1 Getting started

1.1 About this guide

This document describes the commands available in the MD-CLI that can be used to manage the router.

For a list of unsupported features by platform and chassis, see the *SR OS R22.x.Rx Software Release Notes*, part number 3HE 18412 000 x TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.

Note:

This guide generically covers Release 22.x.Rx content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the *SR OS R22.x.Rx Software Release Notes*, part number 3HE 18412 000 x TQZZA, for information about the supported features and applicable platforms in each load of the Release 22.x.Rx software.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode must be **mixed** or **model-driven**. For information about using the MD-CLI, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.

1.2 Platforms and terminology

Note:

Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 1: Platforms and terminology

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	

Platform	Collective platform designation
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	7450 ESS
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	

Platform	Collective platform designation
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12/12e
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12
7750 SR-12	
7750 SR-a4	7750 SR-a
7750 SR-a8	
7750 SR-1e	7750 SR-e
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	7750 SR-s
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	7950 XRS
7950 XRS-20e	
7950 XRS-40	
VSR	VSR
VSR-NRC	

1.3 Conventions

This section describes the general conventions used in this guide.

1.3.1 Precautionary and information messages

The following are information symbols used in the documentation.

DANGER: Danger warns that the described activity or situation may result in serious personal injury or death. An electric shock hazard could exist. Before you begin work on this equipment, be aware of hazards involving electrical circuitry, be familiar with networking environments, and implement accident prevention procedures.

WARNING: Warning indicates that the described activity or situation may, or will, cause equipment damage, serious performance problems, or loss of data.

Caution: Caution indicates that the described activity or situation may reduce your component or system performance.

Note: Note provides additional operational information.

Tip: Tip provides suggestions for use or best practices.

1.3.2 Options or substeps in procedures and sequential workflows

Options in a procedure or a sequential workflow are indicated by a bulleted list. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform one of the listed options to complete the step.

Example: Options in a procedure

1. User must perform this step.
2. This step offers three options. User must perform one option to complete this step.
 - This is one option.
 - This is another option.
 - This is yet another option.

Substeps in a procedure or a sequential workflow are indicated by letters. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step.

Example: Substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
 - a. This is one substep.
 - b. This is another substep.

1.4 MD-CLI command reference

1.4.1 MD-CLI tree hierarchy

Table 2: Command syntax symbols

Symbol	Description
	A vertical bar represents an “or” condition, indicating that only one of the parameters in the brackets or parentheses can be selected.
()	Parentheses indicate that one of the parameters must be selected.
[]	Brackets indicate optional parameters.
Bold	Commands in bold indicate commands and keywords.
Italic	Commands in <i>italics</i> indicate that you must enter text for the parameter.

In the following examples, **location** and **graceful-shutdown** are command names. For the **location** command, *keyword* must be one of the keywords **cf1**, **cf2**, or **cf3**. For the **graceful-shutdown** command, *boolean* must be one of the keywords **true** or **false**, although explicitly using the keyword **true** is optional.

location *keyword*

keyword - (**cf1** | **cf2** | **cf3**)

graceful-shutdown *boolean*

boolean - ([**true**] | **false**)

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in the following figure.

Figure 1: MD-CLI configuration tree example

```

configure
- cflowd
  - active-flow-timeout number
  - admin-state keyword
  - analyze-gre-payload boolean
  - analyze-l2tp-traffic boolean
  - analyze-v4overv6-traffic boolean
  - apply-groups reference
  - apply-groups-exclude reference
  - cache-size number
  - collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
    - admin-state keyword
    - aggregation
      - as-matrix boolean
      - destination-prefix boolean
      - protocol-port boolean
      - raw boolean
      - source-destination-prefix boolean
      - source-prefix boolean
    - apply-groups reference
    - apply-groups-exclude reference
    - autonomous-system-type keyword
    - description string
    - export-filter
      - family
        - ipv4 boolean
        - ipv6 boolean
        - l2-ip boolean
        - mcast-ipv4 boolean
        - mcast-ipv6 boolean
        - mpls boolean
    - interface-list
      - router reference interface-name reference
      - service

```

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Commands are linked to their command descriptions in the configuration tree with some exceptions (for example, to reduce repeated content), including the **apply-groups**, **apply-groups-exclude**, and **groups** commands. These commands are used to direct the use of configuration templates called configuration groups in the configure region at all configuration levels. The **apply-groups** command applies a configuration group at a configuration level and the **apply-groups-exclude** command excludes a configuration group at a configuration level. See "Using configuration groups" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

Some commands require one or more keys to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

```
- collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
```

The command description indicates the required syntax for each command. See [MD-CLI command descriptions](#) for more information.

collector [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)
- string

- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click the command or parameter name from the MD-CLI tree to be linked to the command description.

```
- summary-only boolean
- autonomous-system number
```

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a vertical bar (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

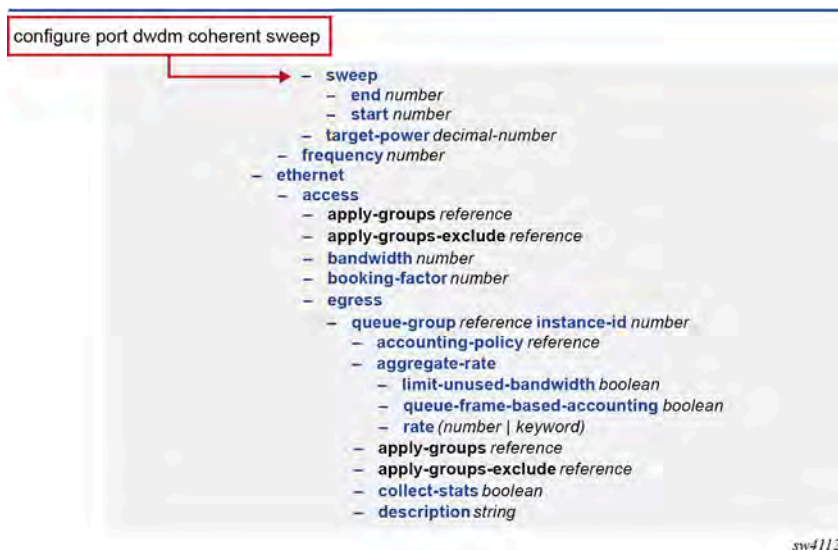

```
- indirect (ipv4-address-no-zone | ipv6-address-no-zone)
```

Allowed values in strings are printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotation marks. Double quotation marks within a string are not supported.

1.4.1.1 Context path

In the CLI tree section, a contextual path at the top of a page refers to the full context of the first command on the page, as shown in the following figure.

Figure 2: Command tree navigation

1.4.2 MD-CLI command descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

```
- log
  - accounting-policy number
```

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

The following table describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 3: Command descriptions fields

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Synopsis	Summary description of the element
Context	Full path to the command (with links to parent commands)
Tree	Link to the command in the CLI tree. For key elements, the link is to the parent element.
Description	Detailed description of the element, as needed
String Length	For string elements, the range of the number of characters allowed
Range/Max. Range	For number elements, the range of allowed values. A maximum range may be overridden by a platform-specific range.
Units	Base unit type of the element
Options	Enumerated values allowed for the element. Not all options are available on all platforms.
Default	Default value for the element. Platform-specific defaults are not displayed.

Field	Description
Reference	Reference to an element instance in the configuration or state datastore
Min./Max. Instances	For lists and leaf-lists, the minimum or maximum number of instances for this element
Notes	Information about special attributes of the element, including whether the element is: <ul style="list-style-type: none"> • a key for an element • mandatory • ordered by the user (instead of by the system) • part of a choice of elements
Introduced	Release in which the element was introduced
Deprecated	Release in which the element was deprecated
Platforms	Hardware platforms on which the element is available. See Platforms and terminology for more information about the platforms. <p> Note: Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the <i>SR OS R22.x.Rx Software Release Notes</i>, part number 3HE 18412 000 x TQZZA, for information about platform support.</p>

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *7450 ESS*, *7750 SR*, *7950 XRS*, and *VSR MD-CLI User Guide*.

Note:

All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

2 Operational commands

This section lists the MD-CLI operational commands.

2.1 admin commands

admin commands are used to perform administrative functions, such as displaying configuration that is not subject to AAA, manually saving the configuration, clearing user sessions, and rebooting the system.

```

admin
- application-assurance
  - group reference
    - url-list reference
      - upgrade
  - upgrade
- clear
  - security
    - lockout
      - all
      - user string
    - password-history
      - all
      - user string
- disconnect
  - address (ipv4-address-no-zone | ipv6-address-no-zone)
  - op-table-bypass boolean
  - session-id number
  - session-type keyword
  - username string
- nat
  - save-deterministic-script
- reboot
  - [card] keyword
  - hold
  - now
- redundancy
  - force-switchover
    - ignore-status
    - now
  - synchronize
    - boot-environment
    - configuration
- satellite
  - ethernet-satellite reference
    - reboot
      - now
      - upgrade
    - synchronize
    - tech-support
      - [url] string
- save
  - bof
  - configure
  - debug
  - li
  - [url] string
- set
  - time
    - [system-time] string
- show
  - configuration
    - bof
    - booted
    - cflash-id string
    - [cli-path] string

```

admin show configuration configure

```
  - configure
  - debug
  - detail
  - flat
  - full-context
  - intended
  - json
  - li
  - running
  - units
  - xml
- support-mode
- system
  - license
    - activate
      - [file-url] string
      - now
    - validate
      - [file-url] string
  - management-interface
    - operations
      - delete-operation
        - [delete-id] number
        - op-table-bypass boolean
      - stop-operation
        - op-table-bypass boolean
        - [stop-id] number
  - security
    - hash-control
      - custom-hash
        - algorithm keyword
        - key string
      - remove-custom-hash
    - system-password
      - admin-password
      - vsd-password
  - telemetry
    - grpc
      - cancel
        - all
        - subscription-id number
- tech-support
  - [url] string
```

2.1.1 admin command descriptions

admin

Synopsis	Enter the administrative context for system operations
Context	admin
Tree	admin
Introduced	16.0.R1
Platforms	All

application-assurance

Synopsis	Enter the application-assurance context
Context	admin application-assurance
Tree	application-assurance
Description	Commands in this context configure Application Assurance (AA) upgrade and AA group upgrade operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [[aa-group-id](#)] *reference*

Synopsis	Enter the group list instance
Context	admin application-assurance group reference
Tree	group
Description	Commands in this context configure the attributes of the group-specific upgrade.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[aa-group-id](#)] *reference*

Synopsis	AA group ID
Context	admin application-assurance group reference
Tree	group
Reference	state application-assurance group <i>number</i>

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-list [[url-list-name](#)] *reference*

Synopsis	Enter the url-list list instance
Context	admin application-assurance group reference url-list reference
Tree	url-list
Description	Commands in this context configure the URL list upgrade parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[url-list-name] *reference*

Synopsis	AA URL list name
Context	admin application-assurance group reference url-list reference
Tree	url-list
Reference	state application-assurance group number url-list string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade the referenced URL list
Context	admin application-assurance group reference url-list reference upgrade
Tree	upgrade
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade to a new isa-aa.tim file
Context	admin application-assurance upgrade

Tree	upgrade
Description	This command loads a new isa-aa.tim file as part of a router-independent signature upgrade. An AA ISA reboot is required for the upgrade to take effect.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear

Synopsis	Enter the clear context
Context	admin clear
Tree	clear
Introduced	19.10.R1
Platforms	All

security

Synopsis	Enter the security context
Context	admin clear security
Tree	security
Introduced	19.10.R1
Platforms	All

lockout

Synopsis	Reset the lockout timer
Context	admin clear security lockout
Tree	lockout
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear lockout of all users
Context	admin clear security lockout all
Tree	all

Notes	The following elements are part of a mandatory choice: all or user .
Introduced	19.10.R1
Platforms	All

user string

Synopsis	User to be cleared of lockout
Context	admin clear security lockout user string
Tree	user
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	19.10.R1
Platforms	All

password-history

Synopsis	Clear the password history
Context	admin clear security password-history
Tree	password-history
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear password history of all users
Context	admin clear security password-history all
Tree	all
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	19.10.R1
Platforms	All

user string

Synopsis	User to be cleared of password history information
Context	admin clear security password-history user string

Tree	user
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all or user .
Introduced	19.10.R1
Platforms	All

disconnect

Synopsis	Disconnect a user session
Context	admin disconnect
Tree	disconnect
Introduced	16.0.R1
Platforms	All

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the session to disconnect
Context	admin disconnect address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	19.10.R1
Platforms	All

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin disconnect op-table-bypass <i>boolean</i>
Tree	op-table-bypass
Description	When configured to true , the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.
Introduced	21.5.R1
Platforms	All

session-id *number*

Synopsis	ID of the session to disconnect
----------	---------------------------------

Context	admin disconnect session-id <i>number</i>
Tree	session-id
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

session-type *keyword*

Synopsis	Type of session to disconnect
Context	admin disconnect session-type <i>keyword</i>
Tree	session-type
Options	console, bluetooth, telnet, ssh, ftp, netconf, grpc, cron-ehs
Introduced	19.10.R1
Platforms	All

username *string*

Synopsis	Username to disconnect
Context	admin disconnect username <i>string</i>
Tree	username
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

nat

Synopsis	Enter the nat context
Context	admin nat
Tree	nat
Introduced	21.2.R1
Platforms	All

save-deterministic-script

Synopsis	Save script that computes deterministic NAT map entries
----------	---

Context	admin nat save-deterministic-script
Tree	save-deterministic-script
Introduced	21.2.R1
Platforms	All

reboot

Synopsis	Reboot CPM or force an upgrade of system boot ROMs
Context	admin reboot
Tree	reboot
Introduced	16.0.R1
Platforms	All

[card] keyword

Synopsis	Card to reboot
Context	admin reboot [card] keyword
Tree	[card]
Options	active, standby, upgrade
Introduced	16.0.R1
Platforms	All

hold

Synopsis	Hold a rebooted standby CPM from coming back online
Context	admin reboot hold
Tree	hold
Introduced	19.10.R1
Platforms	7750 SR-7s, 7750 SR-14s, VSR

now

Synopsis	Reboot immediately without prompts or confirmation
Context	admin reboot now
Tree	now

