tree	<b>revert-members</b>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b>
Tree	<b>loopfree-alternate</b>
Introduced	16.0.R1
Platforms	All

**augment-route-table** *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b> <b>augment-route-table</b> <i>boolean</i>
Tree	<b>augment-route-table</b>
Description	When configured to <b>true</b> , this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP. When configured to <b>false</b> , rLFA-specific information is not added to RTM entries.

Default	false
Introduced	19.10.R1
Platforms	All

## exclude

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">exclude</a>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

## prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">exclude</a> <a href="#">prefix-policy</a> <i>reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

## multi-homed-prefix

Synopsis	Enable the <b>multi-homed-prefix</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">multi-homed-prefix</a>
Tree	<a href="#">multi-homed-prefix</a>
Description	Commands in this context enable multihomed prefix LFA for IS-IS routes (IP FRR), SR-ISIS tunnels, and SRv6-ISIS tunnels.

This feature uses the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.

This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of intra-area anycast prefixes.

The computed IP next hop-based backup path is added to IS-IS routes of external /32 prefixes or /128 prefixes and intra-area /32 or /128 anycast prefixes in the RTM if the prefix is not protected by the base LFA or if the user set leaf preference command option is configured to all. The user must enable the **configure routing-options ip-fast-reroute** command to have these backup paths programmed into the FIB in the datapath.

The computed IP next hop or repair tunnel-based backup path is also programmed for:

- SR-ISIS node SID tunnels of external /32 IPv4 prefixes and /128 IPv6 prefixes, and node SID tunnels of intra-area /32 IPv4 anycast prefixes and /128 anycast IPv6 prefixes, in both algorithm 0 and flexible-algorithms
- SRv6-ISIS locator routes and tunnels of external prefixes and of intra-area anycast prefixes of any size, in both algorithm 0 and flexible algorithm numbers.

As a result, an SR-TE LSP, an SR-MPLS policy, or an SRv6 policy which uses an SR-ISIS SID or an SRv6-ISIS SID of those same prefixes in its configured or computed SID list benefits from the multihomed prefix LFA protection.

Once the IP next-hop based multihomed prefix LFA is enabled, the extensions to compute an SR-TE repair tunnel for the multihomed prefix LFA in the case of SR-ISIS and SRv6-ISIS are automatically enabled if the user also enabled TI-LFA or Remote LFA. The computation reuses the SID list of the primary path or of the TI-LFA or Remote LFA backup path of the alternate ABR or ASBR or alternate owner router.

Introduced	22.7.R1
Platforms	All

### **preference** *keyword*

Synopsis	Multihomed prefix LFA backup path preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b> <b>multi-homed-prefix</b> <b>preference</b> <i>keyword</i>
Tree	<a href="#">preference</a>
Options	none, all
Default	none
Introduced	22.7.R1
Platforms	All

**remote-lfa**

Synopsis	Enable the <b>remote-lfa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a>
Tree	<a href="#">remote-lfa</a>
Introduced	16.0.R1
Platforms	All

**max-pq-cost** *number*

Synopsis	Maximum cost of destination node during reverse SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">max-pq-cost</a> <i>number</i>
Tree	<a href="#">max-pq-cost</a>
Max. Range	0 to 4294967295
Default	4261412864
Introduced	16.0.R1
Platforms	All

**node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">node-protect</a>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R4
Platforms	All

**max-pq-nodes** *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF's
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">node-protect</a> <a href="#">max-pq-nodes</a> <i>number</i>
Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R4
Platforms	All

**ti-lfa**

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa</i>
Tree	<a href="#">ti-lfa</a>
Description	Commands in this context enable the use of the Topology-Independent LFA algorithm in the LFA SPF calculation for this IS-IS instance.
Introduced	16.0.R1
Platforms	All

**max-sr-frr-labels** *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa max-sr-frr-labels number</i>
Tree	<a href="#">max-sr-frr-labels</a>
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	16.0.R1
Platforms	All

**max-srv6-frr-sids** *number*

Synopsis	Maximum number of SIDs the TI-LFA backup path can use
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa max-srv6-frr-sids number</i>
Tree	<a href="#">max-srv6-frr-sids</a>
Description	This command configures the maximum number of SRv6 SIDs allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## node-protect

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <b>node-protect</b>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R5
Platforms	All

## **lsp-lifetime** *number*

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>lsp-lifetime</b> <i>number</i>
Tree	<a href="#">lsp-lifetime</a>
Range	350 to 65535
Units	seconds
Default	1200
Introduced	16.0.R1
Platforms	All

## **lsp-minimum-remaining-lifetime** *number*

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>lsp-minimum-remaining-lifetime</b> <i>number</i>
Tree	<a href="#">lsp-minimum-remaining-lifetime</a>
Range	350 to 65535
Units	seconds
Introduced	19.7.R1
Platforms	All

**lsp-mtu-size** *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <i>router string isis number lsp-mtu-size number</i>
Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Units	bytes
Default	1492
Introduced	16.0.R1
Platforms	All

**lsp-refresh**

Synopsis	Enter the <b>lsp-refresh</b> context
Context	<b>configure</b> <i>router string isis number lsp-refresh</i>
Tree	<a href="#">lsp-refresh</a>
Introduced	16.0.R1
Platforms	All

**half-lifetime** *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
Context	<b>configure</b> <i>router string isis number lsp-refresh half-lifetime boolean</i>
Tree	<a href="#">half-lifetime</a>
Default	true
Introduced	16.0.R1
Platforms	All

**interval** *number*

Synopsis	Refresh timer interval
Context	<b>configure</b> <i>router string isis number lsp-refresh interval number</i>
Tree	<a href="#">interval</a>

Range	150 to 65535
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

### **mru-mismatch-detection** *boolean*

Synopsis	Enable detection of MRU mismatch
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>mru-mismatch-detection</b> <i>boolean</i>
Tree	<a href="#">mru-mismatch-detection</a>
Description	<p>When configured to <b>true</b>, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to <b>false</b>, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p>
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multi-topology**

Synopsis	Enable the <b>multi-topology</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>multi-topology</b>
Tree	<a href="#">multi-topology</a>
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast** *boolean*

Synopsis	Support IPv4 topology (MT3)
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multi-topology</a> <b>ipv4-multicast</b> <i>boolean</i>
Tree	<a href="#">ipv4-multicast</a>

Tree	<a href="#">segment-routing</a>
Introduced	16.0.R1
Platforms	All

### **adj-sid-hold** (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <b>adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">adj-sid-hold</a>
Description	<p>This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> <li>• IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.</li> <li>• The adjacency SID hold timer starts.</li> <li>• The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.</li> <li>• If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.</li> <li>• If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.</li> <li>• A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.</li> </ul>
Range	1 to 300
Units	seconds
Options	none

Default	15
Introduced	16.0.R1
Platforms	All

### **adjacency-set** [*id*] *number*

Synopsis	Enter the <b>adjacency-set</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing</b> <b>adjacency-set</b> <i>number</i>
Tree	<b>adjacency-set</b>
Introduced	16.0.R1
Platforms	All

### **[id]** *number*

Synopsis	Identifier for specified adjacency set
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing</b> <b>adjacency-set</b> <i>number</i>

### **family** *keyword*

Synopsis	Address family for the adjacency set
----------	--------------------------------------

Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6
Default	ipv4
Introduced	16.0.R1
Platforms	All

### **parallel** *boolean*

Synopsis	Require all members of the adjacency set to terminate on the same neighboring node
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number parallel boolean</i>
Tree	<i>parallel</i>
Default	true
Introduced	16.0.R1
Platforms	All

### **sid**

Synopsis	Enable the <b>sid</b> context
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number sid</i>
Tree	<i>sid</i>
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis	Adjacency SID label
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number sid label number</i>
Tree	<i>label</i>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

**adjacency-sid**

Synopsis	Enter the <b>adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a>
Tree	<a href="#">adjacency-sid</a>
Introduced	22.7.R1
Platforms	All

**allocate-dual-sids** *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a> <a href="#">allocate-dual-sids</a> <i>boolean</i>
Tree	<a href="#">allocate-dual-sids</a>
Description	<p>When configured to <b>true</b>, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.</p> <p>When configured to <b>false</b>, the router disables the support of two SR-MPLS adjacency SIDs per interface.</p>
Default	false
Introduced	22.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**class-forwarding** *boolean*

Synopsis	Allow CBF with ECMP over RSVP-TE LSPs as IGP shortcuts
----------	--

Context	<b>configure</b> <i>router string isis number segment-routing class-forwarding boolean</i>
Tree	<a href="#">class-forwarding</a>
Description	<p>When configured to <b>true</b>, this command enables Class-Based Forwarding (CBF) with ECMP for SR-ISIS resolved to RSVP-TE LSPs as IGP shortcuts.</p> <p>For CBF with ECMP to be effective, a class forwarding policy must be defined, as well as FC to set associations and RSVP-TE LSPs to set associations.</p> <p>When configured to <b>false</b>, CBF over IGP shortcuts is disabled.</p>
Default	false
Introduced	20.2.R1
Platforms	All

### egress-statistics

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics</i>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

### adj-set *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	<p>When configured to <b>true</b>, this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### adj-sid *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics adj-sid boolean</i>

Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **entropy-label** *boolean*

Synopsis	Enable processing of received ELC signaled in the IGP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">entropy-label</a> <i>boolean</i>
Tree	<a href="#">entropy-label</a>
Introduced	16.0.R1
Platforms	All

### **export-tunnel-table** *keyword*

Synopsis	Tunnel table export policies to export tunneled routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">export-tunnel-table</a> <i>keyword</i>
Tree	<a href="#">export-tunnel-table</a>
Options	ldp
Introduced	16.0.R1
Platforms	All

## ingress-statistics

Synopsis	Enter the <b>ingress-statistics</b> context
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics</i>
Tree	<a href="#">ingress-statistics</a>
Introduced	19.10.R1
Platforms	All

## adj-set *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

## adj-sid *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics adj-sid boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing</b> <b>ingress-statistics</b> <b>node-sid</b> <i>boolean</i>
Tree	<b>node-sid</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **mapping-server**

Synopsis	Enter the <b>mapping-server</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing</b> <b>mapping-server</b>
Tree	<b>mapping-server</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the IS-IS mapping server
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing</b> <b>mapping-server</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **node-sid-map** [*sid-index*] *number*

Synopsis	Enter the <b>node-sid-map</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing</b> <b>mapping-server</b> <b>node-sid-map</b> <i>number</i>
Tree	<b>node-sid-map</b>
Introduced	16.0.R1
Platforms	All

**[sid-index] number**

Synopsis	SID index of a mapping server Prefix-SID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <a href="#">number</a>
Tree	<a href="#">node-sid-map</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**clear-n-flag boolean**

Synopsis	Clear the node-sid flag (N-flag)
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <a href="#">number</a> <a href="#">clear-n-flag</a> <a href="#">boolean</a>
Tree	<a href="#">clear-n-flag</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ip-prefix string**

Synopsis	Prefix of a mapping server Prefix-SID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <a href="#">number</a> <a href="#">ip-prefix</a> <a href="#">string</a>
Tree	<a href="#">ip-prefix</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**level-capability keyword**

Synopsis	Flags to assign in SID Label Binding TLV advertised by Segment Routing Mapping Server
----------	---

Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>mapping-server</i> <i>node-sid-map</i> <i>number</i> <i>level-capability</i> <i>keyword</i>
Tree	<a href="#">level-capability</a>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

### **range** *number*

Synopsis	Range of addresses and their associated prefix SIDs
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>mapping-server</i> <i>node-sid-map</i> <i>number</i> <a href="#">range</a> <i>number</i>
Tree	<a href="#">range</a>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **set-flags**

Synopsis	Enter the <b>set-flags</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>mapping-server</i> <i>node-sid-map</i> <i>number</i> <a href="#">set-flags</a>
Tree	<a href="#">set-flags</a>
Introduced	16.0.R1
Platforms	All

### **bit-s** *boolean*

Synopsis	SID Label Binding TLV to be flooded across the entire routing domain
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing</i> <i>mapping-server</i> <i>node-sid-map</i> <i>number</i> <a href="#">set-flags</a> <a href="#">bit-s</a> <i>boolean</i>
Tree	<a href="#">bit-s</a>
Default	false
Introduced	16.0.R1

Platforms All

### maximum-sid-depth

Synopsis Enter the **maximum-sid-depth** context

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#)

Tree [maximum-sid-depth](#)

Introduced 20.2.R1

Platforms All

### override-bmi *number*

Synopsis Value to override the announced node MSD-BMI value

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#) [override-bmi](#) *number*

Tree [override-bmi](#)

Description This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.

When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.

Range 0 to 12

Introduced 20.2.R1

Platforms All

### override-erld *number*

Synopsis Value to override the announced node MSD-ERLD value

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#) [override-erld](#) *number*

Tree [override-erld](#)

Description This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.

When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.

Range	0 to 15
Introduced	20.2.R1
Platforms	All

### micro-loop-avoidance

Synopsis	Enable the <b>micro-loop-avoidance</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">micro-loop-avoidance</a>
Tree	<a href="#">micro-loop-avoidance</a>
Introduced	19.10.R1
Platforms	All

### fib-delay *number*

Synopsis	FIB delay before programming new primary next-hops
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">micro-loop-avoidance</a> <a href="#">fib-delay</a> <i>number</i>
Tree	<a href="#">fib-delay</a>
Description	This command specifies the delay time before programming the new next-hops for the SR tunnel.
Range	1 to 300
Units	deciseconds
Default	15
Introduced	19.10.R1
Platforms	All

### prefix-sid-range

Synopsis	Enable the <b>prefix-sid-range</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">prefix-sid-range</a>
Tree	<a href="#">prefix-sid-range</a>
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	16.0.R1
Platforms	All

## global

Synopsis	BGP global SR range allocation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">prefix-sid-range</a> <a href="#">global</a>
Tree	<a href="#">global</a>
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the <b>configure router mpls-labels sr-labels</b> context.
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## max-index *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">prefix-sid-range</a> <a href="#">max-index</a> <i>number</i>
Tree	<a href="#">max-index</a>
Range	0 to 524287
Default	1
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## start-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">prefix-sid-range</a> <a href="#">start-label</a> <i>number</i>
Tree	<a href="#">start-label</a>
Range	0 to 524287
Default	0

Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

### **srlb reference**

Synopsis	Segment routing local block
Context	<b>configure router string isis number segment-routing srlb reference</b>
Tree	<a href="#">srlb</a>
Reference	<b>configure router string mpls-labels reserved-label-block string</b>
Introduced	16.0.R1
Platforms	All

### **tunnel-mtu number**

Synopsis	Tunnel MTU size
Context	<b>configure router string isis number segment-routing tunnel-mtu number</b>
Tree	<a href="#">tunnel-mtu</a>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref number**

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure router string isis number segment-routing tunnel-table-pref number</b>
Tree	<a href="#">tunnel-table-pref</a>
Description	This command configures the TTM preference of SR tunnels created by the IGP instance. This is used in the case of BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the new tunnel binding commands are configured to the <b>any</b> value which parses the TTM for tunnels in the protocol preference order. The user can choose to either go with the global TTM preference or list explicitly the tunnel types they want to use. When they list the tunnel types explicitly, the TTM preference will still be used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected one fails. Also, a reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to TTM a SR tunnel entry for each resolved remote node SID prefix and programs the data path with the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the setting of the default preference of the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as **SR-ISIS** and **SR-OSPF**).

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8
- ROUTE\_PREF\_LDP 9
- ROUTE\_PREF\_OSPF\_TTM 10
- ROUTE\_PREF\_ISIS\_TTM 11
- ROUTE\_PREF\_BGP\_TTM 12
- ROUTE\_PREF\_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-ISIS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on lowest IGP instance-id.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	11
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

Synopsis	Enter the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string isis number</i> <b>segment-routing-v6</b>
Tree	<b>segment-routing-v6</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <i>router string isis number</i> <b>segment-routing-v6 adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">adj-sid-hold</a>
Description	<p>This command specifies the length of time the system holds the SRv6 adjacency route and tunnel entries programmed in datapath while the adjacency is down.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> <li>• IGP withdraws the advertisement of the link TLV as well as its SRv6 End.X SID sub-TLV</li> <li>• The adjacency SID hold timer starts.</li> <li>• The route table, FIB, and tunnel table entries are kept for as long as the adjacency SID hold timer is running. This allows packets to flow over the LFA backup path, if the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of a SRv6 policy after IGP converges.</li> <li>• If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change when a new LFA SPF is run while the adjacency SID hold timer is running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID value.</li> <li>• If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the SID value returned into the locator subnet where it was drawn from. Users of the adjacency (for example, SRv6 policy) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static SID value or a new dynamic SID value.</li> <li>• A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by tunnel of the local adjacency SID and of all remote locator routes that resolve to a next hop over this adjacency.</li> </ul> <p>Each IS-IS instance runs a single timer per adjacency that IPv4 SR-MPLS, IPv6 SR-MPLS, and SRv6 adjacency SIDs share. When you enable both SR-MPLS (<b>configure router isis segment-routing</b>) and SRv6 (<b>configure router isis segment-routing-v6</b>) in the IS-IS instance, the system programs the higher of the two timer values for all SIDs on the adjacency.</p>
Range	1 to 300
Units	seconds
Options	none
Default	15
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**admin-state** *keyword*

Synopsis	Administrative state of segment routing SRv6
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**locator** [**locator-name**] *reference*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>locator</b> <i>reference</i>
Tree	<b>locator</b>
Description	This command adds a reference to a locator for each algorithm in this IS-IS instance. The same algorithm locator can be shared with other IGP instances and BGP instances in IP-VPN or EVPN.
Max. Instances	8
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[locator-name]** *reference*

Synopsis	Locator name
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>locator</b> <i>reference</i>
Tree	<b>locator</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**level** [**level-number**] *keyword*

Synopsis	Enter the <b>level</b> list instance
----------	--------------------------------------

Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference level keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference level keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **metric** *number*

Synopsis	IS-IS metric to advertise in the locator level list
Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference level keyword metric number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **level-capability** *keyword*

Synopsis	IS-IS routing level capability
Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference level-capability keyword</i>
Tree	<a href="#">level-capability</a>
Description	This command configures the routing level capability for an instance of the IS-IS routing process.

The level capability configured on the instance must match the level capability on the interface to form an adjacency.

Options	1, 2, 1/2
Default	1/2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## multi-topology

Synopsis	Enter the <b>multi-topology</b> context
Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference multi-topology</i>
Tree	<a href="#">multi-topology</a>
Description	<p>Commands in this context enable the use of a local SRv6 locator in an IS-IS IPv6 topology. A user can enable one or more locators in an IS-IS instance. Each locator can be enabled in a single topology of an IS-IS instance, topology 0 (MT0) or topology 2 (MT2). A local locator can be used in multiple IS-IS instances, but can only be assigned to at most one IPv6 topology independently within each IS-IS instance.</p> <p>Use the <b>configure router isis segment-routing-v6 admin-state</b> command to enable the processing of local and remote IPv6 prefixes and SRv6 locators in MT0 and MT2. In addition, to enable SRv6 forwarding in the MT0, MT2, or both topologies, set the <b>configure router isis ipv6-routing</b> command to <b>native</b>, the <b>configure router isis multi-topology ipv6-unicast</b> command to <b>true</b>, or both.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## mt0 boolean

Synopsis	Support standard topology (MT0)
Context	<b>configure</b> <i>router string isis number segment-routing-v6 locator reference multi-topology mt0 boolean</i>
Tree	<a href="#">mt0</a>
Default	true
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## mt2 boolean

Synopsis	Support IPv6 routing topology (MT2)
----------	-------------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing-v6</i> <i>locator</i> <i>reference</i> <i>multi-topology</i> <i>mt2</i> <i>boolean</i>
Tree	<i>mt2</i>
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**tag** *number*

Synopsis	Route tag to advertise in the locator
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing-v6</i> <i>locator</i> <i>reference</i> <i>tag</i> <i>number</i>
Tree	<i>tag</i>
Range	1 to 4294967295
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**micro-segment-locator** [*locator-name*] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing-v6</i> <i>micro-segment-locator</i> <i>reference</i>
Tree	<i>micro-segment-locator</i>
Max. Instances	8
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[locator-name]** *reference*

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>segment-routing-v6</i> <i>micro-segment-locator</i> <i>reference</i>
Tree	<i>micro-segment-locator</i>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment-locator</i> <i>string</i>
Notes	This element is part of a list key.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **level** [[level-number](#)] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **metric** *number*

Synopsis	IS-IS metric to advertise in the locator level list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**level-capability** *keyword*

Synopsis	IS-IS routing level capability
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>micro-segment-locator</b> <i>reference</i> <b>level-capability</b> <i>keyword</i>
Tree	<b>level-capability</b>
Description	This command configures the routing level capability for an instance of the IS-IS routing process.  The level capability configured on the instance must match the level capability on the interface to form an adjacency.
Options	1, 2, 1/2
Default	1/2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**multi-topology**

Synopsis	Enter the <b>multi-topology</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>micro-segment-locator</b> <i>reference</i> <b>multi-topology</b>
Tree	<b>multi-topology</b>
Description	Commands in this context enable the use of a local SRv6 locator in an IS-IS IPv6 topology. A user can enable one or more locators in an IS-IS instance. Each locator can be enabled in a single topology of an IS-IS instance, topology 0 (MT0) or topology 2 (MT2). A local locator can be used in multiple IS-IS instances, but can only be assigned to at most one IPv6 topology independently within each IS-IS instance.  Use the <b>configure router isis segment-routing-v6 admin-state</b> command to enable the processing of local and remote IPv6 prefixes and SRv6 locators in MT0 and MT2. In addition, to enable SRv6 forwarding in the MT0, MT2, or both topologies, set the <b>configure router isis ipv6-routing</b> command to <b>native</b> , the <b>configure router isis multi-topology ipv6-unicast</b> command to <b>true</b> , or both.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**mt0** *boolean*

Synopsis	Support standard topology (MT0)
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>segment-routing-v6</b> <b>micro-segment-locator</b> <i>reference</i> <b>multi-topology</b> <b>mt0</b> <i>boolean</i>
Tree	<b>mt0</b>

Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**mt2 boolean**

Synopsis	Support IPv6 routing topology (MT2)
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <a href="#">reference</a> <a href="#">multi-topology</a> <b>mt2</b> <i>boolean</i>
Tree	<a href="#">mt2</a>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**tag number**

Synopsis	Route tag to advertise in the locator
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <a href="#">reference</a> <b>tag</b> <i>number</i>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**standard-multi-instance boolean**

Synopsis	Enable RFC standards compliant multi-instance behavior
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">standard-multi-instance</a> <i>boolean</i>
Tree	<a href="#">standard-multi-instance</a>
Default	false
Introduced	16.0.R1
Platforms	All

**strict-adjacency-check boolean**

Synopsis	Enable strict checking of address families for IS-IS adjacencies
----------	--

Context	<b>configure</b> <i>router string isis number strict-adjacency-check boolean</i>
Tree	<a href="#">strict-adjacency-check</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **summary-address** [[ip-prefix](#)] (*ipv4-prefix | ipv6-prefix*)

Synopsis	Enter the <b>summary-address</b> list instance
Context	<b>configure</b> <i>router string isis number summary-address (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">summary-address</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP prefix for the summary address
Context	<b>configure</b> <i>router string isis number summary-address (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">summary-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **algorithm** *number*

Synopsis	Algorithm topology for the summary address
Context	<b>configure</b> <i>router string isis number summary-address (ipv4-prefix   ipv6-prefix) algorithm number</i>
Tree	<a href="#">algorithm</a>
Range	0   128 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**level-capability** *keyword*

Synopsis	IS-IS level for the summary address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>summary-address</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>level-capability</b> <i>keyword</i>
Tree	<b>level-capability</b>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

**route-tag** *number*

Synopsis	Route tag assigned to the summary address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>summary-address</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-tag</b> <i>number</i>
Tree	<b>route-tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**suppress-attached-bit** *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>suppress-attached-bit</b> <i>boolean</i>
Tree	<b>suppress-attached-bit</b>
Default	false
Introduced	16.0.R1
Platforms	All

**system-id** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	System ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">system-id</a> <i>string</i>
Tree	<a href="#">system-id</a>
String Length	14
Default	0000.0000.0000
Introduced	16.0.R1
Platforms	All

**timers**

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R1
Platforms	All

**lsp-wait**

Synopsis	Enter the <b>lsp-wait</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a>
Tree	<a href="#">lsp-wait</a>
Introduced	16.0.R1
Platforms	All

**lsp-initial-wait** *number*

Synopsis	Initial LSP generation delay
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-initial-wait</a> <i>number</i>
Tree	<a href="#">lsp-initial-wait</a>
Range	10 to 100000
Units	milliseconds
Default	10

---

Introduced	16.0.R1
Platforms	All

### **lsp-max-wait** *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-max-wait</a> <i>number</i>
Tree	<a href="#">lsp-max-wait</a>
Range	10 to 120000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

### **lsp-second-wait** *number*

Synopsis	Delay between first and second LSP generation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-second-wait</a> <i>number</i>
Tree	<a href="#">lsp-second-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

### **spf-wait**

Synopsis	Enter the <b>spf-wait</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">spf-wait</a>
Tree	<a href="#">spf-wait</a>
Introduced	16.0.R1
Platforms	All

**spf-initial-wait** *number*

Synopsis	Initial SPF calculation delay after topology change
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>timers</b> <b>spf-wait</b> <b>spf-initial-wait</b> <i>number</i>
Tree	<b>spf-initial-wait</b>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**spf-max-wait** *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>timers</b> <b>spf-wait</b> <b>spf-max-wait</b> <i>number</i>
Tree	<b>spf-max-wait</b>
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

**spf-second-wait** *number*

Synopsis	Hold time between first and second SPF calculations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>timers</b> <b>spf-wait</b> <b>spf-second-wait</b> <i>number</i>
Tree	<b>spf-second-wait</b>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

**traffic-engineering** *boolean*

Synopsis	Enable traffic engineering for the router
----------	---

Context	<b>configure</b> <i>router string isis number traffic-engineering boolean</i>
Tree	<a href="#">traffic-engineering</a>
Default	false
Introduced	16.0.R1
Platforms	All

### traffic-engineering-options

Synopsis	Enter the <b>traffic-engineering-options</b> context
Context	<b>configure</b> <i>router string isis number traffic-engineering-options</i>
Tree	<a href="#">traffic-engineering-options</a>
Introduced	19.10.R1
Platforms	All

### advertise-delay *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	<b>configure</b> <i>router string isis number traffic-engineering-options advertise-delay boolean</i>
Tree	<a href="#">advertise-delay</a>
Description	<p>When configured to <b>true</b>, the router advertises link delay in the IGP LSDB within legacy Traffic Engineering (TE) attributes in IS-IS or within the Application-Specific Link Attribute (ASLA) when ASLA is enabled for SR-TE or RSVP-TE applications.</p> <p>When the <b>application-link-attributes legacy</b> command is configured for SR-TE or RSVP-TE, link delay is advertised as a legacy TE TLV with the ASLA legacy bit set.</p> <p>When configured to <b>false</b>, the router disables link delay advertisement.</p>
Default	false
Introduced	22.10.R1
Platforms	All

### application-link-attributes

Synopsis	Enable the <b>application-link-attributes</b> context
Context	<b>configure</b> <i>router string isis number traffic-engineering-options application-link-attributes</i>
Tree	<a href="#">application-link-attributes</a>
Introduced	19.10.R1
Platforms	All

**legacy** *boolean*

Synopsis	Advertise legacy TE attributes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">traffic-engineering-options</a> <a href="#">application-link-attributes</a> <b>legacy</b> <i>boolean</i>
Tree	<a href="#">legacy</a>
Description	When configured to <b>true</b> , the router supports the legacy mode of advertising TE attributes. When configured to <b>false</b> , legacy mode is disabled.
Default	false
Introduced	19.10.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Advertise IS-IS IPv6 Traffic Engineering
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">traffic-engineering-options</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.10.R1
Platforms	All

