neq string

Synopsis	Log event router instance to filter out
Context	configure log filter string named-entry string match vrtr-name neq string
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.2.R1
Platforms	All

regexp boolean

Synopsis	Match the router instance string
Context	configure log filter string named-entry string match vrtr-name regexp boolean
Tree	regexp
Default	false
Introduced	21.2.R1
Platforms	All

log-events

Synopsis	Enter the log-events context
Context	configure log log-events
Tree	log-events
Introduced	16.0.R1
Platforms	All

adp event *keyword*

Synopsis	Enter the adp list instance
Context	configure log log-events adp event <i>keyword</i>
Tree	adp
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events adp event <i>keyword</i>
Tree	adp
Options	tmnxDiscoveryEndNotify, tmnxDiscoveryCellularReq
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events adp event <i>keyword generate</i> <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events adp event <i>keyword repeat</i> <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events adp event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events adp event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events adp event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events adp event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

throttle boolean

Synopsis	Throttle log events of this type
Context	configure log log-events adp event keyword throttle boolean
Tree	throttle
Introduced	16.0.R1

Options	tAtmTcSubLayerDown, tAtmTcSubLayerClear, atmVclStatusChange, atmVplStatusChange, atmVtlStatusChange, atmIfcStatusChange, tAtmPlcpSubLayerDown, tAtmPlcpSubLayerClear, tAtmEpOutOfPeerVpiOrVciRange, tAtmMaxPeerVccsExceeded, tAtmMaxPeerVpcsExceeded, tAtmIImiLinkStatusChange, atmIImiPeerVclStatusChange, atmIImiPeerVplStatusChange
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events atm event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events atm event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events atm event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events atm event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events atm event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events atm event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events atm event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

auto-prov [event](#) *keyword*

Synopsis	Enter the auto-prov list instance
Context	configure log log-events auto-prov event <i>keyword</i>
Tree	auto-prov
Introduced	16.0.R1
Platforms	All

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events auto-prov event <i>keyword</i>
Tree	auto-prov
Options	autoNodeProv
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events auto-prov event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events auto-prov event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity keyword

Synopsis	Severity level associated with event type
Context	configure log log-events auto-prov event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events auto-prov event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events auto-prov event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

bfd event keyword

Synopsis	Enter the bfd list instance
Context	configure log log-events bfd event keyword
Tree	bfd
Introduced	16.0.R1
Platforms	All

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events bfd event keyword
Tree	bfd
Options	tmnxBfdOnLspSessDown, tmnxBfdOnLspSessUp, tmnxBfdOnLspSessDeleted, tmnxBfdOnLspSessProtChange, tmnxBfdOnLspSessNoCpmNpResources, tmnxBfdOnLspSessNoTailResources, tmnxBfdOnLspExtSessDown, tmnxBfdOnLspExtSessUp, tmnxBfdOnLspExtSessDeleted, tmnxBfdOnLspExtSessProtChange, tmnxBfdOnLspExtSessNoCpmNpResrcs
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events bfd event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events bfd event keyword repeat boolean
Tree	repeat
Default	false
Introduced	16.0.R4

Platforms All

severity *keyword*

Synopsis Severity level associated with event type
 Context **configure** [log](#) [log-events](#) [bfd event](#) *keyword* **severity** *keyword*
 Tree [severity](#)
 Options cleared, indeterminate, critical, major, minor, warning
 Introduced 16.0.R1
 Platforms All

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
 Context **configure** [log](#) [log-events](#) [bfd event](#) *keyword* **specific-throttle** *boolean*
 Tree [specific-throttle](#)
 Introduced 16.0.R1
 Platforms All

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
 Context **configure** [log](#) [log-events](#) [bfd event](#) *keyword* **specific-throttle-interval** *number*
 Tree [specific-throttle-interval](#)
 Range 1 to 1200
 Introduced 16.0.R1
 Platforms All

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
 Context **configure** [log](#) [log-events](#) [bfd event](#) *keyword* **specific-throttle-limit** *number*
 Tree [specific-throttle-limit](#)
 Range 1 to 20000
 Introduced 16.0.R1

Platforms All

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure** [log](#) [log-events](#) [bfd](#) [event](#) *keyword* **throttle** *boolean*
 Tree [throttle](#)
 Introduced 16.0.R1
 Platforms All

bgp [event](#) *keyword*

Synopsis Enter the **bgp** list instance
 Context **configure** [log](#) [log-events](#) [bgp](#) [event](#) *keyword*
 Tree [bgp](#)
 Introduced 16.0.R1
 Platforms All

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers
 Context **configure** [log](#) [log-events](#) [bgp](#) [event](#) *keyword*
 Tree [bgp](#)
 Options sendNotification, receiveNotification, bgpInterfaceDown, bgpConnNoKA, bgpConnNoOpenRcvd, bgpRejectConnBadLocAddr, bgpRemoteEndClosedConn, bgpPeerNotFound, bgpConnMgrTerminated, bgpTerminated, bgpNoMemoryPeer, bgpVariableRangeViolation, bgpCfgViol, tBgpPeerGRStatusChange, tBgpNgEstablished, tBgpNgBackwardTransition, tBgpPeerNgHoldTimeInconsistent, tBgpFlowspecUnsupportdComAction, tBgp4RouteInvalid, tBgp4PathAttrInvalid, tBgp4WithdrawnRtFromUpdateError, tBgp4UpdateInvalid, tBgpGeneral, tBgpFibResourceFailPeer, tBgpReceivedInvalidNlri, tBgpMaxNgPfxLmt, tBgpMaxNgPfxLmtThresholdReached, tBgpInstanceDynamicPeerLmtReachd, tBgpPGDynamicPeerLmtReached, bgpEstablishedNotification, bgpBackwardTransNotification, tBgp4PathAttrDiscarded, tmnxBmpSessionStatusChange, tBgpInstConvStateTransition, tBgpPeerNgGRStatusChange, tBgpPGDynNbrIfMaxSessLmtReachd
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

generate *boolean*

Synopsis	Generate log events of this type and increment the event counter
Context	configure log log-events bgp event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events bgp event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events bgp event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters that throttle this specific event
Context	configure log log-events bgp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events bgp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Times that this event can be logged within the specific throttle interval
Context	configure log log-events bgp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events bgp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

bier event *keyword*

Synopsis	Enter the bier list instance
Context	configure log log-events bier event <i>keyword</i>
Tree	bier
Introduced	19.5.R1
Platforms	All

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events bier event keyword
Tree	bier
Options	vRtrBierBfrldCollision, vRtrBierMtMismatch, vRtrBierSubDomainMismatch, vRtrBierUnsupportedNhop
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events bier event keyword generate boolean
Tree	generate
Introduced	19.5.R1
Platforms	All

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events bier event keyword repeat boolean
Tree	repeat
Default	false
Introduced	19.5.R1
Platforms	All

severity keyword

Synopsis	Severity level associated with event type
Context	configure log log-events bier event keyword severity keyword
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	19.5.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events bier event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	19.5.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events bier event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	19.5.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events bier event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	19.5.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events bier event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	19.5.R1
Platforms	All

calltrace event keyword

Synopsis	Enter the calltrace list instance
Context	configure log log-events calltrace event keyword
Tree	calltrace
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events calltrace event keyword
Tree	calltrace
Options	tmnxCallTraceMaxFilesNumReached, tmnxCallTraceLocSizeLimitReached, calltraceDebugEvent
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events calltrace event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events calltrace event keyword repeat boolean
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events calltrace event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events calltrace event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events calltrace event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events calltrace event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events calltrace event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cflowd [event](#) *keyword*

Synopsis	Enter the cflowd list instance
Context	configure log log-events cflowd event <i>keyword</i>
Tree	cflowd
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events cflowd event <i>keyword</i>
Tree	cflowd
Options	tmnCflowdCreateFailure, tmnCflowdStateChange, tmnCflowdFlowCreateFailure, tmnCflowdPacketTxFailure
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events cflowd event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events cflowd event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events cflowd event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events cflowd event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events cflowd event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events cflowd event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events cflowd event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

chassis [event](#) *keyword*

Synopsis	Enter the chassis list instance
Context	configure log log-events chassis event <i>keyword</i>
Tree	chassis
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events chassis event <i>keyword</i>
Tree	chassis

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events eth-cfm event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events eth-cfm event keyword repeat boolean
Tree	repeat
Default	false

Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events eth-cfm event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events eth-cfm event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000

Introduced 16.0.R1
 Platforms All

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure** [log](#) [log-events](#) [eth-cfm event](#) *keyword* **throttle** *boolean*
 Tree [throttle](#)
 Introduced 16.0.R1
 Platforms All

etun [event](#) *keyword*

Synopsis Enter the **etun** list instance
 Context **configure** [log](#) [log-events](#) [etun event](#) *keyword*
 Tree [etun](#)
 Introduced 16.0.R1
 Platforms All

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers
 Context **configure** [log](#) [log-events](#) [etun event](#) *keyword*
 Tree [etun](#)
 Options [tmnxEthTunnelApsCfgRaiseAlarm](#), [tmnxEthTunnelApsCfgClearAlarm](#),
[tmnxEthTunnelApsPrvsnRaiseAlarm](#), [tmnxEthTunnelApsPrvsnClearAlarm](#),
[tmnxEthTunnelApsNoRspRaiseAlarm](#), [tmnxEthTunnelApsNoRspClearAlarm](#),
[tmnxEthTunnelApsSwitchoverAlarm](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

generate *boolean*

Synopsis Generate log events when the event occurs
 Context **configure** [log](#) [log-events](#) [etun event](#) *keyword* **generate** *boolean*

Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events etun event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events etun event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events etun event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events etun event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval

Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events etun event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events etun event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

filter [event](#) *keyword*

Synopsis	Enter the filter list instance
Context	configure log log-events filter event <i>keyword</i>
Tree	filter
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events filter event <i>keyword</i>
Tree	filter
Options	tIPFilterPBRPacketsDrop, tFilterSubInsSpaceAlarmRaised, tFilterSubInsSpaceAlarmCleared, tFilterSubInsFltrEntryDropped,

tFilterBgpFlowSpecProblem, tFilterApplyPathProblem,
 tFilterRadSharedFitrAlarmRaised, tFilterRadSharedFitrAlarmClear,
 tFilterEmbeddingOperStateChange, tFilterEmbedOpenflowOperStateChg,
 tFilterOpenflowRequestRejected, tFilterEmbedFlowspecOperStateChg,
 tFilterEmbedVsdOperStateChg, tFilterRPActiveDestChangeEvent

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events filter event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events filter event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events filter event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events filter event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events filter event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events filter event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events filter event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

gmpls event *keyword*

Synopsis	Enter the gmpls list instance
Context	configure log log-events gmpls event <i>keyword</i>
Tree	gmpls
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events gmpls event <i>keyword</i>
Tree	gmpls
Options	vRtrGmplsLspPathStateChange
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events gmpls event <i>keyword generate</i> <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events gmpls event <i>keyword repeat</i> <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events gmpls event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events gmpls event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events gmpls event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events gmpls event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events gmps event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

gsmp [event](#) *keyword*

Synopsis	Enter the gsmp list instance
Context	configure log log-events gsmp event <i>keyword</i>
Tree	gsmp
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events gsmp event <i>keyword</i>
Tree	gsmp
Options	tmnxAncpIngRateMonitorEvent, tmnxAncpIngRateMonitorEventL, tmnxAncpEgrRateMonitorEvent, tmnxAncpEgrRateMonitorEventL, tmnxAncpShcvDisabledEvent, tmnxAncpShcvDisabledEventL, tmnxAncpSesRejected, tmnxAncpStringRejected
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events gsmp event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events gsmf event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events gsmf event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events gsmf event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events gsmf event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events isis event keyword specific-throttle boolean
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events isis event keyword specific-throttle-interval number

Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events isis event keyword specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events isis event keyword throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

l2tp event *keyword*

Synopsis	Enter the l2tp list instance
Context	configure log log-events l2tp event keyword
Tree	l2tp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events l2tp event keyword
Tree	l2tp

Options	tmnxL2tpPeerUnreachable, tmnxL2tpIlsaMdaVRtrStateChange, tmnxL2tpLnsSePppSessionFailure, tmnxL2tpVappVRtrStateChange, tmnxL2tpTunnelBlacklisted, tmnxL2tpTunnelSelBlacklistFull, tmnxL2tpLnsPppNcpFailure, tmnxL2tpApFailure
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events l2tp event <i>keyword generate boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events l2tp event <i>keyword repeat boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events l2tp event <i>keyword severity keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events l2tp event <i>keyword specific-throttle boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events l2tp event <i>keyword specific-throttle-interval number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events l2tp event <i>keyword specific-throttle-limit number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events l2tp event <i>keyword throttle boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag event keyword

Synopsis	Enter the lag list instance
Context	configure log log-events lag event keyword
Tree	lag
Introduced	16.0.R1
Platforms	All

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events lag event keyword
Tree	lag
Options	DynamicCostOn, DynamicCostOff, LagPortAddFailed, LagSubGroupSelected, LagPortAddFailureCleared, LagStateEvent, tLagMemberStateEvent, tmnxLagBfdMemStateChanged, tLagAdaptiveLoadbalancingChanged
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events lag event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events lag event keyword repeat boolean
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events lag event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events lag event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events lag event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events lag event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events lag event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

ldap [event](#) *keyword*

Synopsis	Enter the ldap list instance
Context	configure log log-events ldap event <i>keyword</i>
Tree	ldap
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ldap event <i>keyword</i>
Tree	ldap
Options	tmnxLdapOperStateChange, tmnxLdapServerOperStateChange
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ldap event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ldap event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ldap event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ldap event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ldap event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ldp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ldp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

ldp *event* *keyword*

Synopsis	Enter the ldp list instance
Context	configure log log-events ldp event <i>keyword</i>
Tree	ldp
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ldp event <i>keyword</i>
Tree	ldp
Options	vRtrLdpStateChange, vRtrLdpGroupIdMismatch, vRtrLdpNgIpv4InstStateChange, vRtrLdpNgIpv6InstStateChange, vRtrLdpNgIfStateChange, vRtrLdpNgInetIfStateChange, vRtrLdpNgTargPeerStateChange, vRtrLdpNgSessionStateChange, vRtrLdpNgSessMaxFecThresChanged, vRtrLdpNgSessMaxFecLimitReached, vRtrLdpNgResourceExhaustion, vRtrLdpNgAddrFecCommMismatch
Notes	This element is part of a list key.

Introduced 16.0.R1
Platforms All

generate *boolean*

Synopsis Generate log events when the event occurs
Context **configure** [log log-events ldp event keyword generate boolean](#)
Tree [generate](#)
Introduced 16.0.R1

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events nat event keyword specific-throttle-limit number

Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events nat event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ntp event *keyword*

Synopsis	Enter the ntp list instance
Context	configure log log-events ntp event <i>keyword</i>
Tree	ntp
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ntp event <i>keyword</i>
Tree	ntp
Options	tmnxNtpAuthMismatch, tmnxNtpNoServersAvail, tmnxNtpServersAvail, tmnxNtpOperChange, tmnxNtpServerChange
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
----------	---

Context	configure log log-events ntp event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ntp event keyword repeat boolean
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ntp event keyword severity keyword
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ntp event keyword specific-throttle boolean
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ntp event keyword specific-throttle-interval number

Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ntp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ntp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

oam event *keyword*

Synopsis	Enter the oam list instance
Context	configure log log-events oam event <i>keyword</i>
Tree	oam
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events oam event <i>keyword</i>
Tree	oam

Options	tmnxOamPingProbeFailedV3, tmnxOamPingTestFailedV3, tmnxOamPingTestCompletedV3, tmnxAncpLoopbackTestCompleted, tmnxAncpLoopbackTestCompletedL, tmnxOamTrPathChange, tmnxOamTrTestFailed, tmnxOamTrTestCompleted, svclInvalid, svclWrongType, tmnxOamLdpTraceAutoDiscState, tmnxOamLdpTraceFecProbeState, tmnxOamLdpTraceFecDisStatus, tmnxOamLdpTraceFecPFailUpdate, tmnxOamSaaThreshold, tmnxOamDiagTestCompleted, tmnxTwampSrvInactivityTimeout, tmnxTwampSrvMaxConnsExceeded, tmnxTwampSrvPfxMaxConnsExceeded, tmnxTwampSrvMaxSessExceeded, tmnxTwampSrvPfxMaxSessExceeded, tmnxTwampRflInactivityTimeout, tmnxOamPmThrRaise, tmnxOamPmThrClear, tmnxOamSathSvcTestCompleted, tmnxOamSathSvcStrmCompleted
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events oam event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events oam event <i>keyword</i> repeat <i>boolean</i>
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events oam event <i>keyword</i> severity <i>keyword</i>
Tree	severity

Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events oam event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events oam event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events oam event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1

Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters that throttle this specific event
Context	configure log log-events port event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events port event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Times that this event can be logged within the specific throttle interval
Context	configure log log-events port event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events port event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	All

ppp event *keyword*

Synopsis	Enter the ppp list instance
Context	configure log log-events ppp event <i>keyword</i>
Tree	ppp
Introduced	16.0.R1
Platforms	All

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ppp event <i>keyword</i>
Tree	ppp
Options	tmnxPppCpUp, tmnxPppCpDown, tmnxPppNcpUp, tmnxPppNcpDown, tmnxPppKeepaliveFailure, tmnxPppLqmFailure, ipcpRemotelpUnknown, ipcpSameLocalAndRemotelp, ipcpPeerSuggestedDifferentIpl, ipcpPeerRejectedOurIpl, ipcpPeerOnDifferentSubnet, tmnxPppLoopback, tmnxPppLoopbackClear, ipv6cpRemotelntldUnknown, ipv6cpSameLocalAndRemotelntld, ipv6cpPeerSuggestedDiffIpl, ipv6cpPeerRejectedOurIpl, ipv6cpPeerOnDifferentSubnet
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ppp event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	16.0.R1

Platforms All

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared
Context **configure** [log](#) [log-events](#) [ppp event](#) *keyword* [repeat](#) *boolean*
Tree [repeat](#)
Default false
Introduced 16.0.R4
Platforms All

severity *keyword*

Synopsis Severity level associated with event type
Context **configure** [log](#) [log-events](#) [ppp event](#) *keyword* [severity](#) *keyword*
Tree [severity](#)
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1
Platforms All

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
Context **configure** [log](#) [log-events](#) [ppp event](#) *keyword* [specific-throttle](#) *boolean*
Tree [specific-throttle](#)
Introduced 16.0.R1
Platforms All

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
Context **configure** [log](#) [log-events](#) [ppp event](#) *keyword* [specific-throttle-interval](#) *number*
Tree [specific-throttle-interval](#)
Range 1 to 1200
Introduced 16.0.R1

Platforms All

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
 Context **configure log log-events ppp event** *keyword specific-throttle-limit number*
 Tree [specific-throttle-limit](#)
 Range 1 to 20000
 Introduced 16.0.R1
 Platforms All

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure log log-events ppp event** *keyword throttle boolean*
 Tree [throttle](#)
 Introduced 16.0.R1
 Platforms All

pppoe event *keyword*

Synopsis Enter the **pppoe** list instance
 Context **configure log log-events pppoe event** *keyword*
 Tree [pppoe](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event *keyword*

Synopsis Log event as a trigger for one or more EHS handlers
 Context **configure log log-events pppoe event** *keyword*
 Tree [pppoe](#)
 Options tmnxPppoeSessionFailure, tmnxPppoeNcpFailure, tmnxMlpppBundleIndicatorsChange, tmnxPppoeLacSteeringActive, tmnxPppoeLacSteeringStopped, tmnxPppoeLacSteeringFailed, tmnxPppoeMaxSessionsOvrExceeded
 Notes This element is part of a list key.

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

generate *boolean*

Synopsis Generate log events when the event occurs
Context **configure** [log log-events pppoe event](#) *keyword generate boolean*
Tree [generate](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared
Context **configure** [log log-events pppoe event](#) *keyword repeat boolean*
Tree [repeat](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

severity *keyword*

Synopsis Severity level associated with event type
Context **configure** [log log-events pppoe event](#) *keyword severity keyword*
Tree [severity](#)
Options cleared, indeterminate, critical, major, minor, warning
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
Context **configure** [log log-events pppoe event](#) *keyword specific-throttle boolean*
Tree [specific-throttle](#)
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
 Context **configure** [log](#) [log-events](#) [pppoe](#) [event](#) *keyword* [specific-throttle-interval](#) *number*
 Tree [specific-throttle-interval](#)
 Range 1 to 1200
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
 Context **configure** [log](#) [log-events](#) [pppoe](#) [event](#) *keyword* [specific-throttle-limit](#) *number*
 Tree [specific-throttle-limit](#)
 Range 1 to 20000
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure** [log](#) [log-events](#) [pppoe](#) [event](#) *keyword* [throttle](#) *boolean*
 Tree [throttle](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-clnt [event](#) *keyword*

Synopsis Enter the **pppoe-clnt** list instance
 Context **configure** [log](#) [log-events](#) [pppoe-clnt](#) [event](#) *keyword*
 Tree [pppoe-clnt](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event keyword

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events pppoe-clnt event keyword
Tree	pppoe-clnt
Options	tmnxPppoeClientSetupFailure, tmnxPppoeClientEchoTimeout, tmnxPppoeClientNcpFailure
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

generate boolean

Synopsis	Generate log events when the event occurs
Context	configure log log-events pppoe-clnt event keyword generate boolean
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

repeat boolean

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events pppoe-clnt event keyword repeat boolean
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

severity keyword

Synopsis	Severity level associated with event type
Context	configure log log-events pppoe-clnt event keyword severity keyword
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle *boolean*

Synopsis Use parameters to throttle the specific event
 Context **configure** [log log-events pppoe-clnt event](#) *keyword* [specific-throttle](#) *boolean*
 Tree [specific-throttle](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-interval *number*

Synopsis Duration of the event specific throttling interval
 Context **configure** [log log-events pppoe-clnt event](#) *keyword* [specific-throttle-interval](#) *number*
 Tree [specific-throttle-interval](#)
 Range 1 to 1200
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-limit *number*

Synopsis Throttle limit within which events can be logged
 Context **configure** [log log-events pppoe-clnt event](#) *keyword* [specific-throttle-limit](#) *number*
 Tree [specific-throttle-limit](#)
 Range 1 to 20000
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

throttle *boolean*

Synopsis Throttle log events of this type
 Context **configure** [log log-events pppoe-clnt event](#) *keyword* [throttle](#) *boolean*
 Tree [throttle](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ptp event *keyword*

Synopsis	Enter the ptp list instance
Context	configure log log-events ptp event <i>keyword</i>
Tree	ptp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	configure log log-events ptp event <i>keyword</i>
Tree	ptp
Options	tmnxPtpCardNotSupported, tmnxPtpCardNotSupportedClear, tmnxPtpMasterClockChangedEvent, tmnxPtpClockRecoveryStateChange, tmnxPtpOutOfResources, tmnxPtpOutOfResourcesClear, tmnxPtpDynamicChange, tmnxPtpPortNoTimestamping, tmnxPtpPortPtsfUnusable, tmnxPtpRequiresSystemReboot, tmnxPtpRequiresSystemRebootClear, tmnxPtpTimeRecoveryStateChange
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events ptp event <i>keyword generate</i> <i>boolean</i>
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	configure log log-events ptp event <i>keyword repeat</i> <i>boolean</i>
Tree	repeat
Default	false

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

severity *keyword*

Synopsis	Severity level associated with event type
Context	configure log log-events ptp event <i>keyword</i> severity <i>keyword</i>
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	configure log log-events ptp event <i>keyword</i> specific-throttle <i>boolean</i>
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	configure log log-events ptp event <i>keyword</i> specific-throttle-interval <i>number</i>
Tree	specific-throttle-interval
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	configure log log-events ptp event <i>keyword</i> specific-throttle-limit <i>number</i>
Tree	specific-throttle-limit
Range	1 to 20000

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

throttle *boolean*

Synopsis	Throttle log events of this type
Context	configure log log-events ptp event <i>keyword</i> throttle <i>boolean</i>
Tree	throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

python event *keyword*

Synopsis	Enter the python list instance
Context	configure log log-events python event <i>keyword</i>
Tree	python
Introduced	21.2.R1
Platforms	All

event *keyword*

Synopsis	Python module events
Context	configure log log-events python event <i>keyword</i>
Tree	python
Options	tmnxPythonInterpreterRestarted
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	configure log log-events python event <i>keyword</i> generate <i>boolean</i>
Tree	generate
Introduced	21.2.R1

Platforms All

repeat *boolean*

Synopsis Repeat the log event until the condition is cleared
Context **configure** [log](#) [log-events](#) [python](#) [event](#) *keyword* **repeat** *boolean*
Tree [repeat](#)
Default false
Introduced 21.2.R1

3.24.1 macsec command descriptions

macsec

Synopsis	Enter the macsec context
Context	configure macsec
Tree	macsec
Introduced	16.0.R1
Platforms	All

connectivity-association [[ca-name](#)] *string*

Synopsis	Enter the connectivity-association list instance
Context	configure macsec connectivity-association <i>string</i>
Tree	connectivity-association
Introduced	16.0.R1
Platforms	All

[\[ca-name\]](#) *string*

Synopsis	Connectivity association name
Context	configure macsec connectivity-association <i>string</i>
Tree	connectivity-association
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the connectivity association
Context	configure macsec connectivity-association <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	16.0.R1
Platforms	All

cipher-suite *keyword*

Synopsis	Data path encryption algorithm
Context	configure macsec connectivity-association <i>string</i> cipher-suite <i>keyword</i>
Tree	cipher-suite
Options	gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Default	gcm-aes-128
Introduced	16.0.R1
Platforms	All

clear-tag-mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear tag mode for clear text before the SecTAG
Context	configure macsec connectivity-association <i>string</i> clear-tag-mode <i>keyword</i>
Tree	clear-tag-mode
Options	none, single-tag, dual-tag
Default	none
Introduced	16.0.R1
Platforms	All

delay-protection *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable delay protection
Context	configure macsec connectivity-association <i>string</i> delay-protection <i>boolean</i>
Tree	delay-protection
Default	false

Introduced	20.10.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure macsec connectivity-association <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

encryption-offset *number*

Synopsis	Confidentiality (encryption) offset
Context	configure macsec connectivity-association <i>string</i> encryption-offset <i>number</i>
Tree	encryption-offset
Range	0 30 50
Default	0
Introduced	16.0.R1
Platforms	All

macsec-encrypt *boolean*

Synopsis	Encrypt and authenticate all PDUs
Context	configure macsec connectivity-association <i>string</i> macsec-encrypt <i>boolean</i>
Tree	macsec-encrypt
Description	When configured to true , all PDUs are encrypted and authenticated. When configured to false , all PDUs are transmitted in clear text, however, they are still authenticated and have the trailing ICV.
Default	true
Introduced	16.0.R1
Platforms	All

replay-protection *boolean*

Synopsis	Discard packet when not within the replay window size
Context	configure macsec connectivity-association <i>string</i> replay-protection <i>boolean</i>
Tree	replay-protection
Description	<p>When configured to true, replay protection is enabled and packets are discarded when they are not within the replay window size.</p> <p>With replay protection, the sequence of the ID number of received packets is checked. If a packet arrives out of sequence and the difference between the packet IDs exceeds the replay protection window size, the packet is counted by the receiving port and discarded. For example if the replay protection window size is configured to five and a packet with an ID of 1006 arrives on the receiving link immediately following the packet assigned an ID of 1000, the packet with ID 1006 is counted and discarded because it is outside the parameter of the window size.</p> <p>Replay protection is particularly useful for addressing man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link that arrives on the receiving link out of sequence will be detected and dropped instead of forwarded through the network.</p> <p>Replay protection should not be enabled in cases where packets are expected to arrive out of order.</p> <p>When configured to false, replay protection is not enabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

replay-window-size *number*

Synopsis	Replay protection window size
Context	configure macsec connectivity-association <i>string</i> replay-window-size <i>number</i>
Tree	replay-window-size
Range	0 to 4294967294
Default	0
Introduced	16.0.R1
Platforms	All

static-cak

Synopsis	Enter the static-cak context
Context	configure macsec connectivity-association <i>string</i> static-cak

Tree	static-cak
Description	Commands in this context configure the Connectivity Association Key (CAK) to manage the MACsec Key Agreement (MKA).
Introduced	16.0.R1
Platforms	All

active-psk *number*

Synopsis	Active pre-shared-key (PSK)
Context	configure macsec connectivity-association <i>string</i> static-cak active-psk <i>number</i>
Tree	active-psk
Description	This command specifies the active transmitting PSK. If two PSKs are configured, the arriving MACsec MKA can be decrypted via CAKs using either PSK; however, only the active PSK is used for TX encryption of MKA PDUs.
Range	1 to 2
Default	1
Introduced	16.0.R1
Platforms	All

mka-hello-interval *keyword*

Synopsis	MKA hello interval
Context	configure macsec connectivity-association <i>string</i> static-cak mka-hello-interval <i>keyword</i>
Tree	mka-hello-interval
Description	This command configures the interval at which MKA hello packets are sent or received for the connectivity association.
Options	1, 2, 3, 4, 5, 6, 500ms
Default	2
Introduced	19.5.R1
Platforms	All

mka-key-server-priority *number*

Synopsis	Key server priority used by the MKA protocol
Context	configure macsec connectivity-association <i>string</i> static-cak mka-key-server-priority <i>number</i>

Tree	mka-key-server-priority
Description	This command specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

pre-shared-key [[psk-id](#)] *number*

Synopsis	Enter the pre-shared-key list instance
Context	configure macsec connectivity-association <i>string static-cak pre-shared-key number</i>
Tree	pre-shared-key
Description	<p>Commands in this context configure pre-shared key attributes to enable MACsec using static connectivity association key (CAK) security mode.</p> <p>A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). The pre-shared key, the CKN and the CAK, must match on both ends of a link.</p> <p>A pre-shared key is configured on both devices at each end of a point-to-point link to enable MACsec via static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the successful MKA liveness negotiation.</p> <p>The encryption type is used to encrypt the SAK and authenticate the MKA packet. The symmetric encryption key SAK (Security Association Key) must be encrypted (wrapped) via the MKA protocols. The AES key is derived from the pre-shared-key.</p>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

[psk-id] *number*

Synopsis	Pre-shared-key (PSK) ID
Context	configure macsec connectivity-association <i>string static-cak pre-shared-key number</i>
Tree	pre-shared-key
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

cak string

Synopsis Connectivity association key (CAK) for the PSK

Context **configure macsec connectivity-association string static-cak pre-shared-key number cak string**

Tree **cak**

Description This command specifies the connectivity association key (CAK) for the pre-shared key. Two values are derived from the CAK:

- Key Encryption Key (KEK), used to encrypt the MKA and SAK (symmetric key used for data path PDUs) distributed between all members
- Integrity Check Value (ICV), used to authenticate the MKA and SAK PDUs distributed between all members

String Length 1 to 71

Introduced 16.0.R1

Platforms All

cak-name string

Synopsis Connectivity association key name (CKN) for the PSK

Context **configure macsec connectivity-association string static-cak pre-shared-key number cak-name string**

Tree **cak-name**

Description This command specifies the connectivity association key name (CKN) for the pre-shared key. The CKN is appended to the MKA for identification of the appropriate CAK by the peer.

String Length 1 to 64

Introduced 16.0.R1

Platforms All

encryption-type keyword

Synopsis Encryption for authentication of the MKA packet

Context **configure macsec connectivity-association string static-cak pre-shared-key number encryption-type keyword**

Tree **encryption-type**

Options	aes-128-cmac, aes-256-cmac
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

3.26.1 mirror command descriptions

mirror

Synopsis	Enter the mirror context
Context	configure mirror
Tree	mirror
Introduced	16.0.R1
Platforms	All

global-sampling-rate *number*

Synopsis	System wide global sampling rate
Context	configure mirror global-sampling-rate <i>number</i>
Tree	global-sampling-rate
Description	<p>This command configures the global sampling rate. The global sampling rate provides a higher sampling rate than the sampling rate specified on the mirror destination. When set, this command applies to all mirror destination services that have the use-global-sampling-rate command configured.</p> <p>The global sampling rate takes precedence over the rate specified on the mirror destination. This means that when this command and the configure mirror mirror-dest sampling-rate are configured under the same mirror destination, the system automatically samples using the higher rate configured with this command and ignores the lower rate configured with the sampling-rate command.</p> <p>When unconfigured, no mirror destinations are associated to a global sampling rate and all mirror destinations mirror at the full rate, which means every packet is mirrored unless a mirror destination rate is specified.</p>
Range	0 2 to 255
Default	0
Introduced	22.10.R1
Platforms	All

mirror-dest [[service-name](#)] *string*

layer-3-encap

Synopsis	Enable the layer-3-encap context
Context	configure mirror mirror-dest string encap layer-3-encap
Tree	layer-3-encap
Introduced	16.0.R1
Platforms	All

direction-bit *boolean*

Synopsis	Use the highest bit to specify traffic flow direction
Context	configure mirror mirror-dest string encap layer-3-encap direction-bit <i>boolean</i>
Tree	direction-bit
Default	false
Introduced	16.0.R1
Platforms	All

gateway

Synopsis	Enable the gateway context
Context	configure mirror mirror-dest string encap layer-3-encap gateway
Tree	gateway
Introduced	16.0.R1
Platforms	All

ip-address

Synopsis	Enter the ip-address context
----------	-------------------------------------

Context	configure mirror mirror-dest string encap layer-3-encap gateway ip-address
Tree	ip-address
Introduced	16.0.R1
Platforms	All

destination string

Synopsis	IPv4 destination address for the gateway
Context	configure mirror mirror-dest string encap layer-3-encap gateway ip-address destination string
Tree	destination
Introduced	16.0.R1
Platforms	All

source string

Synopsis	IPv4 source address for the gateway
Context	configure mirror mirror-dest string encap layer-3-encap gateway ip-address source string
Tree	source
Introduced	16.0.R1
Platforms	All

udp-port

Synopsis	Enter the udp-port context
Context	configure mirror mirror-dest string encap layer-3-encap gateway udp-port
Tree	udp-port
Introduced	16.0.R1
Platforms	All

destination number

Synopsis	UDP destination port to use with the gateway
Context	configure mirror mirror-dest string encap layer-3-encap gateway udp-port destination number

Tree	destination
Range	0 1 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

source number

Synopsis	UDP source port to use with the gateway
Context	configure mirror mirror-dest <i>string</i> encap layer-3-encap gateway udp-port source <i>number</i>
Tree	source
Range	0 1 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

header-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Header type for Layer 3 encapsulation
Context	configure mirror mirror-dest <i>string</i> encap layer-3-encap header-type <i>keyword</i>
Tree	header-type
Options	ip-udp-shim, ip-gre, ip-udp-shim-sampled
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

router-instance string

Synopsis	Router instance to use with routed encapsulation
Context	configure mirror mirror-dest <i>string</i> encap layer-3-encap router-instance <i>string</i>
Tree	router-instance

Default	Base
Introduced	16.0.R1
Platforms	All

endpoint *[name]* *string*

Synopsis	Enter the endpoint list instance
Context	configure mirror mirror-dest <i>string</i> endpoint <i>string</i>
Tree	endpoint
Max. Instances	2
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Service endpoint name
Context	configure mirror mirror-dest <i>string</i> endpoint <i>string</i>
Tree	endpoint
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure mirror mirror-dest <i>string</i> endpoint <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

revert-time (*number* | *keyword*)

Synopsis	Time to wait before reverting back to primary spoke SDP
Context	configure mirror mirror-dest <i>string</i> endpoint <i>string</i> revert-time (<i>number</i> <i>keyword</i>)
Tree	revert-time
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	16.0.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding class for destination traffic
Context	configure mirror mirror-dest <i>string</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R1
Platforms	All

include-port-id *boolean*

Synopsis	Include the system port ID in the packet
Context	configure mirror mirror-dest <i>string</i> include-port-id <i>boolean</i>
Tree	include-port-id
Default	false
Introduced	16.0.R1
Platforms	All

pcap [*session-name*] *string*

Synopsis	Enter the pcap list instance
Context	configure mirror mirror-dest <i>string</i> pcap <i>string</i>
Tree	pcap

Max. Instances	1
Introduced	16.0.R1
Platforms	All

[session-name] *string*

Synopsis	PCAP session name
Context	configure mirror mirror-dest <i>string</i> pcap <i>string</i>
Tree	pcap
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

file-url *string*

Synopsis	URL and file name for packet capture transfer
Context	configure mirror mirror-dest <i>string</i> pcap <i>string</i> file-url <i>string</i>
Tree	file-url
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

remote-source

Synopsis	Enable the remote-source context
Context	configure mirror mirror-dest <i>string</i> remote-source
Tree	remote-source
Introduced	16.0.R1
Platforms	All

far-end [[far-end-addr](#)] *string*

Synopsis	Enter the far-end list instance
----------	--

Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i>
Tree	far-end
Introduced	16.0.R1
Platforms	All

[far-end-addr] *string*

Synopsis	Far end IP address
Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i>
Tree	far-end
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

icb *boolean*

Synopsis	Remote source as an inter-chassis backup
Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i> icb <i>boolean</i>
Tree	icb
Default	false
Introduced	16.0.R1
Platforms	All

ing-vc-label *number*

Synopsis	Ingress virtual circuit label
Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i> ing-vc-label <i>number</i>
Tree	ing-vc-label
Range	32 to 18431
Notes	The following elements are part of a choice: ing-vc-label or label-signaling .
Introduced	16.0.R1
Platforms	All

label-signaling *keyword*

Synopsis	Protocol to obtain the ingress labels
Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i> label-signaling <i>keyword</i>
Tree	label-signaling
Options	tldp
Default	tldp
Notes	The following elements are part of a choice: ing-vc-label or label-signaling .
Introduced	16.0.R1
Platforms	All

vc-id *number*

Synopsis	Virtual circuit ID associated with the remote source
Context	configure mirror mirror-dest <i>string</i> remote-source far-end <i>string</i> vc-id <i>number</i>
Tree	vc-id
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

spoke-sdp [**sdp-bind-id**] *string*

Synopsis	Enter the spoke-sdp list instance
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i>
Tree	spoke-sdp
Introduced	16.0.R1
Platforms	All

[sdp-bind-id] *string*

Synopsis	SDP ID number
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i>
Tree	spoke-sdp
String Length	3 to 16

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the service SDP binding
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

control-word *boolean*

Synopsis	Enable the PW control word on spoke SDPs
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> control-word <i>boolean</i>
Tree	control-word
Description	When configured to true , this command enables the PW control word on spoke SDPs that are part of a mirror destination. The control word must be enabled to allow MPLS-TP OAM on spoke SDP and is only valid for spoke SDPs that are part of a mirror service of type ether . When configured to false , this command disables the PW control word.
Default	false
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> egress
Tree	egress
Introduced	16.0.R1
Platforms	All

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> egress vc-label <i>number</i>
Tree	vc-label
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

endpoint

Synopsis	Enter the endpoint context
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> endpoint
Tree	endpoint
Introduced	16.0.R1
Platforms	All

icb *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind the SDP as the Inter-Chassis Backup (ICB) type
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> endpoint icb <i>boolean</i>
Tree	icb
Default	false
Introduced	16.0.R1
Platforms	All

name *reference*

Synopsis	SAP-associated endpoint name
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> endpoint <i>name reference</i>
Tree	name
Reference	configure mirror mirror-dest <i>string</i> endpoint <i>string</i>
Introduced	16.0.R1

cookie

Synopsis	Enter the cookie context
Context	configure mirror mirror-dest <i>string</i> remote-source spoke-sdp <i>string</i> ingress l2tpv3 cookie
Tree	cookie
Introduced	16.0.R1
Platforms	All

cookie1 string

Synopsis	Value of the first cookie for the tunnel
Context	configure mirror mirror-dest string remote-source spoke-sdp string ingress l2tpv3 cookie cookie1 string
Tree	cookie1
String Length	18 to 23
Introduced	16.0.R1
Platforms	All

cookie2 string

Synopsis	Value of the second cookie for the tunnel
Context	configure mirror mirror-dest string remote-source spoke-sdp string ingress l2tpv3 cookie cookie2 string
Tree	cookie2
String Length	18 to 23
Introduced	16.0.R1
Platforms	All

vc-label number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	configure mirror mirror-dest string remote-source spoke-sdp string ingress vc-label number
Tree	vc-label
Range	32 to 18431
Introduced	16.0.R1
Platforms	All

sampling-rate number

Synopsis	Sampling rate
Context	configure mirror mirror-dest string sampling-rate number

Tree	sampling-rate
Description	This command configures the packet sampling rate value for mirrored traffic and is supported with mirror source configurations. The sampling rate is common to all endpoints on a given line card FP per mirror destination service.
Range	256 to 10000
Introduced	20.7.R1
Platforms	All

sap [[sap-id](#)] *string*

Synopsis	Enter the sap list instance
Context	configure mirror mirror-dest <i>string</i> sap <i>string</i>
Tree	sap
Max. Instances	1
Introduced	16.0.R1
Platforms	All

[sap-id] *string*

Synopsis	SAP ID
Context	configure mirror mirror-dest <i>string</i> sap <i>string</i>
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure mirror mirror-dest <i>string</i> sap <i>string</i> egress
Tree	egress

subscriber [**subscriber-id**] *string*

Synopsis	Enter the subscriber list instance
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i>
Tree	subscriber
Introduced	19.10.R1
Platforms	All

[**subscriber-id**] *string*

Synopsis	Subscriber ID
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i>
Tree	subscriber
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Mirror egress packets
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> egress <i>boolean</i>
Tree	egress
Description	When configured to true , egressing packets are mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

fc *keyword*

Synopsis	The forwarding classes traffic which should be mirrored
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	19.10.R1
Platforms	All

host-type *keyword*

Synopsis	Host type for mirroring
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> host-type <i>keyword</i>
Tree	host-type
Options	ipoe, ppp
Introduced	19.10.R1
Platforms	All

ingress *boolean*

Synopsis	Mirror ingress packets
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> ingress <i>boolean</i>
Tree	ingress

Description	When configured to true , ingressing packets are mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

ip-address *string*

Synopsis	Service IP address of remote device sending LI traffic
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> ip-address <i>string</i>
Tree	ip-address
Notes	The following elements are part of a choice: (ip-address , mac-address , and sap-id) or sla-profile .
Introduced	19.10.R1
Platforms	All

ip-family *keyword*

Synopsis	IP family for mirroring
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> ip-family <i>keyword</i>
Tree	ip-family
Options	ipv4, ipv6
Introduced	19.10.R1
Platforms	All

mac-address *string*

Synopsis	MAC address for the subscriber
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> mac-address <i>string</i>
Tree	mac-address
Notes	The following elements are part of a choice: (ip-address , mac-address , and sap-id) or sla-profile .
Introduced	19.10.R1
Platforms	All

sap-id *string*

Synopsis	Subscriber SAP ID
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> sap-id <i>string</i>
Tree	sap-id
String Length	1 to 45
Notes	The following elements are part of a choice: (ip-address , mac-address , and sap-id) or sla-profile .
Introduced	19.10.R1
Platforms	All

sla-profile *string*

Synopsis	SLA profile name
Context	configure mirror mirror-source <i>string</i> subscriber <i>string</i> sla-profile <i>string</i>
Tree	sla-profile
String Length	1 to 32
Notes	The following elements are part of a choice: (ip-address , mac-address , and sap-id) or sla-profile .
Introduced	19.10.R1
Platforms	All