Introduced 16.0.R1
Platforms All

redundancy

Context	admin system management-interface
Tree	management-interface
Introduced	21.5.R1
Platforms	All

operations

Synopsis	Enter the operations context
Context	admin system management-interface operations
Tree	operations
Description	Commands in this context are used to manage YANG-based operations (for example, admin reboot , or ping) in model-driven interfaces.
Introduced	21.5.R1
Platforms	All

delete-operation

Synopsis	Stop and remove an operation
Context	admin system management-interface operations delete-operation
Tree	delete-operation
Description	This command removes an operation and all status and data associated with it. If the operation was executing, it is stopped before removal.
Introduced	21.5.R1
Platforms	All

[delete-id] *number*

Synopsis	ID of the operation to remove
Context	admin system management-interface operations delete-operation [delete-id] <i>number</i>
Tree	[delete-id]
Range	1 to 10000
Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	All

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations delete-operation op-table-bypass <i>boolean</i>
Tree	op-table-bypass

Description	When configured to true , the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.
Introduced	21.5.R1
Platforms	All

stop-operation

Synopsis	Stop the execution of an operational command
Context	admin system management-interface operations stop-operation
Tree	stop-operation
Description	This command stops the execution of an operational command. An operation launched as "asynchronous" is not deleted from the system when it is stopped. Status and other data associated with the operation persist until the operation is explicitly deleted using the delete operation command or a retention timeout.
Introduced	21.5.R1
Platforms	All

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin system management-interface operations stop-operation op-table-bypass boolean
Tree	op-table-bypass
Description	When configured to true , the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or admin disconnect is required.
Introduced	21.5.R1
Platforms	All

[stop-id] *number*

[cli-path] *string*

Synopsis Absolute path or relative path from pwc
 Context [compare string \[to\] string \[cli-path\] string](#)
 Tree [\[cli-path\]](#)

Introduced	20.10.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
Context	compare string [to] string flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: flat or netconf-rpc .
Introduced	16.0.R1
Platforms	All

full-context

Synopsis	Show the full context on each line
Context	compare string [to] string full-context
Tree	full-context
Introduced	16.0.R1
Platforms	All

lines number

Synopsis	Number of lines of context to display before and after
Context	compare string [to] string lines number
Tree	lines
Description	This command specifies the number of lines of context to display before and after changed elements. The context is evaluated separately at each container. If the parameter value is larger than the available context, the maximum available context up to the container boundary is displayed.
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

netconf-rpc

Synopsis	Display changes in NETCONF <edit-config> RPC format
Context	compare string [to] string netconf-rpc
Tree	netconf-rpc
Description	This option specifies the display of changes in NETCONF <edit-config> RPC format. This option is only supported with the summary option.
Notes	The following elements are part of a choice: flat or netconf-rpc .
Introduced	21.5.R1
Platforms	All

summary

Synopsis	Suppress specific differences and display a summary
Context	compare string [to] string summary
Tree	summary
Description	This command allows the suppression of specific differences and displays a summarized comparison. The summarized differences in elements under the highest level container that was deleted is displayed with { ... }. A tilde (~) character is displayed to indicate the new value of an element that has changed.
Introduced	16.0.R1

encryption-key string

Synopsis	Encryption key of the file to be loaded
Context	load keyword encryption-key string
Tree	encryption-key
String Length	8 to 32
Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	21.7.R1
Platforms	All

interactive

Synopsis	Load the configuration interactively
Context	load keyword interactive
Tree	interactive
Description	This command allows the user to enter configuration commands directly in an interactive session. This command is available with the merge option of the load command. See "Loading configuration interactively" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide</i> for more information.
Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	22.10.R1
Platforms	All

[url] string

Synopsis	Location of the file to be loaded
Context	load keyword [url] string
Tree	[url]
String Length	1 to 255
Notes	The following elements are part of a mandatory choice: interactive or (encryption-key and url).
Introduced	16.0.R1
Platforms	All

rename

Synopsis	Rename a list element
Context	rename
Tree	rename
Introduced	20.10.R1
Platforms	All

[cli-path] string

Synopsis	Source element path to the list, or 'pwc'
Context	rename [cli-path] string
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

to string

Synopsis	Destination key name
Context	rename to string
Tree	to
Introduced	20.10.R1
Platforms	All

rollback

Synopsis	Roll back to a previous configuration
Context	rollback
Tree	rollback
Introduced	16.0.R1
Platforms	All

commit-id *number*

Synopsis	Commit ID to roll back to
Context	rollback commit-id <i>number</i>
Tree	commit-id
Range	1 to 4294967295
Notes	The following elements are part of a choice: commit-id or rollback-id .
Introduced	22.10.R4
Platforms	All

[rollback-id] (*keyword* | *number*)

Synopsis	Saved configuration number to roll back to
Context	rollback [rollback-id] (<i>keyword</i> <i>number</i>)
Tree	[rollback-id]
Range	0 to 200
Options	startup
Notes	The following elements are part of a choice: commit-id or rollback-id .
Introduced	22.10.R4
Platforms	All

update

Synopsis	Update the candidate baseline
Context	update
Tree	update
Introduced	16.0.R4

Platforms All

/configure

Synopsis Update the entire candidate
Context [update /configure](#)

Introduced 16.0.R4
Platforms All

/bof

Synopsis Update the entire BOF candidate
Context [update /bof](#)
Tree [/bof](#)
Introduced 20.10.R1
Platforms All

check

Synopsis Perform dry-run update report without an actual update
Context [update check](#)
Tree [check](#)
Introduced 16.0.R4
Platforms All

/debug

Synopsis Update the entire debug candidate
Context [update /debug](#)
Tree [/debug](#)
Introduced 21.5.R1
Platforms All

/li

Synopsis	Update the entire LI candidate
Context	update /li
Tree	/li
Introduced	19.10.R1
Platforms	All

validate

Synopsis	Validate changes in the candidate configuration
Context	validate
Tree	validate
Introduced	16.0.R1
Platforms	All

2.3 environment commands

See “Environment commands” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

```
environment
- command-alias
- alias string
  - admin-state keyword
  - cli-command string
  - description string
  - mount-point (keyword | string)
  - python-script reference
- command-completion
- enter boolean
- space boolean
- tab boolean
- console
- length number
- width number
- info-output
- always-display
  - admin-state boolean
- message-severity-level
- cli keyword
- more boolean
- progress-indicator
- admin-state keyword
- delay number
- type keyword
- prompt
- context boolean
- newline boolean
- timestamp boolean
- uncommitted-changes-indicator boolean
- python
- memory-reservation number
- minimum-available-memory number
- timeout number
- time-display keyword
- time-format keyword
```

2.3.1 environment command descriptions

environment

Synopsis	Configure the environment settings for this session
Context	environment
Tree	environment
Introduced	16.0.R1
Platforms	All

command-alias

Synopsis	Enter the command-alias context
Context	environment command-alias
Tree	command-alias
Description	<p>Commands in this context create aliases to existing MD-CLI commands or to Python scripts.</p> <p>Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.</p>
Introduced	21.7.R1
Platforms	All

alias [[alias-name](#)] *string*

Synopsis	Enter the alias list instance
Context	environment command-alias alias <i>string</i>
Tree	alias
Description	<p>Commands in this context create aliases to existing MD-CLI commands or to Python applications.</p> <p>Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.</p>
Introduced	21.7.R1
Platforms	All

[alias-name] *string*

Synopsis	Alias name
Context	environment command-alias alias <i>string</i>
Tree	alias
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	environment command-alias alias <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of the MD-CLI alias. MD-CLI aliases that are administratively disabled cannot be executed, do not autocomplete in operational mode, and do not appear in ? help.
Options	enable, disable
Introduced	21.10.R1
Platforms	All

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	environment command-alias alias <i>string</i> cli-command <i>string</i>
Tree	cli-command
String Length	1 to 255
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	21.7.R1
Platforms	All

description *string*

Synopsis	Text description
Context	environment command-alias alias <i>string</i> description <i>string</i>

Tree	description
String Length	1 to 110
Introduced	21.7.R1
Platforms	All

mount-point [[path](#)] (*keyword* | *string*)

Synopsis	Add a list entry for mount-point
Context	environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
Min. Instances	1
Introduced	21.7.R1
Platforms	All

[path] (*keyword* | *string*)

Synopsis	Mount point where the alias is available
Context	environment command-alias alias <i>string</i> mount-point (<i>keyword</i> <i>string</i>)
Tree	mount-point
String Length	1 to 255
Options	global
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

python-script *reference*

Synopsis	Python script to run when executing the alias
Context	environment command-alias alias <i>string</i> python-script <i>reference</i>
Tree	python-script
Reference	state python python-script <i>string</i>
Notes	The following elements are part of a mandatory choice: cli-command or python-script .
Introduced	21.7.R1
Platforms	All

command-completion

Synopsis	Enter the command-completion context
Context	environment command-completion
Tree	command-completion
Introduced	16.0.R1
Platforms	All

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	environment command-completion enter <i>boolean</i>
Tree	enter
Default	true
Introduced	16.0.R1
Platforms	All

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	environment command-completion space <i>boolean</i>
Tree	space
Default	true
Introduced	16.0.R1
Platforms	All

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	environment command-completion tab <i>boolean</i>
Tree	tab
Default	true
Introduced	16.0.R1
Platforms	All

console

Synopsis	Enter the console context
Context	environment console
Tree	console
Introduced	16.0.R1
Platforms	All

length *number*

Synopsis	Number of lines displayed on the console
Context	environment console length <i>number</i>
Tree	length
Range	24 to 512
Default	24
Introduced	16.0.R1
Platforms	All

width *number*

Synopsis	Number of columns displayed on the console
Context	environment console width <i>number</i>
Tree	width
Range	80 to 512
Default	80
Introduced	16.0.R1
Platforms	All

info-output

Synopsis	Enter the info-output context
Context	environment info-output
Tree	info-output
Introduced	22.2.R1
Platforms	All

always-display

Synopsis	Enter the always-display context
Context	environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed, regardless of whether they are set to their default value.
Introduced	22.2.R1
Platforms	All

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	environment info-output always-display admin-state boolean
Tree	admin-state
Description	When configured to true , the values of the admin-state elements in info output (without the detail option) are always displayed, even if they are the default values.
Default	false
Introduced	22.2.R1
Platforms	All

message-severity-level

Synopsis	Enter the message-severity-level context
Context	environment message-severity-level
Tree	message-severity-level
Introduced	16.0.R1
Platforms	All

cli *keyword*

Synopsis	Message severity threshold for CLI messages
Context	environment message-severity-level cli keyword
Tree	cli
Options	warning, info

Default	info
Introduced	16.0.R1
Platforms	All

more *boolean*

Synopsis	Activate the pager when output is longer than a screen
Context	environment more <i>boolean</i>
Tree	more
Default	true
Introduced	16.0.R1
Platforms	All

progress-indicator

Synopsis	Enter the progress-indicator context
Context	environment progress-indicator
Tree	progress-indicator
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the progress indicator
Context	environment progress-indicator admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

delay *number*

Synopsis	Delay before the progress indicator is displayed
Context	environment progress-indicator delay <i>number</i>

Tree	delay
Range	0 to 10000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Progress indicator output style
Context	environment progress-indicator type <i>keyword</i>
Tree	type
Options	dots
Default	dots
Introduced	16.0.R1
Platforms	All

prompt

Synopsis	Enter the prompt context
Context	environment prompt
Tree	prompt
Introduced	16.0.R1
Platforms	All

context *boolean*

Synopsis	Show the current command context in the prompt
Context	environment prompt context <i>boolean</i>
Tree	context
Default	true
Introduced	16.0.R1
Platforms	All

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	environment prompt newline <i>boolean</i>
Tree	newline
Default	true
Introduced	16.0.R1
Platforms	All

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	environment prompt timestamp <i>boolean</i>
Tree	timestamp
Default	false
Introduced	16.0.R1
Platforms	All

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	environment prompt uncommitted-changes-indicator <i>boolean</i>
Tree	uncommitted-changes-indicator
Default	true
Introduced	16.0.R1
Platforms	All

python

Synopsis	Enter the python context
Context	environment python
Tree	python
Introduced	21.10.R1
Platforms	All

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	environment python memory-reservation <i>number</i>
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	21.10.R1
Platforms	All

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	environment python minimum-available-memory <i>number</i>
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	21.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	environment python timeout <i>number</i>
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

time-display *keyword*

Synopsis	Time zone to display time
Context	environment time-display <i>keyword</i>
Tree	time-display

Description	<p>This command configures the time zone for a timestamp displayed in outputs, such as event logs and show commands for the current CLI session.</p> <p>In event logs, the selected time is used to control the timestamps in the CLI output of show log log-id and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF).</p> <p>Also see the configure log log-id time-format command.</p>
Options	local, utc
Default	local
Introduced	16.0.R1
Platforms	All

time-format *keyword*

Synopsis	Format to display the date and time
Context	environment time-format keyword
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain show command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	20.5.R1
Platforms	All

2.4 file commands

See “File management” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide* for more information.

```

file
- change-directory

```

2.4.1 file command descriptions

file

Synopsis	Perform file operations
Context	file
Tree	file
Description	Commands in this context execute file management operations.
Introduced	20.10.R1
Platforms	All

change-directory

Synopsis	Change the working directory
Context	file change-directory
Tree	change-directory
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url*)

Synopsis	New working directory URL
Context	file change-directory [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i>)
Tree	[url]
String Length	1 to 200
Default	.
Introduced	20.10.R1
Platforms	All

checksum

Synopsis	Compute and display checksums
Context	file checksum
Tree	checksum

Description	This command computes and displays an image file or a checksum for a file.
Introduced	20.10.R1
Platforms	All