**unicast-import**

Synopsis	Enter the <b>unicast-import</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <b>unicast-import</b>
Tree	<a href="#">unicast-import</a>
Introduced	16.0.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Submit IPv4 routes into unicast RTM
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">unicast-import</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	true

Introduced 16.0.R1  
Platforms All

### **ipv6** *boolean*

Synopsis Submit IPv6 routes into unicast RTM  
Context **configure** *router string isis number unicast-import ipv6 boolean*  
Tree [ipv6](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **l2tp**

Synopsis Enter the **l2tp** context  
Context **configure** *router string l2tp*  
Tree [l2tp](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of L2TP  
Context **configure** *router string l2tp admin-state keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding** *keyword*

Synopsis Attribute of the Value Pair (AVP) hiding algorithm  
Context **configure** *router string l2tp avp-hiding keyword*  
Tree [avp-hiding](#)

---

Options	sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge** *boolean*

Synopsis	Use challenge-response authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>challenge</b> <i>boolean</i>
Tree	<b>challenge</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>destruct-timeout</b> <i>number</i>
Tree	<b>destruct-timeout</b>
Range	60 to 86400
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet-tunnel**

Synopsis	Enter the <b>ethernet-tunnel</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>ethernet-tunnel</b>
Tree	<b>ethernet-tunnel</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reconnect-timeout** (*number* | *keyword*)

Synopsis	Timeout for a session setup retry
----------	-----------------------------------

Context	<b>configure</b> <i>router string l2tp ethernet-tunnel reconnect-timeout</i> ( <i>number   keyword</i> )
Tree	<a href="#">reconnect-timeout</a>
Range	10 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### exclude-avps

Synopsis	Enter the <b>exclude-avps</b> context
Context	<b>configure</b> <i>router string l2tp exclude-avps</i>
Tree	<a href="#">exclude-avps</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### calling-number *boolean*

Synopsis	Calling Number AVP to exclude
Context	<b>configure</b> <i>router string l2tp exclude-avps calling-number boolean</i>
Tree	<a href="#">calling-number</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### initial-rx-lcp-conf-req *boolean*

Synopsis	Exclude the Initial Received LCP CONFREQ AVP
Context	<b>configure</b> <i>router string l2tp exclude-avps initial-rx-lcp-conf-req boolean</i>
Tree	<a href="#">initial-rx-lcp-conf-req</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-max-session-lifetime *number*

Synopsis	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">recovery-max-session-lifetime</a> <i>number</i>
Tree	<a href="#">recovery-max-session-lifetime</a>
Range	2 to 4294967295
Units	centiseconds
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">recovery-method</a> <i>keyword</i>
Tree	<a href="#">recovery-method</a>
Options	mcs, recovery-tunnel
Default	mcs
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">recovery-time</a> <i>number</i>
Tree	<a href="#">recovery-time</a>

Range	0 to 900
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** [*id*] *reference*

Synopsis	Enter the <b>track-srrp</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp failover track-srrp reference</a>
Tree	<a href="#">track-srrp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[id]** *reference*

Synopsis	SRRP instance ID for multi-chassis redundancy failover
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp failover track-srrp reference</a>
Tree	<a href="#">track-srrp</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync track-srrp number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** *reference*

Synopsis	Multi-chassis peer address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp failover track-srrp reference peer reference</a>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sync-tag** *string*

Synopsis	Synchronization tag on the multi-chassis peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>failover</b> <b>track-srrp</b> <i>reference</i> <b>sync-tag</b> <i>string</i>
Tree	<b>sync-tag</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**group** [**tunnel-group-name**] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[tunnel-group-name]** *string*

Synopsis	Tunnel group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the L2TP tunnel group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding** *keyword*

Synopsis The AVP hiding algorithm  
Context **configure** *router string l2tp group string avp-hiding keyword*  
Tree [avp-hiding](#)  
Options never, sensitive, always  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge** *keyword*

Synopsis Enable use of challenge-response authentication  
Context **configure** *router string l2tp group string challenge keyword*  
Tree [challenge](#)  
Options false, true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description  
Context **configure** *router string l2tp group string description string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis Destruction timeout  
Context **configure** *router string l2tp group string destruct-timeout number*  
Tree [destruct-timeout](#)

Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet-tunnel

Synopsis	Enter the <b>ethernet-tunnel</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ethernet-tunnel</a>
Tree	<a href="#">ethernet-tunnel</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## reconnect-timeout (*number* | *keyword*)

Synopsis	Timeout for a session setup retry at group level
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ethernet-tunnel</a> <a href="#">reconnect-timeout</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">reconnect-timeout</a>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
----------	--

Context	<b>configure</b> <i>router string l2tp group string failover recovery-method keyword</i>
Tree	<a href="#">recovery-method</a>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-time** *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <i>router string l2tp group string failover recovery-time number</i>
Tree	<a href="#">recovery-time</a>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hello-interval** (*number | keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <i>router string l2tp group string hello-interval (number   keyword)</i>
Tree	<a href="#">hello-interval</a>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number | keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <i>router string l2tp group string idle-timeout (number   keyword)</i>
Tree	<a href="#">idle-timeout</a>
Range	0 to 3600
Units	seconds
Options	infinite

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **I2tpv3**

Synopsis	Enter the <b>I2tpv3</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">I2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">I2tpv3</a>
Tree	<a href="#">I2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **cookie-length** (*number* | *keyword*)

Synopsis	Cookie field length
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">I2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">I2tpv3</a> <a href="#">cookie-length</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cookie-length</a>
Range	4   8
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **digest-type** *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">I2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">I2tpv3</a> <a href="#">digest-type</a> <i>keyword</i>
Tree	<a href="#">digest-type</a>
Options	none, md5, sha1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **nonce-length** *number*

Synopsis	Length for the local L2TPv3 nonce (random number)
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">I2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">I2tpv3</a> <a href="#">nonce-length</a> <i>number</i>
Tree	<a href="#">nonce-length</a>

Range	0   16 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	L2TPv3 password
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">l2tpv3</a> <a href="#">password</a> <i>string</i>
Tree	<a href="#">password</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">l2tpv3</a> <a href="#">private-tcp-mss-adjust</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP Maximum Segment Size (MSS) on public network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">l2tpv3</a> <a href="#">public-tcp-mss-adjust</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pw-cap-list

Synopsis Enter the **pw-cap-list** context

Context **configure** [router](#) [string l2tp group](#) [string l2tpv3](#) [pw-cap-list](#)

Tree [pw-cap-list](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Advertise Ethernet pseudowire type

Context **configure** [router](#) [string l2tp group](#) [string l2tpv3](#) [pw-cap-list](#) [ethernet](#) *boolean*

Tree [ethernet](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet-vlan *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Advertise Ethernet VLAN pseudowire type

Context **configure** [router](#) [string l2tp group](#) [string l2tpv3](#) [pw-cap-list](#) [ethernet-vlan](#) *boolean*

Tree [ethernet-vlan](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rem-router-id** *string*

Synopsis	Filter on remote router ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>l2tpv3</b> <b>rem-router-id</b> <i>string</i>
Tree	<b>rem-router-id</b>
Default	0.0.0.0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**track-password-change** *boolean*

Synopsis	Enable tracking of password changes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>l2tpv3</b> <b>track-password-change</b> <i>boolean</i>
Tree	<b>track-password-change</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**lac**

Synopsis	Enter the <b>lac</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>lac</b>
Tree	<b>lac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**df-bit** *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>lac</b> <b>df-bit</b> <i>keyword</i>
Tree	<b>df-bit</b>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Ins

Synopsis	Enter the <b>Ins</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">Ins</a>
Tree	<a href="#">Ins</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Ins-group *reference*

Synopsis	ISA LNS group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">Ins</a> <a href="#">Ins-group</a> <i>reference</i>
Tree	<a href="#">Ins-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">Ins-group</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">Ins</a> <a href="#">load-balance-method</a> <i>keyword</i>
Tree	<a href="#">load-balance-method</a>
Options	per-session, per-tunnel
Default	per-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mlppp

Synopsis	Enter the <b>mlppp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">Ins</a> <a href="#">mlppp</a>
Tree	<a href="#">mlppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel group
Context	<b>configure</b> <b>router</b> <i>string l2tp group string lns mlppp admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <b>router</b> <i>string l2tp group string lns mlppp endpoint</i>
Tree	<a href="#">endpoint</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	<b>configure</b> <b>router</b> <i>string l2tp group string lns mlppp endpoint ip (ipv4-address   keyword)</i>
Tree	<a href="#">ip</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**mac** (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <b>router</b> <i>string l2tp group string lns mlppp endpoint mac (mac-address   keyword)</i>
Tree	<a href="#">mac</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **interleave** *boolean*

Synopsis Enable link fragmentation and interleaving  
Context **configure** *router string l2tp group string lns mlppp interleave boolean*  
Tree [interleave](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-fragment-delay** (*number | keyword*)

Synopsis Maximum fragment delay caused by transmission on a link  
Context **configure** *router string l2tp group string lns mlppp max-fragment-delay (number | keyword)*  
Tree [max-fragment-delay](#)  
Range 5 to 1000  
Units milliseconds  
Options no-fragmentation  
Default no-fragmentation  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis Maximum MLPPP links  
Context **configure** *router string l2tp group string lns mlppp max-links number*  
Tree [max-links](#)  
Range 1 to 8  
Default 1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**reassemble-timeout** *number*

Synopsis	Reassembly timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>lns</b> <b>mlppp</b> <b>reassemble-timeout</b> <i>number</i>
Tree	<a href="#">reassemble-timeout</a>
Range	100   1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**short-sequence-numbers** *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>lns</b> <b>mlppp</b> <b>short-sequence-numbers</b> <i>boolean</i>
Tree	<a href="#">short-sequence-numbers</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**ppp**

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>lns</b> <b>ppp</b>
Tree	<a href="#">ppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**authentication** *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>lns</b> <b>ppp</b> <b>authentication</b> <i>keyword</i>
Tree	<a href="#">authentication</a>
Options	pap, chap, pref-chap, pref-pap
Default	pref-chap
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authentication-policy** *string*

Synopsis Authentication policy when a DHCP message is received  
 Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp authentication-policy](#) *string*  
 Tree [authentication-policy](#)  
 String Length 1 to 32  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **chap-challenge-length**

Synopsis Enter the **chap-challenge-length** context  
 Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp chap-challenge-length](#)  
 Tree [chap-challenge-length](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end** *number*

Synopsis Upper bound of the PPP CHAP challenge length  
 Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp chap-challenge-length](#) *end number*  
 Tree [end](#)  
 Range 8 to 64  
 Units octets  
 Default 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **start** *number*

Synopsis Lower bound of the PPP CHAP challenge length  
 Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp chap-challenge-length](#) *start number*  
 Tree [start](#)

Range	8 to 64
Units	octets
Default	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-group-interface**

Synopsis	Enter the <b>default-group-interface</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a>
Tree	<a href="#">default-group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** *string*

Synopsis	Group interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a> <a href="#">service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipcp-subnet-negotiation** *boolean*

Synopsis	Allow IPCP subnet negotiation for PPPoE hosts
----------	---

---

Context	<b>configure</b> <i>router string l2tp group string lns ppp ipcp-subnet-negotiation boolean</i>
Tree	<a href="#">ipcp-subnet-negotiation</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## keepalive

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <i>router string l2tp group string lns ppp keepalive</i>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interval *number*

Synopsis	PPP keepalive interval
Context	<b>configure</b> <i>router string l2tp group string lns ppp keepalive interval number</i>
Tree	<a href="#">interval</a>
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multiplier *number*

Synopsis	PPP keepalive multiplier
Context	<b>configure</b> <i>router string l2tp group string lns ppp keepalive multiplier number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-force-ack-accm** *boolean*

Synopsis	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>lcp-force-ack-accm</b> <i>boolean</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-ignore-magic-numbers** *boolean*

Synopsis	Check magic number in echo request and reply messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>lcp-ignore-magic-numbers</b> <i>boolean</i>
Tree	<a href="#">lcp-ignore-magic-numbers</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu** *number*

Synopsis	Maximum PPP MTU size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>mtu</b> <i>number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Units	octets
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-authentication** *boolean*

Synopsis	Use authentication AVPs that are received from LAC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>proxy-authentication</b> <i>boolean</i>
Tree	<a href="#">proxy-authentication</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-lcp** *boolean*

Synopsis	Proxy LCP AVPs that are received from LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">proxy-lcp</a> <i>boolean</i>
Tree	<a href="#">proxy-lcp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**reject-disabled-ncp** *boolean*

Synopsis	Force LCP Protocol Reject for IPv6CP Configure Request
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">reject-disabled-ncp</a> <i>boolean</i>
Tree	<a href="#">reject-disabled-ncp</a>
Default	false
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**user-db** *string*

Synopsis	Local user database for PPP PAP and CHAP authentication
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">user-db</a> <i>string</i>
Tree	<a href="#">user-db</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**local-address** *string*

Synopsis	Local address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">local-address</a> <i>string</i>

---

Tree	<a href="#">local-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name** *string*

Synopsis	Local host name used to distinguish tunnels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">local-name</a> <i>string</i>
Tree	<a href="#">local-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab** *number*

Synopsis	Maximum retries for established tunnels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">max-retries-estab</a> <i>number</i>
Tree	<a href="#">max-retries-estab</a>
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis	Maximum retries for unestablished tunnels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">max-retries-not-estab</a> <i>number</i>
Tree	<a href="#">max-retries-not-estab</a>
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	Password between L2TP LAC and LNS
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">password</a> <i>string</i>

Tree	<a href="#">password</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **protocol** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Protocol version
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">protocol</a> <i>keyword</i>
Tree	<a href="#">protocol</a>
Options	v2, v3, v3draft
Default	v2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">radius-accounting-policy</a> <i>reference</i>
Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">receive-window-size</a> <i>number</i>
Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-assign-method** *keyword*

Synopsis	Session assignment method
Context	<b>configure</b> <i>router string l2tp group string session-assign-method keyword</i>
Tree	<a href="#">session-assign-method</a>
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit** (*number | keyword*)

Synopsis	Session limit
Context	<b>configure</b> <i>router string l2tp group string session-limit (number   keyword)</i>
Tree	<a href="#">session-limit</a>
Range	1 to 250000
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tunnel** [*tunnel-name*] *string*

Synopsis	Enter the <b>tunnel</b> list instance
Context	<b>configure</b> <i>router string l2tp group string tunnel string</i>
Tree	<a href="#">tunnel</a>
Max. Instances	31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[tunnel-name]** *string*

Synopsis	Tunnel name
Context	<b>configure</b> <i>router string l2tp group string tunnel string</i>
Tree	<a href="#">tunnel</a>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the L2TP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-establish** *boolean*

Synopsis	Allow the tunnel to be automatically set up by the system
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>auto-establish</b> <i>boolean</i>
Tree	<b>auto-establish</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding** *keyword*

Synopsis	The AVP hiding algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>avp-hiding</b> <i>keyword</i>
Tree	<b>avp-hiding</b>
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge** *keyword*

Synopsis	Enable use of challenge-response authentication
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">challenge</a> <i>keyword</i>
Tree	<a href="#">challenge</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">destruct-timeout</a> <i>number</i>
Tree	<a href="#">destruct-timeout</a>
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**recovery-method** *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>failover</b> <b>recovery-method</b> <i>keyword</i>
Tree	<b>recovery-method</b>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**recovery-time** *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>failover</b> <b>recovery-time</b> <i>number</i>
Tree	<b>recovery-time</b>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>hello-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>hello-interval</b>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>idle-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>idle-timeout</b>
Range	0 to 3600

Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## I2tpv3

Synopsis	Enter the <b>I2tpv3</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">I2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">I2tpv3</a>
Tree	<a href="#">I2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## private-tcp-mss-adjust (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">I2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">I2tpv3</a> <a href="#">private-tcp-mss-adjust</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## public-tcp-mss-adjust (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">I2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">I2tpv3</a> <a href="#">public-tcp-mss-adjust</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lac

Synopsis Enter the **lac** context

Context **configure** *router string l2tp group string tunnel string lac*

Tree [lac](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## df-bit keyword

Synopsis DF (do not fragment) bit in data traffic transmitted as LAC

Context **configure** *router string l2tp group string tunnel string lac df-bit keyword*

Tree [df-bit](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lns

Synopsis Enter the **lns** context

Context **configure** *router string l2tp group string tunnel string lns*

Tree [lns](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lns-group reference

Synopsis ISA LNS group

Context **configure** *router string l2tp group string tunnel string lns lns-group reference*

Tree [lns-group](#)

Reference **configure** *isa lns-group number*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**load-balance-method** *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>load-balance-method</b> <i>keyword</i>
Tree	<b>load-balance-method</b>
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mlppp**

Synopsis	Enter the <b>mlppp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b>
Tree	<b>mlppp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>endpoint</b>
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp endpoint ip</b> ( <i>ipv4-address</i>   <i>keyword</i> )
Tree	<a href="#">ip</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**mac** (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp endpoint mac</b> ( <i>mac-address</i>   <i>keyword</i> )
Tree	<a href="#">mac</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**interleave** *keyword*

Synopsis	Use of Link fragmentation and interleaving
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp interleave</b> <i>keyword</i>
Tree	<a href="#">interleave</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**max-fragment-delay** *number*

Synopsis	Maximum fragment delay caused by transmission on a link
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp max-fragment-delay</b> <i>number</i>
Tree	<a href="#">max-fragment-delay</a>

Range	5 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis	Maximum MLPPP links
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <b>max-links</b> <i>number</i>
Tree	<a href="#">max-links</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **reassemble-timeout** *number*

Synopsis	Reassembly timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <b>reassemble-timeout</b> <i>number</i>
Tree	<a href="#">reassemble-timeout</a>
Range	100   1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **short-sequence-numbers** *keyword*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <b>short-sequence-numbers</b> <i>keyword</i>
Tree	<a href="#">short-sequence-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## ppp

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">ppp</a>
Tree	<a href="#">ppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">ppp</a> <a href="#">authentication</a> <i>keyword</i>
Tree	<a href="#">authentication</a>
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">ppp</a> <a href="#">authentication-policy</a> <i>string</i>
Tree	<a href="#">authentication-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## chap-challenge-length

Synopsis	Enter the <b>chap-challenge-length</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a>
Tree	<a href="#">chap-challenge-length</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**end number**

Synopsis	Upper bound of the PPP CHAP challenge length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>chap-challenge-length</b> <b>end</b> <b>number</b>
Tree	<b>end</b>
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the PPP CHAP challenge length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>chap-challenge-length</b> <b>start</b> <b>number</b>
Tree	<b>start</b>
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**default-group-interface**

Synopsis	Enter the <b>default-group-interface</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>default-group-interface</b>
Tree	<b>default-group-interface</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface string**

Synopsis	Group interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>ins</b> <b>ppp</b> <b>default-group-interface</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

Synopsis Administrative service name  
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#) [service-name](#) *string*  
 Tree [service-name](#)  
 String Length 1 to 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipcp-subnet-negotiation** *keyword*

Synopsis Use of IPCP subnet negotiation for PPPoE hosts  
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [ipcp-subnet-negotiation](#) *keyword*  
 Tree [ipcp-subnet-negotiation](#)  
 Options false, true  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keepalive**

Synopsis Enter the **keepalive** context  
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [keepalive](#)  
 Tree [keepalive](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis PPP keepalive interval  
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [keepalive](#) *interval* *number*  
 Tree [interval](#)

Range	10 to 300
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis	PPP keepalive multiplier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">keepalive</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-force-ack-accm** *keyword*

Synopsis	Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">lcp-force-ack-accm</a> <i>keyword</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-ignore-magic-numbers** *keyword*

Synopsis	Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">lcp-ignore-magic-numbers</a> <i>keyword</i>
Tree	<a href="#">lcp-ignore-magic-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mtu number**

Synopsis	Maximum PPP MTU size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <i>mtu number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-authentication keyword**

Synopsis	Authentication AVPs that are received from LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">proxy-authentication</a> <i>keyword</i>
Tree	<a href="#">proxy-authentication</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-lcp keyword**

Synopsis	Use the Proxy LCP AVPs that are received from the LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">proxy-lcp</a> <i>keyword</i>
Tree	<a href="#">proxy-lcp</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**reject-disabled-ncp keyword**

Synopsis	Force LCP Project Reject for IPv6CP Configure Request
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">reject-disabled-ncp</a> <i>keyword</i>
Tree	<a href="#">reject-disabled-ncp</a>
Options	false, true

Introduced 16.0.R6  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *string*

Synopsis Local user database for PPP PAP and CHAP authentication  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [ins](#) [ppp](#) **user-db** *string*  
Tree [user-db](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-address** *string*

Synopsis Local address  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-address** *string*  
Tree [local-address](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name** *string*

Synopsis Local host name used to distinguish tunnels  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-name** *string*  
Tree [local-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab** *number*

Synopsis Maximum retries for established tunnels  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **max-retries-estab** *number*  
Tree [max-retries-estab](#)  
Range 2 to 7

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis Maximum retries for unestablished tunnels  
 Context **configure** *router string l2tp group string tunnel string max-retries-not-estab number*  
 Tree [max-retries-not-estab](#)  
 Range 2 to 7  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis Password between L2TP LAC and LNS  
 Context **configure** *router string l2tp group string tunnel string password string*  
 Tree [password](#)  
 String Length 1 to 115  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** *string*

Synopsis Peer address  
 Context **configure** *router string l2tp group string tunnel string peer string*  
 Tree [peer](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference** *number*

Synopsis Tunnel preference number with its group  
 Context **configure** *router string l2tp group string tunnel string preference number*  
 Tree [preference](#)  
 Range 0 to 16777215

Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">radius-accounting-policy</a> <i>reference</i>
Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">receive-window-size</a> <i>number</i>
Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-name** *string*

Synopsis	Remote tunnel host name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">remote-name</a> <i>string</i>
Tree	<a href="#">remote-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** (*number* | *keyword*)

Synopsis	L2TP session limit for each tunnel of this router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">session-limit</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">session-limit</a>
Range	1 to 65534
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-session-limit** *number*

Synopsis	L2TP session limit for each group of this router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group-session-limit</a> <i>number</i>
Tree	<a href="#">group-session-limit</a>
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">hello-interval</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">hello-interval</a>
Range	10 to 3600
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">idle-timeout</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">idle-timeout</a>
Range	0 to 3600
Units	seconds
Options	infinite

Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ignore-avps

Synopsis	Enter the <b>ignore-avps</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">ignore-avps</a>
Tree	<a href="#">ignore-avps</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### sequencing-required *boolean*

Synopsis	Ignore Sequencing Required AVP
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">ignore-avps</a> <a href="#">sequencing-required</a> <i>boolean</i>
Tree	<a href="#">sequencing-required</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### l2tpv3

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">l2tpv3</a>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### cookie-length *number*

Synopsis	Cookie field length
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">cookie-length</a> <i>number</i>
Tree	<a href="#">cookie-length</a>
Range	4   8

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **digest-type** *keyword*

Synopsis Hashing algorithm that calculates the message digest  
Context **configure** *router string l2tp l2tpv3 digest-type keyword*  
Tree [digest-type](#)  
Options md5, sha1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nonce-length** *number*

Synopsis Length of the local L2TPv3 nonce (random number)  
Context **configure** *router string l2tp l2tpv3 nonce-length number*  
Tree [nonce-length](#)  
Range 0 | 16 to 64  
Default 0  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis L2TPv3 password  
Context **configure** *router string l2tp l2tpv3 password string*  
Tree [password](#)  
String Length 1 to 115  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

Synopsis TCP maximum segment size (MSS) on private network  
Context **configure** *router string l2tp l2tpv3 private-tcp-mss-adjust number*

---

Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** *number*

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">public-tcp-mss-adjust</a> <i>number</i>
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **transport-type**

Synopsis	Enter the <b>transport-type</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">transport-type</a>
Tree	<a href="#">transport-type</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip** *boolean*

Synopsis	Use IP as the transport type for the L2TPv3 tunnel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">transport-type</a> <a href="#">ip</a> <i>boolean</i>
Tree	<a href="#">ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lac

Synopsis	Enter the <b>lac</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a>
Tree	<a href="#">lac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## calling-number-format *string*

Synopsis	Calling Number AVP for L2TP control messages
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">calling-number-format</a> <a href="#">string</a>
Tree	<a href="#">calling-number-format</a>
String Length	1 to 255
Default	%S %s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## cisco-nas-port

Synopsis	Enter the <b>cisco-nas-port</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">cisco-nas-port</a>
Tree	<a href="#">cisco-nas-port</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet *string*

Synopsis	L2TP Cisco NAS port AVP with binary patterns for Ethernet
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">cisco-nas-port</a> <a href="#">ethernet</a> <a href="#">string</a>
Tree	<a href="#">ethernet</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**df-bit** *boolean*

Synopsis	Send all L2TP packets with DF bit set to 1
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp lac df-bit</b> <i>boolean</i>
Tree	<b>df-bit</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**local-address** *string*

Synopsis	Local address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**local-name** *string*

Synopsis	Local host name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp local-name</b> <i>string</i>
Tree	<b>local-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-retries-estab** *number*

Synopsis	Maximum retries for established tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp max-retries-estab</b> <i>number</i>
Tree	<b>max-retries-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-retries-not-estab** *number*

Synopsis	Maximum retries for unestablished tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>max-retries-not-estab</b> <i>number</i>
Tree	<b>max-retries-not-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**next-attempt** *keyword*

Synopsis	Tunnel that is selected when previous session setup failed
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>next-attempt</b> <i>keyword</i>
Tree	<b>next-attempt</b>
Options	same-preference-level, next-preference-level
Default	next-preference-level
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**password** *string*

Synopsis	L2TP password
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>password</b> <i>string</i>
Tree	<b>password</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer-address-change-policy** *keyword*

Synopsis	Reaction for L2TP response from a different address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>peer-address-change-policy</b> <i>keyword</i>
Tree	<b>peer-address-change-policy</b>
Options	accept, ignore, reject

Default	reject
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp radius-accounting-policy</a> <i>reference</i>
Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa radius l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp receive-window-size</a> <i>number</i>
Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **replace-result-code**

Synopsis	Enter the <b>replace-result-code</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp replace-result-code</a>
Tree	<a href="#">replace-result-code</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-invalid-dst** *boolean*

Synopsis	Replace result code with general error code
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp replace-result-code</a> <a href="#">cdn-invalid-dst</a> <i>boolean</i>

Tree	<a href="#">cdn-invalid-dst</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-permanent-no-facilities** *boolean*

Synopsis	Replace result code with general error
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a> <a href="#">cdn-permanent-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-permanent-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities** *boolean*

Synopsis	Replace result code with general error
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a> <a href="#">cdn-temporary-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-temporary-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rtm-debounce-time** (*number* | *keyword*)

Synopsis	Debounce timer that declares L2TP action for route table management events
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">rtm-debounce-time</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rtm-debounce-time</a>
Range	0 to 5000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-assign-method** *keyword*

Synopsis	Session assignment method
Context	<b>configure</b> <i>router string l2tp session-assign-method keyword</i>
Tree	<a href="#">session-assign-method</a>
Options	existing-first, weighted, weighted-random
Default	existing-first
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit** *number*

Synopsis	L2TP session limit of this router
Context	<b>configure</b> <i>router string l2tp session-limit number</i>
Tree	<a href="#">session-limit</a>
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tunnel-selection-blacklist**

Synopsis	Enter the <b>tunnel-selection-blacklist</b> context
Context	<b>configure</b> <i>router string l2tp tunnel-selection-blacklist</i>
Tree	<a href="#">tunnel-selection-blacklist</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**add-tunnel-on**

Synopsis	Enter the <b>add-tunnel-on</b> context
Context	<b>configure</b> <i>router string l2tp tunnel-selection-blacklist add-tunnel-on</i>
Tree	<a href="#">add-tunnel-on</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**address-change-timeout** *boolean*

Synopsis	Enable a timed-out tunnel to be forced to the denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">address-change-timeout</a> <i>boolean</i>
Tree	<a href="#">address-change-timeout</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cdn-err-code** *boolean*