3.27 multicast-management commands

```

configure
- multicast-management
- apply-groups reference
- apply-groups-exclude reference
- bandwidth-policy string
- admin-bw-threshold number

3.27.1 multicast-management command descriptions

multicast-management

Synopsis	Enter the multicast-management context
Context	configure multicast-management
Tree	multicast-management
Introduced	16.0.R1
Platforms	All

bandwidth-policy [[policy-name](#)] *string*

Synopsis	Enter the bandwidth-policy list instance
Context	configure multicast-management bandwidth-policy <i>string</i>
Tree	bandwidth-policy
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

[\[policy-name\]](#) *string*

Synopsis	Bandwidth policy name
Context	configure multicast-management bandwidth-policy <i>string</i>
Tree	bandwidth-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

admin-bw-threshold *number*

Synopsis	Administrative bandwidth threshold
Context	configure multicast-management bandwidth-policy <i>string</i> admin-bw-threshold <i>number</i>

Tree	admin-bw-threshold
Range	1 to 40000000
Units	kilobps
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

description *string*

Synopsis	Text description
Context	configure multicast-management bandwidth-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

falling-percent-reset *number*

Synopsis	Percent of bandwidth that decreases before resetting
Context	configure multicast-management bandwidth-policy <i>string</i> falling-percent-reset <i>number</i>
Tree	falling-percent-reset
Range	1 to 100
Units	percent
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

impm-paths

Synopsis	Enter the impm-paths context
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths
Tree	impm-paths
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-path

Synopsis Enter the **primary-path** context

Context **configure** [multicast-management](#) [bandwidth-policy](#) *string* [impm-paths](#) [primary-path](#)

Tree [primary-path](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

queue-parameters

Synopsis Enter the **queue-parameters** context

Context **configure** [multicast-management](#) [bandwidth-policy](#) *string* [impm-paths](#) [primary-path](#) [queue-parameters](#)

Tree [queue-parameters](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis Override for default CBS for single queue for each path

Context **configure** [multicast-management](#) [bandwidth-policy](#) *string* [impm-paths](#) [primary-path](#) [queue-parameters](#) [cbs](#) *decimal-number*

Tree [cbs](#)

Range 0.00 to 100.00

Units percent

Default 5.00

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

drop-tail

Synopsis	Enter the drop-tail context
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths primary-path queue-parameters drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

low

Synopsis	Enter the low context
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths primary-path queue-parameters drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-reduction-from-mbs *number*

Synopsis	Low drop-tail percent from MBS that is reduced
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths primary-path queue-parameters drop-tail low percent-reduction-from-mbs <i>number</i>
Tree	percent-reduction-from-mbs
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mbs *decimal-number*

Synopsis	Override for default MBS for single queue for each path
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths primary-path queue-parameters mbs <i>decimal-number</i>

Tree	mbs
Range	0.00 to 100.00
Units	percent
Default	7.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-path

Synopsis	Enter the secondary-path context
Context	configure multicast-management bandwidth-policy <i>string</i> impmpaths secondary-path
Tree	secondary-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-paths

Synopsis	Enter the number-paths context
Context	configure multicast-management bandwidth-policy <i>string</i> impmpaths secondary-path number-paths
Tree	number-paths
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-of-paths *number*

Synopsis	Number of secondary paths
Context	configure multicast-management bandwidth-policy <i>string</i> impmpaths secondary-path number-paths number-of-paths <i>number</i>
Tree	number-of-paths
Range	1 to 15
Default	1
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

redundant-sfm *number*

Synopsis Number of secondary paths in redundant SFM mode

Context **configure** [multicast-management bandwidth-policy](#) *string* [impm-paths secondary-path number-paths](#) **redundant-sfm** *number*

Tree [redundant-sfm](#)

Range 1 to 15

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

queue-parameters

Synopsis Enter the **queue-parameters** context

Context **configure** [multicast-management bandwidth-policy](#) *string* [impm-paths secondary-path queue-parameters](#)

Tree [queue-parameters](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis Override for default CBS for single queue for each path

Context **configure** [multicast-management bandwidth-policy](#) *string* [impm-paths secondary-path queue-parameters](#) **cbs** *decimal-number*

Tree [cbs](#)

Range 0.00 to 100.00

Units percent

Default 30.00

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

drop-tail

Synopsis	Enter the drop-tail context
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths secondary-path queue-parameters drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

low

Synopsis	Enter the low context
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths secondary-path queue-parameters drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-reduction-from-mbs *number*

Synopsis	Low drop-tail percent from MBS that is reduced
Context	configure multicast-management bandwidth-policy <i>string</i> impm-paths secondary-path queue-parameters drop-tail low percent-reduction-from-mbs <i>number</i>
Tree	percent-reduction-from-mbs
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mbs *decimal-number*

Synopsis	Override for default MBS for single queue for each path
----------	---

Context	configure multicast-management bandwidth-policy <i>string</i> imp-path secondary-path queue-parameters mbs <i>decimal-number</i>
Tree	mbs
Range	0.00 to 100.00
Units	percent
Default	40.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mcast-pool

Synopsis	Enter the mcast-pool context
Context	configure multicast-management bandwidth-policy <i>string</i> mcast-pool
Tree	mcast-pool
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-of-total *number*

Synopsis	Percent of ingress buffers assigned to multicast pool
Context	configure multicast-management bandwidth-policy <i>string</i> mcast-pool percent-of-total <i>number</i>
Tree	percent-of-total
Range	1 to 50
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

resv-cbs *number*

Synopsis	Percentage of pool reserved for multicast path queues
Context	configure multicast-management bandwidth-policy <i>string</i> mcast-pool resv-cbs <i>number</i>
Tree	resv-cbs

Range	1 to 100
Units	percent
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

slope-policy *reference*

Synopsis	Slope policy name
Context	configure multicast-management bandwidth-policy <i>string</i> mcast-pool slope-policy reference
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

chassis-level

Synopsis	Enter the chassis-level context
Context	configure multicast-management chassis-level
Tree	chassis-level
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mmrp-imp-override *boolean*

Synopsis	Manage MMRP traffic by IMPM
Context	configure multicast-management chassis-level mmrp-imp-override <i>boolean</i>
Tree	mmrp-imp-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

per-mcast-plane-capacity

Synopsis	Enter the per-mcast-plane-capacity context
Context	configure multicast-management chassis-level per-mcast-plane-capacity
Tree	per-mcast-plane-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mcast-capacity

Synopsis	Enter the mcast-capacity context
Context	configure multicast-management chassis-level per-mcast-plane-capacity mcast-capacity
Tree	mcast-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-percentage *decimal-number*

Synopsis	Percent of plane capacity for primary multicast planes
Context	configure multicast-management chassis-level per-mcast-plane-capacity mcast-capacity primary-percentage <i>decimal-number</i>
Tree	primary-percentage
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-percentage *decimal-number*

Synopsis	Percent of plane capacity for secondary multicast plane
Context	configure multicast-management chassis-level per-mcast-plane-capacity mcast-capacity secondary-percentage <i>decimal-number</i>
Tree	secondary-percentage

Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

redundant-mcast-capacity

Synopsis	Enter the redundant-mcast-capacity context
Context	configure multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity
Tree	redundant-mcast-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-percentage *decimal-number*

Synopsis	Percent of plane capacity for primary multicast planes
Context	configure multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity primary-percentage <i>decimal-number</i>
Tree	primary-percentage
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-percentage *decimal-number*

Synopsis	Percent of plane capacity for secondary multicast plane
Context	configure multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity secondary-percentage <i>decimal-number</i>
Tree	secondary-percentage
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

total-capacity *keyword*

Synopsis Total multicast plane bandwidth

Context **configure** [multicast-management](#) [chassis-level](#) [per-mcast-plane-capacity](#) **total-capacity** *keyword*

Tree [total-capacity](#)

Units megabps

Options dynamic, 2000, 4000, 5250, 8250, 15000, 17000, 19000, 27000, 42000, 90000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

round-robin-inactive-records *boolean*

Synopsis Redistribute newly populated inactive records

Context **configure** [multicast-management](#) [chassis-level](#) **round-robin-inactive-records** *boolean*

Tree [round-robin-inactive-records](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

multicast-info-policy [[policy-name](#)] *string*

Synopsis Enter the **multicast-info-policy** list instance

Context **configure** [multicast-management](#) **multicast-info-policy** *string*

Tree [multicast-info-policy](#)

Max. Instances 32

Introduced 16.0.R1

Platforms All

[policy-name] *string*

Synopsis	Multicast information policy name
Context	configure multicast-management multicast-info-policy <i>string</i>
Tree	multicast-info-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

bundle [[bundle-name](#)] *string*

Synopsis	Enter the bundle list instance
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i>
Tree	bundle
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[bundle-name] *string*

Synopsis	Bundle name
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i>
Tree	bundle
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-bw *number*

Synopsis	Administrative bandwidth
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> admin-bw <i>number</i>
Tree	admin-bw

Range	1 to 40000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

bw-activity

Synopsis	Enter the bw-activity context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> bw-activity
Tree	bw-activity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

black-hole-rate *number*

Synopsis	Rate that a channel is placed in the blackhole state
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> bw-activity black-hole-rate <i>number</i>
Tree	black-hole-rate
Range	1 to 40000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

bw-activity-type *keyword*

Synopsis	Bandwidth required by a multicast channel
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> bw-activity bw-activity-type <i>keyword</i>
Tree	bw-activity-type
Options	use-admin-bw, dynamic
Default	dynamic
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

falling-delay *number*

Synopsis Falling delay threshold value until delay time expires

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **bw-activity** **falling-delay** *number*

Tree **falling-delay**

Range 10 to 3600

Units seconds

Default 30

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

channel **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Enter the **channel** list instance

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **channel**

Introduced 16.0.R1

Platforms All

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Starting IP address for the channel range

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **channel**

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Ending IP address for the channel range
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	channel
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-bw *number*

Synopsis	Administrative bandwidth
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-bw <i>number</i>

Tree	alarms
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

cc-error *boolean*

Synopsis	Check the continuity counter
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms cc-error <i>boolean</i>
Tree	cc-error
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

non-vid-pid-absent *number*

Synopsis	PID checked within the specified interval
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-</i>

	address-no-zone) source-override (ipv4-address-no-zone ipv6-address-no-zone) video analyzer alarms non-vid-pid-absent <i>number</i>
Tree	non-vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pat-repetition

Synopsis	Enable the pat-repetition context
Context	configure multicast-management multicast-info-policy <i>string bundle string channel start</i> (ipv4-address-no-zone ipv6-address-no-zone) <i>end</i> (ipv4-address-no-zone ipv6-address-no-zone) source-override (ipv4-address-no-zone ipv6-address-no-zone) video analyzer alarms pat-repetition
Tree	pat-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis	Time between two PATs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string bundle string channel start</i> (ipv4-address-no-zone ipv6-address-no-zone) <i>end</i> (ipv4-address-no-zone ipv6-address-no-zone) source-override (ipv4-address-no-zone ipv6-address-no-zone) video analyzer alarms pat-repetition poa <i>number</i>
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PATs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pat-repetition qos <i>number</i>
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PATs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pat-repetition tnc <i>number</i>
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pat-syntax boolean

Synopsis	Check for PAT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pat-syntax <i>boolean</i>
Tree	pat-syntax
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pcr-repetition

Synopsis	Enable the pcr-repetition context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition
Tree	pcr-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis	Time between two PCRs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition poa <i>number</i>
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PCRs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition qos <i>number</i>
Tree	qos

Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PCRs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition tnc number
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pid-pmt-unref boolean

Synopsis	Check for unreferenced PIDs in the PMT
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pid-pmt-unref boolean
Tree	pid-pmt-unref
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-repetition

Synopsis	Enable the pmt-repetition context
----------	--

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-repetition
Tree	pmt-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis	Time between two PMTs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-repetition poa <i>number</i>
Tree	poa
Range	300 to 5000
Units	milliseconds
Default	2000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PMTs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-repetition qos <i>number</i>
Tree	qos
Range	200 to 4900
Units	milliseconds
Default	800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PMTs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-repetition tnc <i>number</i>
Tree	tnc
Range	100 to 4800
Units	milliseconds
Default	400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-syntax boolean

Synopsis	Check for PMT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-syntax <i>boolean</i>
Tree	pmt-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

report-alarm

Synopsis	Enter the report-alarm context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms report-alarm
Tree	report-alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

severity *keyword*

Synopsis	Keyword for the type of alarm
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms report-alarm severity <i>keyword</i>
Tree	severity
Options	tnc, qos, poa
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tei-set *boolean*

Synopsis	Check for TEI set errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms tei-set <i>boolean</i>
Tree	tei-set
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ts-sync-loss *boolean*

Synopsis	Check for synchronization loss errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms ts-sync-loss <i>boolean</i>
Tree	ts-sync-loss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

vid-pid-absent *number*

Synopsis	VID PID checked within the specified time interval
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms vid-pid-absent <i>number</i>
Tree	vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis	Text description
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-channel-type *keyword*

Synopsis	Channel type for the bundle or channel
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-channel-type <i>keyword</i>
Tree	fcc-channel-type
Options	hd, sd, pip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-min-duration *number*

Synopsis	Minimum duration of the FCC burst
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-min-duration <i>number</i>
Tree	fcc-min-duration
Range	300 to 8000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server *keyword*

Synopsis	Value to override the parent value of the FCC server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-server <i>keyword</i>
Tree	fcc-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *keyword*

Synopsis	Value to override the parent value of local RT server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video local-rt-server <i>keyword</i>
Tree	local-rt-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

reorder-audio *number*

Synopsis	Time the audio packets are reordered in the ad stream
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video reorder-audio <i>number</i>
Tree	reorder-audio
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-buffer-size *number*

Synopsis	Buffer size to store channel packets
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-buffer-size <i>number</i>
Tree	rt-buffer-size
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-server

Synopsis	Enter the rt-server context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) source-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-server
Tree	rt-server
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ip-address *string*

Synopsis IP address of the upstream retransmission server

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **source-override** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video** **rt-server** **ip-address** *string*

pat-syntax *boolean*

Synopsis	Check for PAT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pat-syntax <i>boolean</i>
Tree	pat-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pcr-repetition

Synopsis	Enable the pcr-repetition context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition
Tree	pcr-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa *number*

Synopsis	Time between two PCRs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition poa <i>number</i>
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PCRs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition qos number
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PCRs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pcr-repetition tnc number
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pid-pmt-unref boolean

Synopsis	Check for unreferenced PIDs in the PMT
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pid-pmt-unref boolean
Tree	pid-pmt-unref
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-repetition

Synopsis Enable the **pmt-repetition** context

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video** **analyzer** **alarms** **pmt-repetition**

Tree **pmt-repetition**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis Time between two PMTs for which a POA alarm is raised

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video** **analyzer** **alarms** **pmt-repetition** **poa** *number*

Tree **poa**

Range 300 to 5000

Units milliseconds

Default 2000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis Time between two PMTs for which a QoS alarm is raised

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video** **analyzer** **alarms** **pmt-repetition** **qos** *number*

Tree **qos**

Range 200 to 4900

Units milliseconds

Default 800

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PMTs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-repetition tnc number
Tree	tnc
Range	100 to 4800
Units	milliseconds
Default	400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-syntax boolean

Synopsis	Check for PMT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms pmt-syntax boolean
Tree	pmt-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

report-alarm

Synopsis	Enter the report-alarm context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms report-alarm
Tree	report-alarm
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

severity *keyword*

Synopsis Keyword for the type of alarm

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms report-alarm severity** *keyword*

Tree **severity**

Options tnc, qos, poa

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tei-set *boolean*

Synopsis Check for TEI set errors

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms tei-set boolean**

Tree **tei-set**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ts-sync-loss *boolean*

Synopsis Check for synchronization loss errors

Context **configure** **multicast-management** **multicast-info-policy** *string* **bundle** *string* **channel** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **video analyzer alarms ts-sync-loss boolean**

Tree **ts-sync-loss**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

vid-pid-absent *number*

Synopsis	VID PID checked within the specified time interval
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer alarms vid-pid-absent <i>number</i>
Tree	vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis	Text description
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video analyzer description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-channel-type *keyword*

Synopsis	Channel type for the bundle or channel
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-channel-type <i>keyword</i>
Tree	fcc-channel-type
Options	hd, sd, pip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-min-duration *number*

Synopsis	Minimum duration of the FCC burst
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-min-duration <i>number</i>
Tree	fcc-min-duration
Range	300 to 8000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server *keyword*

Synopsis	Value to override the parent value of the FCC server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video fcc-server <i>keyword</i>
Tree	fcc-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *keyword*

Synopsis	Value to override the parent value of local RT server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video local-rt-server <i>keyword</i>
Tree	local-rt-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

reorder-audio *number*

Synopsis	Time the audio packets are reordered in the ad stream
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video reorder-audio <i>number</i>
Tree	reorder-audio
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-buffer-size *number*

Synopsis	Buffer size to store channel packets
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-buffer-size <i>number</i>
Tree	rt-buffer-size
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-server

Synopsis	Enter the rt-server context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-server
Tree	rt-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ip-address string

Synopsis	IP address of the upstream retransmission server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-server ip-address <i>string</i>
Tree	ip-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

port number

Synopsis	UDP port to send RET requests to the upstream RET sever
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-server port <i>number</i>
Tree	port
Range	1024 to 5999 6251 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-state keyword

Synopsis	Retransmission server state
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video rt-server rt-state <i>keyword</i>
Tree	rt-state
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

stream-selection

Synopsis	Enter the stream-selection context
----------	---

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video stream-selection
Tree	stream-selection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

intf1 string

Synopsis	Primary interface
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video stream-selection intf1 <i>string</i>
Tree	intf1
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

intf2 string

Synopsis	Secondary interface
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video stream-selection intf2 <i>string</i>
Tree	intf2
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

source1 string

Synopsis	Primary source IP address
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video stream-selection source1 <i>string</i>
Tree	source1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

source2 *string*

Synopsis	Secondary source IP address
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video stream-selection source2 <i>string</i>
Tree	source2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

video-group (*number* | *keyword*)

Synopsis	Video group ID
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> channel start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) video video-group (<i>number</i> <i>keyword</i>)
Tree	video-group
Range	1 to 4
Options	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

cong-priority-threshold *number*

Synopsis	Preference level threshold from low to high priority
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> cong-priority-threshold <i>number</i>
Tree	cong-priority-threshold
Range	0 to 7
Default	4
Introduced	16.0.R1

Platforms All

description *string*

Synopsis Text description

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* **description** *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms All

ecmp-opt-threshold *number*

Synopsis ECMP threshold

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* **ecmp-opt-threshold** *number*

Tree [ecmp-opt-threshold](#)

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms All

explicit-sf-path *keyword*

Synopsis Explicit ingress switch fabric multicast path

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* **explicit-sf-path** *keyword*

Tree [explicit-sf-path](#)

Options primary, secondary

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

keepalive-override *number*

Synopsis Keepalive timer override

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> keepalive-override <i>number</i>
Tree	keepalive-override
Range	10 to 86000
Units	seconds
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Relative preference level for multicast channels
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> preference <i>number</i>
Tree	preference
Range	1 to 7
Introduced	16.0.R1
Platforms	All

primary-tunnel-interface

Synopsis	Enter the primary-tunnel-interface context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> primary-tunnel-interface
Tree	primary-tunnel-interface
Introduced	16.0.R1
Platforms	All

ldp-p2mp *number*

Synopsis	ID for signaling MLDP P2MP LSP
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> primary-tunnel-interface ldp-p2mp <i>number</i>
Tree	ldp-p2mp
Range	1 to 4294967295
Notes	The following elements are part of a choice: ldp-p2mp or rsvp-p2mp .
Introduced	16.0.R1

Platforms All

rsvp-p2mp *string*

Synopsis P2MP name for the LDP P2MP

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [primary-tunnel-interface](#) [rsvp-p2mp](#) *string*

Tree [rsvp-p2mp](#)

String Length 1 to 32

Notes The following elements are part of a choice: **ldp-p2mp** or **rsvp-p2mp**.

Introduced 16.0.R1

Platforms All

sender *string*

Synopsis Bundle set to receive from the primary tunnel interface

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [primary-tunnel-interface](#) [sender](#) *string*

Tree [sender](#)

Introduced 16.0.R1

Platforms All

video

Synopsis Enter the **video** context

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [video](#)

Tree [video](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

analyzer

Synopsis Enable the **analyzer** context

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [video](#) [analyzer](#)

Tree	analyzer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

alarms

Synopsis	Enter the alarms context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms
Tree	alarms
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

cc-error *boolean*

Synopsis	Check the continuity counter
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms cc-error <i>boolean</i>
Tree	cc-error
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

non-vid-pid-absent *number*

Synopsis	PID checked within the specified interval
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms non-vid-pid-absent <i>number</i>
Tree	non-vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pat-repetition

Synopsis	Enable the pat-repetition context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pat-repetition
Tree	pat-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis	Time between two PATs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pat-repetition poa <i>number</i>
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PATs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pat-repetition qos <i>number</i>
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PATs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pat-repetition tnc <i>number</i>
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pat-syntax boolean

Synopsis	Check for PAT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pat-syntax <i>boolean</i>
Tree	pat-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pcr-repetition

Synopsis	Enable the pcr-repetition context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pcr-repetition
Tree	pcr-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa number

Synopsis	Time between two PCRs for which a POA alarm is raised
----------	---

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pcr-repetition poa <i>number</i>
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos number

Synopsis	Time between two PCRs for which a QoS alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pcr-repetition qos <i>number</i>
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PCRs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pcr-repetition tnc <i>number</i>
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pid-pmt-unref *boolean*

Synopsis	Check for unreferenced PIDs in the PMT
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pid-pmt-unref <i>boolean</i>
Tree	pid-pmt-unref
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-repetition

Synopsis	Enable the pmt-repetition context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pmt-repetition
Tree	pmt-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

poa *number*

Synopsis	Time between two PMTs for which a POA alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pmt-repetition poa <i>number</i>
Tree	poa
Range	300 to 5000
Units	milliseconds
Default	2000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

qos *number*

Synopsis	Time between two PMTs for which a QoS alarm is raised
----------	---

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pmt-repetition qos <i>number</i>
Tree	qos
Range	200 to 4900
Units	milliseconds
Default	800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tnc number

Synopsis	Time between two PMTs for which a TNC alarm is raised
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pmt-repetition tnc <i>number</i>
Tree	tnc
Range	100 to 4800
Units	milliseconds
Default	400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pmt-syntax boolean

Synopsis	Check for PMT syntax errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms pmt-syntax <i>boolean</i>
Tree	pmt-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

report-alarm

Synopsis	Enter the report-alarm context
----------	---------------------------------------

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms report-alarm
Tree	report-alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

severity *keyword*

Synopsis	Keyword for the type of alarm
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms report-alarm severity <i>keyword</i>
Tree	severity
Options	tnc, qos, poa
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

tei-set *boolean*

Synopsis	Check for TEI set errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms tei-set <i>boolean</i>
Tree	tei-set
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ts-sync-loss *boolean*

Synopsis	Check for synchronization loss errors
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video analyzer alarms ts-sync-loss <i>boolean</i>
Tree	ts-sync-loss
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

vid-pid-absent *number*

Synopsis VID PID checked within the specified time interval

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [video analyzer](#) [alarms](#) **vid-pid-absent** *number*

Tree [vid-pid-absent](#)

Range 100 to 5000

Units milliseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis Text description

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [video analyzer](#) [description](#) *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-channel-type *keyword*

Synopsis Channel type for the bundle or channel

Context **configure** [multicast-management](#) [multicast-info-policy](#) *string* [bundle](#) *string* [video](#) **fcc-channel-type** *keyword*

Tree [fcc-channel-type](#)

Options hd, sd, pip

Default hd

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-min-duration *number*

Synopsis	Minimum duration of the FCC burst
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video fcc-min-duration <i>number</i>
Tree	fcc-min-duration
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server *boolean*

Synopsis	Enable the FCC server for a multicast bundle
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video fcc-server <i>boolean</i>
Tree	fcc-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-fcc-port *number*

Synopsis	Local port for FCC requests
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video local-fcc-port <i>number</i>
Tree	local-fcc-port
Range	1024 to 5999 6251 to 65535
Default	4098
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-port *number*

Synopsis	Local port for RET requests
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video local-rt-port <i>number</i>
Tree	local-rt-port
Range	1024 to 5999 6251 to 65535
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video local-rt-server <i>boolean</i>
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

reorder-audio *number*

Synopsis	Time the audio packets are reordered in the ad stream
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video reorder-audio <i>number</i>
Tree	reorder-audio
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-buffer-size *number*

Synopsis	Buffer size to store channel packets
----------	--------------------------------------

Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video rt-buffer-size <i>number</i>
Tree	rt-buffer-size
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-server

Synopsis	Enable the rt-server context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video rt-server
Tree	rt-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ip-address *string*

Synopsis	IP address of the upstream retransmission server
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video rt-server ip-address <i>string</i>
Tree	ip-address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

port *number*

Synopsis	RET server port number
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video rt-server port <i>number</i>
Tree	port

Range	1024 to 5999 6251 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

stream-selection

Synopsis	Enter the stream-selection context
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video stream-selection
Tree	stream-selection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

intf1 *string*

Synopsis	Primary interface
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video stream-selection intf1 <i>string</i>
Tree	intf1
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

intf2 *string*

Synopsis	Secondary interface
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video stream-selection intf2 <i>string</i>
Tree	intf2
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

source1 *string*

Synopsis	Primary source IP address
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video stream-selection source1 <i>string</i>
Tree	source1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

source2 *string*

Synopsis	Secondary source IP address
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video stream-selection source2 <i>string</i>
Tree	source2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

video-group *number*

Synopsis	Video group for the bundle
Context	configure multicast-management multicast-info-policy <i>string</i> bundle <i>string</i> video video-group <i>number</i>
Tree	video-group
Range	1 to 4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis	Text description
Context	configure multicast-management multicast-info-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80

Introduced	16.0.R1
Platforms	All

video-policy

Synopsis	Enter the video-policy context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy
Tree	video-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

video-interface [[ip-address](#)] *string*

Synopsis	Enter the video-interface list instance
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i>
Tree	video-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[\[ip-address\]](#) *string*

Synopsis	IP address of the video interface
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i>
Tree	video-interface
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

extended-unicast *boolean*

Synopsis	Extend video unicast session
----------	------------------------------

Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> extended-unicast <i>boolean</i>
Tree	extended-unicast
Description	<p>When configured to true, video unicast is delayed from switching over to multicast for 5 minutes. The unicast session can be extended further by sending an RTCP extension request, which resets the 5-minute timer. This is ideal for services that require unicast video and end devices that require extended time to switch over from unicast to multicast.</p> <p>When configured to false, the unicast session switches over to multicast 1.5 seconds after the IGMP request is sent. Most Fast Channel Change deployments do not require a time extension.</p>
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-session-timeout *number*

Synopsis	FCC session timeout
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> fcc-session-timeout <i>number</i>
Tree	fcc-session-timeout
Range	5 to 300
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

hd

Synopsis	Enter the hd context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd
Tree	hd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd dent-threshold <i>number</i>
Tree	dent-threshold
Range	1 to 31
Default	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd fcc-burst <i>number</i>
Tree	fcc-burst
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server

Synopsis	Enter the fcc-server context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd fcc-server
Tree	fcc-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mode *keyword*

Synopsis	Mode the FCC server sends information to the client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd fcc-server mode <i>keyword</i>
Tree	mode
Options	burst, dent, hybrid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd local-rt-server boolean
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mc-handover *number*

Synopsis	Rate the FCC server sends data during the handover
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd mc-handover number
Tree	mc-handover
Range	0 to 100
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
----------	---

Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> hd rt-rate <i>number</i>
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

max-igmp-latency *number*

Synopsis	Maximum IGMP latency per client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> max-igmp-latency <i>number</i>
Tree	max-igmp-latency
Range	10 to 1000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

max-sessions *number*

Synopsis	Maximum number of sessions per client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> max-sessions <i>number</i>
Tree	max-sessions
Range	1 to 65536
Default	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

pip

Synopsis	Enter the pip context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip
Tree	pip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip dent-threshold <i>number</i>
Tree	dent-threshold
Range	1 to 31
Default	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip fcc-burst <i>number</i>
Tree	fcc-burst
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server

Synopsis	Enter the fcc-server context
----------	-------------------------------------

Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip fcc-server
Tree	fcc-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mode *keyword*

Synopsis	Mode the FCC server sends information to the client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip fcc-server mode <i>keyword</i>
Tree	mode
Options	burst, dent, hybrid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip local-rt-server <i>boolean</i>
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mc-handover *number*

Synopsis	Rate the FCC server sends data during the handover
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip mc-handover <i>number</i>
Tree	mc-handover
Range	0 to 600
Units	percent

Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> pip rt-rate <i>number</i>
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ret-session-timeout *number*

Synopsis	RET session timeout
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> ret-session-timeout <i>number</i>
Tree	ret-session-timeout
Range	5 to 300
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-payload-type *number*

Synopsis	Format for the received retransmission packets
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> rt-payload-type <i>number</i>
Tree	rt-payload-type

Range	33 96 to 127
Default	99
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> rt-rate <i>number</i>
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

sd

Synopsis	Enter the sd context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd
Tree	sd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd dent-threshold <i>number</i>
Tree	dent-threshold
Range	1 to 31
Default	16

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd fcc-burst <i>number</i>
Tree	fcc-burst
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fcc-server

Synopsis	Enter the fcc-server context
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd fcc-server
Tree	fcc-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mode *keyword*

Synopsis	Mode the FCC server sends information to the client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd fcc-server mode <i>keyword</i>
Tree	mode
Options	burst, dent, hybrid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd local-rt-server <i>boolean</i>
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mc-handover *number*

Synopsis	Rate the FCC server sends data during the handover
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd mc-handover <i>number</i>
Tree	mc-handover
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> sd rt-rate <i>number</i>
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

subscriber-bw-limit *number*

Synopsis	Egress bandwidth limit per subscriber
Context	configure multicast-management multicast-info-policy <i>string</i> video-policy video-interface <i>string</i> subscriber-bw-limit <i>number</i>
Tree	subscriber-bw-limit
Range	1 to 4294967295
Units	kilobps
Default	4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

multicast-reporting-destination [*name*] *string*

Synopsis	Enter the multicast-reporting-destination list instance
Context	configure multicast-management multicast-reporting-destination <i>string</i>
Tree	multicast-reporting-destination
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Multicast reporting destination name
Context	configure multicast-management multicast-reporting-destination <i>string</i>
Tree	multicast-reporting-destination
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Tree	description
String Length	1 to 160

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e

fragment-threshold (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum fragment length transmitted across the bundle
 Context **configure** [multilink-bundle](#) *string* [fragment-threshold](#) (*number* | *keyword*)
 Tree [fragment-threshold](#)
 Range 128 to 512
 Units bytes
 Options unlimited
 Default 128
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e

interleave-fragment *boolean*

Synopsis Enable LFI on the multilink bundle
 Context **configure** [multilink-bundle](#) *string* [interleave-fragment](#) *boolean*
 Tree [interleave-fragment](#)
 Default false
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e

member [[channel-id](#)] *string*

Synopsis Add a list entry for **member**
 Context **configure** [multilink-bundle](#) *string* [member](#) *string*
 Tree [member](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e

[channel-id] *string*

Synopsis	Multilink bundle member ID
Context	configure multilink-bundle <i>string</i> member <i>string</i>
Tree	member
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

minimum-links *number*

Synopsis	Minimum links that must be active for an active bundle
Context	configure multilink-bundle <i>string</i> minimum-links <i>number</i>
Tree	minimum-links
Range	1 to 8
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

mlppp

Synopsis	Enter the mlppp context
Context	configure multilink-bundle <i>string</i> mlppp
Tree	mlppp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

egress

Synopsis	Enter the egress context
Context	configure multilink-bundle <i>string</i> mlppp egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

qos-profile *reference*

Synopsis	Egress MLPPP QoS profile
Context	configure multilink-bundle <i>string</i> mlppp egress qos-profile <i>reference</i>
Tree	qos-profile
Reference	configure qos mlppp-profile-egress <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

endpoint-discriminator

Synopsis	Enter the endpoint-discriminator context
Context	configure multilink-bundle <i>string</i> mlppp endpoint-discriminator
Tree	endpoint-discriminator
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

class *keyword*

Synopsis	LCP endpoint discriminator class type
Context	configure multilink-bundle <i>string</i> mlppp endpoint-discriminator class <i>keyword</i>
Tree	class
Options	null, ip-address, global-mac-address
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

discriminator-id *string*

Synopsis	Endpoint discriminator ID
Context	configure multilink-bundle <i>string</i> mlppp endpoint-discriminator discriminator-id <i>string</i>
Tree	discriminator-id
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

ingress

Synopsis	Enter the ingress context
Context	configure multilink-bundle <i>string</i> mlppp ingress
Tree	ingress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

qos-profile *reference*

Synopsis	Ingress MLPPP QoS profile
Context	configure multilink-bundle <i>string</i> mlppp ingress qos-profile <i>reference</i>
Tree	qos-profile
Reference	configure qos mlppp-profile-ingress <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

magic-number *boolean*

Synopsis	Allow loopback detection for MLPPP bundles
Context	configure multilink-bundle <i>string</i> mlppp magic-number <i>boolean</i>
Tree	magic-number
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

multiclass *number*

Synopsis	Multiclass MLPPP bundle index
Context	configure multilink-bundle <i>string</i> mlppp multiclass <i>number</i>
Tree	multiclass
Range	2 to 4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

stateless-aps-switchover *boolean*

Synopsis	Allow stateless APS swtichovers
Context	configure multilink-bundle <i>string</i> mlppp stateless-aps-switchover <i>boolean</i>
Tree	stateless-aps-switchover
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

mrru *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum Received Reconstructed Unit (MRRU)
Context	configure multilink-bundle <i>string</i> mrru <i>number</i>
Tree	mrru
Range	1500 to 9206
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

protect-bundle *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Protection multilink bundle in bundle protection group
Context	configure multilink-bundle <i>string</i> protect-bundle <i>reference</i>
Tree	protect-bundle
Reference	configure multilink-bundle <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

red-differential

Synopsis	Enter the red-differential context
Context	configure multilink-bundle <i>string</i> red-differential
Tree	red-differential
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

action *keyword*

Synopsis	Action when differential delay exceeds threshold
Context	configure multilink-bundle <i>string</i> red-differential action <i>keyword</i>
Tree	action
Options	down
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

delay *number*

Synopsis	Differential delay threshold for individual links
Context	configure multilink-bundle <i>string</i> red-differential delay <i>number</i>
Tree	delay
Range	1 to 50
Units	milliseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

short-sequence *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use 12-bit sequence numbers for the MLPPP bundle
Context	configure multilink-bundle <i>string</i> short-sequence <i>boolean</i>
Tree	short-sequence
Default	false

Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e

working-bundle *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Working bundle that is part of the BPG
Context **configure** [multilink-bundle](#) *string* [working-bundle](#) *reference*
Tree [working-bundle](#)
Reference **configure** [multilink-bundle](#) *string*
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e

yellow-differential-delay *number*

Synopsis Yellow warning threshold for the differential delay
Context **configure** [multilink-bundle](#) *string* [yellow-differential-delay](#) *number*
Tree [yellow-differential-delay](#)
Range 1 to 25
Units milliseconds
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e

3.29 oam-pm commands

```

configure
- oam-pm

admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of availability statistics
Context	configure oam-pm session string ethernet Imm availability admin-state keyword

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

flr-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	configure oam-pm session <i>string</i> ethernet lmm availability flr-threshold <i>number</i>
Tree	flr-threshold
Range	0 to 100
Units	percent
Default	50
Introduced	16.0.R5
Platforms	All

hli-force-count *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI/CHLI counters regardless of availability
Context	configure oam-pm session <i>string</i> ethernet lmm availability hli-force-count <i>boolean</i>
Tree	hli-force-count
Default	false
Introduced	16.0.R5
Platforms	All

timing

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the timing context
Context	configure oam-pm session <i>string</i> ethernet lmm availability timing
Tree	timing
Introduced	16.0.R5
Platforms	All

chli-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold
Context	configure oam-pm session <i>string</i> ethernet lmm availability timing chli-threshold <i>number</i>
Tree	chli-threshold
Range	1 to 9
Default	5
Introduced	16.0.R5
Platforms	All

consec-delta-t *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of consecutive delta-t intervals
Context	configure oam-pm session <i>string</i> ethernet lmm availability timing consec-delta-t <i>number</i>
Tree	consec-delta-t
Range	2 to 10
Default	10
Introduced	16.0.R5

Platforms All

frames-per-delta-t *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Number of frames sent in one delta-t

Context **configure** [oam-pm session](#) *string* [ethernet lmm availability timing frames-per-delta-t](#) *number*

Tree [frames-per-delta-t](#)

Range 1 to 50

Introduced 16.0.R5

Platforms All

fc-collection *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable collection of per-forwarding class counters

Context **configure** [oam-pm session](#) *string* [ethernet lmm fc-collection](#) *boolean*

Tree [fc-collection](#)

Default false

Introduced 16.0.R5

Platforms All

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Time between transmission PDUs for the session's test

Context **configure** [oam-pm session](#) *string* [ethernet lmm interval](#) *number*

Range	2 to 10
Default	10
Introduced	16.0.R5

Platforms All

frames-per-delta-t *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Number of frames sent in one delta-t

Context **configure** [oam-pm session](#) *string* [ethernet slm timing frames-per-delta-t](#) *number*

Tree [frames-per-delta-t](#)

Range 1 to 50

Introduced 16.0.R5

Platforms All

source

Synopsis Enable the **source** context

Context **configure** [oam-pm session](#) *string* [ethernet source](#)

Tree [source](#)

Introduced 16.0.R5

Platforms All

ma-admin-name *string*

Synopsis Source Ethernet MA name

Context **configure** [oam-pm session](#) *string* [ethernet source ma-admin-name](#) *string*

Tree [ma-admin-name](#)

String Length 1 to 64

Notes This element is mandatory.

Introduced 16.0.R5

Platforms All

md-admin-name *string*

Synopsis Source Ethernet MD name

Context	configure oam-pm session <i>string</i> ethernet source md-admin-name <i>string</i>
Tree	md-admin-name
String Length	1 to 64
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

mep *number*

Synopsis	Source Ethernet MEP ID
Context	configure oam-pm session <i>string</i> ethernet source mep <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

ip

Synopsis	Enable the ip context
Context	configure oam-pm session <i>string</i> ip
Tree	ip
Notes	The following elements are part of a mandatory choice: ethernet , ip , or mpls .
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-egress-remark-dscp *boolean*

Synopsis	Allow DSCP modification by the egress QoS policy
Context	configure oam-pm session <i>string</i> ip allow-egress-remark-dscp <i>boolean</i>
Tree	allow-egress-remark-dscp
Default	false
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

destination (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address for the session
Context	configure oam-pm session <i>string ip destination</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	destination
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

destination-udp-port *number*

Synopsis	Destination UDP port for the session
Context	configure oam-pm session <i>string ip destination-udp-port number</i>
Tree	destination-udp-port
Range	1 to 65535
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

do-not-fragment *boolean*

Synopsis	Do not allow packet fragmentation in the IPv4 header
Context	configure oam-pm session <i>string ip do-not-fragment boolean</i>
Tree	do-not-fragment
Default	false
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp (*keyword* | *keyword*)

Synopsis	DSCP value configured to the DSCP name
Context	configure oam-pm session <i>string ip dscp</i> (<i>keyword</i> <i>keyword</i>)
Tree	dscp
Description	This command allows for the explicit setting of the DSCP rather than deriving the DSCP value from the egress network QoS policy 1 using the fc and profile values.

Although disconnected from the **fc** and **profile** settings unless required, the three parameters should be aligned to ensure proper treatment within the node and along the path.

Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Options	resolve
Default	resolve
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class for the session
Context	configure oam-pm session <i>string ip fc keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

forwarding

Synopsis	Enable the forwarding context
Context	configure oam-pm session <i>string ip forwarding</i>
Tree	forwarding
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bypass-routing

Synopsis	Bypass the routing table when sending test packets
Context	configure oam-pm session <i>string ip forwarding bypass-routing</i>
Tree	bypass-routing

Notes	The following elements are part of a mandatory choice: bypass-routing , interface , or next-hop .
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface *string*

Synopsis	Interface name
Context	configure oam-pm session <i>string</i> ip forwarding interface <i>string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: bypass-routing , interface , or next-hop .
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address for forwarding
Context	configure oam-pm session <i>string</i> ip forwarding next-hop (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a mandatory choice: bypass-routing , interface , or next-hop .
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern (*keyword | number*)

Synopsis	Pattern used to fill the packet padding field
Context	configure oam-pm session <i>string</i> ip pattern (<i>keyword number</i>)
Tree	pattern
Range	0 to 65535
Options	sequential
Default	0
Introduced	16.0.R5

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis Profile type for the session

Context **configure** **oam-pm** **session** *string ip profile keyword*

Tree [profile](#)

Options in, out

Default out

Introduced 16.0.R5

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

router-instance *string*

Synopsis Router instance for the session

Context **configure** **oam-pm** **session** *string ip router-instance string*

Tree [router-instance](#)

Default Base

Introduced 16.0.R5

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Source IP address for the session

Context **configure** **oam-pm** **session** *string ip source (ipv4-address-no-zone | ipv6-address-no-zone)*

Tree [source](#)

Introduced 16.0.R5

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source-udp-port *number*

Synopsis Source UDP port for the session

Context **configure** **oam-pm** **session** *string ip source-udp-port number*

Tree [source-udp-port](#)

Range 64374 to 64383

Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tll *number*

Synopsis	TTL value for the session
Context	configure oam-pm session <i>string ip tll number</i>
Tree	tll
Range	1 to 255
Default	255
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enable the twamp-light context
Context	configure oam-pm session <i>string ip twamp-light</i>
Tree	twamp-light
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the test
Context	configure oam-pm session <i>string ip twamp-light admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	configure oam-pm session <i>string</i> ip twamp-light allow-ipv6-udp-checksum-zero <i>boolean</i>
Tree	allow-ipv6-udp-checksum-zero
Description	<p>When configured to true, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x0000 arriving packets are discarded.</p> <p>When configured to false, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.</p>
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	configure oam-pm session <i>string</i> ip twamp-light delay-template <i>string</i>
Tree	delay-template
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session's test
Context	configure oam-pm session <i>string ip twamp-light interval number</i>
Tree	interval
Range	100 1000 10000
Units	milliseconds
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

loss

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the loss context
Context	configure oam-pm session <i>string ip twamp-light loss</i>
Tree	loss
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flr-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	configure oam-pm session <i>string ip twamp-light loss flr-threshold number</i>
Tree	flr-threshold
Range	0 to 100
Units	percent
Default	50
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hli-force-count *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Increment HLI/CHLI counters regardless of availability
Context	configure oam-pm session <i>string ip twamp-light loss hli-force-count</i> <i>boolean</i>
Tree	hli-force-count
Default	false
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timing**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the timing context
Context	configure oam-pm session <i>string ip twamp-light loss timing</i>
Tree	timing
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

chli-threshold *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold
Context	configure oam-pm session <i>string ip twamp-light loss timing chli-threshold</i> <i>number</i>
Tree	chli-threshold
Range	1 to 9
Default	5
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

consec-delta-t *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of consecutive delta-t intervals
Context	configure oam-pm session <i>string</i> ip twamp-light loss timing consec-delta-t <i>number</i>
Tree	consec-delta-t
Range	2 to 10
Default	10
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

frames-per-delta-t *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of frames sent in one delta-t
Context	configure oam-pm session <i>string</i> ip twamp-light loss timing frames-per-delta-t <i>number</i>
Tree	frames-per-delta-t
Range	1 to 50
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

loss-events**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the loss-events context
Context	configure oam-pm session <i>string</i> ip twamp-light loss-events

Range	1 to 864000
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

undet-unavailability-event [[direction](#)] *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the undet-unavailability-event list instance
Context	configure oam-pm session <i>string</i> ip twamp-light loss-events undet-unavailability-event <i>keyword</i>
Tree	undet-unavailability-event
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[direction] *keyword*

Synopsis	Traffic flow direction
Context	configure oam-pm session <i>string</i> ip twamp-light loss-events undet-unavailability-event <i>keyword</i>
Tree	undet-unavailability-event
Options	forward, backward, aggregate
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear threshold
----------	-----------------

Context	configure oam-pm session <i>string</i> ip twamp-light loss-events undet-unavailability-event <i>keyword</i> clear-threshold <i>number</i>
Tree	clear-threshold
Range	0 to 863999
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

raise-threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Rising threshold that determines when to generate event
Context	configure oam-pm session <i>string</i> ip twamp-light loss-events undet-unavailability-event <i>keyword</i> raise-threshold <i>number</i>
Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-size *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of packet padding sent for the TWAMP-Light test
Context	configure oam-pm session <i>string</i> ip twamp-light pad-size <i>number</i>
Tree	pad-size
Range	0 to 2000
Units	octets
Default	0
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

record-stats *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of statistics recorded for the TWAMP-Light test
Context	configure oam-pm session <i>string</i> ip twamp-light record-stats <i>keyword</i>
Tree	record-stats
Options	delay, loss, delay-and-loss
Default	delay
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-duration *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	configure oam-pm session <i>string</i> ip twamp-light test-duration <i>number</i>
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-id *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Test ID
Context	configure oam-pm session <i>string</i> ip twamp-light test-id <i>number</i>
Tree	test-id

Range	0 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

measurement-interval [[duration](#)] *keyword*

Synopsis	Enter the measurement-interval list instance
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i>
Tree	measurement-interval
Introduced	16.0.R5
Platforms	All

[duration] *keyword*

Synopsis	Duration of the measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i>
Tree	measurement-interval
Options	15-mins, 1-hour, 1-day, 5-mins
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

accounting-policy *reference*

Synopsis	Accounting policy for the measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	16.0.R5
Platforms	All

boundary-type *keyword*

Synopsis	Alignment of the start of the measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> boundary-type <i>keyword</i>
Tree	boundary-type
Options	clock-aligned, test-relative
Default	clock-aligned
Introduced	16.0.R5
Platforms	All

clock-offset *number*

Synopsis	Offset for a clock-aligned measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> clock-offset <i>number</i>
Tree	clock-offset
Range	0 to 86399
Units	seconds
Default	0
Introduced	16.0.R5
Platforms	All

intervals-stored *number*

Synopsis	Maximum number of measurement intervals stored
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> intervals-stored <i>number</i>
Tree	intervals-stored
Range	1 to 96
Introduced	16.0.R5
Platforms	All

threshold-cross-alerts

Synopsis	Enter the threshold-cross-alerts context
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> threshold-cross-alerts

Tree	threshold-cross-alerts
Introduced	16.0.R5
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of TCAs for measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> threshold-cross-alerts admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

delay-events *boolean*

Synopsis	Enable delay TCAs for the measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> threshold-cross-alerts delay-events <i>boolean</i>
Tree	delay-events
Default	false
Introduced	16.0.R5
Platforms	All

loss-events *boolean*

Synopsis	Enable loss TCAs for the measurement interval
Context	configure oam-pm session <i>string</i> measurement-interval <i>keyword</i> threshold-cross-alerts loss-events <i>boolean</i>
Tree	loss-events
Default	false
Introduced	16.0.R5
Platforms	All

mpls

Synopsis	Enable the mpls context
Context	configure oam-pm session string mpls
Tree	mpls
Notes	The following elements are part of a mandatory choice: ethernet , ip , or mpls .
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dm

Synopsis	Enable the dm context
Context	configure oam-pm session string mpls dm
Tree	dm
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MPLS DM test
Context	configure oam-pm session string mpls dm admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	configure oam-pm session string mpls dm delay-template <i>string</i>
Tree	delay-template
String Length	1 to 64

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Elapsed time between query messages sent for the test
Context	configure oam-pm session <i>string</i> mpls dm interval <i>number</i>
Tree	interval
Range	1000 2000 3000 4000 5000 6000 7000 8000 9000 10000
Units	milliseconds
Default	1000
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size of the pad TLV in query messages sent for the test
Context	configure oam-pm session <i>string</i> mpls dm pad-tlv-size <i>number</i>
Tree	pad-tlv-size
Range	0 2 to 257
Units	octets
Default	0
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reflect-pad *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Copy the pad TLV in each query to the response
Context	configure oam-pm session <i>string</i> mpls dm reflect-pad <i>boolean</i>
Tree	reflect-pad
Default	false
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-duration *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	configure oam-pm session <i>string</i> mpls dm test-duration <i>number</i>
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-id *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Test ID for query and response messages
Context	configure oam-pm session <i>string</i> mpls dm test-id <i>number</i>
Tree	test-id
Range	0 to 67108863
Notes	This element is mandatory.

Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp keyword

Synopsis	DSCP value for the session
Context	configure oam-pm session <i>string</i> mpls dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	be
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class for the session
Context	configure oam-pm session <i>string</i> mpls fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp

Synopsis	Enter the lsp context
Context	configure oam-pm session <i>string</i> mpls lsp
Tree	lsp
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls-tp-static

Synopsis	Enable the mpls-tp-static context
Context	configure oam-pm session <i>string</i> mpls lsp mpls-tp-static
Tree	mpls-tp-static
Notes	The following elements are part of a choice: mpls-tp-static , rsvp , or rsvp-auto .
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *string*

Synopsis	LSP to be tested
Context	configure oam-pm session <i>string</i> mpls lsp mpls-tp-static <i>string</i>
Tree	lsp
String Length	1 to 64
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp

Synopsis	Enable the rsvp context
Context	configure oam-pm session <i>string</i> mpls lsp rsvp
Tree	rsvp
Notes	The following elements are part of a choice: mpls-tp-static , rsvp , or rsvp-auto .
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *string*

Synopsis	LSP to be tested
Context	configure oam-pm session <i>string</i> mpls lsp rsvp lsp <i>string</i>
Tree	lsp
String Length	1 to 64
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

udp-return-object (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address used by far end of the test to send response
Context	configure oam-pm session <i>string</i> mpls lsp rsvp udp-return-object (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	udp-return-object
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-auto

Synopsis	Enable the rsvp-auto context
Context	configure oam-pm session <i>string</i> mpls lsp rsvp-auto
Tree	rsvp-auto
Notes	The following elements are part of a choice: mpls-tp-static , rsvp , or rsvp-auto .
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

from *string*

Synopsis	IPv4 address used to identify the LSP to be tested
Context	configure oam-pm session <i>string</i> mpls lsp rsvp-auto from <i>string</i>
Tree	from
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-template *string*

Synopsis	LSP template used to identify the LSP to be tested
Context	configure oam-pm session <i>string</i> mpls lsp rsvp-auto lsp-template <i>string</i>
Tree	lsp-template
String Length	1 to 32
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

to string

Synopsis	IPv4 address used to identify the LSP to be tested
Context	configure oam-pm session <i>string</i> mpls lsp rsvp-auto to <i>string</i>
Tree	to
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

udp-return-object (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address used by far end of the test to send response
Context	configure oam-pm session <i>string</i> mpls lsp rsvp-auto udp-return-object (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	udp-return-object
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern (*keyword* | *number*)

Synopsis	Pattern value repeated to fill padding field of packet
Context	configure oam-pm session <i>string</i> mpls pattern (<i>keyword</i> <i>number</i>)
Tree	pattern
Range	0 to 65535
Options	sequential
Default	0
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile for the session
Context	configure oam-pm session <i>string</i> mpls profile <i>keyword</i>
Tree	profile
Options	in, out
Default	out
Introduced	16.0.R6

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis MPLS TTL value for the session
 Context **configure** [oam-pm session](#) *string* [mpls ttl](#) *number*
 Tree [ttl](#)
 Range 1 to 255
 Default 255
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Session type
 Context **configure** [oam-pm session](#) *string* [session-type](#) *keyword*
 Tree [session-type](#)
 Options proactive, on-demand
 Default proactive
 Introduced 16.0.R5
 Platforms All

streaming

Synopsis Enter the **streaming** context
 Context **configure** [oam-pm streaming](#)
 Tree [streaming](#)
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template [[delay-template-name](#)] *string*

Synopsis	Enter the delay-template list instance
Context	configure oam-pm streaming delay-template <i>string</i>
Tree	delay-template
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[delay-template-name] *string*

Synopsis	Streaming delay template name
Context	configure oam-pm streaming delay-template <i>string</i>
Tree	delay-template
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the delay template
Context	configure oam-pm streaming delay-template <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure oam-pm streaming delay-template <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	19.7.R1

      - apply-groups reference
      - apply-groups-exclude reference
      - max-size number
      - mismatch-action keyword
      - switch-defined-cookie boolean
    - logical-port-status keyword
    - ofs-id number

```

3.30.1 openflow command descriptions

openflow

Synopsis	Enter the openflow context
Context	configure openflow
Tree	openflow
Introduced	16.0.R4
Platforms	All

of-controller [[controller-id](#)] *number*

Synopsis	Enter the of-controller list instance
Context	configure openflow of-controller <i>number</i>
Tree	of-controller
Max. Instances	1
Introduced	16.0.R4
Platforms	VSR-NRC

[[controller-id](#)] *number*

Synopsis	OpenFlow controller ID
Context	configure openflow of-controller <i>number</i>
Tree	of-controller
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR-NRC

address *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address for the OpenFlow controller
Context	configure openflow of-controller <i>number</i> address <i>string</i>
Tree	address
Introduced	16.0.R4
Platforms	VSR-NRC

admin-state *keyword*

Synopsis	Administrative state of OpenFlow controller instance
Context	configure openflow of-controller <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR-NRC

description *string*

Synopsis	Text description
Context	configure openflow of-controller <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	VSR-NRC

echo-interval *number*

Synopsis	Interval for monitoring OpenFlow control channels
Context	configure openflow of-controller <i>number</i> echo-interval <i>number</i>
Tree	echo-interval
Range	10 to 3600
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	VSR-NRC

echo-multiple *number*

Synopsis	Consecutive lost messages before channel declared down
Context	configure openflow of-controller <i>number</i> echo-multiple <i>number</i>
Tree	echo-multiple
Range	3 to 100
Default	3
Introduced	16.0.R4
Platforms	VSR-NRC

ipv6-address *string*

Synopsis	IPv6 address for the OpenFlow channel to the controller
Context	configure openflow of-controller <i>number</i> ipv6-address <i>string</i>
Tree	ipv6-address
Introduced	19.10.R1
Platforms	VSR-NRC

role *keyword*

Synopsis	Role when multiple controllers connected to OF switch
Context	configure openflow of-controller <i>number</i> role <i>keyword</i>
Tree	role
Options	equal
Default	equal
Introduced	16.0.R4
Platforms	VSR-NRC

tls-server-profile *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Profile name used by the controller
Context	configure openflow of-controller <i>number</i> tls-server-profile <i>reference</i>

Tree	tls-server-profile
Reference	configure system security tls server-tls-profile <i>string</i>
Introduced	16.0.R4
Platforms	VSR-NRC

version *keyword*

Synopsis	Version negotiated between OF controller and switch
Context	configure openflow of-controller <i>number</i> version <i>keyword</i>
Tree	version
Options	version-1-3-1
Default	version-1-3-1
Introduced	16.0.R4
Platforms	VSR-NRC

of-switch [[name](#)] *string*

Synopsis	Enter the of-switch list instance
Context	configure openflow of-switch <i>string</i>
Tree	of-switch
Max. Instances	8
Introduced	16.0.R4
Platforms	All

[name] *string*

Synopsis	OpenFlow switch name
Context	configure openflow of-switch <i>string</i>
Tree	of-switch
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the OpenFlow switch instance
Context	configure openflow of-switch <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

aux-channel *boolean*

Synopsis	Enable the auxiliary connection for the H-OFS instance
Context	configure openflow of-switch <i>string</i> aux-channel <i>boolean</i>
Tree	aux-channel
Default	false
Introduced	16.0.R4
Platforms	All

controller [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [port](#) *number*

Synopsis	Enter the controller list instance
Context	configure openflow of-switch <i>string</i> controller (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	controller
Max. Instances	2
Introduced	16.0.R4
Platforms	All

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the OpenFlow channel to the controller
Context	configure openflow of-switch <i>string</i> controller (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	controller

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

port number

Synopsis	Controller port ID
Context	configure openflow of-switch <i>string controller (ipv4-address-no-zone ipv6-address-no-zone)</i> port number
Tree	controller
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

ofc-loopback (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Loopback IP address in the VPRN
Context	configure openflow of-switch <i>string controller (ipv4-address-no-zone ipv6-address-no-zone)</i> port number ofc-loopback (ipv4-address-no-zone ipv6-address-no-zone)
Tree	ofc-loopback
Introduced	16.0.R4
Platforms	All

service-name *string*

Synopsis	Administrative service name
Context	configure openflow of-switch <i>string controller (ipv4-address-no-zone ipv6-address-no-zone)</i> port number service-name string
Tree	service-name
String Length	1 to 64
Introduced	16.0.R4
Platforms	All

tls-client-profile *reference*

Synopsis	TLS profile name for use on the control channel
Context	configure openflow of-switch <i>string</i> controller (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i> tls-client-profile <i>reference</i>
Tree	tls-client-profile
Reference	configure system security tls client-tls-profile <i>string</i>
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	configure openflow of-switch <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255
Introduced	16.0.R4
Platforms	All

echo-interval *number*

Synopsis	Interval for monitoring OpenFlow control channels
Context	configure openflow of-switch <i>string</i> echo-interval <i>number</i>
Tree	echo-interval
Range	1 to 3600
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	All

echo-multiple *number*

Synopsis	Consecutive lost messages before channel declared down
Context	configure openflow of-switch <i>string</i> echo-multiple <i>number</i>
Tree	echo-multiple
Range	3 to 100

Default	3
Introduced	16.0.R4
Platforms	All

flowtable [[table-id](#)] *number*

Synopsis	Enter the flowtable list instance
Context	configure openflow of-switch <i>string</i> flowtable <i>number</i>
Tree	flowtable
Max. Instances	1
Introduced	16.0.R4
Platforms	All

[table-id] *number*

Synopsis	OpenFlow table ID
Context	configure openflow of-switch <i>string</i> flowtable <i>number</i>
Tree	flowtable
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

max-size *number*

Synopsis	Maximum size of the flow table
Context	configure openflow of-switch <i>string</i> flowtable <i>number</i> max-size <i>number</i>
Tree	max-size
Range	1 to 524288
Default	1000
Introduced	16.0.R4
Platforms	All

mismatch-action *keyword*

Synopsis	Action taken when no match entries found in flow table
Context	configure openflow of-switch <i>string</i> flowtable <i>number</i> mismatch-action <i>keyword</i>
Tree	mismatch-action
Options	drop, fall-through, packet-in
Default	fall-through
Introduced	16.0.R4
Platforms	All

switch-defined-cookie *boolean*

Synopsis	Enable switch-defined cookie encoding
Context	configure openflow of-switch <i>string</i> flowtable <i>number</i> switch-defined-cookie <i>boolean</i>
Tree	switch-defined-cookie
Default	false
Introduced	16.0.R4
Platforms	All

logical-port-status *keyword*

Synopsis	Logical port type for status change reporting
Context	configure openflow of-switch <i>string</i> logical-port-status <i>keyword</i>
Tree	logical-port-status
Options	rsvp-te, mpls-tp, sr-te
Max. Instances	3
Introduced	16.0.R4
Platforms	All

ofs-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	OFS switch ID
----------	---------------

Context	configure openflow of-switch <i>string ofs-id number</i>
Tree	<i>ofs-id</i>
Range	1 to 8
Introduced	16.0.R6
Platforms	All

3.31 policy-options commands

```

expression *string*

Synopsis	Regular expression string
Context	configure policy-options as-path <i>string</i> expression <i>string</i>
Tree	expression
Description	This command configures a route policy AS path regular expression statement to use in route policy entries.

An AS path in a BGP route matches an AS path regular expression, if the path matches the pattern of the regular expression. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String Length	1 to 255
Introduced	16.0.R1
Platforms	All

expression *string*

Synopsis	Regular expression string
Context	configure policy-options as-path-group <i>string entry number expression string</i>
Tree	expression
Description	This command configures an AS path group regular expression.

An AS path in a BGP route matches an AS path group, if the pattern of the path matches the concatenation of all regular expressions in the group. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String Length	1 to 255

[name] *string*

Synopsis	Community name
Context	configure policy-options community <i>string</i>
Tree	community
Description	This command configures a route policy community name. String values must be composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

Tree	member
Introduced	16.0.R1
Platforms	All

[member] *string*

Synopsis	Community member value
Context	configure policy-options community <i>string</i> member <i>string</i>
Tree	member
Description	This command configures a BGP community value.

Each member of a community list is a standard, extended, or large community value or a regular expression that potentially matches many community values. A regular expression incorporates terms and operators that use the terms. An individual numerical digit is an elementary term in the community regular expression. More complex terms

can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String Length	1 to 72
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

damping [name] *string*

Default 1

Introduced 16.0.R1

Platforms All

bgp-high-priority *boolean*

Synopsis Tag routes as high priority for fast table updates

Context **configure** [policy-options](#) [policy-statement](#) *string* [default-action](#) [bgp-high-priority](#) *boolean*

Tree [bgp-high-priority](#)

Description When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.

This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:

- IPv4
- label-IPv4

- IPv6
- label-IPv6

This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.