[type] keyword

Synopsis	Checksum option type
Context	file checksum [type] keyword
Tree	[type]
Options	image, md5, sha256
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url*)

Synopsis	File URL
Context	file checksum [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

copy

Synopsis	Copy files
Context	file copy
Tree	copy
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
----------	---

Context	file copy client-tls-profile <i>string</i>
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

[destination-url] (*sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose*)

Synopsis	Destination URL or '.' for the working directory
Context	file copy [destination-url] (<i>sat-url cflash-url string-not-all-spaces ftp-tftp-url http-url-loose</i>)
Tree	[destination-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file copy direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force copy without prompting before overwriting
Context	file copy force
Tree	force
Introduced	20.10.R1
Platforms	All

proxy string

Synopsis	Connect over HTTP with a proxy
Context	file copy proxy string
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

recursive

Synopsis	Copy sub-directories encountered at the source URL
Context	file copy recursive
Tree	recursive
Description	This command recursively copies files and directories. If files or directories already exist, the operator is prompted to overwrite them. When the force command is enabled, a positive response to the overwrite prompts is assumed, and the operator is not prompted for confirmation. The existing files or directories are overwritten.
Introduced	21.10.R1
Platforms	All

[source-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose*)

Synopsis	Source URL
Context	file copy [source-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i>)
Tree	[source-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

disable

Synopsis	Disable compact flash devices
Context	file disable
Tree	disable
Introduced	20.10.R1

Platforms All

active

Synopsis Disable all devices on the active CPM

Context [file disable active](#)

Tree [active](#)

Notes The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

Introduced 20.10.R1

Platforms All

cflash-id *string*

Synopsis Disable the compact flash device

Context [file disable cflash-id *string*](#)

Tree [cflash-id](#)

String Length 4 to 6

Notes The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

Introduced 20.10.R1

Platforms All

standby

Synopsis Disable all devices on the standby CPM

Context [file disable standby](#)

Tree [standby](#)

Notes The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

Introduced 20.10.R1

Platforms All

edit

Synopsis Edit files with the text editor

Context [file edit](#)

Tree [edit](#)

Description	This command allows users to edit files with the text editor. See "Text editor" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide</i> for more information.
Introduced	22.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	File URL
Context	file edit [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

enable

Synopsis	Enable compact flash devices
Context	file enable
Tree	enable
Introduced	20.10.R1
Platforms	All

active

Synopsis	Enable all devices on the active CPM
Context	file enable active
Tree	active
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	20.10.R1
Platforms	All

cflash-id *string*

Synopsis	Enable the compact flash device
Context	file enable cflash-id <i>string</i>
Tree	cflash-id
String Length	4 to 6
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	20.10.R1
Platforms	All

standby

Synopsis	Enable all devices on the standby CPM
Context	file enable standby
Tree	standby
Notes	The following elements are part of a choice: active , cflash-id , or standby .
Introduced	20.10.R1
Platforms	All

format

Synopsis	Format a compact flash device
Context	file format
Tree	format
Introduced	20.10.R1
Platforms	All

[cflash-id] *string*

Synopsis	Compact flash ID
Context	file format [cflash-id] <i>string</i>
Tree	[cflash-id]
String Length	4 to 6
Introduced	20.10.R1
Platforms	All

list

Synopsis	List directory contents
Context	file list
Tree	list
Introduced	20.10.R1
Platforms	All

reverse

Synopsis	List files in reverse sort order
Context	file list reverse
Tree	reverse
Introduced	20.10.R1
Platforms	All

[**sort-order**] *keyword*

Synopsis	Sort order for the directory
Context	file list [sort-order] keyword
Tree	[sort-order]
Options	date, name, size
Introduced	20.10.R1
Platforms	All

[**url**] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url*)

Synopsis	Location of the directory to be listed
Context	file list [url] (sat-url cflash-url string-not-all-spaces ftp-url)
Tree	[url]
String Length	1 to 200
Default	.
Introduced	20.10.R1
Platforms	All

make-directory

Synopsis	Make a directory
Context	file make-directory
Tree	make-directory
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url*)

Synopsis	Directory location
Context	file make-directory [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

move

Synopsis	Move or rename files or directories
Context	file move
Tree	move
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file move client-tls-profile <i>string</i>
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

[destination-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *http-url-loose*)

Synopsis	Destination URL or '.' for the working directory
Context	file move [destination-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>http-url-loose</i>)
Tree	[destination-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file move direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force move without prompting before overwriting
Context	file move force
Tree	force
Introduced	20.10.R1
Platforms	All

proxy string

Synopsis	Connect over HTTP with a proxy
Context	file move proxy string
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

[source-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *http-url-loose*)

Synopsis	Source URL
Context	file move [source-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>http-url-loose</i>)
Tree	[source-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

permission

Synopsis	Show or set file permissions
Context	file permission
Tree	permission
Introduced	20.10.R1
Platforms	All

[attribute] *keyword*

Synopsis	File permission
Context	file permission [attribute] <i>keyword</i>
Tree	[attribute]
Options	read-only, read-write
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	File URL to set permissions
Context	file permission [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[url]
String Length	1 to 200
Introduced	20.10.R1
Platforms	All

remove

Synopsis	Remove files
Context	file remove
Tree	remove
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file remove client-tls-profile <i>string</i>
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file remove direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force removal without prompting
Context	file remove force
Tree	force
Introduced	20.10.R1
Platforms	All

proxy string

Synopsis	Connect over HTTP with a proxy
Context	file remove proxy string
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url* | *http-url-loose*)

Synopsis	File URL
Context	file remove [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i> <i>http-url-loose</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

remove-directory

Synopsis	Remove directories
Context	file remove-directory
Tree	remove-directory
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force removal without prompting
Context	file remove-directory force
Tree	force
Introduced	20.10.R1
Platforms	All

recursive

Synopsis	Remove directory and contents recursively
Context	file remove-directory recursive
Tree	recursive
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-url*)

Synopsis	Directory URL
Context	file remove-directory [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-url</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

repair

Synopsis	Repair a compact flash file system
Context	file repair
Tree	repair
Introduced	20.10.R1
Platforms	All

[cflash-id] *string*

Synopsis	Compact flash ID
Context	file repair [cflash-id] string
Tree	[cflash-id]
String Length	4 to 6
Introduced	20.10.R1
Platforms	All

show

Synopsis	Display the contents of a file
Context	file show
Tree	show
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file show client-tls-profile <i>string</i>
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file show direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

proxy *string*

Synopsis	Connect over HTTP with a proxy
Context	file show proxy <i>string</i>
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose*)

Synopsis	File URL
Context	file show [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

unzip

Synopsis	Unzip files
Context	file unzip
Tree	unzip
Introduced	20.10.R1
Platforms	All

create-destination

Synopsis	Create destination directory if it does not exist
Context	file unzip create-destination
Tree	create-destination
Introduced	20.10.R1
Platforms	All

[destination-url] (*sat-url* | *cflash-url* | *string-not-all-spaces*)

Synopsis	Destination URL or '.' for the working directory
Context	file unzip [destination-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i>)
Tree	[destination-url]
String Length	1 to 200
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force the unzip operation without prompting
Context	file unzip force
Tree	force
Description	<p>When configured, files and directories that already exist in the destination URL are overwritten without prompting.</p> <p>The system does not automatically create directories explicitly specified by the destination URL. To allow the system to create new directories, use the create-destination command.</p> <p>When unconfigured, the system prompts the user before overwriting a file or directory.</p>
Notes	The following elements are part of a choice: force or list .
Introduced	20.10.R1
Platforms	All

list

Synopsis	List the file contents without the unzip operation
Context	file unzip list
Tree	list
Notes	The following elements are part of a choice: force or list .
Introduced	20.10.R1
Platforms	All

[source-url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url* | *http-url-loose*)

Synopsis	Source URL
Context	file unzip [source-url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i> <i>http-url-loose</i>)
Tree	[source-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

version

Synopsis	Display the version of an SR OS image file
Context	file version
Tree	version
Introduced	20.10.R1
Platforms	All

[url] (*sat-url* | *cflash-url* | *string-not-all-spaces* | *ftp-tftp-url*)

Synopsis	File URL
Context	file version [url] (<i>sat-url</i> <i>cflash-url</i> <i>string-not-all-spaces</i> <i>ftp-tftp-url</i>)
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