Synopsis	Add to deny if CDN is received with code: General error
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">cdn-err-code</a> <i>boolean</i>
Tree	<a href="#">cdn-err-code</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cdn-invalid-dst** *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 6
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">cdn-invalid-dst</a> <i>boolean</i>
Tree	<a href="#">cdn-invalid-dst</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cdn-permanent-no-facilities** *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 5
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">cdn-permanent-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-permanent-no-facilities</a>

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities** *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 4
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-temporary-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-err-code** *boolean*

Synopsis	Add to denylist if received with general error code
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-err-code</a> <i>boolean</i>
Tree	<a href="#">stop-ccn-err-code</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-other** *boolean*

Synopsis	Add to denylist if StopCCN received with general error
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-other</a> <i>boolean</i>
Tree	<a href="#">stop-ccn-other</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tx-cdn-not-established-in-time** *boolean*

Synopsis	Add to denylist if CDN transmitted with result code
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp tunnel-selection-blacklist add-tunnel-on tx-cdn-not-established-in-time</b> <i>boolean</i>
Tree	<b>tx-cdn-not-established-in-time</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-list-length** (*number* | *keyword*)

Synopsis	Number of tunnels or peers in the denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp tunnel-selection-blacklist max-list-length</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-list-length</b>
Range	1 to 65535
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-time** *number*

Synopsis	Time that a tunnel or peer can remain in the denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp tunnel-selection-blacklist max-time</b> <i>number</i>
Tree	<b>max-time</b>
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**timeout-action** *keyword*

Synopsis	Action when a tunnel or peer exceeds time in denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp tunnel-selection-blacklist timeout-action</b> <i>keyword</i>

Tree	<a href="#">timeout-action</a>
Options	remove-from-blacklist, try-one-session
Default	remove-from-blacklist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-session-limit** *number*

Synopsis	L2TP session limit for each tunnel of this router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <b>tunnel-session-limit</b> <i>number</i>
Tree	<a href="#">tunnel-session-limit</a>
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ldp**

Synopsis	Enable the <b>ldp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a>
Tree	<a href="#">ldp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of LDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**aggregate-prefix-match**

Synopsis	Enable the <b>aggregate-prefix-match</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">aggregate-prefix-match</a>
Tree	<a href="#">aggregate-prefix-match</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP aggregate prefix match
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">aggregate-prefix-match</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**prefix-exclude** *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">aggregate-prefix-match</a> <a href="#">prefix-exclude</a> <i>reference</i>
Tree	<a href="#">prefix-exclude</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**class-forwarding** *keyword*

Synopsis	Forwarding mode for LDP over RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">class-forwarding</a> <i>keyword</i>
Tree	<a href="#">class-forwarding</a>
Options	lsr, ler, lsr-and-ler

Introduced 16.0.R1  
 Platforms All

### **consider-system-ip-in-gep** *boolean*

Synopsis Apply global export policy for system IP FEC creation  
 Context **configure** *router string ldp consider-system-ip-in-gep boolean*  
 Tree [consider-system-ip-in-gep](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **egress-statistics**

Synopsis Enter the **egress-statistics** context  
 Context **configure** *router string ldp egress-statistics*  
 Tree [egress-statistics](#)  
 Introduced 16.0.R1  
 Platforms All

### **fec-prefix** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **fec-prefix** list instance  
 Context **configure** *router string ldp egress-statistics fec-prefix (ipv4-prefix | ipv6-prefix)*  
 Tree [fec-prefix](#)  
 Introduced 16.0.R1  
 Platforms All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP prefix  
 Context **configure** *router string ldp egress-statistics fec-prefix (ipv4-prefix | ipv6-prefix)*  
 Tree [fec-prefix](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1

Platforms All

### **accounting-policy** *reference*

Synopsis Accounting policy ID

Context **configure** **router** *string* **ldp** **egress-statistics** **fec-prefix** (*ipv4-prefix | ipv6-prefix*) **accounting-policy** *reference*

Tree **accounting-policy**

Reference **configure** **log** **accounting-policy** *number*

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the LDP egress statistics

Context **configure** **router** *string* **ldp** **egress-statistics** **fec-prefix** (*ipv4-prefix | ipv6-prefix*) **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms All

### **collect-stats** *boolean*

Synopsis Collect statistics

Context **configure** **router** *string* **ldp** **egress-statistics** **fec-prefix** (*ipv4-prefix | ipv6-prefix*) **collect-stats** *boolean*

Tree **collect-stats**

Default false

Introduced 16.0.R1

Platforms All

### **entropy-label-capability** *boolean*

Synopsis Enable entropy label capability on the LDP instance

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">entropy-label-capability</a> <i>boolean</i>
Tree	<a href="#">entropy-label-capability</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policies to determine routes exported to LDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **export-tunnel-table** *reference*

Synopsis	Tunnel table export policies to export tunneled routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">export-tunnel-table</a> <i>reference</i>
Tree	<a href="#">export-tunnel-table</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **fast-reroute**

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">fast-reroute</a>
Tree	<a href="#">fast-reroute</a>

Introduced 16.0.R1  
 Platforms All

### **backup-sr-tunnel** *boolean*

Synopsis Use SR tunnel as a remote LFA backup tunnel next-hop by an LDP FEC  
 Context **configure** **router** *string* **ldp fast-reroute backup-sr-tunnel** *boolean*  
 Tree **backup-sr-tunnel**  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **fec-originate** [**fec-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **fec-originate** list instance  
 Context **configure** **router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)  
 Tree **fec-originate**  
 Introduced 16.0.R1  
 Platforms All

### [**fec-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Static FEC IP prefix  
 Context **configure** **router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*)  
 Tree **fec-originate**  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **advertised-label** *number*

Synopsis Label that is advertised to upstream peer  
 Context **configure** **router** *string* **ldp fec-originate** (*ipv4-prefix* | *ipv6-prefix*) **advertised-label** *number*  
 Tree **advertised-label**

Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

### **interface** *string*

Synopsis	Interface name for this static FEC prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	0 to 32
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>next-hop</b>
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **pop** *boolean*

Synopsis	Pop the label and transmit without the label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>pop</b> <i>boolean</i>
Tree	<b>pop</b>
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **swap-label** *number*

Synopsis	Value mapped to egress label associated with next-hop entry that LSR uses to swap incoming label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>swap-label</b> <i>number</i>
Tree	<a href="#">swap-label</a>
Range	6 to 1048575
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **generate-basic-fec-only** *boolean*

Synopsis	Enable mLDP to generate a basic FEC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>generate-basic-fec-only</b> <i>boolean</i>
Tree	<a href="#">generate-basic-fec-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enter the <b>graceful-restart</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>graceful-restart</b>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

### **helper-mode** *boolean*

Synopsis	Enable graceful restart helper
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>graceful-restart</b> <b>helper-mode</b> <i>boolean</i>
Tree	<a href="#">helper-mode</a>
Default	false
Introduced	16.0.R1

---

Platforms All

### **maximum-recovery-time** *number*

Synopsis Value for the local maximum recovery time

Context **configure** *router string ldp graceful-restart maximum-recovery-time number*

Tree [maximum-recovery-time](#)

Range 15 to 1800

Units seconds

Default 120

Introduced 16.0.R1

Platforms All

### **neighbor-liveness-time** *number*

Synopsis Value for the neighbor liveness timer

Context **configure** *router string ldp graceful-restart neighbor-liveness-time number*

Tree [neighbor-liveness-time](#)

Range 5 to 300

Units seconds

Default 120

Introduced 16.0.R1

Platforms All

### **implicit-null-label** *boolean*

Synopsis Signal the implicit null label value for all LDP FECs for which the node is the egress LER

Context **configure** *router string ldp implicit-null-label boolean*

Tree [implicit-null-label](#)

Default false

Introduced 16.0.R1

Platforms All

**import-mcast-policy** *reference*

Synopsis	Import policy for mLDP FECs arriving on the node
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-mcast-policy</a> <i>reference</i>
Tree	<a href="#">import-mcast-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

**import-pmsi-routes**

Synopsis	Enter the <b>import-pmsi-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-pmsi-routes</a>
Tree	<a href="#">import-pmsi-routes</a>
Introduced	19.5.R1
Platforms	All

**mvpn** *boolean*

Synopsis	Import BGP MVPN inter-AS routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-pmsi-routes</a> <a href="#">mvpn</a> <i>boolean</i>
Tree	<a href="#">mvpn</a>
Default	false
Introduced	19.5.R1
Platforms	All

**mvpn-no-export-community** *boolean*

Synopsis	Import BGP MVPN intra-AS routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-pmsi-routes</a> <a href="#">mvpn-no-export-community</a> <i>boolean</i>
Tree	<a href="#">mvpn-no-export-community</a>
Default	false
Introduced	19.5.R1

Platforms All

### **import-policy** *reference*

Synopsis Import policies to filter LDP label bindings received from LDP peers

Context **configure** [router](#) *string* [ldp](#) [import-policy](#) *reference*

Tree [import-policy](#)

Reference **configure** [policy-options](#) [policy-statement](#) *string*

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **import-tunnel-table** *reference*

Synopsis Tunnel table import policies for non-host prefixes

Context **configure** [router](#) *string* [ldp](#) [import-tunnel-table](#) *reference*

Tree [import-tunnel-table](#)

Reference **configure** [policy-options](#) [policy-statement](#) *string*

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **interface-parameters**

Synopsis Enter the **interface-parameters** context

Context **configure** [router](#) *string* [ldp](#) [interface-parameters](#)

Tree [interface-parameters](#)

Introduced 16.0.R1

Platforms All

**interface** [ip-int-name] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

**[ip-int-name]** *reference*

Synopsis	Interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

**ipv4 boolean**

Synopsis	Allow BFD tracking of IPv4 LDP Session for interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6 boolean**

Synopsis	Allow BFD tracking of IPv6 LDP session for interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv4**

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the LDP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <i>admin-state</i> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable

Introduced	16.0.R1
Platforms	All

### **fec-type-capability**

Synopsis	Enter the <b>fec-type-capability</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv4</a> <a href="#">fec-type-capability</a>
Tree	<a href="#">fec-type-capability</a>
Introduced	16.0.R1
Platforms	All

### **p2mp-ipv4** *boolean*

Synopsis	Enable IPv4 P2MP FEC capability
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv4</a> <a href="#">fec-type-capability</a> <a href="#">p2mp-ipv4</a> <i>boolean</i>
Tree	<a href="#">p2mp-ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **p2mp-ipv6** *boolean*

Synopsis	Enable IPv6 P2MP FEC capability
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv4</a> <a href="#">fec-type-capability</a> <a href="#">p2mp-ipv6</a> <i>boolean</i>
Tree	<a href="#">p2mp-ipv6</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **prefix-ipv4** *boolean*

Synopsis	Enable IPv4 prefix FEC capability
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv4</a> <a href="#">fec-type-capability</a> <a href="#">prefix-ipv4</a> <i>boolean</i>

Tree	<a href="#">prefix-ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **prefix-ipv6** *boolean*

Synopsis	Enable IPv6 prefix FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">fec-type-capability</a> <a href="#">prefix-ipv6</a> <i>boolean</i>
Tree	<a href="#">prefix-ipv6</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enable the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">hello</a>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout value for Hello
----------	-------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## keepalive

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Factor value for keepalive
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">keepalive</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## local-lsr-id

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>local-lsr-id</b>
Tree	<b>local-lsr-id</b>
Introduced	16.0.R1
Platforms	All

## interface-name *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>local-lsr-id</b> <b>interface-name</b> <i>reference</i>
Tree	<b>interface-name</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>transport-address</b> <i>keyword</i>
Tree	<b>transport-address</b>
Options	interface, system
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**fec-type-capability**

Synopsis	Enter the <b>fec-type-capability</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>fec-type-capability</b>
Tree	<a href="#">fec-type-capability</a>
Introduced	16.0.R1
Platforms	All

**p2mp-ipv4** *boolean*

Synopsis	Enable IPv4 P2MP FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>fec-type-capability</b> <b>p2mp-ipv4</b> <i>boolean</i>
Tree	<a href="#">p2mp-ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

**p2mp-ipv6** *boolean*

Synopsis	Enable IPv6 P2MP FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>fec-type-capability</b> <b>p2mp-ipv6</b> <i>boolean</i>
Tree	<a href="#">p2mp-ipv6</a>

Default	true
Introduced	16.0.R1
Platforms	All

**prefix-ipv4** *boolean*

Synopsis	Enable IPv4 prefix FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">fec-type-capability</a> <a href="#">prefix-ipv4</a> <i>boolean</i>
Tree	<a href="#">prefix-ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

**prefix-ipv6** *boolean*

Synopsis	Enable IPv6 prefix FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">fec-type-capability</a> <a href="#">prefix-ipv6</a> <i>boolean</i>
Tree	<a href="#">prefix-ipv6</a>
Default	true
Introduced	16.0.R1
Platforms	All

**hello**

Synopsis	Enable the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">hello</a>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

**factor** *number*

Synopsis	Factor value for Hello
----------	------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">hello</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">hello</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Factor value for keepalive
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">keepalive</a> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**local-lsr-id**

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">local-lsr-id</a>
Tree	<a href="#">local-lsr-id</a>
Introduced	16.0.R1
Platforms	All

**format-32bit** *boolean*

Synopsis	Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">local-lsr-id</a> <b>format-32bit</b> <i>boolean</i>
Tree	<a href="#">format-32bit</a>
Default	false
Introduced	16.0.R1
Platforms	All

**interface-name** *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">local-lsr-id</a> <b>interface-name</b> <i>reference</i>
Tree	<a href="#">interface-name</a>

Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <a href="#">transport-address</a> <i>keyword</i>
Tree	<a href="#">transport-address</a>
Options	interface, system
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight for the LDP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">load-balancing-weight</a> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Max. Range	0 to 4294967295
Introduced	20.2.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a>

---

Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

### **factor number**

Synopsis	Value for the Hello factor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a> <i>factor number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **timeout number**

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a> <i>timeout number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Value for the keep-alive factor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv4</b> <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**timeout number**

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv4</b> <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**transport-address keyword**

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv4</b> <b>transport-address</b> <i>keyword</i>
Tree	<b>transport-address</b>
Options	interface, system
Default	system
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b>
Tree	<b>ipv6</b>

---

Introduced	16.0.R1
Platforms	All

## hello

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv6</a> <a href="#">hello</a>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Value for the Hello factor
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv6</a> <a href="#">hello</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv6</a> <a href="#">hello</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

## keepalive

Synopsis	Enter the <b>keepalive</b> context
----------	------------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>ipv6</i> <i>keepalive</i>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

**factor** *number*

Synopsis	Value for the keep-alive factor
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>ipv6</i> <i>keepalive</i> <i>factor</i> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>ipv6</i> <i>keepalive</i> <i>timeout</i> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>ipv6</i> <i>transport-address</i> <i>keyword</i>
Tree	<a href="#">transport-address</a>
Options	interface, system
Default	system
Introduced	16.0.R1
Platforms	All

### **label-withdrawal-delay** *number*

Synopsis	Time interval during which LDP delays for the withdrawal of FEC-label binding
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>label-withdrawal-delay</b> <i>number</i>
Tree	<a href="#">label-withdrawal-delay</a>
Range	3 to 120
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ldp-shortcut**

Synopsis	Enter the <b>ldp-shortcut</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b>
Tree	<a href="#">ldp-shortcut</a>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Forward IPv4 packets by using LDP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Forward IPv6 packets by using LDP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b> <b>ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**legacy-ipv4-lsr-interop** *boolean*

Synopsis	Allow interoperability with legacy IPv4 LSR implementations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>legacy-ipv4-lsr-interop</b> <i>boolean</i>
Tree	<a href="#">legacy-ipv4-lsr-interop</a>
Default	false
Introduced	16.0.R1
Platforms	All

**lsp-bfd** [[prefix-list](#)] *reference*

Synopsis	Enter the <b>lsp-bfd</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>lsp-bfd</b> <i>reference</i>
Tree	<a href="#">lsp-bfd</a>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

**[prefix-list]** *reference*

Synopsis	Name of a router policy options prefix list
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>lsp-bfd</b> <i>reference</i>
Tree	<a href="#">lsp-bfd</a>
Reference	<b>configure</b> <b>policy-options</b> <b>prefix-list</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on LDP LSPs with FECs that match the prefix list
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>lsp-bfd</b> <i>reference</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false

Introduced 16.0.R1  
 Platforms All

### **bfd-template** *reference*

Synopsis BFD template to apply to BFD sessions associated with the prefix list  
 Context **configure** [router](#) *string* [ldp](#) [lsp-bfd](#) *reference* [bfd-template](#) *reference*  
 Tree [bfd-template](#)  
 Reference **configure** [bfd](#) [bfd-template](#) *string*  
 Introduced 16.0.R1  
 Platforms All

### **failure-action** *keyword*

Synopsis Reaction to BFD session failure for the prefix list  
 Context **configure** [router](#) *string* [ldp](#) [lsp-bfd](#) *reference* [failure-action](#) *keyword*  
 Tree [failure-action](#)  
 Options down  
 Introduced 16.0.R1  
 Platforms All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis LSP ping transmit interval for periodic verification  
 Context **configure** [router](#) *string* [ldp](#) [lsp-bfd](#) *reference* [lsp-ping-interval](#) (*number* | *keyword*)  
 Tree [lsp-ping-interval](#)  
 Range 60 to 300  
 Units seconds  
 Options none  
 Default 60  
 Introduced 16.0.R1  
 Platforms All

**priority number**

Synopsis	Prefix list to control the search order
Context	<b>configure router</b> <i>string ldp lsp-bfd reference</i> <b>priority number</b>
Tree	<b>priority</b>
Range	1 to 99
Default	1
Introduced	16.0.R1
Platforms	All

**source-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address in LSP ping packets and BFD control packets associated with prefix list
Context	<b>configure router</b> <i>string ldp lsp-bfd reference</i> <b>source-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>source-address</b>
Introduced	16.0.R1
Platforms	All

**max-ecmp-routes number**

Synopsis	Maximum ECMP value for LDP
Context	<b>configure router</b> <i>string ldp</i> <b>max-ecmp-routes number</b>
Tree	<b>max-ecmp-routes</b>
Description	<p>This command sets the maximum number of ECMP routes that LDP may use to resolve the next hop for a FEC as permitted by the RTM or TTM.</p> <p>The system-wide maximum number of ECMP routes is set by the <b>configure router ecmp</b> command; therefore, the operational maximum number used by LDP is set to the lesser of the values configured by this command and the <b>configure router ecmp</b> command.</p>
Range	1 to 64
Default	32
Introduced	19.10.R1
Platforms	All

**mcast-upstream-asbr-frr** *boolean*

Synopsis	Enable ASBR MoFRR to allow local leaf to perform MoFRR for multiple ASBRs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>mcast-upstream-asbr-frr</b> <i>boolean</i>
Tree	<b>mcast-upstream-asbr-frr</b>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-upstream-frr** *boolean*

Synopsis	Use fast upstream switchover for mLDP FECs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>mcast-upstream-frr</b> <i>boolean</i>
Tree	<b>mcast-upstream-frr</b>
Default	false
Introduced	16.0.R1
Platforms	All

**mp-mbb-time** *number*

Synopsis	MP MBB time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>mp-mbb-time</b> <i>number</i>
Tree	<b>mp-mbb-time</b>
Range	0 to 10
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	All

**prefer-mcast-tunnel-in-tunnel** *boolean*

Synopsis	Use T-LDP session to the peer for FEC resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>prefer-mcast-tunnel-in-tunnel</b> <i>boolean</i>
Tree	<b>prefer-mcast-tunnel-in-tunnel</b>
Default	true
Introduced	21.2.R1

Platforms All

### **prefer-protocol-stitching** *boolean*

Synopsis Stitch LDP ILM to SR NHLFE even if LDP NHLFE exists

Context **configure** *router string ldp prefer-protocol-stitching boolean*

Tree [prefer-protocol-stitching](#)

Description When configured to **true**, an LDP ILM stitches to an SR NHLFE, even if an LDP NHLFE exists.  
When configured to **false**, the stitching preference of an LDP ILM is to an LDP NHLFE.

Default false

Introduced 21.7.R1

Platforms All

### **prefer-tunnel-in-tunnel** *boolean*

Synopsis Preference tunnel-in-tunnel over a simple LDP tunnel

Context **configure** *router string ldp prefer-tunnel-in-tunnel boolean*

Tree [prefer-tunnel-in-tunnel](#)

Default true

Introduced 16.0.R1

Platforms All

### **resolve-root-using** *keyword*

Synopsis Resolution route table for multicast FECs

Context **configure** *router string ldp resolve-root-using keyword*

Tree [resolve-root-using](#)

Options ucast-rtm, mcast-rtm

Default ucast-rtm

Introduced 16.0.R1

Platforms All

**session-parameters**

Synopsis	Enter the <b>session-parameters</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>session-parameters</b>
Tree	<b>session-parameters</b>
Introduced	16.0.R1
Platforms	All

**peer** [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>session-parameters</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>session-parameters</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adv-adj-addr-only** *boolean*

Synopsis	Distribute only the local addresses used to establish the Hello adjacencies with a peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>session-parameters</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>adv-adj-addr-only</b> <i>boolean</i>
Tree	<b>adv-adj-addr-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

**adv-local-lsr-id** *boolean*

Synopsis	Advertise local LSR ID over a specified LDP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>adv-local-lsr-id</b> <i>boolean</i>
Tree	<a href="#">adv-local-lsr-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**community** *string*

Synopsis	Community string associated with a session to a specified peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>community</b> <i>string</i>
Tree	<a href="#">community</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**dod-label-distribution** *boolean*

Synopsis	Use LDP Downstream-on-Demand (DoD) label distribution procedures
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>dod-label-distribution</b> <i>boolean</i>
Tree	<a href="#">dod-label-distribution</a>
Default	false
Introduced	16.0.R1
Platforms	All

**export-addresses** *reference*

Synopsis	Export policies to determine which local addresses should be distributed to this peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>export-addresses</b> <i>reference</i>
Tree	<a href="#">export-addresses</a>

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **export-prefixes** *reference*

Synopsis	Export policies to determine which FEC prefixes are redistributed to LDP and TLDP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">session-parameters</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">export-prefixes</a> <i>reference</i>
Tree	<a href="#">export-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **fec-limit**

Synopsis	Enter the <b>fec-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">session-parameters</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">fec-limit</a>
Tree	<a href="#">fec-limit</a>
Introduced	16.0.R1
Platforms	All

### **limit** *number*

Synopsis	Maximum number of FECs to be accepted from this peer LSR
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">session-parameters</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">fec-limit</a> <a href="#">limit</a> <i>number</i>
Tree	<a href="#">limit</a>

Range	0   1 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Trap and syslog message to generate when reaching the threshold and limit
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-limit log-only boolean</b>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Threshold that generates trap and warning when reached
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-limit threshold number</b>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **fec-type-capability**

Synopsis	Enter the <b>fec-type-capability</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-type-capability</b>
Tree	<b>fec-type-capability</b>
Introduced	16.0.R1
Platforms	All

### **p2mp** *boolean*

Synopsis	Enable P2MP FEC capability for the session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-type-capability p2mp</b> <i>boolean</i>
Tree	<b>p2mp</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **prefix-ipv4** *boolean*

Synopsis	Enable IPv4 prefix FEC capability for the session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-type-capability prefix-ipv4</b> <i>boolean</i>
Tree	<b>prefix-ipv4</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **prefix-ipv6** *boolean*

Synopsis	Enable IPv6 prefix FEC capability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec-type-capability prefix-ipv6</b> <i>boolean</i>
Tree	<b>prefix-ipv6</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **fec129-cisco-interop** *boolean*

Synopsis	Allow translation between non-compliant FEC 129 formats of Cisco
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec129-cisco-interop</b> <i>boolean</i>
Tree	<b>fec129-cisco-interop</b>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-prefixes** *reference*

Synopsis	FEC prefixes to be redistributed to this LDP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp session-parameters peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">import-prefixes</a> <i>reference</i>
Tree	<a href="#">import-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **pe-id-mac-flush-interop** *boolean*

Synopsis	Send PE-ID TLV in LDP MAC withdrawal message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp session-parameters peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">pe-id-mac-flush-interop</a> <i>boolean</i>
Tree	<a href="#">pe-id-mac-flush-interop</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **shortcut-local-ttl-propagate** *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp shortcut-local-ttl-propagate</a> <i>boolean</i>
Tree	<a href="#">shortcut-local-ttl-propagate</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **shortcut-transit-ttl-propagate** *boolean*

Synopsis	Enable TTL propagation over LSP shortcut
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>shortcut-transit-ttl-propagate</b> <i>boolean</i>
Tree	<b>shortcut-transit-ttl-propagate</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **targeted-session**

Synopsis	Enter the <b>targeted-session</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b>
Tree	<b>targeted-session</b>
Introduced	16.0.R1
Platforms	All

### **auto-rx**

Synopsis	Enter the <b>auto-rx</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-rx</b>
Tree	<b>auto-rx</b>
Description	Commands in this context specify the LDP session configuration to accept targeted Hello messages from any peer.
Introduced	20.10.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-rx</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-rx</b> <b>ipv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**tunneling** *boolean*

Synopsis	Enable tunneling for targeted peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-rx</b> <b>ipv4</b> <b>tunneling</b> <i>boolean</i>
Tree	<b>tunneling</b>
Description	<p>When configured to <b>true</b>, this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.</p> <p>If the <b>auto-rx</b> and <b>auto-tx</b> contexts are both administratively enabled, this command must be set to <b>true</b> for LDP rLFA to function properly.</p> <p>When configured to <b>false</b>, FEC label bindings are not sent via the LDP session.</p>
Default	false
Introduced	20.10.R1
Platforms	All

**auto-tx**

Synopsis	Enter the <b>auto-tx</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b>
Tree	<b>auto-tx</b>
Description	Commands in this context specify the LDP session configuration to send targeted Hello messages toward PQ nodes determined by the rLFA algorithm.
Introduced	20.10.R1
Platforms	All

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**tunneling** *boolean*

Synopsis	Enable tunneling for targeted peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b> <b>tunneling</b> <i>boolean</i>
Tree	<b>tunneling</b>
Description	<p>When configured to <b>true</b>, this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.</p> <p>If the <b>auto-rx</b> context is administratively disabled, this command should be set to <b>true</b> for LDP rLFA to function properly.</p> <p>When configured to <b>false</b>, FEC label bindings are not sent via the LDP session.</p>
Default	false
Introduced	20.10.R1
Platforms	All

**export-prefixes** *reference*

Synopsis	Export route policy to determine which routes are exported to this targeted LDP session
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">export-prefixes</a> <i>reference</i>
Tree	<a href="#">export-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **import-prefixes** *reference*

Synopsis	Import route policy to determine which routes are accepted from targeted LDP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">import-prefixes</a> <i>reference</i>
Tree	<a href="#">import-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <b>ipv4</b>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <b>ipv4</b> <b>hello</b>
Tree	<a href="#">hello</a>
Introduced	16.0.R1

Platforms All

### **factor** *number*

Synopsis Factor value for Hello

Context **configure** [router](#) *string* [ldp targeted-session ipv4 hello factor](#) *number*

Tree [factor](#)

Range 1 to 255

Default 3

Introduced 16.0.R1

Platforms All

### **timeout** *number*

Synopsis Timeout value for Hello

Context **configure** [router](#) *string* [ldp targeted-session ipv4 hello timeout](#) *number*

Tree [timeout](#)

Range 3 to 65535

Units seconds

Default 45

Introduced 16.0.R1

Platforms All

### **hello-reduction**

Synopsis Enter the **hello-reduction** context

Context **configure** [router](#) *string* [ldp targeted-session ipv4 hello-reduction](#)

Tree [hello-reduction](#)

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of suppression of Hello messages

Context **configure** [router](#) *string* [ldp targeted-session ipv4 hello-reduction admin-state](#) *keyword*

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R3
Platforms	All

### **factor number**

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello-reduction</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

### **factor number**

Synopsis	Factor value for keepalive
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	4
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv4</b> <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Default	40
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello</b>
Tree	<b>hello</b>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <i>router string ldp targeted-session ipv6 hello timeout number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	45
Introduced	16.0.R1
Platforms	All