When configured to **false**, no routes are tagged for faster route table updates.

Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>string</i> default-action bgp-leak <i>boolean</i>

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure policy-options policy-statement <i>string</i> default-action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	configure policy-options policy-statement <i>string</i> default-action bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	<p>When configured to true, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.</p> <p>When configured to false, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.</p>
Default	false
Introduced	20.5.R1

Platforms All

value (*string* | *number*)

Synopsis BGP tunnel table metric value

Context **configure** [policy-options](#) [policy-statement](#) *string* [default-action](#) [bgp-tunnel-metric](#) *value* (*string* | *number*)

Tree [value](#)

Description This command configures a BGP tunnel metric is assigned to routes that do not match any entry.

If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either:

- the `prefer-aigp` option is set to `false`
- the `prefer-aigp` option is set to `true` but the BGP-LU route does not have an AIGP attribute

String Length 1 to 32

String Length	1 to 32
Options	none

Introduced	16.0.R1
Platforms	All

dest-class *number*

Synopsis	Default destination class for the policy statement
Context	configure policy-options policy-statement <i>string</i> default-action dest-class <i>number</i>
Tree	dest-class
Description	This command specifies the policy accounting destination class index to associate with matched routes.
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

egress-statistics *boolean*

Synopsis	Enable egress statistics for BGP-LU routes
Context	configure policy-options policy-statement <i>string</i> default-action egress-statistics <i>boolean</i>
Tree	egress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on egress data paths. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

flex-algo (*string* | *number*)

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	configure policy-options policy-statement <i>string</i> default-action flex-algo (<i>string</i> <i>number</i>)
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry.

Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU.

This command is not supported for multicast address families.

String Length	1 to 32
Range	128 to 255
Introduced	20.10.R1
Platforms	All

ingress-statistics *boolean*

Synopsis	Enable ingress statistics for BGP-LU routes
Context	configure policy-options policy-statement <i>string</i> default-action ingress-statistics <i>boolean</i>
Tree	ingress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on ingress data paths. For effective operation, a prefix must be advertised with a label per prefix for ILM statistics. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix

String Length	1 to 32
Range	1 to 255
Introduced	16.0.R1
Platforms	All

resolve-static *boolean*

Synopsis	Resolve next hop of a static route for the BGP next hop
Context	configure policy-options policy-statement <i>string</i> default-action resolve-static <i>boolean</i>

Tree	resolve-static
Default	false
Introduced	16.0.R1
Platforms	All

route-table-install *boolean*

Synopsis	Allow BGP route installation in the route table
Context	configure policy-options policy-statement <i>string</i> default-action route-table-install <i>boolean</i>
Tree	route-table-install
Default	true
Introduced	19.10.R1
Platforms	All

source-class *number*

Synopsis	Default source class for the policy statement
Context	configure policy-options policy-statement <i>string</i> default-action source-class <i>number</i>
Tree	source-class
Description	This command specifies the policy accounting source class index to associate with matched routes.
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the sr-label-index context
Context	configure policy-options policy-statement <i>string</i> default-action sr-label-index
Tree	sr-label-index
Description	<p>Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes.</p> <p>The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts.</p>

This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.

When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.

Introduced	19.10.R1
Platforms	All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	configure policy-options policy-statement <i>string</i> default-action sr-label-index prefer-igp <i>boolean</i>
Tree	prefer-igp
Description	<p>When configured to true, BGP obtains the SID index from the IGP route (if a SID index is present) and the configure router bgp segment-routing prefix-sid-range global command is set to true.</p> <p>This command applies only to route table import policies.</p> <p>When configured to false, or the SID index is not present in the IGP route, or the configure router bgp segment-routing prefix-sid-range global command is not set to true, BGP obtains the label index value from the value command.</p>
Default	false
Introduced	19.10.R1
Platforms	All

value (*string* | *number*)

Synopsis	BGP SR label index associated with routes
Context	configure policy-options policy-statement <i>string</i> default-action sr-label-index value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command specifies the BGP SR label index value to be associated with a route or routes.</p> <p>If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.</p> <p>If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.</p>

String Length	1 to 32
Range	0 to 524287
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy (*param-midstring* | *string*)

Synopsis	SR maintenance policy as an action
Context	configure policy-options policy-statement <i>string</i> default-action sr-maintenance-policy (<i>param-midstring</i> <i>string</i>)
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	configure policy-options policy-statement <i>string</i> default-action sticky-ecmp <i>boolean</i>
Tree	sticky-ecmp
Default	false
Introduced	16.0.R1
Platforms	All

tag (*number* | *string*)

Synopsis	OSPF RIP or IS-IS tag applied to routes
Context	configure policy-options policy-statement <i>string</i> default-action tag (<i>number</i> <i>string</i>)
Tree	tag
String Length	1 to 32
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

type (*number* | *string*)

Synopsis	OSPF metric type applied to routes
Context	configure policy-options policy-statement <i>string</i> default-action <i>type</i> (<i>number</i> <i>string</i>)
Tree	type

 (*param-midstring* | *string*)
 Tree [add](#)
 String Length 1 to 32
 Notes The following elements are part of a choice: **add** or **replace**.
 Introduced 16.0.R1
 Platforms All

replace (*param-midstring* | *string*)

Synopsis	AS path to replace
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action as-path replace (<i>param-midstring</i> <i>string</i>)
Tree	replace
String Length	1 to 32
Notes	The following elements are part of a choice: add or replace .
Introduced	16.0.R1
Platforms	All

as-path-prepend

Synopsis	Enter the as-path-prepend context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action as-path-prepend
Tree	as-path-prepend
Introduced	16.0.R1
Platforms	All

as-path (*number* | *string* | *keyword*)

Synopsis	AS number to prepend to the AS path attribute
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action as-path-prepend as-path (<i>number</i> <i>string</i> <i>keyword</i>)
Tree	as-path
String Length	1 to 32
Range	1 to 4294967295
Options	most-recent
Introduced	16.0.R1
Platforms	All

repeat (*number* | *string*)

Synopsis	Number of times to prepend the specified AS number
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action as-path-prepend repeat (<i>number</i> <i>string</i>)
Tree	repeat

String Length	1 to 32
Range	1 to 50
Default	1
Introduced	16.0.R1
Platforms	All

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-high-priority <i>boolean</i>
Tree	bgp-high-priority
Description	<p>When configured to true, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.</p> <p>This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:</p> <ul style="list-style-type: none"> • IPv4 • label-IPv4 • IPv6 • label-IPv6 <p>This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.</p> <p>When configured to false, no routes are tagged for faster route table updates.</p>
Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-leak <i>boolean</i>
Tree	bgp-leak
Default	false
Introduced	16.0.R1
Platforms	All

bgp-med

Synopsis	Enter the bgp-med context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-med
Tree	bgp-med
Introduced	19.7.R1
Platforms	All

adjust *string*

Synopsis	BGP-MED adjustment
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-med adjust <i>string</i>
Tree	adjust
String Length	1 to 64
Notes	The following elements are part of a choice: adjust or set .
Introduced	19.7.R1
Platforms	All

set (*keyword* | *number* | *string*)

Synopsis	BGP-MED assignment
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-med set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String Length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
Notes	The following elements are part of a choice: adjust or set .
Introduced	19.7.R1
Platforms	All

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
----------	--

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	<p>When configured to true, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.</p> <p>When configured to false, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.</p>
Default	false
Introduced	20.5.R1
Platforms	All

value (*string* | *number*)

Synopsis	BGP tunnel table metric value
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action bgp-tunnel-metric value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command configures a BGP tunnel metric is assigned to routes that do not match any entry.</p> <p>If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either:</p> <ul style="list-style-type: none"> the <code>prefer-aigp</code> option is set to false the <code>prefer-aigp</code> option is set to true but the BGP-LU route does not have an AIGP attribute
String Length	1 to 32

Range	0 to 4294967295
Introduced	20.5.R1
Platforms	All

community

Synopsis	Enter the community context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action community
Tree	community
Introduced	16.0.R1
Platforms	All

add (*param-midstring-64* | *string*)

Synopsis	List of community names to add
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action community add (<i>param-midstring-64</i> <i>string</i>)
Tree	add
String Length	1 to 64
Max. Instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

remove (*param-midstring-64* | *string*)

Synopsis	List of community names to remove
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action community remove (<i>param-midstring-64</i> <i>string</i>)
Tree	remove
String Length	1 to 64
Max. Instances	28
Notes	The following elements are part of a choice: (add and remove) or replace .

This element is ordered by the user.

Introduced 16.0.R1
Platforms All

replace (*param-midstring-64* | *string*)

Synopsis List of community names to replace
Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [action](#) [community](#) **replace** (*param-midstring-64* | *string*)
Tree [replace](#)
String Length 1 to 64
Max. Instances 28
Notes The following elements are part of a choice: (**add** and **remove**) or **replace**.
This element is ordered by the user.
Introduced 16.0.R1
Platforms All

create-mpls-tunnel *boolean*

Synopsis Create an MPLS tunnel
Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [action](#) [create-mpls-tunnel](#) *boolean*
Tree [create-mpls-tunnel](#)
Description When configured to **true**, the router creates an MPLS tunnel.
This command is supported for only the following address families:

- evpn
- ipv4
- ipv6
- label-ipv4
- label-ipv6
- vpn-ipv4
- vpn-ipv6

Default false
Introduced 21.10.R1
Platforms All

create-udp-tunnel *boolean*

Synopsis	Create an MPLS-over-UDP tunnel
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action create-udp-tunnel <i>boolean</i>
Tree	create-udp-tunnel
Default	false
Introduced	16.0.R1
Platforms	All

damping (*keyword* | *param-midstring* | *string*)

Synopsis	Damping profile used for routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action damping (<i>keyword</i> <i>param-midstring</i> <i>string</i>)
Tree	damping
String Length	1 to 32
Options	none
Introduced	16.0.R1
Platforms	All

dest-class *number*

Synopsis	Default destination class for the policy statement
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action dest-class <i>number</i>
Tree	dest-class
Description	This command specifies the policy accounting destination class index to associate with matched routes.
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

egress-statistics *boolean*

Synopsis	Enable egress statistics for BGP-LU routes
----------	--

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action egress-statistics <i>boolean</i>
Tree	egress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on egress data paths. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

flex-algo (*string* | *number*)

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action flex-algo (<i>string</i> <i>number</i>)
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry. Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU. This command is not supported for multicast address families.
String Length	1 to 32
Range	128 to 255
Introduced	20.10.R1
Platforms	All

forwarding-class

Synopsis	Enter the forwarding-class context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action forwarding-class
Tree	forwarding-class
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class associated with the route
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action forwarding-class fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority keyword

Synopsis	Route priority
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action forwarding-class priority <i>keyword</i>
Tree	priority
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ingress-statistics boolean

Synopsis	Enable ingress statistics for BGP-LU routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action ingress-statistics <i>boolean</i>
Tree	ingress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on ingress data paths. For effective operation, a prefix must be advertised with a label per prefix for ILM statistics. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

install-backup-path boolean

Synopsis	Install a preprogrammed backup path for the prefix
----------	--

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action install-backup-path <i>boolean</i>
Tree	install-backup-path
Default	false
Introduced	16.0.R1
Platforms	All

local-preference (*number* | *string*)

Synopsis	BGP local preference for routes not matching any entry
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action local-preference (<i>number</i> <i>string</i>)
Tree	local-preference
String Length	1 to 32
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action metric
Tree	metric
Introduced	16.0.R1
Platforms	All

add (*number* | *string*)

Synopsis	Metric to add
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action metric add (<i>number</i> <i>string</i>)
Tree	add
String Length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	16.0.R1

Platforms All

set (*number* | *string*)

Synopsis Metric to assign

Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [action](#) [metric](#) **set** (*number* | *string*)

Tree [set](#)

String Length 1 to 32

Range 0 to 4294967295

Notes The following elements are part of a choice: **add**, **set**, or **subtract**.

Introduced 16.0.R1

Platforms All

subtract (*number* | *string*)

Synopsis Metric to subtract

Tree [subtract](#)

String Length 1 to 32

Range 0 to 4294967295

Notes The following elements are part of a choice: **add**, **set**, or **subtract**.

Introduced 16.0.R1

Platforms All

multicast-redirect

Synopsis Enter the **multicast-redirect** context

Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [action](#) [multicast-redirect](#)

Tree [multicast-redirect](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fwd-service *string*

Synopsis	Service ID for multicast redirection
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action multicast-redirection fwd-service <i>string</i>
Tree	fwd-service
Default	Base
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-int-name *string*

Synopsis	Alternate interface where IGMP messages are redirected
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action multicast-redirection ip-int-name <i>string</i>
Tree	ip-int-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-policy (*param-midstring* | *string*)

Synopsis	BGP-VPN imported route and a NAT policy association
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action nat-policy (<i>param-midstring</i> <i>string</i>)
Tree	nat-policy
Description	<p>This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action.</p> <p>A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.</p> <p>All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type accept regardless of whether the NAT policy is configured in the action.</p>
String Length	1 to 32
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

next-hop (*keyword* | *ipv4-address-no-zone* | *ipv6-address-no-zone* | *string*)

Synopsis	Next-hop IP address applied to routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action next-hop (<i>keyword</i> <i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>string</i>)
Tree	next-hop
String Length	1 to 32
Options	peer-address, self
Introduced	16.0.R1
Platforms	All

origin (*keyword* | *string*)

Synopsis	BGP origin for routes that are exported into BGP
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action origin (<i>keyword</i> <i>string</i>)
Tree	origin
String Length	1 to 32
Options	igp, egp, incomplete
Introduced	16.0.R1
Platforms	All

origin-validation-state (*keyword* | *string*)

Synopsis	Origin validation state for routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action origin-validation-state (<i>keyword</i> <i>string</i>)
Tree	origin-validation-state
String Length	1 to 32
Options	valid, not-found, invalid
Introduced	16.0.R1
Platforms	All

preference (*number* | *string*)

Synopsis	Route preference applied to routes
----------	------------------------------------

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action preference (<i>number</i> <i>string</i>)
Tree	preference
String Length	1 to 32
Range	1 to 255
Introduced	16.0.R1
Platforms	All

resolve-static *boolean*

Synopsis	Resolve next hop of a static route for the BGP next hop
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action resolve-static <i>boolean</i>
Tree	resolve-static
Default	false
Introduced	16.0.R1
Platforms	All

route-table-install *boolean*

Synopsis	Allow BGP route installation in the route table
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action route-table-install <i>boolean</i>
Tree	route-table-install
Default	true
Introduced	19.10.R1
Platforms	All

source-class *number*

Synopsis	Default source class for the policy statement
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action source-class <i>number</i>
Tree	source-class
Description	This command specifies the policy accounting source class index to associate with matched routes.

Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the sr-label-index context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action sr-label-index
Tree	sr-label-index
Description	<p>Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes.</p> <p>The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts.</p> <p>This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.</p> <p>When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.</p>
Introduced	19.10.R1
Platforms	All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action sr-label-index prefer-igp <i>boolean</i>
Tree	prefer-igp
Description	<p>When configured to true, BGP obtains the SID index from the IGP route (if a SID index is present) and the configure router bgp segment-routing prefix-sid-range global command is set to true.</p> <p>This command applies only to route table import policies.</p> <p>When configured to false, or the SID index is not present in the IGP route, or the configure router bgp segment-routing prefix-sid-range global command is not set to true, BGP obtains the label index value from the value command.</p>
Default	false
Introduced	19.10.R1
Platforms	All

value (*string* | *number*)

Synopsis	BGP SR label index associated with routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action sr-label-index value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command specifies the BGP SR label index value to be associated with a route or routes.</p> <p>If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.</p> <p>If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.</p>
String Length	1 to 32
Range	0 to 524287
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy (*param-midstring* | *string*)

Synopsis	SR maintenance policy as an action
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action sr-maintenance-policy (<i>param-midstring</i> <i>string</i>)
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action sticky-ecmp <i>boolean</i>
Tree	sticky-ecmp
Default	false

Introduced	16.0.R1
Platforms	All

tag (*number* | *string*)

Synopsis	OSPF RIP or IS-IS tag applied to routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action tag (<i>number</i> <i>string</i>)
Tree	tag
String Length	1 to 32
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

type (*number* | *string*)

Synopsis	OSPF metric type applied to routes
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> action type (<i>number</i> <i>string</i>)
Tree	type
String Length	1 to 32
Range	1 to 2
Introduced	16.0.R1
Platforms	All

conditional-expression

Synopsis	Enable the conditional-expression context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> conditional-expression
Tree	conditional-expression
Introduced	16.0.R1
Platforms	All

route-exists *string*

Synopsis	Conditional expression to test route existence
----------	--

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> conditional-expression route-exists <i>string</i>
Tree	route-exists
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

from

Synopsis	Enable the from context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from
Tree	from
Description	Commands in this context configure policy match criteria based on the route's source or the protocol from which it is received. If conditions are not specified, all route sources are considered to match.
Introduced	16.0.R1
Platforms	All

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from aggregate-contributor <i>boolean</i>
Tree	aggregate-contributor
Description	When configured to true , matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor.

This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, **vrf-export** policy or **vrf-import** policy, no routes are matched by that entry.

When configured to **false**, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.

Default	false
Introduced	20.10.R1
Platforms	All

area string

Synopsis	OSPF area as a match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from area <i>string</i>
Tree	area
Introduced	16.0.R1
Platforms	All

as-path

Synopsis	Enter the as-path context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path
Tree	as-path
Introduced	16.0.R1

group (*param-midstring* | *string*)

Synopsis	AS path group as a match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path group (<i>param-midstring</i> <i>string</i>)
Tree	group
String Length	1 to 32
Notes	The following elements are part of a choice: group or name .
Introduced	16.0.R1
Platforms	All

length

Synopsis	Enter the length context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path length
Tree	length
Introduced	16.0.R1
Platforms	All

qualifier *keyword*

Synopsis	Higher or lower values to be accepted as match criteria
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path length qualifier <i>keyword</i>
Tree	qualifier
Options	equal, or-higher, or-lower
Default	equal
Introduced	16.0.R1
Platforms	All

unique *boolean*

Synopsis	Use unique AS numbers as matching criteria
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path length unique <i>boolean</i>
Tree	unique
Default	false
Introduced	16.0.R1
Platforms	All

value (*number* | *string*)

Synopsis	AS numbers in the AS path that match on the BGP route
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from as-path length value (<i>number</i> <i>string</i>)
Tree	value
String Length	1 to 32
Range	0 to 255

Introduced 16.0.R1
 Platforms All

name (*param-midstring* | *string*)

Synopsis AS path name to match
 Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [from as-path](#) *name*
 (*param-midstring* | *string*)
 Tree [name](#)
 Description This command specifies an AS path regular expression name for the route policy entry. Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".
 String Length 1 to 32
 Notes The following elements are part of a choice: **group** or **name**.
 Introduced 16.0.R1
 Platforms All

cluster-id

Synopsis Enter the **cluster-id** context

origin *keyword*

Synopsis Route origin match criteria

Context **configure** [policy-options](#) [policy-statement](#) *string* [entry](#) *number* [from origin](#) *keyword*

Tree [origin](#)

Description	<p>This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes:</p> <p>Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the sub-mgmt option for the protocol command.</p> <p>Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the direct option for the protocol command.</p> <p>Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the direct option for the protocol command.</p> <p>Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the managed option for the protocol command.</p> <p>The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.</p>
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	16.0.R1
Platforms	All

origin-validation-state *keyword*

Synopsis	Origin validation state used for match criteria
Context	configure policy-options policy-statement <i>string</i> entry number from origin-validation-state <i>keyword</i>
Tree	origin-validation-state
Description	This command specifies a validation state that is used to match BGP routes based on their origin validation state.
Options	valid, not-found, invalid
Introduced	16.0.R1
Platforms	All

ospf-type *number*

Synopsis	OSPF type metric applied to unmatching route entries
Context	configure policy-options policy-statement <i>string</i> entry number from ospf-type <i>number</i>

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from protocol
Tree	protocol
Description	Commands in this context configure the match criterion based on protocols for a route policy statement entry and may be used for both import and export policies.
Introduced	16.0.R1
Platforms	All

instance (*keyword* | *number*)

Synopsis	Instance for protocol IS-IS, OSPF, or OSPFv3 to match
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Description	This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion. When this command is explicitly configured, the name command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).
Range	0 to 127
Options	all
Default	0
Introduced	16.0.R1
Platforms	All

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from protocol name <i>keyword</i>
Tree	name
Description	This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set:

- direct
- static
- isis
- aggregate
- bgp
- bgp-label
- direct-interface

If multiple protocols are specified, the **instance** command cannot be explicitly configured.

The protocol **direct-interface** route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.

Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta, dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ifl, srv6, video
Max. Instances	5

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address to match
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from source-address ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	16.0.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a source address prefix list to match
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from source-address prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	16.0.R1
Platforms	All

state *keyword*

Synopsis	State used as a match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from state <i>keyword</i>
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag (*number* | *keyword*)

Synopsis	Route tag used as a match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> from tag (<i>number</i> <i>keyword</i>)
Tree	tag
Range	1 to 4294967295
Options	no-tag
Introduced	16.0.R1
Platforms	All

to

Synopsis	Enable the to context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to
Tree	to
Introduced	16.0.R1
Platforms	All

level number

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to level <i>number</i>
Tree	level
Range	1 to 2
Introduced	16.0.R1
Platforms	All

neighbor

Synopsis	Enter the neighbor context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to neighbor
Tree	neighbor
Introduced	16.0.R1
Platforms	All

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone | ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	IP address to match the neighbor
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to neighbor ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	16.0.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Name to match the neighbor prefix list
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to neighbor prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	16.0.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Prefix list as match criterion
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Max. Instances	28
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to protocol
Tree	protocol
Introduced	16.0.R1
Platforms	All

instance (*keyword* | *number*)

Synopsis	Instance for the IS-IS, OSPF, or OSPF3 protocol
----------	---

Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Range	0 to 127
Options	all
Default	0
Introduced	16.0.R1
Platforms	All

name *keyword*

Synopsis	Protocol name to match
Context	configure policy-options policy-statement <i>string</i> entry <i>number</i> to protocol name <i>keyword</i>
Tree	name
Options	bgp, isis, ospf, rip, bgp-vpn, ospf3, ldp, vpn-leak, ripng, bgp-label, evpn-ift
Max. Instances	2
Introduced	16.0.R1
Platforms	All

entry-type *keyword*

Synopsis	The entry type for a route policy entry
Context	configure policy-options policy-statement <i>string</i> entry-type <i>keyword</i>
Tree	entry-type
Options	numbered, named
Default	numbered
Introduced	19.10.R1
Platforms	All

named-entry [[entry-name](#)] *string*

Synopsis	Enter the named-entry list instance
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i>
Tree	named-entry

Max. Instances	16384
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

[entry-name] *string*

Synopsis	Route policy entry name
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i>
Tree	named-entry
String Length	1 to 255
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

action

Synopsis	Enable the action context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action
Tree	action
Introduced	19.10.R1
Platforms	All

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action action-type <i>keyword</i>
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

add-paths-send-limit (*number* | *keyword*)

Synopsis	BGP Add-Paths send limit applied for routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action add-paths-send-limit (<i>number</i> <i>keyword</i>)
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	19.10.R1
Platforms	All

admin-tag-policy (*param-midstring-64* | *string*)

Synopsis	Administrative tag policy name
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action admin-tag-policy (<i>param-midstring-64</i> <i>string</i>)
Tree	admin-tag-policy
String Length	1 to 64
Introduced	19.10.R1
Platforms	All

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action advertise-label <i>keyword</i>
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.
Options	per-prefix, pop, pop-and-forward
Introduced	19.10.R1
Platforms	All

aigp-metric

Synopsis	Enter the aigp-metric context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action aigp-metric

Tree	aigp-metric
Introduced	19.10.R1
Platforms	All

add (*number* | *string*)

Synopsis	AIGP metric to add
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action aigp-metric add (<i>number</i> <i>string</i>)
Tree	add
String Length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add or set .
Introduced	19.10.R1
Platforms	All

set (*keyword* | *number* | *string*)

Synopsis	AIGP metric
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action aigp-metric set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String Length	1 to 32
Range	0 to 4294967295
Options	igp
Notes	The following elements are part of a choice: add or set .
Introduced	19.10.R1
Platforms	All

as-path

Synopsis	Enter the as-path context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action as-path
Tree	as-path
Introduced	19.10.R1

Platforms All

add (*param-midstring* | *string*)

Synopsis AS path to add

Context **configure** [policy-options](#) [policy-statement](#) *string* [named-entry](#) *string* [action](#) [as-path](#) [add](#) (*param-midstring* | *string*)

Tree [add](#)

String Length 1 to 32

Notes The following elements are part of a choice: **add** or **replace**.

Introduced 19.10.R1

Platforms All

replace (*param-midstring* | *string*)

Synopsis AS path to replace

Context **configure** [policy-options](#) [policy-statement](#) *string* [named-entry](#) *string* [action](#) [as-path](#) [replace](#) (*param-midstring* | *string*)

Tree [replace](#)

String Length 1 to 32

Notes The following elements are part of a choice: **add** or **replace**.

Introduced 19.10.R1

Platforms All

as-path-prepend

Synopsis Enter the **as-path-prepend** context

Context **configure** [policy-options](#) [policy-statement](#) *string* [named-entry](#) *string* [action](#) [as-path-prepend](#)

Tree [as-path-prepend](#)

Introduced 19.10.R1

Platforms All

as-path (*number* | *string* | *keyword*)

Synopsis AS number to prepend to the AS path attribute

Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action as-path-prepend as-path (<i>number</i> <i>string</i> <i>keyword</i>)
Tree	as-path
String Length	1 to 32
Range	1 to 4294967295
Options	most-recent
Introduced	19.10.R1
Platforms	All

repeat (*number* | *string*)

Synopsis	Number of times to prepend the specified AS number
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action as-path-prepend repeat (<i>number</i> <i>string</i>)
Tree	repeat
String Length	1 to 32
Range	1 to 50
Default	1
Introduced	19.10.R1
Platforms	All

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-high-priority <i>boolean</i>
Tree	bgp-high-priority
Description	<p>When configured to true, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates.</p> <p>This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types:</p> <ul style="list-style-type: none"> • IPv4 • label-IPv4 • IPv6 • label-IPv6

This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB.

When configured to **false**, no routes are tagged for faster route table updates.

Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-leak <i>boolean</i>
Tree	bgp-leak
Default	false
Introduced	19.10.R1
Platforms	All

bgp-med

Synopsis	Enter the bgp-med context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-med
Tree	bgp-med
Introduced	19.10.R1
Platforms	All

adjust *string*

Synopsis	BGP-MED adjustment
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-med adjust <i>string</i>
Tree	adjust
String Length	1 to 64
Notes	The following elements are part of a choice: adjust or set .
Introduced	19.10.R1
Platforms	All

set (*keyword* | *number* | *string*)

Synopsis	BGP-MED assignment
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-med set (<i>keyword</i> <i>number</i> <i>string</i>)
Tree	set
String Length	1 to 32
Range	0 to 4294967295
Options	igp, min-igp
Notes	The following elements are part of a choice: adjust or set .
Introduced	19.10.R1
Platforms	All

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-tunnel-metric prefer-aigp <i>boolean</i>
Tree	prefer-aigp
Description	<p>When configured to true, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf.</p> <p>When configured to false, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.</p>
Default	false

Introduced	20.5.R1
Platforms	All

value (*string* | *number*)

Synopsis	BGP tunnel table metric value
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action bgp-tunnel-metric value (<i>string</i> <i>number</i>)
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: <ul style="list-style-type: none"> • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String Length	1 to 32
Range	0 to 4294967295
Introduced	20.5.R1
Platforms	All

community

Synopsis	Enter the community context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action community
Tree	community
Introduced	19.10.R1
Platforms	All

add (*param-midstring-64* | *string*)

Synopsis	List of community names to add
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action community add (<i>param-midstring-64</i> <i>string</i>)
Tree	add
String Length	1 to 64

Max. Instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

remove (*param-midstring-64* | *string*)

Synopsis	List of community names to remove
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action community remove (<i>param-midstring-64</i> <i>string</i>)
Tree	remove
String Length	1 to 64
Max. Instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

replace (*param-midstring-64* | *string*)

Synopsis	List of community names to replace
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action community replace (<i>param-midstring-64</i> <i>string</i>)
Tree	replace
String Length	1 to 64
Max. Instances	28
Notes	The following elements are part of a choice: (add and remove) or replace . This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

create-mpls-tunnel *boolean*

Synopsis	Create an MPLS tunnel
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action create-mpls-tunnel <i>boolean</i>
Tree	create-mpls-tunnel
Description	When configured to true , the router creates an MPLS tunnel. This command is supported for only the following address families: <ul style="list-style-type: none"> • evpn • ipv4 • ipv6 • label-ipv4 • label-ipv6 • vpn-ipv4 • vpn-ipv6
Default	false
Introduced	21.10.R1
Platforms	All

create-udp-tunnel *boolean*

Synopsis	Create an MPLS-over-UDP tunnel
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action create-udp-tunnel <i>boolean</i>
Tree	create-udp-tunnel
Default	false
Introduced	19.10.R1
Platforms	All

damping (*keyword* | *param-midstring* | *string*)

Synopsis	Damping profile used for routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action damping (<i>keyword</i> <i>param-midstring</i> <i>string</i>)
Tree	damping
String Length	1 to 32
Options	none

Introduced	19.10.R1
Platforms	All

dest-class *number*

Synopsis	Default destination class for the policy statement
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action dest-class <i>number</i>
Tree	dest-class
Description	This command specifies the policy accounting destination class index to associate with matched routes.
Range	1 to 255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

egress-statistics *boolean*

Synopsis	Enable egress statistics for BGP-LU routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action egress-statistics <i>boolean</i>
Tree	egress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on egress data paths. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

flex-algo (*string* | *number*)

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action flex-algo (<i>string</i> <i>number</i>)
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry.

Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU.

This command is not supported for multicast address families.

String Length	1 to 32
Range	128 to 255
Introduced	20.10.R1
Platforms	All

forwarding-class

Synopsis	Enter the forwarding-class context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action forwarding-class
Tree	forwarding-class
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class associated with the route
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action forwarding-class fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority keyword

Synopsis	Route priority
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action forwarding-class priority <i>keyword</i>
Tree	priority
Options	low, high
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ingress-statistics *boolean*

Synopsis	Enable ingress statistics for BGP-LU routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action ingress-statistics <i>boolean</i>
Tree	ingress-statistics
Description	When configured to true , this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on ingress data paths. For effective operation, a prefix must be advertised with a label per prefix for ILM statistics. When configured to false , this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action install-backup-path <i>boolean</i>
Tree	install-backup-path
Default	false
Introduced	19.10.R1
Platforms	All

local-preference (*number* | *string*)

Synopsis	BGP local preference for routes not matching any entry
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action local-preference (<i>number</i> <i>string</i>)
Tree	local-preference
String Length	1 to 32
Range	0 to 4294967295
Introduced	19.10.R1
Platforms	All

metric

Synopsis	Enter the metric context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action metric
Tree	metric
Introduced	19.10.R1
Platforms	All

add (*number* | *string*)

Synopsis	Metric to add
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action metric add (<i>number</i> <i>string</i>)
Tree	add
String Length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	19.10.R1
Platforms	All

set (*number* | *string*)

Synopsis	Metric to assign
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action metric set (<i>number</i> <i>string</i>)
Tree	set
String Length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	19.10.R1
Platforms	All

subtract (*number* | *string*)

Synopsis	Metric to subtract
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action metric subtract (<i>number</i> <i>string</i>)

Tree	subtract
String Length	1 to 32
Range	0 to 4294967295
Notes	The following elements are part of a choice: add , set , or subtract .
Introduced	19.10.R1
Platforms	All

multicast-redirectation

Synopsis	Enter the multicast-redirectation context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action multicast-redirectation
Tree	multicast-redirectation
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fwd-service *string*

Synopsis	Service ID for multicast redirection
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action multicast-redirectation fwd-service <i>string</i>
Tree	fwd-service
Default	Base
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-int-name *string*

Synopsis	Alternate interface where IGMP messages are redirected
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action multicast-redirectation ip-int-name <i>string</i>
Tree	ip-int-name
String Length	1 to 32
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-policy (*param-midstring* | *string*)

Synopsis	BGP-VPN imported route and a NAT policy association
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action nat-policy (<i>param-midstring</i> <i>string</i>)
Tree	nat-policy
Description	<p>This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action.</p> <p>A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.</p> <p>All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type accept regardless of whether the NAT policy is configured in the action.</p>
String Length	1 to 32
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

next-hop (*keyword* | *ipv4-address-no-zone* | *ipv6-address-no-zone* | *string*)

Synopsis	Next-hop IP address applied to routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action next-hop (<i>keyword</i> <i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>string</i>)
Tree	next-hop
String Length	1 to 32
Options	peer-address, self
Introduced	19.10.R1
Platforms	All

origin (*keyword* | *string*)

Synopsis	BGP origin for routes that are exported into BGP
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action origin (<i>keyword</i> <i>string</i>)
Tree	origin
String Length	1 to 32

Options	igp, egp, incomplete
Introduced	19.10.R1
Platforms	All

origin-validation-state (*keyword | string*)

Synopsis	Origin validation state for routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action origin-validation-state (<i>keyword string</i>)
Tree	origin-validation-state
String Length	1 to 32
Options	valid, not-found, invalid
Introduced	19.10.R1
Platforms	All

preference (*number | string*)

Synopsis	Route preference applied to routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action preference (<i>number string</i>)
Tree	preference
String Length	1 to 32
Range	1 to 255
Introduced	19.10.R1
Platforms	All

resolve-static *boolean*

Synopsis	Resolve next hop of a static route for the BGP next hop
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action resolve-static <i>boolean</i>
Tree	resolve-static
Default	false
Introduced	19.10.R1
Platforms	All

route-table-install *boolean*

Synopsis	Allow BGP route installation in the route table
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action route-table-install <i>boolean</i>
Tree	route-table-install
Default	true
Introduced	19.10.R1
Platforms	All

source-class *number*

Synopsis	Default source class for the policy statement
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action source-class <i>number</i>
Tree	source-class
Description	This command specifies the policy accounting source class index to associate with matched routes.
Range	1 to 255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the sr-label-index context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action sr-label-index
Tree	sr-label-index
Description	<p>Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes.</p> <p>The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts.</p> <p>This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.</p> <p>When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.</p>
Introduced	19.10.R1

Platforms All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action sr-label-index prefer-igp <i>boolean</i>
Tree	prefer-igp
Description	<p>When configured to true, BGP obtains the SID index from the IGP route (if a SID index is present) and the configure router bgp segment-routing prefix-sid-range global command is set to true.</p> <p>This command applies only to route table import policies.</p> <p>When configured to false, or the SID index is not present in the IGP route, or the configure router bgp segment-routing prefix-sid-range global command is not set to true, BGP obtains the label index value from the value command.</p>
Default	false
Introduced	19.10.R1
Platforms	All

value (*string* | *number*)

Synopsis	BGP SR label index associated with routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action sr-label-index value (<i>string</i> <i>number</i>)
Tree	value
Description	<p>This command specifies the BGP SR label index value to be associated with a route or routes.</p> <p>If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.</p> <p>If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.</p>
String Length	1 to 32
Range	0 to 524287
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy (*param-midstring* | *string*)

Synopsis	SR maintenance policy as an action
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action sr-maintenance-policy (<i>param-midstring</i> <i>string</i>)
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

sticky-ecmp *boolean*

Synopsis	Specify the sticky ECMP flag for BGP ECMP routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action sticky-ecmp <i>boolean</i>
Tree	sticky-ecmp
Default	false
Introduced	19.10.R1
Platforms	All

tag (*number* | *string*)

Synopsis	OSPF RIP or IS-IS tag applied to routes
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> action tag (<i>number</i> <i>string</i>)
Tree	tag
String Length	1 to 32
Range	1 to 4294967295
Introduced	19.10.R1

distinguisher *number*

Synopsis	SR policy distinguisher as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from distinguisher <i>number</i>
Tree	distinguisher
Description	This command configures an SR Policy distinguisher as a route policy match criterion. This match criterion is only used in import policies.
Range	0 to 4294967295
Introduced	20.10.R1
Platforms	All

endpoint (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	SR policy endpoint address as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from endpoint (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	endpoint
Description	This command configures an SR Policy endpoint address as a route policy match criterion. This match criterion is only used in import policies.
Introduced	20.10.R1
Platforms	All

evpn-type *keyword*

Synopsis	EVPN type as a match criterion for the entry
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from evpn-type <i>keyword</i>
Tree	evpn-type
Options	ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix, selective-multicast, multicast-join-sync, multicast-leave-sync

Introduced	19.10.R1
Platforms	All

external *boolean*

Synopsis	Specify the external IS-IS route as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from external <i>boolean</i>
Tree	external
Default	false
Introduced	19.10.R1
Platforms	All

family *keyword*

Synopsis	Address family as the match condition
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from family <i>keyword</i>
Tree	family
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Max. Instances	20
Introduced	19.10.R1
Platforms	All

flowspec

Synopsis	Enter the flowspec context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from flowspec
Tree	flowspec
Introduced	19.10.R1
Platforms	All

dest (*param-midstring* | *string*)

Synopsis	BGP FlowSpec route matches per destination IP prefix
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from flowspec dest (<i>param-midstring</i> <i>string</i>)
Tree	dest
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

source (*param-midstring* | *string*)

Synopsis	BGP FlowSpec route matches per the source IP prefix
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from flowspec source (<i>param-midstring</i> <i>string</i>)
Tree	source
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

group-address (*param-midstring* | *string*)

Synopsis	Prefix list of multicast group addresses for mathcing
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from group-address (<i>param-midstring</i> <i>string</i>)
Tree	group-address
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

host-ip (*param-midstring* | *string*)

Synopsis	Prefix list of IGMP host IP addresses for matching
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from host-ip (<i>param-midstring</i> <i>string</i>)
Tree	host-ip
String Length	1 to 32

Introduced	19.10.R1
Platforms	All

interface (*named-item* | *interface-name* | *interface-name* | *interface-name*)

Synopsis	Interface name as match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from interface (<i>named-item</i> <i>interface-name</i> <i>interface-name</i> <i>interface-name</i>)
Tree	interface
String Length	1 to 32
Max. Instances	1
Notes	This element is ordered by the user.
Introduced	19.10.R1

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop to match
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from next-hop ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a next hop prefix list to match
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from next-hop prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

origin *keyword*

Synopsis	Route origin match criteria
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from origin <i>keyword</i>
Tree	origin
Description	<p>This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes:</p> <p>Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the sub-mgmt option for the protocol command.</p> <p>Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the direct option for the protocol command.</p>

Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the **direct** option for the **protocol** command.

Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the **managed** option for the **protocol** command.

The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.

Options	igp, egg, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	19.10.R1
Platforms	All

origin-validation-state *keyword*

Synopsis	Origin validation state used for match criteria
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from origin-validation-state <i>keyword</i>
Tree	origin-validation-state
Description	This command specifies a validation state that is used to match BGP routes based on their origin validation state.
Options	valid, not-found, invalid
Introduced	19.10.R1
Platforms	All

ospf-type *number*

Synopsis	OSPF type metric applied to unmatching route entries
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from ospf-type <i>number</i>
Tree	ospf-type
Range	1 to 2
Introduced	19.10.R1

Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from protocol
Tree	protocol
Description	Commands in this context configure the match criterion based on protocols for a route policy statement entry and may be used for both import and export policies.
Introduced	19.10.R1
Platforms	All

instance (*keyword* | *number*)

Synopsis	Instance for protocol IS-IS, OSPF, or OSPFv3 to match
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Description	This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion. When this command is explicitly configured, the name command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).
Range	0 to 127
Options	all
Default	0
Introduced	19.10.R1
Platforms	All

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from protocol name <i>keyword</i>
Tree	name
Description	This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set: <ul style="list-style-type: none"> • direct • static • isis • aggregate

- `bgp`
- `bgp-label`
- `direct-interface`

If multiple protocols are specified, the **instance** command cannot be explicitly configured.

The protocol **direct-interface** route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.

Options	<code>direct</code> , <code>static</code> , <code>bgp</code> , <code>isis</code> , <code>ospf</code> , <code>rip</code> , <code>aggregate</code> , <code>bgp-vpn</code> , <code>igmp</code> , <code>pim</code> , <code>ospf3</code> , <code>ldp</code> , <code>sub-mgmt</code> , <code>mld</code> , <code>managed</code> , <code>vpn-leak</code> , <code>nat</code> , <code>periodic</code> , <code>ipsec</code> , <code>dhcpv6-pd</code> , <code>dhcpv6-na</code> , <code>dhcpv6-ta</code> , <code>dhcpv6-pd-excl</code> , <code>ripng</code> , <code>bgp-label</code> , <code>direct-interface</code> , <code>arp-nd</code> , <code>rib-api</code> , <code>dhcp-client</code> , <code>evpn-iftl</code> , <code>srv6</code> , <code>video</code>
Max. Instances	5
Introduced	19.10.R1
Platforms	All

source-address

Synopsis	Enter the source-address context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from source-address
Tree	source-address
Introduced	19.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address to match
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from source-address ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Name of a source address prefix list to match
----------	---

Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from source-address prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

state *keyword*

Synopsis	State used as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from <i>state</i> <i>keyword</i>
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag (*number* | *keyword*)

Synopsis	Route tag used as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> from <i>tag</i> (<i>number</i> <i>keyword</i>)
Tree	tag
Range	1 to 4294967295
Options	no-tag
Introduced	19.10.R1
Platforms	All

to

Synopsis	Enable the to context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to

Tree	to
Introduced	19.10.R1
Platforms	All

level number

Synopsis	IS-IS route level as a match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to level <i>number</i>
Tree	level
Range	1 to 2
Introduced	19.10.R1
Platforms	All

neighbor

Synopsis	Enter the neighbor context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to neighbor
Tree	neighbor
Introduced	19.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address to match the neighbor
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to neighbor ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Name to match the neighbor prefix list
----------	--

Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to neighbor prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or prefix-list .
Introduced	19.10.R1
Platforms	All

prefix-list (*param-midstring* | *string*)

Synopsis	Prefix list as match criterion
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to prefix-list (<i>param-midstring</i> <i>string</i>)
Tree	prefix-list
String Length	1 to 32
Max. Instances	28
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

protocol

Synopsis	Enter the protocol context
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to protocol
Tree	protocol
Introduced	19.10.R1
Platforms	All

instance (*keyword* | *number*)

Synopsis	Instance for the IS-IS, OSPF, or OSPF3 protocol
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to protocol instance (<i>keyword</i> <i>number</i>)
Tree	instance
Range	0 to 127

Options	all
Default	0
Introduced	19.10.R1
Platforms	All

name *keyword*

Synopsis	Protocol name to match
Context	configure policy-options policy-statement <i>string</i> named-entry <i>string</i> to protocol name <i>keyword</i>
Tree	name
Options	bgp, isis, ospf, rip, bgp-vpn, ospf3, ldp, vpn-leak, ripng, bgp-label, evpn-ift
Max. Instances	2
Introduced	19.10.R1
Platforms	All

prefix-list [[name](#)] *string*

Synopsis	Enter the prefix-list list instance
Context	configure policy-options prefix-list <i>string</i>
Tree	prefix-list
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Prefix list name
Context	configure policy-options prefix-list <i>string</i>
Tree	prefix-list
Description	This command specifies the name for a prefix list. Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

prefix [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*) *type keyword*

Synopsis Enter the **prefix** list instance

Context **configure** *policy-options prefix-list string prefix* (*ipv4-prefix* | *ipv6-prefix*) *type keyword*

Tree *prefix*

Introduced 16.0.R1

Platforms All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP prefix associated with the prefix length

Context **configure** *policy-options prefix-list string prefix* (*ipv4-prefix* | *ipv6-prefix*) *type keyword*

Tree *prefix*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

type keyword

Synopsis Prefix list match type

Context **configure** *policy-options prefix-list string prefix* (*ipv4-prefix* | *ipv6-prefix*) *type keyword*

Tree *prefix*

Options exact, longer, through, range, to, address-mask

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

end-length number

Synopsis Prefix range end length

Context **configure** *policy-options prefix-list string prefix* (*ipv4-prefix* | *ipv6-prefix*) *type keyword end-length number*

Tree *end-length*

Range	0 to 128
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	16.0.R1
Platforms	All

mask-pattern [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for mask-pattern
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i> mask-pattern (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	mask-pattern
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	20.7.R1
Platforms	All

[\[address\]](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Address mask for matching routes to the prefix entry
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i> mask-pattern (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	mask-pattern
Description	<p>This command specifies the address mask to compare against the prefix entry to determine whether the route is considered a match.</p> <p>A route matches the prefix entry if the following conditions are met.</p> <ul style="list-style-type: none"> • The bitwise logical AND of the prefix address and its mask matches the bitwise logical AND of the route address and its mask. • The prefix length of the prefix entry matches the prefix length of the route. <p>For example, for a prefix entry of 17.1.0.0/32, routes with an address 17.1.x.0 (where x can be 0 through 255) and a prefix length of 32 match the entry.</p>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

start-length *number*

Synopsis	Start in the prefix range length
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i> start-length <i>number</i>
Tree	start-length
Range	0 to 128
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	16.0.R1
Platforms	All

through-length *number*

Synopsis	Prefix through length
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i> through-length <i>number</i>
Tree	through-length
Range	0 to 128
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	16.0.R1
Platforms	All

to-prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for to-prefix
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type <i>keyword</i> to-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	to-prefix
Notes	The following elements are part of a choice: mask-pattern , (end-length and start-length), through-length , or to-prefix .
Introduced	20.7.R1
Platforms	All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for "to" match type
Context	configure policy-options prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) type keyword to-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	to-prefix
Description	<p>This command configures an IP prefix to use in a route policy prefix list for the to match type. If the prefix entry is in the format <i>prefix1/length1</i>, and this command is configured in the format <i>prefix2/length2</i>, a route matches the prefix entry if the following conditions are met.</p> <ul style="list-style-type: none">• The route shares the same most-significant bits (specified by <i>length1</i>) with the prefix entry• The route shares the same most-significant bits (specified by <i>length2</i>) with this IP prefix value• The prefix length of the route is in the range of <i>length1</i> to <i>length2</i> (inclusive) <p>For example, for a prefix entry of 10.0.0.8 with a to IP prefix value of 10.0.0.0/32, routes 10.0.0.0/8, 10.0.0.0/9, 10.0.0.0/10, and so on, to 10.0.0.0/32 are considered matches for the prefix entry.</p>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

3.32.1 port command descriptions

port [**port-id**] *string*

Synopsis	Enter the port list instance
Context	configure port string
Tree	port
Introduced	16.0.R1
Platforms	All

[port-id] *string*

Synopsis	Port ID
Context	configure port string
Tree	port
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the access context
Context	configure port string access
Tree	access
Description	Commands in this context configure egress and ingress pool policy commands.
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure port string access egress
Tree	egress

Description	Commands in this context specify the configuration of access egress buffer pools to determine how a CBS-reserved space is handled and the strategy for utilizing the shared buffer space.
Introduced	16.0.R1
Platforms	All

pool [*name*] *string*

Synopsis	Enter the pool list instance
Context	configure port <i>string</i> access egress pool <i>string</i>
Tree	pool
Description	Commands in this context configure pool policies for the pool instance.
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Pool name for the access port
Context	configure port <i>string</i> access egress pool <i>string</i>
Tree	pool
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

amber-alarm-threshold *number*

Synopsis	Threshold for the amber alarm on oversubscription
Context	configure port <i>string</i> access egress pool <i>string</i> amber-alarm-threshold <i>number</i>
Tree	amber-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

red-alarm-threshold *number*

Synopsis	Threshold for the red alarm on oversubscription
Context	configure port <i>string</i> access egress pool <i>string</i> red-alarm-threshold <i>number</i>
Tree	red-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

resv-cbs

Synopsis	Enter the resv-cbs context
Context	configure port <i>string</i> access egress pool <i>string</i> resv-cbs
Tree	resv-cbs
Introduced	16.0.R1
Platforms	All

amber-alarm-action

Synopsis	Enter the amber-alarm-action context
Context	configure port <i>string</i> access egress pool <i>string</i> resv-cbs amber-alarm-action
Tree	amber-alarm-action
Introduced	16.0.R1
Platforms	All

max *number*

Synopsis	Maximum percentage for reserved CBS of the pool
Context	configure port <i>string</i> access egress pool <i>string</i> resv-cbs amber-alarm-action max <i>number</i>
Tree	max
Description	<p>This command specifies the maximum percentage for the reserved CBS of the pool. The maximum reserved CBS must not be less than the value of the reserved CBS.</p> <p>To enable adaptive CBS sizing the max, step, and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value.</p>

When unconfigured, CBS adaptive sizing is not enabled.

Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

step number

Synopsis	Step-size percentage for reserved CBS of the pool
Context	configure port string access egress pool string resv-cbs amber-alarm-action step number
Tree	step
Description	This command specifies the step-size percentage for the reserved CBS of the pool. To enable adaptive CBS sizing the max , step , and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value. When unconfigured, CBS adaptive sizing is not enabled.

Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

cbs (number | keyword)

Synopsis	Percentage of the pool buffer space reserved for CBS
Context	configure port string access egress pool string resv-cbs cbs (number keyword)
Tree	cbs
Range	0 to 100
Units	percent
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

slope-policy *reference*

Synopsis	Policy for the RED slope and TAF values
Context	configure port <i>string</i> access egress pool <i>string</i> slope-policy <i>reference</i>
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure port <i>string</i> access ingress
Tree	ingress
Introduced	16.0.R1
Platforms	All

pool [[name](#)] *string*

Synopsis	Enter the pool list instance
Context	configure port <i>string</i> access ingress pool <i>string</i>
Tree	pool
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Pool name for the access port
Context	configure port <i>string</i> access ingress pool <i>string</i>
Tree	pool
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

amber-alarm-threshold *number*

Synopsis	Threshold for the amber alarm on oversubscription
Context	configure port <i>string</i> access ingress pool <i>string</i> amber-alarm-threshold <i>number</i>
Tree	amber-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

red-alarm-threshold *number*

Synopsis	Threshold for the red alarm on oversubscription
Context	configure port <i>string</i> access ingress pool <i>string</i> red-alarm-threshold <i>number</i>
Tree	red-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

resv-cbs

Synopsis	Enter the resv-cbs context
Context	configure port <i>string</i> access ingress pool <i>string</i> resv-cbs
Tree	resv-cbs
Introduced	16.0.R1
Platforms	All

amber-alarm-action

Synopsis	Enter the amber-alarm-action context
Context	configure port <i>string</i> access ingress pool <i>string</i> resv-cbs amber-alarm-action
Tree	amber-alarm-action
Introduced	16.0.R1
Platforms	All

max number

Synopsis	Maximum percentage for reserved CBS of the pool
Context	configure port string access ingress pool string resv-cbs amber-alarm-action max number
Tree	max
Description	<p>This command specifies the maximum percentage for the reserved CBS of the pool. The maximum reserved CBS must not be less than the value of the reserved CBS.</p> <p>To enable adaptive CBS sizing the max, step, and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value.</p> <p>When unconfigured, CBS adaptive sizing is not enabled.</p>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

step number

Synopsis	Step-size percentage for reserved CBS of the pool
Context	configure port string access ingress pool string resv-cbs amber-alarm-action step number
Tree	step
Description	<p>This command specifies the step-size percentage for the reserved CBS of the pool.</p> <p>To enable adaptive CBS sizing the max, step, and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value.</p> <p>When unconfigured, CBS adaptive sizing is not enabled.</p>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

cbs (number | keyword)

Synopsis	Percentage of the pool buffer space reserved for CBS
Context	configure port string access ingress pool string resv-cbs cbs (number keyword)

Tree	cbs
Range	0 to 100
Units	percent
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

slope-policy *reference*

Synopsis	Policy for the RED slope and TAF values
Context	configure port <i>string</i> access ingress pool <i>string</i> slope-policy <i>reference</i>
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the port
Context	configure port <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

connector

Synopsis	Enter the connector context
Context	configure port <i>string</i> connector
Tree	connector
Description	Commands in this context configure connector ports and modes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

breakout keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port breakout of the transceiver used in the connector
Context	configure port <i>string</i> connector breakout <i>keyword</i>
Tree	breakout
Description	<p>This command defines the port breakout of the transceiver used in the connector. Specifying the type triggers the creation of the ports that will be accessible under the connector.</p> <p>When a QSFP28 connector uses an SFP+ optical module with the QSFP28-to-SFP+/SFP28 adapter, set this command to c1-10g. This value indicates the presence of the adapter.</p> <p>For some connectors (for example, QSPFDD), there can be overlap in the breakout for different host interfaces. The same port breakout can be supported on an optical modules that uses a host interface of CAUI-4 as another optical module that uses 100GAUI-2. To distinguish from the CAUI-4 host interface, the '-au2' suffix is used on some breakout options. This is only necessary where there is overlap. In other situations, the SR OS will set the host interface correctly without requiring the distinction in the breakout option.</p>
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g, c4-100g, c1-10g, c1-25g, c1-50g, c8-50g, c1-800g, c3-100g, c8-100g, c2-400g, c1-1g, c1-100g-au2, c2-100g-au2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rs-fec-mode keyword

Synopsis	RS-FEC mode for the Ethernet connector
Context	configure port <i>string</i> connector rs-fec-mode <i>keyword</i>
Tree	rs-fec-mode
Description	<p>This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet connector.</p> <p>See "Forward Error Correction" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide</i> for more information about FEC settings.</p>
Options	cl91-514-528, cl91-514-544
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ddm-events *boolean*

Synopsis	Enable Digital Diagnostic Monitoring (DDM) events
Context	configure port string ddm-events <i>boolean</i>
Tree	ddm-events
Default	true
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure port string description <i>string</i>
Tree	description
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

dist-cpu-protection

Synopsis	Enter the dist-cpu-protection context
Context	configure port string dist-cpu-protection
Tree	dist-cpu-protection
Introduced	21.5.R1
Platforms	All

policy *reference*

Synopsis	Distributed CPU protection policy name
Context	configure port string dist-cpu-protection policy <i>reference</i>
Tree	policy
Reference	configure system security dist-cpu-protection policy <i>string</i>
Introduced	21.5.R1
Platforms	All

dwdm

Synopsis	Enter the dwdm context
Context	configure port string dwdm
Tree	dwdm
Description	Commands in this context configure the Dense Wavelength Division Multiplexing (DWDM) parameters for the port.
Introduced	16.0.R1
Platforms	All

coherent

Synopsis	Enter the coherent context
Context	configure port string dwdm coherent
Tree	coherent
Description	Commands in this context configure the coherent optical module.
Introduced	16.0.R1
Platforms	All

compatibility *keyword*

Synopsis	Optical mode and rate of operation
Context	configure port string dwdm coherent compatibility keyword
Tree	compatibility
Options	long-haul, metro, access, interop, interop2, interop3, long-haul-non-differential
Default	long-haul
Introduced	16.0.R1
Platforms	All

cpr-window-size *number*

Synopsis	Window size for the carrier phase recovery
Context	configure port string dwdm coherent cpr-window-size number
Tree	cpr-window-size
Description	This command configures the window size for the carrier phase recovery.