2.5 Global commands

Global commands are used for operational functions, such as entering configuration sessions, navigating the CLI, executing OAM commands, and logging into remote hosts.

```

- back number
- bof
  - exclusive
  - private
  - read-only
- configure

info [[from](#)] *keyword*

Synopsis Show the information under the present working context
Context [info keyword](#)
Tree [info](#)
Introduced 16.0.R1
Platforms All

[\[from\]](#) *keyword*

Synopsis Source datastore
Context [info keyword](#)
Tree [info](#)
Description This command specifies the source datastore. This option is not supported for **state** elements.
Options candidate, running, baseline, intended
Notes This element is part of a list key.

Introduced	16.0.R1
Platforms	All

[cli-path] *string*

Synopsis	Absolute path or relative path from pwc
Context	info keyword [cli-path] <i>string</i>
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

converted

Synopsis	Include converted third-party model configuration from the running datastore
Context	info keyword converted
Tree	converted
Description	<p>This option specifies the inclusion of converted configuration values from third party models in the output and is only available when configure system management-interface yang-modules openconfig-modules is set to true.</p> <p>This option should only be used in the configure region when third party models are used. The output with this option is the same as info when used in other configuration regions.</p> <p>This option is not supported for state elements.</p>
Introduced	16.0.R1
Platforms	All

detail

Synopsis	Include default and unconfigured values
Context	info keyword detail
Tree	detail
Introduced	16.0.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
----------	--

Context	info keyword flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: flat , json , or xml .
Introduced	16.0.R1
Platforms	All

full-context

Synopsis	Show the full context on each line
Context	info keyword full-context
Tree	full-context
Introduced	16.0.R1
Platforms	All

inheritance

Synopsis	Include configuration inherited from configuration groups
Context	info keyword inheritance
Tree	inheritance
Description	<p>This option specifies the inclusion of configuration inherited from configuration groups in the output.</p> <p>This option should only be used in the configure region when configuration groups are used. The output with this option is the same as info when used in other configuration regions.</p> <p>This option is not supported for state elements.</p>
Introduced	16.0.R1
Platforms	All

json

Synopsis	Show the output in indented JSON IETF format
Context	info keyword json
Tree	json
Notes	The following elements are part of a choice: flat , json , or xml .
Introduced	19.10.R1

Platforms All

model *keyword*

Synopsis Model for which to display converted output

Context [info keyword](#) [model keyword](#)

Tree [model](#)

Description This option specifies the model which displays the converted output.
This option is only supported with the **converted** option and is only available when **configure system management-interface yang-modules openconfig-modules** is set to **true**.

Options all, openconfig

Default all

Introduced 20.7.R1

Platforms All

units

Synopsis Include unit types for applicable elements

Context [info keyword](#) [units](#)

Tree [units](#)

Introduced 20.5.R1

Platforms All

xml

Synopsis Show the output in indented XML format

Context [info keyword](#) [xml](#)

Tree [xml](#)

Notes The following elements are part of a choice: **flat**, **json**, or **xml**.

Introduced 20.7.R1

Platforms All

li

Synopsis Enter a candidate configuration mode

Context	li
Tree	li
Introduced	19.10.R1
Platforms	All

exclusive

Synopsis	Enter exclusive configuration mode
Context	li exclusive
Tree	exclusive
Introduced	19.10.R1
Platforms	All

private

Synopsis	Enter private configuration mode
Context	li private
Tree	private
Introduced	19.10.R1
Platforms	All

read-only

Synopsis	Enter read-only configuration mode
Context	li read-only
Tree	read-only
Introduced	19.10.R1
Platforms	All

logout

Synopsis	Exit the CLI session
Context	logout
Tree	logout
Introduced	16.0.R1

Platforms All

oam

Synopsis Perform OAM tests

Context [oam](#)

Tree [oam](#)

Introduced 20.2.R1

Platforms All

efm

Synopsis Enter the **efm** context

Context [oam efm](#)

Tree [efm](#)

Introduced 20.2.R1

local-loopback

Synopsis Start or stop local loopback test on a port

Context [oam efm local-loopback](#)

Tree [local-loopback](#)

Introduced 20.2.R1

Platforms All

[action] keyword

Synopsis Action type for the test

Context [oam efm local-loopback \[action\] keyword](#)

Tree [\[action\]](#)

Options start, stop

Notes This element is mandatory.

Introduced 20.2.R1

Platforms All

port-id string

Synopsis	Port ID for the test
Context	oam efm local-loopback port-id string
Tree	port-id
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

remote-loopback

Synopsis	Start or stop remote loopback test on a port
Context	oam efm remote-loopback
Tree	remote-loopback
Introduced	20.2.R1
Platforms	All

[action] keyword

Synopsis	Action type for the test
Context	oam efm remote-loopback [action] keyword
Tree	[action]
Options	start, stop
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

port-id string

Synopsis	Port ID for the test
Context	oam efm remote-loopback port-id string
Tree	port-id
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

eth-cfm

Synopsis	Initiate an Ethernet Connectivity Fault Management test
Context	oam eth-cfm
Tree	eth-cfm
Introduced	20.2.R1
Platforms	All

eth-test

Synopsis	Initiate an OAM ETH-CFM test
Context	oam eth-cfm eth-test
Tree	eth-test
Introduced	20.2.R1
Platforms	All

data-length *number*

Synopsis	Size of the padding to be added to the frame
Context	oam eth-cfm eth-test data-length <i>number</i>
Tree	data-length
Range	64 to 1500
Default	64
Introduced	20.2.R1
Platforms	All

[destination] (*mac-unicast-address-no-zero* | *number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm eth-test [destination] (<i>mac-unicast-address-no-zero</i> <i>number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm eth-test ma-admin-name reference
Tree	ma-admin-name
Reference	state eth-cfm domain string association string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm eth-test md-admin-name reference
Tree	md-admin-name
Reference	state eth-cfm domain string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm eth-test mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm eth-test priority number

Tree	priority
Range	0 to 7
Default	7
Introduced	20.2.R1
Platforms	All

linktrace

Synopsis	Initiate a linktrace test
Context	oam eth-cfm linktrace
Tree	linktrace
Introduced	20.2.R1
Platforms	All

[destination] (*mac-unicast-address-no-zero | number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm linktrace [destination] (<i>mac-unicast-address-no-zero number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm linktrace ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain string association string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm linktrace md-admin-name reference
Tree	md-admin-name
Reference	state eth-cfm domain string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm linktrace mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

ttl *number*

Synopsis	Time to live for a returned linktrace
Context	oam eth-cfm linktrace ttl number
Tree	ttl
Range	0 to 255
Default	64
Introduced	20.2.R1
Platforms	All

loopback

Synopsis	Initiate a loopback test
Context	oam eth-cfm loopback
Tree	loopback

Introduced 20.2.R1
 Platforms All

[destination] (*mac-unicast-address-no-zero | keyword | number*)

Synopsis Destination MAC address or remote MEP ID of the peer
 Context [oam eth-cfm loopback \[destination\]](#) (*mac-unicast-address-no-zero | keyword | number*)
 Tree [\[destination\]](#)
 Range 1 to 8191
 Options multicast
 Notes This element is mandatory.
 Introduced 20.2.R1
 Platforms All

interval *number*

Synopsis Time between probes within the test run
 Context [oam eth-cfm loopback interval](#) *number*
 Tree [interval](#)
 Range 0 to 600
 Units deciseconds
 Default 0
 Introduced 20.2.R1
 Platforms All

lbm-padding *number*

Synopsis Data portion size of the data TLV, no octet string
 Context [oam eth-cfm loopback lbm-padding](#) *number*
 Tree [lbm-padding](#)
 Description This command specifies the size of the data portion of the data TLV which does not allow for an optional octet string.
 MSDU is not processed when setting is in use. A value of 0 means that no data TLV is added to the packet. This is specified with an octet string. This parameter and **size** are mutually exclusive.
 Range 0 | 3 to 9778

Default	0
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm loopback ma-admin-name reference
Tree	ma-admin-name
Reference	state eth-cfm domain string association string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm loopback md-admin-name reference
Tree	md-admin-name
Reference	state eth-cfm domain string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm loopback mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority number

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm loopback priority number
Tree	priority
Range	0 to 7
Introduced	20.2.R1
Platforms	All

send-count number

Synopsis	Number of loopback messages to send
Context	oam eth-cfm loopback send-count number
Tree	send-count
Range	1 to 1024
Default	1
Introduced	20.2.R1
Platforms	All

size number

Synopsis	Data portion size of the data TLV, octet string allowed
Context	oam eth-cfm loopback size number
Tree	size
Description	This command specifies the size of the data portion of the data TLV allowing for an optional octet string to be included. A value of 0 means that no data TLV is added to the packet. This parameter and lbm-padding are mutually exclusive.
Range	0 to 1500
Units	bytes
Default	0
Introduced	20.2.R1
Platforms	All

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm loopback timeout <i>number</i>
Tree	timeout
Description	This command specifies the time the router waits for a message reply after sending a message request. Upon expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.
Range	1 to 10
Units	seconds
Default	5
Introduced	20.2.R1
Platforms	All

one-way-delay-test

Synopsis	Initiate a one-way delay test
Context	oam eth-cfm one-way-delay-test
Tree	one-way-delay-test
Introduced	20.2.R1
Platforms	All

[destination] (*mac-unicast-address-no-zero* | *number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm one-way-delay-test [destination] (<i>mac-unicast-address-no-zero</i> <i>number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
----------	------------------

Context	oam eth-cfm one-way-delay-test ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain <i>string association string</i>
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm one-way-delay-test md-admin-name <i>reference</i>
Tree	md-admin-name
Reference	state eth-cfm domain <i>string</i>
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm one-way-delay-test mep-id <i>number</i>
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm one-way-delay-test priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7

Introduced	20.2.R1
Platforms	All

two-way-delay-test

Synopsis	Initiate a two-way delay test
Context	oam eth-cfm two-way-delay-test
Tree	two-way-delay-test
Introduced	20.2.R1
Platforms	All

[destination] (*mac-unicast-address-no-zero | number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm two-way-delay-test [destination] (<i>mac-unicast-address-no-zero number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm two-way-delay-test ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain string association string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-delay-test md-admin-name <i>reference</i>

Tree	md-admin-name
Reference	state eth-cfm domain <i>string</i>
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-delay-test mep-id <i>number</i>
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm two-way-delay-test priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	20.2.R1
Platforms	All

two-way-slm-test

Synopsis	Initiate a two-way SLM test in SAA
Context	oam eth-cfm two-way-slm-test
Tree	two-way-slm-test
Introduced	20.2.R1
Platforms	All

[destination] (*mac-unicast-address-no-zero | number*)

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm two-way-slm-test [destination] (<i>mac-unicast-address-no-zero number</i>)
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

interval (*number | decimal-number*)

Synopsis	Time between probes within the test run
Context	oam eth-cfm two-way-slm-test interval (<i>number decimal-number</i>)
Tree	interval
Range	1 to 10
Units	seconds
Default	5
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm two-way-slm-test ma-admin-name <i>reference</i>
Tree	ma-admin-name
Reference	state eth-cfm domain string association string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-slm-test md-admin-name <i>reference</i>

Tree	md-admin-name
Reference	state eth-cfm domain string
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id number

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-slm-test mep-id number
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority number

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm two-way-slm-test priority number
Tree	priority
Range	0 to 7
Default	7
Introduced	20.2.R1
Platforms	All

send-count number

Synopsis	Number of two-way SLM test messages to send
Context	oam eth-cfm two-way-slm-test send-count number
Tree	send-count
Range	1 to 1000
Default	1
Introduced	20.2.R1

Platforms All

size number

Synopsis Data portion size of the data TLV, octet string allowed

Context [oam eth-cfm two-way-slm-test size number](#)

Tree [size](#)

Description This command specifies the size of the data portion of the data TLV allowing for an optional octet string to be included.

Range 0 to 1500

Units bytes

Default 0

Introduced 20.2.R1

Platforms All

timeout number

Synopsis Wait time for a reply to a sent message request

Context [oam eth-cfm two-way-slm-test timeout number](#)

Tree [timeout](#)

Description This command specifies the time the router waits for a message reply after sending a message request.

Upon expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.

Range 1 to 10

Units seconds

Default 5

Introduced 20.2.R1

Platforms All

oam-pm

Synopsis Initiate an on-demand OAM Performance Monitoring test

Context [oam oam-pm](#)

Tree [oam-pm](#)

Introduced 20.2.R1

Platforms All

action *keyword*

Synopsis OAM-PM test action
Context [oam oam-pm action keyword](#)
Tree [action](#)
Options start, stop
Notes This element is mandatory.
Introduced 20.2.R1
Platforms All

session *reference*

Synopsis OAM-PM session name
Context [oam oam-pm session reference](#)
Tree [session](#)
Reference **state oam-pm session string**
Notes This element is mandatory.
Introduced 20.2.R1
Platforms All

test-type *keyword*

Synopsis Test type
Context [oam oam-pm test-type keyword](#)
Tree [test-type](#)
Options dm, dmm, lmm, slm, twamp-light
Notes This element is mandatory.
Introduced 20.2.R1
Platforms All

saa

Synopsis Enter the **saa** context

Context	oam saa
Tree	saa
Introduced	22.10.R1
Platforms	All

owner [[owner-name](#)] *reference* [test](#) *reference*

Synopsis	SAA owner name
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Introduced	22.10.R1
Platforms	All

[owner-name] *reference*

Synopsis	Name of the owner of SAA test to be stopped or started
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Reference	state saa owner <i>string test string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

test *reference*

Synopsis	Name of the SAA test to be stopped or started
Context	oam saa owner <i>reference</i> test <i>reference</i>
Tree	owner
Reference	state saa owner <i>string test string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

start

Synopsis	Start the SAA test
Context	oam saa owner <i>reference</i> test <i>reference</i> start
Tree	start
Introduced	22.10.R1
Platforms	All

accounting *boolean*

Synopsis	Disable recording results in accounting policy
Context	oam saa owner <i>reference</i> test <i>reference</i> start accounting boolean
Tree	accounting
Default	true
Introduced	22.10.R1
Platforms	All

stop

Synopsis	Stop the SAA test
Context	oam saa owner <i>reference</i> test <i>reference</i> stop
Tree	stop
Introduced	22.10.R1
Platforms	All

accounting *boolean*

Synopsis	Disable recording results in accounting policy
Context	oam saa owner <i>reference</i> test <i>reference</i> stop accounting boolean
Tree	accounting
Default	true
Introduced	22.10.R1
Platforms	All

password

Synopsis	Change the local user password
Context	password
Tree	password
Introduced	20.10.R1
Platforms	All

ping

Synopsis	Ping an IP address or DNS name
Context	ping
Tree	ping
Introduced	19.10.R1
Platforms	All

bypass-routing

Synopsis	Bypass routing table when sending ping request to host
Context	ping bypass-routing
Tree	bypass-routing
Description	When configured, the system bypasses the routing table when sending the ping request to a host on a directly-attached network. If the host is not on a directly-attached network, an error is returned.
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	19.10.R1
Platforms	All

count *number*

Synopsis	Number of ping requests to send to the remote host
Context	ping count <i>number</i>
Tree	count
Range	1 to 100000
Units	packets
Default	5

Introduced 19.10.R1
 Platforms All

[destination] (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)

Synopsis Destination IP address or DNS name
 Context [ping \[destination\]](#) (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)
 Tree [\[destination\]](#)
 String Length 1 to 128
 Notes This element is mandatory.
 Introduced 19.10.R1
 Platforms All

do-not-fragment

Synopsis Do not fragment the request frame
 Context [ping do-not-fragment](#)
 Tree [do-not-fragment](#)
 Description This command sets the do-not-fragment bit in the IPv4 header. This prevents packet fragmentation along the path when there is an MTU mismatch.
 Introduced 19.10.R1
 Platforms All

fc keyword

Synopsis Forwarding class option for the transmitted packet
 Context [ping fc keyword](#)
 Tree [fc](#)
 Options be, l2, af, l1, h2, ef, h1, nc
 Default nc
 Introduced 19.10.R1
 Platforms All

interface (*reference | reference | reference | reference | reference*)

Synopsis	Sending interface name
Context	ping interface (<i>reference reference reference reference reference</i>)
Tree	interface
Reference	state router <i>string interface string</i> state service ies <i>string interface string</i> state service ies <i>string subscriber-interface string</i> state service vprn <i>string interface string</i> state service vprn <i>string subscriber-interface string</i>
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	19.10.R1
Platforms	All

interval (*number | decimal-number*)

Synopsis	Time between consecutive ping requests
Context	ping interval (<i>number decimal-number</i>)
Tree	interval
Range	1 to 10000
Units	seconds
Default	1
Introduced	19.10.R1
Platforms	All

next-hop-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Next-hop address to send packet, ignoring routing table
Context	ping next-hop-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	next-hop-address
Description	This command specifies the next-hop address. The system does not use the routing table and the address must be on an adjacent router attached to a common subnet.
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	19.10.R1

Platforms All

output-format *keyword*

Synopsis Output format
Context [ping output-format keyword](#)
Tree [output-format](#)
Options summary, detail
Default detail
Introduced 19.10.R1
Platforms All

pattern (*keyword | number*)

Synopsis Pattern string to include in the packet
Context [ping pattern \(keyword | number\)](#)
Tree [pattern](#)
Range 0 to 65535
Options sequential
Default sequential
Introduced 19.10.R1
Platforms All

router-instance (*reference | reference*)

Synopsis Router name or VPRN service name
Context [ping router-instance \(reference | reference\)](#)
Tree [router-instance](#)
Default Base
Reference **state router** *string*
state service vprn *string*
Introduced 19.10.R1
Platforms All

size number

Synopsis	Request packet size including ICMP header and payload
Context	ping size number
Tree	size
Range	0 to 16384
Units	bytes
Default	56
Introduced	19.10.R1
Platforms	All

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP Echo Request packet
Context	ping source-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	source-address
Introduced	19.10.R1
Platforms	All

subscriber string

Synopsis	Subscriber ID for sending ICMP Echo Request packets
Context	ping subscriber string
Tree	subscriber
String Length	1 to 64
Notes	The following elements are part of a choice: bypass-routing , interface , next-hop-address , or subscriber .
Introduced	19.10.R1
Platforms	All

timeout number

Synopsis	Wait time for the ICMP Echo Reply packet
Context	ping timeout number
Tree	timeout

Description	This command specifies the time to wait for the ICMP Echo Reply packet. The timer is started when the last ICMP Echo Request is sent.
Range	1 to 10
Units	seconds
Default	5
Introduced	19.10.R2
Platforms	All

tos number

Synopsis	Type of Service (ToS) bits in the IP header
Context	ping tos number
Tree	tos
Range	0 to 255
Default	0
Introduced	19.10.R1
Platforms	All

ttl number

Synopsis	Time to Live (TTL) included in the request packet
Context	ping ttl number
Tree	ttl
Range	1 to 128
Default	64
Introduced	19.10.R1
Platforms	All

pwc

Synopsis	Show the present working context
Context	pwc
Tree	pwc
Introduced	16.0.R1
Platforms	All

[path-type] keyword

Synopsis	Alternative format to display the path
Context	pwc [path-type] keyword
Tree	[path-type]
Description	This command provides alternative formats to display the present working context. The gnmi-path option replaces the xpath option.
Options	model-path, gnmi-path, cli-path, json-instance-path
Introduced	19.10.R1
Platforms	All

previous

Synopsis	Display previous working context
Context	pwc previous

Introduced	16.0.R1
Platforms	All

ssh

Synopsis	SSH to an IP address or DNS name
Context	ssh
Tree	ssh
Introduced	20.7.R1
Platforms	All

[destination] (*ipv4-address-with-zone* | *ipv6-address-with-zone* | *string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	ssh [destination] (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i> <i>string-not-all-spaces</i>)
Tree	[destination]
String Length	1 to 128

Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	All

key-re-exchange

Synopsis	Enter the key-re-exchange context
Context	ssh key-re-exchange
Tree	key-re-exchange
Introduced	20.7.R1
Platforms	All

mbytes (*number* | *keyword*)

Synopsis	Maximum bytes before initiating key re-exchange
Context	ssh key-re-exchange mbytes (<i>number</i> <i>keyword</i>)
Tree	mbytes
Description	This command specifies the number of bytes transmitted on an SSH session, after which the SSH client initiates the key re-exchange.
Range	1 to 64000
Units	megabytes
Options	infinite
Default	1024
Introduced	20.7.R1
Platforms	All

minutes (*number* | *keyword*)

Synopsis	Time after which SSH client initiates key re-exchange
Context	ssh key-re-exchange minutes (<i>number</i> <i>keyword</i>)
Tree	minutes
Range	1 to 1440
Units	minutes
Options	infinite
Default	60

Introduced	20.7.R1
Platforms	All

login-name *string*

Synopsis	SSH login username
Context	ssh login-name <i>string</i>
Tree	login-name
String Length	1 to 32
Introduced	20.7.R1
Platforms	All

router-instance (*reference* | *reference*)

Synopsis	Router name or VPRN service name
Context	ssh router-instance (<i>reference</i> <i>reference</i>)
Tree	router-instance
Default	Base
Reference	state router <i>string</i> state service vprn <i>string</i>
Introduced	20.7.R1
Platforms	All

telnet

Synopsis	Telnet to an IP address or DNS name
Context	telnet
Tree	telnet
Description	This command opens a Telnet session to a remote host. In SR-series networks, the Telnet servers limit Telnet clients to three login attempts; if unsuccessful, the Telnet client session disconnects. The number is not user configurable.
Introduced	20.7.R1
Platforms	All

[destination] (*ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	telnet [destination] (<i>ipv4-address-with-zone ipv6-address-with-zone string-not-all-spaces</i>)
Tree	[destination]
Description	This command specifies the IP address or DNS name (if DNS name resolution is configured) of the remote host for the Telnet session.
String Length	1 to 128
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	All

port number

Synopsis	Remote host TCP port for the Telnet connection
Context	telnet port number
Tree	port
Range	1 to 65535
Default	23
Introduced	20.7.R1
Platforms	All

router-instance (*reference | reference*)

Synopsis	Router name or VPRN service name
Context	telnet router-instance (<i>reference reference</i>)
Tree	router-instance
Default	Base
Reference	state router <i>string</i> state service vprn <i>string</i>
Introduced	20.7.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address of the Telnet packets
Context	telnet source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	20.7.R1
Platforms	All

top

Synopsis	Move to the top level of the context
Context	top
Tree	top
Introduced	16.0.R1
Platforms	All

traceroute

Synopsis	Show the route taken to an IP address or DNS name
Context	traceroute
Tree	traceroute
Introduced	19.10.R1
Platforms	All

decode *keyword*

Synopsis	Perform original datagram parsing functions
Context	traceroute decode <i>keyword</i>
Tree	decode
Options	none, original-datagram
Default	none
Introduced	22.7.R1
Platforms	All

dest-port *number*

Synopsis	Transport protocol destination port number
Context	traceroute dest-port <i>number</i>
Tree	dest-port
Range	1 to 65535
Default	33434
Introduced	20.10.R1
Platforms	All

dest-port-udp-fixed

Synopsis	Avoid increment of destination port number for UDP test
Context	traceroute dest-port-udp-fixed
Tree	dest-port-udp-fixed
Introduced	21.10.R1
Platforms	All

[destination] (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *string-not-all-spaces*)

Synopsis	Destination IP address or DNS name
Context	traceroute [destination] (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>string-not-all-spaces</i>)
Tree	[destination]
String Length	1 to 128
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

detail

Synopsis	Display MPLS label stack information or TCP port status
Context	traceroute detail
Tree	detail
Introduced	19.10.R1
Platforms	All

min-ttl *number*

Synopsis	First hop traceroute probes using the TTL value
Context	traceroute min-ttl <i>number</i>
Tree	min-ttl
Description	This command specifies the first hop traceroute probes, using the ttl value.
Range	1 to 255
Default	1
Introduced	21.10.R1
Platforms	All

numeric

Synopsis	Display IP addresses instead of DNS names
Context	traceroute numeric
Tree	numeric
Introduced	19.10.R1
Platforms	All

probe-count *number*

Synopsis	Number of probes to send per hop
Context	traceroute probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	All

protocol *keyword*

Synopsis	Packet type to send
Context	traceroute protocol <i>keyword</i>
Tree	protocol

Description	This command sets the transport protocol, UDP or TCP, for the traceroute packet. A targeted VPRN service silently discards TCP traceroutes and only responds to UDP traceroutes.
Options	udp, tcp
Default	udp
Introduced	21.10.R1
Platforms	All

router-instance (*reference* | *reference*)

Synopsis	Router name or VPRN service name
Context	traceroute router-instance (<i>reference</i> <i>reference</i>)
Tree	router-instance
Default	Base
Reference	state router <i>string</i> state service vprn <i>string</i>
Introduced	19.10.R1
Platforms	All

size *number*

Synopsis	Number of pad bytes in each transmitted packet
Context	traceroute size <i>number</i>
Tree	size
Range	0 to 9786
Units	bytes
Default	0
Introduced	21.10.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address of the probe packets
Context	traceroute source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address

Description	This command specifies the source address of the probe packets. If the IP address is not one of the interfaces of the device, the system returns an error.
Introduced	19.10.R1
Platforms	All

tos number

Synopsis	Type of Service (ToS) bits in the IP header
Context	traceroute tos number
Tree	tos
Range	0 to 255
Default	0
Introduced	19.10.R1
Platforms	All

ttl number

Synopsis	Maximum number of hops (TTL) to probe
Context	traceroute ttl number
Tree	ttl
Range	1 to 255
Default	30
Introduced	19.10.R1
Platforms	All

wait number

Synopsis	Time to wait for a response to the probe
Context	traceroute wait number
Tree	wait
Range	10 to 60000
Units	milliseconds
Default	5000
Introduced	19.10.R1
Platforms	All

tree

Synopsis	Show the command tree under the present working context
Context	tree
Tree	tree
Introduced	16.0.R1
Platforms	All

2.6.1 Output modifier command descriptions

|

Synopsis	Apply an output modifier
Context	
Tree	
Introduced	16.0.R1
Platforms	All

count

Synopsis	Show the line count of the output
Context	count
Tree	count
Introduced	16.0.R1
Platforms	All

match [\[pattern\]](#) *string*

Synopsis	Match on a string (") or regular expression (')
Context	match <i>string</i>
Tree	match
Introduced	16.0.R1
Platforms	All

[\[pattern\]](#) *string*

Synopsis	String (") or regular expression (') pattern to match
Context	match <i>string</i>
Tree	match
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

ignore-case *boolean*

Synopsis	Ignore case in pattern match
Context	match string ignore-case boolean
Tree	ignore-case
Default	false
Introduced	16.0.R1
Platforms	All

invert-match *boolean*

Synopsis	Invert the pattern match selection
Context	match string invert-match boolean
Tree	invert-match
Default	false
Introduced	16.0.R1
Platforms	All

max-count *number*

Synopsis	Maximum number of displayed matches
Context	match string max-count number
Tree	max-count
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

post-lines *number*

Synopsis	Number of lines to display following the matched line
Context	match string post-lines number
Tree	post-lines
Range	0 to 4294967295
Default	0
Introduced	16.0.R1

Platforms All

pre-lines *number*

Synopsis Number of lines to display preceding the matched line
 Context | [match string pre-lines number](#)
 Tree [pre-lines](#)
 Range 0 to 4294967295
 Default 0
 Introduced 16.0.R1
 Platforms All

no-more

Synopsis Prevent pagination for the displayed output
 Context | [no-more](#)
 Tree [no-more](#)
 Introduced 16.0.R1
 Platforms All

pyexec [[url](#)] (*string | reference*)

Synopsis Execute a Python application
 Context | [pyexec \(string | reference\)](#)
 Tree [pyexec](#)
 Introduced 21.7.R1
 Platforms All

[url] (*string | reference*)

Synopsis Location of the script to be executed
 Context | [pyexec \(string | reference\)](#)
 Tree [pyexec](#)
 Reference **state python python-script string**
 Notes This element is part of a list key.

Introduced 21.7.R1
Platforms All

[argument-01] string

Synopsis First argument
Context | [pyexec](#) (*string* | *reference*) [\[argument-01\]](#) *string*
Tree [\[argument-01\]](#)
Introduced 21.7.R1
Platforms All

[argument-02] string

Synopsis Second argument
Context | [pyexec](#) (*string* | *reference*) [\[argument-02\]](#) *string*
Tree [\[argument-02\]](#)
Introduced 21.7.R1
Platforms All

[argument-03] string

Synopsis Third argument
Context | [pyexec](#) (*string* | *reference*) [\[argument-03\]](#) *string*
Tree [\[argument-03\]](#)
Introduced 21.7.R1
Platforms All

[argument-04] string

Synopsis Fourth argument
Context | [pyexec](#) (*string* | *reference*) [\[argument-04\]](#) *string*
Tree [\[argument-04\]](#)
Introduced 21.7.R1
Platforms All

[argument-05] *string*

Synopsis	Fifth argument
Context	pyexec (<i>string</i> <i>reference</i>) [argument-05] <i>string</i>
Tree	[argument-05]
Introduced	21.7.R1
Platforms	All

[argument-06] *string*

Synopsis	Sixth argument
Context	pyexec (<i>string</i> <i>reference</i>) [argument-06] <i>string</i>
Tree	[argument-06]
Introduced	21.7.R1
Platforms	All

[argument-07] *string*

Synopsis	Seventh argument
Context	pyexec (<i>string</i> <i>reference</i>) [argument-07] <i>string</i>
Tree	[argument-07]
Introduced	21.7.R1
Platforms	All

[argument-08] *string*

Synopsis	Eight argument
Context	pyexec (<i>string</i> <i>reference</i>) [argument-08] <i>string</i>
Tree	[argument-08]
Introduced	21.7.R1
Platforms	All

[argument-09] *string*

Synopsis	Ninth argument
Context	pyexec (<i>string</i> <i>reference</i>) [argument-09] <i>string</i>

Tree [\[argument-09\]](#)
 Introduced 21.7.R1
 Platforms All

[argument-10] *string*

Synopsis Tenth argument
 Context [| pyexec \(string | reference\) \[argument-10\] string](#)
 Tree [\[argument-10\]](#)
 Introduced 21.7.R1
 Platforms All

reverse-dns

Synopsis Resolve IP addresses to DNS names in input
 Context [| reverse-dns](#)
 Tree [reverse-dns](#)
 Introduced 22.7.R1
 Platforms All

> [url] (*cflash-url | ftp-tftp-url*)

Synopsis Redirect output to a file
 Context [> \(cflash-url | ftp-tftp-url\)](#)
 Tree [>](#)
 Introduced 16.0.R4
 Platforms All

[url] (*cflash-url | ftp-tftp-url*)

Synopsis Location to save the output
 Context [> \(cflash-url | ftp-tftp-url\)](#)
 Tree [>](#)
 String Length 1 to 199
 Notes This element is part of a list key.

Introduced	16.0.R4
Platforms	All

3 Configuration commands

This section lists MD-CLI configuration commands.

3.1 aaa commands