**hello-reduction**

Synopsis	Enter the <b>hello-reduction</b> context
Context	<b>configure</b> <i>router string ldp targeted-session ipv6 hello-reduction</i>
Tree	<a href="#">hello-reduction</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <i>router string ldp targeted-session ipv6 hello-reduction admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R3
Platforms	All

**factor** *number*

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <i>router string ldp targeted-session ipv6 hello-reduction factor number</i>
Tree	<a href="#">factor</a>
Range	3 to 20

---

Default	3
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv6</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Factor value for keepalive
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv6</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	4
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv6</a> <a href="#">keepalive</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	40
Introduced	16.0.R1
Platforms	All

**peer** [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD tracking of LDP session for the peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false

Introduced 16.0.R1  
Platforms All

## hello

Synopsis Enable the **hello** context  
Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello**  
Tree **hello**  
Introduced 16.0.R1  
Platforms All

## factor number

Synopsis Factor value for Hello  
Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello** **factor** *number*  
Tree **factor**  
Range 1 to 255  
Introduced 16.0.R1  
Platforms All

## timeout number

Synopsis Timeout value for Hello  
Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello** **timeout** *number*  
Tree **timeout**  
Range 3 to 65535  
Units seconds  
Introduced 16.0.R1  
Platforms All

## hello-reduction

Synopsis Enable the **hello-reduction** context

Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>hello-reduction</b>
Tree	<b>hello-reduction</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>hello-reduction admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R3
Platforms	All

### **factor** *number*

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>hello-reduction factor</b> <i>number</i>
Tree	<b>factor</b>
Range	3 to 20
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>keepalive</b>
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Factor value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout number**

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**local-lsr-id**

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>local-lsr-id</b>
Tree	<b>local-lsr-id</b>
Introduced	16.0.R1
Platforms	All

**format-32bit boolean**

Synopsis	Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>local-lsr-id</b> <b>format-32bit</b> <i>boolean</i>
Tree	<b>format-32bit</b>
Default	false

Introduced 16.0.R1  
 Platforms All

### **interface-name** *reference*

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Context **configure** *router string ldp targeted-session peer* (*ipv4-address-no-zone | ipv6-address-no-zone*) *local-lsr-id interface-name reference*

Tree [interface-name](#)

Reference **configure** *router string interface string*

Introduced 16.0.R1  
 Platforms All

### **mcast-tunneling**

Synopsis Enable the **mcast-tunneling** context

Context **configure** *router string ldp targeted-session peer* (*ipv4-address-no-zone | ipv6-address-no-zone*) *mcast-tunneling*

Tree [mcast-tunneling](#)

Introduced 21.2.R1  
 Platforms All

### **lsp** [*lsp-name*] *string*

Synopsis Add a list entry for **lsp**

Context **configure** *router string ldp targeted-session peer* (*ipv4-address-no-zone | ipv6-address-no-zone*) *mcast-tunneling lsp string*

Tree [lsp](#)

Max. Instances 4

Introduced 21.2.R1  
 Platforms All

### **[lsp-name]** *string*

Synopsis LSP name

Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <i>mcast-tunneling lsp string</i>
Tree	<a href="#">lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

## tunneling

Synopsis	Enable the <b>tunneling</b> context
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <i>tunneling</i>
Tree	<a href="#">tunneling</a>
Introduced	16.0.R1
Platforms	All

## **lsp** [[lsp-name](#)] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <i>tunneling lsp string</i>
Tree	<a href="#">lsp</a>
Max. Instances	4
Introduced	16.0.R1
Platforms	All

## **[lsp-name]** *string*

Synopsis	LSP name
Context	<b>configure</b> <i>router string ldp targeted-session peer</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <i>tunneling lsp string</i>
Tree	<a href="#">lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **peer-template** [[template-name](#)] *string*

Synopsis Enter the **peer-template** list instance  
Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string*  
Tree [peer-template](#)  
Max. Instances 500  
Introduced 16.0.R1  
Platforms All

### **[template-name]** *string*

Synopsis Name for the targeted peer template  
Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string*  
Tree [peer-template](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the peer template  
Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string* [admin-state](#) *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default enable  
Introduced 16.0.R1  
Platforms All

**adv-local-lsr-id** *boolean*

Synopsis	Advertise local LSR ID over a specified LDP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>adv-local-lsr-id</b> <i>boolean</i>
Tree	<a href="#">adv-local-lsr-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD tracking of LDP session for sessions created by peer template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**community** *string*

Synopsis	Community string associated with a session to a specified peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>community</b> <i>string</i>
Tree	<a href="#">community</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**hello**

Synopsis	Enable the <b>hello</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Factor value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout number**

Synopsis	Timeout value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**hello-reduction**

Synopsis	Enable the <b>hello-reduction</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello-reduction</b>
Tree	<b>hello-reduction</b>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello-reduction</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R3
Platforms	All

**factor number**

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string</i> hello-reduction factor number
Tree	<b>factor</b>
Range	3 to 20
Introduced	16.0.R1
Platforms	All

**keepalive**

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string</i> keepalive
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Factor value for keepalive
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string</i> keepalive factor number
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout number**

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string</i> keepalive timeout number
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds

Introduced 16.0.R1  
 Platforms All

### **local-lsr-id**

Synopsis Enter the **local-lsr-id** context  
 Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string* [local-lsr-id](#)  
 Tree [local-lsr-id](#)  
 Introduced 16.0.R1  
 Platforms All

### **interface-name** *reference*

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP  
 Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string* [local-lsr-id](#) [interface-name](#) *reference*  
 Tree [interface-name](#)  
 Reference **configure** [router](#) *string* [interface](#) *string*  
 Introduced 16.0.R1  
 Platforms All

### **mcast-tunneling** *boolean*

Synopsis Enable MLDP over RSVP-TE tunnels for the template  
 Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string* [mcast-tunneling](#) *boolean*  
 Tree [mcast-tunneling](#)  
 Default false  
 Introduced 21.2.R1  
 Platforms All

### **tunneling** *boolean*

Synopsis Allow LDP over tunnels  
 Context **configure** [router](#) *string* [ldp](#) [targeted-session](#) [peer-template](#) *string* [tunneling](#) *boolean*

Tree	<a href="#">tunneling</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **peer-template-map** [[template-map-name](#)] *reference*

Synopsis	Enter the <b>peer-template-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template-map</a> <i>reference</i>
Tree	<a href="#">peer-template-map</a>
Max. Instances	500
Introduced	16.0.R1
Platforms	All

### **[template-map-name]** *reference*

Synopsis	Name to identify the targeted peer template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template-map</a> <i>reference</i>
Tree	<a href="#">peer-template-map</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **policy-map** *reference*

Synopsis	Targeted peer template to apply to the given policies
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template-map</a> <i>reference</i> <a href="#">policy-map</a> <i>reference</i>
Tree	<a href="#">policy-map</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Min. Instances	1

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **resolve-v6-prefix-over-shortcut** *boolean*

Synopsis	Resolve IPv6 prefix over IGP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>resolve-v6-prefix-over-shortcut</b> <i>boolean</i>
Tree	<a href="#">resolve-v6-prefix-over-shortcut</a>
Description	When configured to <b>true</b> , the system enables the resolution of IPv6 LDP unicast prefix FECs over IGP shortcuts. When configured to <b>false</b> , the resolution is not allowed.
Default	false
Introduced	22.7.R1
Platforms	All

### **sdp-auto-targeted-session** *boolean*

Synopsis	Allow auto-creation of targeted sessions by SDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>sdp-auto-targeted-session</b> <i>boolean</i>
Tree	<a href="#">sdp-auto-targeted-session</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **tcp-session-parameters**

Synopsis	Enter the <b>tcp-session-parameters</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b>
Tree	<a href="#">tcp-session-parameters</a>
Introduced	16.0.R1
Platforms	All

**authentication-key *string***

Synopsis	Authentication key between LDP peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp tcp-session-parameters</b> <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	<p>This command specifies the authentication key used to establish a session between LDP peers.</p> <p>Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.</p> <p>The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.</p>
String Length	1 to 370
Introduced	21.2.R1
Platforms	All

**authentication-keychain *reference***

Synopsis	Authentication keychain to use for the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp tcp-session-parameters</b> <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	<p>This command configures the authentication keychain to use for the TCP session.</p> <p>The per-peer authentication configuration takes precedence over the global authentication configuration.</p>
Reference	<b>configure</b> <b>system security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	21.2.R1
Platforms	All

**peer-transport** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer-transport</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp tcp-session-parameters</b> <b>peer-transport</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer-transport</a>

Introduced 16.0.R1  
 Platforms All

### [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the TCP connection to the LDP peer  
 Context **configure** **router** *string* **ldp** **tcp-session-parameters** **peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [peer-transport](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **authentication-key** *string*

Synopsis Authentication key for the peer  
 Context **configure** **router** *string* **ldp** **tcp-session-parameters** **peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **authentication-key** *string*  
 Tree [authentication-key](#)  
 String Length 1 to 370  
 Introduced 16.0.R1  
 Platforms All

### **authentication-keychain** *reference*

Synopsis TCP authentication keychain to use for the session  
 Context **configure** **router** *string* **ldp** **tcp-session-parameters** **peer-transport** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **authentication-keychain** *reference*  
 Tree [authentication-keychain](#)  
 Reference **configure** **system** **security** **keychains** **keychain** *string*  
 Introduced 16.0.R3  
 Platforms All

### **path-mtu-discovery** *boolean*

Synopsis Allow Path MTU Discovery for associated TCP connections

Context	<b>configure router</b> <i>string</i> <a href="#">ldp tcp-session-parameters peer-transport</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">path-mtu-discovery</a> <i>boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for incoming packets
Context	<b>configure router</b> <i>string</i> <a href="#">ldp tcp-session-parameters peer-transport</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">ttl-security</a> <i>number</i>
Tree	<a href="#">ttl-security</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **tunnel-down-damp-time** *number*

Synopsis	Time interval for an LDP to damp a tunnel down event before posting to the Route Table Manager (RTM)
Context	<b>configure router</b> <i>string</i> <a href="#">ldp tunnel-down-damp-time</a> <i>number</i>
Tree	<a href="#">tunnel-down-damp-time</a>
Range	0 to 20
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref** *number*

Synopsis	Tunnel table preference value for address FECs
Context	<b>configure router</b> <i>string</i> <a href="#">ldp tunnel-table-pref</a> <i>number</i>
Tree	<a href="#">tunnel-table-pref</a>
Description	This command configures the tunnel table preference for an LDP tunnel type.

The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.

This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the **mixed-lsp-mode** option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	9
Introduced	21.10.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Allow weighted ECMP load-balancing
Context	<b>configure</b> <i>router</i> <i>string</i> <b>ldp</b> <b>weighted-ecmp</b> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Description	When configured to <b>true</b> , the system allows weighted ECMP on LDP using RSVP LSPs or SR-TE LSPs. LDP labeled packets are sprayed across the RSVP or SR-TE LSP ECMP set in proportion to the configured load-balancing weight of LSPs. When configured to <b>false</b> , the system removes weighted ECMP load-balancing.
Default	false
Introduced	16.0.R1
Platforms	All

### **leak-export**

Synopsis	Enter the <b>leak-export</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <b>leak-export</b>
Tree	<a href="#">leak-export</a>
Introduced	16.0.R4
Platforms	All

### **leak-export-limit** *number*

Synopsis	Maximum limit on number of GRT routes leaked into VPRNs
----------	---

Context	<b>configure router</b> <i>string</i> <b>leak-export</b> <b>leak-export-limit</b> <i>number</i>
Tree	<b>leak-export-limit</b>
Range	1 to 10000
Default	5
Introduced	16.0.R4
Platforms	All

### **policy-name** (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	<b>configure router</b> <i>string</i> <b>leak-export</b> <b>policy-name</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy-name</b>
String Length	1 to 255
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **lsp-bfd**

Synopsis	Enter the <b>lsp-bfd</b> context
Context	<b>configure router</b> <i>string</i> <b>lsp-bfd</b>
Tree	<b>lsp-bfd</b>
Introduced	16.0.R1
Platforms	All

### **bfd-sessions** *number*

Synopsis	Maximum number of LSP BFD session tail-ends
Context	<b>configure router</b> <i>string</i> <b>lsp-bfd</b> <b>bfd-sessions</b> <i>number</i>
Tree	<b>bfd-sessions</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## tail-end

Synopsis	Enter the <b>tail-end</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">lsp-bfd tail-end</a>
Tree	<a href="#">tail-end</a>
Introduced	20.10.R1
Platforms	All

## multiplier *number*

Synopsis	Missed message threshold before session is set to down
Context	<b>configure router</b> <i>string</i> <a href="#">lsp-bfd tail-end multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 20
Default	3
Introduced	20.10.R1
Platforms	All

## receive-interval *number*

Synopsis	The BFD receive interval for LSP tail-end
Context	<b>configure router</b> <i>string</i> <a href="#">lsp-bfd tail-end receive-interval</a> <i>number</i>
Tree	<a href="#">receive-interval</a>
Range	100 to 1000
Units	milliseconds
Default	1000
Introduced	20.10.R1
Platforms	All

## transmit-interval *number*

Synopsis	The BFD transmit interval for LSP tail-end
Context	<b>configure router</b> <i>string</i> <a href="#">lsp-bfd tail-end transmit-interval</a> <i>number</i>
Tree	<a href="#">transmit-interval</a>
Range	100 to 1000

---

Units	milliseconds
Default	1000
Introduced	20.10.R1
Platforms	All

### **mc-maximum-routes**

Synopsis	Enter the <b>mc-maximum-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mc-maximum-routes</a>
Tree	<a href="#">mc-maximum-routes</a>
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Log and allow learning of new multicast routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mc-maximum-routes</a> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Maximum multicast routes which the VRF holds
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mc-maximum-routes</a> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	Maximum multicast routes configured on virtual router
----------	---

Context	<b>configure router</b> <i>string mc-maximum-routes value number</i>
Tree	<a href="#">value</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

## mld

Synopsis	Enable the <b>mld</b> context
Context	<b>configure router</b> <i>string mld</i>
Tree	<a href="#">mld</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of MLD
Context	<b>configure router</b> <i>string mld admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## forwarding-group-interface *forwarding-service string group-interface-name reference*

Synopsis	Enter the <b>forwarding-group-interface</b> list instance
Context	<b>configure router</b> <i>string mld forwarding-group-interface forwarding-service string group-interface-name reference</i>
Tree	<a href="#">forwarding-group-interface</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## forwarding-service *string*

Synopsis	Forwarding service for the subscriber interface
----------	---

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface-name** *reference*

Synopsis	Group interface name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
Reference	<b>configure</b> <i>service</i> <i>vpn</i> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the MLD interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>admin-state</i> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy to filter MLD packets
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>import-policy</i> <i>reference</i>
Tree	<a href="#">import-policy</a>

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mcac

Synopsis Enter the **mcac** context

Context **configure** [router](#) *string* [mld forwarding-group-interface forwarding-service](#) *string* [group-interface-name](#) *reference* [mcac](#)

Tree	<b>group-interface</b>
Reference	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the MLD interface

Context **configure** *router string mld group-interface reference admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis Import policy to filter MLD packets

Context **configure** *router string mld group-interface reference import-policy reference*

Tree [import-policy](#)

Reference **configure** *policy-options policy-statement string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis Maximum number of group sources for this interface

Context **configure** *router string mld group-interface reference maximum-number-group-sources number*

Tree [maximum-number-group-sources](#)

Description This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.

Range 1 to 32000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>

Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024

Introduced 16.0.R1  
Platforms All

### **query-last-member-interval** *number*

Synopsis Time between group-specific query messages  
Context **configure** [router string mld interface string query-last-member-interval number](#)  
Tree [query-last-member-interval](#)  
Range 1 to 1023  
Introduced 16.0.R1  
Platforms All

### **query-response-interval** *number*

Synopsis Time to wait for a response to the host-query messages  
Context **configure** [router string mld interface string query-response-interval number](#)  
Tree [query-response-interval](#)  
Range 1 to 1023  
Introduced 16.0.R1  
Platforms All

### **router-alert-check** *boolean*

Synopsis Enable router alert checking for IGMP or MLD messages  
Context **configure** [router string mld interface string router-alert-check boolean](#)  
Tree [router-alert-check](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **ssm-translate**

Synopsis Enter the **ssm-translate** context  
Context **configure** [router string mld interface string ssm-translate](#)  
Tree [ssm-translate](#)

Introduced 16.0.R1  
 Platforms All

### **group-range** *start string end string*

Synopsis Enter the **group-range** list instance  
 Context **configure** *router string mld interface string ssm-translate group-range start string end string*  
 Tree [group-range](#)  
 Introduced 16.0.R1  
 Platforms All

### **start string**

Synopsis Lower bound of the group range  
 Context **configure** *router string mld interface string ssm-translate group-range start string end string*  
 Tree [group-range](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **end string**

## mpls

Synopsis	Enable the <b>mpls</b> context
Context	<b>configure router string mpls</b>
Tree	<b>mpls</b>
Introduced	16.0.R1
Platforms	All

## admin-group-frr *boolean*

Synopsis	Use admin group constraints for FRR path computation
Context	<b>configure router string mpls admin-group-frr boolean</b>
Tree	<b>admin-group-frr</b>
Default	false
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the MPLS instance
Context	<b>configure router string mpls admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## auto-bandwidth-multipliers

Synopsis	Enter the <b>auto-bandwidth-multipliers</b> context
Context	<b>configure router string mpls auto-bandwidth-multipliers</b>
Tree	<b>auto-bandwidth-multipliers</b>
Introduced	16.0.R1
Platforms	All

**adjust-multiplier** *number*

Synopsis	Collection intervals in a sample interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls auto-bandwidth-multipliers</b> <b>adjust-multiplier</b> <i>number</i>
Tree	<b>adjust-multiplier</b>
Range	1 to 16383
Default	288
Introduced	16.0.R1
Platforms	All

**sample-multiplier** *number*

Synopsis	Collection intervals in a sample interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls auto-bandwidth-multipliers</b> <b>sample-multiplier</b> <i>number</i>
Tree	<b>sample-multiplier</b>
Range	1 to 511
Default	1
Introduced	16.0.R1
Platforms	All

**auto-lsp** [**template-name**] *reference*

Synopsis	Enter the <b>auto-lsp</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls auto-lsp</b> <i>reference</i>
Tree	<b>auto-lsp</b>
Max. Instances	500
Introduced	16.0.R1
Platforms	All

**[template-name]** *reference*

Synopsis	LSP template name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls auto-lsp</b> <i>reference</i>
Tree	<b>auto-lsp</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **one-hop** *boolean*

Synopsis	Enable one-hop point-to-point LSP automatic signaling
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls auto-lsp</a> <i>reference</i> <b>one-hop</b> <i>boolean</i>
Tree	<a href="#">one-hop</a>
Description	This command enables the automatic signaling of one-hop point-to-point LSPs.
Default	false
Notes	The following elements are part of a choice: <b>one-hop</b> or <b>policy</b> .
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Peer prefix policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls auto-lsp</a> <i>reference</i> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	The following elements are part of a choice: <b>one-hop</b> or <b>policy</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **aux-stats**

Synopsis	Enable the <b>aux-stats</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls aux-stats</a>
Tree	<a href="#">aux-stats</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**sr boolean**

Synopsis	Traffic type count in MPLS statistics table
Context	<b>configure router string mpls aux-stats sr boolean</b>
Tree	<b>sr</b>
Description	This command configures the type of traffic to count in the auxiliary MPLS statistics table. It refers to any type of segment routing traffic (SR-OSPF, SR-ISIS, SR-TE, and so on).
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**bypass-resignal-timer number**

Synopsis	Resignal timer for bypass
Context	<b>configure router string mpls bypass-resignal-timer number</b>
Tree	<b>bypass-resignal-timer</b>
Range	1 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

**class-forwarding-policy [policy-name] string**

Synopsis	Enter the <b>class-forwarding-policy</b> list instance
Context	<b>configure router string mpls class-forwarding-policy string</b>
Tree	<b>class-forwarding-policy</b>
Max. Instances	15
Introduced	16.0.R1
Platforms	All

**[policy-name] string**

Synopsis	Name of class forwarding policy
Context	<b>configure router string mpls class-forwarding-policy string</b>

Tree	<a href="#">class-forwarding-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **default-set** *number*

Synopsis	Default forwarding set ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls class-forwarding-policy</a> <i>string</i> <b>default-set</b> <i>number</i>
Tree	<a href="#">default-set</a>
Range	1 to 6
Default	1
Introduced	16.0.R1
Platforms	All

### **fc** [[fc-name](#)] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls class-forwarding-policy</a> <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<a href="#">fc</a>
Introduced	16.0.R1
Platforms	All

### [[fc-name](#)] *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls class-forwarding-policy</a> <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **forwarding-set** *number*

Synopsis	Forwarding set ID for forwarding classes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls class-forwarding-policy</b> <i>string</i> <b>fc</b> <i>keyword</i> <b>forwarding-set</b> <i>number</i>
Tree	<b>forwarding-set</b>
Range	1 to 6
Default	1
Introduced	16.0.R1
Platforms	All

### **cspf-on-loose-hop** *boolean*

Synopsis	Calculate CSPF until next loose hop on LSR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls cspf-on-loose-hop</b> <i>boolean</i>
Tree	<b>cspf-on-loose-hop</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **dynamic-bypass** *boolean*

Synopsis	Create dynamic bypass LSPs in FRR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls dynamic-bypass</b> <i>boolean</i>
Tree	<b>dynamic-bypass</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **entropy-label**

Synopsis	Enter the <b>entropy-label</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls entropy-label</b>
Tree	<b>entropy-label</b>
Introduced	16.0.R1
Platforms	All

**rsvp-te boolean**

Synopsis	Apply entropy labels to RSVP-TE LSPs
Context	<b>configure</b> <i>router string mpls entropy-label rsvp-te boolean</i>
Tree	<a href="#">rsvp-te</a>
Introduced	16.0.R1
Platforms	All

**sr-te boolean**

Synopsis	Apply entropy labels to SR-TE LSPs
Context	<b>configure</b> <i>router string mpls entropy-label sr-te boolean</i>
Tree	<a href="#">sr-te</a>
Introduced	16.0.R1
Platforms	All

**exponential-backoff-retry boolean**

Synopsis	Use exponential back-off timer when retrying an LSP
Context	<b>configure</b> <i>router string mpls exponential-backoff-retry boolean</i>
Tree	<a href="#">exponential-backoff-retry</a>
Default	false
Introduced	16.0.R1
Platforms	All

**forwarding-policies**

Synopsis	Enable the <b>forwarding-policies</b> context
Context	<b>configure</b> <i>router string mpls forwarding-policies</i>
Tree	<a href="#">forwarding-policies</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MPLS forwarding policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**forwarding-policy** [**policy-name**] *string*

Synopsis	Enter the <b>forwarding-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies</b> <b>forwarding-policy</b> <i>string</i>
Tree	<b>forwarding-policy</b>
Max. Instances	65536
Introduced	16.0.R1
Platforms	All

**[policy-name]** *string*

Synopsis	Forwarding policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies</b> <b>forwarding-policy</b> <i>string</i>
Tree	<b>forwarding-policy</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the MPLS forwarding policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies</b> <b>forwarding-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## **binding-label** *number*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Binding label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>binding-label</b> <i>number</i>
Tree	<b>binding-label</b>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

## **egress-statistics**

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>egress-statistics</b>
Tree	<b>egress-statistics</b>
Introduced	19.7.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of egress or ingress statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>egress-statistics admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	19.7.R1

Platforms All

## endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure endpoint address.

Context **configure** router *string* mpls forwarding-policies forwarding-policy *string* endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Introduced	16.0.R4
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight of an NHG entry
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls forwarding-policies forwarding-policy</i> <i>string</i> <i>next-hop-group number load-balancing-weight number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	16.0.R4
Platforms	All

### **primary-next-hop**

Synopsis	Enable the <b>primary-next-hop</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls forwarding-policies forwarding-policy</i> <i>string</i> <i>next-hop-group number primary-next-hop</i>
Tree	<a href="#">primary-next-hop</a>
Introduced	16.0.R1

Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Next hop address

Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number primary-next-hop next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [next-hop](#)

Introduced 16.0.R1

Platforms All

### **pushed-labels** [[index](#)] *number*

Synopsis Enter the **pushed-labels** list instance

Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number primary-next-hop pushed-labels number*

Tree [pushed-labels](#)

Max. Instances 10

Introduced 16.0.R4

Platforms All

### [[index](#)] *number*

Synopsis Index for push label

Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number primary-next-hop pushed-labels number*

Tree [pushed-labels](#)

Range 1 to 10

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms All

### **label** *number*

Synopsis Label value

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls forwarding-policies forwarding-policy</i> <i>string</i> <i>next-hop-group</i> <i>number</i> <i>primary-next-hop pushed-labels</i> <i>number</i> <i>label</i> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### resolution-type *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Resolution type for next hop group
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls forwarding-policies forwarding-policy</i> <i>string</i> <i>next-hop-group</i> <i>number</i> <a href="#">resolution-type</a> <i>keyword</i>
Tree	<a href="#">resolution-type</a>
Options	direct, indirect
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### preference *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference number
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls forwarding-policies forwarding-policy</i> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

**revert-timer** *number*

Synopsis	Revert timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>revert-timer</b> <i>number</i>
Tree	<a href="#">revert-timer</a>
Range	1 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

**tunnel-table-pref** *number*

Synopsis	Tunnel table preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>tunnel-table-pref</b> <i>number</i>
Tree	<a href="#">tunnel-table-pref</a>
Description	<p>This command configures the TTM preference value of an MPLS forwarding policy.</p> <p>The <i>preference-value</i> parameter is used by applications to select one tunnel type to bind to in TTM when multiple tunnel types are enabled for the application.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

**reserved-label-block** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies reserved-label-block</b> <i>reference</i>
Tree	<a href="#">reserved-label-block</a>

---

Reference	<b>configure</b> <i>router string mpls-labels reserved-label-block string</i>
Introduced	16.0.R1
Platforms	All

### **frr-object** *boolean*

Synopsis	Signal with fast reroute object
Context	<b>configure</b> <i>router string mpls frr-object boolean</i>
Tree	<a href="#">frr-object</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **hold-timer** *number*

Synopsis	Hold timer value
Context	<b>configure</b> <i>router string mpls hold-timer number</i>
Tree	<a href="#">hold-timer</a>
Range	0 to 1000
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **ingress-statistics**

Synopsis	Enter the <b>ingress-statistics</b> context
Context	<b>configure</b> <i>router string mpls ingress-statistics</i>
Tree	<a href="#">ingress-statistics</a>
Introduced	16.0.R1
Platforms	All

### **lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **lsp-name** *string*

Synopsis	Enter the <b>lsp</b> list instance
----------	------------------------------------

Context	<b>configure router string mpls ingress-statistics lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>lsp-name string</i>
Tree	<a href="#">lsp</a>
Introduced	16.0.R1
Platforms	All

### **sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Sender address
Context	<b>configure router string mpls ingress-statistics lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>lsp-name string</i>
Tree	<a href="#">lsp</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **lsp-name** *string*

Synopsis	LSP name
Context	<b>configure router string mpls ingress-statistics lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>lsp-name string</i>
Tree	<a href="#">lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy ID
Context	<b>configure router string mpls ingress-statistics lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>lsp-name string accounting-policy reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure log accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of statistics for the LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>ingress-statistics</b> <b>lsp</b> <b>sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>lsp-name</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>ingress-statistics</b> <b>lsp</b> <b>sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>lsp-name</b> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<b>collect-stats</b>
Default	false
Introduced	16.0.R1
Platforms	All

**stat-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Stat mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>ingress-statistics</b> <b>lsp</b> <b>sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>lsp-name</b> <i>string</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

**p2mp-template-lsp sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **rsvp-session-name** *string*

Synopsis	Enter the <b>p2mp-template-lsp</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls ingress-statistics</b> <b>p2mp-template-lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>rsvp-session-name</b> <i>string</i>
Tree	<b>p2mp-template-lsp</b>
Introduced	16.0.R1
Platforms	All

**sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Sender address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls ingress-statistics</b> <b>p2mp-template-lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>rsvp-session-name</b> <i>string</i>
Tree	<b>p2mp-template-lsp</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**rsvp-session-name** *string*

Synopsis	RSVP session name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls ingress-statistics</b> <b>p2mp-template-lsp sender</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>rsvp-session-name</b> <i>string</i>
Tree	<b>p2mp-template-lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**accounting-policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy ID
----------	----------------------

Context	<b>configure</b> <i>router string mpls ingress-statistics p2mp-template-lsp sender (ipv4-address-no-zone   ipv6-address-no-zone) rsvp-session-name string accounting-policy reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <i>log accounting-policy number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of statistics for the LSP
Context	<b>configure</b> <i>router string mpls ingress-statistics p2mp-template-lsp sender (ipv4-address-no-zone   ipv6-address-no-zone) rsvp-session-name string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Collect statistics
Context	<b>configure</b> <i>router string mpls ingress-statistics p2mp-template-lsp sender (ipv4-address-no-zone   ipv6-address-no-zone) rsvp-session-name string collect-stats boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **max-stats** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of statistic indices
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls ingress-statistics p2mp-template-lsp sender</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>rsvp-session-name</i> <i>string</i> <i>max-stats</i> <i>number</i>
Tree	<a href="#">max-stats</a>
Range	1 to 8191
Default	8191
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Stat mode
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls ingress-statistics p2mp-template-lsp sender</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>rsvp-session-name</i> <i>string</i> <i>stat-mode</i> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

### **p2p-template-lsp** *sender* (*ipv4-address-no-zone* | *ipv6-address-no-zone*) *rsvp-session-name* *string*

Synopsis	Enter the <b>p2p-template-lsp</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls ingress-statistics p2p-template-lsp sender</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <i>rsvp-session-name</i> <i>string</i>
Tree	<a href="#">p2p-template-lsp</a>
Introduced	16.0.R1
Platforms	All

### **sender** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Sender address
----------	----------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls ingress-statistics</a> <a href="#">p2p-template-lsp</a> <a href="#">sender</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">rsvp-session-name</a> <i>string</i>
Tree	<a href="#">p2p-template-lsp</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **rsvp-session-name** *string*

Synopsis	RSVP session name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls ingress-statistics</a> <a href="#">p2p-template-lsp</a> <a href="#">sender</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">rsvp-session-name</a> <i>string</i>
Tree	<a href="#">p2p-template-lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls ingress-statistics</a> <a href="#">p2p-template-lsp</a> <a href="#">sender</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">rsvp-session-name</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>

Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

**interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls interface</i> <i>reference</i>
Tree	<a href="#">interface</a>
Description	<p>Commands in this context configure the attributes for MPLS protocol support on an IP interface.</p> <p>MPLS commands are not executed on an IP interface where MPLS is not enabled. An MPLS interface must be explicitly enabled (admin-state enabled).</p> <p>The MPLS interface must be admin-state disabled to delete the interface definition.</p> <p>A corresponding RSVP interface must also be configured. The MPLS interface cannot be deleted without also deleting the RSVP interface.</p>
Introduced	16.0.R1
Platforms	All

**[interface-name]** *reference*

Synopsis	Router interface name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls interface</i> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **admin-group** *reference*

Synopsis	Administrative groups supported by the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls interface</a> <i>reference</i> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Description	<p>This command specifies the administrative groups that the interface supports.</p> <p>This information is advertised as part of OSPF and IS-IS to help CSPF compute constrained LSPs that must include or exclude certain administrative groups. An MPLS interface is assumed to belong to all the administrative groups unless this command is issued under the interface configuration. With this command configured, the interface is assumed to belong to only the groups specifically configured in this command.</p> <p>Only the administrative groups bound to an MPLS interface are advertised in TE link TLVs and sub-TLVs when the <b>traffic-engineering</b> option is enabled in IS-IS or OSPF. IES and VPRN interfaces do not have their attributes advertised in TE TLVs.</p>
Reference	<b>configure</b> <a href="#">routing-options</a> <i>if-attribute</i> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the MPLS interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls interface</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **label-map** [[in-label](#)] *number*

Synopsis	Enter the <b>label-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls interface</a> <i>reference</i> <a href="#">label-map</a> <i>number</i>
Tree	<a href="#">label-map</a>

Introduced 16.0.R1  
 Platforms All

### **[in-label]** *number*

Synopsis Match the incoming MPLS label  
 Context **configure** *router string mpls interface reference label-map number*  
 Tree [label-map](#)  
 Range 32 to 1048575  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the label map  
 Context **configure** *router string mpls interface reference label-map number admin-state keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Platforms All

### **pop**

**WARNING:**  
 Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**  
 Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Pop (remove) the incoming label and forward packet based on service header  
 Context **configure** *router string mpls interface reference label-map number pop*  
 Tree [pop](#)

Notes	The following elements are part of a choice: <b>pop</b> or <b>swap</b> .
Introduced	16.0.R1
Platforms	All

## swap

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>swap</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls interface reference</a> <a href="#">label-map</a> <a href="#">number</a> <a href="#">swap</a>

Tree *admin-state*  
Options enable, disable

Default	disable
Introduced	16.0.R1
Platforms	All

### **admin-tag** [[name](#)] *reference*

Synopsis	Add a list entry for <b>admin-tag</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">admin-tag</a> <i>reference</i>
Tree	<a href="#">admin-tag</a>
Max. Instances	4
Introduced	16.0.R1
Platforms	All

### **[name]** *reference*

Synopsis	Name of the admin tags
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">admin-tag</a> <i>reference</i>
Tree	<a href="#">admin-tag</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adspec** *boolean*

Synopsis	Include ADSPEC object in RSVP messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">adspec</a> <i>boolean</i>
Tree	<a href="#">adspec</a>
Default	false
Introduced	16.0.R1
Platforms	All

## auto-bandwidth

Synopsis	Enable the <b>auto-bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a>
Tree	<a href="#">auto-bandwidth</a>
Introduced	16.0.R1
Platforms	All

## adjust-down

Synopsis	Enter the <b>adjust-down</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">adjust-down</a>
Tree	<a href="#">adjust-down</a>
Introduced	16.0.R1
Platforms	All

## bw *number*

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">adjust-down</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

## percent *number*

Synopsis	Minimum difference in percent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">adjust-down</a> <a href="#">percent</a> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1

Platforms All

## **adjust-up**

Synopsis Enter the **adjust-up** context  
Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth](#) [adjust-up](#)  
Tree [adjust-up](#)  
Introduced 16.0.R1  
Platforms All

## **bw number**

Synopsis Minimum difference in absolute bandwidth  
Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth](#) [adjust-up](#) [bw](#) *number*  
Tree [bw](#)  
Range 0 to 6400000  
Units megabps  
Default 0  
Introduced 16.0.R1  
Platforms All

## **percent number**

Synopsis Minimum difference in percent  
Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth](#) [adjust-up](#) [percent](#) *number*  
Tree [percent](#)  
Range 0 to 100  
Units percent  
Default 5  
Introduced 16.0.R1  
Platforms All

## **fc [fc-name] keyword**

Synopsis Enter the **fc** list instance

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>auto-bandwidth fc</i> <i>keyword</i>
Tree	<i>fc</i>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>auto-bandwidth fc</i> <i>keyword</i>
Tree	<i>fc</i>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**sampling-weight** *number*

Synopsis	Forwarding class weight for LSP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>auto-bandwidth fc</i> <i>keyword</i> <i>sampling-weight number</i>
Tree	<i>sampling-weight</i>
Range	0 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

**max-bandwidth** *number*

Synopsis	Maximum bandwidth of auto-bandwidth to request for LSP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>auto-bandwidth max-bandwidth number</i>
Tree	<i>max-bandwidth</i>
Range	0 to 6400000

Units	megabps
Default	100000
Introduced	16.0.R1
Platforms	All

### **min-bandwidth** *number*

Synopsis	Minimum bandwidth of auto-bandwidth to request for the LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">min-bandwidth</a> <i>number</i>
Tree	<a href="#">min-bandwidth</a>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

### **monitor-bandwidth** *boolean*

Synopsis	Collect and display auto-bandwidth measurements for the LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">monitor-bandwidth</a> <i>boolean</i>
Tree	<a href="#">monitor-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **multipliers**

Synopsis	Enter the <b>multipliers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a>
Tree	<a href="#">multipliers</a>
Introduced	16.0.R1
Platforms	All

**adjust-multiplier** *number*

Synopsis	Number of collection intervals in the adjust interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a> <a href="#">adjust-multiplier</a> <i>number</i>
Tree	<a href="#">adjust-multiplier</a>
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

**sample-multiplier** *number*

Synopsis	Multiplier for collection intervals in a sample interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a> <a href="#">sample-multiplier</a> <i>number</i>
Tree	<a href="#">sample-multiplier</a>
Range	1 to 511
Introduced	16.0.R1
Platforms	All

**overflow-limit**

Synopsis	Enable the <b>overflow-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a>
Tree	<a href="#">overflow-limit</a>
Introduced	16.0.R1
Platforms	All

**bw** *number*

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1

Platforms All

### **number** *number*

Synopsis Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt

Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth overflow-limit](#) **number** *number*

Tree [number](#)

Range 1 to 10

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **threshold** *number*

Synopsis Minimum difference in percent between the LSP bandwidth and the sampled data rate

Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth overflow-limit](#) **threshold** *number*

Tree [threshold](#)

Range 0 to 100

Units percent

Default 0

Introduced 16.0.R1

Platforms All

### **underflow-limit**

Synopsis Enable the **underflow-limit** context

Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth underflow-limit](#)

Tree [underflow-limit](#)

Introduced 16.0.R1

Platforms All

### **bw** *number*

Synopsis Minimum difference in absolute bandwidth

Context **configure** [router](#) *string* [mpls lsp](#) *string* [auto-bandwidth underflow-limit](#) **bw** *number*

Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth underflow-limit</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth underflow-limit</a> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

### **use-last-adj-bw**

Synopsis	Enable the <b>use-last-adj-bw</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">use-last-adj-bw</a>
Tree	<a href="#">use-last-adj-bw</a>
Introduced	16.0.R5
Platforms	All

**secondary-retry-limit** (*number* | *keyword*)

Synopsis	Maximum number of retry limits for secondary paths
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth use-last-adj-bw secondary-retry-limit (number   keyword)</i>
Tree	<a href="#">secondary-retry-limit</a>
Description	This command configures the maximum number of retry attempts for secondary paths. After each successful attempt, the counter is reset to zero.
Range	1 to 10000
Options	infinite
Default	5
Introduced	16.0.R5
Platforms	All

**bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string mpls lsp string bfd</i>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <i>router string mpls lsp string bfd bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **failure-action** *keyword*

Synopsis	Action when LSP BFD fails on the RSVP SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">bfd</a> <a href="#">failure-action</a> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Description	The command specifies the action when LSP BFD fails on an RSVP, SR-TE, or LDP LSP.  Regardless of the failure action specified, when the BFD session goes down on the LSP, the system generates an SNMP trap.
Options	none, down, failover, failover-or-down
Default	none
Introduced	16.0.R1
Platforms	All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">bfd</a> <a href="#">lsp-ping-interval</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">lsp-ping-interval</a>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

### **return-path-label** *number*

Synopsis	S-BFD return-path label
----------	-------------------------

Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>bfd return-path-label</b> <i>number</i>
Tree	<b>return-path-label</b>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>bfd wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

**bgp-shortcut** *boolean*

Synopsis	Include LSP for BGP routes
Context	<b>configure</b> <i>router string mpls lsp string bgp-shortcut boolean</i>
Tree	<a href="#">bgp-shortcut</a>
Introduced	16.0.R1
Platforms	All

**bgp-transport-tunnel** *boolean*

Synopsis	Include LSP as transport LSP for labeled BGP routes
Context	<b>configure</b> <i>router string mpls lsp string bgp-transport-tunnel boolean</i>
Tree	<a href="#">bgp-transport-tunnel</a>
Introduced	16.0.R1
Platforms	All

**binding-sid** *number*

Synopsis	Binding SID for the LSP
Context	<b>configure</b> <i>router string mpls lsp string binding-sid number</i>
Tree	<a href="#">binding-sid</a>
Description	This command binds a label to the LSP. The label value must belong to the reserved label block that is configured with the <b>configure router mpls lsp-bsid-block</b> command.
Range	32 to 1048575
Introduced	22.10.R1
Platforms	All

**class-forwarding**

Synopsis	Enable the <b>class-forwarding</b> context
Context	<b>configure</b> <i>router string mpls lsp string class-forwarding</i>
Tree	<a href="#">class-forwarding</a>
Introduced	16.0.R1
Platforms	All

## forwarding-set

Synopsis	Enter the <b>forwarding-set</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a>
Tree	<a href="#">forwarding-set</a>
Notes	The following elements are part of a choice: ( <b>default-lsp</b> and <b>fc</b> ) or <b>forwarding-set</b> .
Introduced	16.0.R1
Platforms	All

## policy reference

Synopsis	Name for the class based forwarding policy for LSP instances
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">class-forwarding-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## set number

Synopsis	Forwarding set ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">set</a> <i>number</i>
Tree	<a href="#">set</a>
Range	1 to 6
Introduced	16.0.R1
Platforms	All

## class-type number

Synopsis	Class type for an LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-type</a> <i>number</i>
Tree	<a href="#">class-type</a>
Range	0 to 7
Default	0
Introduced	16.0.R1

Platforms All

### **egress-statistics**

Synopsis Enable the **egress-statistics** context  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [egress-statistics](#)  
 Tree [egress-statistics](#)  
 Introduced 16.0.R1  
 Platforms All

### **accounting-policy** *reference*

Synopsis Accounting policy ID  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [egress-statistics](#) [accounting-policy](#) *reference*  
 Tree [accounting-policy](#)  
 Reference **configure** [log](#) [accounting-policy](#) *number*  
 Introduced 16.0.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of statistics for the LSP  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [egress-statistics](#) [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Platforms All

### **collect-stats** *boolean*

Synopsis Collect LSP statistics  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [egress-statistics](#) [collect-stats](#) *boolean*  
 Tree [collect-stats](#)

Description	When configured to <b>true</b> , this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.  When configured to <b>false</b> , the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	<b>configure</b> <i>router string mpls lsp string egress-statistics stat-mode keyword</i>
Tree	<a href="#">stat-mode</a>
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

### **entropy-label** *keyword*

Synopsis	Entropy label
Context	<b>configure</b> <i>router string mpls lsp string entropy-label keyword</i>
Tree	<a href="#">entropy-label</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

### **exclude-admin-group** *reference*

Synopsis	Name of admin group excluded when LSP is set up
Context	<b>configure</b> <i>router string mpls lsp string exclude-admin-group reference</i>

Tree	<a href="#">exclude-admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options if-attribute admin-group string</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **exclude-node** ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#))

Synopsis	Exclude Routers object to be included in the bypass path message
Context	<b>configure</b> <a href="#">router string mpls lsp string exclude-node</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> )
Tree	<a href="#">exclude-node</a>
Introduced	16.0.R1
Platforms	All

### **fallback-path-computation-method** *keyword*

Synopsis	Fallback path computation method
Context	<b>configure</b> <a href="#">router string mpls lsp string fallback-path-computation-method keyword</a>
Tree	<a href="#">fallback-path-computation-method</a>
Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	21.2.R1
Platforms	All

### **fast-reroute**

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure</b> <a href="#">router string mpls lsp string fast-reroute</a>
Tree	<a href="#">fast-reroute</a>
Introduced	16.0.R1
Platforms	All

**frr-method** *keyword*

Synopsis	Fast Reroute method
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>frr-method</b> <i>keyword</i>
Tree	<b>frr-method</b>
Options	one-to-one, facility
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Total number of hops a detour or backup LSP can take
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>hop-limit</b> <i>number</i>
Tree	<b>hop-limit</b>
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

**node-protect** *boolean*

Synopsis	Enable node and link protection for the specified LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>node-protect</b> <i>boolean</i>
Tree	<b>node-protect</b>
Introduced	16.0.R1
Platforms	All

**propagate-admin-group** *boolean*

Synopsis	Enable admin group constraints on a FRR backup LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>propagate-admin-group</b> <i>boolean</i>
Tree	<b>propagate-admin-group</b>
Default	false
Introduced	16.0.R1
Platforms	All

**from** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address of this LSP
Context	<b>configure</b> <i>router string mpls lsp string from (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<i>from</i>
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Maximum number of hops that an LSP can traverse including ingress and egress routers
Context	<b>configure</b> <i>router string mpls lsp string hop-limit number</i>
Tree	<i>hop-limit</i>
Range	2 to 255
Default	255
Introduced	16.0.R1
Platforms	All

**igp-shortcut**

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <i>router string mpls lsp string igp-shortcut</i>
Tree	<i>igp-shortcut</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of LSP for shortcut or forwarding
Context	<b>configure</b> <i>router string mpls lsp string igp-shortcut admin-state keyword</i>
Tree	<i>admin-state</i>

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **lfa-type** *keyword*

Synopsis	LSP usage in LFA SPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">igp-shortcut</a> <b>lfa-type</b> <i>keyword</i>
Tree	<a href="#">lfa-type</a>
Options	lfa-protect, lfa-only
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

### **relative-metric** *number*

Synopsis	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">igp-shortcut</a> <b>relative-metric</b> <i>number</i>
Tree	<a href="#">relative-metric</a>
Range	-10 to 10
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

### **include-admin-group** *reference*

Synopsis	Admin group name included when LSP is set up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <b>include-admin-group</b> <i>reference</i>
Tree	<a href="#">include-admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**label-stack-reduction** *boolean*

Synopsis	Enable/disable label compression for LSP path.
Context	<b>configure</b> <i>router string mpls lsp string label-stack-reduction boolean</i>
Tree	<a href="#">label-stack-reduction</a>
Default	false
Introduced	19.7.R1
Platforms	All

**ldp-over-rsvp** *boolean*

Synopsis	Include this LSP in LDP over RSVP
Context	<b>configure</b> <i>router string mpls lsp string ldp-over-rsvp boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Introduced	16.0.R1
Platforms	All

**least-fill** *boolean*

Synopsis	Enable least-fill path selection for this LSP
Context	<b>configure</b> <i>router string mpls lsp string least-fill boolean</i>
Tree	<a href="#">least-fill</a>
Default	false
Introduced	16.0.R1
Platforms	All

**load-balancing-weight** *number*

Synopsis	Load balancing weight for an MPLS LSP
Context	<b>configure</b> <i>router string mpls lsp string load-balancing-weight number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**local-sr-protection** *keyword*

Synopsis	Local SR protection preference for LSP path computation
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>local-sr-protection</b> <i>keyword</i>
Tree	<b>local-sr-protection</b>
Options	none, preferred, mandatory
Default	preferred
Introduced	19.7.R1
Platforms	All

**lsp-self-ping** *keyword*

Synopsis	LSP Self Ping activation status on the RSVP-TE LSP
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>lsp-self-ping</b> <i>keyword</i>
Tree	<b>lsp-self-ping</b>
Description	When configured, the system uses this setting for the LSP regardless of the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> . When unconfigured, the command inherits the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> .
Options	false, true
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**main-ct-retry-limit** *number*

Synopsis	Maximum number of retries before reverting to backup CT
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>main-ct-retry-limit</b> <i>number</i>
Tree	<b>main-ct-retry-limit</b>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

**max-sr-labels**

Synopsis	Enter the <b>max-sr-labels</b> context
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>max-sr-labels</b>

---

Tree	<a href="#">max-sr-labels</a>
Introduced	16.0.R1
Platforms	All

### **additional-frr-labels** *number*

Synopsis	Value for the maximum additional overhead labels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">max-sr-labels</a> <a href="#">additional-frr-labels</a> <i>number</i>
Tree	<a href="#">additional-frr-labels</a>
Range	0 to 4
Default	1
Introduced	16.0.R1
Platforms	All

### **label-stack-size** *number*

Synopsis	Maximum label stack size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">max-sr-labels</a> <a href="#">label-stack-size</a> <i>number</i>
Tree	<a href="#">label-stack-size</a>
Description	This command configures the maximum label stack size of the primary path of the SR-TE LSP.
Range	1 to 11
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	LSP metric that forces to a constant value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

**metric-type** *keyword*

Synopsis	Metric type used for LSP path computation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>metric-type</b> <i>keyword</i>
Tree	<b>metric-type</b>
Options	igp, te
Default	igp
Introduced	19.7.R1
Platforms	All

**override-tunnel-elc** *boolean*

Synopsis	Override any received entropy label capability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>override-tunnel-elc</b> <i>boolean</i>
Tree	<b>override-tunnel-elc</b>
Description	When configured to <b>true</b> , this command allows the system to override any received entropy label capability advertisement. When configured to <b>false</b> , this command disables the override.
Default	false
Introduced	21.10.R1
Platforms	All

**p2mp-id** *number*

Synopsis	Unique identifier as Point-to-Multipoint (P2MP) identifier
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>p2mp-id</b> <i>number</i>
Tree	<b>p2mp-id</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**path-computation-method** *keyword*

Synopsis	Path computation method
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>path-computation-method</b> <i>keyword</i>
Tree	<b>path-computation-method</b>

Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the <b>hop-to-label</b> translation is used for for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP.
Options	local-cspf, pce
Introduced	19.7.R1
Platforms	All

### **path-profile** [[profile-id](#)] *number*

Synopsis	Enter the <b>path-profile</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">path-profile</a> <i>number</i>
Tree	<a href="#">path-profile</a>
Description	Commands in this context configure the attributes of the PCE path profile.
Max. Instances	5
Introduced	16.0.R1
Platforms	All

### [\[profile-id\]](#) *number*

Synopsis	Profile ID for the specified LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">path-profile</a> <i>number</i>
Tree	<a href="#">path-profile</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **path-group** *number*

Synopsis	Path-group ID for the specified LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">path-profile</a> <i>number</i> <a href="#">path-group</a> <i>number</i>
Tree	<a href="#">path-group</a>
Max. Range	0 to 4294967295

Default	0
Introduced	16.0.R1
Platforms	All

## **pce-associations**

Synopsis	Enter the <b>pce-associations</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">pce-associations</a>
Tree	<a href="#">pce-associations</a>
Description	Commands in this context configure the LSP binding with one or more PCEP associations.
Introduced	22.5.R1
Platforms	All

## **diversity** [[diversity-name](#)] *reference*

Synopsis	Add a list entry for <b>diversity</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>reference</i>
Tree	<a href="#">diversity</a>
Description	Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

## **[diversity-name]** *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>reference</i>
Tree	<a href="#">diversity</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**policy** [*policy-name*] *reference*

Synopsis	Add a list entry for <b>policy</b>
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

**[policy-name]** *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>pce-associations</i> <i>policy</i> <i>reference</i>
Tree	<i>policy</i>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>pcep pcc</i> <i>pce-associations</i> <i>policy</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**pce-control** *boolean*

Synopsis	Enable PCE controlled LSP mode of operation
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>pce-control</i> <i>boolean</i>
Tree	<i>pce-control</i>
Description	<p>When configured to <b>true</b>, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to <b>false</b>, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**pce-report** *keyword*

Synopsis	Global configuration of reporting to PCE to override
Context	<b>configure</b> <i>router string mpls lsp string pce-report keyword</i>
Tree	<a href="#">pce-report</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**primary** [[path-name](#)] *reference*

Synopsis	Enter the <b>primary</b> list instance
Context	<b>configure</b> <i>router string mpls lsp string primary reference</i>
Tree	<a href="#">primary</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[path-name]** *reference*

Synopsis	Path name
Context	<b>configure</b> <i>router string mpls lsp string primary reference</i>
Tree	<a href="#">primary</a>
Reference	<b>configure</b> <i>router string mpls path string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptive** *boolean*

Synopsis	Enable make-before-break functionality
Context	<b>configure</b> <i>router string mpls lsp string primary reference adaptive boolean</i>
Tree	<a href="#">adaptive</a>
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the LSP path  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R1  
 Platforms All

### **backup-class-type** *number*

Synopsis Class-type for the LSP or LSP path  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [backup-class-type](#) *number*  
 Tree [backup-class-type](#)  
 Range 0 to 7  
 Introduced 16.0.R1  
 Platforms All

### **bandwidth** *number*

Synopsis Amount of bandwidth to be reserved  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [bandwidth](#) *number*  
 Tree [bandwidth](#)  
 Range 0 to 6400000  
 Units megabps  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

### **bfd**

Synopsis Enter the **bfd** context

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">lsp-ping-interval</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">lsp-ping-interval</a>
Range	60 to 300
Units	seconds
Options	none
Default	60

Introduced	16.0.R1
Platforms	All

### **return-path-label** *number*

Synopsis	S-BFD return-path label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>primary</b> <i>reference</i> <b>bfd return-path-label</b> <i>number</i>
Tree	<b>return-path-label</b>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>primary</b> <i>reference</i> <b>bfd wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds

Default	4
Introduced	19.7.R1
Platforms	All

### **class-type** *number*

Synopsis	Class-type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">class-type</a> <i>number</i>
Tree	<a href="#">class-type</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **exclude-admin-group**

Synopsis	Enable the <b>exclude-admin-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">exclude-admin-group</a>
Tree	<a href="#">exclude-admin-group</a>
Introduced	16.0.R1
Platforms	All

### **group** *reference*

Synopsis	Groups to exclude when the LSP path is setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">exclude-admin-group</a> <a href="#">group</a> <i>reference</i>
Tree	<a href="#">group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Min. Instances	1
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Total number of hops that an LSP traverses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">hop-limit</a> <i>number</i>
Tree	<a href="#">hop-limit</a>
Range	2 to 255
Introduced	16.0.R1
Platforms	All

**include-admin-group**

Synopsis	Enable the <b>include-admin-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">include-admin-group</a>
Tree	<a href="#">include-admin-group</a>
Introduced	16.0.R1
Platforms	All

**group** *reference*

Synopsis	Groups that are included when LSP path is setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">include-admin-group</a> <a href="#">group</a> <i>reference</i>

Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

**bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	19.7.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	19.7.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <b>bfd-template</b> <i>reference</i>
Tree	<b>bfd-template</b>
Reference	<b>configure</b> <b>bfd</b> <b>bfd-template</b> <i>string</i>
Introduced	19.7.R1
Platforms	All

**lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <b>lsp-ping-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>lsp-ping-interval</b>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	19.7.R1
Platforms	All

**return-path-label** *number*

Synopsis	S-BFD return-path label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <b>return-path-label</b> <i>number</i>
Tree	<b>return-path-label</b>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512

Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

### **class-type** *number*

Synopsis	Class-type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>class-type</b> <i>number</i>
Tree	<b>class-type</b>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **exclude-admin-group**

Synopsis	Enable the <b>exclude-admin-group</b> context
----------	---

Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls</a> <a href="#">lsp</a> <a href="#">string</a> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">exclude-admin-group</a>

Max. Instances	32
Min. Instances	1
Introduced	16.0.R1
Platforms	All

**path-preference number**

Synopsis	Path preference for the secondary standby path
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary reference</a> <a href="#">path-preference</a> <i>number</i>
Tree	<a href="#">path-preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

**priority**

Synopsis	Enter the <b>priority</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary reference</a> <a href="#">priority</a>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	All

**hold-priority number**

Synopsis	Priority of an LSP session at preemption action
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary reference</a> <a href="#">priority</a> <a href="#">hold-priority</a> <i>number</i>

Tree	<a href="#">hold-priority</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

### **setup-priority** *number*

Synopsis	Priority when insufficient bandwidth for LSP setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">priority</a> <a href="#">setup-priority</a> <i>number</i>
Tree	<a href="#">setup-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

### **record** *boolean*

Synopsis	Enable recording of all hops that an LSP path traverses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">record</a> <i>boolean</i>
Tree	<a href="#">record</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **record-label** *boolean*

Synopsis	Enable recording of labels at each node or instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">record-label</a> <i>boolean</i>
Tree	<a href="#">record-label</a>
Default	true
Introduced	16.0.R1
Platforms	All