When this command is changed, the link bounces because the receiver needs to be reconfigured.

Range	2 4 8 16 32 64
Units	symbols
Default	32
Introduced	16.0.R1
Platforms	All

dispersion *number*

Synopsis	Residual chromatic dispersion compensation
Context	configure port <i>string</i> dwdm coherent dispersion <i>number</i>
Tree	dispersion
Description	This command specifies the residual chromatic dispersion compensation when the coherent receiver is operating in manual dispersion control mode.
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	Mode used to compensate for chromatic dispersion
Context	configure port <i>string</i> dwdm coherent mode <i>keyword</i>
Tree	mode
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port <i>string</i> dwdm coherent report-alarm
Tree	report-alarm

Description	Commands in this context configure the alarms reported for the coherent module.
Introduced	16.0.R1
Platforms	All

hosttx *boolean*

Synopsis	Report the host (electrical side) transmit alarm
Context	configure port string <i>dwdm coherent report-alarm hosttx boolean</i>
Tree	hosttx
Default	true
Introduced	16.0.R1
Platforms	All

mod *boolean*

Synopsis	Report the module alarm
Context	configure port string <i>dwdm coherent report-alarm mod boolean</i>
Tree	mod
Default	true
Introduced	16.0.R1
Platforms	All

modflt *boolean*

Synopsis	Report the module fault alarm
Context	configure port string <i>dwdm coherent report-alarm modflt boolean</i>
Tree	modflt
Default	true
Introduced	16.0.R1
Platforms	All

netrx *boolean*

Synopsis	Report the network (optical side) receive alarm
Context	configure port string <i>dwdm coherent report-alarm netrx boolean</i>

Tree	netrx
Default	true
Introduced	16.0.R1
Platforms	All

nettx boolean

Synopsis	Report the network (optical side) transmit alarm
Context	configure port string dwdm coherent report-alarm nettx boolean
Tree	nettx
Default	true
Introduced	16.0.R1
Platforms	All

rx-los-reaction keyword

Synopsis	Reaction to an RX LOS
Context	configure port string dwdm coherent rx-los-reaction keyword
Tree	rx-los-reaction
Description	This command configures the reaction to an RX LOS. Note: If this command is disabled for some coherent DWDM transceivers, the transceiver only reports local fault alarms when an RX LOS condition occurs; however, the port returns to service faster after the LOS condition is cleared. For these transceivers, if this command is enabled, there is better visibility of individual alarms (for example, signal-fail, local fault, no-am-lock), but the port takes longer to service after the LOS condition is cleared.
Options	none, squelch
Default	squelch
Introduced	16.0.R1
Platforms	All

rx-los-thresh decimal-number

Synopsis	Average input power LOS threshold
Context	configure port string dwdm coherent rx-los-thresh decimal-number
Tree	rx-los-thresh
Range	-30 to -13

Units	decibel-milliwatts
Default	-23
Introduced	16.0.R1
Platforms	All

sweep

Synopsis	Enter the sweep context
Context	configure port string dwdm coherent sweep
Tree	sweep
Description	Commands in this context allow users to configure the dispersion sweep start and end values for the automatic mode of coherent control. If the user knows the approximate or theoretical residual dispersion of the link, these commands can be used to limit the range of sweeping for the automatic control mode and therefore achieve a faster link up.
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the dispersion compensation range
Context	configure port string dwdm coherent sweep end number
Tree	end
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	2000
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the dispersion compensation range
Context	configure port string dwdm coherent sweep start number
Tree	start
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	-25500

Introduced	16.0.R1
Platforms	All

target-power *decimal-number*

Synopsis	Average output power target for the port
Context	configure <i>port string</i> <i>dwdm coherent</i> target-power <i>decimal-number</i>
Tree	target-power
Range	-20 to 3
Units	decibel-milliwatts
Default	1
Introduced	16.0.R1
Platforms	All

frequency *number*

Synopsis	Center frequency for tunable DWDM optical interface
Context	configure <i>port string</i> <i>dwdm</i> frequency <i>number</i>
Tree	frequency
Description	<p>This command configures the center frequency to use for a tunable DWDM optical interface. This command can be used to specify any frequency in the C band.</p> <p>To set the DWDM frequency, the port must be a physical port and the provisioned MDA type must have DWDM tunable optics (for example, p1-100g-tun-b), or the MDA must support the option of tunable DWDM optic modules.</p> <p>This command replaces the configure port dwdm channel command.</p>
Range	191100000 to 196150000
Units	megahertz
Introduced	21.10.R3
Platforms	All

ethernet

Synopsis	Enter the ethernet context
Context	configure <i>port string</i> ethernet
Tree	ethernet
Description	Commands in this context configure Ethernet port attributes.

This context can only be used when configuring Fast Ethernet, Gigabit, or 10-Gb Ethernet LAN ports on an appropriate MDA.

Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the access context
Context	configure port string ethernet access
Tree	access
Description	Commands in this context configure Ethernet access port commands.
Introduced	16.0.R1
Platforms	All

bandwidth number

Synopsis	Administrative bandwidth assigned to Ethernet ports
Context	configure port string ethernet access bandwidth number
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

booking-factor number

Synopsis	Booking factor applied to the Ethernet port
Context	configure port string ethernet access booking-factor number
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure port <i>string</i> ethernet access egress
Tree	egress
Description	Commands in this context configure Ethernet access egress port commands.
Introduced	16.0.R1
Platforms	All

queue-group [*queue-group-name*] *reference* *instance-id* *number*

Synopsis	Enter the queue-group list instance
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> <i>instance-id</i> <i>number</i>
Tree	queue-group
Introduced	16.0.R1
Platforms	All

[queue-group-name] *reference*

Synopsis	Queue group name
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> <i>instance-id</i> <i>number</i>

Introduced	16.0.R1
Platforms	All

drop-tail

Synopsis	Enter the drop-tail context
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail
Tree	drop-tail
Description	Commands in this context configure queue drop tail commands.
Introduced	16.0.R1
Platforms	All

low

Synopsis	Enter the low context
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail low
Tree	low

Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	16.0.R1
Platforms	All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

mbs (*number* | *keyword*)

Synopsis	MBS for the template queue
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
----------	---

Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth
Tree	monitor-queue-depth
Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to false , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> parent

Tree	parent
Description	<p>Commands in this context define the weight of the queue treatment by the parent scheduler that further governs the available bandwidth given to the queue, aside from the queue PIR setting.</p> <p>When multiple schedulers or queues share a child status with the parent scheduler, the weight or level commands define how the queue contends with the other children for the parent bandwidth.</p>
Introduced	16.0.R1
Platforms	All

cir-weight *number*

Synopsis	CIR that overrides the parent for the queue group
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	16.0.R1

Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .

Introduced	16.0.R1
Platforms	All

cir (*number* | *keyword*)

Synopsis	CIR for the queue
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Description	<p>This command specifies the administrative CIR used by the queue. When the rate command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent cir-level and cir-weight commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

pir (*number* | *keyword*)

Synopsis	PIR for the queue
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Description	<p>This command specifies the administrative PIR used by the queue. When the rate command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's adaptation-rule commands and the actual hardware where the queue is provisioned.</p> <p>The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that</p>

the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.

scheduler [*scheduler-name*] *string*

Synopsis	Enter the scheduler list instance
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	Commands in this context are used to override specific attributes of the specified scheduler name. A scheduler defines bandwidth controls that limit each child (other schedulers and queues) associated with the scheduler. Scheduler objects are created within the hierarchical tiers of the policy. It is assumed that each scheduler created has

queues or other schedulers defined as child associations. The scheduler can be a child which takes bandwidth from a scheduler in a higher tier.

A total of 32 schedulers can be created within a single scheduler policy with no restriction on the distribution between the tiers. The scheduler name must exist in the applied scheduler policy.

Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	This command specifies the scheduler name. Valid names consist of any string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides scheduler <i>string</i> parent
Tree	parent
Description	<p>Commands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy.</p> <p>The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.</p>

rate

Synopsis	Enter the rate context
Context	configure <i>port string ethernet access egress queue-group reference instance-id number scheduler-policy overrides scheduler string rate</i>
Tree	<i>rate</i>
Description	Commands in this context override specific attributes of the specified scheduler rate. The actual operating rate of the scheduler is limited by bandwidth constraints other than its maximum rate. The scheduler's parent scheduler may not have the available bandwidth to meet the scheduler's needs. The bandwidth available to the parent scheduler could be allocated to other child schedulers or the child queues on the parent scheduler may be based on a higher priority. The children of the scheduler may not need the maximum rate available to the scheduler due to an insufficient offered load or limits to their own maximum rates.
Introduced	16.0.R1
Platforms	All

cir (*number* | *keyword*)

Synopsis	CIR for the scheduler
Context	configure port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides scheduler <i>string</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Description	This command specifies the CIR. When a parent is associated with the scheduler, this command provides the amount of bandwidth to be considered during the parent scheduler's within-cir distribution phase. When the rate command is executed, a valid PIR setting must be explicitly defined before specifying the CIR. If the CIR is set to max , the CIR rate is set to infinity. The sum keyword specifies that the CIR be used as the summed CIR values of the children schedulers, policers, or queues.

Tree	monitor-hw-agg-shaper-scheduler
Description	When configured to true , enables congestion monitoring of the hardware aggregate shaper scheduler on the specified vport.
Default	false
Introduced	21.7.R1

Platforms 7750 SR-1, 7750 SR-s

monitor-port-scheduler *boolean*

Synopsis Enable congestion monitoring on egress port scheduler

Context **configure** [port](#) *string* [ethernet access egress virtual-port](#) *string* **monitor-port-scheduler** *boolean*

Tree [monitor-port-scheduler](#)

Description The command enables congestion monitoring on an EPS that is applied to a Vport. Congestion monitoring must be further configured under the port-scheduler CLI hierarchy. Once the congestion monitoring is in effect, the offered rate (incoming traffic) is compared to the configured port-scheduler congestion threshold. The results of these measurements are stored as the number of samples representing the number of times the offered rates exceeded the configured congestion threshold since the last clearing of the stats. Therefore, the results represent the number of times that the port-scheduler that is applied to a Vport was congested since the last reset of the stats using a **clear** command.

Default false

Introduced 16.0.R4

queue-group [[queue-group-name](#)] *reference*

Synopsis Enter the **queue-group** list instance
 Context **configure** [port string ethernet access ingress queue-group reference](#)
 Tree [queue-group](#)

Description	<p>Commands in this context create an ingress queue group on the Ethernet port. Queue groups created on access ports are used as an alternative queue destination for SAPs.</p> <p>Queue groups can be created on both access and network oriented ports. When the port is in access mode, the queue groups must be created within the port access node. Access ingress queue groups can only be used by ingress SAP forwarding classes and only a single ingress queue group per port is supported. When the queue group is created in an ingress port context, the queue group name must be an existing ingress queue group template. Two ingress queue groups with the same name cannot be created on the same port.</p> <p>When creating a queue group, the system will attempt to allocate queue resources based on the queues defined in the queue group template. If the appropriate queue resources do not currently exist, the queue group will not be created. Ingress port queue groups do not support shared-queuing or multipoint shared queuing behavior.</p> <p>A port queue group cannot be removed from the port when a forwarding class is currently redirected to the group. All forwarding class redirections must first be removed prior to removing the queue group.</p>
Introduced	16.0.R1
Platforms	All

[queue-group-name] reference

Synopsis	Queue group name
Context	configure port string ethernet access ingress queue-group reference
Tree	queue-group
Description	This command specifies the queue group name. The specified queue group name must exist as an ingress or egress queue group template depending on the ingress or egress context of the port queue group. Only a single queue group may be created on an ingress port.

Introduced 16.0.R1
Platforms All

queue [[queue-id](#)] *reference*

Synopsis Enter the **queue** list instance

Context	configure port string ethernet access ingress queue-group reference queue-overrides queue reference
Tree	queue
Description	Commands in this context associate a queue for use in a queue group template. The template queue is created on each queue group object that is created with the queue group template name. Each queue is identified within the template by a queue ID number. The template ensures that all queue groups created with the template's name have the same queue IDs, providing a uniform structure for the forwarding class redirection commands in the SAP egress QoS policies. The queue commands can be individually changed for each queue in each queue group using per queue overrides.
Introduced	16.0.R1
Platforms	All

[queue-id] [reference](#)

Synopsis	Speed and duplex autonegotiation on the Ethernet port
Context	configure port string ethernet autonegotiate keyword
Tree	autonegotiate
Description	<p>This command enables speed and duplex autonegotiation on Fast Ethernet ports and enables far-end fault indicator support on Gb ports. When autonegotiation is enabled on a port, the link attempts to automatically negotiate the link speed and duplex commands. If autonegotiation is enabled, the configured duplex and speed commands are ignored.</p> <p>When autonegotiation is disabled on a port, the port does not attempt to autonegotiate and will only operate at the speed and duplex command settings configured for the port. Note that disabling autonegotiation on Gb ports is not allowed as the IEEE 802.3 specification for Gb Ethernet requires autonegotiation be enabled for far end fault indication.</p> <p>It is required for autonegotiation to be limited for ports in a LAG to guarantee a specific port speed.</p>
Options	true, false, limited
Introduced	16.0.R1
Platforms	All

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port string ethernet collect-stats boolean
Tree	collect-stats
Default	false
Introduced	16.0.R1
Platforms	All

crc-monitor

Synopsis	Enter the crc-monitor context
Context	configure port <i>string</i> ethernet crc-monitor
Tree	crc-monitor
Description	Commands in this context configure Ethernet Cyclic Redundancy Check (CRC) monitoring.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

signal-degrade

Synopsis	Enter the signal-degrade context
Context	configure port <i>string</i> ethernet crc-monitor signal-degrade
Tree	signal-degrade
Description	Commands in this context specify the error rate at which to declare the Signal Degrade (SD) condition on an Ethernet interface. The value represents $M \cdot 10^E - N$, which is the ratio of errored frames over the total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	SD multiplier
Context	configure port <i>string</i> ethernet crc-monitor signal-degrade multiplier <i>number</i>
Tree	multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	SD threshold
Context	configure port <i>string</i> ethernet crc-monitor signal-degrade threshold <i>number</i>
Tree	threshold

Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

signal-failure

Synopsis	Enter the signal-failure context
Context	configure port string ethernet crc-monitor signal-failure
Tree	signal-failure
Description	Commands in this context specify the error rate at which to declare the Signal Fail (SF) condition on an Ethernet interface. The value represents M*10E-N errored frames over total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	SF multiplier
Context	configure port string ethernet crc-monitor signal-failure multiplier number
Tree	multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	SF threshold
Context	configure port string ethernet crc-monitor signal-failure threshold number
Tree	threshold
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-size *number*

Synopsis	Sliding window size over which errors are measured
Context	configure port <i>string</i> ethernet crc-monitor window-size <i>number</i>
Tree	window-size
Description	This command specifies the sliding window size over which the Ethernet frames are sampled to detect SF or SD conditions. The command is used jointly with the signal-failure and the signal-degrade commands to configure the sliding window size.
Range	5 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dampening

Synopsis	Enter the dampening context
Context	configure port <i>string</i> ethernet dampening
Tree	dampening
Description	Commands in this context configure Exponential Port Dampening (EPD) for the Ethernet port.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of exponential port dampening
Context	configure port <i>string</i> ethernet dampening admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

half-life *number*

Synopsis	Half-life decay time
----------	----------------------

Context	configure port string ethernet dampening half-life number
Tree	half-life
Description	This command specifies the time that must pass before penalties decay to one-half the initial amount. The half-life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half-life must be less than or equal to 49 and greater than or equal to one.
Range	1 to 2000
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

max-suppress-time number

Synopsis	Maximum suppression time
Context	configure port string ethernet dampening max-suppress-time number
Tree	max-suppress-time
Description	This command specifies the maximum suppression time, which is the time it can take after the physical link comes up before the worst case accumulated penalties have decayed to the reuse threshold. The maximum penalty is derived from the maximum suppression time, half life, and reuse threshold, using the following equation: $\text{maximum penalty} = (\text{reuse threshold})^2 \exp(-(\text{maximum suppression time}/\text{half life}))$ The half life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half life must be less than or equal to 49 and greater than or equal to one.
Range	1 to 43200
Units	seconds
Default	20
Introduced	16.0.R1
Platforms	All

reuse-threshold number

Synopsis	Threshold which port-up state is no longer suppressed
Context	configure port string ethernet dampening reuse-threshold number
Tree	reuse-threshold
Description	This command specifies the threshold at which the port-up state is no longer suppressed, after the port has been in a suppressed state and the accumulated

	penalties decay drops below this threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	1000
Introduced	16.0.R1
Platforms	All

suppress-threshold *number*

Synopsis	Threshold at which the port-up state is suppressed
Context	configure port <i>string</i> ethernet dampening suppress-threshold <i>number</i>
Tree	suppress-threshold
Description	This command specifies the threshold at which the port-up state is suppressed until the accumulated penalties drop below the reuse threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	2000
Introduced	16.0.R1
Platforms	All

discard-rx-pause-frames *boolean*

Synopsis	Discard received pause frames
Context	configure port <i>string</i> ethernet discard-rx-pause-frames <i>boolean</i>
Tree	discard-rx-pause-frames
Description	When configured to true , the router discards received pause frames. Pause frames are used for local link flow control. When configured to false , pause frames are processed upon reception and the transmit side of the receiving port pauses in its transmissions.
Default	false
Introduced	20.10.R1
Platforms	All

dot1q-etype *string*

Synopsis	Ethertype expected if port encapsulation type is dot1q
Context	configure port <i>string</i> ethernet dot1q-etype <i>string</i>
Tree	dot1q-etype
Description	This command specifies the Ethertype expected when the port encapsulation type is dot1q. Dot1q encapsulation is supported only on Ethernet interfaces.
Default	33024
Introduced	16.0.R1
Platforms	All

dot1x

Synopsis	Enter the dot1x context
Context	configure port <i>string</i> ethernet dot1x
Tree	dot1x
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of dot1x packet extraction to CPM
Context	configure port <i>string</i> ethernet dot1x admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	All

macsec

Synopsis	Enter the macsec context
Context	configure port <i>string</i> ethernet dot1x macsec
Tree	macsec
Description	Commands in this context configure Media Access Control Security (MACsec) under the port.

Introduced 16.0.R1
Platforms All

Tree	advertise-capabilities
Description	Commands in this context specify settings that enable the advertisement of specific capabilities.
Introduced	16.0.R1
Platforms	All

link-monitoring *boolean*

Synopsis	Advertise link monitoring capabilities to peer
Context	configure port string ethernet efm-oam discovery advertise-capabilities link-monitoring <i>boolean</i>
Tree	link-monitoring
Description	When configured to true , the link monitoring capability is advertised to the peer through the EFM-OAM protocol. When configured to false , the router suppresses the advertisement of capabilities to a remote peer.
Default	true
Introduced	16.0.R1
Platforms	All

dying-gasp-tx-on-reset *boolean*

Synopsis	Enable generation of the Information OAMPDU off-cycle
Context	configure port <i>string</i> ethernet efm-oam dying-gasp-tx-on-reset <i>boolean</i>
Tree	dying-gasp-tx-on-reset
Description	<p>When configured to true, this command enables the generation of the Information OAMPDU off-cycle when the soft reset notification is received by the EFM application.</p> <p>The local port state remains under the control of the soft reset application and does not change based on the EFM function. If the port is operationally up, then the local node will continue to consider the port as available for service data and forwarding. If the upstream node requires a notification to route around the local node undergoing the soft reset, then a notification must be sent to those nodes. This is a disruptive function.</p> <p>When both the grace-tx and dying-gasp-tx-on-reset commands are active on the same port, the grace-tx command takes precedence when a soft reset is invoked if the peer vendor OUI being received is 00:16:4D or the configured grace-vendor-oui value.</p> <p>When configured to false, the generation of the Information OAMPDU off-cycle is disabled.</p>
Default	true
Introduced	16.0.R1
Platforms	All

grace-tx *boolean*

Synopsis	Enable the sending of Grace TLV for EFM-OAM
Context	configure port <i>string</i> ethernet efm-oam grace-tx <i>boolean</i>
Tree	grace-tx
Description	<p>When configured to true, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval.</p> <p>By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to true, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period.</p> <p>The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer.</p> <p>When configured to false, the Nokia Vendor Specific Grace TLV is not sent.</p>
Introduced	16.0.R1
Platforms	All

grace-vendor-oui *string*

Synopsis	Peer vendor OUI to support grace function
Context	configure port string ethernet efm-oam grace-vendor-oui <i>string</i>
Tree	grace-vendor-oui
Default	00:16:4D
Introduced	16.0.R1
Platforms	All

hold-time *number*

Synopsis	Wait time before protocol returns to operational state
Context	configure port string ethernet efm-oam hold-time <i>number</i>
Tree	hold-time
Range	1 to 50
Units	seconds
Introduced	16.0.R1
Platforms	All

ignore-efm-state *boolean*

Synopsis	Suppress port state changes for EFM-OAM faults
Context	configure port string ethernet efm-oam ignore-efm-state <i>boolean</i>
Tree	ignore-efm-state
Description	When configured to true , the ETH-OAM protocol does not impact the state of the port when there is a failure in the protocol state machine (discovery, configuration, timeout, loops, and so on). There is only a protocol warning message on the port. When configured to false , the port state is affected by any existing EFM-OAM protocol fault condition.
Default	false
Introduced	16.0.R1
Platforms	All

link-monitoring

Synopsis	Enter the link-monitoring context
----------	--

Context	configure port <i>string</i> ethernet efm-oam link-monitoring
Tree	link-monitoring
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	configure port <i>string</i> ethernet efm-oam link-monitoring admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

errored-frame

Synopsis	Enter the errored-frame context
Context	configure port <i>string</i> ethernet efm-oam link-monitoring errored-frame
Tree	errored-frame
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of link monitoring on the port

Introduced	16.0.R4
Platforms	All

window number

Synopsis	Window size
Context	configure port string ethernet efm-oam link-monitoring errored-symbols window number
Tree	window
Range	10 to 600
Units	deciseconds
Default	10
Introduced	16.0.R4
Platforms	All

local-sf-action

Synopsis	Enter the local-sf-action context
Context	configure port string ethernet efm-oam link-monitoring local-sf-action
Tree	local-sf-action
Introduced	16.0.R4
Platforms	All

event-notification-burst number

Synopsis	Number of OAMPDUs to send when SF threshold is reached
Context	configure port string ethernet efm-oam link-monitoring local-sf-action event-notification-burst number
Tree	event-notification-burst
Range	1 to 5
Units	packets
Default	1
Introduced	16.0.R4
Platforms	All

info-notification

Synopsis	Enter the info-notification context
Context	configure port string ethernet efm-oam link-monitoring local-sf-action info-notification

Tree	info-notification
Introduced	16.0.R4
Platforms	All

critical-event *boolean*

Synopsis	Set critical event flag when SF threshold is reached
Context	configure port <i>string</i> ethernet efm-oam link-monitoring local-sf-action info-notification critical-event <i>boolean</i>
Tree	critical-event
Default	false
Introduced	16.0.R4
Platforms	All

dying-gasp *boolean*

Synopsis	Set dying gasp flag when SF threshold is reached
Context	configure port <i>string</i> ethernet efm-oam link-monitoring local-sf-action info-notification dying-gasp <i>boolean</i>
Tree	dying-gasp
Default	false
Introduced	16.0.R4
Platforms	All

local-port-action *keyword*

Synopsis	Local port action when SF threshold is reached
Context	configure port <i>string</i> ethernet efm-oam link-monitoring local-sf-action local-port-action <i>keyword</i>
Tree	local-port-action
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	16.0.R4
Platforms	All

mode *keyword*

Synopsis	Mode of OAM operation for the Ethernet port
Context	configure port <i>string</i> ethernet efm-oam mode <i>keyword</i>
Tree	mode
Options	passive, active
Default	active
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Multiplier for the transmit interval of OAMPDUs
Context	configure port <i>string</i> ethernet efm-oam multiplier <i>number</i>
Tree	multiplier
Range	2 to 5
Default	5
Introduced	16.0.R1
Platforms	All

peer-rdi-rx

Synopsis	Enter the peer-rdi-rx context
Context	configure port <i>string</i> ethernet efm-oam peer-rdi-rx
Tree	peer-rdi-rx
Introduced	16.0.R1
Platforms	All

critical-event *keyword*

Synopsis	Action taken upon receipt of critical event flag
Context	configure port <i>string</i> ethernet efm-oam peer-rdi-rx critical-event <i>keyword</i>
Tree	critical-event
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	16.0.R1

Platforms All

dying-gasp *keyword*

Synopsis Action taken upon receipt of dying gasp flag

Tree [event-notification](#)

Options log-only, port-out-of-service

Default log-only

Introduced 16.0.R1

Platforms All

link-fault *keyword*

Synopsis Action taken upon receipt of link fault flag

Context **configure** [port](#) [string](#) [ethernet](#) [efm-oam](#) [peer-rdi-rx](#) **link-fault** *keyword*

Tree [link-fault](#)

Options log-only, port-out-of-service

Default port-out-of-service

Introduced 16.0.R1

Platforms All

transmit-interval *number*

Synopsis Transmit interval of OAMPDUs

Context	configure port <i>string</i> ethernet efm-oam transmit-interval <i>number</i>
Tree	transmit-interval
Range	1 to 600
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

trigger-fault *keyword*

Synopsis	Flag setting in the information OAMPDU
Context	configure port <i>string</i> ethernet efm-oam trigger-fault <i>keyword</i>
Tree	trigger-fault
Options	dying-gasp, critical-event
Introduced	16.0.R1
Platforms	All

tunneling *boolean*

Synopsis	Enable EFM-OAM PDU tunneling
Context	configure port <i>string</i> ethernet efm-oam tunneling <i>boolean</i>
Tree	tunneling
Default	false
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure port <i>string</i> ethernet egress
Tree	egress
Introduced	16.0.R1
Platforms	All

eth-bn-rate-changes *boolean*

Synopsis	Allow rate changes in ETH-BN messages on port-based MEP
Context	configure port <i>string</i> ethernet egress eth-bn-rate-changes <i>boolean</i>
Tree	eth-bn-rate-changes
Description	When configured to true , this command allows rate changes received in ETH-BN messages on a port-based MEP to update the egress rate used on the port. This command is not supported for all MDA types. When configured to false , rate changes in ETH-BN messages are denied.
Default	false
Introduced	16.0.R1
Platforms	All

hs-port-pool-policy *reference*

Synopsis	HS port pool policy
Context	configure port <i>string</i> ethernet egress hs-port-pool-policy <i>reference</i>
Tree	hs-port-pool-policy
Reference	configure qos hs-port-pool-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-scheduler-policy

Synopsis	Enter the hs-scheduler-policy context
Context	configure port <i>string</i> ethernet egress hs-scheduler-policy
Tree	hs-scheduler-policy
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

overrides

Synopsis	Enable the overrides context
Context	configure port <i>string</i> ethernet egress hs-scheduler-policy overrides
Tree	overrides
Introduced	19.10.R1

Platforms 7750 SR-7/12/12e

group [group-id] *number*

Synopsis Enter the **group** list instance

hw-aggr-shaper-scheduler

Synopsis	Enter the hw-aggr-shaper-scheduler context
Context	configure port <i>string</i> ethernet egress hw-aggr-shaper-scheduler
Tree	hw-aggr-shaper-scheduler
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

monitor *boolean*

Synopsis	Allow monitoring of the HW aggregate shaper scheduler
Context	configure port <i>string</i> ethernet egress hw-aggr-shaper-scheduler monitor <i>boolean</i>
Tree	monitor
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

policy-name *reference*

Synopsis	Name of HW aggregate shaper scheduler policy
Context	configure port <i>string</i> ethernet egress hw-aggr-shaper-scheduler policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos hw-aggr-shaper-scheduler-policy <i>string</i>
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

monitor-port-scheduler *boolean*

Synopsis	Enable monitoring of egress scheduler
Context	configure port <i>string</i> ethernet egress monitor-port-scheduler <i>boolean</i>
Tree	monitor-port-scheduler
Default	false
Introduced	16.0.R1
Platforms	All

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port <i>string</i> ethernet egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	16.0.R1
Platforms	All

overrides

Synopsis	Enable the overrides context
Context	configure port <i>string</i> ethernet egress port-scheduler-policy overrides
Tree	overrides
Description	Commands in this context configure egress scheduler overrides.
Introduced	16.0.R4
Platforms	All

level [[priority-level](#)] *number*

Synopsis	Enter the level list instance
Context	configure port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Introduced	16.0.R4
Platforms	All

[priority-level] *number*

Synopsis	Port priority level to be overridden
Context	configure port string ethernet egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port string ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R4
Platforms	All

cir *decimal-number*

Synopsis	CIR for the port scheduler policy
Context	configure port string ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R4
Platforms	All

pir *decimal-number*

Synopsis	PIR for the the port scheduler policy
Context	configure port string ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir

Range	0.01 to 100.00
Units	percent
Introduced	16.0.R4
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure port string ethernet egress port-scheduler-policy overrides level number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R4
Platforms	All

cir (*number* | *keyword*)

Synopsis	CIR
Context	configure port string ethernet egress port-scheduler-policy overrides level number rate cir (number keyword)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R4
Platforms	All

pir (*number* | *keyword*)

Synopsis	PIR
Context	configure port string ethernet egress port-scheduler-policy overrides level number rate pir (number keyword)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max

Introduced	16.0.R4
Platforms	All

max-rate

Synopsis	Enter the max-rate context
Context	configure port string ethernet egress port-scheduler-policy overrides max-rate
Tree	max-rate
Description	Commands in this context override the max-rate command found in the port scheduler policy associated with the port. When a maximum rate is defined at the port or channel level, the port scheduler's policy max-rate command is ignored.
Introduced	16.0.R4
Platforms	All

percent-rate *decimal-number*

Synopsis	PIR rate
Context	configure port string ethernet egress port-scheduler-policy overrides max-rate percent-rate decimal-number
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R4
Platforms	All

rate (*number* | *keyword*)

Synopsis	PIR rate
Context	configure port string ethernet egress port-scheduler-policy overrides max-rate rate (number keyword)
Tree	rate
Range	1 to 6400000000
Units	kilobps
Options	max

Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R4
Platforms	All

policy-name *reference*

Synopsis	Egress scheduler policy name
Context	configure port <i>string</i> ethernet egress port-scheduler-policy <i>policy-name reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

rate *number*

Synopsis	Rate of egress traffic
Context	configure port <i>string</i> ethernet egress rate <i>number</i>
Tree	rate
Description	This command configures the rate of traffic leaving the network. An event log is generated each time the egress rate is modified unless the port is part of a LAG. This command is not supported for all MDA types.
Max. Range	-2147483648 to 2147483647
Units	kilobps
Introduced	16.0.R1
Platforms	All

elmi

Synopsis	Enter the elmi context
Context	configure port <i>string</i> ethernet elmi
Tree	elmi
Introduced	16.0.R4
Platforms	All

mode keyword

Synopsis	Ethernet LMI mode
Context	configure port string ethernet elmi mode keyword
Tree	mode
Options	uni-n
Introduced	16.0.R4
Platforms	All

n393 number

Synopsis	Monitored count of consecutive errors
Context	configure port string ethernet elmi n393 number
Tree	n393
Range	2 to 10
Default	4
Introduced	16.0.R4
Platforms	All

t391 number

Synopsis	Polling timer for UNI-C
Context	configure port string ethernet elmi t391 number
Tree	t391
Range	5 to 30
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	All

t392 number

Synopsis	Polling verification timer for UNI-N
Context	configure port string ethernet elmi t392 number
Tree	t392

Range	5 to 30
Units	seconds
Default	15
Introduced	16.0.R4
Platforms	All

encap-type *keyword*

Synopsis	Encapsulation method for the Ethernet port
Context	configure port <i>string</i> ethernet encap-type <i>keyword</i>
Tree	encap-type
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	All

Synopsis	Enter the eth-cfm context
Context	configure port <i>string</i> ethernet eth-cfm
Tree	eth-cfm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the mep list instance
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
----------	------------------------------

Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number
Tree	mep
Reference	configure eth-cfm domain <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number
Tree	mep
Reference	configure eth-cfm domain <i>string</i> association <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais

Synopsis	Enable the ais context
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number ais
Tree	ais
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number ais client-meg-level <i>number</i>
Tree	client-meg-level
Range	1 to 7
Max.	7
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number ais interface-support <i>boolean</i>
Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval number

Synopsis	Transmission interval for AIS messages
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect keyword

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais low-priority-defect keyword
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Priority of the AIS messages generated by the node
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
----------	---

Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time number

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time number

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm boolean

Synopsis	Generate CCM messages
----------	-----------------------

Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority number

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size number

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number
Tree	ccm-padding-size
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore keyword

Synopsis	TLV to ignore on reception
----------	----------------------------

Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number ccm-tlv-ignore <i>keyword</i>
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. Instances	2
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number collect-lmm-stats <i>boolean</i>
Tree	collect-lmm-stats
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number csf multiplier <i>decimal-number</i>

Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-bn

Synopsis	Enter the eth-bn context
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn
Tree	eth-bn
Description	Commands in this context configure Ethernet Bandwidth Notification (ETH-BN) message handling.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

receive *boolean*

Synopsis	Enable the reception and processing of ETH-BN messages
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn receive boolean
Tree	receive
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-update-pacing *number*

Synopsis	Pace of messages to and from ETH-CFM to QoS subsystems
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn rx-update-pacing <i>number</i>
Tree	rx-update-pacing
Range	1 to 600
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
----------	---

Context	configure <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number facility-fault boolean</i>
Tree	facility-fault
Description	When configured to true , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to false , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</i>
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</i>
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</i>

Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure port string ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed priority number
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed boolean

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure port string ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed rx-eth-ed boolean
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed boolean

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure port string ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed tx-eth-ed boolean
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis Enter the **eth-vsm-grace** context

Context **configure** port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace

Tree [eth-vsm-grace](#)

Description Commands in this context configure the Nokia ETH-CFM Grace function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace boolean

Synopsis Receive and process Nokia ETH-CFM Grace PDU on the MEP

Context **configure** port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean

Tree [rx-eth-vsm-grace](#)

Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace boolean

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers.

The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number mac-address <i>string</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold

Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan (*number* | *keyword*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outer VLAN ID of the tunnel
Context	configure port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number vlan (<i>number</i> <i>keyword</i>)
Tree	vlan
Range	1 to 4094
Options	none
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hold-time

Synopsis	Enter the hold-time context
Context	configure port <i>string</i> ethernet hold-time
Tree	hold-time
Introduced	16.0.R1
Platforms	All

down *number*

Synopsis	Delay after interface goes from up state to down state
Context	configure port <i>string</i> ethernet hold-time down <i>number</i>
Tree	down
Description	This command specifies the delay to notify the upper layers after an interface transitions from an up state to a down state.

When an interface transitions from an up state to a down state, it is immediately advertised to the rest of the system if the down interval is zero, but if the down interval is greater than zero, interface down transitions are not advertised to upper layers until the down interval has expired.

Range	1 to 3600000
Introduced	16.0.R1
Platforms	All

units keyword

Synopsis	Hold time units
Context	configure port string ethernet hold-time units keyword
Tree	units
Options	seconds, centiseconds
Default	seconds
Introduced	16.0.R1
Platforms	All

up number

Synopsis	Delay after interface goes from down state to up state
Context	configure port string ethernet hold-time up number
Tree	up
Description	This command specifies the delay to notify the upper layers after an interface transitions from a down state to an up state. When an interface transitions from a down state to an up state, it is immediately advertised as up to the rest of the system if the up interval is zero, but if the up interval is greater than zero, up transitions are not advertised until the up interval has expired.
Range	1 to 3600000
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure port string ethernet ingress
Tree	ingress

Introduced	16.0.R1
Platforms	All

rate number

Synopsis	Maximum ingress bandwidth
Context	configure port string ethernet ingress rate number
Tree	rate
Max. Range	-2147483648 to 2147483647
Units	megabps
Introduced	16.0.R1
Platforms	All

lACP-tunnel boolean

Synopsis	Enable LACP packet tunneling for the Ethernet port
Context	configure port string ethernet lACP-tunnel boolean
Tree	lACP-tunnel
Default	false
Introduced	16.0.R1
Platforms	All

lldp

Synopsis	Enter the lldp context
Context	configure port string ethernet lldp
Tree	lldp
Description	Commands in this context configure the Link Layer Discovery Protocol (LLDP) on the port.
Introduced	16.0.R1
Platforms	All

dest-mac [mac-type] keyword

Synopsis	Enter the dest-mac list instance
----------	---

Context	configure port <i>string</i> ethernet lldp dest-mac <i>keyword</i>
Tree	dest-mac
Description	Commands in this context configure destination MAC address commands.
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	All

drop-tail

Synopsis	Enter the drop-tail context
Context	configure port string ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail
Tree	drop-tail
Description	Commands in this context configure queue drop tail commands.
Introduced	16.0.R1
Platforms	All

low

Synopsis	Enter the low context
Context	configure port string ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail low
Tree	low
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	16.0.R1
Platforms	All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
----------	---

Context	configure port string ethernet network egress queue-group reference instance-id number queue-overrides queue reference drop-tail low percent-reduction-from-mbs (number keyword)
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

mbs ([number](#) | [keyword](#))

Synopsis	MBS for the template queue
Context	configure port string ethernet network egress queue-group reference instance-id number queue-overrides queue reference mbs (number keyword)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
Context	configure port string ethernet network egress queue-group reference instance-id number queue-overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth
Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to false , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate
Tree	percent-rate
Description	Commands in this context specify percent rates. This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the percent rate is performed under the hs-wrr-group command within the egress queue group template.
Notes	The following elements are part of a choice: percent-rate or rate .

Introduced	16.0.R1
Platforms	All

cir *decimal-number*

Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate
Tree	rate
Description	<p>Commands in this context specify the administrative PIR and CIR for the queue. Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.</p> <p>This command can be executed at anytime, altering the PIR and CIR rates for all queues created through the association of the SAP egress QoS policy with the queue ID.</p>

This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the rate is performed under the **hs-wrr-group** command within the egress queue group template.

Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	All

cir (*number* | *keyword*)

Synopsis	CIR for the queue
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Description	<p>This command specifies the administrative CIR used by the queue. When the rate command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent cir-level and cir-weight commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

pir (*number* | *keyword*)

Synopsis	PIR for the queue
Context	configure port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Description	<p>This command specifies the administrative PIR used by the queue. When the rate command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is</p>

dependent on the queue's **adaptation-rule** commands and the actual hardware where the queue is provisioned.

The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

Context	configure port <i>string</i> ethernet report-alarm signal-fail <i>boolean</i>
Tree	signal-fail
Introduced	16.0.R1
Platforms	All

rs-fec-mode *keyword*

Synopsis	RS-FEC mode on the Ethernet port
Context	configure port <i>string</i> ethernet rs-fec-mode <i>keyword</i>
Tree	rs-fec-mode
Description	This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet port. See "Forward Error Correction" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide</i> for more information about FEC settings.
Options	cl91-514-528, cl74, cl108
Introduced	16.0.R1
Platforms	All

single-fiber *boolean*

Synopsis	Enable packet gathering from a single fiber port
Context	configure port <i>string</i> ethernet single-fiber <i>boolean</i>
Tree	single-fiber
Description	When configured to true , this command enables packet gathering and redirection of IP packets from a single fiber (Rx) port of the Ethernet or SONET/SDH interface and redistributes packets to other interfaces through static routes or policy-based forwarding. Traffic is no longer transmitted out of the port. When configured to false , packet gathering is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

speed number

Synopsis	Ethernet port speed
Context	configure port string ethernet speed number
Tree	speed
Description	<p>This command configures the port speed for ports that support multiple speeds. This applies to the following:</p> <ul style="list-style-type: none"> • Fast Ethernet when autonegotiation is not enabled • 10/100/1000 Mb/s Ethernet when autonegotiation is not enabled • 10/1G ports supporting 10G SFP+ or 1G SFP • 40/100G ports supporting QSFP28s on non connector-based MDAs <p>If autonegotiation is enabled for the port, this command setting is ignored. Speed cannot be configured for ports that are part of a LAG.</p>
Range	10 100 1000 10000 25000 40000 50000 100000
Units	megabps
Introduced	16.0.R1
Platforms	All

ssm

Synopsis	Enter the ssm context
Context	configure port string ethernet ssm
Tree	ssm
Description	<p>Commands in this context configure the Ethernet Synchronization Messaging Channel (ESMC) for the Ethernet port. The ESMC carries the Synchronization Status Message (SSM) code representing the quality level of the source of the frequency of the central clock of the node.</p>
Introduced	16.0.R1
Platforms	All

admin-state keyword

Synopsis	Administrative state of the ESMC for the Ethernet port

Options	sonet, sdh
Default	sdh
Introduced	16.0.R1
Platforms	All

esmc-tunnel *boolean*

Synopsis	Tunnel ESMC frames in Epipe or VPLS services
Context	configure port string ethernet ssm esmc-tunnel <i>boolean</i>
Tree	esmc-tunnel
Description	<p>When configured to true, ESMC frames that are received into the Ethernet port can be tunneled in an Epipe or VPLS service. This is not recommended because it breaks the concepts inherent in Synchronous Ethernet, however it is required for compliance to MEF 6.1.1 EPL Option 2.</p> <p>When configured to false, ESMC frames are extracted upon reception by the port and are not tunneled through the service.</p>
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-dus *boolean*

Synopsis	Force QL value transmitted be set to QL-DNU or QL-DUS
Context	configure port string ethernet ssm tx-dus <i>boolean</i>
Tree	tx-dus
Introduced	16.0.R1
Platforms	All

symbol-monitor

Synopsis	Enter the symbol-monitor context
Context	configure port <i>string</i> ethernet symbol-monitor
Tree	symbol-monitor
Description	Commands in this context configure Ethernet symbol monitoring. Support for symbol monitoring is hardware dependent. An error message indicating that the port setting cannot be modified is presented when attempting to enable the feature or configure the individual commands on unsupported hardware.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of symbol monitoring on the port
Context	configure port <i>string</i> ethernet symbol-monitor admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

signal-degrade

Synopsis	Enter the signal-degrade context
Context	configure port <i>string</i> ethernet symbol-monitor signal-degrade
Tree	signal-degrade
Description	Commands in this context specify the error rate at which to declare the SD condition on an Ethernet interface. The value represents $M*10E-N$, which is the ratio of errored frames over the total frames received over the sliding window interval. The symbol errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	SD multiplier used to scale the symbol error ratio
Context	configure port <i>string</i> ethernet symbol-monitor signal-degrade multiplier <i>number</i>

Tree	multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	SD threshold for symbol errors
Context	configure port <i>string</i> ethernet symbol-monitor signal-degrade threshold <i>number</i>
Tree	threshold
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

signal-failure

Synopsis	Enter the signal-failure context
Context	configure port <i>string</i> ethernet symbol-monitor signal-failure
Tree	signal-failure
Description	Commands in this context specify the error rate at which to declare the SF condition on an Ethernet interface. The value represents $M*10E-N$, which is the ratio of errored frames over the total frames received over the sliding window interval. The symbol errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	SF multiplier used to scale the symbol error ratio
Context	configure port <i>string</i> ethernet symbol-monitor signal-failure multiplier <i>number</i>
Tree	multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	SF threshold for symbol errors
Context	configure port <i>string</i> ethernet symbol-monitor signal-failure threshold <i>number</i>
Tree	threshold
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-size *number*

Synopsis	Sliding window size over which errors are measured
Context	configure port <i>string</i> ethernet symbol-monitor window-size <i>number</i>
Tree	window-size
Description	This command specifies the sliding window size over which the symbols are sampled to detect SF or SD conditions.
Range	5 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

util-stats-interval *number*

Synopsis	Interval to calculate utilization statistics
Context	configure port <i>string</i> ethernet util-stats-interval <i>number</i>
Tree	util-stats-interval
Description	This command configures the interval used to calculate the utilization statistics. Port utilization statistics are only available for physical Ethernet ports on a host system. These statistics are not available for the following: <ul style="list-style-type: none"> • Ethernet ports on an Ethernet satellite • Ethernet ports on a VSR • PXC ports • vsm-cca-xp ports
Range	30 to 600

Units	seconds
Default	300
Introduced	16.0.R1
Platforms	All

xgig keyword

Synopsis	Ethernet port mode
Context	configure port string ethernet xgig keyword
Tree	xgig
Description	This command configures a 10 Gb/s interface to be in LAN or WAN mode. When configuring the port to be in WAN mode, certain SONET/SDH commands can be changed to reflect the SONET/SDH requirements for the port. When configuring the port to be in LAN mode, all SONET/SDH commands are pre-determined and not configurable.
Options	lan, wan
Introduced	16.0.R1
Platforms	All

gnss

Synopsis	Enter the gnss context
Context	configure port string gnss
Tree	gnss
Description	Commands in this context configure GNSS port attributes.
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

antenna-cable-delay number

Synopsis	Signal delay resulting from GNSS antenna cable length
Context	configure port string gnss antenna-cable-delay number
Tree	antenna-cable-delay
Description	This command configures the expected signal delay resulting from the length of the GNSS antenna cable.

Note: 7750 SR FP5 GNSS platforms support a value range of 0 to 1000.

Range	0 to 32767
Units	nanoseconds
Default	0
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

constellation

Synopsis	Enter the constellation context
Context	configure port string gnss constellation
Tree	constellation
Description	Commands in this context configure the GNSS systems that are used by the GNSS receiver.
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

galileo *boolean*

Synopsis	Enable GNSS receiver to use GALILEO constellation type
Context	configure port string gnss constellation galileo <i>boolean</i>
Tree	galileo
Description	When configured to true , this command enables the use of the European Galileo GNSS system.
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

glonass *boolean*

Synopsis	Enable GNSS receiver to use GLONASS constellation type
Context	configure port string gnss constellation glonass <i>boolean</i>
Tree	glonass

Description	When configured to true , the system enables the use of the Russian GLONASS GNSS system. Note: The glonass command is currently not supported.
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

gps boolean

Synopsis	Enable GNSS receiver to use GPS constellation type
Context	configure port string gns constellation gps boolean
Tree	gps
Description	When configured to true , this command enables the use of the American GPS GNSS system. When configured to false , this command disables the use of the American GPS GNSS system.
Default	true
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

elevation-mask-angle number

Synopsis	Minimum elevation mask angle
Context	configure port string gns elevation-mask-angle number
Tree	elevation-mask-angle
Description	This command configures the elevation mask angle, which provides a method of filtering satellites used by the system. Satellites with low elevation may provide degraded accuracy because of the long signal path through the atmosphere. Signals from satellites below the configured minimum satellite elevation are not used. Nokia does not recommend configuring an elevation mask angle below 10.
Range	0 to 89
Units	degrees angle
Default	10
Introduced	22.10.R1

Platforms 7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

hybrid-buffer-allocation

Synopsis Enter the **hybrid-buffer-allocation** context
Context **configure** port *string* hybrid-buffer-allocation

Tree	ingress-weight
Introduced	16.0.R1
Platforms	All

access number

Synopsis	Access weight for the hybrid port
Context	configure port <i>string</i> hybrid-buffer-allocation ingress-weight access <i>number</i>
Tree	access
Range	0 to 100
Default	50
Introduced	16.0.R1
Platforms	All

network number

Synopsis	Access weight for the hybrid port
Context	configure port <i>string</i> hybrid-buffer-allocation ingress-weight network <i>number</i>
Tree	network
Range	0 to 100
Default	50
Introduced	16.0.R1
Platforms	All

modify-buffer-allocation

Synopsis	Enter the modify-buffer-allocation context
Context	configure port <i>string</i> modify-buffer-allocation

Tree	modify-buffer-allocation
Description	Commands in this context to configure ingress and egress percentage of rate commands. These commands only apply to physical ports (for example, it does not work on APS or similar logical ports). The percentage of rate commands are used to define a percentage value that affects the amount of buffers used by ingress and egress port managed buffer space.
Introduced	16.0.R1
Platforms	All

percentage-of-rate

Synopsis	Enter the percentage-of-rate context
Context	configure port <i>string</i> modify-buffer-allocation percentage-of-rate
Tree	percentage-of-rate
Description	Commands in this context increase or decrease the active bandwidth associated with the egress or ingress port that affects the amount of egress or ingress buffer space managed by the port. Changing a ports active bandwidth using the commands in this context are an effective means of artificially lowering the buffers managed by one egress or ingress port and giving them to the other egress or ingress ports on the same MDA.
Introduced	16.0.R1
Platforms	All

egress *number*

Synopsis	Egress rate percentage
Context	configure port <i>string</i> modify-buffer-allocation percentage-of-rate egress <i>number</i>
Tree	egress
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

ingress *number*

Synopsis	Ingress rate percentage
Context	configure port <i>string</i> modify-buffer-allocation percentage-of-rate ingress <i>number</i>
Tree	ingress
Range	1 to 1000

Default	100
Introduced	16.0.R1
Platforms	All

monitor-agg-egress-queue-stats *boolean*

Synopsis	Monitor aggregate queue statistics
Context	configure port <i>string</i> monitor-agg-egress-queue-stats <i>boolean</i>
Tree	monitor-agg-egress-queue-stats
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure port <i>string</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures the operational group to monitor the operational group state. The state of the operational group affects the state of this port. When the operational group is inactive, the state of the port goes down and powers off the port to signal to the CE that the connected port is not available.
Reference	configure service oper-group <i>string</i>
Introduced	22.7.R1
Platforms	All

Tree	amber-alarm-action
Introduced	16.0.R1
Platforms	All

max *number*

Synopsis	Maximum percentage for reserved CBS of the pool
Context	configure port string network egress pool string resv-cbs amber-alarm-action max <i>number</i>
Tree	max
Description	This command specifies the maximum percentage for the reserved CBS of the pool. The maximum reserved CBS must not be less than the value of the reserved CBS. To enable adaptive CBS sizing the max , step , and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value.