```

configure
- aaa
  - apply-groups reference
  - apply-groups-exclude reference
  - diameter
    - node string
      - apply-groups reference
      - apply-groups-exclude reference
      - connection
        - ipv4
          - allow-connections boolean
          - local-address string
        - ipv6
          - allow-connections boolean
          - local-address string
        - timer number
      - description string
      - origin-realm string
      - peer index number
        - address (ipv4-address-no-zone | ipv6-address-no-zone)
        - admin-state keyword
        - apply-groups reference
        - apply-groups-exclude reference
        - connection-timer number
        - default-peer boolean
        - destination-host string
        - preference number
        - route index number
          - application keyword
          - apply-groups reference
          - apply-groups-exclude reference
          - preference number
          - realm string
        - watchdog-timer number
      - python-policy reference
      - router-instance string
    - peer-policy string
      - applications
        - gx boolean
        - gy boolean
        - nasreq boolean
      - apply-groups reference
      - apply-groups-exclude reference
      - connection-timer number
      - description string
      - ipv4-source-address string
      - ipv6-source-address string
      - origin-host string
      - origin-realm string
      - peer string
        - address (ipv4-address-no-zone | ipv6-address-no-zone)
        - admin-state keyword
        - apply-groups reference
        - apply-groups-exclude reference
        - connection-timer number
        - destination-host string
        - destination-realm string
        - preference number
        - statistics

```

configure aaa diameter peer-policy peer transaction-timer

```

- transaction-timer number
- transport
  - port-number number
  - watchdog-timer number
- proxy
  - admin-state keyword
  - local-address (ipv4-address-no-zone | ipv6-address-no-zone)
  - mcs-peer
    - address reference
    - apply-groups reference
    - apply-groups-exclude reference
    - sync-tag string
    - router-instance string
  - python-policy reference
  - role keyword
  - router-instance string
  - transaction-timer number
  - vendor-support keyword
  - watchdog-timer number
- radius
  - acct-on-off-group string
  - apply-groups reference
  - apply-groups-exclude reference
  - description string
  - coa-port number
  - isa-policy string
  - accounting
    - include-attributes
      - acct-delay-time boolean
      - acct-triggered-reason boolean
      - called-station-id boolean
      - calling-station-id boolean
      - circuit-id boolean
      - class boolean
      - credit-control-quota boolean
      - dhcp-options boolean
      - dhcp-vendor-class-id boolean
      - frame-counters boolean
      - framed-ip-address boolean
      - framed-ip-netmask boolean
      - framed-ipv6-prefix boolean
      - hardware-timestamp boolean
      - ipv6-address boolean
      - mac-address boolean
      - millisecond-event-timestamp boolean
      - multi-session-id boolean
      - nas-identifier boolean
      - nas-ip-address boolean
      - nas-ipv6-address boolean
      - nas-port boolean
      - nas-port-id boolean
      - nas-port-type boolean
      - nat-inside-service-id boolean
      - nat-outside-ip-address boolean
      - nat-outside-service-id boolean
      - nat-port-range-block boolean
      - nat-subscriber-string boolean
      - octet-counters boolean
      - proxied-subscriber-data boolean
      - release-reason boolean
      - remote-id boolean
      - rssi boolean
      - session-time boolean
      - subscriber-id boolean

```

configure aaa radius isa-policy accounting include-attributes toserver-dhcp6-options