**srlg** *boolean*

Synopsis	Use SRLG constraint in secondary path computation for an LSP at the head-end LER
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>srlg</b> <i>boolean</i>
Tree	<b>srlg</b>
Default	false
Introduced	16.0.R1
Platforms	All

**standby** *boolean*

Synopsis	Keep secondary path indefinitely in hot standby state
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>standby</b> <i>boolean</i>
Tree	<b>standby</b>
Default	false
Introduced	16.0.R1
Platforms	All

**soft-preemption** *boolean*

Synopsis	Enable soft preemption
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>soft-preemption</b> <i>boolean</i>
Tree	<b>soft-preemption</b>
Description	When configured to <b>true</b> , the P2MP LSP preemption is governed by the <b>configure router rsvp preemption-timer</b> value. When configured to <b>false</b> , the preemption timer value is set to 0 and the P2MP LSPs are hard preempted. For P2P LSPs, soft preemption is always enabled and cannot be disabled.
Introduced	22.2.R1
Platforms	All

**to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination IP address or the egress router for the LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>to</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>to</b>
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	LSP for bypass protection, point to multipoint, segment routing or MPLS-TP static LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Options	p2p-rsvp, p2p-static-mpls, p2p-rsvp-bypass, p2mp-rsvp, p2mp-rsvp-auto, p2p-rsvp-mesh, p2p-rsvp-one-hop, p2p-sr-te, p2p-sr-te-mesh, p2p-sr-te-one-hop, p2p-sr-te-pce-init, p2p-sr-te-on-demand
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **vprn-auto-bind** *boolean*

Synopsis	Include this LSP in auto-bind for VPRN services
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp</b> <i>string</i> <b>vprn-auto-bind</b> <i>boolean</i>
Tree	<b>vprn-auto-bind</b>
Introduced	16.0.R1
Platforms	All

### **lsp-bsid-block** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block for binding SIDs
----------	---------------------------------------

Context	<b>configure router</b> <i>string</i> <a href="#">mpls lsp-bsid-block</a> <i>reference</i>
Tree	<a href="#">lsp-bsid-block</a>
Description	This command references a pre-existing reserved label block for statically configured binding SIDs.
Reference	<b>configure router</b> <i>string</i> <a href="#">mpls-labels reserved-label-block</a> <i>string</i>
Introduced	22.7.R1
Platforms	All

## **lsp-history**

Synopsis	Enable the <b>lsp-history</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">mpls lsp-history</a>
Tree	<a href="#">lsp-history</a>
Description	Commands in this context control the recording of LSP history events. When the context is created, memory is allocated for storing up to 100 of the most recent LSP history events. When the context is deleted, memory is deallocated.
Introduced	22.10.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of LSP history recording
Context	<b>configure router</b> <i>string</i> <a href="#">mpls lsp-history admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	22.10.R1
Platforms	All

## **lsp-init-retry-timeout** *number*

Synopsis	LSP initial retry timeout
Context	<b>configure router</b> <i>string</i> <a href="#">mpls lsp-init-retry-timeout</a> <i>number</i>
Tree	<a href="#">lsp-init-retry-timeout</a>

Range	10 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

## **lsp-self-ping**

Synopsis	Enter the <b>lsp-self-ping</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>lsp-self-ping</b>
Tree	<a href="#">lsp-self-ping</a>
Description	<p>Commands in this context configure LSP Self Ping parameters.</p> <p>LSP Self Ping checks that the datapath of an RSVP LSP has been programmed by all LSRs along its path before switching the traffic to it. If enabled, LSP Self Ping packets are sent periodically at a configurable interval following the receipt of the RESV message for an RSVP LSP path following an MBB or other event where the active path changes while the previous active path stayed up. The router will not switch traffic to the new path until an LSP Self Ping reply is received from the far-end LER.</p> <p>When configured under the MPLS context, LSP Self Ping is enabled for all RSVP LSPs, unless it is explicitly disabled for a given LSP.</p>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **interval number**

Synopsis	MPLS periodic LSP Self Ping interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>lsp-self-ping</b> <i>interval number</i>
Tree	<a href="#">interval</a>
Description	<p>This command configures the interval at which LSP Self Ping packets are periodically sent on a candidate path of an RSVP LSP.</p> <p>This value is used for all LSPs that have LSP Self Ping enabled.</p>
Range	1 to 10
Units	seconds
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rsvp-te boolean**

Synopsis	Activate LSP Self Ping on RSVP-TE LSPs
Context	<b>configure router</b> <i>string</i> <b>mpls lsp-self-ping rsvp-te boolean</b>
Tree	<b>rsvp-te</b>
Description	When configured to <b>true</b> , this command enables LSP Self Ping on all RSVP-TE LSPs, unless an individual LSP has this explicitly disabled under the <b>configure router mpls lsp lsp-self-ping</b> command or in the LSP template. When configured to <b>false</b> , this command disables LSP Self Ping on all RSVP-TE LSPs.
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**timeout number**

Synopsis	MPLS LSP Self Ping timeout
Context	<b>configure router</b> <i>string</i> <b>mpls lsp-self-ping timeout number</b>
Tree	<b>timeout</b>
Description	This command configures a timeout value for the LSP Self Ping timer. The LSP Self Ping timer starts when the RESV message is received for an LSP. The system periodically sends LSP Self Ping packets until the timer expires or the first LSP Self Ping reply is received, whichever comes first. If the timer expires before an LSP Self Ping packet is received, the configured timeout action is performed.
Range	3 to 3600
Units	seconds
Default	300
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**timeout-action keyword**

Synopsis	Action taken when LSP Self Ping timer expires
Context	<b>configure router</b> <i>string</i> <b>mpls lsp-self-ping timeout-action keyword</b>
Tree	<b>timeout-action</b>
Options	retry, switch
Default	retry

Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lsp-template** [*template-name*] *string*

Synopsis	Enter the <b>lsp-template</b> list instance
Context	<b>configure</b> <i>router string mpls lsp-template string</i>
Tree	<a href="#">lsp-template</a>
Description	Commands in this context configure the attributes of an LSP template that can be referenced by a client application when dynamic LSPs must be created.
Max. Instances	4096
Introduced	16.0.R1
Platforms	All

### **[template-name]** *string*

Synopsis	LSP template name
Context	<b>configure</b> <i>router string mpls lsp-template string</i>
Tree	<a href="#">lsp-template</a>
Description	This command specifies the name of the LSP template. An LSP template name and LSP name must not be the same.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptive** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable make-before-break functionality
Context	<b>configure</b> <i>router string mpls lsp-template string adaptive boolean</i>
Tree	<a href="#">adaptive</a>

Default	true
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the LSP template

Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

## adjust-up

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>adjust-up</b> context
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth adjust-up</i>
Tree	<i>adjust-up</i>
Introduced	16.0.R1
Platforms	All

## bw number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth adjust-up bw number</i>
Tree	<i>bw</i>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

## percent number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum difference in percent
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth adjust-up percent number</i>
Tree	<i>percent</i>
Range	0 to 100

Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

### **fc** [*fc-name*] *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth fc keyword</i>
Tree	<b>fc</b>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sampling-weight** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Forwarding class weight for LSP
----------	---------------------------------

Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth fc keyword</i> <b>sampling-weight number</b>
Tree	<b>sampling-weight</b>
Range	0 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

### **max-bandwidth** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum bandwidth of auto-bandwidth to request for LSP
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth</i> <b>max-bandwidth number</b>
Tree	<b>max-bandwidth</b>
Range	0 to 6400000
Units	megabps
Default	100000
Introduced	16.0.R1
Platforms	All

### **min-bandwidth** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum bandwidth of auto-bandwidth to request for the LSP
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth</i> <b>min-bandwidth number</b>
Tree	<b>min-bandwidth</b>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1

Platforms All

### monitor-bandwidth *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Collect and display auto-bandwidth measurements for the LSP

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [auto-bandwidth](#) [monitor-bandwidth](#) [boolean](#)

Tree [monitor-bandwidth](#)

Default false

Introduced 16.0.R1

Platforms All

### multipliers

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **multipliers** context

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [auto-bandwidth](#) [multipliers](#)

Tree [multipliers](#)

Introduced 16.0.R1

Platforms All

### adjust-multiplier *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Number of collection intervals in the adjust interval

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [auto-bandwidth](#) [multipliers](#) [adjust-multiplier](#) [number](#)

Tree [adjust-multiplier](#)

Range	1 to 16383
Introduced	16.0.R1
Platforms	All

### **sample-multiplier** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multiplier for collection intervals in a sample interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a> <a href="#">sample-multiplier</a> <i>number</i>
Tree	<a href="#">sample-multiplier</a>
Range	1 to 511
Introduced	16.0.R1
Platforms	All

### **overflow-limit**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>overflow-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a>
Tree	<a href="#">overflow-limit</a>
Introduced	16.0.R1
Platforms	All

### **bw** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum difference in absolute bandwidth
----------	--

Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth overflow-limit bw number</i>
Tree	<i>bw</i>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

### **number** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth overflow-limit number number</i>
Tree	<i>number</i>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <i>router string mpls lsp-template string auto-bandwidth overflow-limit threshold number</i>
Tree	<i>threshold</i>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1

Platforms All

## underflow-limit

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the **underflow-limit** context

Context **configure** *router string mpls lsp-template string auto-bandwidth underflow-limit*

Tree [underflow-limit](#)

Introduced 16.0.R1

Platforms All

## bw number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Minimum difference in absolute bandwidth

Context **configure** *router string mpls lsp-template string auto-bandwidth underflow-limit bw number*

Tree [bw](#)

Range 1 to 6400000

Units megabps

Introduced 16.0.R1

Platforms All

## number number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt

Context **configure** *router string mpls lsp-template string auto-bandwidth underflow-limit number number*

Tree	<a href="#">number</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth underflow-limit</a> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

### **backup-class-type** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup class type for this LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">backup-class-type</a> <i>number</i>
Tree	<a href="#">backup-class-type</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

**bandwidth** *number*

Synopsis	Amount of bandwidth reserved for the P2MP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

**bfd****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>bfd</b>
Tree	<b>bfd</b>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>bfd bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **failure-action** *keyword*

Synopsis	Action to take when LSP BFD session fails
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">bfd</a> <a href="#">failure-action</a> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Options	none, down, failover-or-down
Default	none
Introduced	16.0.R1
Platforms	All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">bfd</a> <a href="#">lsp-ping-interval</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">lsp-ping-interval</a>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

### **return-path-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">bfd</a> <a href="#">return-path-label</a> <i>number</i>

Tree	<a href="#">return-path-label</a>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <i>lsp-template</i> <i>string</i> <b>bfd</b> <b>wait-for-up-timer</b> <i>number</i>
Tree	<a href="#">wait-for-up-timer</a>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bgp-shortcut** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable/disable use of RSVP LSP for IPv4 BGP routes.
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>bgp-shortcut</i> <i>boolean</i>
Tree	<a href="#">bgp-shortcut</a>
Introduced	16.0.R1
Platforms	All

**bgp-transport-tunnel** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow use of RSVP-TE LSP as transport for tunnel routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>bgp-transport-tunnel</i> <i>boolean</i>
Tree	<a href="#">bgp-transport-tunnel</a>
Default	true
Introduced	16.0.R1
Platforms	All

**binding-sid** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Request to allocate and bind a label
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>binding-sid</i> <i>boolean</i>
Tree	<a href="#">binding-sid</a>
Description	<p>When configured to <b>true</b>, the system allocates and binds a label to any LSP that is created using the template.</p> <p>When configured to <b>false</b>, this command removes the configuration but this does not affect LSPs that were already created using the template.</p>

Default	false
Introduced	22.10.R1
Platforms	All

## class-forwarding

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>class-forwarding</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">class-forwarding</a>
Tree	<a href="#">class-forwarding</a>
Introduced	16.0.R1
Platforms	All

## forwarding-set

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>forwarding-set</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a>
Tree	<a href="#">forwarding-set</a>
Notes	The following elements are part of a choice: ( <b>default-lsp</b> and <b>fc</b> ) or <b>forwarding-set</b> .
Introduced	16.0.R1
Platforms	All

## policy reference

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name for the class based forwarding policy for LSP instances
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">policy reference</a>

Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">class-forwarding-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **set** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Forwarding set ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">set</a> <i>number</i>
Tree	<a href="#">set</a>
Range	1 to 6
Introduced	16.0.R1
Platforms	All

### **class-type** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Class type for an LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">class-type</a> <i>number</i>
Tree	<a href="#">class-type</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

**default-path** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default path to be used for signaling LSP instances
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">default-path</a> <i>reference</i>
Tree	<a href="#">default-path</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls path</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**egress-statistics****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	16.0.R1
Platforms	All

**accounting-policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>

Reference	<b>configure</b> <a href="#">log accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Collect LSP statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Description	<p>When configured to <b>true</b>, this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.</p> <p>When configured to <b>false</b>, the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

**entropy-label** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Entropy label for an LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">entropy-label</a> <i>keyword</i>
Tree	<a href="#">entropy-label</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**exclude-admin-group** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Admin group name excluded when LSP is set up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">exclude-admin-group</a> <i>reference</i>
Tree	<a href="#">exclude-admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <i>if-attribute</i> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**fallback-path-computation-method** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Fallback path computation method
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">fallback-path-computation-method</a> <i>keyword</i>
Tree	<a href="#">fallback-path-computation-method</a>

Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	21.10.R1
Platforms	All

### family keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Address family that specifies template use in SR-TE LSP
Context	<b>configure router string mpls lsp-template string family keyword</b>
Tree	<b>family</b>
Description	This command specifies the address family for which the LSP template applies in an SR-TE LSP. An LSP template is required for each address family.
Options	ipv4, ipv6
Default	ipv4
Introduced	20.5.R1
Platforms	All

### fast-reroute

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure router string mpls lsp-template string fast-reroute</b>
Tree	<b>fast-reroute</b>
Introduced	16.0.R1
Platforms	All

**frr-method** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Fast Reroute method for the LSPs that are dynamically created using this LSP template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>frr-method</b> <i>keyword</i>
Tree	<b>frr-method</b>
Options	one-to-one, facility
Default	facility
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Total number of hops a detour or backup LSP can take
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>hop-limit</b> <i>number</i>
Tree	<b>hop-limit</b>
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

**node-protect** *boolean*

Synopsis	Enable node and link protection for the specified LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>node-protect</b> <i>boolean</i>
Tree	<b>node-protect</b>
Default	false
Introduced	16.0.R1
Platforms	All

**propagate-admin-group** *boolean*

Synopsis	Enable admin group constraints on a FRR backup LSP
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>fast-reroute</i> <i>propagate-admin-group</i> <i>boolean</i>
Tree	<a href="#">propagate-admin-group</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **from** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the ingress router for the LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <b>from</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">from</a>
Introduced	16.0.R1
Platforms	All

### **hop-limit** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum hops for an LSP created using this LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <b>hop-limit</b> <i>number</i>
Tree	<a href="#">hop-limit</a>
Range	2 to 255
Introduced	16.0.R1
Platforms	All

## igp-shortcut

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of LSP for shortcut or forwarding
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## lfa-type *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP usage in LFA SPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">lfa-type</a> <i>keyword</i>
Tree	<a href="#">lfa-type</a>
Options	lfa-protect, lfa-only
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1

Platforms All

### **relative-metric** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Shortest IGP cost between the endpoints of the LSP plus the configured offset

Context **configure** *router string mpls lsp-template string igp-shortcut relative-metric number*

Tree [relative-metric](#)

Range -10 to 10

Notes The following elements are part of a choice: **lfa-type** or **relative-metric**.

Introduced 16.0.R1

Platforms All

### **include-admin-group** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Admin group name included when LSP is set up

Context **configure** *router string mpls lsp-template string include-admin-group reference*

Tree [include-admin-group](#)

Reference **configure** *routing-options if-attribute admin-group string*

Max. Instances 32

Introduced 16.0.R1

Platforms All

### **label-stack-reduction** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable label compression for LSP path

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">label-stack-reduction</a> <i>boolean</i>
Tree	<a href="#">label-stack-reduction</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **ldp-over-rsvp** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include this LSP in LDP over RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **least-fill** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable least-fill path selection for this LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">least-fill</a> <i>boolean</i>
Tree	<a href="#">least-fill</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Load balancing weight for an MPLS LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>load-balancing-weight</i> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **local-sr-protection** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local SR protection preference for LSP path computation
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>local-sr-protection</i> <i>keyword</i>
Tree	<a href="#">local-sr-protection</a>
Options	none, preferred, mandatory
Default	preferred
Introduced	19.7.R1
Platforms	All

### **lsp-self-ping** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP Self Ping activation status on RSVP-TE LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>lsp-self-ping</i> <i>keyword</i>
Tree	<a href="#">lsp-self-ping</a>
Description	When configured, the system uses this setting for the LSP template regardless of the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> . When unconfigured, the command inherits the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> .
Options	false, true
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## main-ct-retry-limit *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of retries before reverting to backup CT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">main-ct-retry-limit</a> <i>number</i>
Tree	<a href="#">main-ct-retry-limit</a>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

## max-sr-labels

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-sr-labels</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">max-sr-labels</a>
Tree	<a href="#">max-sr-labels</a>
Introduced	16.0.R1
Platforms	All

## additional-frr-labels *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of additional overhead labels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">max-sr-labels</a> <a href="#">additional-frr-labels</a> <i>number</i>
Tree	<a href="#">additional-frr-labels</a>
Range	0 to 4
Default	1
Introduced	16.0.R1

Platforms All

### label-stack-size *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Size for the maximum segment routing label stack

Context **configure** *router string mpls lsp-template string max-sr-labels label-stack-size number*

Tree [label-stack-size](#)

Range 1 to 11

Introduced 16.0.R1

Platforms All

### metric *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis LSP template metric

Context **configure** *router string mpls lsp-template string metric number*

Tree [metric](#)

Range 0 to 16777215

Default 0

Introduced 16.0.R1

Platforms All

### metric-type *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Metric type used for LSP path computation

Context **configure** *router string mpls lsp-template string metric-type keyword*

Tree [metric-type](#)

Options	igp, te
Default	igp
Introduced	19.7.R1
Platforms	All

### **override-tunnel-elic** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Override any received entropy label capability
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <b>override-tunnel-elic</b> <i>boolean</i>
Tree	<b>override-tunnel-elic</b>
Description	When configured to <b>true</b> , this command allows the system to override any received entropy label capability advertisement. When configured to <b>false</b> , this command disables the override.
Default	false
Introduced	21.10.R1
Platforms	All

### **path-computation-method** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Path computation method
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <b>path-computation-method</b> <i>keyword</i>
Tree	<b>path-computation-method</b>
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the <b>hop-to-label</b> translation is used for for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP.
Options	local-cspf, pce
Introduced	19.7.R1
Platforms	All

**path-profile** [[profile-id](#)] *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>path-profile</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">path-profile</a> <i>number</i>
Tree	<a href="#">path-profile</a>
Description	Commands in this context configure the attributes of the PCE path profile.
Max. Instances	5
Introduced	21.10.R1
Platforms	All

**[profile-id]** *number*

Synopsis	Profile ID for the specified LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">path-profile</a> <i>number</i>
Tree	<a href="#">path-profile</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

**path-group** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Path-group ID for the specified LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">path-profile</a> <i>number</i> <a href="#">path-group</a> <i>number</i>
Tree	<a href="#">path-group</a>
Max. Range	0 to 4294967295
Default	0
Introduced	21.10.R1

Platforms All

## pce-associations

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **pce-associations** context

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [pce-associations](#)

Tree [pce-associations](#)

Description Commands in this context configure the LSP binding with one or more PCEP associations.

Introduced 22.5.R1

Platforms All

## diversity [[diversity-name](#)] *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Add a list entry for **diversity**

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [pce-associations](#) [diversity](#) *reference*

Tree [diversity](#)

Description Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.

Max. Instances 5

Introduced 22.5.R1

Platforms All

## [[diversity-name](#)] *reference*

Synopsis Name of the PCE association configured under the PCC

Context **configure** [router](#) [string](#) [mpls lsp-template](#) [string](#) [pce-associations](#) [diversity](#) *reference*

Tree [diversity](#)

Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

### **policy** [[policy-name](#)] *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>policy</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

### **[policy-name]** *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">policy</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

### **pce-control** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PCE controlled LSP mode of operation
Context	<b>configure</b> <i>router string mpls lsp-template string pce-control boolean</i>
Tree	<i>pce-control</i>
Description	<p>When configured to <b>true</b>, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to <b>false</b>, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false
Introduced	21.10.R1
Platforms	All

### **pce-report** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable reporting modes to PCE for RSVP-TE or SR-TE LSPs
Context	<b>configure</b> <i>router string mpls lsp-template string pce-report keyword</i>
Tree	<i>pce-report</i>
Options	false, true
Introduced	16.0.R1
Platforms	All

### **priority**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>priority</b> context
Context	<b>configure</b> <i>router string mpls lsp-template string priority</i>
Tree	<i>priority</i>
Introduced	16.0.R1
Platforms	All

## hold-priority *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold priority when insufficient bandwidth is available to set up LSP
Context	<b>configure</b> <i>router string mpls lsp-template string priority hold-priority number</i>
Tree	<i>hold-priority</i>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

## setup-priority *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Setup priority when insufficient bandwidth is available to set up LSP
Context	<b>configure</b> <i>router string mpls lsp-template string priority setup-priority number</i>
Tree	<i>setup-priority</i>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

## propagate-admin-group *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable admin groups via session attribute object
Context	<b>configure</b> <i>router string mpls lsp-template string propagate-admin-group boolean</i>
Tree	<i>propagate-admin-group</i>

Default	false
Introduced	16.0.R1
Platforms	All

### **record** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of all hops for this LSP template
Context	<b>configure</b> <i>router string mpls lsp-template string record boolean</i>
Tree	<i>record</i>
Default	true
Introduced	16.0.R1
Platforms	All

### **record-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of labels at each node or instance
Context	<b>configure</b> <i>router string mpls lsp-template string record-label boolean</i>
Tree	<i>record-label</i>
Default	true
Introduced	16.0.R1
Platforms	All

### **retry-limit** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of attempts to re-establish LSP after it fails
Context	<b>configure</b> <i>router string mpls lsp-template string retry-limit number</i>

Tree	<a href="#">retry-limit</a>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time for LSP re-establishment attempts after failure
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">retry-timer</a> <i>number</i>
Tree	<a href="#">retry-timer</a>
Range	1 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **soft-preemption** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable soft preemption
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">soft-preemption</a> <i>boolean</i>
Tree	<a href="#">soft-preemption</a>
Description	<p>When configured to <b>true</b>, the P2MP LSP preemption is governed by the <b>configure router rsvp preemption-timer</b> value.</p> <p>When configured to <b>false</b>, the preemption timer value is set to 0 and the P2MP LSPs are hard preempted.</p> <p>For P2P LSPs, soft preemption is always enabled and cannot be disabled.</p>
Introduced	22.2.R1
Platforms	All

**template-id** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Template ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>template-id</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>template-id</b>
Description	This command specifies the value that is signaled in the PCE to identify the LSP template.
Range	1 to 4294967295
Options	default
Introduced	16.0.R5
Platforms	All

**type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	LSP template type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command configures the type of a template that can be referenced by a client application where dynamic LSP creation is required. The LSP template type is mandatory.
Options	p2mp-rsvp, p2p-rsvp-one-hop, p2p-rsvp-mesh, p2p-sr-te-one-hop, p2p-sr-te-mesh, p2p-sr-te-pce-init, p2p-sr-te-on-demand
Notes	This element is mandatory.

Introduced 16.0.R1  
 Platforms All

### **vprn-auto-bind** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Include LSP template in auto-bind for VPRN services  
 Context **configure** *router* *string* *mpls lsp-template* *string* *vprn-auto-bind* *boolean*  
 Tree [vprn-auto-bind](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **max-bypass-associations** *number*

Synopsis Maximum number of LSPs associated with a bypass tunnel  
 Context **configure** *router* *string* *mpls max-bypass-associations* *number*  
 Tree [max-bypass-associations](#)  
 Range 100 to 131072  
 Default 1000  
 Introduced 16.0.R1  
 Platforms All

### **max-bypass-plr-associations** *number*

Synopsis Maximum number of PLRs per RSVP-TE bypass LSP  
 Context **configure** *router* *string* *mpls max-bypass-plr-associations* *number*  
 Tree [max-bypass-plr-associations](#)  
 Range 1 to 16  
 Default 16  
 Introduced 19.10.R1  
 Platforms All

**mbb-prefer-current-hops** *boolean*

Synopsis	Select preference to use the current hops for Make-Before-Break (MBB)
Context	<b>configure</b> <i>router string mpls mbb-prefer-current-hops boolean</i>
Tree	<a href="#">mbb-prefer-current-hops</a>
Default	false
Introduced	16.0.R1
Platforms	All

**p2mp-resignal-timer** *number*

Synopsis	Resignal timer for P2MP LSPs
Context	<b>configure</b> <i>router string mpls p2mp-resignal-timer number</i>
Tree	<a href="#">p2mp-resignal-timer</a>
Range	60 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

**p2mp-s2l-fast-retry** *number*

Synopsis	Fast retry timer for P2MP S2L paths
Context	<b>configure</b> <i>router string mpls p2mp-s2l-fast-retry number</i>
Tree	<a href="#">p2mp-s2l-fast-retry</a>
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	All

**p2p-active-path-fast-retry** *number*

Synopsis	Fast retry timer for P2P active paths
Context	<b>configure</b> <i>router string mpls p2p-active-path-fast-retry number</i>
Tree	<a href="#">p2p-active-path-fast-retry</a>
Range	1 to 10

Units	seconds
Introduced	16.0.R1
Platforms	All

### **path** [*path-name*] *string*

Synopsis	Enter the <b>path</b> list instance
Context	<b>configure</b> <i>router string mpls path string</i>
Tree	<i>path</i>
Max. Instances	65535
Introduced	16.0.R1
Platforms	All

### **[path-name]** *string*

Synopsis	Name for this LSP path
Context	<b>configure</b> <i>router string mpls path string</i>
Tree	<i>path</i>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the path used for LSPs
Context	<b>configure</b> <i>router string mpls path string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**hop** [*hop-index*] *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>hop</b> list instance
Context	<b>configure</b> <i>router string mpls path string hop number</i>
Tree	<i>hop</i>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

**[hop-index]** *number*

Synopsis	Index to identify a particular hop
Context	<b>configure</b> <i>router string mpls path string hop number</i>
Tree	<i>hop</i>
Range	1 to 1024
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the transit router
Context	<b>configure</b> <i>router string mpls path string hop number ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<i>ip-address</i>

Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	16.0.R1
Platforms	All

### **sid-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS label for tunnel hop in the path of an SR-TE LSP
Context	<b>configure</b> <i>router string mpls path string hop number sid-label number</i>
Tree	<i>sid-label</i>
Range	32 to 1048575
Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	19.10.R1
Platforms	All

### **type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel hop type
Context	<b>configure</b> <i>router string mpls path string hop number type keyword</i>
Tree	<i>type</i>
Options	strict, loose
Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	16.0.R1
Platforms	All

## pce-init-lsp

Synopsis	Enable the <b>pce-init-lsp</b> context
Context	<b>configure</b> <i>router string mpls pce-init-lsp</i>
Tree	<a href="#">pce-init-lsp</a>
Introduced	16.0.R5
Platforms	All

## sr-te

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure</b> <i>router string mpls pce-init-lsp sr-te</i>
Tree	<a href="#">sr-te</a>
Introduced	16.0.R5
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of SR-TE PCE-initiated LSP support
Context	<b>configure</b> <i>router string mpls pce-init-lsp sr-te admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

## pce-report

Synopsis	Enter the <b>pce-report</b> context
Context	<b>configure</b> <i>router string mpls pce-report</i>
Tree	<a href="#">pce-report</a>
Introduced	16.0.R1
Platforms	All

**rsvp-te boolean**

Synopsis	Allow PCE reporting for all TE LSPs of RSVP-TE type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>pce-report</b> <b>rsvp-te</b> <i>boolean</i>
Tree	<b>rsvp-te</b>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-te boolean**