When unconfigured, CBS adaptive sizing is not enabled.

Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

step number

Synopsis	Step-size percentage for reserved CBS of the pool
Context	configure port string network egress pool string resv-cbs amber-alarm-action step number
Tree	step
Description	This command specifies the step-size percentage for the reserved CBS of the pool. To enable adaptive CBS sizing the max , step , and cbs commands must be configured. The cbs command must also be configured to a percentage other than the default value. When unconfigured, CBS adaptive sizing is not enabled.

Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

cbs (number | keyword)

Synopsis	Percentage of the pool buffer space reserved for CBS
Context	configure port string network egress pool string resv-cbs cbs (number keyword)
Tree	cbs
Range	0 to 100

fec-fail *boolean*

Synopsis	Report FEC mode mismatch alarm
Context	configure port <i>string</i> otu report-alarm fec-fail <i>boolean</i>
Tree	fec-fail
Default	false
Introduced	16.0.R1
Platforms	All

fec-sd *boolean*

Synopsis	Report Signal Degrade alarm
Context	configure port <i>string</i> otu report-alarm fec-sd <i>boolean</i>
Tree	fec-sd
Default	false
Introduced	16.0.R1
Platforms	All

fec-sf *boolean*

Synopsis	Report Signal Fail alarm
Context	configure port <i>string</i> otu report-alarm fec-sf <i>boolean</i>
Tree	fec-sf
Default	true
Introduced	16.0.R1
Platforms	All

fec-uncorr *boolean*

Synopsis	Report one or more Uncorrectable FEC errors alarm
Context	configure port <i>string</i> otu report-alarm fec-uncorr <i>boolean</i>
Tree	fec-uncorr
Default	false
Introduced	16.0.R1
Platforms	All

loc boolean

Synopsis	Report OTU alarm for loss of clock
Context	configure port string otu report-alarm loc boolean
Tree	loc
Default	true
Introduced	16.0.R1
Platforms	All

lof boolean

Synopsis	Report alarm for the loss of OTU framing
Context	configure port string otu report-alarm lof boolean
Tree	lof
Default	true
Introduced	16.0.R1
Platforms	All

lom boolean

Synopsis	Report alarm for the loss of multi-frame
Context	configure port string otu report-alarm lom boolean
Tree	lom
Default	true
Introduced	16.0.R1
Platforms	All

los boolean

Synopsis	Report alarm for the loss of signal transitions on data
Context	configure port string otu report-alarm los boolean
Tree	los
Default	true
Introduced	16.0.R1
Platforms	All

odu-ais *boolean*

Synopsis	Report ODU Alarm Indication Signal alarm
Context	configure port string otu report-alarm odu-ais <i>boolean</i>
Tree	odu-ais
Default	false
Introduced	16.0.R1
Platforms	All

odu-bdi *boolean*

Synopsis	Report PM Backward Defect Indication alarm
Context	configure port string otu report-alarm odu-bdi <i>boolean</i>
Tree	odu-bdi
Default	false
Introduced	16.0.R1
Platforms	All

odu-lck *boolean*

Synopsis	Report ODU Locked alarm
Context	configure port string otu report-alarm odu-lck <i>boolean</i>
Tree	odu-lck
Default	false
Introduced	16.0.R1
Platforms	All

odu-oci *boolean*

Synopsis	Report ODU Open Connection Indication alarm
Context	configure port string otu report-alarm odu-oci <i>boolean</i>
Tree	odu-oci
Default	false
Introduced	16.0.R1
Platforms	All

odu-tim boolean

Synopsis	Report PM Trace ID Mismatch alarm
Context	configure port string otu report-alarm odu-tim boolean
Tree	odu-tim
Default	false
Introduced	16.0.R1
Platforms	All

opu-plm boolean

Synopsis	Report PSI Payload Type Mismatch alarm
Context	configure port string otu report-alarm opu-plm boolean
Tree	opu-plm
Default	false
Introduced	16.0.R1

otu-ais boolean

Synopsis	Report OTU Alarm Indication Signal alarm
Context	configure port string otu report-alarm otu-ais boolean
Tree	otu-ais
Default	false
Introduced	16.0.R1
Platforms	All

otu-bdi boolean

Synopsis	Report SM Backward Defect Indication alarm
Context	configure port string otu report-alarm otu-bdi boolean
Tree	otu-bdi
Default	true
Introduced	16.0.R1
Platforms	All

otu-ber-sd *boolean*

Synopsis	Report SM Signal Degrade alarm
Context	configure port string otu report-alarm otu-ber-sd <i>boolean</i>
Tree	otu-ber-sd
Default	false
Introduced	16.0.R1
Platforms	All

otu-ber-sf *boolean*

Synopsis	Report SM Signal Fail alarm
Context	configure port string otu report-alarm otu-ber-sf <i>boolean</i>
Tree	otu-ber-sf
Default	true
Introduced	16.0.R1
Platforms	All

otu-biae *boolean*

Synopsis	Report SM Backward Incoming Alignment Error alarm
Context	configure port string otu report-alarm otu-biae <i>boolean</i>
Tree	otu-biae
Default	false
Introduced	16.0.R1
Platforms	All

otu-iae *boolean*

Synopsis	Report SM Incoming Alignment Error alarm
Context	configure port string otu report-alarm otu-iae <i>boolean</i>
Tree	otu-iae
Default	false
Introduced	16.0.R1
Platforms	All

otu-tim *boolean*

Synopsis	Report SM Trace ID Mismatch alarm
Context	configure port string otu report-alarm otu-tim <i>boolean</i>
Tree	otu-tim
Default	false
Introduced	16.0.R1
Platforms	All

sd-threshold *number*

Synopsis	Error rate at which to declare signal degrade condition
Context	configure port string otu sd-threshold <i>number</i>
Tree	sd-threshold
Range	5 to 9
Default	7
Introduced	16.0.R1
Platforms	All

section-monitoring

Synopsis	Enter the section-monitoring context
Context	configure port string otu section-monitoring
Tree	section-monitoring
Introduced	16.0.R4
Platforms	All

trail-trace-identifier

Synopsis	Enter the trail-trace-identifier context
Context	configure port string otu section-monitoring trail-trace-identifier
Tree	trail-trace-identifier
Introduced	16.0.R4
Platforms	All

expected

Synopsis	Enter the expected context
Context	configure port string otu section-monitoring trail-trace-identifier expected
Tree	expected
Introduced	16.0.R4
Platforms	All

auto-generated

Synopsis	Use the system generated TTI
Context	configure port string otu section-monitoring trail-trace-identifier expected auto-generated
Tree	auto-generated
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	16.0.R4
Platforms	All

bytes *string*

Synopsis	TTI as a sequence of bytes
Context	configure port string otu section-monitoring trail-trace-identifier expected bytes <i>string</i>
Tree	bytes
String Length	0 to 192
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	16.0.R4
Platforms	All

string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	configure port string otu section-monitoring trail-trace-identifier expected string <i>string</i>
Tree	string
String Length	0 to 64
Notes	The following elements are part of a choice: auto-generated , bytes , or string .

Introduced 16.0.R4
Platforms All

mismatch-reaction *keyword*

Synopsis Reaction to a mismatched TTI
Context **configure** [port](#) [string](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) [mismatch-reaction](#) *keyword*

bytes *string*

Synopsis TTI as a sequence of bytes
Context **configure** [port](#) [string](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) [transmit](#) [bytes](#) *string*
Tree [bytes](#)

String Length	0 to 192
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	16.0.R4
Platforms	All

string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	configure port string otu section-monitoring trail-trace-identifier transmit string <i>string</i>
Tree	string
String Length	0 to 64
Notes	The following elements are part of a choice: auto-generated , bytes , or string .
Introduced	16.0.R4
Platforms	All

sf-sd-method *keyword*

Synopsis	Method used to determine the SF and SD alarms
Context	configure port string otu sf-sd-method <i>keyword</i>
Tree	sf-sd-method
Options	fec, bip8
Default	fec
Introduced	16.0.R1
Platforms	All

sf-threshold *number*

Synopsis	Error rate at which to declare signal fail condition
Context	configure port string otu sf-threshold <i>number</i>
Tree	sf-threshold
Range	3 to 6
Default	5
Introduced	16.0.R1
Platforms	All

sonet-sdh

Synopsis	Enter the sonet-sdh context
Context	configure port string sonet-sdh
Tree	sonet-sdh
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clock-source *keyword*

Synopsis	Clock used for transmitted data
Context	configure port string sonet-sdh clock-source keyword
Tree	clock-source
Options	loop-timed, node-timed
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

framing *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SONET or SDH framing
Context	configure port string sonet-sdh framing keyword
Tree	framing
Options	sonet, sdh
Default	sonet
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

group [[group-index](#)] *string*

Synopsis	Enter the group list instance
Context	configure port string sonet-sdh group string
Tree	group

Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[group-index] *string*

Synopsis Components making up the specified SONET/SDH path
Context **configure** *port string sonet-sdh group string*
Tree *group*
Notes This element is part of a list key.
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

payload *keyword*

Synopsis SONET/SDH group payload
Context **configure** *port string sonet-sdh group string payload keyword*
Tree *payload*
Options vt15, vt2, tu3
Default tu3
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hold-time

Synopsis Enter the **hold-time** context
Context **configure** *port string sonet-sdh hold-time*
Tree *hold-time*
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis Hold timer for link down event dampening
Context **configure** *port string sonet-sdh hold-time down number*
Tree *down*

Range	0 to 100
Units	deciseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

up number

Synopsis	Hold timer for link up event dampening
Context	configure port string sonet-sdh hold-time up number
Tree	up
Range	0 to 100
Units	deciseconds
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

loopback keyword

Synopsis	Loopback to activate on SONET port
Context	configure port string sonet-sdh loopback keyword
Tree	loopback
Options	line, internal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

path [path-index] string

Synopsis	Enter the path list instance
Context	configure port string sonet-sdh path string
Tree	path
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[path-index] string

Synopsis	SONET/SDH path index
Context	configure port string sonet-sdh path string
Tree	path
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state keyword

Synopsis	Administrative state of the SONET/SDH path
Context	configure port string sonet-sdh path string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc number

Synopsis	Cyclic redundancy check
Context	configure port string sonet-sdh path string crc number
Tree	crc
Range	16 32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description string

Synopsis	Text description
Context	configure port string sonet-sdh path string description string
Tree	description
String Length	1 to 160
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

egress

Synopsis	Enter the egress context
Context	configure port string sonet-sdh path string egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port string sonet-sdh path string egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enable the overrides context
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level [[priority-level](#)] *number*

Synopsis	Enter the level list instance
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number
Tree	level
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[[priority-level](#)] *number*

Synopsis	Port priority levels override
----------	-------------------------------

Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir decimal-number

Synopsis	CIR for the priority level
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number percent-rate cir decimal-number
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir decimal-number

Synopsis	PIR for the priority level
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number percent-rate pir decimal-number
Tree	pir

Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the rate context
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (number | keyword)

Synopsis	CIR for the priority level
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number rate cir (number keyword)
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (number | keyword)

Synopsis	PIR for the priority level
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides level number rate pir (number keyword)
Tree	pir
Range	1 to 3200000000

Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rate

Synopsis	Enter the max-rate context
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate *decimal-number*

Synopsis	PIR
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides max-rate percent-rate decimal-number
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate (*number* | *keyword*)

Synopsis	PIR
Context	configure port string sonet-sdh path string egress port-scheduler-policy overrides max-rate rate (number keyword)
Tree	rate
Range	1 to 3200000000
Units	kilobps

Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Port egress scheduler policy name
Context	configure port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

encap-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure an encap method.
Context	configure port <i>string</i> sonet-sdh path <i>string</i> encap-type <i>keyword</i>
Tree	encap-type
Options	bcp-null, bcp-dot1q, ipcp, ppp-auto, wan-mirror, cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm
Context	configure port <i>string</i> sonet-sdh path <i>string</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis MAC address for the SONET/SDH path
 Context **configure** *port string sonet-sdh path string mac-address string*
 Tree [mac-address](#)
 Default 00:00:00:00:00:00
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Operation port mode for the SONET/SDH path
 Context **configure** *port string sonet-sdh path string mode keyword*
 Tree [mode](#)
 Options access, network
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mtu *number*

Synopsis Maximum payload MTU size
 Context **configure** *port string sonet-sdh path string mtu number*
 Tree [mtu](#)
 Range 512 to 9208
 Units bytes
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network

Synopsis	Enter the network context
Context	configure port string sonet-sdh path string network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure port string sonet-sdh path string network accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port string sonet-sdh path string network collect-stats boolean
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue-policy *reference*

Synopsis	Queue policy on the SONET/SDH network path
Context	configure port string sonet-sdh path string network queue-policy reference
Tree	queue-policy
Reference	configure qos network-queue string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

payload *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SONET/SDH path payload
Context	configure port string sonet-sdh path string payload keyword
Tree	payload
Options	sts3, tug3, vt15, vt2, ds3, e3, ds1, e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ppp

Synopsis	Enter the ppp context
Context	configure port string sonet-sdh path string ppp
Tree	ppp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

keepalive

Synopsis	Enter the keepalive context
Context	configure port string sonet-sdh path string ppp keepalive
Tree	keepalive
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop-count *number*

Synopsis	Consecutive missed keepalives before port is taken down
Context	configure port string sonet-sdh path string ppp keepalive drop-count number
Tree	drop-count
Range	1 to 255
Default	3
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval (*number* | *keyword*)

Synopsis Interval at which keepalive messages are issued

Context **configure** *port string sonet-sdh path string ppp keepalive interval* (*number* | *keyword*)

Tree [interval](#)

Range 1 to 60

Units seconds

Options none

Default 10

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

report-alarm

Synopsis Enter the **report-alarm** context

Context **configure** *port string sonet-sdh path string report-alarm*

Tree [report-alarm](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pais *boolean*

Synopsis Report path alarm indication signal errors

Context **configure** *port string sonet-sdh path string report-alarm pais boolean*

Tree [pais](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

plcd *boolean*

Synopsis Report path loss of code group delineation errors

Context **configure** *port string sonet-sdh path string report-alarm plcd boolean*

Tree	plcd
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

plop *boolean*

Synopsis	Report path loss of pointer errors as a trap
Context	configure port string sonet-sdh path string report-alarm plop <i>boolean</i>
Tree	plop
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pplm *boolean*

Synopsis	Report a path payload mismatch trap
Context	configure port string sonet-sdh path string report-alarm pplm <i>boolean</i>
Tree	pplm
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prdi *boolean*

Synopsis	Report path remote defect indication errors
Context	configure port string sonet-sdh path string report-alarm prdi <i>boolean</i>
Tree	prdi
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prei *boolean*

Synopsis	Report a path error condition as a result of b3 error
----------	---

Context	configure port string sonet-sdh path string report-alarm prei <i>boolean</i>
Tree	prei
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

puneq *boolean*

Synopsis	Report path unequipped errors
Context	configure port string sonet-sdh path string report-alarm puneq <i>boolean</i>
Tree	puneq
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

scramble *boolean*

Synopsis	Enable SONET/SDH payload scrambling
Context	configure port string sonet-sdh path string scramble <i>boolean</i>
Tree	scramble
Description	<p>When configured to true, the SONET/SDH frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking.</p> <p>When configured to false, the strings of all 1s or all 0s are continuous.</p>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

signal-label *string*

Synopsis	C2 byte value that communicates the payload type
Context	configure port string sonet-sdh path string signal-label <i>string</i>
Tree	signal-label
String Length	1 to 4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

trace-string (*keyword* | *string*)

Synopsis	J1 path-trace string that identifies the circuit
Context	configure port <i>string</i> sonet-sdh path <i>string</i> trace-string (<i>keyword</i> <i>string</i>)
Tree	trace-string
String Length	0 to 62
Options	zeros
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port <i>string</i> sonet-sdh report-alarm
Tree	report-alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lais *boolean*

Synopsis	Report Line Indication Signal Errors alarm
Context	configure port <i>string</i> sonet-sdh report-alarm lais <i>boolean</i>
Tree	lais
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lb2er-sd *boolean*

Synopsis	Report line and section alarms for SONET/SDH ports
Context	configure port <i>string</i> sonet-sdh report-alarm lb2er-sd <i>boolean</i>
Tree	lb2er-sd
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lb2er-sf *boolean*

Synopsis	Report alarm line signal failure BER errors
Context	configure <i>port string sonet-sdh report-alarm lb2er-sf boolean</i>
Tree	lb2er-sf
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

loc *boolean*

Synopsis	Report alarm for a loss of clock
Context	configure <i>port string sonet-sdh report-alarm loc boolean</i>
Tree	loc
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lrdi *boolean*

Synopsis	Report Line Remote Defect Indication Errors alarm
Context	configure <i>port string sonet-sdh report-alarm lrdi boolean</i>
Tree	lrdi
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lrei *boolean*

Synopsis	Report alarm for a line error condition
Context	configure <i>port string sonet-sdh report-alarm lrei boolean</i>
Tree	lrei
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

slof *boolean*

Synopsis	Report alarm for section loss of frame errors
Context	configure <i>port string sonet-sdh report-alarm slof boolean</i>
Tree	slof
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

slos *boolean*

Synopsis	Report alarm for section loss of signal error on send
Context	configure <i>port string sonet-sdh report-alarm slos boolean</i>
Tree	slos
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ss1f *boolean*

Synopsis	Report alarm for section synchronization failure
Context	configure <i>port string sonet-sdh report-alarm ss1f boolean</i>
Tree	ss1f
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sd-threshold *number*

Synopsis	Threshold for line signal failure BER
Context	configure <i>port string sonet-sdh sd-threshold number</i>
Tree	sd-threshold
Range	3 to 9
Default	6
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

section-trace

Synopsis Enter the **section-trace** context

Context **configure** [port string sonet-sdh section-trace](#)

Tree [section-trace](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

byte string

Synopsis Section trace bytes in the SONET section header

Context **configure** [port string sonet-sdh section-trace byte string](#)

Tree [byte](#)

String Length 1 to 4

Default 1

Notes The following elements are part of a choice: **byte**, **increment-z0**, or **string**.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

increment-z0

Synopsis Configure incrementing STM ID instead of a static value

Context **configure** [port string sonet-sdh section-trace increment-z0](#)

Tree [increment-z0](#)

Notes The following elements are part of a choice: **byte**, **increment-z0**, or **string**.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

string string

Synopsis Text string that identifies the section

Context **configure** [port string sonet-sdh section-trace string string](#)

Tree [string](#)

String Length	0 to 16
Notes	The following elements are part of a choice: byte , increment-z0 , or string .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sf-threshold *number*

Synopsis	Threshold for line signal failure BER
Context	configure port string sonet-sdh sf-threshold number
Tree	sf-threshold
Range	3 to 6
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

single-fiber *boolean*

Synopsis	Allow packet gathering and redirection from single port
Context	configure port string sonet-sdh single-fiber boolean
Tree	single-fiber
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

speed *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SONET/SDH port speed
Context	configure port string sonet-sdh speed keyword
Tree	speed
Options	oc3, oc12, oc48, oc192, oc768, oc1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

suppress-low-order-alarms *boolean*

Synopsis	Suppress low order alarms
Context	configure <i>port string sonet-sdh suppress-low-order-alarms boolean</i>
Tree	suppress-low-order-alarms
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-dus *boolean*

Synopsis	Force the QL value to be set to QL-DUS/QL-DNU
Context	configure <i>port string sonet-sdh tx-dus boolean</i>
Tree	tx-dus
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tdm

Synopsis	Enter the tdm context
Context	configure <i>port string tdm</i>
Tree	tdm
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

buildout *keyword*

Synopsis	Line buildout for physical DS1/DS3 ports
Context	configure <i>port string tdm buildout keyword</i>
Tree	buildout
Options	short, long
Default	short
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ds1 [[ds1-index](#)] *string*

Synopsis	Enter the ds1 list instance
Context	configure port string tdm ds1 string
Tree	ds1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[ds1-index] *string*

Synopsis	DS-1 channel ID
Context	configure port string tdm ds1 string
Tree	ds1
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis	Administrative state of the DS1 channel
Context	configure port string tdm ds1 string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-threshold

Synopsis	Enter the ber-threshold context
Context	configure port string tdm ds1 string ber-threshold
Tree	ber-threshold
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-degrade *number*

Synopsis	BER signal degradation threshold
Context	configure port <i>string</i> tdm ds1 <i>string</i> ber-threshold signal-degrade <i>number</i>
Tree	signal-degrade
Range	1 5 10 50 100
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-failure *number*

Synopsis	BER signal failure threshold
Context	configure port <i>string</i> tdm ds1 <i>string</i> ber-threshold signal-failure <i>number</i>
Tree	signal-failure
Range	1 5 10 50 100
Default	50
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

channel-group [[ds0-index](#)] *number*

Synopsis	Enter the channel-group list instance
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i>
Tree	channel-group
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[ds0-index] *number*

Synopsis	Channel group ID
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i>
Tree	channel-group
Range	1 to 24
Notes	This element is part of a list key.

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis Administrative state of the DS1 channel group
 Context **configure** *port string tdm ds1 string channel-group number admin-state keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

crc *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Precision of the CRC
 Context **configure** *port string tdm ds1 string channel-group number crc number*
 Tree [crc](#)
 Range 16 | 32
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

description *string*

Synopsis Text description
 Context **configure** *port string tdm ds1 string channel-group number description string*
 Tree [description](#)
 String Length 1 to 160
 Default DS0GRP
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

egress

Synopsis	Enter the egress context
Context	configure port string tdm ds1 string channel-group number egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

overrides

Synopsis	Enable the overrides context
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

level [[priority-level](#)] *number*

Synopsis	Enter the level list instance
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number
Tree	level
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[priority-level] number

Synopsis	Port priority levels override
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir decimal-number

Synopsis	CIR for the priority level
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number percent-rate cir decimal-number
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir decimal-number

Synopsis	PIR for the priority level
----------	----------------------------

Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate

Synopsis	Enter the rate context
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir (*number* | *keyword*)

Synopsis	PIR for the priority level
----------	----------------------------

Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides level number rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

max-rate

Synopsis	Enter the max-rate context
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate decimal-number

Synopsis	PIR
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides max-rate percent-rate decimal-number
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate (number | keyword)

Synopsis	PIR
----------	-----

Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy overrides max-rate rate (<i>number keyword</i>)
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

policy-name *reference*

Synopsis	Port egress scheduler policy name
Context	configure port string tdm ds1 string channel-group number egress port-scheduler-policy policy-name reference
Tree	policy-name
Reference	configure qos port-scheduler-policy string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

encap-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method
Context	configure port string tdm ds1 string channel-group number encap-type keyword
Tree	encap-type
Options	bcp-null, bcp-dot1q, ipcp, ppp-auto, wan-mirror, cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-cycle-flag *keyword*

Synopsis	Value transmitted during idle cycles
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-cycle-flag <i>keyword</i>
Tree	idle-cycle-flag
Options	flags, ones
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-payload-fill

Synopsis	Enter the idle-payload-fill context
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill
Tree	idle-payload-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

all-ones

Synopsis	Define the 8 bit value to be transmitted as 11111111
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pattern *number*

Synopsis	User-defined pattern to be transmitted
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill pattern <i>number</i>
Tree	pattern
Range	0 to 255
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-signal-fill

Synopsis	Enter the idle-signal-fill context
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill
Tree	idle-signal-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

all-ones

Synopsis	Define the 8-bit value to be transmitted as 11111111
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pattern *number*

Synopsis	User-defined pattern to be transmitted
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill <i>pattern number</i>
Tree	pattern
Range	0 to 15
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm to be used on the port
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mac-address *string*

Synopsis MAC address for the port
 Context **configure** *port string tdm ds1 string channel-group number mac-address string*
 Tree [mac-address](#)
 Default 00:00:00:00:00:00
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Operation mode for the TDM channel group
 Context **configure** *port string tdm ds1 string channel-group number mode keyword*
 Tree [mode](#)
 Options access, network
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mtu *number*

Synopsis Maximum payload MTU size for the port
 Context **configure** *port string tdm ds1 string channel-group number mtu number*
 Tree [mtu](#)
 Range 512 to 9208
 Units bytes
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

network

Synopsis	Enter the network context
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> network accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> network collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

queue-policy *reference*

Synopsis	Queue policy on the TDM DS0 network channel group
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> network queue-policy <i>reference</i>
Tree	queue-policy
Reference	configure qos network-queue <i>string</i>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ppp

Synopsis Enter the **ppp** context

Context **configure** [port string tdm ds1 string channel-group number ppp](#)

Tree [ppp](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sf-link-down *boolean*

Synopsis Set link out-of-service on BER-SF alarm

Context **configure** [port string tdm ds1 string channel-group number ppp ber-sf-link-down boolean](#)

Tree [ber-sf-link-down](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

compress

Synopsis Enter the **compress** context

Context **configure** [port string tdm ds1 string channel-group number ppp compress](#)

Tree [compress](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

acfc *boolean*

Synopsis Enable Address Control Field Compression (ACFC)

Context **configure** [port string tdm ds1 string channel-group number ppp compress acfc boolean](#)

Tree [acfc](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pfc *boolean*

Synopsis Enable Protocol Field Compression (PFC)
 Context **configure** *port string tdm ds1 string channel-group number ppp compress pfc boolean*
 Tree [pfc](#)
 Default false
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

keepalive

Synopsis Enter the **keepalive** context
 Context **configure** *port string tdm ds1 string channel-group number ppp keepalive*
 Tree [keepalive](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

drop-count *number*

Synopsis Consecutive missed keepalives before port is taken down
 Context **configure** *port string tdm ds1 string channel-group number ppp keepalive drop-count number*
 Tree [drop-count](#)
 Range 1 to 255
 Default 3
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

interval (*number* | *keyword*)

Synopsis Interval at which keepalive messages are issued
 Context **configure** *port string tdm ds1 string channel-group number ppp keepalive interval (number | keyword)*
 Tree [interval](#)

Range	1 to 60
Units	seconds
Options	none
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

speed *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Speed of the DS0 channels in the channel group
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> speed <i>number</i>
Tree	speed
Range	56 64
Default	64
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

timeslot *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Timeslot for the channel group
Context	configure port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> timeslot <i>number</i>
Tree	timeslot
Range	1 to 24
Max. Instances	24
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clock-source *keyword*

Synopsis	Clock for data transmission
Context	configure port <i>string</i> tdm ds1 <i>string</i> clock-source <i>keyword</i>
Tree	clock-source
Options	loop-timed, node-timed, adaptive, differential
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

framing *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing for the DS1 channel
Context	configure port <i>string</i> tdm ds1 <i>string</i> framing <i>keyword</i>
Tree	framing
Options	extended-super-frame, super-frame, ds1-unframed
Default	extended-super-frame
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

loopback *keyword*

Synopsis	Loopback mode for the port
Context	configure port <i>string</i> tdm ds1 <i>string</i> loopback <i>keyword</i>
Tree	loopback
Options	line, internal, fdl-ansi, fdl-bellcore, payload-ansi, inband-ansi, inband-bellcore
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

remote-loop-respond *boolean*

Synopsis	Respond to requests for remote loopbacks
Context	configure port <i>string</i> tdm ds1 <i>string</i> remote-loop-respond <i>boolean</i>
Tree	remote-loop-respond

Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port string tdm ds1 string report-alarm
Tree	report-alarm
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ais boolean

Synopsis	Report alarm indication signal errors
Context	configure port string tdm ds1 string report-alarm ais boolean
Tree	ais
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sd boolean

Synopsis	Report the BER that specifies signal degradation
Context	configure port string tdm ds1 string report-alarm ber-sd boolean
Tree	ber-sd
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sf boolean

Synopsis	Report the BER that species signal failure
Context	configure port string tdm ds1 string report-alarm ber-sf boolean
Tree	ber-sf

Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

looped *boolean*

Synopsis	Report looped packet errors
Context	configure port <i>string</i> tdm ds1 <i>string</i> report-alarm looped <i>boolean</i>
Tree	looped
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

los *boolean*

Synopsis	Report loss of signal errors
Context	configure port <i>string</i> tdm ds1 <i>string</i> report-alarm los <i>boolean</i>
Tree	los
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

oof *boolean*

Synopsis	Report out-of-frame errors
Context	configure port <i>string</i> tdm ds1 <i>string</i> report-alarm oof <i>boolean</i>
Tree	oof
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rai *boolean*

Synopsis	Report resource availability indicator events
Context	configure port <i>string</i> tdm ds1 <i>string</i> report-alarm rai <i>boolean</i>

Tree	rai
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal mode on the channel
Context	configure port <i>string</i> tdm ds1 <i>string</i> signal-mode <i>keyword</i>
Tree	signal-mode
Options	channel-associated-signaling
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ds3 [[ds3-index](#)] *string*

Synopsis	Enter the ds3 list instance
Context	configure port <i>string</i> tdm ds3 <i>string</i>
Tree	ds3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[ds3-index] *string*

Synopsis	TDM DS3 index
Context	configure port <i>string</i> tdm ds3 <i>string</i>
Tree	ds3
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis	Administrative state of the DS3 port
Context	configure port string tdm ds3 string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

channelized *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Channelization of the DS3
Context	configure port string tdm ds3 string channelized keyword
Tree	channelized
Options	ds1, e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clock-source *keyword*

Synopsis	Clock for data transmission
Context	configure port string tdm ds3 string clock-source keyword
Tree	clock-source
Options	loop-timed, node-timed
Default	node-timed
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

crc number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precision of the cyclic redundancy check (CRC)
Context	configure port string tdm ds3 string crc number
Tree	crc
Range	16 32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

description string

Synopsis	Text description
Context	configure port string tdm ds3 string description string
Tree	description
String Length	1 to 160
Default	DS3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

egress

Synopsis	Enter the egress context
Context	configure port string tdm ds3 string egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port string tdm ds3 string egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

overrides

Synopsis Enable the **overrides** context
 Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy overrides
 Tree [overrides](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

level [[priority-level](#)] *number*

Synopsis Enter the **level** list instance
 Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy overrides level *number*
 Tree [level](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[\[priority-level\]](#) *number*

Synopsis Port priority levels override
 Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy overrides level *number*
 Tree [level](#)
 Range 1 to 8
 Notes This element is part of a list key.
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate

Synopsis Enter the **percent-rate** context
 Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy overrides level *number* [percent-rate](#)
 Tree [percent-rate](#)
 Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir *decimal-number*

Synopsis	CIR for the priority level
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir *decimal-number*

Synopsis	PIR for the priority level
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate

Synopsis	Enter the rate context
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	configure <i>port string tdm ds3 string egress port-scheduler-policy overrides level number rate cir</i> (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	configure <i>port string tdm ds3 string egress port-scheduler-policy overrides level number rate pir</i> (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

max-rate

Synopsis	Enter the max-rate context
Context	configure <i>port string tdm ds3 string egress port-scheduler-policy overrides max-rate</i>
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate *decimal-number*

Synopsis	PIR
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy overrides max-rate percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate (*number* | *keyword*)

Synopsis	PIR
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy overrides max-rate rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

policy-name *reference*

Synopsis	Port egress scheduler policy name
Context	configure port <i>string</i> tdm ds3 <i>string</i> egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method
Context	configure port <i>string</i> tdm ds3 <i>string</i> encap-type <i>keyword</i>
Tree	encap-type
Options	bcp-null, bcp-dot1q, ipcp, ppp-auto, wan-mirror, cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

feac-loop-respond *boolean*

Synopsis	Enable DS-3 interface to respond to remote loop signals
Context	configure port <i>string</i> tdm ds3 <i>string</i> feac-loop-respond <i>boolean</i>
Tree	feac-loop-respond
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

framing *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing for the DS3 channel
Context	configure port <i>string</i> tdm ds3 <i>string</i> framing <i>keyword</i>
Tree	framing
Options	c-bit, m23, ds3-unframed
Default	c-bit
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-cycle-flag *keyword*

Synopsis	Value transmitted during idle cycles
Context	configure port <i>string</i> tdm ds3 <i>string</i> idle-cycle-flag <i>keyword</i>
Tree	idle-cycle-flag
Options	flags, ones
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm to be used on the port
Context	configure port <i>string</i> tdm ds3 <i>string</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

loopback *keyword*

Synopsis	Loopback mode on the channel
Context	configure port <i>string</i> tdm ds3 <i>string</i> loopback <i>keyword</i>
Tree	loopback
Options	line, internal, remote
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mac-address *string*

Synopsis	MAC address for the port
Context	configure port <i>string</i> tdm ds3 <i>string</i> mac-address <i>string</i>
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

maintenance-data-link

Synopsis	Enter the maintenance-data-link context
Context	configure port string tdm ds3 string maintenance-data-link
Tree	maintenance-data-link
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

equipment-id-code string

Synopsis	Equipment ID Code (EIC) of the MDL
Context	configure port string tdm ds3 string maintenance-data-link equipment-id-code string
Tree	equipment-id-code
String Length	0 to 10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

facility-id-code string

Synopsis	Facility ID Code sent in the MDL Path message
Context	configure port string tdm ds3 string maintenance-data-link facility-id-code string
Tree	facility-id-code
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

frame-id-code string

Synopsis	Frame ID Code (FIC) of the MDL
Context	configure port string tdm ds3 string maintenance-data-link frame-id-code string
Tree	frame-id-code
String Length	0 to 10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

generator-string *string*

Synopsis	Generator number string sent in MDL test signal message
Context	configure port string tdm ds3 string maintenance-data-link generator-string <i>string</i>
Tree	generator-string
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

location-id-code *string*

Synopsis	Location ID Code (LIC) of the MDL
Context	configure port string tdm ds3 string maintenance-data-link location-id-code <i>string</i>
Tree	location-id-code
String Length	0 to 11
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

port-string *string*

Synopsis	Port number string sent in the MDL idle signal message
Context	configure port string tdm ds3 string maintenance-data-link port-string <i>string</i>
Tree	port-string
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

transmit-message-type

Synopsis	Enter the transmit-message-type context
Context	configure port string tdm ds3 string maintenance-data-link transmit-message-type
Tree	transmit-message-type
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-signal *boolean*

Synopsis	Enable transmission of MDL idle signal messages
Context	configure port <i>string</i> tdm ds3 <i>string</i> maintenance-data-link transmit-message-type idle-signal <i>boolean</i>
Tree	idle-signal
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

path *boolean*

Synopsis	Enable transmission of MDL path messages
Context	configure port <i>string</i> tdm ds3 <i>string</i> maintenance-data-link transmit-message-type path <i>boolean</i>
Tree	path
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

test-signal *boolean*

Synopsis	Enable transmission of MDL test signal messages
Context	configure port <i>string</i> tdm ds3 <i>string</i> maintenance-data-link transmit-message-type test-signal <i>boolean</i>
Tree	test-signal
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

unit-id-code *string*

Synopsis	Unit ID Code (UIC) of the MDL
Context	configure port <i>string</i> tdm ds3 <i>string</i> maintenance-data-link unit-id-code <i>string</i>
Tree	unit-id-code
String Length	0 to 6

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	configure <i>port string tdm ds3 string mode keyword</i>
Tree	<i>mode</i>
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mtu *number*

Synopsis	Maximum payload MTU size for the port
Context	configure <i>port string tdm ds3 string mtu number</i>
Tree	<i>mtu</i>
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

network

Synopsis	Enter the network context
Context	configure <i>port string tdm ds3 string network</i>
Tree	<i>network</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure port string tdm ds3 string network accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port string tdm ds3 string network collect-stats boolean
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

queue-policy *reference*

Synopsis	Queue policy on the TDM DS3 network channel
Context	configure port string tdm ds3 string network queue-policy reference
Tree	queue-policy
Reference	configure qos network-queue string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ppp

Synopsis	Enter the ppp context
Context	configure port string tdm ds3 string ppp
Tree	ppp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

keepalive

Synopsis	Enter the keepalive context
Context	configure port string tdm ds3 string ppp keepalive
Tree	keepalive
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

drop-count number

Synopsis	Consecutive missed keepalives before port is taken down
Context	configure port string tdm ds3 string ppp keepalive drop-count number
Tree	drop-count
Range	1 to 255
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

interval (number | keyword)

Synopsis	Interval at which keepalive messages are issued
Context	configure port string tdm ds3 string ppp keepalive interval (number keyword)
Tree	interval
Range	1 to 60
Units	seconds
Options	none
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port string tdm ds3 string report-alarm
Tree	report-alarm
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ais *boolean*

Synopsis Report alarm indication signal errors
Context **configure** [port](#) *string* [tdm ds3](#) *string* [report-alarm](#) [ais](#) *boolean*
Tree [ais](#)
Default true
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

looped *boolean*

Synopsis Report looped packet errors
Context **configure** [port](#) *string* [tdm ds3](#) *string* [report-alarm](#) [looped](#) *boolean*
Tree [looped](#)
Default false
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

los *boolean*

Synopsis Report loss of signal errors
Context **configure** [port](#) *string* [tdm ds3](#) *string* [report-alarm](#) [los](#) *boolean*
Tree [los](#)
Default true
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

oof *boolean*

Synopsis Report out-of-frame errors
Context **configure** [port](#) *string* [tdm ds3](#) *string* [report-alarm](#) [oof](#) *boolean*
Tree [oof](#)
Default false

Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rai *boolean*

Synopsis Report resource availability indicator events
Context **configure** port string tdm ds3 string report-alarm rai boolean
Tree rai
Default false
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

scramble *boolean*

Synopsis Enable TDM DS3 payload scrambling
Context **configure** port string tdm ds3 string scramble boolean
Tree scramble
Description When configured to **true**, the TDM DS3 frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking.
When configured to **false**, the strings of all 1s or all 0s are continuous.
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

subrate

Synopsis Enter the **subrate** context
Context **configure** port string tdm ds3 string subrate
Tree subrate
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

csu-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Channel Service Unit (CSU) compatibility mode
Context	configure port <i>string</i> tdm ds3 <i>string</i> subrate csu-mode <i>keyword</i>
Tree	csu-mode
Options	digital-link, larscom
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate-step *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Subrate for the associated DS3
Context	configure port <i>string</i> tdm ds3 <i>string</i> subrate rate-step <i>number</i>
Tree	rate-step
Range	0 to 147
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

e1 [*e1-index*] *string*

Synopsis	Enter the e1 list instance
Context	configure port <i>string</i> tdm e1 <i>string</i>
Tree	e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[e1-index] *string*

Synopsis	E-1 channel
Context	configure port <i>string</i> tdm e1 <i>string</i>

Tree	e1
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis	Administrative state of the E1 channel
Context	configure port string tdm e1 string admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-threshold

Synopsis	Enter the ber-threshold context
Context	configure port string tdm e1 string ber-threshold
Tree	ber-threshold
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-degrade *number*

Synopsis	BER signal degradation threshold
Context	configure port string tdm e1 string ber-threshold signal-degrade <i>number</i>
Tree	signal-degrade
Range	1 5 10 50 100
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-failure *number*

Synopsis	BER signal failure threshold
Context	configure port <i>string</i> tdm e1 <i>string</i> ber-threshold signal-failure <i>number</i>
Tree	signal-failure
Range	1 5 10 50 100
Default	50
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

channel-group [*ds0-index*] *number*

Synopsis	Enter the channel-group list instance
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i>
Tree	channel-group
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[ds0-index] *number*

Synopsis	DS0 channel group in a channelized DS1 or E1 circuit
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i>
Tree	channel-group
Range	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis	Administrative state of the E1 channel group
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

crc number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Precision of the Cyclic Redundancy Check (CRC)
 Context **configure** port string tdm e1 string channel-group number crc number
 Tree [crc](#)
 Range 16 | 32
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

description string

Synopsis Text description
 Context **configure** port string tdm e1 string channel-group number description string
 Tree [description](#)
 String Length 1 to 160
 Default DS0GRP
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

egress

Synopsis Enter the **egress** context
 Context **configure** port string tdm e1 string channel-group number egress
 Tree [egress](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

port-scheduler-policy

Synopsis Enter the **port-scheduler-policy** context

Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

overrides

Synopsis	Enable the overrides context
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

level [[priority-level](#)] *number*

Synopsis	Enter the level list instance
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[[priority-level](#)] *number*

Synopsis	Port priority levels override
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir decimal-number

Synopsis	CIR for the priority level
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate cir decimal-number
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir decimal-number

Synopsis	PIR for the priority level
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate

Synopsis	Enter the rate context
----------	-------------------------------

Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

max-rate

Synopsis	Enter the max-rate context
----------	-----------------------------------

Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate *decimal-number*

Synopsis	PIR
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate (*number* | *keyword*)

Synopsis	PIR
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

policy-name *reference*

Synopsis	Port egress scheduler policy name
----------	-----------------------------------

Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy <i>policy-name</i> <i>reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

encap-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method used on a port, path, or channel
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> encap-type <i>keyword</i>
Tree	encap-type
Options	bcp-null, bcp-dot1q, ipcp, ppp-auto, wan-mirror, cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-cycle-flag *keyword*

Synopsis	Value transmitted by channel group during idle cycle
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-cycle-flag <i>keyword</i>
Tree	idle-cycle-flag
Options	flags, ones
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-payload-fill

Synopsis	Enter the idle-payload-fill context
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill
Tree	idle-payload-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

all-ones

Synopsis	Define the 8 bit value to be transmitted as 11111111
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pattern number

Synopsis	User-defined pattern to be transmitted
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill pattern <i>number</i>
Tree	pattern
Range	0 to 255
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-signal-fill

Synopsis	Enter the idle-signal-fill context
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-signal-fill
Tree	idle-signal-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

all-ones

Synopsis	Define the 8-bit value to be transmitted as 11111111
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-signal-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: all-ones or pattern .
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pattern *number*

Synopsis User-defined pattern to be transmitted

Context **configure** [port string tdm e1 string channel-group number idle-signal-fill](#) [pattern number](#)

Tree [pattern](#)

Range 0 to 15

Notes The following elements are part of a choice: **all-ones** or **pattern**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

load-balancing-algorithm *keyword*

Synopsis Load balancing algorithm to be used on this port

Context **configure** [port string tdm e1 string channel-group number load-balancing-algorithm keyword](#)

Tree [load-balancing-algorithm](#)

Options default, include-l4, exclude-l4

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mac-address *string*

Synopsis MAC address for the port

Context **configure** [port string tdm e1 string channel-group number mac-address string](#)

Tree [mac-address](#)

Default 00:00:00:00:00:00

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	configure port string tdm e1 string channel-group number mode keyword
Tree	mode
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mtu *number*

Synopsis	Maximum payload MTU
Context	configure port string tdm e1 string channel-group number mtu number
Tree	mtu
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

network

Synopsis	Enter the network context
Context	configure port string tdm e1 string channel-group number network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure port string tdm e1 string channel-group number network accounting-policy reference
Tree	accounting-policy

Reference	configure log accounting-policy <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> network collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

queue-policy *reference*

Synopsis	Network queue policy on TDM E0 network channel group
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> network queue-policy <i>reference</i>
Tree	queue-policy
Reference	configure qos network-queue <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ppp

Synopsis	Enter the ppp context
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> ppp
Tree	ppp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sf-link-down *boolean*

Synopsis	Set link out-of-service on BER-SF alarm
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> ppp ber-sf-link-down <i>boolean</i>

Tree	ber-sf-link-down
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

compress

Synopsis	Enter the compress context
Context	configure port string tdm e1 string channel-group number ppp compress
Tree	compress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

acfc *boolean*

Synopsis	Enable Address Control Field Compression (ACFC)
Context	configure port string tdm e1 string channel-group number ppp compress acfc boolean
Tree	acfc
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pfc *boolean*

Synopsis	Enable Protocol Field Compression (PFC)
Context	configure port string tdm e1 string channel-group number ppp compress pfc boolean
Tree	pfc
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

keepalive

Synopsis	Enter the keepalive context
Context	configure port string tdm e1 string channel-group number ppp keepalive

Tree	keepalive
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

drop-count *number*

Synopsis	Consecutive missed keepalives before port is taken down
Context	configure port string tdm e1 string channel-group number ppp keepalive drop-count number
Tree	drop-count
Range	1 to 255
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

interval (*number* | *keyword*)

Synopsis	Interval at which keepalive messages are issued
Context	configure port string tdm e1 string channel-group number ppp keepalive interval (number keyword)
Tree	interval
Range	1 to 60
Units	seconds
Options	none
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

speed *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Speed of the E0 channels in this channel group
Context	configure port string tdm e1 string channel-group number speed number

Tree	speed
Range	56 64
Default	64
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

timeslot *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure timeslot for this channel group.
Context	configure port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> timeslot <i>number</i>
Tree	timeslot
Range	1 to 32
Max.	32
Instances	
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clock-source *keyword*

Synopsis	Clock for data transmission
Context	configure port <i>string</i> tdm e1 <i>string</i> clock-source <i>keyword</i>
Tree	clock-source
Options	loop-timed, node-timed, adaptive, differential
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

framing *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing on the E1 channel
----------	---------------------------

Context	configure port <i>string</i> tdm e1 <i>string</i> framing <i>keyword</i>
Tree	framing
Options	no-crc-g704, g704, e1-unframed
Default	g704
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

loopback *keyword*

Synopsis	Loopback mode
Context	configure port <i>string</i> tdm e1 <i>string</i> loopback <i>keyword</i>
Tree	loopback
Options	line, internal
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

national-bits

Synopsis	Enter the national-bits context
Context	configure port <i>string</i> tdm e1 <i>string</i> national-bits
Tree	national-bits
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

sa4 *boolean*

Synopsis	Enable bit Sa4
Context	configure port <i>string</i> tdm e1 <i>string</i> national-bits sa4 <i>boolean</i>
Tree	sa4
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

sa5 boolean

Synopsis	Enable bit Sa5
Context	configure port string tdm e1 string national-bits sa5 boolean
Tree	sa5
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

sa6 boolean

Synopsis	Enable bit Sa6
Context	configure port string tdm e1 string national-bits sa6 boolean
Tree	sa6
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

sa7 boolean

Synopsis	Enable bit Sa7
Context	configure port string tdm e1 string national-bits sa7 boolean
Tree	sa7
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

sa8 boolean

Synopsis	Enable bit Sa8
Context	configure port string tdm e1 string national-bits sa8 boolean
Tree	sa8
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port string tdm e1 string report-alarm
Tree	report-alarm
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ais boolean

Synopsis	Report alarm indication signal errors
Context	configure port string tdm e1 string report-alarm ais boolean
Tree	ais
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sd boolean

Synopsis	Enable/disable ber-sd alarm.
Context	configure port string tdm e1 string report-alarm ber-sd boolean
Tree	ber-sd
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ber-sf boolean

Synopsis	Enable/disable ber-sf alarm.
Context	configure port string tdm e1 string report-alarm ber-sf boolean
Tree	ber-sf
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

looped *boolean*

Synopsis	Report looped packet errors
Context	configure port string tdm e1 string report-alarm looped boolean
Tree	looped
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

los *boolean*

Synopsis	Report loss of signal errors
Context	configure port string tdm e1 string report-alarm los boolean
Tree	los
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

oof *boolean*

Synopsis	Report out-of-frame errors
Context	configure port string tdm e1 string report-alarm oof boolean
Tree	oof
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rai *boolean*

Synopsis	Report resource availability indicator events
Context	configure port string tdm e1 string report-alarm rai boolean
Tree	rai
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

signal-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal mode on the channel
Context	configure port <i>string</i> tdm e1 <i>string</i> signal-mode <i>keyword</i>
Tree	signal-mode
Options	channel-associated-signaling
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

e3 [**e3-index**] *string*

Synopsis	Enter the e3 list instance
Context	configure port <i>string</i> tdm e3 <i>string</i>
Tree	e3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[e3-index] *string*

Synopsis	Components making up the SONET/SDH Path
Context	configure port <i>string</i> tdm e3 <i>string</i>
Tree	e3
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

admin-state *keyword*

Synopsis	Administrative state of the E3 channel
Context	configure port <i>string</i> tdm e3 <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clock-source *keyword*

Synopsis	Clock for data transmission
Context	configure port <i>string</i> tdm e3 <i>string</i> clock-source <i>keyword</i>
Tree	clock-source
Options	loop-timed, node-timed
Default	node-timed
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

crc *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precision of the CRC
Context	configure port <i>string</i> tdm e3 <i>string</i> crc <i>number</i>
Tree	crc
Range	16 32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

description *string*

Synopsis	Text description
Context	configure port <i>string</i> tdm e3 <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 160
Default	E3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

egress

Synopsis	Enter the egress context
Context	configure port string tdm e3 string egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

port-scheduler-policy

Synopsis	Enter the port-scheduler-policy context
Context	configure port string tdm e3 string egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

overrides

Synopsis	Enable the overrides context
Context	configure port string tdm e3 string egress port-scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

level [[priority-level](#)] *number*

Synopsis	Enter the level list instance
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number
Tree	level
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[\[priority-level\]](#) *number*

Synopsis	Port priority levels override
----------	-------------------------------

Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate

Synopsis	Enter the percent-rate context
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir decimal-number

Synopsis	CIR for the priority level
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate cir decimal-number
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir decimal-number

Synopsis	PIR for the priority level
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100

Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate

Synopsis	Enter the rate context
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

cir (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

pir (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	configure port string tdm e3 string egress port-scheduler-policy overrides level number rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 3200000000
Units	kilobps

Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

max-rate

Synopsis	Enter the max-rate context
Context	configure port string tdm e3 string egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

percent-rate decimal-number

Synopsis	PIR
Context	configure port string tdm e3 string egress port-scheduler-policy overrides max-rate percent-rate decimal-number
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rate (number | keyword)

Synopsis	PIR
Context	configure port string tdm e3 string egress port-scheduler-policy overrides max-rate rate (number keyword)
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max

Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

policy-name *reference*

Synopsis	Port egress scheduler policy name
Context	configure port <i>string</i> tdm e3 <i>string</i> egress port-scheduler-policy <i>policy-name</i> <i>reference</i>
Tree	policy-name
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

encap-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method used on a port, path, or channel
Context	configure port <i>string</i> tdm e3 <i>string</i> encap-type <i>keyword</i>
Tree	encap-type
Options	bcp-null, bcp-dot1q, ipcp, ppp-auto, wan-mirror, cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

framing *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing for the E3 channel
Context	configure port <i>string</i> tdm e3 <i>string</i> framing <i>keyword</i>
Tree	framing

Options	g751, g832, e3-unframed
Default	g751
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

idle-cycle-flag *keyword*

Synopsis	Value transmitted by channel group during idle cycle
Context	configure port <i>string</i> tdm e3 <i>string</i> idle-cycle-flag <i>keyword</i>
Tree	idle-cycle-flag
Options	flags, ones
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

load-balancing-algorithm *keyword*

Synopsis	Load balancing algorithm to be used on this port
Context	configure port <i>string</i> tdm e3 <i>string</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

loopback *keyword*

Synopsis	Loopback mode
Context	configure port <i>string</i> tdm e3 <i>string</i> loopback <i>keyword</i>
Tree	loopback
Options	line, internal
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mac-address *string*

Synopsis	MAC address for the port
----------	--------------------------

Context	configure port string tdm e3 string mac-address string
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mode keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	configure port string tdm e3 string mode keyword
Tree	mode
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mtu number

Synopsis	Maximum payload MTU size
Context	configure port string tdm e3 string mtu number
Tree	mtu
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

network

Synopsis	Enter the network context
Context	configure port string tdm e3 string network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure port string tdm e3 string network accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

collect-stats *boolean*

Synopsis	Collect accounting and statistical data
Context	configure port string tdm e3 string network collect-stats boolean
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

queue-policy *reference*

Synopsis	Queue policy on the TDM E3 network channel
Context	configure port string tdm e3 string network queue-policy reference
Tree	queue-policy
Reference	configure qos network-queue string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ppp

Synopsis	Enter the ppp context
Context	configure port string tdm e3 string ppp
Tree	ppp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

keepalive

Synopsis	Enter the keepalive context
Context	configure port <i>string</i> tdm e3 <i>string</i> ppp keepalive
Tree	keepalive
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

drop-count *number*

Synopsis	Consecutive missed keepalives before port is taken down
Context	configure port <i>string</i> tdm e3 <i>string</i> ppp keepalive drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

interval (*number* | *keyword*)