```

- toserver-dhcp6-options boolean
- ue-creation-type boolean
- user-name boolean
- wlan-ssid-vlan boolean
- xconnect-tunnel-home-address boolean
- xconnect-tunnel-local-ipv6-address boolean
- xconnect-tunnel-remote-ipv6-address boolean
- xconnect-tunnel-service boolean
- xconnect-tunnel-type boolean
- nat-periodic-update
- interval number
- rate-limit (number | keyword)
- update-triggers
- address-state boolean
- soft-quota-exhausted boolean

3.1.1 aaa command descriptions

aaa

Synopsis	Enter the aaa context
Context	configure aaa
Tree	aaa
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the diameter context
Context	configure aaa diameter
Tree	diameter
Description	Commands in this context configure Diameter Base parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [[origin-host](#)] *string*

Synopsis	Enter the node list instance
Context	configure aaa diameter node <i>string</i>
Tree	node
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[\[origin-host\]](#) *string*

Synopsis	Origin-Host AVP
Context	configure aaa diameter node <i>string</i>
Tree	node
String Length	1 to 80

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection

Synopsis	Enter the connection context
Context	configure aaa diameter node <i>string</i> connection
Tree	connection
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure aaa diameter node <i>string</i> connection ipv4
Tree	ipv4
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	configure aaa diameter node <i>string</i> connection ipv4 allow-connections <i>boolean</i>
Tree	allow-connections
Description	<p>When configured to true, this command is used in multi-chassis redundancy where the local Diameter node accepts connection from the inter-chassis peer. The peer requesting the connection must have the same Diameter name as the local peer and its source address must match the IP address of the locally configured destination peer.</p> <p>The IPv4 address on which the node listens for incoming connection is the configured source address of the local peer. This source IPv4 address can reference any local interface, including loopbacks.</p> <p>When configured to false, incoming requests for connections are refused.</p>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis	IPv4 source address for the TCP peer connection
Context	configure aaa diameter node <i>string</i> connection ipv4 local-address <i>string</i>
Tree	local-address
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the ipv6 context
Context	configure aaa diameter node <i>string</i> connection ipv6
Tree	ipv6
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	configure aaa diameter node <i>string</i> connection ipv6 allow-connections <i>boolean</i>
Tree	allow-connections
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis	IPv6 source address for the TCP peer connection
Context	configure aaa diameter node <i>string</i> connection ipv6 local-address <i>string</i>
Tree	local-address
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timer number

Synopsis	Wait time before attempting reconnection to peer
Context	configure aaa diameter node <i>string</i> connection timer <i>number</i>
Tree	timer
Description	This command configures the time the system waits before attempting to reconnect to a peer after the connection is lost.
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure aaa diameter node <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-realm string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-realm name
Context	configure aaa diameter node <i>string</i> origin-realm <i>string</i>
Tree	origin-realm
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer index number

Synopsis	Enter the peer list instance
Context	configure aaa diameter node <i>string</i> peer index number
Tree	peer
Max. Instances	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index number

Synopsis	Index of a peer within the node
Context	configure aaa diameter node <i>string</i> peer index number
Tree	peer
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Diameter peer address
Context	configure aaa diameter node <i>string</i> peer index number address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the Diameter peer
Context	configure aaa diameter node <i>string</i> peer index number admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection-timer *number*

Synopsis	Wait time before attempting reconnection to peer
Context	configure aaa diameter node <i>string</i> peer index <i>number</i> connection-timer <i>number</i>
Tree	connection-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-peer *boolean*

Synopsis	Use the peer as default route for realm-based routing
Context	configure aaa diameter node <i>string</i> peer index <i>number</i> default-peer <i>boolean</i>
Tree	default-peer
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-host *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination-Host AVP string for Diameter messages
Context	configure aaa diameter node <i>string</i> peer index <i>number</i> destination-host <i>string</i>
Tree	destination-host
String Length	1 to 80
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference number

Synopsis	Diameter routing preference for a peer
Context	configure <i>aaa diameter node string peer index number preference number</i>
Tree	<i>preference</i>
Range	1 to 100
Default	50
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

route index number

Synopsis	Enter the route list instance
Context	configure <i>aaa diameter node string peer index number route index number</i>
Tree	<i>route</i>
Max. Instances	15
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index number

Synopsis	Static Diameter route ID
Context	configure <i>aaa diameter node string peer index number route index number</i>
Tree	<i>route</i>
Description	This command configures the ID of the static route used to reach remote realms that are not directly connected to the origin realm. The route can also be used to override the route preference (peer preference) of the directly-connected realms.
Range	1 to 15
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

application *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Diameter application to which the route applies
Context	configure aaa diameter node <i>string</i> peer index <i>number</i> route index <i>number</i> application <i>keyword</i>
Tree	application
Description	This command specifies the Diameter application in the destination realm reachable via the static route.
Options	nasreq, gy, gx
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Static route preference; lower value is preferred
Context	configure aaa diameter node <i>string</i> peer index <i>number</i> route index <i>number</i> preference <i>number</i>
Tree	preference
Description	This command configures the preference of the static route. The preference is compared with the preference values of all other static and dynamic routes. The dynamic route is a realm route learned directly from the peer via the Capabilities Exchange process during the peer negotiation phase. The preference value of the dynamic route is configured directly under the peer configuration. A lower preference value is preferred for route selection.
Range	1 to 100
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

realm *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination realm reachable via the static route
Context	configure aaa diameter node <i>string</i> peer index number route index number realm string
Tree	realm
String Length	1 to 80
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watchdog-timer *number*

Synopsis	Time between consecutive watchdog messages
Context	configure aaa diameter node <i>string</i> peer index number watchdog-timer <i>number</i>
Tree	watchdog-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for received or sent Diameter messages
Context	configure aaa diameter node <i>string</i> python-policy <i>reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router in which this node connects to its peers
Context	configure aaa diameter node <i>string</i> router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-policy [**name**] *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the peer-policy list instance
Context	configure aaa diameter peer-policy string
Tree	peer-policy
Max. Instances	32
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Diameter peer policy name
Context	configure aaa diameter peer-policy string
Tree	peer-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

applications**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the applications context
Context	configure aaa diameter peer-policy string applications
Tree	applications
Introduced	16.0.R4

Deprecated 20.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx *boolean*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis Advertise Gx application support in CER messages
 Context **configure** [aaa](#) [diameter](#) [peer-policy](#) [string](#) [applications](#) [gx](#) *boolean*
 Tree [gx](#)
 Default false
 Introduced 16.0.R4
 Deprecated 20.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy *boolean*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis Advertise Gy application support in CER messages
 Context **configure** [aaa](#) [diameter](#) [peer-policy](#) [string](#) [applications](#) [gy](#) *boolean*
 Tree [gy](#)
 Default false
 Introduced 16.0.R4
 Deprecated 20.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq *boolean*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis Advertise NASREQ application support in CER messages
 Context **configure** [aaa](#) [diameter](#) [peer-policy](#) [string](#) [applications](#) [nasreq](#) *boolean*
 Tree [nasreq](#)

Default	false
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection-timer *number*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Wait time before attempting reconnection to peer
Context	configure aaa diameter peer-policy <i>string</i> connection-timer <i>number</i>
Tree	connection-timer
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Text description
Context	configure aaa diameter peer-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-source-address *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	IPv4 source address for peering connection
Context	configure aaa diameter peer-policy <i>string</i> ipv4-source-address <i>string</i>
Tree	ipv4-source-address
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-source-address *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	IPv6 source address for IPv6 peering connection
Context	configure aaa diameter peer-policy <i>string</i> ipv6-source-address <i>string</i>
Tree	ipv6-source-address
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-host *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Origin-Host AVP sent in all Diameter messages
Context	configure aaa diameter peer-policy <i>string</i> origin-host <i>string</i>
Tree	origin-host
String Length	1 to 80
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-realm *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Origin-Realm AVP sent in all Diameter messages
Context	configure aaa diameter peer-policy <i>string</i> origin-realm <i>string</i>
Tree	origin-realm
String Length	1 to 80
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [[peer-name](#)] *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the peer list instance
Context	configure aaa diameter peer-policy <i>string</i> peer <i>string</i>
Tree	peer
Max. Instances	5
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[peer-name] *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Diameter peer name
Context	configure aaa diameter peer-policy <i>string</i> peer <i>string</i>
Tree	peer
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

This element is deprecated and will be removed in a future release.

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Diameter peer address
Context	configure aaa diameter peer-policy <i>string</i> peer <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Administrative state of the peer
Context	configure aaa diameter peer-policy <i>string</i> peer <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection-timer *number***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Wait time before attempting reconnection to a peer
Context	configure aaa diameter peer-policy string peer string connection-timer number
Tree	connection-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-host *string***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination-Host AVP string for Diameter messages
Context	configure aaa diameter peer-policy string peer string destination-host string
Tree	destination-host
String Length	1 to 80
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm *string***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination-Realm AVP string for Diameter messages
Context	configure aaa diameter peer-policy string peer string destination-realm string
Tree	destination-realm
String Length	1 to 80
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference number**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Peer preference of the Diameter peer policy
Context	configure aaa diameter peer-policy string peer string preference number
Tree	preference
Range	1 to 100
Default	50
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

statistics**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the statistics context
Context	configure aaa diameter peer-policy string peer string statistics
Tree	statistics
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transaction-timer *number***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Timeout for base Diameter messages (DWR, CER, DPR)
Context	configure aaa diameter peer-policy string peer string transaction-timer number
Tree	transaction-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transport**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the transport context
Context	configure aaa diameter peer-policy string peer string transport
Tree	transport
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port-number *number***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination TCP port number for the policy peer
Context	configure aaa diameter peer-policy string peer string transport port-number number

Tree	port-number
Range	1 to 65535
Default	3868
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watchdog-timer *number*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Time between consecutive watchdog messages
Context	configure aaa diameter peer-policy <i>string</i> peer <i>string</i> watchdog-timer <i>number</i>
Tree	watchdog-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Enter the proxy context
Context	configure aaa diameter peer-policy <i>string</i> proxy
Tree	proxy
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Administrative state of Diameter proxy
Context	configure aaa diameter peer-policy <i>string</i> proxy admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address on which the Diameter proxy listens
Context	configure aaa diameter peer-policy <i>string</i> proxy local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-address
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mcs-peer**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enable the mcs-peer context
Context	configure aaa diameter peer-policy <i>string</i> proxy mcs-peer

Tree	mcs-peer
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *reference*

WARNING:

This element is deprecated and will be removed in a future release.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MCS peer address
Context	configure aaa diameter peer-policy <i>string</i> proxy mcs-peer address <i>reference</i>
Tree	address
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is mandatory.
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

WARNING:

This element is deprecated and will be removed in a future release.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag shared by MCS peers
Context	configure aaa diameter peer-policy <i>string</i> proxy mcs-peer sync-tag <i>string</i>
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.

Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:

This element is deprecated and will be removed in a future release.

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Routing context associated with Diameter proxy
Context	configure aaa diameter peer-policy <i>string</i> proxy router-instance <i>string</i>
Tree	router-instance
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Name of the python policy for Diameter processing
Context	configure aaa diameter peer-policy <i>string</i> python-policy <i>reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

role *keyword***WARNING:**

This element is deprecated and will be removed in a future release.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Client or proxy role of a Diameter peer policy
Context	configure aaa diameter peer-policy <i>string</i> role <i>keyword</i>
Tree	role
Options	client, proxy
Default	client
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Diameter peer policy router
Context	configure aaa diameter peer-policy <i>string</i> router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transaction-timer *number***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Timeout for base Diameter messages (DWR, CER, DPR)
Context	configure aaa diameter peer-policy <i>string</i> transaction-timer <i>number</i>

Tree	transaction-timer
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-support *keyword*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Vendor support announced in the capability exchange
Context	configure aaa diameter peer-policy <i>string</i> vendor-support <i>keyword</i>
Tree	vendor-support
Options	vodafone, three-gpp
Default	three-gpp
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watchdog-timer *number*

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Time between consecutive watchdog messages
Context	configure aaa diameter peer-policy <i>string</i> watchdog-timer <i>number</i>
Tree	watchdog-timer
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R4
Deprecated	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the radius context
Context	configure aaa radius
Tree	radius
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-on-off-group [\[name\]](#) *string*

Synopsis	Enter the acct-on-off-group list instance
Context	configure aaa radius acct-on-off-group <i>string</i>
Tree	acct-on-off-group
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Group name for accounting on/off
Context	configure aaa radius acct-on-off-group <i>string</i>
Tree	acct-on-off-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure aaa radius acct-on-off-group <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

coa-port *number*

Synopsis RADIUS listening port for CoA and Disconnect messages
 Context **configure** *aaa radius coa-port number*
 Tree [coa-port](#)
 Range 1647 | 1700 | 1812 | 3799
 Default 3799
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

isa-policy [*name*] *string*

Synopsis Enter the **isa-policy** list instance
 Context **configure** *aaa radius isa-policy string*
 Tree [isa-policy](#)
 Max. Instances 8
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis ISA RADIUS policy name referenced by a NAT application
 Context **configure** *aaa radius isa-policy string*
 Tree [isa-policy](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting

Synopsis Enter the **accounting** context

Context	configure aaa radius isa-policy string accounting
Tree	accounting
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-attributes

Synopsis	Enter the include-attributes context
Context	configure aaa radius isa-policy string accounting include-attributes
Tree	include-attributes
Description	Commands in this context specify the attributes to include in the RADIUS accounting messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the accounting delay time attribute
Context	configure aaa radius isa-policy string accounting include-attributes acct-delay-time boolean
Tree	acct-delay-time
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include the accounting triggered reason attribute
Context	configure aaa radius isa-policy string accounting include-attributes acct-triggered-reason boolean
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure aaa radius isa-policy string accounting include-attributes called-station-id <i>boolean</i>
Tree	called-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure aaa radius isa-policy string accounting include-attributes calling-station-id <i>boolean</i>
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include the Agent-Circuit-Id attribute
Context	configure aaa radius isa-policy string accounting include-attributes circuit-id <i>boolean</i>
Tree	circuit-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

class *boolean*

Synopsis	Include the Class attribute
Context	configure aaa radius isa-policy string accounting include-attributes class <i>boolean</i>
Tree	class
Default	false
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credit-control-quota *boolean*

Synopsis Add unconsumed volume quota to Credit-Control-Quota

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [credit-control-quota](#) *boolean*

Tree [credit-control-quota](#)

Default false

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-options *boolean*

Synopsis Include the Alc-ToServer-Dhcp-Options attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [dhcp-options](#) *boolean*

Tree [dhcp-options](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis Include the Alc-Dhcp-Vendor-Class-Id attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [dhcp-vendor-class-id](#) *boolean*

Tree [dhcp-vendor-class-id](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

frame-counters *boolean*

Synopsis Include Acct-Input-Packets and Acct-Output-Packets

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [frame-counters](#) *boolean*

Tree	frame-counters
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes framed-ip-address <i>boolean</i>
Tree	framed-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include the Framed-IP-Netmask attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes framed-ip-netmask <i>boolean</i>
Tree	framed-ip-netmask
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes framed-ipv6-prefix <i>boolean</i>
Tree	framed-ipv6-prefix
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hardware-timestamp *boolean*

Synopsis	Include the Event-Timestamp attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes hardware-timestamp <i>boolean</i>
Tree	hardware-timestamp
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the Alc-Ipv6-Address attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes ipv6-address <i>boolean</i>
Tree	ipv6-address
Description	When configured to true , the IA_NA address of the UE is included in the accounting message if an active IA_NA lease exists. When configured to false , the address is not included.
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the Alc-Client-Hardware-Addr attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes mac-address <i>boolean</i>
Tree	mac-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

millisecond-event-timestamp *boolean*

Synopsis	Include the Alc-Millisecond-Event-Timestamp attribute
----------	---

Context	configure aaa radius isa-policy string accounting include-attributes millisecond-event-timestamp <i>boolean</i>
Tree	millisecond-event-timestamp
Description	When configured to true , the router includes the Alc-Millisecond-Event-Timestamp attribute in the accounting message. This attribute includes the time the accounting event was logged in milliseconds since Jan 1, 1970 00:00:00 UTC. When configured to false , the router does not include this attribute.
Default	false
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-session-id *boolean*

Synopsis	Include the Acct-Multi-Session-Id attribute
Context	configure aaa radius isa-policy string accounting include-attributes multi-session-id <i>boolean</i>
Tree	multi-session-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure aaa radius isa-policy string accounting include-attributes nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	configure aaa radius isa-policy string accounting include-attributes nas-ip-address <i>boolean</i>
Tree	nas-ip-address

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes nas-ipv6-address <i>boolean</i>
Tree	nas-ipv6-address
Description	<p>When configured to true, the router includes the NAS-IPv6-Address attribute in RADIUS accounting messages using the address specified in the configure aaa radius isa-policy nas-ip-address-origin command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections.</p> <p>When configured to false, the router does not include the NAS-IPv6-Address attribute in RADIUS accounting messages.</p>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port *boolean*

Synopsis	Include the NAS-Port attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes nas-port <i>boolean</i>
Tree	nas-port
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes nas-port-id <i>boolean</i>
Tree	nas-port-id
Default	false
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-type *boolean*

Synopsis Include the NAS-Port-Type attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [nas-port-type](#) *boolean*

Tree [nas-port-type](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-inside-service-id *boolean*

Synopsis Include NAT inside service ID in Alc-Serv-Id attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [nat-inside-service-id](#) *boolean*

Tree [nat-inside-service-id](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-ip-address *boolean*

Synopsis Include the Alc-Nat-Outside-Ip-Addr attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [nat-outside-ip-address](#) *boolean*

Tree [nat-outside-ip-address](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-service-id *boolean*

Synopsis Include NAT outside service ID in Alc-Serv-Id attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [nat-outside-service-id](#) *boolean*

Tree	nat-outside-service-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-range-block *boolean*

Synopsis	Include the Alc-Nat-Port-Range attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes nat-port-range-block <i>boolean</i>
Tree	nat-port-range-block
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-subscriber-string *boolean*

Synopsis	Include the Alc-Subsc-ID-Str attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes nat-subscriber-string <i>boolean</i>
Tree	nat-subscriber-string
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octet-counters *boolean*

Synopsis	Include Acct-Input-Octets and Acct-Output-Octets
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes octet-counters <i>boolean</i>
Tree	octet-counters
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxied-subscriber-data *boolean*

Synopsis	Include subscriber data as RADIUS attributes
Context	configure aaa radius isa-policy string accounting include-attributes proxied-subscriber-data <i>boolean</i>
Tree	proxied-subscriber-data
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

release-reason *boolean*

Synopsis	Include reason in the Acct-Terminate-Cause attribute
Context	configure aaa radius isa-policy string accounting include-attributes release-reason <i>boolean</i>
Tree	release-reason
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include the Agent-Remote-Id attribute
Context	configure aaa radius isa-policy string accounting include-attributes remote-id <i>boolean</i>
Tree	remote-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rsi *boolean*

Synopsis	Include the Alc-RSSI attribute
Context	configure aaa radius isa-policy string accounting include-attributes rsi <i>boolean</i>
Tree	rsi
Default	false
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-time *boolean*

Synopsis Include the Acct-Session-Time attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [session-time](#) *boolean*

Tree [session-time](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *boolean*

Synopsis Include the Alc-Subsc-ID-Str attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [subscriber-id](#) *boolean*

Tree [subscriber-id](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp6-options *boolean*

Synopsis Include the Alc-ToServer-Dhcp6-Options attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [toserver-dhcp6-options](#) *boolean*

Tree [toserver-dhcp6-options](#)

Default false

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue-creation-type *boolean*

Synopsis Include the Alc-Wlan-Ue-Creation-Type attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [accounting](#) [include-attributes](#) [ue-creation-type](#) *boolean*

Tree	ue-creation-type
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name *boolean*

Synopsis	Include the User-Name attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes user-name <i>boolean</i>
Tree	user-name
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN in Alc-Wlan-SSID-VLAN attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes wlan-ssid-vlan <i>boolean</i>
Tree	wlan-ssid-vlan
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	configure aaa radius isa-policy <i>string</i> accounting include-attributes xconnect-tunnel-home-address <i>boolean</i>
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-local-ipv6-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Local-Ipv6 attribute
Context	configure aaa radius isa-policy string accounting include-attributes xconnect-tunnel-local-ipv6-address <i>boolean</i>
Tree	xconnect-tunnel-local-ipv6-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-remote-ipv6-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Remote-Ipv6 attribute
Context	configure aaa radius isa-policy string accounting include-attributes xconnect-tunnel-remote-ipv6-address <i>boolean</i>
Tree	xconnect-tunnel-remote-ipv6-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-service *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Service attribute
Context	configure aaa radius isa-policy string accounting include-attributes xconnect-tunnel-service <i>boolean</i>
Tree	xconnect-tunnel-service
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-type *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Type attribute
Context	configure aaa radius isa-policy string accounting include-attributes xconnect-tunnel-type <i>boolean</i>
Tree	xconnect-tunnel-type
Default	false

Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-periodic-update

Synopsis	Enter the nat-periodic-update context
Context	configure aaa radius isa-policy string accounting nat-periodic-update
Tree	nat-periodic-update
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for periodic RADIUS Interim-Update messages
Context	configure aaa radius isa-policy string accounting nat-periodic-update interval number
Tree	interval
Range	1 to 72
Units	hours
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit (*number* | *keyword*)

Synopsis	Rate limit for periodic RADIUS Interim-Update messages
Context	configure aaa radius isa-policy string accounting nat-periodic-update rate-limit (number keyword)
Tree	rate-limit
Range	1 to 100000
Units	packets per second
Options	unlimited
Default	unlimited
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-triggers

Synopsis	Enter the update-triggers context
Context	configure aaa radius isa-policy <i>string</i> accounting update-triggers
Tree	update-triggers
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-state *boolean*

Synopsis	Send an Interim-Update when address allocated or freed
Context	configure aaa radius isa-policy <i>string</i> accounting update-triggers address-state <i>boolean</i>
Tree	address-state
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted *boolean*

Synopsis	Send interim update when soft volume quota is reached
Context	configure aaa radius isa-policy <i>string</i> accounting update-triggers soft-quota-exhausted <i>boolean</i>
Tree	soft-quota-exhausted
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the authentication context
Context	configure aaa radius isa-policy <i>string</i> authentication
Tree	authentication
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-attributes

Synopsis	Enter the include-attributes context
Context	configure aaa radius isa-policy string authentication include-attributes
Tree	include-attributes
Description	Commands in this context specify the attributes to include in the RADIUS authentication messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure aaa radius isa-policy string authentication include-attributes called-station-id boolean
Tree	called-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure aaa radius isa-policy string authentication include-attributes calling-station-id boolean
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include the Agent-Circuit-Id attribute
Context	configure aaa radius isa-policy string authentication include-attributes circuit-id boolean
Tree	circuit-id
Default	false
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis Include the Alc-DHCP-Vendor-Class-Id attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) [dhcp-vendor-class-id](#) *boolean*

Tree [dhcp-vendor-class-id](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis Include the Framed-IP-Address attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) [framed-ip-address](#) *boolean*

Tree [framed-ip-address](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis Include the Alc-IPv6-address attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) [ipv6-address](#) *boolean*

Tree [ipv6-address](#)

Default false

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis Include the Alc-Client-Hardware-Addr attribute

Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) [mac-address](#) *boolean*

Tree	mac-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes nas-ip-address <i>boolean</i>
Tree	nas-ip-address
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes nas-ipv6-address <i>boolean</i>
Tree	nas-ipv6-address
Description	<p>When configured to true, the router includes the NAS-IPv6-Address attribute in RADIUS authentication messages using the address specified in the configure aaa radius isa-policy nas-ip-address-origin command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections.</p> <p>When configured to false, the router does not include the NAS-IPv6-Address attribute in RADIUS authentication messages.</p>

Introduced 22.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port *boolean*

Synopsis Include the NAS-Port attribute
Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) **nas-port** *boolean*
Tree [nas-port](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis Include the NAS-Port-Id attribute
Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) **nas-port-id** *boolean*
Tree [nas-port-id](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-type *boolean*

Synopsis Include the NAS-Port-Type attribute
Context **configure** [aaa](#) [radius](#) [isa-policy](#) *string* [authentication](#) [include-attributes](#) **nas-port-type** *boolean*
Tree [nas-port-type](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis Include the Agent-Remote-Id attribute

Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes remote-id <i>boolean</i>
Tree	remote-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp-Options attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes toserver-dhcp-options <i>boolean</i>
Tree	toserver-dhcp-options
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp6-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp6-Options attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes toserver-dhcp6-options <i>boolean</i>
Tree	toserver-dhcp6-options
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN in Alc-Wlan-SSID-VLAN attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes wlan-ssid-vlan <i>boolean</i>
Tree	wlan-ssid-vlan
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	configure aaa radius isa-policy <i>string</i> authentication include-attributes xconnect-tunnel-home-address <i>boolean</i>
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure aaa radius isa-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address-origin *keyword*

Synopsis	NAS-IP-Address attribute
Context	configure aaa radius isa-policy <i>string</i> nas-ip-address-origin <i>keyword</i>
Tree	nas-ip-address-origin
Options	system-ip, isa-ip
Default	system-ip
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Password used in the RADIUS access requests
Context	configure aaa radius isa-policy <i>string</i> password <i>string</i>
Tree	password
String Length	1 to 42

Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python policy used for modifying RADIUS messages
Context **configure** [aaa radius isa-policy string python-policy reference](#)
Tree [python-policy](#)
Reference **configure** [python python-policy string](#)
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

servers

Synopsis Enter the **servers** context
Context **configure** [aaa radius isa-policy string servers](#)
Tree [servers](#)
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis Algorithm that accesses the RADIUS servers
Context **configure** [aaa radius isa-policy string servers access-algorithm keyword](#)
Tree [access-algorithm](#)
Options direct, round-robin, hash-based, direct-priority
Default direct
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis Enter the **ipv6** context
Context **configure** [aaa radius isa-policy string servers ipv6](#)
Tree [ipv6](#)

Description	Commands in this context configure how to communicate with IPv6 RADIUS servers.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu number

Synopsis	MTU used to fragment outgoing IPv6 RADIUS packets
Context	configure aaa radius isa-policy string servers ipv6 mtu number
Tree	mtu
Range	1280 to 9000
Default	9000
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-prefix string

Synopsis	Prefix containing individual source addresses per ISA
Context	configure aaa radius isa-policy string servers ipv6 source-prefix string
Tree	source-prefix
Description	This command configures an IPv6 prefix containing individual /128 addresses. These addresses are used as the source address for connections to IPv6 RADIUS servers. The prefix must be large enough to accommodate all BB-ISAs or ESA VMs in the system.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance string