Synopsis	Allow PCE reporting for all TE LSPs of SR-TE type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>pce-report</b> <b>sr-te</b> <i>boolean</i>
Tree	<b>sr-te</b>
Default	false
Introduced	16.0.R1
Platforms	All

**resignal-on-igp-overload boolean**

Synopsis	Resignal all RSVP-TE LSPs upon IGP overload
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>resignal-on-igp-overload</b> <i>boolean</i>
Tree	<b>resignal-on-igp-overload</b>
Description	<p>When configured to <b>true</b>, the receipt of the IS-IS overload bit in the TE-DB triggers the immediate resignaling of all RSVP-TE LSPs. MPLS forces the expiry of the resignal timer and the TE-DB computes a new CSPF for each RSVP-TE LSP active path. The re-optimization causes the immediate transition of RSVP-TE LSP paths away from the IS-IS node in overload using the MBB operation.</p> <p>This command cannot be configured to <b>true</b> when the <b>retry-on-igp-overload</b> command is configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the default behavior is maintained where MBB re-optimization occurs only when a timer-based resignal is performed or a manual resignal is executed.</p>
Default	false
Introduced	20.10.R1
Platforms	All

**resignal-timer** *number*

Synopsis	Resignal timer for RSVP LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>resignal-timer</b> <i>number</i>
Tree	<b>resignal-timer</b>
Range	30 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

**retry-on-igp-overload** *boolean*

Synopsis	Tear down LSPs when IGP is in overload state
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>retry-on-igp-overload</b> <i>boolean</i>
Tree	<b>retry-on-igp-overload</b>
Default	false
Introduced	16.0.R1
Platforms	All

**secondary-fast-retry-timer** *number*

Synopsis	Fast retry timer for secondary paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>secondary-fast-retry-timer</b> <i>number</i>
Tree	<b>secondary-fast-retry-timer</b>
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	All

**shortcut-local-ttl-propagate** *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>shortcut-local-ttl-propagate</b> <i>boolean</i>
Tree	<b>shortcut-local-ttl-propagate</b>
Default	true
Introduced	16.0.R1

Platforms All

### **shortcut-transit-ttl-propagate** *boolean*

Synopsis Propagate TTL over LSP shortcut for local packets for transit packets  
 Context **configure** *router string mpls shortcut-transit-ttl-propagate boolean*  
 Tree [shortcut-transit-ttl-propagate](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **sr-te-resignal**

Synopsis Enter the **sr-te-resignal** context  
 Context **configure** *router string mpls sr-te-resignal*  
 Tree [sr-te-resignal](#)  
 Introduced 19.10.R1  
 Platforms All

### **resignal-on-igp-event** *boolean*

Synopsis Re-optimize SR-TE LSPs upon IGP link events  
 Context **configure** *router string mpls sr-te-resignal resignal-on-igp-event boolean*  
 Tree [resignal-on-igp-event](#)  
 Description When configured to **true**, the system signals the re-optimization of all SR-TE LSPs when one or more IGP link down events are received in theTE-DB. The triggered behavior is identical to the timer-based or resignal behavior or the manual-based resignal behavior used with a delay option. MPLS forces the expiry of the resignal timer and all active paths of all SR-TE LSPs are re-evaluated.  
 When configured to **false**, re-optimization is not triggered by IGP events.  
 Default false  
 Introduced 19.10.R1  
 Platforms All

**resignal-timer** *number*

Synopsis	Resignal timer for SR-TE LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>sr-te-resignal</b> <b>resignal-timer</b> <i>number</i>
Tree	<b>resignal-timer</b>
Description	This command configures the time the system waits before signaling the re-optimization of all SR-TE LSPs.
Range	30 to 10080
Units	minutes
Introduced	19.10.R1
Platforms	All

**srlg-database**

Synopsis	Enter the <b>srlg-database</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>srlg-database</b>
Tree	<b>srlg-database</b>
Introduced	16.0.R1
Platforms	All

**router-id** [**router-address**] *string*

Synopsis	Enter the <b>router-id</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>srlg-database</b> <b>router-id</b> <i>string</i>
Tree	<b>router-id</b>
Introduced	16.0.R1
Platforms	All

**[router-address]** *string*

Synopsis	Router ID for the system
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>srlg-database</b> <b>router-id</b> <i>string</i>
Tree	<b>router-id</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the interface entry
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**interface** [**interface-address**] *string* **srlg-group** *reference*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i> <b>interface</b> <i>string</i> <b>srlg-group</b> <i>reference</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

**[interface-address]** *string*

Synopsis	IP address of the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i> <b>interface</b> <i>string</i> <b>srlg-group</b> <i>reference</i>
Tree	<b>interface</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**srlg-group** *reference*

Synopsis	SRLG group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i> <b>interface</b> <i>string</i> <b>srlg-group</b> <i>reference</i>
Tree	<b>interface</b>
Reference	<b>configure</b> <b>routing-options</b> <b>if-attribute</b> <b>srlg-group</b> <i>string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **srlg-frr** *keyword*

Synopsis	Use of SRLG constraint for FRR path computation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>srlg-frr</b> <i>keyword</i>
Tree	<b>srlg-frr</b>
Options	loose, strict
Introduced	16.0.R1
Platforms	All

### **static-lsp** [**lsp-name**] *string*

Synopsis	Enter the <b>static-lsp</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>static-lsp</b> <i>string</i>
Tree	<b>static-lsp</b>
Max. Instances	1000
Introduced	16.0.R1
Platforms	All

### [**lsp-name**] *string*

Synopsis	Labeled Switch path name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>static-lsp</b> <i>string</i>
Tree	<b>static-lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the static LSP
Context	<b>configure</b> <i>router string mpls static-lsp string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**metric** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS static LSP metric to select an LSP
Context	<b>configure</b> <i>router string mpls static-lsp string metric number</i>
Tree	<i>metric</i>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**push****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>push</b> context
Context	<b>configure</b> <i>router string mpls static-lsp string push</i>
Tree	<i>push</i>
Introduced	16.0.R1
Platforms	All

**next-hop string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address for the next hop
Context	<b>configure</b> <i>router string mpls static-lsp string push next-hop string</i>
Tree	<a href="#">next-hop</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**out-label (number | keyword)****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Push specific label onto the top of the outgoing packet's label stack
Context	<b>configure</b> <i>router string mpls static-lsp string push out-label (number   keyword)</i>
Tree	<a href="#">out-label</a>
Range	16 to 1048575
Options	implicit-null-label
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**to string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination IP address or the egress router for the LSP
Context	<b>configure</b> <i>router string mpls static-lsp string to string</i>
Tree	<a href="#">to</a>
Introduced	16.0.R1

Platforms All

### **static-lsp-fast-retry** *number*

Synopsis Fast retry timer for static LSPs

Context **configure** *router string mpls static-lsp-fast-retry number*

Tree [static-lsp-fast-retry](#)

Range 1 to 30

Units seconds

Default 30

Introduced 16.0.R1

Platforms All

### **strict-ero-nhop-direct-resolution** *boolean*

Synopsis Resolves RSVP-TE LSP ERO to local and host routes only

Context **configure** *router string mpls strict-ero-nhop-direct-resolution boolean*

Tree [strict-ero-nhop-direct-resolution](#)

Description When configured to **true**, the router enables the strict Explicit Route Object (ERO) next-hop direct resolution. The feature restricts the routes used to resolve the next hop of an ERO address to local and host routes. This command avoids using a next hop over a parallel link when a half link is up in the routing table.

This command applies to an ERO when all of the following conditions are met:

- the ERO next hop is an IPv4 address
- the ERO object is a strict hop
- the IPv4 address matches the primary subnet of a local numbered interface

If no such route exists, RSVP rejects the PATH message with ErrCode = Routing Error (24) and SubErrCode = Bad Strict Node (2).

When configured to **false**, the router disables the strict ERO next-hop direct resolution.

Default false

Introduced 22.5.R1

Platforms All

### **tunnel-table-pref**

Synopsis Enter the **tunnel-table-pref** context

Context	<b>configure</b> <i>router string mpls tunnel-table-pref</i>
Tree	<a href="#">tunnel-table-pref</a>
Description	Commands in this context configure the tunnel table preference for RSVP-TE LSP and SR-TE LSP tunnel types.
Introduced	21.10.R1
Platforms	All

### **rsvp-te number**

Synopsis	RSVP-TE tunnel table preference
Context	<b>configure</b> <i>router string mpls tunnel-table-pref rsvp-te number</i>
Tree	<a href="#">rsvp-te</a>
Description	<p>This command configures the tunnel table preference for RSVP-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>Nokia recommends that tunnel types have unique preference values. In a situation where two or more tunnel types are set to the same preference value, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	7
Introduced	21.10.R1
Platforms	All

### **sr-te number**

Synopsis	SR-TE tunnel table preference
Context	<b>configure</b> <i>router string mpls tunnel-table-pref sr-te number</i>
Tree	<a href="#">sr-te</a>
Description	<p>This command configures the tunnel table preference for SR-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p>

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	8
Introduced	21.10.R1
Platforms	All

### **user-srlg-db** *boolean*

Synopsis	Enable the use of user SRLG database
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>user-srlg-db</b> <i>boolean</i>
Tree	<a href="#">user-srlg-db</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mpls-labels**

Synopsis	Enter the <b>mpls-labels</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls-labels</b>
Tree	<a href="#">mpls-labels</a>
Introduced	16.0.R1
Platforms	All

### **bgp-labels-hold-timer** *number*

Synopsis	BGP labels hold timer for the ingress router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls-labels</b> <b>bgp-labels-hold-timer</b> <i>number</i>
Tree	<a href="#">bgp-labels-hold-timer</a>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

**reserved-label-block** [[label-block-name](#)] *string*

Synopsis	Enter the <b>reserved-label-block</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Tree	<a href="#">reserved-label-block</a>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

**[label-block-name]** *string*

Synopsis	Name for the reserved label block
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Tree	<a href="#">reserved-label-block</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end-label** *number*

Synopsis	End label for the reserved label block
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i> <a href="#">end-label</a> <i>number</i>
Tree	<a href="#">end-label</a>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

**start-label** *number*

Synopsis	Start label value for the reserved label block
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i> <a href="#">start-label</a> <i>number</i>
Tree	<a href="#">start-label</a>
Range	32 to 1048575
Introduced	16.0.R1

Platforms All

### **sr-labels**

Synopsis Enter the **sr-labels** context  
 Context **configure** [router](#) *string* [mpls-labels](#) [sr-labels](#)  
 Tree [sr-labels](#)  
 Introduced 16.0.R1  
 Platforms All

### **end number**

Synopsis End label for the SRGB  
 Context **configure** [router](#) *string* [mpls-labels](#) [sr-labels](#) [end](#) *number*  
 Tree [end](#)  
 Range 32 to 1048575  
 Introduced 16.0.R1  
 Platforms All

### **start number**

Synopsis Start label value for the SRGB  
 Context **configure** [router](#) *string* [mpls-labels](#) [sr-labels](#) [start](#) *number*  
 Tree [start](#)  
 Range 32 to 1048575  
 Introduced 16.0.R1  
 Platforms All

### **static-label-range number**

Synopsis Static label range on the ingress router  
 Context **configure** [router](#) *string* [mpls-labels](#) [static-label-range](#) *number*  
 Tree [static-label-range](#)  
 Range 0 to 1048544  
 Default 18400

---

Introduced	16.0.R1
Platforms	All

## **msdp**

Synopsis	Enable the <b>msdp</b> context
Context	<b>configure router string msdp</b>
Tree	<b>msdp</b>
Introduced	19.10.R1
Platforms	All

## **active-source-limit *number***

Synopsis	Maximum number of active messages accepted by MSDP
Context	<b>configure router string msdp active-source-limit <i>number</i></b>
Tree	<b>active-source-limit</b>
Range	0 to 1000000
Introduced	19.10.R1
Platforms	All

## **admin-state *keyword***

Synopsis	Administrative state of MSDP
Context	<b>configure router string msdp admin-state <i>keyword</i></b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	19.10.R1
Platforms	All

## **data-encapsulation *boolean***

Synopsis	Enable encapsulation of multicast data used by MSDP
Context	<b>configure router string msdp data-encapsulation <i>boolean</i></b>
Tree	<b>data-encapsulation</b>

Default	true
Introduced	19.10.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Policies to export source active state into MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

### **group** [[name](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	19.10.R1
Platforms	All

### **[name]** *string*

Synopsis	MSDP group name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**active-source-limit** *number*

Synopsis	Maximum number of active messages accepted by MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>active-source-limit</b> <i>number</i>
Tree	<a href="#">active-source-limit</a>
Range	0 to 1000000
Introduced	19.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	19.10.R1
Platforms	All

**export-policy** *reference*

Synopsis	Policies to export source active state into MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>export-policy</b> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**import-policy** *reference*

Synopsis	Policy to import source active state from MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>

---

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

### **local-address** *string*

Synopsis	Local end of an MSDP session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp group</a> <i>string</i> <a href="#">local-address</a> <i>string</i>
Tree	<a href="#">local-address</a>
Introduced	19.10.R1
Platforms	All

### **mode** *keyword*

Synopsis	Topology of groups of peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp group</a> <i>string</i> <a href="#">mode</a> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	standard, mesh-group
Default	standard
Introduced	19.10.R1
Platforms	All

### **peer** [[ip-address](#)] *string*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp group</a> <i>string</i> <a href="#">peer</a> <i>string</i>
Tree	<a href="#">peer</a>
Introduced	19.10.R1
Platforms	All

**[ip-address] string**

Synopsis	IP address of the remote MSDP router for peering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i>
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**active-source-limit number**

Synopsis	Maximum number of active messages accepted by MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>active-source-limit</b> <i>number</i>
Tree	<b>active-source-limit</b>
Range	0 to 1000000
Introduced	19.10.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	19.10.R1
Platforms	All

**authentication-key string**

Synopsis	MD5 authentication key for the MSDP peering session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 370
Introduced	19.10.R1
Platforms	All

**default-peer** *boolean*

Synopsis	Enable/Disable default peer as MSDP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>default-peer</b> <i>boolean</i>
Tree	<a href="#">default-peer</a>
Default	false
Introduced	19.10.R1
Platforms	All

**export-policy** *reference*

Synopsis	Policies to export source active state into MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>export-policy</b> <i>reference</i>
Tree	<a href="#">export-policy</a>

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**import-policy** *reference*

Synopsis	Policy to import source active state from MSDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**local-address** *string*

Synopsis	Local end of an MSDP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	19.10.R1
Platforms	All

**receive-message-rate**

Synopsis	Enter the <b>receive-message-rate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b>
Tree	<b>receive-message-rate</b>
Introduced	19.10.R1
Platforms	All

**rate** *number*

Synopsis	Number of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	10 to 10000
Introduced	19.10.R1
Platforms	All

**threshold** *number*

Synopsis	Limit for MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 1000000
Introduced	19.10.R1
Platforms	All

**time** *number*

Synopsis	Limit of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>time</b> <i>number</i>
Tree	<b>time</b>
Range	1 to 600
Units	seconds
Introduced	19.10.R1
Platforms	All

**receive-message-rate**

Synopsis	Enter the <b>receive-message-rate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b>
Tree	<b>receive-message-rate</b>
Introduced	19.10.R1
Platforms	All

**rate** *number*

Synopsis	Number of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	10 to 10000
Introduced	19.10.R1
Platforms	All

**threshold** *number*

Synopsis	Limit for MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 1000000
Introduced	19.10.R1
Platforms	All

**time number**

Synopsis	Limit of MSDP messages read from the TCP session
Context	<b>configure router</b> <i>string msdp group string receive-message-rate time number</i>
Tree	<a href="#">time</a>
Range	1 to 600
Units	seconds
Introduced	19.10.R1
Platforms	All

**import-policy reference**

Synopsis	Policy to import source active state from MSDP
Context	<b>configure router</b> <i>string msdp import-policy reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure policy-options policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**local-address string**

Synopsis	Local end of an MSDP session
Context	<b>configure router</b> <i>string msdp local-address string</i>
Tree	<a href="#">local-address</a>
Introduced	19.10.R1
Platforms	All

**peer [ip-address] string**

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure router</b> <i>string msdp peer string</i>
Tree	<a href="#">peer</a>

Introduced 19.10.R1  
Platforms All

### **[ip-address]** *string*

Synopsis IP address of the remote MSDP router for peering  
Context **configure** *router string msdp peer string*  
Tree *peer*  
Notes This element is part of a list key.  
Introduced 19.10.R1  
Platforms All

### **active-source-limit** *number*

Synopsis Maximum number of active messages accepted by MSDP  
Context **configure** *router string msdp peer string active-source-limit number*  
Tree *active-source-limit*  
Range 0 to 1000000  
Introduced 19.10.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of MSDP  
Context **configure** *router string msdp peer string admin-state keyword*  
Tree *admin-state*  
Options enable, disable  
Default enable  
Introduced 19.10.R1  
Platforms All

### **authentication-key** *string*

Synopsis MD5 authentication key for the MSDP peering session  
Context **configure** *router string msdp peer string authentication-key string*

Tree	<a href="#">authentication-key</a>
String Length	1 to 370
Introduced	19.10.R1
Platforms	All

**default-peer** *boolean*

Synopsis	Enable/Disable default peer as MSDP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">default-peer</a> <i>boolean</i>
Tree	<a href="#">default-peer</a>
Default	false
Introduced	19.10.R1
Platforms	All

**export-policy** *reference*

Synopsis	Policies to export source active state into MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**import-policy** *reference*

Synopsis	Policy to import source active state from MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced 19.10.R1  
Platforms All

### **local-address** *string*

Synopsis Local end of an MSDP session  
Context **configure** *router string msdp peer string local-address string*  
Tree [local-address](#)  
Introduced 19.10.R1  
Platforms All

### **receive-message-rate**

Synopsis Enter the **receive-message-rate** context  
Context **configure** *router string msdp peer string receive-message-rate*  
Tree [receive-message-rate](#)  
Introduced 19.10.R1  
Platforms All

### **rate** *number*

Synopsis Number of MSDP messages read from the TCP session  
Context **configure** *router string msdp peer string receive-message-rate rate number*  
Tree [rate](#)  
Range 10 to 10000  
Introduced 19.10.R1  
Platforms All

### **threshold** *number*

Synopsis Limit for MSDP messages read from the TCP session  
Context **configure** *router string msdp peer string receive-message-rate threshold number*  
Tree [threshold](#)  
Range 1 to 1000000  
Introduced 19.10.R1

Platforms All

### **time** *number*

Synopsis Limit of MSDP messages read from the TCP session  
Context **configure** *router string msdp peer string receive-message-rate time number*  
Tree [time](#)  
Range 1 to 600  
Units seconds  
Introduced 19.10.R1  
Platforms All

### **receive-message-rate**

Synopsis Enter the **receive-message-rate** context  
Context **configure** *router string msdp receive-message-rate*  
Tree [receive-message-rate](#)  
Introduced 19.10.R1  
Platforms All

### **rate** *number*

Synopsis Number of MSDP messages read from the TCP session  
Context **configure** *router string msdp receive-message-rate rate number*  
Tree [rate](#)  
Range 10 to 10000  
Introduced 19.10.R1  
Platforms All

### **threshold** *number*

Synopsis Limit for MSDP messages read from the TCP session  
Context **configure** *router string msdp receive-message-rate threshold number*  
Tree [threshold](#)  
Range 1 to 1000000

Introduced 19.10.R1  
Platforms All

### **time** *number*

Synopsis Limit of MSDP messages read from the TCP session  
Context **configure** *router string msdp receive-message-rate time number*  
Tree *time*  
Range 1 to 600  
Units seconds  
Introduced 19.10.R1  
Platforms All

### **rpf-table** *keyword*

Synopsis Route tables for RPF lookup  
Context **configure** *router string msdp rpf-table keyword*  
Tree *rpf-table*  
Options rtable-m, rtable-u, both  
Default rtable-u  
Introduced 19.10.R1  
Platforms All

### **source** [*ip-prefix*] *string*

Synopsis Enter the **source** list instance  
Context **configure** *router string msdp source string*  
Tree *source*  
Introduced 19.10.R1  
Platforms All

### [*ip-prefix*] *string*

Synopsis Source IP address for accepted active source messages  
Context **configure** *router string msdp source string*

Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **active-source-limit** *number*

Synopsis	Number of active source messages accepted by MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">source</a> <i>string</i> <a href="#">active-source-limit</a> <i>number</i>
Tree	<a href="#">active-source-limit</a>
Range	0 to 1000000
Introduced	19.10.R1
Platforms	All

### **source-active-cache-lifetime** *number*

Synopsis	Lifetime of SA entries in the cache
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">source-active-cache-lifetime</a> <i>number</i>
Tree	<a href="#">source-active-cache-lifetime</a>
Range	90 to 600
Units	seconds
Default	90
Introduced	19.10.R1
Platforms	All

### **mss-adjust**

Synopsis	Enable the <b>mss-adjust</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mss-adjust</a>
Tree	<a href="#">mss-adjust</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-group** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group used for TCP-MSS adjustment
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mss-adjust</i> <i>nat-group</i> <i>number</i>
Tree	<a href="#">nat-group</a>
Max. Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**segment-size** *number*

Synopsis	TCP-MSS option value in transmitted TCP SYN requests
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mss-adjust</i> <i>segment-size</i> <i>number</i>
Tree	<a href="#">segment-size</a>
Range	160 to 10240
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mtrace2**

Synopsis	Enter the <b>mtrace2</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mtrace2</i>
Tree	<a href="#">mtrace2</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of multicast path tracing
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mtrace2</i> <i>admin-state</i> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **udp-port** *number*

Synopsis	Destination and listening port for the mtrace2 command
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mtrace2</a> <a href="#">udp-port</a> <i>number</i>
Tree	<a href="#">udp-port</a>
Range	1024 to 49151
Default	5000
Introduced	16.0.R1
Platforms	All

### **multicast-info-policy** *reference*

Synopsis	Multicast policy name for virtual router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">multicast-info-policy</a> <i>reference</i>
Tree	<a href="#">multicast-info-policy</a>
Reference	<b>configure</b> <a href="#">multicast-management</a> <a href="#">multicast-info-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **nat**

Synopsis	Enable the <b>nat</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a>
Tree	<a href="#">nat</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inside

Synopsis	Enter the <b>inside</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a>
Tree	<a href="#">inside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-aware

Synopsis	Enter the <b>I2-aware</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a>
Tree	<a href="#">I2-aware</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## subscribers [[prefix](#)] *string*

Synopsis	Add a list entry for <b>subscribers</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a> <a href="#">subscribers</a> <i>string</i>
Tree	<a href="#">subscribers</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[prefix](#)] *string*

Synopsis	Layer-2 Aware NAT subscriber prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a> <a href="#">subscribers</a> <i>string</i>
Tree	<a href="#">subscribers</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## large-scale

Synopsis	Enter the <b>large-scale</b> context
----------	--------------------------------------

---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a>
Tree	<a href="#">large-scale</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dnat-only**

Synopsis	Enter the <b>dnat-only</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dnat-only</a>
Tree	<a href="#">dnat-only</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **source-prefix-list** *reference*

Synopsis	NAT prefix list that contains source IP addresses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dnat-only</a> <a href="#">source-prefix-list</a> <i>reference</i>
Tree	<a href="#">source-prefix-list</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">prefix-list</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dual-stack-lite**

Synopsis	Enter the <b>dual-stack-lite</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a>
Tree	<a href="#">dual-stack-lite</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of Dual Stack Lite
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## deterministic

Synopsis	Enter the <b>deterministic</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a>
Tree	<a href="#">deterministic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-map [[source-prefix](#)] *string*

### WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Enter the <b>policy-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">policy-map</a> <a href="#">string</a>
Tree	<a href="#">policy-map</a>
Introduced	16.0.R1
Deprecated	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[source-prefix](#)] *string*

### WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Source prefix that adds traffic to NAT pool
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">policy-map</a> <a href="#">string</a>
Tree	<a href="#">policy-map</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Deprecated 22.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis Administrative state of the prefix  
 Context **configure** *router string nat inside large-scale dual-stack-lite deterministic policy-map string admin-state keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Deprecated 22.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **map** [*from*] *string to string*

**WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **map** list instance  
 Context **configure** *router string nat inside large-scale dual-stack-lite deterministic policy-map string map string to string*  
 Tree [map](#)  
 Introduced 16.0.R1  
 Deprecated 22.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[from]** *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Beginning of the range for IPv6 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>inside</b> <b>large-scale</b> <b>dual-stack-lite</b> <b>deterministic</b> <b>policy-map</b> <i>string</i> <b>map</b> <i>string</i> <b>to</b> <i>string</i>
Tree	<b>map</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Deprecated	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**to** *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Inside end IPv6 address to map to outside IP addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>inside</b> <b>large-scale</b> <b>dual-stack-lite</b> <b>deterministic</b> <b>policy-map</b> <i>string</i> <b>map</b> <i>string</i> <b>to</b> <i>string</i>
Tree	<b>map</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Deprecated	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**first-outside-address** *string***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outside IP address mapped to inside IP address range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">policy-map</a> <a href="#">string</a> <a href="#">map</a> <i>string</i> <a href="#">to</a> <a href="#">string</a> <a href="#">first-outside-address</a> <i>string</i>
Tree	<a href="#">first-outside-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Deprecated	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy** *reference***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">policy-map</a> <a href="#">string</a> <a href="#">nat-policy</a> <i>reference</i>
Tree	<a href="#">nat-policy</a>

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Outside IP address mapped to inside IP address range

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) [deterministic](#) [prefix-map](#) *string* [nat-policy](#) [reference](#) [map](#) *string* [to](#) *string* **first-outside-address** *string*

Tree [first-outside-address](#)

Notes This element is mandatory.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **endpoint** [[address](#)] *string*

Synopsis Enter the **endpoint** list instance

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) **endpoint** *string*

Tree [endpoint](#)

Max. Instances 128

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *string*

Synopsis Dual Stack Lite IPv6 address

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) **endpoint** *string*

Tree [endpoint](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-fragmentation** *keyword*

Synopsis Fragmentation control of the AFTR originated downstream IPv6 traffic

Context **configure** **router** *string* **nat** **inside** **large-scale** **dual-stack-lite** **endpoint** *string* **ip-fragmentation** *keyword*

Tree **ip-fragmentation**

Options fragment-ipv6, fragment-ipv6-unless-ipv4-df-set

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **min-first-fragment-size-rx** *number*

Synopsis Minimum MTU size for upstream packets

Context **configure** **router** *string* **nat** **inside** **large-scale** **dual-stack-lite** **endpoint** *string* **min-first-fragment-size-rx** *number*

Tree **min-first-fragment-size-rx**

Description This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.

Range 512 to 1280

Default 1280

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reassemble** *boolean*

Synopsis Reassembly of IPv6 payload datagrams

Context **configure** **router** *string* **nat** **inside** **large-scale** **dual-stack-lite** **endpoint** *string* **reassemble** *boolean*

Tree **reassemble**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-mtu** *number*

Synopsis DS-Lite tunnel MTU for this address

Context **configure** *router string nat inside large-scale dual-stack-lite endpoint string tunnel-mtu number*

Tree [tunnel-mtu](#)

Description This command configures the Dual Stack Lite (DS-Lite) tunnel MTU for this address.