Synopsis	Interval at which keepalive messages are issued
Context	configure port <i>string</i> tdm e3 <i>string</i> ppp keepalive interval (<i>number</i> <i>keyword</i>)
Tree	interval
Range	1 to 60
Units	seconds
Options	none
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

report-alarm

Synopsis	Enter the report-alarm context
Context	configure port <i>string</i> tdm e3 <i>string</i> report-alarm
Tree	report-alarm

Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

ais *boolean*

Synopsis Report alarm indication signal errors
Context **configure** port string tdm e3 string report-alarm ais boolean
Tree ais
Default true
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

looped *boolean*

Synopsis Report looped packet errors
Context **configure** port string tdm e3 string report-alarm looped boolean
Tree looped
Default false
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

los *boolean*

Synopsis Report loss of signal errors
Context **configure** port string tdm e3 string report-alarm los boolean
Tree los
Default true
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

oof *boolean*

Synopsis Report out-of-frame errors
Context **configure** port string tdm e3 string report-alarm oof boolean
Tree oof

Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

rai *boolean*

Synopsis	Report resource availability indicator events
Context	configure port <i>string</i> tdm e3 <i>string</i> report-alarm rai <i>boolean</i>
Tree	rai
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

scramble *boolean*

Synopsis	Enable TDM E3 payload scrambling
Context	configure port <i>string</i> tdm e3 <i>string</i> scramble <i>boolean</i>
Tree	scramble
Description	When configured to true , the TDM E3 frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking. When configured to false , the strings of all 1s or all 0s are continuous.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

hold-time

Synopsis	Enter the hold-time context
Context	configure port <i>string</i> tdm hold-time
Tree	hold-time
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

down *number*

Synopsis	Hold timer for link down event dampening
----------	--

Context	configure port string tdm hold-time down number
Tree	down
Range	0 to 100
Default	5
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

up number

Synopsis	Hold timer for link up event dampening
Context	configure port string tdm hold-time up number
Tree	up
Range	1 to 100
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

transceiver

Synopsis	Enter the transceiver context
Context	configure port string transceiver
Tree	transceiver
Introduced	16.0.R4
Platforms	All

digital-coherent-optics boolean

Synopsis	Enable digital coherent optics module for transceiver
Context	configure port string transceiver digital-coherent-optics boolean
Tree	digital-coherent-optics
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

3.33 port-policy commands

```
configure
- port-policy string
- apply-groups reference
- apply-groups-exclude reference
- description string
- egress-port-scheduler-policy reference
```

String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress-port-scheduler-policy *reference*

Synopsis	Policy for egress port scheduler
Context	configure port-policy <i>string</i> egress-port-scheduler-policy <i>reference</i>

Tree	egress-port-scheduler-policy
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.34 port-xc commands

```
configure
- port-xc
  - apply-groups reference
  - apply-groups-exclude reference
  - pxc number
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - description string
    - port-id reference
```

3.34.1 port-xc command descriptions

port-xc

Synopsis	Enter the port-xc context
Context	configure port-xc
Tree	port-xc
Description	Commands in this context configure port cross-connect (PXC) functionality.
Introduced	16.0.R1
Platforms	All

pxc [[pxc-id](#)] *number*

Synopsis	Enter the pxc list instance
Context	configure port-xc pxc number
Tree	pxc
Description	Commands in this context configure port cross-connect (PXC) information.
Introduced	16.0.R1
Platforms	All

[\[pxc-id\]](#) *number*

Synopsis	PXC ID
Context	configure port-xc pxc number
Tree	pxc
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the PXC
Context	configure port-xc pxc number admin-state keyword

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure port-xc pxc number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

- monitor-oper-group reference
- vc-id number
- vc-type keyword
- vlan-vc-tag number

```

3.35.1 pw-port command descriptions

pw-port [*pw-port-id*] *number*

Synopsis	Enter the pw-port list instance
Context	configure <i>pw-port number</i>
Tree	<i>pw-port</i>
Introduced	16.0.R4
Platforms	All

[pw-port-id] *number*

Synopsis	Pseudowire port ID
Context	configure <i>pw-port number</i>
Tree	<i>pw-port</i>
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	configure <i>pw-port number description string</i>
Tree	<i>description</i>
String Length	1 to 255
Default	PW Port
Introduced	16.0.R4
Platforms	All

dot1q-etype *string*

Synopsis	Dot1q Ethertype on the PW port
Context	configure <i>pw-port number dot1q-etype string</i>
Tree	<i>dot1q-etype</i>

Default	33024
Introduced	16.0.R4
Platforms	All

encap-type *keyword*

Synopsis	Encap type of the pseudo-wire port
Context	configure pw-port number encap-type keyword
Tree	encap-type
Options	dot1q, qinq
Default	dot1q
Introduced	16.0.R4
Platforms	All

epipe [[service-name](#)] *reference*

Synopsis	Enter the epipe list instance
Context	configure pw-port number epipe reference
Tree	epipe
Max. Instances	1
Notes	The following elements are part of a choice: epipe or sdp .
Introduced	16.0.R4
Platforms	All

[service-name] *reference*

Synopsis	Administrative service name
Context	configure pw-port number epipe reference
Tree	epipe
Reference	configure service epipe string
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the pseudowire port
Context	configure pw-port <i>number</i> epipe <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

down-on-peer-tldp-pw-status-faults *boolean*

Synopsis	Force PW port to go down for certain PW status bits
Context	configure pw-port <i>number</i> epipe <i>reference</i> down-on-peer-tldp-pw-status-faults <i>boolean</i>
Tree	down-on-peer-tldp-pw-status-faults
Description	<p>When configured to true, the router causes the PW port configured on an Epipe to go locally operationally down if any of the following status bits are received on a mate spoke SDP across an FPE:</p> <ul style="list-style-type: none"> • 0x00000001 - Pseudowire Not Forwarding • 0x00000002 - Local Attachment Circuit (ingress) Receive Fault • 0x00000004 - Local Attachment Circuit (egress) Transmit Fault • 0x00000008 - Local PSN-facing PW (ingress) Receive Fault • 0x00000010 - Local PSN-facing PW (egress) Transmit Fault <p>When configured to false, the mate PW status fault bits are not taken into account in the operational state of the PW port.</p>
Default	false
Introduced	22.2.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure pw-port <i>number</i> epipe <i>reference</i> egress
Tree	egress
Introduced	16.0.R4
Platforms	All

shaper

Synopsis	Enter the shaper context
Context	configure pw-port number epipe reference egress shaper
Tree	shaper
Introduced	16.0.R4
Platforms	All

intermediate-destination-id *string*

Synopsis	Intermediate destination ID for ESM PW SAPs
Context	configure pw-port number epipe reference egress shaper intermediate-destination-id string
Tree	intermediate-destination-id
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

virtual-port *string*

Synopsis	Virtual port name of the egress shaper
Context	configure pw-port number epipe reference egress shaper virtual-port string
Tree	virtual-port
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

fpe-id *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding Path Extension ID
Context	configure pw-port number epipe reference fpe-id reference
Tree	fpe-id

Reference	configure fwd-path-ext fpe number
Introduced	16.0.R4
Platforms	All

monitor-oper-group *reference*

Synopsis	Name of the operational group to monitor
Context	configure pw-port number epipe reference monitor-oper-group reference
Tree	monitor-oper-group
Reference	configure service oper-group string
Introduced	16.0.R4
Platforms	All

oper-up-on-mh-standby *boolean*

Synopsis	Sets PW port to operationally up on MH standby
Context	configure pw-port number epipe reference oper-up-on-mh-standby boolean
Tree	oper-up-on-mh-standby
Description	<p>When configured to true, this command allows the PW port to remain operationally up on the non-DF PE and all the PW SAPs contained in the PW port.</p> <p>The PW port status shows operationally up status with a flag MH Standby.</p> <p>When configured to false, this command causes the PW port to remain operationally down on the non-DF PE and all the PW SAPs contained in the PW port.</p>
Default	false
Introduced	22.2.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group ID
Context	configure pw-port number oper-group reference
Tree	oper-group
Reference	configure service oper-group string
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qinq-etype *string*

Synopsis	QinQ Ethertype encapsulation on the PW port
Context	configure pw-port number qinq-etype string
Tree	qinq-etype
Default	33024
Introduced	16.0.R4
Platforms	All

sdp [[sdp-id](#)] *reference*

Synopsis	Enter the sdp list instance
Context	configure pw-port number sdp reference
Tree	sdp
Max. Instances	1
Notes	The following elements are part of a choice: epipe or sdp .
Introduced	16.0.R4
Platforms	All

[sdp-id] *reference*

Synopsis	SDP ID
Context	configure pw-port number sdp reference
Tree	sdp
Reference	configure service sdp number
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the pseudowire port
Context	configure pw-port number sdp reference admin-state keyword
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

adv-service-mtu *number*

Synopsis	Service MTU size to be used
Context	configure pw-port number sdp reference adv-service-mtu number
Tree	adv-service-mtu
Range	0 to 9782
Units	bytes
Introduced	21.7.R1
Platforms	All

control-word *boolean*

Synopsis	Allow control word bit setting in the label message
Context	configure pw-port number sdp reference control-word boolean
Tree	control-word
Default	false
Introduced	19.10.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure pw-port number sdp reference egress
Tree	egress
Introduced	16.0.R4
Platforms	All

shaper

Synopsis	Enter the shaper context
----------	---------------------------------

Context	configure pw-port number sdp reference egress shaper
Tree	shaper
Introduced	16.0.R4
Platforms	All

intermediate-destination-id *string*

Synopsis	Intermediate destination ID applicable to ESM PW SAPs
Context	configure pw-port number sdp reference egress shaper intermediate-destination-id string
Tree	intermediate-destination-id
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

pw-sap-secondary-shaper *string*

Synopsis	Secondary shaper applicable to PW SAPs
Context	configure pw-port number sdp reference egress shaper pw-sap-secondary-shaper string
Tree	pw-sap-secondary-shaper
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

virtual-port *string*

Synopsis	Virtual port applicable to all PW SAPs
Context	configure pw-port number sdp reference egress shaper virtual-port string
Tree	virtual-port
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress VC label representing the PW port
Context	configure <i>pw-port number sdp reference egress vc-label number</i>
Tree	vc-label
Range	16 to 1048575
Introduced	16.0.R4
Platforms	All

entropy-label *boolean*

Synopsis	Enable entropy level insertion on the PW port
Context	configure <i>pw-port number sdp reference entropy-label boolean</i>
Tree	entropy-label
Description	<p>When configured to true, the entropy label and ELI are inserted in packets for which at least one LSP in the stack for the far-end of the tunnel used by the service has advertised entropy label capability.</p> <ul style="list-style-type: none"> For RSVP or SR-TE tunnels, the entropy-label command must be set to true under the configure router mpls or configure router mpls lsp context. For SR-ISIS, SR-OSPF, or SR-TE tunnels, the override-tunnel-elic command must be set to true under the configure router isis entropy-label or configure router ospf entropy-label context. For LDP tunnels, the entropy-label-capability command must be set to true under the configure router ldp context. <p>When configured to false, entropy label insertion on the PW port is not allowed.</p> <p>The entropy label is only applicable to PW ports bound to a static port; it is not applicable to ports using an FPE.</p>
Default	false
Introduced	21.5.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure <i>pw-port number sdp reference ingress</i>

Tree	ingress
Introduced	16.0.R4
Platforms	All

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress VC label representing the PW-port
Context	configure pw-port <i>number</i> sdp <i>reference</i> ingress vc-label <i>number</i>
Tree	vc-label
Range	1 to 1048575
Introduced	16.0.R4
Platforms	All

monitor-oper-group *reference*

Synopsis	Name of the operational group to monitor
Context	configure pw-port <i>number</i> sdp <i>reference</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>string</i>
Introduced	16.0.R4
Platforms	All

vc-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Virtual Circuit ID signaled to the peer
Context	configure pw-port <i>number</i> sdp <i>reference</i> vc-id <i>number</i>
Tree	vc-id
Range	1 to 4294967295

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

vc-type *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Forwarding mode for the PW-port
Context	configure pw-port number sdp reference vc-type keyword
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	16.0.R4
Platforms	All

vlan-vc-tag *number*

Synopsis	VLAN VC tag
Context	configure pw-port number sdp reference vlan-vc-tag number
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	16.0.R4
Platforms	All

3.37.1 qos command descriptions

qos

Synopsis	Enter the qos context
Context	configure qos
Tree	qos
Introduced	16.0.R1
Platforms	All

adv-config-policy [[adv-config-policy-name](#)] *string*

Synopsis	Enter the adv-config-policy list instance
Context	configure qos adv-config-policy <i>string</i>
Tree	adv-config-policy
Max. Instances	255
Introduced	16.0.R1
Platforms	All

[[adv-config-policy-name](#)] *string*

Synopsis	Advanced QoS policy name
Context	configure qos adv-config-policy <i>string</i>
Tree	adv-config-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

child-control

Synopsis	Enter the child-control context
Context	configure qos adv-config-policy <i>string</i> child-control
Tree	child-control

Introduced	16.0.R1
Platforms	All

bandwidth-distribution

Synopsis	Enter the bandwidth-distribution context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution
Tree	bandwidth-distribution
Introduced	16.0.R1
Platforms	All

above-offered-allowance

Synopsis	Enter the above-offered-allowance context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance
Tree	above-offered-allowance
Description	Commands in this context control the child's above offered allowance bandwidth. The configuration is only applicable when the port scheduler is configured to use the above-offered-allowance-control algorithm (specified via the configure qos port-scheduler-policy hqos-algorithm command).
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delta-consumed-agg-rate

Synopsis	Enter the delta-consumed-agg-rate context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance delta-consumed-agg-rate
Tree	delta-consumed-agg-rate
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent *decimal-number*

Synopsis	Percentage of the delta consumed aggregate rate
----------	---

Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance delta-consumed-agg-rate percent <i>decimal-number</i>
Tree	percent
Description	This command configures the percentage of the delta (from the beginning to the end of the current H-QoS below CIR or above CIR pass) of the aggregate rate consumed by other members that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. This command is only applicable when the port scheduler is configured to use the above-offered-allowance-control algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	20.00
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delta-consumed-higher-tier-rate

Synopsis	Enter the delta-consumed-higher-tier-rate context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance delta-consumed-higher-tier-rate
Tree	delta-consumed-higher-tier-rate
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent *decimal-number*

Synopsis	Percentage of the delta consumed higher-tier rate
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance delta-consumed-higher-tier-rate percent <i>decimal-number</i>
Tree	percent
Description	This command configures the percentage of the delta (from the beginning to the end of the current H-QoS below CIR or above CIR pass) of the higher-tier rate consumed by its other members that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. Higher tier refers to the Vport aggregate rate and port scheduler level, group, and maximum rates. This command is only applicable when the port scheduler is configured to use the above-offered-allowance-control algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	5.00
Introduced	19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

unconsumed-agg-rate

Synopsis Enter the **unconsumed-agg-rate** context

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-agg-rate

Tree [unconsumed-agg-rate](#)

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent *decimal-number*

Synopsis Percentage of the unconsumed aggregate rate

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-agg-rate percent *decimal-number*

Tree [percent](#)

Description This command configures the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. This command is only applicable when the port scheduler is configured to use the **above-offered-allowance-control** algorithm; otherwise it is ignored.

Range 0.00 to 100.00

Default 100.00

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

unconsumed-higher-tier-rate

Synopsis Enter the **unconsumed-higher-tier-rate** context

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-higher-tier-rate

Tree [unconsumed-higher-tier-rate](#)

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent *decimal-number*

Synopsis	Percentage of the unconsumed higher-tier rate
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance unconsumed-higher-tier-rate percent <i>decimal-number</i>
Tree	percent
Description	This command configures the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. Higher tier refers to the Vport aggregate rate and port scheduler level, group, and maximum rates. This command is only applicable when the port scheduler is configured to use the above-offered-allowance-control algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	100.00
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

above-offered-cap

Synopsis	Enter the above-offered-cap context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap
Tree	above-offered-cap
Introduced	16.0.R1
Platforms	All

percent *decimal-number*

Synopsis	Percentage of PIR used as the fair share increase limit
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap percent <i>decimal-number</i>
Tree	percent
Range	0.00 to 100.00
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

rate (*number* | *keyword*)

Synopsis	Explicit rate as the fair share increase limit
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	0 to 100000000
Options	max
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

enqueue-on-pir-zero *boolean*

Synopsis	Queue packets when bandwidth distribution set to zero
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution enqueue-on-pir-zero <i>boolean</i>
Tree	enqueue-on-pir-zero
Default	false
Introduced	16.0.R1
Platforms	All

granularity

Synopsis	Enter the granularity context
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution granularity
Tree	granularity
Introduced	16.0.R1
Platforms	All

percent *decimal-number*

Synopsis	Rounding percentage value for administrative PIR
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution granularity percent <i>decimal-number</i>
Tree	percent
Range	0.00 to 100.00

Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

rate number

Synopsis	Rounding rate step value
Context	configure qos adv-config-policy string child-control bandwidth-distribution granularity rate number
Tree	rate
Range	0 to 100000000
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

internal-scheduler-weight-mode keyword

Synopsis	Weight mode applied to this advanced QoS policy
Context	configure qos adv-config-policy string child-control bandwidth-distribution internal-scheduler-weight-mode keyword
Tree	internal-scheduler-weight-mode
Options	auto, force-equal, offered-load, capped-offered-load
Introduced	16.0.R1
Platforms	All

limit-pir-zero-drain boolean

Synopsis	Throttle draining when operational PIR set to zero
Context	configure qos adv-config-policy string child-control bandwidth-distribution limit-pir-zero-drain boolean
Tree	limit-pir-zero-drain
Default	false
Introduced	16.0.R1
Platforms	All

lub-init-min-pir *boolean*

Synopsis	Apply minimal PIR for new queues when LUB is enabled
Context	configure qos adv-config-policy <i>string</i> child-control bandwidth-distribution lub-init-min-pir <i>boolean</i>
Tree	lub-init-min-pir
Default	false
Introduced	16.0.R1
Platforms	All

offered-measurement

Synopsis	Enter the offered-measurement context
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement
Tree	offered-measurement
Introduced	16.0.R1
Platforms	All

add

Synopsis	Enter the add context
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement add
Tree	add
Introduced	16.0.R1
Platforms	All

active-min-only *boolean*

Synopsis	Use minimum offered rate for active queues or policers
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement add active-min-only <i>boolean</i>
Tree	active-min-only
Default	false
Introduced	16.0.R1
Platforms	All

min-only *boolean*

Synopsis	Use increase in operational PIR as minimum offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement add min-only <i>boolean</i>
Tree	min-only
Default	false
Introduced	16.0.R1
Platforms	All

percent *decimal-number*

Synopsis	Percentage of child PIR to add to offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement add percent <i>decimal-number</i>
Tree	percent
Range	0.00 to 100.00
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

rate *number*

Synopsis	Rate value to add to child's offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement add rate <i>number</i>
Tree	rate
Range	0 to 100000000
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

fast-start *boolean*

Synopsis	Allow fast detection of initial bandwidth
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement fast-start <i>boolean</i>

Tree	fast-start
Default	false
Introduced	16.0.R1
Platforms	All

fast-stop *boolean*

Synopsis	Allow fast detection of lack of offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement fast-stop <i>boolean</i>
Tree	fast-stop
Default	false
Introduced	16.0.R1
Platforms	All

granularity

Synopsis	Enter the granularity context
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement granularity
Tree	granularity
Introduced	16.0.R1
Platforms	All

percent *decimal-number*

Synopsis	Percentage of PIR used as threshold sensitivity to offered rate change
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement granularity percent <i>decimal-number</i>
Tree	percent
Range	0.00 to 100.00
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

rate *number*

Synopsis	Rate as child's offered rate change sensitivity value
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement granularity rate <i>number</i>
Tree	rate
Range	0 to 100000000
Notes	The following elements are part of a choice: percent or rate .
Introduced	16.0.R1
Platforms	All

hold-time

Synopsis	Enter the hold-time context
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement hold-time
Tree	hold-time
Introduced	16.0.R1
Platforms	All

active-min-only *boolean*

Synopsis	Use minimum offered rate for active queues or policers
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement hold-time active-min-only <i>boolean</i>
Tree	active-min-only
Default	false
Introduced	16.0.R1
Platforms	All

high-rate *number*

Synopsis	Time to maintain current offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement hold-time high-rate <i>number</i>
Tree	high-rate
Range	0 to 60
Default	0

Introduced 16.0.R1
Platforms All

max-decrement

Synopsis Enter the **max-decrement** context
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement
Tree [max-decrement](#)
Introduced 16.0.R1
Platforms All

percent *decimal-number*

Synopsis percentage as decrement limit to offered rate change
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement percent *decimal-number*
Tree [percent](#)
Range 0.00 to 100.00
Notes The following elements are part of a choice: **percent** or **rate**.
Introduced 16.0.R1
Platforms All

rate *number*

Synopsis Value to use as decrement limit to offered rate change
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement rate *number*
Tree [rate](#)
Range 0 to 100000000
Notes The following elements are part of a choice: **percent** or **rate**.
Introduced 16.0.R1
Platforms All

sample-interval *number*

Synopsis	Interval for sampling the child's offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement sample-interval <i>number</i>
Tree	sample-interval
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

time-average-factor

Synopsis	Enter the time-average-factor context
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor
Tree	time-average-factor
Introduced	16.0.R1
Platforms	All

dec-only *boolean*

Synopsis	Apply time adjustment when the offered rate decreases
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor dec-only <i>boolean</i>
Tree	dec-only
Default	false
Introduced	16.0.R1
Platforms	All

weighting-factor *number*

Synopsis	New offered rate with a sample of the previous offered rate
Context	configure qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor weighting-factor <i>number</i>
Tree	weighting-factor
Range	0 to 64

Default	0
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos adv-config-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

atm-td-profile [*atm-td-profile-id*] *number*

Synopsis	Enter the atm-td-profile list instance
Context	configure qos atm-td-profile <i>number</i>
Tree	atm-td-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

[atm-td-profile-id] *number*

Synopsis	ATM traffic descriptor ID
Context	configure qos atm-td-profile <i>number</i>
Tree	atm-td-profile
Range	1 to 1000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

clp-tagging *boolean*

Synopsis	Control the setting of CLP bit in the ATM cell header
Context	configure qos atm-td-profile <i>number</i> clp-tagging <i>boolean</i>

Tree	clp-tagging
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

description *string*

Synopsis	Text description
Context	configure qos atm-td-profile <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

descriptor-type *keyword*

Synopsis	ATM traffic descriptor type
Context	configure qos atm-td-profile <i>number</i> descriptor-type <i>keyword</i>
Tree	descriptor-type
Options	p01, p01-and-s01, p01-and-s0, p01-and-s0-tag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

policing *boolean*

Synopsis	Allow ingress traffic policing
Context	configure qos atm-td-profile <i>number</i> policing <i>boolean</i>
Tree	policing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

service-category *keyword*

Synopsis	ATM service category
----------	----------------------

Context	configure qos atm-td-profile <i>number</i> <i>service-category</i> <i>keyword</i>
Tree	service-category
Options	cbr, rt-vbr, nrt-vbr, ubr
Default	ubr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

shaping *boolean*

Synopsis	Enable egress shaping
Context	configure qos atm-td-profile <i>number</i> shaping <i>boolean</i>
Tree	shaping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

traffic

Synopsis	Enter the traffic context
Context	configure qos atm-td-profile <i>number</i> traffic
Tree	traffic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

cdvt *number*

Synopsis	Cell Delay Variation Tolerance
Context	configure qos atm-td-profile <i>number</i> traffic cdvt <i>number</i>
Tree	cdvt
Max. Range	0 to 4294967295
Units	microseconds
Default	250
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

mbs number

Synopsis	Maximum burst size in cell
Context	configure qos atm-td-profile number traffic mbs number
Tree	mbs
Max. Range	0 to 4294967295
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

mir number

Synopsis	Minimum information rate
Context	configure qos atm-td-profile number traffic mir number
Tree	mir
Max. Range	0 to 4294967295
Units	kilobps
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

pir number

Synopsis	Peak information rate
Context	configure qos atm-td-profile number traffic pir number
Tree	pir
Max. Range	0 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

sir number

Synopsis	Sustained information rate
Context	configure qos atm-td-profile number traffic sir number
Tree	sir

Max. Range	0 to 4294967295
Units	kilobps
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

weight *number*

Synopsis	Relative weight for the ATM traffic descriptor based on ATM VP shaper scheduling
Context	configure qos atm-td-profile <i>number weight number</i>
Tree	weight
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

fp-resource-policy [[fp-resource-policy-name](#)] *string*

Synopsis	Enter the fp-resource-policy list instance
Context	configure qos fp-resource-policy <i>string</i>
Tree	fp-resource-policy
Max. Instances	15
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[fp-resource-policy-name] *string*

Synopsis	FP resource policy name
Context	configure qos fp-resource-policy <i>string</i>
Tree	fp-resource-policy
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

aggregate-shapers

Synopsis	Enter the aggregate-shapers context
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers
Tree	aggregate-shapers
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

auto-creation *boolean*

WARNING:

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enables auto-creation of hardware aggregate shapers
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers auto-creation <i>boolean</i>
Tree	auto-creation
Description	When configured to true , enables the auto-creation of hardware aggregate shapers on the specified FP. After enabling, the corresponding FP is rebooted.
Default	false
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

hw-agg-shapers

Synopsis	Enter the hw-agg-shapers context
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers
Tree	hw-agg-shapers
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

saps *boolean***WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enable hardware aggregate shapers for SAPs
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers saps <i>boolean</i>
Tree	saps
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

subscribers *boolean***WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enable hardware aggregate shapers for subscribers
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers subscribers <i>boolean</i>
Tree	subscribers
Default	false
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

queue-sets

Synopsis	Enter the queue-sets context
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets
Tree	queue-sets
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

default-size

Synopsis	Enter the default-size context
Context	configure qos fp-resource-policy string aggregate-shapers queue-sets default-size
Tree	default-size
Description	Commands in this context configure the default queue-set size for individual object types.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

queue-groups (*number* | *keyword*)

Synopsis	Default size of queue-groups
Context	configure qos fp-resource-policy string aggregate-shapers queue-sets default-size queue-groups (<i>number</i> <i>keyword</i>)
Tree	queue-groups
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

saps (*number* | *keyword*)

Synopsis	Default queue-set size for SAPs
Context	configure qos fp-resource-policy string aggregate-shapers queue-sets default-size saps (<i>number</i> <i>keyword</i>)
Tree	saps
Description	This command configures the default queue-set size for SAPs. When the non-shaper-queues keyword is configured, SAPs do not use hardware aggregate shapers on FPs where the specified FP resource policy is applied.
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

subscribers (*number* | *keyword*)

Synopsis	Default queue-set size for subscribers
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets default-size subscribers (<i>number</i> <i>keyword</i>)
Tree	subscribers
Description	This command configures the default queue-set size for subscribers. When the non-shaper-queues keyword is configured, SAPs do not use hardware aggregate shapers on FPs where the specified FP resource policy is applied.
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

size [*qset-size*] *number*

Synopsis	Enter the size list instance
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i>
Tree	size
Description	Commands in this context configure parameters for the specified queue-set size.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

[qset-size] *number*

Synopsis	Size of the queue-sets
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i>
Tree	size
Range	2 to 8
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

allocation-weight *number*

Synopsis	Allocation weight of the queue-set size
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i> allocation-weight <i>number</i>
Tree	allocation-weight
Description	This command configures the allocation weight for the specified queue-set size. The available queue-sets are distributed based on the allocation weight among different queue-set sizes.
Range	0 to 100
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

reserved-non-shaper-queues *number*

Synopsis	Number of queues reserved for non-shaper queues
Context	configure qos fp-resource-policy <i>string</i> aggregate-shapers reserved-non-shaper-queues <i>number</i>
Tree	reserved-non-shaper-queues
Description	This command configures the number of egress queues that will not be used by hardware aggregate shapers.
Range	2048 to 262144
Default	8192
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

description *string*

Synopsis	Text description
Context	configure qos fp-resource-policy <i>string</i> description <i>string</i>

ports

Synopsis	Enter the ports context
Context	configure qos fp-resource-policy string ports
Tree	ports
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

hqos-mode *keyword*

**WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Default HQOS mode of the port
Context	configure qos fp-resource-policy string ports hqos-mode keyword
Tree	hqos-mode
Options	port-scheduler, hw-agg-shaping
Default	port-scheduler
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

queues

Synopsis	Enter the queues context
Context	configure qos fp-resource-policy string queues
Tree	queues
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ingress-percent-of-total *decimal-number*

**WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Percentage of total ingress queues allocated
Context	configure qos fp-resource-policy <i>string</i> queues ingress-percent-of-total <i>decimal-number</i>
Tree	ingress-percent-of-total
Description	<p>This command configures the percentage of the total number of queues on the FP on which the policy is applied that are allocated to ingress, with the remainder allocated to egress. The ingress and egress buffer pool sizes are not affected by the queue allocation.</p> <p>The allocation is performed in sets of 8192 queues, with a minimum of 8192 queues at ingress and 8192 queues at egress. If the percentage configured results in the queue allocation not being a multiple of 8192, the number of queues at ingress is rounded down to the next 8192 boundary, and consequently the number of queues at egress is rounded up to the next 8192 boundary, both while respecting the minimum at ingress and egress.</p> <p>If the FP resource policy is applied to any FP and the updated allocation is not achievable with the current ingress or egress queue consumption on any of the related FPs, the command fails.</p> <p>The configuration of this command (which includes removing the configuration) causes the router to immediately reset the associated cards, XIOMs and MDAs on all FPs on which the FP resource policy is applied, except on the 7750 SR-1, where the configuration must be saved and the router rebooted, immediately after committing the configuration transaction.</p>
Range	4.00 to 97.00
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

port-bw-oversubscription-factor *number*

Synopsis	Over subscription factor for port-class pool sizes
Context	configure qos hs-pool-policy <i>string</i> <i>mid-tier</i> <i>mid-pool</i> <i>number</i> port-bw-oversubscription-factor <i>number</i>
Tree	port-bw-oversubscription-factor
Description	This command modifies the size of the mid-pool when calculating the port-class pool sizes based on port bandwidth ratios. The over subscription factor for a mid-pool can

be modified at any time, causing the corresponding port-class pool dynamic sizes to be recalculated. A similar behavior can be obtained by increasing the mid-pool's allocation-percent of its parent root-pool. However, the major difference in using this command is that it provides larger port-class pools without allowing the mid-pool to use a higher number of buffers in the root pool.

Range	1 to 10

Tree **class-pool**

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

[std-class-pool-id] *number*

Synopsis Class pool ID

Context **configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool number**

Tree **class-pool**

Range 1 to 6

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

allocation

Synopsis Enter the **allocation** context

Context **configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool number allocation**

Tree **allocation**

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

explicit-percent *decimal-number*

Synopsis Percentage of parent pool to be allocated

Context **configure qos hs-port-pool-policy** *string* **std-port-class-pools class-pool number allocation explicit-percent decimal-number**

Tree **explicit-percent**

Range 0.01 to 100.00

Notes	The following elements are part of a choice: explicit-percent or port-bw-weight .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

port-bw-weight *number*

Synopsis	Port bandwidth weight to be allocated
Context	configure qos hs-port-pool-policy <i>string</i> std-port-class-pools class-pool <i>number</i> allocation port-bw-weight <i>number</i>
Tree	port-bw-weight
Range	1 to 100
Default	1
Notes	The following elements are part of a choice: explicit-percent or port-bw-weight .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

parent-mid-pool

Synopsis	Enter the parent-mid-pool context
Context	configure qos hs-port-pool-policy <i>string</i> std-port-class-pools class-pool <i>number</i> parent-mid-pool
Tree	parent-mid-pool
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

none

Synopsis	Deactivate the port-class pool; pool size is zero
Context	configure qos hs-port-pool-policy <i>string</i> std-port-class-pools class-pool <i>number</i> parent-mid-pool none
Tree	none
Notes	The following elements are part of a choice: none or pool-id .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

pool-id *number*

Synopsis	Mid-pool ID associated with the port-class pool
Context	configure qos hs-port-pool-policy <i>string</i> std-port-class-pools class-pool <i>number</i> parent-mid-pool pool-id <i>number</i>
Tree	pool-id
Range	1 to 16
Notes	The following elements are part of a choice: none or pool-id .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

slope-policy *reference*

Synopsis	Slope policy to define high, low, and exceed slopes
Context	configure qos hs-port-pool-policy <i>string</i> std-port-class-pools class-pool <i>number</i> slope-policy <i>reference</i>
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-scheduler-policy [*name*] *string*

Synopsis	Enter the hs-scheduler-policy list instance
Context	configure qos hs-scheduler-policy <i>string</i>
Tree	hs-scheduler-policy
Max. Instances	127
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

[name] *string*

Synopsis	HS scheduler policy name
Context	configure qos hs-scheduler-policy <i>string</i>
Tree	hs-scheduler-policy
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

description *string*

Synopsis	Text description
Context	configure qos hs-scheduler-policy <i>string description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

group [[group-id](#)] *number*

Synopsis	Enter the group list instance
Context	configure qos hs-scheduler-policy <i>string group number</i>
Tree	group
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

[group-id] *number*

Synopsis	Group ID for the HS scheduler policy
Context	configure qos hs-scheduler-policy <i>string group number</i>
Tree	group
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis	Group maximum rate
Context	configure qos hs-scheduler-policy <i>string group number rate (number keyword)</i>

Tree	rate
Range	1 to 100000
Units	megabps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit for the policy
Context	configure qos hs-scheduler-policy <i>string</i> max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 100000
Options	max
Default	max
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

scheduling-class [[class-id](#)] *number*

Synopsis	Enter the scheduling-class list instance
Context	configure qos hs-scheduler-policy <i>string</i> scheduling-class <i>number</i>
Tree	scheduling-class
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

[class-id] *number*

Synopsis	Scheduling class for the HS scheduler policy
Context	configure qos hs-scheduler-policy <i>string</i> scheduling-class <i>number</i>
Tree	scheduling-class
Range	1 to 6
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7750 SR-7/12/12e

group

Synopsis Enable the **group** context

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group

Tree [group](#)

Notes The following elements are part of a choice: **group** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

group-id *number*

Synopsis Associated group associated with this scheduling class

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group group-id *number*

Tree [group-id](#)

Range 1

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

weight *number*

Synopsis Weight associated with this scheduling class

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group weight *number*

Tree [weight](#)

Range 1 to 127

Default 1

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context	configure qos hs-scheduler-policy <i>string scheduling-class number rate (number keyword)</i>
Tree	rate
Range	1 to 100000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: group or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hw-agg-shaper-scheduler-policy [[name](#)] *string*

Synopsis	Enter the hw-agg-shaper-scheduler-policy list instance
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i>
Tree	hw-agg-shaper-scheduler-policy
Description	Commands in this context configure the attributes of a hardware aggregate shaper scheduler policy.
Max. Instances	127
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

[name] *string*

Synopsis	Name of the hardware aggregate shaper scheduler policy
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i>
Tree	hw-agg-shaper-scheduler-policy
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

congestion-threshold *number*

Synopsis	Congestion threshold of the scheduler
----------	---------------------------------------

Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> congestion-threshold <i>number</i>
Tree	congestion-threshold
Description	This command configures the congestion threshold for the hardware aggregate shaper scheduler policy, which, if exceeded, triggers the hardware aggregate scheduler algorithm. The value is expressed as a percentage of the scheduler rate.
Range	0 to 100
Default	90
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

description *string*

Synopsis	Text description
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

group [**group-name**] *string*

Synopsis	Add a list entry for group
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> group <i>string</i>
Tree	group
Max. Instances	6
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

[group-name] *string*

Synopsis	Name of the HW aggregate shaper scheduler policy group
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> group <i>string</i>
Tree	group
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

max-percent-rate *decimal-number*

Synopsis	Maximum frame-based bandwidth percentage
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> max-percent-rate <i>decimal-number</i>
Tree	max-percent-rate
Description	This command configures the rate of the hardware aggregate shaper scheduler expressed as a percentage of the port rate.
Range	0.01 to 100.00
Notes	The following elements are part of a choice: max-percent-rate or max-rate .
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: max-percent-rate or max-rate .
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

monitor-threshold *number*

Synopsis	Monitor threshold for the scheduler
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> monitor-threshold <i>number</i>
Tree	monitor-threshold
Description	This command configures the monitor threshold for the hardware aggregate shaper scheduler policy, which is used for egress scheduler monitoring. The value is expressed

as a percentage of the scheduler rate, which is considered as a limit for determining congestion.

Range	0 to 100
Default	0
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

sched-class [\[class-id\]](#) *number*

Synopsis	Enter the sched-class list instance
Context	configure qos hw-aggr-shaper-scheduler-policy <i>string</i> sched-class <i>number</i>
Tree	sched-class
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

[class-id] *number*

Synopsis	Scheduling class ID for the scheduler policy
Context	configure qos hw-aggr-shaper-scheduler-policy <i>string</i> sched-class <i>number</i>
Tree	sched-class
Range	1 to 6
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

group *reference*

Synopsis	Group associated with the scheduling class
Context	configure qos hw-aggr-shaper-scheduler-policy <i>string</i> sched-class <i>number</i> group <i>reference</i>
Tree	group
Description	This command assigns the specified scheduling class to a group within a hardware aggregate shaper scheduler policy.
Reference	configure qos hw-aggr-shaper-scheduler-policy <i>string</i> group <i>string</i>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

weight *number*

Synopsis	Weight associated with the scheduling class
Context	configure qos hw-agg-shaper-scheduler-policy <i>string</i> sched-class <i>number</i> weight <i>number</i>
Tree	weight
Range	1 to 8
Default	1
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

match-list

Synopsis	Enter the match-list context
Context	configure qos match-list
Tree	match-list
Introduced	16.0.R1
Platforms	All

ip-prefix-list [*prefix-list-name*] *string*

Synopsis	Enter the ip-prefix-list list instance
Context	configure qos match-list ip-prefix-list <i>string</i>
Tree	ip-prefix-list
Max. Instances	512
Introduced	16.0.R1
Platforms	All

[prefix-list-name] *string*

Synopsis	IP prefix list name
Context	configure qos match-list ip-prefix-list <i>string</i>
Tree	ip-prefix-list
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R3
Platforms All

description *string*

Synopsis Text description
Context **configure qos match-list ip-prefix-list** *string description string*
Tree [description](#)
String Length 1 to 80

Synopsis	Enter the dst-port context
Context	configure qos network string egress ip-criteria entry number match dst-port
Tree	dst-port
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Value 'equal to' assigned as match condition
----------	--

Context	configure qos network <i>string egress ip-criteria entry number match dst-port eq number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network <i>string egress ip-criteria entry number match dst-port gt number</i>
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network <i>string egress ip-criteria entry number match dst-port lt number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure qos network <i>string egress ip-criteria entry number match dst-port port-list reference</i>
Tree	port-list
Reference	configure qos match-list port-list <i>string</i>
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enter the range context
Context	configure qos network string egress ip-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of port range to match
Context	configure qos network string egress ip-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of port range to match
Context	configure qos network string egress ip-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

fragment keyword

Synopsis	Fragmentation state as the match criterion
Context	configure qos network string egress ip-criteria entry number match fragment keyword

Tree	fragment
Description	This command configures fragmented or non-fragmented IP packets as a network QoS policy match criterion. When unconfigured, all packets match regardless of whether they are fragmented.
Options	false, true
Introduced	16.0.R1
Platforms	All

icmp-type *number*

Synopsis	ICMP type in the ICMP header of IPv4 packet to match
Context	configure qos network <i>string</i> egress ip-criteria entry <i>number</i> match icmp-type <i>number</i>
Tree	icmp-type
Description	This command configures matching on the ICMP type field in the ICMP header of an IPv4 packet as a network QoS match criterion. An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

protocol (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos network <i>string</i> egress ip-criteria entry <i>number</i> match protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

src-ip

Synopsis	Enter the src-ip context
Context	configure qos network string egress ip-criteria entry number match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Source IPv4 address to match
Context	configure qos network string egress ip-criteria entry number match src-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	Subnet mask
Context	configure qos network string egress ip-criteria entry number match src-ip mask <i>string</i>
Tree	mask
Introduced	16.0.R1

policer number

Synopsis	Policer ID to be used for the matched traffic
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> port-redirect-group <i>policer</i> <i>number</i>
Tree	policer
Range	1 to 16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue number

Synopsis	Queue to be used for post-policed traffic
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> port-redirect-group <i>queue</i> <i>number</i>
Tree	queue
Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

profile *keyword*

Synopsis	Profile reclassification action
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <i>profile</i> <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <i>type</i> <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>description</i> <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the match context
Context	configure qos network <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i>
Tree	match
Introduced	16.0.R1
Platforms	All

dscp keyword

Synopsis	DSCP value to match in the packet
Context	configure qos network string egress ipv6-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos network string egress ipv6-criteria entry number match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

address (ipv6-address | ipv6-prefix-with-host-bits)

Synopsis	Destination IPv6 address to match
Context	configure qos network string egress ipv6-criteria entry number match dst-ip address (ipv6-address ipv6-prefix-with-host-bits)
Tree	address
Introduced	16.0.R1
Platforms	All

mask string

Synopsis	Address mask
Context	configure qos network string egress ipv6-criteria entry number match dst-ip mask string
Tree	mask
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the dst-port context
Context	configure qos network string egress ipv6-criteria entry number match dst-port
Tree	dst-port
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Value 'equal to' assigned as match condition
Context	configure qos network string egress ipv6-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Value 'greater than' assigned as match condition
Context	configure qos network string egress ipv6-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Value 'less than' assigned as match condition
Context	configure qos network string egress ipv6-criteria entry number match dst-port lt number
Tree	lt

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match dst-port port-list reference
Tree	port-list
Reference	configure qos match-list port-list <i>string</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enter the range context
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of port range to match
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of port range to match
Context	configure qos network string egress ipv6-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

fragment keyword

Synopsis	Fragmentation state as the match criterion
Context	configure qos network string egress ipv6-criteria entry number match fragment keyword
Tree	fragment
Description	This command configures fragmented or non-fragmented IPv6 packets as a network QoS policy match criterion. When unconfigured, all packets match regardless of whether they are fragmented.
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

icmp-type number

Synopsis	ICMPv6 type in ICMPv6 header of IPv6 packet to match
Context	configure qos network string egress ipv6-criteria entry number match icmp-type number
Tree	icmp-type
Description	This command configures matching on the ICMPv6 type field in the ICMPv6 header of an IPv6 packet as a network QoS match criterion. An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos network <i>string</i> egress ipv6-criteria entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

src-ip

Synopsis	Enter the src-ip context
Context	configure qos network <i>string</i> egress ipv6-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	Source IPv6 address to match
Context	configure qos network <i>string</i> egress ipv6-criteria entry <i>number</i> match src-ip address (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	Address mask
Context	configure qos network <i>string</i> egress ipv6-criteria entry <i>number</i> match src-ip mask <i>string</i>
Tree	mask
Introduced	16.0.R1

Platforms All

src-port

Synopsis Enter the **src-port** context

Context **configure qos network** *string* *egress* *ipv6-criteria* *entry* *number* *match* **src-port**

Tree [src-port](#)

Introduced 16.0.R1

Platforms All

eq number

Synopsis Value 'equal to' assigned as match condition

Context **configure qos network** *string* *egress* *ipv6-criteria* *entry* *number* *match* **src-port** **eq** *number*

Tree [eq](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 16.0.R1

Platforms All

gt number

Synopsis Value 'greater than' assigned as match condition

Context **configure qos network** *string* *egress* *ipv6-criteria* *entry* *number* *match* **src-port** **gt** *number*

Tree [gt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 16.0.R1

Platforms All

lt number

Synopsis Value 'less than' assigned as match condition

Context **configure qos network** *string* *egress* *ipv6-criteria* *entry* *number* *match* **src-port** **lt** *number*

Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match src-port port-list reference
Tree	port-list
Reference	configure qos match-list port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enter the range context
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of port range to match
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of port range to match
Context	configure qos network <i>string</i> egress ipv6-criteria entry number match src-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

prec [prec-value] number

Synopsis	Enter the prec list instance
Context	configure qos network <i>string</i> egress prec number
Tree	prec
Introduced	16.0.R1
Platforms	All

[prec-value] number

Synopsis	Precedence value for which mapping is performed
Context	configure qos network <i>string</i> egress prec number
Tree	prec
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>string</i> egress prec number fc keyword
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile to use for the ingressing traffic
Context	configure qos network <i>string egress prec number profile keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

remark-trusted

Synopsis	Enable the remark-trusted context
Context	configure qos network <i>string egress remark-trusted</i>
Tree	remark-trusted
Introduced	16.0.R1
Platforms	All

force-egress-marking *boolean*

Synopsis	Remark DSCP bits in the internal IP header
Context	configure qos network <i>string egress remark-trusted force-egress-marking boolean</i>
Tree	force-egress-marking
Default	false
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure qos network <i>string ingress</i>
Tree	ingress

Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enter the default-action context
Context	configure qos network <i>string</i> ingress default-action
Tree	default-action
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Forwarding class used when classifying ingress traffic
Context	configure qos network <i>string</i> ingress default-action fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R1
Platforms	All

profile keyword

Synopsis	Default profile for the ingressing traffic
Context	configure qos network <i>string</i> ingress default-action profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Default	out
Introduced	16.0.R1
Platforms	All

dot1p [dot1p-value] number

Synopsis	Enter the dot1p list instance
Context	configure qos network <i>string</i> ingress dot1p <i>number</i>

Tree	dot1p
Introduced	16.0.R1
Platforms	All

[dot1p-value] *number*

Synopsis	Dot1p value to match in the packet
Context	configure qos network <i>string</i> ingress dot1p <i>number</i>
Tree	dot1p
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding class
Context	configure qos network <i>string</i> ingress dot1p <i>number</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile to be used for the ingressing traffic
Context	configure qos network <i>string</i> ingress dot1p <i>number</i> profile <i>keyword</i>
Tree	profile
Options	in, out, de, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

dscp [**dscp-name**] *keyword*

Synopsis	Enter the dscp list instance
Context	configure qos network <i>string</i> ingress dscp <i>keyword</i>
Tree	dscp
Introduced	16.0.R1
Platforms	All

[dscp-name] *keyword*

Synopsis	DSCP associated with the forwarding class
Context	configure qos network <i>string</i> ingress dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding class
Context	configure qos network <i>string</i> ingress dscp <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile to use for the ingress traffic
Context	configure qos network <i>string</i> ingress dscp <i>keyword</i> profile <i>keyword</i>
Tree	profile

Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fc [**fc-name**] *keyword*

Synopsis	Enter the fc list instance
Context	configure qos network <i>string</i> ingress fc <i>keyword</i>
Tree	fc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[fc-name] *keyword*

Synopsis	Forwarding class name
Context	configure qos network <i>string</i> ingress fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure qos network <i>string</i> ingress fc <i>keyword</i> fp-redirect-group
Tree	fp-redirect-group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

broadcast-policer *number*

Synopsis	Policer to be used for broadcast traffic
----------	--

Context	configure qos network <i>string</i> ingress fc <i>keyword</i> fp-redirect-group broadcast-policer number
Tree	broadcast-policer
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

multicast-policer *number*

Synopsis	Policer to be used for multicast traffic
Context	configure qos network <i>string</i> ingress fc <i>keyword</i> fp-redirect-group multicast-policer number
Tree	multicast-policer
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer *number*

Synopsis	Policer to be used for unicast traffic
Context	configure qos network <i>string</i> ingress fc <i>keyword</i> fp-redirect-group policer number
Tree	policer
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

unknown-policer *number*

Synopsis	Policer to be used for unknown traffic
Context	configure qos network <i>string</i> ingress fc <i>keyword</i> fp-redirect-group unknown-policer number
Tree	unknown-policer
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure qos network <i>string</i> ingress ip-criteria
Tree	ip-criteria
Introduced	16.0.R1
Platforms	All

entry [**entry-id**] *number*

Synopsis	Enter the entry list instance
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i>
Tree	entry
Introduced	16.0.R1
Platforms	All

[entry-id] *number*

Synopsis	Network Ingress IP Criteria Entry Index
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enter the action context
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i> action
Tree	action
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i> action fc keyword
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

profile keyword

Synopsis	Default profile for the matching traffic
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i> action profile keyword
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

type keyword

Synopsis	Action for criteria entry
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i> action type keyword
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

description string

Synopsis	Text description
Context	configure qos network <i>string</i> ingress ip-criteria entry <i>number</i> description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the match context
Context	configure qos network string ingress ip-criteria entry number match
Tree	match
Introduced	16.0.R1
Platforms	All

dscp keyword

Synopsis	DSCP to be used as network QoS policy match criterion
Context	configure qos network string ingress ip-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos network string ingress ip-criteria entry number match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Destination IPv4 address for network QoS policy match
Context	configure qos network string ingress ip-criteria entry number match dst-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1

Platforms All

ip-prefix-list *reference*

Synopsis IPv4 prefix list containing IPv4 prefixes to match

Context **configure qos network** *string* **ingress ip-criteria entry** *number* **match dst-ip ip-prefix-list reference**

Tree [ip-prefix-list](#)

Reference **configure qos match-list ip-prefix-list** *string*

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R4

Platforms All

mask *string*

Synopsis IP address to match with source IP of the packet

Context **configure qos network** *string* **ingress ip-criteria entry** *number* **match dst-ip mask** *string*

Tree [mask](#)

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms All

dst-port

Synopsis Enter the **dst-port** context

Context **configure qos network** *string* **ingress ip-criteria entry** *number* **match dst-port**

Tree [dst-port](#)

Introduced 16.0.R1

Platforms All

eq *number*

Synopsis Exact destination port as the match criterion

Context **configure qos network** *string* **ingress ip-criteria entry** *number* **match dst-port eq** *number*

Tree [eq](#)

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than destination port value as match criterion
Context	configure qos network string ingress ip-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than destination port value as the match criterion
Context	configure qos network string ingress ip-criteria entry number match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Port list used as match criterion
Context	configure qos network string ingress ip-criteria entry number match dst-port port-list reference
Tree	port-list
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	configure qos match-list port-list string

Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enter the range context
Context	configure qos network string ingress ip-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of port range to match
Context	configure qos network string ingress ip-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of port range to match
Context	configure qos network string ingress ip-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

fragment keyword

Synopsis	Fragmentation state as the match criterion
----------	--

Context	configure qos network <i>string</i> ingress ip-criteria entry number match fragment keyword
Tree	fragment
Options	false, true
Introduced	16.0.R1
Platforms	All

protocol (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos network <i>string</i> ingress ip-criteria entry number match protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

src-ip

Synopsis	Enter the src-ip context
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Source IPv4 address for network QoS policy match
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 prefix list containing IPv4 prefixes to match
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list string
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R4
Platforms	All

mask *string*

Synopsis	IP address to match with source IP of the packet
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-ip mask string
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

src-port

Synopsis	Enter the src-port context
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-port
Tree	src-port
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact source port as the match criterion
Context	configure qos network <i>string</i> ingress ip-criteria entry number match src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .

Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than source port value as match criterion
Context	configure qos network string ingress ip-criteria entry number match src-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than destination port value as the match criterion
Context	configure qos network string ingress ip-criteria entry number match src-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Port list used as match criterion
Context	configure qos network string ingress ip-criteria entry number match src-port port-list reference
Tree	port-list
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	configure qos match-list port-list string
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis Enter the **range** context

Context **configure qos network** *string* **ingress ip-criteria entry number match src-port range**

Tree [range](#)

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 16.0.R1

Platforms All

end number

Synopsis Upper bound of port range to match

Context **configure qos network** *string* **ingress ip-criteria entry number match src-port range end number**

Tree [end](#)

Options in, out, exceed, inplus

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

policy-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis QoS network policy ID

Context **configure qos network** *string* **policy-id** *number*

Tree [policy-id](#)

Description This command specifies the QoS network policy ID and uniquely identifies the policy on the router.

Network **policy-id 1** exists as the default policy that is applied to all network interfaces by default. The network policy-id 1 cannot be modified or deleted. It defines the default DSCP-to-FC mapping and MPLS EXP-to-FC mapping for the ingress. For the egress, it defines forwarding classes that represent individual queues and the packet marking criteria.

Network **policy-id 1** exists as the default policy that is applied to all network ports by default. This default policy cannot be modified or deleted. It defines the default DSCP-to-FC mapping and default unicast meters for ingress IP traffic. For the egress, it defines the forwarding class to dot1p and DSCP values and the packet marking criteria.

If a new network policy is created (for instance, **policy-id 3**), only the default action and egress forwarding class parameters are identical to the default policy. A new network policy does not contain the default DSCP-to-FC and MPLS-EXP-to-FC mapping for network QoS policy of type **ip-interface** or the DSCP-to-FC mapping (for network QoS policy of type **port**). The default network policy can be copied to create a new network policy that includes the default ingress DSCP-to-FC and MPLS EXP-to-FC mapping (as appropriate).

Range 1 to 65535

hs-wrr-weight number

Synopsis	WRR weight with which queue parents into the scheduler
Context	configure qos network-queue <i>string queue number hs-wrr-weight number</i>
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

mbs decimal-number

Synopsis	Percentage of buffer space allowed for the queue
Context	configure qos network-queue <i>string queue number mbs decimal-number</i>
Tree	mbs
Range	0.00 to 100.00
Units	centipercents
Introduced	16.0.R1
Platforms	All

multipoint *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Apply as a multicast queue
Context	configure qos network-queue <i>string queue number multipoint boolean</i>
Tree	multipoint
Introduced	16.0.R1
Platforms	All

port-parent

Synopsis	Enable the port-parent context
Context	configure qos network-queue <i>string queue number port-parent</i>
Tree	port-parent
Introduced	16.0.R1
Platforms	All

cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	configure qos network-queue <i>string queue number port-parent cir-level number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

cir-weight *number*

Synopsis	Weight to receive bandwidth at the within-CIR level
Context	configure qos network-queue <i>string queue number port-parent cir-weight number</i>
Tree	cir-weight
Range	0 to 100
Default	0

Introduced	16.0.R1
Platforms	All

level number

Synopsis	Port priority level for above-CIR behavior
Context	configure qos network-queue <i>string queue number port-parent level number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

weight number

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos network-queue <i>string queue number port-parent weight number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

queue-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority that this queue receives from the hardware level schedulers
Context	configure qos network-queue <i>string queue number queue-type keyword</i>
Tree	queue-type
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1

arbiter-name *string*

Synopsis	Arbiter name
Context	configure qos policer-control-policy string tier number arbiter string arbiter-parent arbiter-name string
Tree	arbiter-name
Description	This command specifies the arbiter name. In tier 1, the arbiter name is not allowed and only the system reversed name "root" is accepted. The specified arbiter name must exist within the policer control policy at tier 1 or the parent command fails. When a tiered arbiter is acting as a parent for another tiered arbiter, the parent arbiter cannot be removed from the policy. The child arbiter receives all bandwidth directly from its parent arbiter (that receives bandwidth from the root arbiter).
String Length	1 to 32
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

level *number*

Synopsis	Level the child arbiter uses on its parent
Context	configure qos policer-control-policy string tier number arbiter string arbiter-parent level number
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

weight *number*

Synopsis	Weight attribute at parent level applied to children
Context	configure qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> arbiter-parent weight <i>number</i>
Tree	weight
Description	This command defines how multiple children at the same parent strict level compete when insufficient bandwidth exists on the parent for that level. Each child's weight is divided by the sum of the active children's weights and the result is multiplied by the available bandwidth. If a child cannot receive its entire weighted fair share of bandwidth due to a defined child rate limit, the remainder of its bandwidth is distributed between the other children based on their weights.
Range	1 to 100
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description *string*

monitor-threshold *number*

Synopsis Congestion monitoring threshold

Context **configure** qos port-scheduler-policy *string* group *string* monitor-threshold *number*

Tree [monitor-threshold](#)

Description This command defines the congestion monitoring threshold for the desired monitoring entity under the port scheduler for per aggregate port scheduler rate, per individual level, and per group that is aggregating multiple levels.

The congestion threshold is specified as a percentage of the configured PIR for the entity for which congestion monitoring is desired. For example, if the configured PIR for level 1 is 100000 kb/s, and the monitoring threshold is set to 90%, an event where the offered rate is greater than 90,000 kb/s is recorded. This event is shown as part of the cumulative count of congestion threshold exceeds since the last clearing of the counters.

Range 0 to 100

Default 0

Introduced 16.0.R1

queue-group-redirect-list [*name*] *string*

Synopsis	Enter the queue-group-redirect-list list instance
Context	configure qos queue-group-redirect-list <i>string</i>
Tree	queue-group-redirect-list
Max. Instances	2047
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Queue group redirect list name
Context	configure qos queue-group-redirect-list <i>string</i>
Tree	queue-group-redirect-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

match [*field-value*] *number*

Synopsis	Enter the match list instance
Context	configure qos queue-group-redirect-list <i>string match number</i>
Tree	match
Max. Instances	16
Introduced	16.0.R1
Platforms	All

[field-value] number

Synopsis	Field value in the ingress or egress packet to match
Context	configure qos queue-group-redirect-list string match number
Tree	match
Description	This command specifies the value of the field in the ingress or egress packet. When there is a match, the packet is redirected to the specified queue group instance. The field must be a valid VXLAN VNI.
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

instance number

Synopsis	Queue group instance for traffic redirection
Context	configure qos queue-group-redirect-list string match number instance number
Tree	instance
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

type keyword

Synopsis	Type for queue-group redirect list
Context	configure qos queue-group-redirect-list string type keyword
Tree	type
Options	vxlan-vni
Default	vxlan-vni
Introduced	16.0.R1
Platforms	All

queue-group-templates

Synopsis	Enter the queue-group-templates context
----------	--

Context	configure qos queue-group-templates
Tree	queue-group-templates
Introduced	16.0.R1

Synopsis Weight of scheduling class

Context	configure qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1 2 4 8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis	Administrative PIR percent
Context	configure qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100.00
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

policer [*policer-id*] *number*

Synopsis	Enter the policer list instance
----------	--

Context	configure qos queue-group-templates egress queue-group <i>string policer number</i>
Tree	policer
Description	Commands in this context configure a QoS egress queue-group policer.
Introduced	16.0.R1
Platforms	All

[policer-id] *number*

Synopsis	Egress queue-group policer ID
Context	configure qos queue-group-templates egress queue-group <i>string policer number</i>
Tree	policer
Description	This command specifies the queue-group policer that will either be created or edited within the queue group template. For VSR, the queue group template may only have up to eight policers (numbered 1 through 8).
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos queue-group-templates egress queue-group <i>string policer number adaptation-rule</i>
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	All

cir *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos queue-group-templates egress queue-group <i>string policer number adaptation-rule cir keyword</i>
Tree	cir
Options	max, min, closest
Default	closest

Introduced	16.0.R1
Platforms	All

pir *keyword*

Synopsis	Constraint used when deriving the operational PIR value
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

adv-config-policy *reference*

Synopsis	Advanced QoS policy name
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> adv-config-policy <i>reference</i>
Tree	adv-config-policy
Reference	configure qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

arbiter-parent

Synopsis	Enter the arbiter-parent context
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent
Tree	arbiter-parent
Introduced	16.0.R1
Platforms	All

arbiter-name *string*

Synopsis	Arbiter name
----------	--------------

Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number arbiter-parent arbiter-name <i>string</i>
Tree	arbiter-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

level *number*

Synopsis	Priority level
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

weight *number*

Synopsis	Weight in the priority level
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number arbiter-parent weight <i>number</i>
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	All

cbs (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456

Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

exceed-pir *boolean*

Synopsis	Forward packets exceeding the PIR as exceed-profile
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number exceed-pir <i>boolean</i>
Tree	exceed-pir
Default	false
Introduced	16.0.R1
Platforms	All

high-prio-only (*number | keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	configure qos queue-group-templates egress queue-group <i>string</i> policer number high-prio-only (<i>number keyword</i>)
Tree	high-prio-only
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1

Platforms All

mbs (*number* | *keyword*)

Synopsis Weight of scheduling class
Context **configure** [qos sap-egress](#) *string* [hs-wrr-group](#) *number* [hs-class-weight](#) *number*
Tree [hs-class-weight](#)
Range 1 | 2 | 4 | 8
Default 1
Introduced 16.0.R1
Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Administrative PIR percent
Context **configure** [qos sap-egress](#) *string* [hs-wrr-group](#) *number* [percent-rate](#) *decimal-number*
Tree [percent-rate](#)
Range 0.01 to 100.00
Notes The following elements are part of a choice: **percent-rate** or **rate**.
Introduced 16.0.R1
Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-egress <i>string</i> hs-wrr-group <i>number</i> rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure qos sap-egress <i>string</i> ip-criteria
Tree	ip-criteria
Introduced	16.0.R1
Platforms	All

entry [*entry-id*] *number*

Synopsis	Enter the entry list instance
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i>
Tree	entry
Introduced	16.0.R1
Platforms	All

[entry-id] *number*

Synopsis	IP Criteria Entry Index
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

action

Synopsis	Enter the action context
Context	configure qos sap-egress <i>string ip-criteria entry number action</i>
Tree	action
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure qos sap-egress <i>string ip-criteria entry number action fc keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

policer reference

Synopsis	Policer identifier for the matched traffic
Context	configure qos sap-egress <i>string ip-criteria entry number action policer reference</i>
Tree	policer
Reference	configure qos sap-egress <i>string policer number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

port-redirect-group-queue *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	configure qos sap-egress <i>string ip-criteria entry number action port-redirect-group-queue <i>boolean</i></i>
Tree	port-redirect-group-queue

Default	false
Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile for the matching traffic
Context	configure qos sap-egress <i>string ip-criteria entry number action profile keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

queue *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	configure qos sap-egress <i>string ip-criteria entry number action queue number</i>
Tree	queue
Range	1 to 8
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-egress <i>string ip-criteria entry number action type keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

use-fc-mapped-queue *boolean*

Synopsis	Redirect policer output to the configured queues
----------	--

Context	configure qos sap-egress <i>string ip-criteria entry number action use-fc-mapped-queue boolean</i>
Tree	use-fc-mapped-queue
Default	false
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos sap-egress <i>string ip-criteria entry number description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1

match

Synopsis	Enter the match context
Context	configure qos sap-egress <i>string ip-criteria entry number match</i>
Tree	match
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP value to match in the packet
Context	configure qos sap-egress <i>string ip-criteria entry number match dscp keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-egress <i>string ip-criteria entry number match</i> dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	configure qos sap-egress <i>string ip-criteria entry number match</i> dst-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	configure qos sap-egress <i>string ip-criteria entry number match</i> dst-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	IP address mask to match with source IP of the packet
Context	configure qos sap-egress <i>string ip-criteria entry number match</i> dst-ip mask <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .

Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-egress string ip-criteria entry number match dst-port
Tree	dst-port
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress string ip-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Value 'greater than' as match condition
Context	configure qos sap-egress string ip-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress string ip-criteria entry number match dst-port lt number

Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enter the range context
Context	configure qos sap-egress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-egress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-port range end <i>number</i>
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-port range start <i>number</i>
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

fragment *keyword*

Synopsis	Fragmented packets as the match criterion
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match fragment <i>keyword</i>
Tree	fragment
Options	false, true
Introduced	16.0.R1
Platforms	All

protocol (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .

Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	configure qos sap-egress <i>string ip-criteria entry number match src-ip ip-prefix-list reference</i>
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1

Synopsis	Value 'less than' as match condition
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enter the range context
Context	configure qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match src-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range
Context	configure qos sap-egress string ip-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress string ip-criteria entry number match src-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure qos sap-egress string ipv6-criteria
Tree	ipv6-criteria
Introduced	16.0.R1
Platforms	All

entry [entry-id] number

Synopsis	Enter the entry list instance
Context	configure qos sap-egress string ipv6-criteria entry number
Tree	entry
Introduced	16.0.R1
Platforms	All

[entry-id] number

Synopsis	IP Criteria Entry Index
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enter the action context
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> action
Tree	action
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> action fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

policer reference

Synopsis	Policer identifier for the matched traffic
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> action policer <i>reference</i>
Tree	policer
Reference	configure qos sap-egress <i>string</i> policer <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

port-redirect-group-queue *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number action port-redirect-group-queue <i>boolean</i>
Tree	port-redirect-group-queue
Default	false
Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile for the matching traffic
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number action profile <i>keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

queue *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number action queue <i>number</i>
Tree	queue
Range	1 to 8
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match

Introduced	16.0.R1
Platforms	All

use-fc-mapped-queue *boolean*

Synopsis	Redirect policer output to the configured queues
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> action use-fc-mapped-queue <i>boolean</i>
Tree	use-fc-mapped-queue
Default	false
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the match context
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match
Tree	match
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP value to match in the packet
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp

Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	Destination IPv6 address for SAP QoS policy match
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number match dst-ip address (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number match dst-ip ipv6-prefix-list reference
Tree	ipv6-prefix-list
Reference	configure qos match-list ipv6-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask string

Synopsis	IP address mask to match with destination IP of packet
Context	configure qos sap-egress string ipv6-criteria entry number match dst-ip mask string
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-egress string ipv6-criteria entry number match dst-port
Tree	dst-port
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress string ipv6-criteria entry number match dst-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Value 'greater than' as match condition
Context	configure qos sap-egress string ipv6-criteria entry number match dst-port gt number
Tree	gt
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1

Platforms All

lt *number*

Synopsis Value 'less than' as match condition

Context **configure** qos sap-egress string ipv6-criteria entry number match dst-port lt number

Tree lt

Range 0 to 65535

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.

Introduced 16.0.R1

Platforms All

range

Synopsis Enter the **range** context

Context **configure** qos sap-egress string ipv6-criteria entry number match dst-port range

Tree range

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.

Introduced 16.0.R1

Platforms All

end *number*

Synopsis Upper bound of the port range

Context **configure** qos sap-egress string ipv6-criteria entry number match dst-port range end number

Tree end

Range 0 to 65535

Introduced 16.0.R1

Platforms All

start *number*

Synopsis Lower bound of the port range

Context **configure** qos sap-egress string ipv6-criteria entry number match dst-port range start number

Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

src-ip

Synopsis	Enter the src-ip context
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	All

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	Source IPv6 address for SAP QoS policy match
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip address (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure qos match-list ipv6-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *string*

Synopsis	IP address mask to match with source IP of the packet
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-ip mask <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

src-port

Synopsis	Enter the src-port context
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-port
Tree	src-port
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Value 'equal to' as match condition
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	16.0.R1

Platforms All

gt number

Synopsis Value 'greater than' as match condition

Context **configure qos sap-egress string ipv6-criteria entry number match src-port gt number**

Tree [gt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

lt number

Synopsis Value 'less than' as match condition

Context **configure qos sap-egress string ipv6-criteria entry number match src-port lt number**

Tree [lt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

range

Synopsis Enter the **range** context

Context **configure qos sap-egress string ipv6-criteria entry number match src-port range**

Tree [range](#)

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

end number

Synopsis Upper bound of the port range

Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number match src-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range
Context	configure qos sap-egress <i>string</i> ipv6-criteria entry number match src-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

parent-location keyword

Synopsis	Location where queues look to find parent scheduler
Context	configure qos sap-egress <i>string</i> parent-location keyword
Tree	parent-location
Options	auto, sla
Default	auto
Introduced	16.0.R1
Platforms	All

policer [policer-id] number

Synopsis	Enter the policer list instance
Context	configure qos sap-egress <i>string</i> policer number
Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] number

Synopsis	SAP egress policer ID
Context	configure qos sap-egress <i>string policer number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos sap-egress <i>string policer number adaptation-rule</i>
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos sap-egress <i>string policer number adaptation-rule cir keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure qos sap-egress <i>string policer number adaptation-rule pir keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

adv-config-policy *reference*

Synopsis Advanced QoS policy name

Context **configure qos sap-egress** *string* **policer** *number* **adv-config-policy** *reference*

Tree **adv-config-policy**

Reference **configure qos adv-config-policy** *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

arbiter-parent

Synopsis Enter the **arbiter-parent** context

Context **configure qos sap-egress** *string* **policer** *number* **arbiter-parent**

Tree **arbiter-parent**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

arbiter-name *string*

Synopsis Arbiter name

Context **configure qos sap-egress** *string* **policer** *number* **arbiter-parent** **arbiter-name** *string*

Tree **arbiter-name**

Description This command specifies an arbiter name. The policer is intended to become a child to one of the tiered arbiters with the specified arbiter name where an instance of the policer is created. If the specified arbiter name does not exist, the policer is placed in the orphan state.

String Length 1 to 32

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

level *number*

Synopsis Level of priority while feeding to the parent

Context **configure qos sap-egress** *string* **policer** *number* **arbiter-parent** **level** *number*

Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

weight *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	configure qos sap-egress <i>string</i> policer <i>number</i> arbiter-parent weight <i>number</i>
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	configure qos sap-egress <i>string</i> policer <i>number</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description *string*

Synopsis	Text description
Context	configure qos sap-egress <i>string</i> policer <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

dscp-prec-remarking *boolean*

Synopsis Remark DSCP/precedence based on packet profile state
 Context **configure qos sap-egress** *string* **policer** *number* **dscp-prec-remarking** *boolean*
 Tree [dscp-prec-remarking](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

exceed-pir *boolean*

Synopsis Forward packets exceeding the PIR as exceed-profile
 Context **configure qos sap-egress** *string* **policer** *number* **exceed-pir** *boolean*
 Tree [exceed-pir](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

high-prio-only (*number* | *keyword*)

Synopsis Percentage of MBS reserved for high priority traffic
 Context **configure qos sap-egress** *string* **policer** *number* **high-prio-only** (*number* | *keyword*)
 Tree [high-prio-only](#)
 Range 0 to 100
 Options auto
 Default auto
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (*number* | *keyword*)

Synopsis Maximum burst tolerance allowed by the policer
 Context **configure qos sap-egress** *string* **policer** *number* **mbs** (*number* | *keyword*)

Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure qos sap-egress <i>string</i> policer <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos sap-egress <i>string</i> policer <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *decimal-number*

Synopsis	Administrative CIR percent
Context	configure qos sap-egress <i>string</i> policer <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *decimal-number*

Synopsis Administrative PIR percent
 Context **configure qos sap-egress** *string* **policer** *number* **percent-rate** **pir** *decimal-number*
 Tree **pir**
 Range 0.01 to 100.00
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

reference-rate *keyword*

Synopsis Reference rate
 Context **configure qos sap-egress** *string* **policer** *number* **percent-rate** **reference-rate** *keyword*
 Tree **reference-rate**
 Options local-limit, reference-port-limit
 Default local-limit
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

port-parent

Synopsis Enable the **port-parent** context
 Context **configure qos sap-egress** *string* **policer** *number* **port-parent**
 Tree **port-parent**
 Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir-level *number*

Synopsis Port priority level for within-CIR offered load
 Context **configure qos sap-egress** *string* **policer** *number* **port-parent** **cir-level** *number*
 Tree **cir-level**

Description	This command defines the port priority that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the port schedulers with-CIR pass and the cir-weight command is ignored.
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir-weight *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos sap-egress <i>string</i> policer <i>number</i> port-parent cir-weight <i>number</i>
Tree	cir-weight
Description	<p>This command defines the weight that the policer uses at the within-CIR port priority level.</p> <p>All CIR weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to the default value, the policer receives bandwidth only after other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

level *number*

Synopsis	Port priority level for above-CIR behavior
Context	configure qos sap-egress <i>string</i> policer <i>number</i> port-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

weight *number*

Synopsis	Weight to use in the above-CIR port priority level
Context	configure qos sap-egress <i>string</i> policer <i>number</i> port-parent weight <i>number</i>
Tree	weight
Description	<p>This command defines the weight that the policer uses at the above-CIR port priority level.</p> <p>All weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after other children with a non-zero weight at this level.</p>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

profile-capped *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	configure qos sap-egress <i>string</i> policer <i>number</i> profile-capped <i>boolean</i>
Tree	profile-capped
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

profile-out-preserve *boolean*

Synopsis	Preserve the color of offered out-of-profile traffic
Context	configure qos sap-egress <i>string</i> policer <i>number</i> profile-out-preserve <i>boolean</i>
Tree	profile-out-preserve
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure qos sap-egress <i>string</i> policer <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-egress <i>string</i> policer <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-egress <i>string</i> policer <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

scheduler-parent

Synopsis	Enable the scheduler-parent context
Context	configure qos sap-egress string policer number scheduler-parent
Tree	scheduler-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir-level number

Synopsis	Port priority level for within-CIR offered load
Context	configure qos sap-egress string policer number scheduler-parent cir-level number
Tree	cir-level
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the schedulers within-CIR pass and the cir-weight command is ignored.
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir-weight number

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos sap-egress string policer number scheduler-parent cir-weight number
Tree	cir-weight
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

level number

Synopsis	Priority level for bandwidth on the parent scheduler
Context	configure qos sap-egress string policer number scheduler-parent level number
Tree	level
Description	This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler. Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

scheduler-name string

Synopsis	Scheduler name
Context	configure qos sap-egress string policer number scheduler-parent scheduler-name string
Tree	scheduler-name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

weight number

Synopsis	Policer weight at the above-CIR priority level
Context	configure qos sap-egress string policer number scheduler-parent weight number
Tree	weight
Range	0 to 100
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure qos sap-egress <i>string policer number stat-mode keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policers-hqos-manageable *boolean*

Synopsis	Manage policers through the Hierarchical QoS process
Context	configure qos sap-egress <i>string policers-hqos-manageable boolean</i>
Tree	policers-hqos-manageable
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, VSR

policy-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Egress SAP QoS policy ID
Context	configure qos sap-egress <i>string policy-id number</i>
Tree	policy-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

post-policer-mapping *reference*

Synopsis	Post policer mapping policy applied to this policy
Context	configure qos sap-egress <i>string</i> post-policer-mapping <i>reference</i>
Tree	post-policer-mapping
Reference	configure qos post-policer-mapping <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

prec [**prec-value**] *number*

Synopsis	Enter the prec list instance
Context	configure qos sap-egress <i>string</i> prec <i>number</i>
Tree	prec
Introduced	16.0.R1
Platforms	All

[prec-value] *number*

Synopsis	Precedence value for which mapping is performed
Context	configure qos sap-egress <i>string</i> prec <i>number</i>
Tree	prec
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding class
Context	configure qos sap-egress <i>string</i> prec <i>number</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

profile *keyword*

Synopsis	Default profile for the ingressing traffic
Context	configure qos sap-egress <i>string prec number profile keyword</i>
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

queue [[queue-id](#)] *number*

Synopsis	Enter the queue list instance
Context	configure qos sap-egress <i>string queue number</i>
Tree	queue
Introduced	16.0.R1
Platforms	All

[queue-id] *number*

Synopsis	Egress Queue-Group queue identifier
Context	configure qos sap-egress <i>string queue number</i>
Tree	queue
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos sap-egress <i>string queue number adaptation-rule</i>
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	All

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos sap-egress <i>string queue number adaptation-rule cir keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure qos sap-egress <i>string queue number adaptation-rule pir keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

adv-config-policy reference

Synopsis	Name of the advanced configuration policy
Context	configure qos sap-egress <i>string queue number adv-config-policy reference</i>
Tree	adv-config-policy
Reference	configure qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

agg-shaper-weight number

Synopsis	Aggregate shaper weight of the sap-egress queue
Context	configure qos sap-egress <i>string queue number agg-shaper-weight number</i>
Tree	agg-shaper-weight
Range	1 to 100

Default	1
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure qos sap-egress <i>string</i> queue <i>number</i> avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	configure qos sap-egress <i>string</i> queue <i>number</i> burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

cbs (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	configure qos sap-egress <i>string</i> queue <i>number</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto

Introduced 16.0.R1
Platforms All

drop-tail

Synopsis Enter the **drop-tail** context
Context **configure qos sap-egress** *string queue number drop-tail*
Tree [drop-tail](#)
Introduced 16.0.R1
Platforms All

exceed

Synopsis Enter the **exceed** context
Context **configure qos sap-egress** *string queue number drop-tail exceed*
Tree [exceed](#)
Introduced 16.0.R1
Platforms All

percent-reduction-from-mbs (*number | keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail
Context **configure qos sap-egress** *string queue number drop-tail exceed percent-reduction-from-mbs* (*number | keyword*)
Tree [percent-reduction-from-mbs](#)
Range 0 to 100
Options auto
Default auto
Introduced 16.0.R1
Platforms All

high

Synopsis Enter the **high** context
Context **configure qos sap-egress** *string queue number drop-tail high*
Tree [high](#)

Introduced 16.0.R1
 Platforms All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail
 Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [high](#) [percent-reduction-from-mbs](#) (*number* | *keyword*)
 Tree [percent-reduction-from-mbs](#)
 Range 0 to 100
 Options auto
 Default auto
 Introduced 16.0.R1
 Platforms All

highplus

Synopsis Enter the **highplus** context
 Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [highplus](#)
 Tree [highplus](#)
 Introduced 16.0.R1
 Platforms All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail
 Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [highplus](#) [percent-reduction-from-mbs](#) (*number* | *keyword*)
 Tree [percent-reduction-from-mbs](#)
 Range 0 to 100
 Options auto
 Default auto
 Introduced 16.0.R1
 Platforms All

low

Synopsis	Enter the low context
Context	configure qos sap-egress <i>string queue number drop-tail low</i>
Tree	low
Introduced	16.0.R1
Platforms	All

percent-reduction-from-mbs (*number | keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	configure qos sap-egress <i>string queue number drop-tail low percent-reduction-from-mbs (number keyword)</i>
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

fir-burst-limit (*number | keyword*)

Synopsis	Burst limit for FIR
Context	configure qos sap-egress <i>string queue number fir-burst-limit (number keyword)</i>
Tree	fir-burst-limit
Description	This command configures a burst limit for the FIR of the specified queue. If the keyword auto is used, the FIR burst limit is based on the PIR. In this case, it is recommended to use the explicit PIR value in the queue configuration.
Range	1 to 102400
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

hs-alt-port-class-pool *boolean*

Synopsis	Use HS alternate class port pool buffer for traffic
Context	configure qos sap-egress <i>string queue number</i> hs-alt-port-class-pool <i>boolean</i>
Tree	hs-alt-port-class-pool
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-class-weight *number*

Synopsis	Scheduling class weight
Context	configure qos sap-egress <i>string queue number</i> hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1 2 4 8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the hs-wred-queue context
Context	configure qos sap-egress <i>string queue number</i> hs-wred-queue
Tree	hs-wred-queue
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

policy *reference*

Synopsis	Slope policy name
Context	configure qos sap-egress <i>string queue number</i> hs-wred-queue policy <i>reference</i>
Tree	policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis	WRR weight with which queue parents into the scheduler
Context	configure qos sap-egress <i>string</i> queue <i>number</i> hs-wrr-weight <i>number</i>
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	configure qos sap-egress <i>string</i> queue <i>number</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

packet-byte-offset *number*

Synopsis	Packet byte offset for addition of policing information
Context	configure qos sap-egress <i>string</i> queue <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 32
Default	0
Introduced	16.0.R1
Platforms	All

percent-rate

Synopsis	Enter the percent-rate context
----------	---------------------------------------

Context	configure qos sap-egress <i>string queue number percent-rate</i>
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	All

cir *decimal-number*

Synopsis	Administrative CIR percent
Context	configure qos sap-egress <i>string queue number percent-rate cir decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

pir *decimal-number*

Synopsis	Administrative PIR percent
Context	configure qos sap-egress <i>string queue number percent-rate pir decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

reference-rate *keyword*

Synopsis	Reference rate
Context	configure qos sap-egress <i>string queue number percent-rate reference-rate keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	16.0.R1
Platforms	All

port-parent

Synopsis	Enable the port-parent context
Context	configure qos sap-egress <i>string queue number</i> port-parent
Tree	port-parent
Notes	The following elements are part of a choice: port-parent or scheduler-parent .
Introduced	16.0.R1
Platforms	All

cir-level *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	configure qos sap-egress <i>string queue number</i> port-parent <i>cir-level number</i>
Tree	cir-level
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure qos sap-egress <i>string queue number</i> port-parent <i>cir-weight number</i>