Range 464 to 9212

Default 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-subscriber-limit** *number*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Largest value for all subscriber limits in each deterministic pool

Context **configure** *router string nat inside large-scale dual-stack-lite max-subscriber-limit number*

Tree [max-subscriber-limit](#)

Range 1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-prefix-length** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis IPv6 prefix length of the Dual Stack Lite subscribers

Context	<b>configure</b> <i>router string nat inside large-scale dual-stack-lite subscriber-prefix-length number</i>
Tree	<a href="#">subscriber-prefix-length</a>
Range	32 to 64   128

### **nat-import** *reference*

Synopsis	Import BGP-VPN routes in NAT inside routing context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">nat-import</a> <i>reference</i>
Tree	<a href="#">nat-import</a>
Description	<p>This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT.</p> <p>A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.</p> <p>All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Tree	<a href="#">use-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## upstream

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>upstream</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">upstream</a>
Tree	<a href="#">upstream</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## set-tos (*keyword* | *number*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TOS/DSCP bits in IPv4 frame in the upstream direction
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">upstream</a> <a href="#">set-tos</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">set-tos</a>
Range	0 to 255
Options	use-ipv6
Default	use-ipv6
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## redundancy

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">redundancy</a>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer string**

Synopsis	IP address of the NAT redundancy peer for this virtual router instance
Context	<b>configure</b> <a href="#">router string nat inside large-scale redundancy peer string</a>
Tree	<a href="#">peer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer6 string**

Synopsis	IPv6 address of the NAT redundancy peer for this virtual router instance
Context	<b>configure</b> <a href="#">router string nat inside large-scale redundancy peer6 string</a>
Tree	<a href="#">peer6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**steering-route string**

Synopsis	IP address and prefix length of the steering route
Context	<b>configure</b> <a href="#">router string nat inside large-scale redundancy steering-route string</a>
Tree	<a href="#">steering-route</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**subscriber-identification**

Synopsis	Enter the <b>subscriber-identification</b> context
Context	<b>configure</b> <a href="#">router string nat inside large-scale subscriber-identification</a>
Tree	<a href="#">subscriber-identification</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of subscriber identification
----------	---

Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## attribute

Synopsis	Enter the <b>attribute</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">attribute</a>
Tree	<a href="#">attribute</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## type *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	RADIUS attribute used as subscriber identifier
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">attribute</a> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Options	alc-sub-string, user-name, class, station-id, imsi, imei
Default	alc-sub-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vendor *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The RADIUS Vendor
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">attribute</a> <a href="#">vendor</a> <a href="#">keyword</a>
Tree	<a href="#">vendor</a>
Options	standard, nokia, 3gpp
Default	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **drop-unidentified-traffic** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Drop traffic from unidentified flows
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">drop-unidentified-traffic</a> <a href="#">boolean</a>
Tree	<a href="#">drop-unidentified-traffic</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **radius-proxy-server**

Synopsis	Enable the <b>radius-proxy-server</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a>

Tree	<a href="#">radius-proxy-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Server name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### map

Synopsis	Enter the <b>map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a>

Tree	<a href="#">map</a>
Introduced	16.0.R1
Platforms	VSR

### **map-domain** [\[domain-name\]](#) *reference*

Synopsis	Add a list entry for <b>map-domain</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a> <a href="#">map-domain</a> <i>reference</i>
Tree	<a href="#">map-domain</a>
Introduced	16.0.R1
Platforms	VSR

### **[domain-name]** *reference*

Synopsis	MAP domain template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a> <a href="#">map-domain</a> <i>reference</i>
Tree	<a href="#">map-domain</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">map-t</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	VSR

### **outside**

Synopsis	Enter the <b>outside</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a>
Tree	<a href="#">outside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dnat-only**

Synopsis	Enter the <b>dnat-only</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">dnat-only</a>
Tree	<a href="#">dnat-only</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **route-limit** *number*

Synopsis	Limit for internal routes for downstream traffic
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">dnat-only</a> <b>route-limit</b> <i>number</i>
Tree	<a href="#">route-limit</a>
Range	1 to 131072
Default	32768
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filters**

Synopsis	Enter the <b>filters</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a>
Tree	<a href="#">filters</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **downstream**

Synopsis	Enter the <b>downstream</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a> <a href="#">downstream</a>
Tree	<a href="#">downstream</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4** *reference*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a> <a href="#">downstream</a> <b>ipv4</b> <i>reference</i>
Tree	<a href="#">ipv4</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6 reference**

Synopsis IPv6 filter policy name  
Context **configure** [router](#) [string](#) [nat](#) [outside](#) [filters](#) [downstream](#) [ipv6](#) [reference](#)  
Tree [ipv6](#)  
Reference **configure** [filter](#) [ipv6-filter](#) [string](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **upstream**

Synopsis Enter the **upstream** context  
Context **configure** [router](#) [string](#) [nat](#) [outside](#) [filters](#) [upstream](#)  
Tree [upstream](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4 reference**

Synopsis IPv4 filter policy name  
Context **configure** [router](#) [string](#) [nat](#) [outside](#) [filters](#) [upstream](#) [ipv4](#) [reference](#)  
Tree [ipv4](#)  
Reference **configure** [filter](#) [ip-filter](#) [string](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6 reference**

Synopsis IPv6 filter policy name  
Context **configure** [router](#) [string](#) [nat](#) [outside](#) [filters](#) [upstream](#) [ipv6](#) [reference](#)  
Tree [ipv6](#)  
Reference **configure** [filter](#) [ipv6-filter](#) [string](#)

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu number**

Synopsis	MTU for downstream traffic
Context	<b>configure</b> <a href="#">router string nat outside</a> <a href="#">mtu number</a>
Tree	<a href="#">mtu</a>
Range	512 to 9000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool [name] string**

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure</b> <a href="#">router string nat outside</a> <a href="#">pool string</a>
Tree	<a href="#">pool</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name] string**

Synopsis	NAT pool name
Context	<b>configure</b> <a href="#">router string nat outside</a> <a href="#">pool string</a>
Tree	<a href="#">pool</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address-range [start] string end string**

Synopsis	Enter the <b>address-range</b> list instance
----------	--

Context	<b>configure</b> <i>router string nat outside pool string address-range string end string</i>
Tree	<a href="#">address-range</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[start]** *string*

Synopsis	Lower bound of the NAT address range
Context	<b>configure</b> <i>router string nat outside pool string address-range string end string</i>
Tree	<a href="#">address-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**end** *string*

Synopsis	Upper bound of the NAT address range
Context	<b>configure</b> <i>router string nat outside pool string address-range string end string</i>
Tree	<a href="#">address-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string nat outside pool string address-range string end string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**drain** *boolean*

Synopsis	Start or stop draining this NAT address range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>address-range</b> <i>string</i> <b>end</b> <i>string</i> <b>drain</b> <i>boolean</i>
Tree	<b>drain</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the outside routing NAT pool
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**applications**

Synopsis	Enter the <b>applications</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>applications</b>
Tree	<b>applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**agnostic** *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool to create in the outside routing context
----------	---

Context	<b>configure</b> <i>router string nat outside pool string applications agnostic boolean</i>
Tree	<i>agnostic</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string nat outside pool string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-echo-reply** *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	<b>configure</b> <i>router string nat outside pool string icmp-echo-reply boolean</i>
Tree	<i>icmp-echo-reply</i>
Description	<p>This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.</p> <p>In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.</p> <p>In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.</p> <p>In LSN, the reply from an outside IP address is generated regardless if a binding is present.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **l2-aware**

Synopsis	Enter the <b>l2-aware</b> context
Context	<b>configure</b> <i>router string nat outside pool string l2-aware</i>

Tree	<a href="#">l2-aware</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-host

Synopsis	Enable the <b>default-host</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">l2-aware</a> <a href="#">default-host</a>
Tree	<a href="#">default-host</a>
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">l2-aware</a> <a href="#">default-host</a> <a href="#">inside-router-instance</a> <i>string</i>
Tree	<a href="#">inside-router-instance</a>
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis	IP address of the default DMZ host
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">l2-aware</a> <a href="#">default-host</a> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>

Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>l2-aware</b> <b>default-host</b> <b>rate-limit</b> <i>number</i>
Tree	<b>rate-limit</b>
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host.  Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **external-assignment** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	External IP address for Layer-2-aware
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>l2-aware</b> <b>external-assignment</b> <i>boolean</i>
Tree	<b>external-assignment</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-block-extension

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>port-block-extension</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a>
Tree	<a href="#">port-block-extension</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ports *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per dynamic port-block
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">ports</a> <i>number</i>
Tree	<a href="#">ports</a>
Range	10 to 5000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## subscriber

Synopsis	Enter the <b>subscriber</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">subscriber</a>
Tree	<a href="#">subscriber</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>l2-aware</b> <b>port-block-extension</b> <b>subscriber</b> <b>watermarks</b>
Tree	<b>watermarks</b>
Description	This command configures watermarks for NAT resources.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>l2-aware</b> <b>port-block-extension</b> <b>subscriber</b> <b>watermarks</b> <b>high</b> <i>number</i>
Tree	<b>high</b>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis	Low watermark percentage
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>l2-aware</b> <b>port-block-extension</b> <b>subscriber</b> <b>watermarks</b> <b>low</b> <i>number</i>
Tree	<b>low</b>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## subscriber-limit *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of L2-Aware NAT subscribers per outside address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">subscriber-limit</a> <i>number</i>
Tree	<a href="#">subscriber-limit</a>
Description	<p>When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following:</p> <ul style="list-style-type: none"> <li>• well-known port (this is a fixed and permanently allocated block of ports for all NAT types)</li> <li>• static port-forwarding range (if enabled by configuration)</li> <li>• port range allocated for initial port blocks of each L2-Aware subscriber</li> <li>• port range allocated for extended port blocks for the remainder after the three previous port ranges</li> </ul> <p>The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber.</p> <p>The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.</p>
Range	2 to 2000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">watermarks</a>
Tree	<a href="#">watermarks</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### high number

Synopsis	High watermark percentage
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">watermarks</a> <a href="#">high</a> <a href="#">number</a>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### low number

Synopsis	Low watermark percentage
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">l2-aware</a> <a href="#">port-block-extension</a> <a href="#">watermarks</a> <a href="#">low</a> <a href="#">number</a>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### large-scale

Synopsis	Enter the <b>large-scale</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">large-scale</a>
Tree	<a href="#">large-scale</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-host

Synopsis	Enable the <b>default-host</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a>
Tree	<a href="#">default-host</a>
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a> <a href="#">inside-router-instance</a> <i>string</i>
Tree	<a href="#">inside-router-instance</a>
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis	IP address of the default DMZ host
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis Rate limit for unknown traffic sent to default DMZ host

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [default-host](#) **rate-limit** *number*

Tree [rate-limit](#)

Description This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

Range 1 to 10000

Default 10

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **deterministic**

Synopsis Enter the **deterministic** context

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) **deterministic**

Tree [deterministic](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-reservation** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Number of ports per deterministic port-block

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [deterministic](#) **port-reservation** *number*

Tree [port-reservation](#)

Range	1 to 65536
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">deterministic</a> <a href="#">watermarks</a>
Tree	<a href="#">watermarks</a>
Description	<p>Commands in this context monitor extended (dynamic) port-block utilization per outside IP in a NAT pool in deterministic LSN.</p> <p>High and low thresholds are configured in percentages of total available extended port-blocks per outside IP in a pool. Both values represent extended port-block utilization or occupancy per outside IP in a pool.</p> <p>For the system to generate those events, the NAT event-id 2045 must be enabled through configuration in the log event-control.</p>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">deterministic</a> <a href="#">watermarks</a> <a href="#">high</a> <a href="#">number</a>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis	Low watermark percentage
----------	--------------------------

Context	<b>configure router string nat outside pool string large-scale deterministic watermarks low number</b>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## redundancy

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure router string nat outside pool string large-scale redundancy</b>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of NAT pool redundancy
Context	<b>configure router string nat outside pool string large-scale redundancy admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Notes	The following elements are part of a choice: ( <b>admin-state</b> , <b>export-route</b> , and <b>monitor-route</b> ) or <b>follow</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## export-route *string*

Synopsis	Route to export to the peer
----------	-----------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">export-route</a> <i>string</i>
Tree	<a href="#">export-route</a>
Notes	The following elements are part of a choice: ( <b>admin-state</b> , <b>export-route</b> , and <b>monitor-route</b> ) or <b>follow</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **follow**

Synopsis	Enter the <b>follow</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">follow</a>
Tree	<a href="#">follow</a>
Notes	The following elements are part of a choice: ( <b>admin-state</b> , <b>export-route</b> , and <b>monitor-route</b> ) or <b>follow</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **name** *string*

Synopsis	Name of the pool where activity is shared
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">follow</a> <a href="#">name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **router-instance** *string*

Synopsis	Router instance where the lead pool resides
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">follow</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**monitor-route** *string*

Synopsis	Monitor the peer route
Context	<b>configure</b> <i>router string nat outside pool string large-scale redundancy monitor-route string</i>
Tree	<a href="#">monitor-route</a>
Notes	The following elements are part of a choice: ( <b>admin-state</b> , <b>export-route</b> , and <b>monitor-route</b> ) or <b>follow</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**subscriber-limit** *number***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of subscribers per IP address
Context	<b>configure</b> <i>router string nat outside pool string large-scale subscriber-limit number</i>
Tree	<a href="#">subscriber-limit</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Mode of operation of this NAT address pool
Context	<b>configure</b> <i>router string nat outside pool string mode keyword</i>
Tree	<a href="#">mode</a>
Options	auto, napt, one-to-one
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *reference*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Create a NAT group

Context **configure** *router* *string* *nat* *outside* *pool* *string* *nat-group* *reference*

Tree [nat-group](#)

Reference **configure** *isa* *nat-group* *number*

Notes The following elements are part of a mandatory choice: **nat-group** or **wlan-gw-group**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-forwarding

Synopsis Enter the **port-forwarding** context

Context **configure** *router* *string* *nat* *outside* *pool* *string* *port-forwarding*

Tree [port-forwarding](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dynamic-block-reservation *boolean*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Reserve dynamic block for subscriber

Context **configure** *router* *string* *nat* *outside* *pool* *string* *port-forwarding* *dynamic-block-reservation* *boolean*

Tree [dynamic-block-reservation](#)

Description When configured to **true**, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if

the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.

The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.

Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **range-end** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

#### **WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding range-end number</i>
Tree	<i>range-end</i>
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-start</b> command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the <b>range-end</b> implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0   1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**range-start** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding range-start number</i>
Tree	<a href="#">range-start</a>
Description	<p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-end</b> command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the <b>range-start</b> implicit value is set to 1. Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p>
Range	0   1   1025 to 65535
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port-reservation**

Synopsis	Enter the <b>port-reservation</b> context
Context	<b>configure</b> <i>router string nat outside pool string port-reservation</i>
Tree	<a href="#">port-reservation</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port-blocks** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
----------	-------------------------------------

Context	<b>configure</b> <i>router string nat outside pool string port-reservation port-blocks number</i>
Tree	<a href="#">port-blocks</a>
Description	<p>In CGN, this specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the <b>l2-aware port-block-extension</b> hierarchy in the NAT pool.</p>
Range	1 to 64512
Notes	The following elements are part of a choice: <b>port-blocks</b> or <b>ports</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ports** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	<b>configure</b> <i>router string nat outside pool string port-reservation ports number</i>
Tree	<a href="#">ports</a>
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For L2-aware NAT, this command specifies the size of the initial port-block of a subscriber in the pool. Additional port blocks (extended port blocks) for the L2-aware subscriber must be explicitly enabled under the <b>l2-aware port-block-extension</b> hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p>
Range	1 to 64512
Notes	The following elements are part of a choice: <b>port-blocks</b> or <b>ports</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**type** *keyword***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

## origin-validation

Synopsis	Enter the <b>origin-validation</b> context
Context	<b>configure router</b> <i>string</i> <b>origin-validation</b>
Tree	<b>origin-validation</b>
Introduced	19.5.R1
Platforms	All

## rpki-session [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>rpki-session</b> list instance
Context	<b>configure router</b> <i>string</i> <b>origin-validation rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>rpki-session</b>
Introduced	19.5.R1
Platforms	All

## [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address for the RPKI local cache server
Context	<b>configure router</b> <i>string</i> <b>origin-validation rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>rpki-session</b>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the RPKI session
Context	<b>configure router</b> <i>string</i> <b>origin-validation rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

**connect-retry** *number*

Synopsis	RPKI Connect Retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>connect-retry</b> <i>number</i>
Tree	<b>connect-retry</b>
Range	1 to 65535
Units	seconds
Default	120
Introduced	19.5.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	19.5.R1
Platforms	All

**local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local address for the TCP connection setup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>local-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-address</b>
Introduced	19.5.R1
Platforms	All

**port number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination port number used to contact cache server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>port number</b>
Tree	<b>port</b>
Range	0 to 65535
Default	323
Introduced	19.5.R1
Platforms	All

**refresh-time**

Synopsis	Enter the <b>refresh-time</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>refresh-time</b>
Tree	<b>refresh-time</b>
Introduced	19.5.R1
Platforms	All

**hold-time number**

Synopsis	Length of time that the session is to be considered UP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>refresh-time</b> <b>hold-time number</b>
Tree	<b>hold-time</b>
Range	60 to 65535
Units	seconds
Default	600
Introduced	19.5.R1
Platforms	All

**value number**

Synopsis	Periodic Serial Query PDUs sent for liveness detection
Context	<b>configure router</b> <i>string</i> <b>origin-validation rpki-session</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>refresh-time value number</b>
Tree	<b>value</b>
Range	30 to 32767
Units	seconds
Default	300
Introduced	19.5.R1
Platforms	All

**stale-time number**

Synopsis	Maximum time prefix origin validation remains usable
Context	<b>configure router</b> <i>string</i> <b>origin-validation rpki-session</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>stale-time number</b>
Tree	<b>stale-time</b>
Range	60 to 3600
Units	seconds
Default	3600
Introduced	19.5.R1
Platforms	All

**static-entry [ip-prefix] (ipv4-prefix | ipv6-prefix) upto number origin-as number**

Synopsis	Enter the <b>static-entry</b> list instance
Context	<b>configure router</b> <i>string</i> <b>origin-validation static-entry</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>upto number origin-as number</b>
Tree	<b>static-entry</b>
Introduced	19.5.R1
Platforms	All

**[ip-prefix] (ipv4-prefix | ipv6-prefix)**

Synopsis	IPv4 or IPv6 address with the minimum prefix and length
----------	---

Context	<b>configure router string origin-validation static-entry (ipv4-prefix   ipv6-prefix) upto number origin-as number</b>
Tree	<a href="#">static-entry</a>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**upto number**

Synopsis	Maximum prefix length
Context	<b>configure router string origin-validation static-entry (ipv4-prefix   ipv6-prefix) upto number origin-as number</b>
Tree	<a href="#">static-entry</a>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**origin-as number**

Synopsis	Origin AS number
Context	<b>configure router string origin-validation static-entry (ipv4-prefix   ipv6-prefix) upto number origin-as number</b>
Tree	<a href="#">static-entry</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**valid boolean**

Synopsis	Designate mix of origin AS and prefix range as valid
Context	<b>configure router string origin-validation static-entry (ipv4-prefix   ipv6-prefix) upto number origin-as number valid boolean</b>
Tree	<a href="#">valid</a>
Default	true

Introduced	19.5.R1
Platforms	All

### **ospf** [*ospf-instance*] *number*

Synopsis	Enter the <b>ospf</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i>
Tree	<i>ospf</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[ospf-instance]** *number*

Synopsis	Value for the integrated OSPF instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i>
Tree	<i>ospf</i>
Range	0 to 31
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the OSPF instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *keyword*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>advertise-router-capability</b> <i>keyword</i>
Tree	<a href="#">advertise-router-capability</a>
Options	false, link, area, as
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-tunnel-link** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>advertise-tunnel-link</b> <i>boolean</i>
Tree	<a href="#">advertise-tunnel-link</a>
Default	false
Introduced	16.0.R1
Platforms	All

**area** [[area-id](#)] *string*

Synopsis	Enter the <b>area</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i>
Tree	<a href="#">area</a>
Introduced	16.0.R1
Platforms	All

**[area-id]** *string*

Synopsis	Area-ID attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i>
Tree	<a href="#">area</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <b>advertise-router-capability</b> <i>boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true
Introduced	16.0.R1
Platforms	All

**area-range** [[ip-prefix-mask](#)] *string*

Synopsis	Enter the <b>area-range</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <b>area-range</b> <i>string</i>
Tree	<a href="#">area-range</a>
Introduced	16.0.R1
Platforms	All

**[ip-prefix-mask]** *string*

Synopsis	IP prefix and subnet mask for the range used by the ABR
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <b>area-range</b> <i>string</i>
Tree	<a href="#">area-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise** *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <b>area-range</b> <i>string</i> <b>advertise</b> <i>boolean</i>
Tree	<a href="#">advertise</a>
Default	true
Introduced	16.0.R1
Platforms	All

## **bier**

Synopsis	Enter the <b>bier</b> context
Context	<b>configure router string ospf number area string bier</b>
Tree	<b>bier</b>
Description	Commands in this context configure the administrative state of BIER and the BIER template assigned to the OSPF area.
Introduced	20.5.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of BIER
Context	<b>configure router string ospf number area string bier admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	All

## **template reference**

Synopsis	BIER template name
Context	<b>configure router string ospf number area string bier template reference</b>
Tree	<b>template</b>
Reference	<b>configure router string bier template string</b>
Introduced	20.5.R1
Platforms	All

## **blackhole-aggregate boolean**

Synopsis	Install a low priority blackhole route to avoid loops
Context	<b>configure router string ospf number area string blackhole-aggregate boolean</b>
Tree	<b>blackhole-aggregate</b>
Default	true

Introduced 16.0.R1  
 Platforms All

### **database-export-exclude** *boolean*

Synopsis Exclude IGP link-state OSPF area info into TE-DB  
 Context **configure** [router](#) *string* [ospf](#) *number* [area](#) *string* **database-export-exclude** *boolean*  
 Tree [database-export-exclude](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **export-policy** *reference*

Synopsis Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route  
 Context **configure** [router](#) *string* [ospf](#) *number* [area](#) *string* **export-policy** *reference*  
 Tree [export-policy](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

### **import-policy** *reference*

Synopsis Route imported as Summary Type 3/Inter-Area-Prefix-LSA  
 Context **configure** [router](#) *string* [ospf](#) *number* [area](#) *string* **import-policy** *reference*  
 Tree [import-policy](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

**interface** [*interface-name*] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure router</b> <i>string ospf number area string interface string</i>
Tree	<i>interface</i>
Description	Commands in this context configure the attributes of the OSPF area interface. Unless they are explicitly configured, interfaces are not activated by default in any interior gateway protocol such as OSPF.
Introduced	16.0.R1
Platforms	All

**[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure router</b> <i>string ospf number area string interface string</i>
Tree	<i>interface</i>
Description	This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for <b>configure router interface</b> and <b>configure services interface</b> commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.  If the IP interface name does not exist or does not have an IP address configured, an error message is returned.  If the IP interface exists in a different area it is moved to this area.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adjacency-set** [*id*] *reference*

Synopsis	Add a list entry for <b>adjacency-set</b>
Context	<b>configure router</b> <i>string ospf number area string interface string adjacency-set reference</i>
Tree	<i>adjacency-set</i>
Max. Instances	1024

Introduced 16.0.R1  
 Platforms All

### [id] *reference*

Synopsis Adjacency set identity  
 Context **configure** *router string ospf number area string interface string adjacency-set reference*  
 Tree [adjacency-set](#)  
 Reference **configure** *router string ospf number segment-routing adjacency-set number*  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **adjacency-sid**

Synopsis Enable the **adjacency-sid** context  
 Context **configure** *router string ospf number area string interface string adjacency-sid*  
 Tree [adjacency-sid](#)  
 Introduced 16.0.R1  
 Platforms All

### **label** *number*

Synopsis Adjacency SID label  
 Context **configure** *router string ospf number area string interface string adjacency-sid label number*  
 Tree [label](#)  
 Range 1 to 1048575  
 Introduced 16.0.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the OSPF interface  
 Context **configure** *router string ospf number area string interface string admin-state keyword*

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">advertise-router-capability</a> <i>boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **advertise-subnet** *boolean*

Synopsis	Advertise point-to-point interfaces as subnet routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">advertise-subnet</a> <i>boolean</i>
Tree	<a href="#">advertise-subnet</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication key
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

**authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	16.0.R3
Platforms	All

**authentication-type** *keyword*

Synopsis	Authentication type used on OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>authentication-type</b> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

**bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

**remain-down-on-failure** *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>remain-down-on-failure</b> <i>boolean</i>
Tree	<a href="#">remain-down-on-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

**dead-interval** *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>dead-interval</b> <i>number</i>
Tree	<b>dead-interval</b>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**flex-algo** [**flex-algo-id**] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Description	Commands in this context configure the attributes of OSPFv2 flexible algorithms interface.
Max. Instances	7
Introduced	21.7.R1
Platforms	All

**[flex-algo-id]** *number*

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

**node-sid**

Synopsis	Enable the <b>node-sid</b> context
----------	------------------------------------

Context	<b>configure router</b> <i>string ospf number area string interface string flex-algo number node-sid</i>
Tree	<a href="#">node-sid</a>
Introduced	21.7.R1
Platforms	All

### **index** *number*

Synopsis	Node SID index for this interface
Context	<b>configure router</b> <i>string ospf number area string interface string flex-algo number node-sid index number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.7.R1
Platforms	All

### **label** *number*

Synopsis	Label value for the node SID
Context	<b>configure router</b> <i>string ospf number area string interface string flex-algo number node-sid label number</i>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.7.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure router</b> <i>string ospf number area string interface string hello-interval number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 65535
Units	seconds
Default	10

Introduced	16.0.R1
Platforms	All

## interface-type *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>interface-type</b> <i>keyword</i>
Tree	<b>interface-type</b>
Description	This command specifies the interface type. <b>broadcast</b> - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. <b>non-broadcast</b> - Non-broadcast network <b>point-to-point</b> - Point-to-point link Set the interface type of an Ethernet link to <b>point-to-point</b> to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to <b>point-to-point</b> to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. <b>secondary</b> - Multiple secondary adjacencies allowed A <b>secondary</b> interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1
Platforms	All

## load-balancing-weight *number*

Synopsis	Load balancing weight for an OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>

Range	1 to 4294967295
Introduced	20.2.R1
Platforms	All

## loopfree-alternate

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

## exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b> <a href="#">exclude</a> <i>boolean</i>
Tree	<a href="#">exclude</a>
Default	false
Introduced	16.0.R3
Platforms	All

## policy-map

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b> <a href="#">policy-map</a>
Tree	<a href="#">policy-map</a>
Introduced	16.0.R3
Platforms	All

## route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>loopfree-alternate</b> <a href="#">policy-map</a> <a href="#">route-nh-template</a> <i>reference</i>

Tree	<a href="#">route-nh-template</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

### **lsa-filter-out** *keyword*

Synopsis	LSA flooding reduction
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">lsa-filter-out</a> <i>keyword</i>
Tree	<a href="#">lsa-filter-out</a>
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults
Default	none
Introduced	16.0.R1
Platforms	All

### **message-digest-key** [[key-id](#)] *number*

Synopsis	Enter the <b>message-digest-key</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">message-digest-key</a> <i>number</i>
Tree	<a href="#">message-digest-key</a>
Introduced	16.0.R1
Platforms	All

### **[key-id]** *number*

Synopsis	Message digest index
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">message-digest-key</a> <i>number</i>
Tree	<a href="#">message-digest-key</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **md5 string**

Synopsis	MD5 hash key
Context	<b>configure</b> <a href="#">router string ospf number area string interface string message-digest-key number md5 string</a>
Tree	<a href="#">md5</a>
String Length	1 to 51
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **metric number**

Synopsis	Route cost metric for the interface
Context	<b>configure</b> <a href="#">router string ospf number area string interface string metric number</a>
Tree	<a href="#">metric</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **mtu number**

Synopsis	MTU for the OSPF to use on the interface
Context	<b>configure</b> <a href="#">router string ospf number area string interface string mtu number</a>
Tree	<a href="#">mtu</a>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

### **neighbor [address] string**

Synopsis	Add a list entry for <b>neighbor</b>
Context	<b>configure</b> <a href="#">router string ospf number area string interface string neighbor string</a>
Tree	<a href="#">neighbor</a>
Introduced	16.0.R1

Platforms All

### [address] *string*

Synopsis IPv4 address of the OSPFv2 neighbor  
 Context **configure** *router string ospf number area string interface string neighbor string*

### node-sid

Synopsis Enable the **node-sid** context  
 Context **configure** *router string ospf number area string interface string node-sid*  
 Tree *node-sid*  
 Description Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.

In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.