Tree	cir-weight
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

level *number*

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	configure qos sap-egress <i>string queue number</i> port-parent <i>level number</i>
Tree	level
Range	1 to 8

Default	1
Introduced	16.0.R1
Platforms	All

weight *number*

Synopsis	Weight used at above-CIR port priority level
Context	configure qos sap-egress <i>string queue number port-parent weight number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

queue-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to service queue from hardware perspective
Context	configure qos sap-egress <i>string queue number queue-type keyword</i>
Tree	queue-type
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure qos sap-egress <i>string queue number rate</i>
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	All

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-egress <i>string queue number rate cir</i> (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

pir (*number* | *keyword*)

policer-id-range

Synopsis	Enable the policer-id-range context
Context	configure qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range
Tree	policer-id-range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the dynamic policer ID range
Context	configure qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range end number
Tree	end
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the dynamic policer ID range
Context	configure qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer policer-id-range start number
Tree	start
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stat-mode keyword

Synopsis	Mode of statistics collected by the policer
Context	configure qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer stat-mode keyword
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pcc-rule-entry

Synopsis	Enter the pcc-rule-entry context
----------	---

Context	configure qos sap-egress <i>string</i> <i>subscriber-mgmt pcc-rule-entry</i>
Tree	pcc-rule-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the range context
Context	configure qos sap-egress <i>string</i> <i>subscriber-mgmt pcc-rule-entry range</i>
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the filter and QoS policy entries range
Context	configure qos sap-egress <i>string</i> <i>subscriber-mgmt pcc-rule-entry range end number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the filter and QoS policy entries range
Context	configure qos sap-egress <i>string</i> <i>subscriber-mgmt pcc-rule-entry range start number</i>
Tree	start
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-ingress [[sap-ingress-policy-name](#)] *string*

Synopsis	Enter the sap-ingress list instance
Context	configure qos sap-ingress <i>string</i>
Tree	sap-ingress
Introduced	16.0.R1
Platforms	All

[sap-ingress-policy-name] *string*

Synopsis	Policy name
Context	configure qos sap-ingress <i>string</i>
Tree	sap-ingress
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-fc *string*

Synopsis	Default forwarding class for non-matching traffic
Context	configure qos sap-ingress <i>string default-fc</i> <i>string</i>
Tree	default-fc
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

default-priority *keyword*

Synopsis	Priority for packets received on an ingress SAP
Context	configure qos sap-ingress <i>string default-priority</i> <i>keyword</i>
Tree	default-priority
Options	low, high
Default	low
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos sap-ingress <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

dot1p [**dot1p-value**] *number*

Synopsis	Enter the dot1p list instance
Context	configure qos sap-ingress <i>string</i> dot1p <i>number</i>
Tree	dot1p
Introduced	16.0.R1
Platforms	All

[dot1p-value] *number*

Synopsis	Dot1p value to match in the packet
Context	configure qos sap-ingress <i>string</i> dot1p <i>number</i>
Tree	dot1p
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc *string*

Synopsis	Forwarding class for traffic matching specified dot1p
Context	configure qos sap-ingress <i>string</i> dot1p <i>number</i> fc <i>string</i>
Tree	fc
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

priority *keyword*

Synopsis	Priority for packets that match the Dot1p value
Context	configure qos sap-ingress <i>string dot1p number priority keyword</i>
Tree	<i>priority</i>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

dscp [*dscp-name*] *keyword*

Synopsis	Enter the dscp list instance
Context	configure qos sap-ingress <i>string dscp keyword</i>
Tree	<i>dscp</i>
Introduced	16.0.R1
Platforms	All

[dscp-name] *keyword*

Synopsis	Name for the Differentiated Services Code Point (DSCP)
Context	configure qos sap-ingress <i>string dscp keyword</i>
Tree	<i>dscp</i>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fc *string*

Synopsis	Forwarding class for traffic matching specified DSCP
Context	configure qos sap-ingress <i>string dscp keyword fc string</i>

Tree	fc
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

priority *keyword*

Synopsis	Priority for the packet
Context	configure qos sap-ingress <i>string</i> dscp <i>keyword</i> priority <i>keyword</i>
Tree	priority
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

fc [[fc-name](#)] *string*

Synopsis	Enter the fc list instance
Context	configure qos sap-ingress <i>string</i> fc <i>string</i>
Tree	fc
Introduced	16.0.R1
Platforms	All

[fc-name] *string*

Synopsis	Forwarding class (and optional subclass) name
Context	configure qos sap-ingress <i>string</i> fc <i>string</i>
Tree	fc
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

broadcast-policer *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	configure qos sap-ingress <i>string fc string broadcast-policer number</i>
Tree	broadcast-policer
Range	1 to 63
Notes	The following elements are part of a choice: (broadcast-policer and fp-redirect-group-broadcast-policer), broadcast-queue , or broadcast-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

broadcast-queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>string fc string broadcast-queue reference</i>
Tree	broadcast-queue
Reference	configure qos sap-ingress <i>string queue number</i>
Notes	The following elements are part of a choice: (broadcast-policer and fp-redirect-group-broadcast-policer), broadcast-queue , or broadcast-queue-group-queue .
Introduced	16.0.R1
Platforms	All

broadcast-queue-group-queue

Synopsis	Enable the broadcast-queue-group-queue context
Context	configure qos sap-ingress <i>string fc string broadcast-queue-group-queue</i>
Tree	broadcast-queue-group-queue
Notes	The following elements are part of a choice: (broadcast-policer and fp-redirect-group-broadcast-policer), broadcast-queue , or broadcast-queue-group-queue .
Introduced	16.0.R1
Platforms	All

queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>string fc string broadcast-queue-group-queue queue reference</i>

Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

queue-group-name *reference*

Synopsis	Queue group name to forward traffic
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> broadcast-queue-group-queue queue-group-name <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

de-1-out-profile *boolean*

Synopsis	Frames with DE value to be assigned as out of profile
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> de-1-out-profile <i>boolean</i>
Tree	de-1-out-profile
Default	false
Introduced	16.0.R1
Platforms	All

egress-fc *keyword*

Synopsis	Forwarding class for egress QoS processing
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> egress-fc <i>keyword</i>
Tree	egress-fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

fp-redirect-group-broadcast-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	configure qos sap-ingress string fc string fp-redirect-group-broadcast-policer
Tree	fp-redirect-group-broadcast-policer
Notes	The following elements are part of a choice: (broadcast-policer and fp-redirect-group-broadcast-policer), broadcast-queue , or broadcast-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

fp-redirect-group-multicast-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	configure qos sap-ingress string fc string fp-redirect-group-multicast-policer
Tree	fp-redirect-group-multicast-policer
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

fp-redirect-group-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	configure qos sap-ingress string fc string fp-redirect-group-policer
Tree	fp-redirect-group-policer
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

fp-redirect-group-unknown-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	configure qos sap-ingress string fc string fp-redirect-group-unknown-policer
Tree	fp-redirect-group-unknown-policer

Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

in-remark

Synopsis	Enter the in-remark context
Context	configure qos sap-ingress string fc string in-remark
Tree	in-remark
Introduced	16.0.R1
Platforms	All

dscp keyword

Synopsis	DSCP to override DSCP bits of the matching packet
Context	configure qos sap-ingress string fc string in-remark dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: dscp or prec .
Introduced	16.0.R1
Platforms	All

prec number

Synopsis	Value to override precedence bits of matching packet
Context	configure qos sap-ingress string fc string in-remark prec number
Tree	prec
Range	0 to 7
Notes	The following elements are part of a choice: dscp or prec .
Introduced	16.0.R1
Platforms	All

multicast-policer *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	configure qos sap-ingress <i>string fc string multicast-policer number</i>
Tree	multicast-policer
Range	1 to 63
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

multicast-queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>string fc string multicast-queue reference</i>
Tree	multicast-queue
Reference	configure qos sap-ingress <i>string queue number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	16.0.R1
Platforms	All

multicast-queue-group-queue

Synopsis	Enable the multicast-queue-group-queue context
Context	configure qos sap-ingress <i>string fc string multicast-queue-group-queue</i>
Tree	multicast-queue-group-queue
Notes	The following elements are part of a choice: (fp-redirect-group-multicast-policer and multicast-policer), multicast-queue , or multicast-queue-group-queue .
Introduced	16.0.R1
Platforms	All

queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
----------	---

Context	configure qos sap-ingress <i>string</i> fc <i>string</i> multicast-queue-group-queue <i>queue</i> <i>reference</i>
Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>string</i> <i>queue</i> <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

queue-group-name *reference*

Synopsis	Queue group name to forward traffic
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> multicast-queue-group-queue <i>queue-group-name</i> <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

out-remark

Synopsis	Enter the out-remark context
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> out-remark
Tree	out-remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP to override DSCP bits of the matching packet
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> out-remark dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: dscp or prec .
Introduced	16.0.R1
Platforms	All

prec number

Synopsis	Value to override precedence bits of matching packet
Context	configure qos sap-ingress string fc string out-remark prec number
Tree	prec
Range	0 to 7
Notes	The following elements are part of a choice: dscp or prec .
Introduced	16.0.R1
Platforms	All

policer number

Synopsis	Policer ID for unicast traffic in the forwarding class
Context	configure qos sap-ingress string fc string policer number
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

profile keyword

Synopsis	Packets profile associated with the forwarding class
Context	configure qos sap-ingress string fc string profile keyword
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

queue reference

Synopsis	Queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>string fc string queue reference</i>
Tree	queue
Reference	configure qos sap-ingress <i>string queue number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	16.0.R1
Platforms	All

queue-group-queue

Synopsis	Enable the queue-group-queue context
Context	configure qos sap-ingress <i>string fc string queue-group-queue</i>
Tree	queue-group-queue
Notes	The following elements are part of a choice: (fp-redirect-group-policer and policer), queue , or queue-group-queue .
Introduced	16.0.R1
Platforms	All

queue reference

Synopsis	Queue to assign for packets in this forwarding class
Context	configure qos sap-ingress <i>string fc string queue-group-queue queue reference</i>
Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>string queue number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

queue-group-name reference

Synopsis	Queue group to forward traffic
----------	--------------------------------

Context	configure qos sap-ingress <i>string</i> fc <i>string</i> queue-group-queue queue-group-name <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

unknown-policer *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> unknown-policer <i>number</i>
Tree	unknown-policer
Range	1 to 63
Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

unknown-queue *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue <i>reference</i>
Tree	unknown-queue
Reference	configure qos sap-ingress <i>string</i> queue <i>number</i>
Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	16.0.R1
Platforms	All

unknown-queue-group-queue

Synopsis	Enable the unknown-queue-group-queue context
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue-group-queue
Tree	unknown-queue-group-queue

Notes	The following elements are part of a choice: (fp-redirect-group-unknown-policer and unknown-policer), unknown-queue , or unknown-queue-group-queue .
Introduced	16.0.R1
Platforms	All

queue reference

Synopsis	Broadcast queue for packets in the forwarding class
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue-group-queue queue <i>reference</i>
Tree	queue
Reference	configure qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

queue-group-name reference

Synopsis	Queue group name to forward traffic
Context	configure qos sap-ingress <i>string</i> fc <i>string</i> unknown-queue-group-queue queue-group-name <i>reference</i>
Tree	queue-group-name
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure qos sap-ingress <i>string</i> ip-criteria
Tree	ip-criteria
Introduced	16.0.R1
Platforms	All

entry [*entry-id*] *number*

Synopsis	Enter the entry list instance
Context	configure qos sap-ingress <i>string ip-criteria entry number</i>
Tree	<i>entry</i>
Introduced	16.0.R1
Platforms	All

[entry-id] *number*

Synopsis	IP criteria entry to create or edit for the policy
Context	configure qos sap-ingress <i>string ip-criteria entry number</i>
Tree	<i>entry</i>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enter the action context
Context	configure qos sap-ingress <i>string ip-criteria entry number action</i>
Tree	<i>action</i>
Introduced	16.0.R1
Platforms	All

fc *string*

Synopsis	Forwarding class for traffic matching the criteria
Context	configure qos sap-ingress <i>string ip-criteria entry number action fc string</i>
Tree	<i>fc</i>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

policer *reference*

Synopsis	Policer ID for traffic matching the criteria
Context	configure qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action policer <i>reference</i>
Tree	policer
Reference	configure qos sap-ingress <i>string</i> policer <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority *keyword*

Synopsis	Priority for the packet
Context	configure qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action priority <i>keyword</i>
Tree	priority
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Action for criteria entry
Context	configure qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> action type <i>keyword</i>
Tree	type
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure qos sap-ingress <i>string</i> ip-criteria entry <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1

Platforms All

match

Synopsis Enter the **match** context

Context **configure qos sap-ingress** *string ip-criteria entry number match*

Tree [match](#)

Introduced 16.0.R1

Platforms All

dscp keyword

Synopsis DSCP value to match in the packet

Context **configure qos sap-ingress** *string ip-criteria entry number match dscp keyword*

Tree [dscp](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

dst-ip

Synopsis Enter the **dst-ip** context

Context **configure qos sap-ingress** *string ip-criteria entry number match dst-ip*

Tree [dst-ip](#)

Introduced 16.0.R1

Platforms All

address (*ipv4-address | ipv4-prefix-with-host-bits*)

Synopsis Destination IPv4 address for SAP QoS policy match

Context **configure qos sap-ingress** *string ip-criteria entry number match dst-ip address (ipv4-address | ipv4-prefix-with-host-bits)*

Tree [address](#)

Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IP-prefix list as match criterion
Context	configure qos sap-ingress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure qos match-list ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	IP address to match with source IP of the packet
Context	configure qos sap-ingress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-ip mask <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the dst-port context
Context	configure qos sap-ingress <i>string</i> ip-criteria <i>entry</i> <i>number</i> match dst-port
Tree	dst-port
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Value 'equal to' assigned as match condition
----------	--

Context	configure qos sap-ingress <i>string ip-criteria entry number match dst-port eq number</i>
Tree	eq
Range	0 to 65535

etype string

Synopsis Ethernet type

Context **configure qos sap-ingress string mac-criteria entry number match etype string**

Tree [etype](#)

String Length 5 to 6

Introduced 16.0.R1

Platforms All

frame-type keyword

Synopsis Match MAC criteria for ingress SAP QoS policy

Context **configure qos sap-ingress string mac-criteria entry number match frame-type keyword**

Tree [frame-type](#)

Options 802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, atm

Introduced 16.0.R1

Platforms All

inner-tag

Synopsis Enable the **inner-tag** context

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag**

Tree [inner-tag](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask number

Synopsis Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag mask number**

Tree [mask](#)

Range 1 to 4095

Default 4095

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan number

Synopsis Value to match against the VID of the second VLAN tag

Context **configure qos sap-ingress string mac-criteria entry number match inner-tag vlan number**

Tree [vlan](#)

Range 0 to 4095

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-dsap

Synopsis Enable the **llc-dsap** context

Context **configure qos sap-ingress string mac-criteria entry number match llc-dsap**

Tree [llc-dsap](#)

Introduced 16.0.R1

Platforms All

dsap number

Synopsis DSAP value

Context	configure qos sap-ingress <i>string mac-criteria entry number match llc-dsap dsap number</i>
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mask number

Synopsis	DSAP mask
Context	configure qos sap-ingress <i>string mac-criteria entry number match llc-dsap mask number</i>
Tree	mask
Range	0 to 255
Default	255
Introduced	16.0.R1
Platforms	All

llc-ssap

Synopsis	Enable the llc-ssap context
Context	configure qos sap-ingress <i>string mac-criteria entry number match llc-ssap</i>
Tree	llc-ssap
Introduced	16.0.R1
Platforms	All

mask number

Synopsis	Source SAP mask
Context	configure qos sap-ingress <i>string mac-criteria entry number match llc-ssap mask number</i>
Tree	mask
Range	0 to 255
Default	255
Introduced	16.0.R1

Platforms All

ssap number

Synopsis SSAP value

Context **configure qos sap-ingress string mac-criteria entry number match llc-ssap ssap number**

Tree [ssap](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

outer-tag

Synopsis Enable the **outer-tag** context

Context **configure qos sap-ingress string mac-criteria entry number match outer-tag**

Tree [outer-tag](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask number

Synopsis First tag carried transparently through the service

Context **configure qos sap-ingress string mac-criteria entry number match outer-tag mask number**

Tree [mask](#)

Range 1 to 4095

Default 4095

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan number

Synopsis Match against VID of the first VLAN tag in the packet carried transparently through service

Context	configure qos sap-ingress string mac-criteria entry number match outer-tag vlan number
Tree	vlan
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

snap-oui *keyword*

Synopsis	Parameter snap-oui as MAC filter match criteria
Context	configure qos sap-ingress string mac-criteria entry number match snap-oui keyword
Tree	snap-oui
Options	zero, non-zero
Introduced	16.0.R1
Platforms	All

snap-pid *number*

Synopsis	Parameter snap-pid as MAC filter match criteria
Context	configure qos sap-ingress string mac-criteria entry number match snap-pid number
Tree	snap-pid
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

src-mac

Synopsis	Enable the src-mac context
Context	configure qos sap-ingress string mac-criteria entry number match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	All

address string

Synopsis	Source MAC address as QoS policy match criterion
Context	configure qos sap-ingress string mac-criteria entry number match src-mac address string
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mask string

Synopsis	Mask for source MAC address
Context	configure qos sap-ingress string mac-criteria entry number match src-mac mask string
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC criteria filter type
Context	configure qos sap-ingress string mac-criteria type keyword
Tree	type
Options	normal, vid
Default	normal
Introduced	16.0.R1
Platforms	All

policer [policer-id] number

Synopsis	Enter the policer list instance
Context	configure qos sap-ingress string policer number

Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] *number*

Synopsis	SAP-ingress policer identifier
Context	configure qos sap-ingress <i>string</i> policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *keyword*

Synopsis	Constraint used when deriving the operational PIR value
----------	---

Context	configure qos sap-ingress <i>string</i> <i>policer number adaptation-rule pir keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

adv-config-policy *reference*

Synopsis	Advanced QoS policy name
Context	configure qos sap-ingress <i>string policer number adv-config-policy reference</i>
Tree	adv-config-policy
Reference	configure qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

arbiter-parent

Synopsis	Enter the arbiter-parent context
Context	configure qos sap-ingress <i>string policer number arbiter-parent</i>
Tree	arbiter-parent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

arbiter-name *string*

Synopsis	Arbiter name
Context	configure qos sap-ingress <i>string policer number arbiter-parent arbiter-name string</i>
Tree	arbiter-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

level number

Synopsis	Level of priority while feeding to the parent
Context	configure qos sap-ingress string policer number arbiter-parent level number
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

weight number

Synopsis	Weight used by the arbiter for feeding the policer
Context	configure qos sap-ingress string policer number arbiter-parent weight number
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (number | keyword)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	configure qos sap-ingress string policer number cbs (number keyword)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description string

Synopsis	Text description
Context	configure qos sap-ingress string policer number description string

Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

high-prio-only (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> high-prio-only (<i>number</i> <i>keyword</i>)
Tree	high-prio-only
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (*number* | *keyword*)

Synopsis	High priority violate threshold of PIR leaky bucket
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Default	0

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

percent-rate

Synopsis	Enter the percent-rate context
Context	configure qos sap-ingress string policer number percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir decimal-number

Synopsis	Administrative CIR percent
Context	configure qos sap-ingress string policer number percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir decimal-number

Synopsis	Administrative PIR percent
Context	configure qos sap-ingress string policer number percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

reference-rate keyword

Synopsis	Reference rate
Context	configure qos sap-ingress string policer number percent-rate reference-rate keyword

Tree	reference-rate
Options	local-limit, reference-port-limit
Default	local-limit
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

profile-capped *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> profile-capped <i>boolean</i>
Tree	profile-capped
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

scheduler-parent

Synopsis	Enter the scheduler-parent context
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent
Tree	scheduler-parent
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

cir-level *number*

Synopsis	Port priority level for within-CIR offered load
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent cir-level <i>number</i>
Tree	cir-level
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the within-CIR pass of the scheduler and the cir-weight command is ignored.
Range	0 to 8
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

cir-weight *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent cir-weight <i>number</i>
Tree	cir-weight
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

level *number*

Synopsis	Priority level for bandwidth on the parent scheduler
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent level <i>number</i>
Tree	level
Description	<p>This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.</p> <p>Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.</p>
Range	1 to 8
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

scheduler-name *string*

Synopsis	Scheduler name
----------	----------------

Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent scheduler-name <i>string</i>
Tree	scheduler-name
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

weight *number*

Synopsis	Policer weight at the above-CIR priority level
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure qos sap-ingress <i>string</i> policer <i>number</i> stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir, offered-profile-with-discards
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policers-hqos-manageable *boolean*

Synopsis	Manage policers through the hierarchical QoS process
Context	configure qos sap-ingress <i>string</i> policers-hqos-manageable <i>boolean</i>
Tree	policers-hqos-manageable
Default	false
Introduced	22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

policy-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Ingress SAP QoS policy ID

Context **configure qos sap-ingress** *string policy-id number*

Tree [policy-id](#)

Range 1 to 65535

Introduced 16.0.R1

Platforms All

Synopsis	Enter the scheduler list instance
Context	configure qos scheduler-policy <i>string tier number scheduler string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure qos scheduler-policy <i>string tier number scheduler string</i>
Tree	scheduler
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a

unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String Length	1 to 32
Notes	This element is part of a list key.

start-avg *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	configure qos slope-policy <i>string</i> high-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

highplus-slope

Synopsis	Enter the highplus-slope context
Context	configure qos slope-policy <i>string</i> highplus-slope
Tree	highplus-slope
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the highplus priority RED slope
Context	configure qos slope-policy <i>string</i> highplus-slope admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

max-avg *number*

Synopsis	Buffer percentage after which drop probability is one
Context	configure qos slope-policy <i>string</i> highplus-slope max-avg <i>number</i>
Tree	max-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

max-prob *number*

Synopsis	Drop probability increase at highplus start-average
Context	configure qos slope-policy <i>string</i> highplus-slope max-prob <i>number</i>
Tree	max-prob
Range	0 to 100
Introduced	16.0.R1
Platforms	All

start-avg *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	configure qos slope-policy <i>string</i> highplus-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

low-slope

Synopsis	Enter the low-slope context
Context	configure qos slope-policy <i>string</i> low-slope
Tree	low-slope
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the low priority RED slope
Context	configure qos slope-policy <i>string</i> low-slope admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

max-avg *number*

Synopsis	Buffer percentage after which drop probability is one
Context	configure qos slope-policy <i>string</i> low-slope max-avg <i>number</i>
Tree	max-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

max-prob *number*

Synopsis	Drop probability to increase at low start-average
Context	configure qos slope-policy <i>string</i> low-slope max-prob <i>number</i>
Tree	max-prob
Range	0 to 100
Introduced	16.0.R1
Platforms	All

start-avg *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	configure qos slope-policy <i>string</i> low-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1

3.38.1 redundancy command descriptions

redundancy

Synopsis	Enter the redundancy context
Context	configure redundancy
Tree	redundancy
Introduced	16.0.R1
Platforms	All

bgp-evpn

Synopsis	Enter the bgp-evpn context
Context	configure redundancy bgp-evpn
Tree	bgp-evpn
Introduced	16.0.R1
Platforms	All

ethernet-segment

Synopsis	Enter the ethernet-segment context
Context	configure redundancy bgp-evpn ethernet-segment
Tree	ethernet-segment
Introduced	16.0.R1
Platforms	All

activation-timer *number*

Synopsis	Time before Ethernet segment activated on DF-elected PE
Context	configure redundancy bgp-evpn ethernet-segment activation-timer <i>number</i>
Tree	activation-timer
Range	0 to 100
Units	seconds
Default	3
Introduced	16.0.R1

Platforms All

boot-timer *number*

Synopsis	Time before BGP EVPN multi-homing DF election algorithm
Context	configure redundancy bgp-evpn ethernet-segment boot-timer <i>number</i>
Tree	boot-timer
Description	<p>This command allows the necessary time for the control plane protocols to come up upon PE boot-up before bringing up the ESs and running the DF algorithm.</p> <p>The following considerations apply to this command:</p> <ul style="list-style-type: none"> • The boot-timer command must provide enough time to allow the IOMs and BGP sessions to come up before exchanging ES routes and running the DF election for each EVI or ISID. • The boot-timer is synchronized across CPMs and is relative to the system up time; it is not changed or reset upon CPM switchover. • The boot-timer is never interrupted (the es-activation-timer, however, can be interrupted if there is a new event triggering the DF election). • The boot-timer runs per EVI or ISID on the ESs in the system. If the system up time (time the system has been up since the last reboot) is less than the boot-timer value, the system does not run the DF election for any EVI or ISID. When the boot-timer value expires, the DF election runs, and if the system is elected DF for the EVI or ISID, the es-activation-timer is triggered. • The system does not advertise ES routes until the boot timer expires, which guarantees that the peer ES PEs only run the DF election when the PE is ready to become the DF, if required.
Range	0 to 1800
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

bgp-mh

Synopsis	Enter the bgp-mh context
Context	configure redundancy bgp-mh
Tree	bgp-mh
Introduced	16.0.R1
Platforms	All

site

Synopsis	Enter the site context
Context	configure redundancy bgp-mh site
Tree	site
Introduced	16.0.R1
Platforms	All

activation-timer *number*

Synopsis	Time to wait for BGP updates from remote PEs
Context	configure redundancy bgp-mh site activation-timer <i>number</i>
Tree	activation-timer
Range	0 to 100
Units	seconds
Default	2
Introduced	16.0.R1
Platforms	All

boot-timer *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	configure redundancy bgp-mh site boot-timer <i>number</i>
Tree	boot-timer
Range	0 to 600
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

min-down-timer *number*

Synopsis	Min downtime for BGP multi-homing site after transition
Context	configure redundancy bgp-mh site min-down-timer <i>number</i>
Tree	min-down-timer

Description	<p>This command configures the BGP multi-homing site minimum down time. When this value is set and the site goes operationally down, it remains operationally down for at least the length of time configured by this timer, regardless of whether other state changes might cause the site to go operationally up. This timer is restarted every time the site transitions from operationally up to down.</p> <p>This timer is optimized in the following circumstances:</p> <ul style="list-style-type: none"> • If the site goes down on the DF but there are no BGP multi-homing peers with the same site in an up state, this timer is not used. • If the site goes down on the DF but there are no active BGP multi-homing peers, this timer is not used. • If this timer is active and a BGP multihoming update is received from the DF indicating its site is down, this timer is immediately terminated and the BGP multihoming algorithm is triggered to determine whether this PE should become the DF.
Range	1 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

cert-sync *boolean*

Synopsis	Automatically synchronize certificate files
Context	configure redundancy cert-sync <i>boolean</i>
Tree	cert-sync
Default	true
Introduced	16.0.R1
Platforms	All

mgmt-ethernet

Synopsis	Enable the mgmt-ethernet context
Context	configure redundancy mgmt-ethernet
Tree	mgmt-ethernet
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

revert *number*

Synopsis	Time before reverting standby CPM management Ethernet port to active CPM
Context	configure redundancy mgmt-ethernet revert <i>number</i>
Tree	revert
Range	1 to 300
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

multi-chassis

Synopsis	Enter the multi-chassis context
Context	configure redundancy multi-chassis
Tree	multi-chassis
Description	Commands in this context configure the attributes of multi-chassis redundancy.
Introduced	16.0.R1
Platforms	All

ipsec-domain [*id*] *number*

Synopsis	Enter the ipsec-domain list instance
Context	configure redundancy multi-chassis ipsec-domain <i>number</i>
Tree	ipsec-domain
Description	Commands in this context configure an IPsec domain used for N:M IPsec redundancy.
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[*id*] *number*

Synopsis	IPsec domain ID
Context	configure redundancy multi-chassis ipsec-domain <i>number</i>
Tree	ipsec-domain

Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

designated-role *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designated role for the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> designated-role <i>keyword</i>
Tree	designated-role
Description	This command configures the designated role of the tunnel group in the IPsec domain.
Options	standby, active
Default	standby
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *number*

Synopsis	Priority for the IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> priority <i>number</i>
Tree	priority

Description	This command configures the priority for the tunnel group in the IPsec domain. The node with the higher priority is more likely to be elected as active within the domain.
Range	0 to 255
Default	100
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

revertive *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable revertive behavior for the tunnel group
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> revertive <i>boolean</i>
Tree	revertive
Description	When configured to true , the router enables the revertive behavior of the tunnel group, which allows a router in an N:M domain to automatically take over as the active router in the domain when it becomes eligible to do so. When configured to false , the revertive behavior of the tunnel group is disabled.
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID for an IPsec domain
Context	configure redundancy multi-chassis ipsec-domain <i>number</i> tunnel-group <i>reference</i>
Tree	tunnel-group
Description	This command specifies the tunnel group ID for the IPsec domain.
Reference	configure isa tunnel-group <i>number</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the options context
Context	configure redundancy multi-chassis options
Tree	options
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-mgmt

Synopsis	Enter the sub-mgmt context
Context	configure redundancy multi-chassis options sub-mgmt
Tree	sub-mgmt
Description	Commands in this context configure subscriber management options for multi-chassis redundancy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-lease-time-threshold *number*

Synopsis	DHCP lease threshold to skip MCS synchronization
Context	configure redundancy multi-chassis options sub-mgmt dhcp-lease-time-threshold <i>number</i>
Tree	dhcp-lease-time-threshold
Description	This command configures the DHCP lease time threshold to skip MCS synchronization. DHCP leases for the sub-mgmt MCS applications are eligible to skip synchronization if the committed lease time is less than the active threshold on a multi-chassis peer. The active threshold is the minimum value of the thresholds configured on the nodes at each end of a multi-chassis peer. The threshold is inactive when it is unconfigured on at least one end of the multi-chassis peer.
Range	0 to 86400
Units	seconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Description	This command configures the IP address of the peer in a redundant multi-chassis setup, and enters the context for further application-specific configuration options.
Max. Instances	20
Introduced	16.0.R1
Platforms	All

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer IP address
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the MC redundancy peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

authentication-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Authentication key used between the node and MC peer
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) authentication-key <i>string</i>
Tree	authentication-key
String Length	1 to 54
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

mc-endpoint

Synopsis	Enable the mc-endpoint context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-endpoint
Tree	mc-endpoint
Introduced	22.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the MC-EP
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-endpoint admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	All

bfd boolean

Synopsis	Enable BFD detection for the MC-EP peering tunnel
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-endpoint bfd boolean
Tree	bfd
Description	When configured to true , the system uses Bidirectional Forwarding Detection (BFD) to control the state of the associated protocol interface, where the state of the protocol interface is tied to the state of the BFD session between the local and remote nodes. The BFD settings are configured in the IP interface contexts.
Default	false
Introduced	22.10.R1
Platforms	All

boot-timer number

Synopsis	Time to attempt connection before declaring failure
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-endpoint boot-timer number
Tree	boot-timer
Description	This command configures the time interval to attempt connection that applies after the node reboots. This command specifies the time the multi-chassis endpoint (MC-EP) protocol takes to establish a connection before declaring a connection failure with the remote peer. When the time interval expires, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	1 to 600
Units	seconds
Default	300
Introduced	22.10.R1
Platforms	All

hold-on-neighbor-failure *number*

Synopsis	Number of keepalive intervals to wait for packets
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint hold-on-neighbor-failure <i>number</i>
Tree	hold-on-neighbor-failure
Description	This command configures the number of keepalive intervals that the local node waits for packets from the MC-EP peer before declaring a connection failure. When the number of intervals is reached, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	2 to 25
Default	3
Introduced	22.10.R1
Platforms	All

keep-alive-interval *number*

Synopsis	Interval for exchange of keepalive messages
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Description	This command configures the interval for which keepalive messages are exchanged between two systems participating as MC-EP when BFD is not active. The fast keepalive messages are used to detect remote node failure.
Range	5 to 500
Default	10
Introduced	22.10.R1
Platforms	All

passive-mode *boolean*

Synopsis	Enable passive mode for the MC-EP tunnel
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-endpoint passive-mode <i>boolean</i>
Tree	passive-mode
Description	When configured to true , the system enables passive mode behavior for the MC-EP protocol. Assuming the remote pair is configured with regular MC-EP in passive mode, the MC-EP pair remains dormant until two of the pseudowires in an MC-EP are activated by the remote PEs.

When one pseudowire is active, the dormant MC-EP pair becomes active. The regular mechanism to select the best pseudowire between the active pair is initiated, and the system blocks the Rx and Tx directions of the other pseudowire.

Default	false
Introduced	22.10.R1
Platforms	All

system-priority *number*

Synopsis	System priority of the MC-EP
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-endpoint system-priority <i>number</i>
Tree	system-priority
Description	This command configures the system priority of the MC-EP. The peer configured with the lower value is selected as the master. If the system priority values are equal, the peer with the higher system ID (chassis MAC address) becomes the master.
Range	0 to 255
Default	0
Introduced	22.10.R1
Platforms	All

mc-ipsec

Synopsis	Enable the mc-ipsec context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ipsec
Tree	mc-ipsec
Description	This command enables the context to configure multi-chassis peer parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ipsec bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

discovery-interval

Synopsis	Enter the discovery-interval context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec discovery-interval
Tree	discovery-interval
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

boot number

Synopsis	Maximum interval after system bootup
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec discovery-interval boot <i>number</i>
Tree	boot
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval-secs number

Synopsis	Maximum discovery interval
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec discovery-interval interval-secs <i>number</i>
Tree	interval-secs
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

domain [*id*] *reference*

Synopsis	Enter the domain list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec domain <i>reference</i>
Tree	domain
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *reference*

Synopsis	IPsec domain ID
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec domain <i>reference</i>
Tree	domain
Reference	configure redundancy multi-chassis ipsec-domain <i>number</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the IPsec domain
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec domain <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-on-neighbor-failure *number*

Synopsis	Hold time on neighbor failure
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec hold-on-neighbor-failure <i>number</i>

Tree	hold-on-neighbor-failure
Range	2 to 25
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive-interval *number*

Synopsis	Keepalive interval
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	5 to 500
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group [[tunnel-group-id](#)] *reference*

Synopsis	Enter the tunnel-group list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tunnel-group-id] *reference*

Synopsis	Tunnel group ID
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the peer IPsec tunnel group

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec](#) [tunnel-group](#) *reference* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-group *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Peer tunnel group

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec](#) [tunnel-group](#) *reference* [peer-group](#) *number*

Tree [peer-group](#)

Range 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *number*

Synopsis Tunnel group priority

Context **configure** [redundancy](#) [multi-chassis](#) [peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec](#) [tunnel-group](#) *reference* [priority](#) *number*

Tree [priority](#)

Range 0 to 255

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mc-lag

Synopsis	Enter the mc-lag context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-lag
Tree	mc-lag
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of MC-LAG
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-lag admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

hold-on-neighbor-failure *number*

Synopsis	Time to wait for packets before node failure assumed
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-lag hold-on-neighbor-failure <i>number</i>
Tree	hold-on-neighbor-failure
Range	2 to 25
Default	3
Introduced	16.0.R1
Platforms	All

keep-alive-interval *number*

Synopsis	Keepalive timer value
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-lag keep-alive-interval <i>number</i>

Tree	keep-alive-interval
Range	5 to 500
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

lag [[lag-name](#)] *reference*

Synopsis	Enter the lag list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag reference
Tree	lag
Introduced	16.0.R1
Platforms	All

[lag-name] *reference*

Synopsis	LAG name
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag reference
Tree	lag
Reference	configure lag string
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

lACP-key *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key based on the remote MC-LAG
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag reference lACP-key number
Tree	lACP-key

Range	1 to 65535
Introduced	16.0.R1
Platforms	All

remote-lag *string*

Synopsis	LAG name
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag <i>reference</i> remote-lag string
Tree	remote-lag
String Length	1 to 27
Introduced	16.0.R1
Platforms	All

source-bmac-lsb (*keyword* | *bmac-lsb*)

Synopsis	MAC address value to apply to all ingress traffic
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag <i>reference</i> source-bmac-lsb (<i>keyword</i> <i>bmac-lsb</i>)
Tree	source-bmac-lsb
Options	use-lacp-key
Introduced	16.0.R1
Platforms	All

system-id *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ID based on the remote MC-LAG
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-lag lag <i>reference</i> system-id string
Tree	system-id
Introduced	16.0.R1
Platforms	All

system-priority *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority based on the remote MC-LAG
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-lag lag reference system-priority <i>number</i>
Tree	system-priority
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

mc-ring

Synopsis	Enter the mc-ring context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring
Tree	mc-ring
Introduced	16.0.R1
Platforms	All

ring [[sync-tag](#)] *string*

Synopsis	Enter the ring list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring ring <i>string</i>
Tree	ring
Introduced	16.0.R1
Platforms	All

[sync-tag] *string*

Synopsis	Tag for synchronizing with the multi-chassis peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring ring <i>string</i>

Tree	ring
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the multi-chassis ring
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

in-band-control-path

Synopsis	Enter the in-band-control-path context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> in-band-control-path
Tree	in-band-control-path
Introduced	16.0.R1
Platforms	All

debounce *boolean*

Synopsis	Enable inband control path debouncing
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> in-band-control-path debounce <i>boolean</i>
Tree	debounce
Default	true
Introduced	16.0.R1
Platforms	All

dst-ip string

Synopsis	IP address of the in-band control path peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring string in-band-control-path dst-ip string
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

interface string

Synopsis	Interface to verify in-band control path
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring string in-band-control-path interface string
Tree	interface
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

max-debounce-time number

Synopsis	Maximum delay after a failure when debouncing is active
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring string in-band-control-path max-debounce-time number
Tree	max-debounce-time
Range	5 to 200
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

service-name string

Synopsis	Administrative service name
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring string in-band-control-path service-name string

Tree	service-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

path-b

Synopsis	Enter the path-b context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring ring <i>string</i> path-b
Tree	path-b
Introduced	16.0.R1
Platforms	All

range start number end number

Synopsis	Add a list entry for range
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring ring <i>string</i> path-b range start number end number
Tree	range
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the VLAN range
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) mc-ring ring <i>string</i> path-b range start number end number
Tree	range
Range	0 to 4094
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the VLAN range
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring string path-b range start number end number
Tree	range
Range	0 to 4094
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

wildcard-saps boolean

Synopsis	Include the SAPs starting with a wildcard '*'
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring string path-b wildcard-saps boolean
Tree	wildcard-saps
Default	false
Introduced	16.0.R4
Platforms	All

path-excl

Synopsis	Enter the path-excl context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring string path-excl
Tree	path-excl
Introduced	16.0.R1
Platforms	All

range start number end number

Synopsis	Add a list entry for range
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring string path-excl range start number end number
Tree	range
Introduced	16.0.R1

Platforms All

start number

Synopsis Lower bound of the VLAN range

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ring ring](#) [string](#) [path-excl](#) [range](#) [start number](#) [end number](#)

Tree [range](#)

Range 0 to 4094

Notes This element is part of a list key.

Introduced 16.0.R1

Default false

Introduced 16.0.R4

Platforms All

ring-node [*name*] *string*

Synopsis	Enter the ring-node list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i>
Tree	ring-node
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	Name of the multi-chassis ring access node
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i>
Tree	ring-node
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the ring node verification
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

dst-ip *string*

Synopsis	Destination IP address for access node connection
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i> dst-ip <i>string</i>
Tree	dst-ip

Introduced	16.0.R1
Platforms	All

interval *number*

Synopsis	Connection verification interval
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i> interval <i>number</i>
Tree	interval
Range	1 to 6000
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

service-name *string*

Synopsis	Administrative service name
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i> service-name <i>string</i>
Tree	service-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

src-ip *string*

Synopsis	Source IP address for access node connection
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) mc-ring ring <i>string</i> ring-node <i>string</i> src-ip <i>string</i>
Tree	src-ip
Introduced	16.0.R1
Platforms	All

src-mac (*keyword* | *ring-node-mac-address*)

Synopsis	Source MAC address for the access node connection
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> ring-node <i>string</i> src-mac (<i>keyword</i> <i>ring-node-mac-address</i>)
Tree	src-mac
Options	system-mac-address
Default	system-mac-address
Introduced	16.0.R1
Platforms	All

vlan *string*

Synopsis	VLAN ID for access node connection
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> ring-node <i>string</i> vlan <i>string</i>
Tree	vlan
String Length	1 to 11
Introduced	16.0.R1
Platforms	All

srrp-instance [*id*] *number*

Synopsis	Add a list entry for srrp-instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> srrp-instance <i>number</i>
Tree	srrp-instance
Max. Instances	2
Introduced	16.0.R1
Platforms	All

[id] *number*

Synopsis	SRRP instance ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> srrp-instance <i>number</i>

Tree	srrp-instance
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of the multi-chassis ring
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) mc-ring ring <i>string</i> type <i>keyword</i>
Tree	type
Options	layer-2, layer-3
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

peer-name *string*

Synopsis	Multi-chassis peer name
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) peer-name <i>string</i>
Tree	peer-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

source-address ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#))

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source address to communicate with the MC peer
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) source-address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	source-address
Introduced	16.0.R1
Platforms	All

sync

Synopsis	Enable the sync context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync
Tree	sync
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the peer synchronization
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

diameter-node

Synopsis	Enable the diameter-node context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync diameter-node
Tree	diameter-node
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [*host-name*] *reference*

Synopsis	Enter the node list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync diameter-node node <i>reference</i>
Tree	node
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[host-name] *reference*

Synopsis	Origin-Host of the node
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync diameter-node node <i>reference</i>
Tree	node
Reference	configure aaa diameter node <i>string</i>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

Synopsis	Sync tag to be used for synchronization
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync diameter-node node <i>reference</i> sync-tag <i>string</i>
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter-proxy *boolean*

Synopsis	Synchronize the Diameter proxy data with the multi-chassis peer
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync diameter-proxy <i>boolean</i>
Tree	diameter-proxy

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

igmp boolean

Synopsis	Synchronize IGMP protocol information with the MC peer
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync igmp boolean
Tree	igmp
Default	false
Introduced	16.0.R1
Platforms	All

igmp-snooping boolean

Synopsis	Synchronize IGMP snooping information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync igmp-snooping boolean
Tree	igmp-snooping
Default	false
Introduced	16.0.R1
Platforms	All

ipsec boolean

Synopsis	Synchronize IPsec information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync ipsec boolean
Tree	ipsec
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp boolean

Synopsis	Synchronize Layer Two Tunnel Protocol (L2TP)
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync l2tp boolean
Tree	l2tp
Default	false
Introduced	16.0.R1
Platforms	All

local-dhcp-server boolean

Synopsis	Synchronize DHCP Server information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync local-dhcp-server boolean
Tree	local-dhcp-server
Default	false
Introduced	16.0.R1
Platforms	All

mc-ring boolean

Synopsis	Synchronize ring information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync mc-ring boolean
Tree	mc-ring
Default	false
Introduced	16.0.R1
Platforms	All

mld boolean

Synopsis	Synchronize MLD protocol information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync mld boolean
Tree	mld
Default	false

Introduced	16.0.R1
Platforms	All

mld-snooping *boolean*

Synopsis	Synchronize MLD snooping information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync mld-snooping <i>boolean</i>
Tree	mld-snooping
Default	false
Introduced	16.0.R1
Platforms	All

nat

Synopsis	Enable the nat context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync nat
Tree	nat
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group [*id*] *reference*

Synopsis	Enter the nat-group list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync nat nat-group <i>reference</i>
Tree	nat-group
Description	Commands in this context configure multi-chassis synchronization (MCS) for a NAT group. NAT group health information is exchanged between the pair of redundant NAT nodes. The system elects one of the nodes as the active node for the NAT group and the other node becomes the standby node.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] reference

Synopsis	NAT group ID
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync nat nat-group reference
Tree	nat-group
Reference	configure isa nat-group number
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync-tag string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync nat nat-group reference sync-tag string
Tree	sync-tag
Description	This command configures the synchronization tag for the NAT group. The tag must match the synchronization tag for the NAT group on the peering node.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pim-snooping

Synopsis	Enter the pim-snooping context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync pim-snooping
Tree	pim-snooping
Introduced	16.0.R1
Platforms	All

saps *boolean*

Synopsis	Synchronize PIM snooping data with the multi-chassis peer on SDP endpoints
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync pim-snooping saps <i>boolean</i>
Tree	saps
Default	false
Introduced	16.0.R1
Platforms	All

spoke-sdps *boolean*

Synopsis	Synchronize spoke SDPs with the multi-chassis peer
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync pim-snooping spoke-sdps <i>boolean</i>
Tree	spoke-sdps
Default	false
Introduced	16.0.R1
Platforms	All

python *boolean*

Synopsis	Synchronize Python
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync python <i>boolean</i>
Tree	python
Default	false
Introduced	16.0.R1
Platforms	All

srrp *boolean*

Synopsis	Synchronize SRRP information
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync srrp <i>boolean</i>
Tree	srrp
Default	false

Introduced	16.0.R1
Platforms	All

sub-host-trk *boolean*

Synopsis	Synchronize subscriber host tracking information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync sub-host-trk <i>boolean</i>
Tree	sub-host-trk
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-mgmt

Synopsis	Enter the sub-mgmt context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync sub-mgmt
Tree	sub-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *boolean*

Synopsis	Synchronize subscriber management IPoE information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync sub-mgmt ipoe <i>boolean</i>
Tree	ipoe
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe *boolean*

Synopsis	Synchronize subscriber management PPPoE information
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync sub-mgmt pppoe <i>boolean</i>

Tree	pppoe
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tags

Synopsis	Enter the tags context
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync tags
Tree	tags
Introduced	16.0.R1
Platforms	All

lag [[lag-name](#)] *reference*

Synopsis	Enter the lag list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync tags lag <i>reference</i>
Tree	lag
Introduced	16.0.R1
Platforms	All

[[lag-name](#)] *reference*

Synopsis	LAG name
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync tags lag <i>reference</i>
Tree	lag
Reference	configure lag <i>string</i>
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

range start string end string

Synopsis	Enter the range list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags lag reference range start string end string
Tree	range
Introduced	16.0.R1
Platforms	All

start string

Synopsis	First encapsulation value
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags lag reference range start string end string
Tree	range
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

end string

Synopsis	Last encapsulation value
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags lag reference range start string end string
Tree	range
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

sync-tag string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags lag reference range start string end string sync-tag string
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sync-tag *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync tags lag reference sync-tag string

Platforms	All

transport-encryption

Synopsis	Enter the transport-encryption context
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync transport-encryption
Tree	transport-encryption
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application [[application-id](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) sync transport-encryption application keyword
Tree	application
Description	Commands in this context configure the MCS application for transport encryption. The application-id configures an application and a keychain defines the key used for the encryption.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[application-id] *keyword*

Synopsis	Application using transport encryption
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync transport-encryption application <i>keyword</i>
Tree	application
Description	This command configures an MCS application for the transport encryption method.
Options	igmp, igmp-snooping, sub-mgmt-ipoe, srrp, mc-ring, mld-snooping, dhcp-server, sub-host-trk, sub-mgmt-pppoe, ipsec, mld, python, l2tp, diam-proxy, pim-snpg-sap, pim-snpg-sdp, diam-node, nat
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keychain *reference*

Synopsis	Keychain containing the authentication keys
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync transport-encryption application <i>keyword</i> keychain <i>reference</i>
Tree	keychain
Description	This command specifies a keychain that contains authentication keys for the application.
Reference	configure system security keychains keychain <i>string</i>
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group [[tunnel-group-id](#)] *number*

Synopsis	Enter the tunnel-group list instance
Context	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) sync tunnel-group <i>number</i>
Tree	tunnel-group
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tunnel-group-id] number

Synopsis Multi-active tunnel group ID

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number*

Tree **tunnel-group**

Range 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync-tag string

Synopsis Tag to synchronize the tunnel group with the MC peer

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number* **sync-tag** *string*

Tree **sync-tag**

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rollback-sync keyword

Synopsis Parameters for redundancy rollback synchronization

Context **configure** **redundancy** **rollback-sync** *keyword*

Tree **rollback-sync**

Options *rollback-single*, *rollback-all*

Introduced 16.0.R1

Platforms All

srrp

Synopsis Enter the **srrp** context

Context	configure redundancy srrp
Tree	srrp
Description	Commands in this context configure system parameters for BNG CUPS inter-UPF resiliency.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-srrp-id-range

Synopsis	Enable the auto-srrp-id-range context
Context	configure redundancy srrp auto-srrp-id-range
Tree	auto-srrp-id-range
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the ID range
Context	configure redundancy srrp auto-srrp-id-range end number
Tree	end
Range	2 to 4294967295
Default	4294967295
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the ID range
Context	configure redundancy srrp auto-srrp-id-range start number
Tree	start
Range	1 to 4294967294
Default	2147483648
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

switchover-exec *string*

Synopsis	CLI script file executed after a redundancy switchover
Context	configure redundancy switchover-exec <i>string</i>
Tree	switchover-exec
Description	<p>This command specifies the location and name of the CLI script file executed following a redundancy switchover from the previously active CPM card. A switchover can happen because of a fatal failure or by manual action.</p> <p>The CLI script file can contain commands for environment settings, classic CLI debug configuration (excluding mirroring settings), and other commands not maintained by the configuration redundancy.</p> <p>The following commands are not supported in the switchover-exec file: clear, configure, candidate, oam, tools, oam, ping, traceroute, mstat, mtrace, and mrinfo.</p>
String Length	1 to 100
Introduced	16.0.R1
Platforms	All

synchronize *keyword*

Synopsis	Parameters for redundancy synchronization
Context	configure redundancy synchronize <i>keyword</i>
Tree	synchronize
Options	config, boot-env
Introduced	16.0.R1
Platforms	All

3.39.1 router command descriptions

router [**router-name**] *string*

Synopsis	Enter the router list instance
Context	configure router <i>string</i>
Tree	router
Description	Commands in this context configure a router instance that represents a virtual router in the system. There will always be at least two instances in the system. The Base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. Instances	4
Introduced	16.0.R1
Platforms	All

[router-name] *string*

Synopsis	Administrative router name
Context	configure router <i>string</i>
Tree	router
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

aggregates

Synopsis	Enter the aggregates context
Context	configure router <i>string</i> aggregates
Tree	aggregates
Introduced	16.0.R1
Platforms	All

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the aggregate list instance
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Description	<p>Commands in this context add aggregate routes to the routing table when there are one or more component routes. A component route is any route installed in the forwarding table that is a more-specific match of the aggregate.</p> <p>The use of aggregate routes can lead to smaller routing table sizes by reducing the number of routes that need to be advertised to neighbor routes.</p>
Introduced	16.0.R1
Platforms	All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

aggregator

Synopsis	Enter the aggregator context
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator
Tree	aggregator
Description	Commands in this context configure the BGP AGGREGATOR path attribute for the aggregate route.
Introduced	16.0.R1
Platforms	All

address *string*

Synopsis	Aggregator IP address
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address <i>string</i>

Tree	address
Introduced	16.0.R1
Platforms	All

as-number *number*

Synopsis	Aggregator AS number
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

as-set *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i>
Tree	as-set
Description	<p>When configured to true, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to false, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p>
Default	false
Introduced	16.0.R1
Platforms	All

blackhole

Synopsis	Enable the blackhole context
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole
Tree	blackhole
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	16.0.R1
Platforms	All

generate-icmp *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Description	When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to false , ICMP unreachable messages are not generated.
Default	false
Introduced	16.0.R2
Platforms	All

community *string*

Synopsis	Community name that is added to the aggregate route
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) community <i>string</i>
Tree	community
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

discard-component-communities *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) discard-component-communities <i>boolean</i>
Tree	discard-component-communities
Default	false
Introduced	19.7.R1
Platforms	All

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	16.0.R1
Platforms	All

local-preference *number*

Synopsis	Local preference used when aggregate route is exported
Context	configure router <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) local-preference <i>number</i>
Tree	local-preference
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1

Platforms All

policy reference

Synopsis Policy name for the aggregated route

Context **configure** **router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **policy reference**

Tree **policy**

Description This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.

If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.

Reference **configure** **policy-options policy-statement** *string*

Introduced 20.10.R1

Platforms All

summary-only boolean

Synopsis Advertise the aggregate route only

Context **configure** **router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **summary-only boolean**

Tree **summary-only**

Description When configured to **true**, the router suppresses the advertisement of more specific component routes for the aggregate.

When configured to **false**, the router advertises both the aggregate route and its contributing routes.

Default false

Introduced 16.0.R1

Platforms All

tunnel-group number

Synopsis Tunnel group from which to associate the MC IPSec state

Context **configure** **router** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **tunnel-group number**

Tree **tunnel-group**

Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

allow-icmp-redirect *boolean*

Synopsis	Allow ICMP redirects on the management interface
Context	configure <i>router</i> <i>string</i> allow-icmp-redirect <i>boolean</i>
Tree	allow-icmp-redirect
Description	When configured to true , ICMP redirect messages can be received on the management interface. When configured to false , all received ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

allow-icmp6-redirect *boolean*

Synopsis	Allow IPv6 ICMP redirects on the management interface
Context	configure <i>router</i> <i>string</i> allow-icmp6-redirect <i>boolean</i>
Tree	allow-icmp6-redirect
Description	When configured to true , IPv6 ICMP redirect messages can be received on the management interface. When configured to false , all received IPv6 ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

autonomous-system *number*

Synopsis	AS number advertised to peers for this router
Context	configure <i>router</i> <i>string</i> autonomous-system <i>number</i>

Tree	autonomous-system
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated. If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

bfd

Synopsis	Enter the bfd context
Context	configure router <i>string</i> bfd
Tree	bfd
Introduced	19.7.R1
Platforms	All

seamless-bfd

Synopsis	Enter the seamless-bfd context
Context	configure router <i>string</i> bfd seamless-bfd
Tree	seamless-bfd
Introduced	19.7.R1
Platforms	All

peer [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the peer list instance
Context	configure router <i>string</i> bfd seamless-bfd peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Max. Instances	8000
Introduced	19.7.R1
Platforms	All

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Address of the remote node
Context	configure router <i>string</i> bfd seamless-bfd peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

discriminator *number*

Synopsis	Discriminator of the remote node
Context	configure router <i>string</i> bfd seamless-bfd peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) discriminator <i>number</i>
Tree	discriminator
Range	1 to 4294967295
Introduced	19.7.R1
Platforms	All

bgp

Synopsis	Enable the bgp context
Context	configure router <i>string</i> bgp
Tree	bgp
Introduced	16.0.R1
Platforms	All

add-paths

Synopsis	Enable the add-paths context
Context	configure router <i>string</i> bgp add-paths
Tree	add-paths
Description	Commands in this context configure add-paths support for the specified address families of the BGP instance. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.
Introduced	16.0.R1

Platforms All

evpn

Synopsis Enter the **evpn** context

Context **configure router string bgp add-paths evpn**

Tree **evpn**

Description Commands in this context configure the Add-Paths capability for EVPN routes. By default, Add-Paths is not enabled for EVPN routes.

Introduced 21.10.R1

Platforms All

receive *boolean*

Synopsis Receive multiple EVPN paths per prefix from a peer

Context **configure router string bgp add-paths evpn receive *boolean***

Tree **receive**

Default false

Introduced 21.10.R1

Platforms All

send (*number* | *keyword*)

Synopsis Maximum number of EVPN paths to send

Context **configure router string bgp add-paths evpn send (*number* | *keyword*)**

Tree **send**

Range 1 to 16

Options multipaths

Introduced 21.10.R1

Platforms All

ipv4

Synopsis Enter the **ipv4** context

Context **configure router string bgp add-paths ipv4**

Tree	ipv4
Description	Commands in this context configure add-paths support for the IPv4 unicast address family.
Introduced	16.0.R1
Platforms	All

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv4 prefix
Context	configure <i>router string</i> bgp add-paths ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple unlabeled IPv4 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	configure <i>router string</i> bgp add-paths ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
----------	-------------------------------

Context	configure router string <code>bgp add-paths ipv6</code>
Tree	<code>ipv6</code>
Description	Commands in this context configure add-paths support for the IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

receive *boolean*

Synopsis	Receive multiple routes per unlabeled IPv6 prefix
Context	configure router string <code>bgp add-paths ipv6 receive boolean</code>
Tree	<code>receive</code>
Description	When configured to true , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	configure router string <code>bgp add-paths ipv6 send (<i>number</i> <i>keyword</i>)</code>
Tree	<code>send</code>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per unlabeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for unlabeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

label-ipv4

Synopsis	Enter the label-ipv4 context
Context	configure <i>router string</i> bgp add-paths label-ipv4
Tree	label-ipv4
Description	Commands in this context configure add-paths support for the labeled IPv4 unicast address family.
Introduced	16.0.R1
Platforms	All

receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	configure <i>router string</i> bgp add-paths label-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (*number* | *keyword*)

Synopsis	Paths advertised per labeled IPv4 unicast prefix
Context	configure <i>router string</i> bgp add-paths label-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router string bgp add-paths label-ipv6
Tree	label-ipv6
Description	Commands in this context configure add-paths support for the labeled IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

receive boolean

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	configure router string bgp add-paths label-ipv6 receive boolean
Tree	receive
Description	When configured to true , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (number | keyword)

Synopsis	Paths advertised per labeled IPv6 unicast prefix
Context	configure router string bgp add-paths label-ipv6 send (number keyword)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, add-paths send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1

Platforms All

mcast-vpn-ipv4

Synopsis Enter the **mcast-vpn-ipv4** context

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4**

Tree **mcast-vpn-ipv4**

Description Commands in this context configure add-paths support for the multicast IPv4 VPN address family.

Introduced 16.0.R1

Platforms All

receive *boolean*

Synopsis Receive multiple multicast routes per IPv4 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4 receive** *boolean*

Tree **receive**

Description When configured to **true**, this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer.
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

send *number*

Synopsis Maximum paths advertised per multicast IPv4 VPN prefix

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv4 send** *number*

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.
When not configured, add-paths send capability is not enabled for multicast IPv4 VPN routes.

Range 1 to 16

Introduced 16.0.R1

Platforms All

mcast-vpn-ipv6

Synopsis Enter the **mcast-vpn-ipv6** context

Context **configure** *router string* **bgp add-paths mcast-vpn-ipv6**

Tree **mcast-vpn-ipv6**

Description Commands in this context configure add-paths support for the multicast IPv6 VPN address family.

Introduced 16.0.R1

vpn-ipv6

Synopsis Enter the **vpn-ipv6** context

Context **configure** *router string* **bgp add-paths vpn-ipv6**

Tree **vpn-ipv6**

Description Commands in this context configure add-paths support for the VPN-IPv6 address family.

Introduced 16.0.R1

Platforms All

receive *boolean*

Synopsis Receive multiple routes per VPN-IPv6 prefix

Context **configure** *router string* **bgp add-paths vpn-ipv6 receive boolean**

Tree **receive**

Description When configured to **true**, this command allows multiple routes per VPN-IPv6 prefix to be received from a peer.
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

send (*number* | *keyword*)

Synopsis Maximum paths advertised per VPN-IPv6 prefix

Context **configure** *router string* **bgp add-paths vpn-ipv6 send (*number* | *keyword*)**

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.
When not configured, add-paths send capability is not enabled for VPN-IPv6 routes.

Range 1 to 16

Options multipaths

Introduced 16.0.R1

Platforms All

admin-state *keyword*

Synopsis Administrative state of the BGP instance
Context **configure** *router string bgp admin-state keyword*
Tree [admin-state](#)
Options enable, disable
Default enable
Introduced 16.0.R1
Platforms All

advertise-external

Synopsis Enter the **advertise-external** context
Context **configure** *router string bgp advertise-external*
Tree [advertise-external](#)
Description Commands in this context allow BGP to advertise its best external route to a destination for specified address families even when its best overall route is an internal route.
Introduced 16.0.R1
Platforms All

ipv4 *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes
Context **configure** *router string bgp advertise-external ipv4 boolean*
Tree [ipv4](#)
Default false
Introduced 16.0.R1
Platforms All

ipv6 *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes
Context **configure** *router string bgp advertise-external ipv6 boolean*

Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure router <i>string</i> bgp advertise-external label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	configure router <i>string</i> bgp advertise-external label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	configure router <i>string</i> bgp advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	When configured to true , this command allows any inactive BGP route to be advertised, even though it is not the used route. When configured to false , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

advertise-ipv6-next-hops

Synopsis	Enter the advertise-ipv6-next-hops context
Context	configure <i>router string</i> bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops
Description	<p>Commands in this context allow specified BGP address family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>This command context has no effect on routes advertised to IPv4 peers.</p>
Introduced	16.0.R1
Platforms	All

evpn *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	configure <i>router string</i> bgp advertise-ipv6-next-hops evpn <i>boolean</i>
Tree	evpn
Description	<p>When configured to true, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	19.5.R1
Platforms	All

ipv4 *boolean*

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	configure <i>router string</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Description	<p>When configured to true, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability</p>

was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

Default	false
Introduced	19.5.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure <i>router</i> <i>string</i> bgp advertise-ipv6-next-hops label-ipv4 <i>boolean</i>
Tree	label-ipv4
Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	configure <i>router</i> <i>string</i> bgp advertise-ipv6-next-hops label-ipv6 <i>boolean</i>
Tree	label-ipv6
Description	<p>When configured to true, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	configure <i>router string</i> <i>bgp advertise-ipv6-next-hops vpn-ipv4 boolean</i>
Tree	vpn-ipv4
Description	<p>When configured to true, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure <i>router string</i> <i>bgp advertise-ipv6-next-hops vpn-ipv6 boolean</i>
Tree	vpn-ipv6
Description	<p>When configured to true, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	configure <i>router string</i> <i>bgp aggregator-id-zero boolean</i>
Tree	aggregator-id-zero
Description	When configured to true , the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.

When configured to **false**, the AS number and router ID are added to the AGGREGATOR path attribute.

Default	false
Introduced	16.0.R1
Platforms	All

asn-4-byte *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	configure router <i>string</i> bgp asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Default	true
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	BGP authentication key for all peers
Context	configure router <i>string</i> bgp authentication-key <i>string</i>
Tree	authentication-key
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>string</i> bgp authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>string</i>
Introduced	16.0.R3

Platforms All

backup-path

Synopsis Enter the **backup-path** context

Context **configure router** *string* **bgp backup-path**

Tree **backup-path**

Description Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.

By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.

Introduced 16.0.R1

Platforms All

ipv4 *boolean*

Synopsis Enable support for unlabeled unicast IPv4 routes

Context **configure router** *string* **bgp backup-path ipv4** *boolean*

Tree **ipv4**

Default false

Introduced 16.0.R1

Platforms All

ipv6 *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes

Context **configure router** *string* **bgp backup-path ipv6** *boolean*

Tree **ipv6**

Default false

Introduced 16.0.R1

Platforms All

Introduced	16.0.R1
Platforms	All

compare-origin-validation-state *boolean*

Synopsis	Compare RPKI origin validation state of usable routes
Context	configure router string bgp best-path-selection compare-origin-validation-state <i>boolean</i>
Tree	compare-origin-validation-state
Description	When configured to true , the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.

When configured to **false**, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.

Default	false
Introduced	16.0.R1
Platforms	All

d-path-length-ignore *boolean*

Synopsis Enable D-PATH length ignore

Context **configure** *router string* *bgp best-path-selection d-path-length-ignore boolean*

Tree [d-path-length-ignore](#)

Description When configured to **true**, this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

deterministic-med *boolean*

Synopsis Group paths based on AS before MED attribute comparison

Context **configure** *router string* *bgp best-path-selection deterministic-med boolean*

Tree [deterministic-med](#)

Description When configured to **true**, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to

select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to **false**, paths are not grouped and the overall best-path selection can depend on the order of route arrival.

Default	false
Introduced	16.0.R1
Platforms	All

ebgp-ibgp-equal

Synopsis	Enter the ebgp-ibgp-equal context
Context	configure router <i>string</i> bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal
Description	<p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p>
Introduced	16.0.R1
Platforms	All

evpn boolean

Synopsis	Consider EBGP and IBGP EVPN routes equal
Context	configure router <i>string</i> bgp best-path-selection ebgp-ibgp-equal evpn boolean
Tree	evpn
Default	false
Introduced	22.7.R1
Platforms	All

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	configure router <i>string</i> bgp best-path-selection ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Description	<p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p>
Default	false
Introduced	16.0.R1
Platforms	All

ignore-router-id

Synopsis	Enable the ignore-router-id context
Context	configure router <i>string</i> bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.

By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.

Introduced	16.0.R1
Platforms	All

include-internal

Synopsis	Enter the include-internal context
Context	configure router <i>string</i> bgp best-path-selection ignore-router-id include-internal
Tree	include-internal
Description	Commands in this context specify the internal address families for which the router ID values are ignored, even when comparing two IBGP paths or an EBGP and an IBGP path.
Introduced	16.0.R1
Platforms	All

mvpn-ipv4 *boolean*

Synopsis	Ignore the router IDs of MVPN-IPv4 routes
Context	configure router <i>string</i> bgp best-path-selection ignore-router-id include-internal mvpn-ipv4 <i>boolean</i>
Tree	mvpn-ipv4

Tree	mvpn-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

origin-invalid-unusable *boolean*

Synopsis	Deem invalid routes unusable for best-path selection
Context	configure router <i>string</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i>
Tree	origin-invalid-unusable
Description	<p>When configured to true, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to false, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix according to the BGP decision process.</p>
Default	false
Introduced	16.0.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure router <i>string</i> bgp bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations.</p> <p>When configured to false, BFD is not enabled globally for all BGP sessions.</p>
Default	false
Introduced	16.0.R1
Platforms	All

bgp-tunnel-metric

Synopsis	Enter the bgp-tunnel-metric context
Context	configure router <i>string</i> bgp bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context control the tunnel table metrics associated with BGP label unicast routes.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use the AIGP attribute as tunnel metric when present
Context	configure <i>router string bgp bgp-tunnel-metric prefer-aigp boolean</i>
Tree	<i>prefer-aigp</i>
Description	<p>When configured to true, the TTM metric is based on the AIGP metric if the route has the path attribute. When the BGP-LU route is selected for installation in TTM and it is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the resolved cost to the BGP next-hop of the route; otherwise, the metric is set to the value in the value setting.</p> <p>When configured to false, the AIGP attribute is ignored for purposes to TTM metric derivation.</p>
Default	false
Introduced	20.5.R1
Platforms	All

value *number*

Synopsis	BGP tunnel metric value
Context	configure <i>router string bgp bgp-tunnel-metric value number</i>
Tree	<i>value</i>
Description	<p>This command configures a BGP tunnel metric for label IPv4 routes that do not have their metric set by more specific means.</p> <p>If a BGP-LU route is selected for installation in the TTM and there is no tunnel metric policy action that applies to the route, the TTM metric of the associated tunnel is set to this value if either:</p> <ul style="list-style-type: none"> • prefer-aigp is set to false • prefer-aigp is set to true but the BGP-LU route does not have an AIGP attribute
Range	0 to 4294967295
Default	1000
Introduced	20.5.R1
Platforms	All

bgp-tunnel-preference *number*

Synopsis	BGP tunnel table preference
Context	configure <i>router string bgp bgp-tunnel-preference number</i>

Tree	bgp-tunnel-preference
Description	<p>This command configures the tunnel table preference for BGP-LU tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p>
Range	1 to 255
Default	12
Introduced	21.10.R1
Platforms	All

block-prefix-sid *boolean*

Synopsis	Block the prefix SID attribute
Context	configure router <i>string</i> bgp block-prefix-sid <i>boolean</i>
Tree	block-prefix-sid
Description	<p>When configured to true, all prefix SID attributes are removed from label IPv4 and label IPv6 routes when they are exchanged with EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to false, all prefix SID attributes associated with label IPv4 and label IPv6 routes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	configure router <i>string</i> bgp client-reflect <i>boolean</i>
Tree	client-reflect
Description	<p>When configured to true, routes received from neighbors considered to be RR clients are reflected to other peers as expected.</p> <p>When configured to false, routes received from neighbors considered to be RR clients are not reflected to other clients.</p>
Default	true

Introduced	16.0.R1
Platforms	All

cluster

Synopsis	Enter the cluster context
Context	configure router <i>string</i> bgp cluster
Tree	cluster
Introduced	16.0.R1
Platforms	All

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology location for ORR
Context	configure router <i>string</i> bgp cluster allow-local-fallback <i>boolean</i>
Tree	allow-local-fallback
Description	When configured to true , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to true . When configured to false , no route is advertised to the clients when there are no reachable routes from the client's ORR location.
Default	false
Introduced	16.0.R1
Platforms	All

cluster-id *string*

Synopsis	Route reflector cluster ID
Context	configure router <i>string</i> bgp cluster cluster-id <i>string</i>
Tree	cluster-id
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	16.0.R1
Platforms	All

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	configure router <i>string</i> bgp cluster orr-location <i>number</i>
Tree	orr-location
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure router <i>string</i> bgp connect-retry <i>number</i>
Tree	connect-retry
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	16.0.R1
Platforms	All

convergence

Synopsis	Enter the convergence context
Context	configure router <i>string</i> bgp convergence
Tree	convergence
Introduced	19.7.R1
Platforms	All

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>string</i> bgp convergence family <i>keyword</i>
Tree	family
Description	Commands in this context configure route convergence options for a specific BGP address family, specifically, the maximum amount of time BGP waits until it advertises the routes of the address family to its BGP peers.
Introduced	19.7.R1
Platforms	All

[family-type] *keyword*

Synopsis	Address family for which convergence selection applies
Context	configure router <i>string</i> bgp convergence family <i>keyword</i>
Tree	family
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

max-wait-to-advertise *number*

Synopsis	Maximum wait time before advertising routes
Context	configure router <i>string</i> bgp convergence family <i>keyword</i> max-wait-to-advertise <i>number</i>
Tree	max-wait-to-advertise
Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

min-wait-to-advertise *number*

Synopsis	Minimum wait time before advertising routes
Context	configure router <i>string</i> bgp convergence min-wait-to-advertise <i>number</i>
Tree	min-wait-to-advertise

Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure router <i>string</i> bgp damp-peer-oscillations
Tree	damp-peer-oscillations
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.
Introduced	16.0.R1
Platforms	All

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure router <i>string</i> bgp damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure router <i>string</i> bgp damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	16.0.R1

Platforms All

max-wait *number*

Synopsis Maximum session idle time after repeated instability

Context **configure** **router** *string* **bgp damp-peer-oscillations idle-hold-time max-wait** *number*

Tree [max-wait](#)

Range 1 to 2048

Default 60

Introduced 16.0.R1

Platforms All

second-wait *number*

Synopsis Time that doubles after each session failure

Context **configure** **router** *string* **bgp damp-peer-oscillations idle-hold-time second-wait** *number*

Tree [second-wait](#)

Description This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.

Range 1 to 2048

Default 5

Introduced 16.0.R1

Platforms All

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>router string bgp damping boolean</i>
Tree	damping
Description	<p>When configured to true, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none"> • Half-life: 15 minutes • Max-suppress: 60 minutes • Suppress-threshold: 3000 • Reuse-threshold: 750 <p>When configured to false, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	configure <i>router string bgp def-recv-evpn-encap keyword</i>
Tree	def-recv-evpn-encap
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
Options	mpls, vxlan
Default	mpls
Introduced	16.0.R1
Platforms	All

Context	configure <i>router string</i> bgp egress-peer-engineering
Tree	egress-peer-engineering
Introduced	21.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	configure <i>router</i> <i>string</i> <i>bgp egress-peer-engineering admin-state keyword</i>
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure <i>router</i> <i>string</i> <i>bgp enforce-first-as boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When configured to false, received routes are not checked for compliance with the rule.</p>
Default	false
Introduced	16.0.R1
Platforms	All

error-handling

Synopsis	Enter the error-handling context
Context	configure <i>router</i> <i>string</i> <i>bgp error-handling</i>
Tree	error-handling
Introduced	16.0.R1
Platforms	All

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure router <i>string</i> bgp error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	When configured to true , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When configured to false , most errors trigger a session reset.
Default	false
Introduced	16.0.R1
Platforms	All

export

Synopsis	Enable the export context
Context	configure router <i>string</i> bgp export
Tree	export
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to all peers. Route policies are configured in the configure policy-options context. When no export policies are specified in this context, BGP-learned routes are advertised by default and non-BGP routes are not advertised.
Introduced	16.0.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	List of export policy names
Context	configure router <i>string</i> bgp export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.

Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).

When no export policies are specified, BGP-learned routes are advertised by default and non-BGP routes are not advertised.

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

extended-nh-encoding

Synopsis	Enter the extended-nh-encoding context
Context	configure <i>router string</i> bgp extended-nh-encoding
Tree	extended-nh-encoding
Description	Commands in this context specify the IPv4-related address families that can receive IPv6 next hops from peers. The peers should not send such routes unless the peers receive notification of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Advertise encoding capability for IPv4 routes
Context	configure <i>router string</i> bgp extended-nh-encoding ipv4 boolean
Tree	ipv4
Default	false
Introduced	19.5.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	configure <i>router</i> <i>string</i> <i>bgp extended-nh-encoding label-ipv4 boolean</i>

Introduced	16.0.R1
Platforms	All

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
----------	---

Context	configure router <i>string</i> bgp fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	When configured to true , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to false , the BGP session remains up until the hold time expires.
Default	true
Introduced	16.0.R1
Platforms	All

flowspec

Synopsis	Enter the flowspec context
Context	configure router <i>string</i> bgp flowspec
Tree	flowspec
Introduced	16.0.R1
Platforms	All

validate-dest-prefix *boolean*

Synopsis	Validate destination prefix in FlowSpec-IPv4/IPv6 route
Context	configure router <i>string</i> bgp flowspec validate-dest-prefix <i>boolean</i>
Tree	validate-dest-prefix
Description	When configured to true , this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent. A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true: <ul style="list-style-type: none"> • it was originated outside the local AS of the receiving BGP router • the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers. When configured to false , destination-prefix validation is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

validate-redirect-ip *boolean*

Synopsis	Validate the redirect-to-IPv4 action in FlowSpec route
Context	configure router <i>string</i> bgp flowspec validate-redirect-ip <i>boolean</i>
Tree	validate-redirect-ip
Description	<p>When configured to true, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.</p> <p>A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.</p> <p>When configured to false, the validation check is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure router <i>string</i> bgp graceful-restart
Tree	graceful-restart
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.
Introduced	16.0.R1
Platforms	All

gr-notification *boolean*

Synopsis	Perform Graceful Restart procedures
Context	configure router <i>string</i> bgp graceful-restart gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false

Introduced	16.0.R1
Platforms	All

long-lived

Synopsis	Enable the long-lived context
Context	configure router <i>string</i> bgp graceful-restart long-lived
Tree	long-lived
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	16.0.R1
Platforms	All

advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	configure router <i>string</i> bgp graceful-restart long-lived advertise-stale-to-all-neighbors <i>boolean</i>

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure <i>router string</i> bgp graceful-restart long-lived forwarding-bits-set keyword
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure <i>router string</i> bgp graceful-restart long-lived helper-override-restart-time number
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1

Platforms All

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context **configure** *router string* **bgp graceful-restart long-lived helper-override-stale-time** *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range 0 to 16777215

Introduced 16.0.R1

Platforms All

without-no-export *boolean*

Synopsis Advertise LLGR stale routes to non-LLGR peers

Context **configure** *router string* **bgp graceful-restart long-lived without-no-export** *boolean*

Tree [without-no-export](#)

Description When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.

Default false

Introduced 16.0.R1

Platforms All

restart-time *number*

Synopsis Restart time advertised by GR capability

Context **configure** *router string* **bgp graceful-restart restart-time** *number*

Tree [restart-time](#)

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure router <i>string</i> bgp group <i>string</i> advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure router <i>string</i> bgp group <i>string</i> advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops

Description	Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied. When unconfigured, command settings are inherited from a higher level BGP configuration.
Introduced	16.0.R1
Platforms	All

evpn boolean

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	configure <i>router string bgp group string advertise-ipv6-next-hops evpn boolean</i>
Tree	evpn
Description	When configured to true , EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to false , EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.
Default	false
Introduced	19.5.R1
Platforms	All

ipv4 boolean

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	configure <i>router string bgp group string advertise-ipv6-next-hops ipv4 boolean</i>
Tree	ipv4
Description	When configured to true , IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to false , IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	19.5.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops label-ipv4 boolean</i>
Tree	label-ipv4
Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	configure <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops label-ipv6 boolean</i>
Tree	label-ipv6
Description	<p>When configured to true, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All