Synopsis	Routing instance
Context	configure aaa radius isa-policy string servers router-instance string
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [*index*] *number*

Synopsis	Enter the server list instance
Context	configure aaa radius isa-policy <i>string</i> servers server <i>number</i>
Tree	server
Max. Instances	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[index] *number*

Synopsis	RADIUS server ID
Context	configure aaa radius isa-policy <i>string</i> servers server <i>number</i>
Tree	server
Range	1 to 10
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the ISA RADIUS server
Context	configure aaa radius isa-policy <i>string</i> servers server <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the RADIUS server
----------	---------------------------------

Context	configure aaa radius isa-policy string servers server number ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

purpose

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the purpose context
Context	configure aaa radius isa-policy string servers server number purpose
Tree	purpose
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the accounting context
Context	configure aaa radius isa-policy string servers server number purpose accounting
Tree	accounting
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS server accounting UDP port
----------	---------------------------------------

Context	configure aaa radius isa-policy string servers server number purpose accounting udp-port number
Tree	udp-port
Range	1 to 65535
Default	1813
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the authentication context
Context	configure aaa radius isa-policy string servers server number purpose authentication
Tree	authentication
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS server authentication UDP port
Context	configure aaa radius isa-policy string servers server number purpose authentication udp-port number
Tree	udp-port
Range	1 to 65535
Default	1812
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

coa**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the coa context
Context	configure aaa radius isa-policy string servers server number purpose coa
Tree	coa
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS server change of authorization UDP port
Context	configure aaa radius isa-policy string servers server number purpose coa udp-port number
Tree	udp-port
Range	1 to 65535
Default	3799
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secret *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secret key to access the RADIUS server
Context	configure aaa radius isa-policy string servers server number secret string
Tree	secret
String Length	1 to 115
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-address-range *string*

Synopsis Starting IP address of the IP address range
Context **configure** [aaa radius isa-policy](#) *string* [servers](#) **source-address-range** *string*
Tree [source-address-range](#)
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis Timeout for a response from the RADIUS server
Context **configure** [aaa radius isa-policy](#) *string* [servers](#) **timeout** *number*
Tree [timeout](#)
Range 1 to 90
Units seconds
Default 5
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-tries *number*

Synopsis Maximum number of tries toward the same RADIUS server
Context **configure** [aaa radius isa-policy](#) *string* [servers](#) **total-tries** *number*
Tree [total-tries](#)
Range 1 to 10
Default 3
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis Enter the **user-name** context
Context **configure** [aaa radius isa-policy](#) *string* **user-name**

Tree	user-name
Description	Commands in this context define the format of the username field in the UE authentication request sent to the RADIUS server. For authentication of IPv6 triggers (ICMPv6, DHCPv6, IPv6 data-trigger) the username format will always fall back to MAC only.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	Username format in RADIUS message
Context	configure aaa radius isa-policy <i>string</i> user-name format <i>keyword</i>
Tree	format
Options	mac, mac-ip, dhcp-vendor, circuit-id
Default	mac
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *keyword*

Synopsis	MAC address format when contacting RADIUS server
Context	configure aaa radius isa-policy <i>string</i> user-name mac-format <i>keyword</i>
Tree	mac-format
Options	alu, ieee
Default	alu
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp-accounting-policy [[name](#)] *string*

Synopsis	Enter the l2tp-accounting-policy list instance
Context	configure aaa radius l2tp-accounting-policy <i>string</i>
Tree	l2tp-accounting-policy
Max. Instances	32
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis L2TP RADIUS accounting policy name
 Context **configure** [aaa radius l2tp-accounting-policy](#) *string*
 Tree [l2tp-accounting-policy](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-type

Synopsis Enter the **accounting-type** context
 Context **configure** [aaa radius l2tp-accounting-policy](#) *string* [accounting-type](#)
 Tree [accounting-type](#)
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session *boolean*

Synopsis Enable per-session accounting
 Context **configure** [aaa radius l2tp-accounting-policy](#) *string* [accounting-type](#) [session](#) *boolean*
 Tree [session](#)
 Default true
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel *boolean*

Synopsis Enable per-tunnel accounting
 Context **configure** [aaa radius l2tp-accounting-policy](#) *string* [accounting-type](#) [tunnel](#) *boolean*
 Tree [tunnel](#)
 Default true

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-tunnel-connection-fmt *string*

Synopsis	Accounting tunnel connection ASCII specification
Context	configure aaa radius l2tp-accounting-policy <i>string</i> acct-tunnel-connection-fmt <i>string</i>
Tree	acct-tunnel-connection-fmt
String Length	1 to 253
Default	%n
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure aaa radius l2tp-accounting-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the include-radius-attribute context
Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute calling-station-id <i>boolean</i>
Tree	calling-station-id

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the nas-port context
Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *string*

Synopsis	RADIUS NAS-Port attribute
Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute nas-port bit-spec <i>string</i>
Tree	bit-spec
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the nas-port-id context
----------	---------------------------------------

Context	configure aaa radius l2tp-accounting-policy string include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	Prefix string added to RADIUS NAS-Port attribute
Context	configure aaa radius l2tp-accounting-policy string include-radius-attribute nas-port-id prefix-string string
Tree	prefix-string
String Length	1 to 8
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	NAS-Port-Id suffix type
Context	configure aaa radius l2tp-accounting-policy string include-radius-attribute nas-port-id suffix keyword
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-type

Synopsis	Enable the nas-port-type context
Context	configure aaa radius l2tp-accounting-policy string include-radius-attribute nas-port-type
Tree	nas-port-type
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type (*keyword* | *number*)

Synopsis	Value for RADIUS NAS-Port-Type attribute
----------	--

Context	configure aaa radius l2tp-accounting-policy <i>string</i> include-radius-attribute nas-port-type type (<i>keyword</i> <i>number</i>)
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	RADIUS server policy referenced
Context	configure aaa radius l2tp-accounting-policy <i>string</i> radius-server-policy <i>reference</i>
Tree	radius-server-policy
Reference	configure aaa radius server-policy <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

route-downloader [**name**] *string*

Synopsis	Enter the route-downloader list instance
Context	configure aaa radius route-downloader <i>string</i>
Tree	route-downloader
Max. Instances	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	RADIUS route downloader name
Context	configure aaa radius route-downloader <i>string</i>
Tree	route-downloader
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this route downloader
Context	configure aaa radius route-downloader <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

base-user-name *string*

Synopsis	Prefix of the username used as access requests
Context	configure aaa radius route-downloader <i>string</i> base-user-name <i>string</i>
Tree	base-user-name
Description	This command sets the prefix for the username that is used for access requests. The actual name used is a concatenation of this string, the "-" (dash) character and a monotonically increasing integer.
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-metric *number*

Synopsis	Default metric that RTM imported routes acquire
Context	configure aaa radius route-downloader <i>string</i> default-metric <i>number</i>
Tree	default-metric
Range	0 to 254
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-tag *number*

Synopsis	Default tag of this route downloader
Context	configure aaa radius route-downloader <i>string default-tag number</i>
Tree	default-tag
Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure aaa radius route-downloader <i>string description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

download-interval *number*

Synopsis	Wait time between consecutive runs of the process
Context	configure aaa radius route-downloader <i>string download-interval number</i>
Tree	download-interval
Range	1 to 1440
Units	minutes
Default	720
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-routes *number*

Synopsis	Maximum routes imported by this route downloader
Context	configure aaa radius route-downloader <i>string max-routes number</i>
Tree	max-routes
Range	1 to 200000

Default	200000
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Route downloader password for RADIUS access requests
Context	configure aaa radius route-downloader <i>string password string</i>
Tree	password
String Length	1 to 71
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	RADIUS server policy referenced
Context	configure aaa radius route-downloader <i>string radius-server-policy reference</i>
Tree	radius-server-policy
Reference	configure aaa radius server-policy <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-interval

Synopsis	Enter the retry-interval context
Context	configure aaa radius route-downloader <i>string retry-interval</i>
Tree	retry-interval
Description	Commands in this context configure parameters of the retry interval timer, which is an exponential backoff timer. The system retries sending an Access Request message after the previous message was unanswered (for example, a RADIUS failure or ICMP port unreachable error).
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis Maximum duration of the retry interval

Context **configure** [aaa radius route-downloader](#) *string* [retry-interval](#) [max](#) *number*

Tree [max](#)

Range 1 to 1440

Units minutes

Default 20

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min number

Synopsis Minimum duration of the retry interval

Context **configure** [aaa radius route-downloader](#) *string* [retry-interval](#) [min](#) *number*

Tree [min](#)

Description This command specifies the minimum duration of the retry interval. This duration grows exponentially after each sequential failure.

Range 1 to 1440

Units minutes

Default 10

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-policy [[name](#)] *string*

Synopsis Enter the **server-policy** list instance

Context **configure** [aaa radius server-policy](#) *string*

Tree [server-policy](#)

Max. Instances 32

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	RADIUS server policy name
Context	configure aaa radius server-policy <i>string</i>
Tree	server-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-on-off

Synopsis	Enable the acct-on-off context
Context	configure aaa radius server-policy <i>string</i> acct-on-off
Tree	acct-on-off
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Accounting on/off group name
Context	configure aaa radius server-policy <i>string</i> acct-on-off monitor <i>reference</i>
Tree	monitor
Reference	configure aaa radius acct-on-off-group <i>string</i>
Notes	The following elements are part of a choice: monitor or oper-state-change .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-state-change

Synopsis	Enable the oper-state-change context
Context	configure aaa radius server-policy <i>string</i> acct-on-off oper-state-change

Tree	oper-state-change
Notes	The following elements are part of a choice: monitor or oper-state-change .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operational state for a group
Context	configure aaa radius server-policy <i>string</i> acct-on-off oper-state-change group <i>reference</i>
Tree	group
Reference	configure aaa radius acct-on-off-group <i>string</i>
Introduced	16.0.R4

description *string*

Synopsis	Text description
Context	configure aaa radius server-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for RADIUS packets to/from RADIUS servers
Context	configure aaa radius server-policy <i>string</i> python-policy <i>reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

servers

Synopsis	Enter the servers context
Context	configure aaa radius server-policy <i>string</i> servers
Tree	servers
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Algorithm to select a RADIUS server from the pool
Context	configure aaa radius server-policy <i>string</i> servers access-algorithm <i>keyword</i>
Tree	access-algorithm
Options	direct, round-robin, hash-based
Default	direct
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

buffering

Synopsis	Enter the buffering context
Context	configure aaa radius server-policy <i>string</i> servers buffering
Tree	buffering
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-interim

Synopsis	Enable the acct-interim context
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-interim
Tree	acct-interim
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lifetime number

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-interim lifetime number
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-interim max number
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min number

Synopsis	Minimum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-interim min number
Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-start

Synopsis	Enable the acct-start context
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-start
Tree	acct-start
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lifetime number

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-start lifetime <i>number</i>
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-start max <i>number</i>
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min number

Synopsis	Minimum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-start min <i>number</i>
Tree	min
Range	1 to 3600

Units	seconds
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-stop

Synopsis	Enable the acct-stop context
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-stop
Tree	acct-stop
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lifetime number

Synopsis	Time accounting message can be in retransmission buffer
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-stop lifetime number
Tree	lifetime
Range	1 to 25
Units	hours
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-stop max number
Tree	max
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min *number*

Synopsis	Minimum time between accounting message resend attempts
Context	configure aaa radius server-policy <i>string</i> servers buffering acct-stop min <i>number</i>
Tree	min
Range	1 to 3600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

health-check

Synopsis	Enter the health-check context
Context	configure aaa radius server-policy <i>string</i> servers health-check
Tree	health-check
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down-timeout *number*

Synopsis	Wait time before declaring RADIUS server out-of-service
Context	configure aaa radius server-policy <i>string</i> servers health-check down-timeout <i>number</i>
Tree	down-timeout
Range	1 to 340
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

test-account

Synopsis	Enter the test-account context
Context	configure aaa radius server-policy <i>string</i> servers health-check test-account
Tree	test-account
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the health check

Context **configure** [aaa radius server-policy](#) *string* [servers health-check test-account admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis Time for test account to check health of RADIUS servers

Context **configure** [aaa radius server-policy](#) *string* [servers health-check test-account interval](#) *number*

Tree [interval](#)

Range 1 to 60

Units seconds

Default 3

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Test account password for RADIUS server health check

Context **configure** [aaa radius server-policy](#) *string* [servers health-check test-account password](#) *string*

Tree [password](#)

String Length 1 to 115

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name *string*

Synopsis	Username to send access requests to probe RADIUS server
Context	configure aaa radius server-policy <i>string</i> servers health-check test-account user-name <i>string</i>
Tree	user-name
String Length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-down-time *number*

Synopsis	Hold time before reusing a RADIUS server that was down
Context	configure aaa radius server-policy <i>string</i> servers hold-down-time <i>number</i>
Tree	hold-down-time
Range	30 to 86400
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-source-address *string*

Synopsis	Source address for IPv6 RADIUS datagrams
Context	configure aaa radius server-policy <i>string</i> servers ipv6-source-address <i>string</i>
Tree	ipv6-source-address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	configure aaa radius server-policy <i>string</i> servers retry-count <i>number</i>
Tree	retry-count
Range	1 to 256
Default	3

Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis RADIUS routing instance
 Context **configure** [aaa radius server-policy](#) *string* [servers router-instance](#) *string*
 Tree [router-instance](#)
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [[server-index](#)] *number*

Synopsis Enter the **server** list instance
 Context **configure** [aaa radius server-policy](#) *string* [servers server](#) *number*
 Tree [server](#)
 Max. Instances 32
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[server-index] *number*

Synopsis RADIUS server index
 Context **configure** [aaa radius server-policy](#) *string* [servers server](#) *number*
 Tree [server](#)
 Range 1 to 16
 Notes This element is part of a list key.
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-name *string*

Synopsis RADIUS server name
 Context **configure** [aaa radius server-policy](#) *string* [servers server](#) *number* [server-name](#) *string*

Tree	server-name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source address of RADIUS messages
Context	configure aaa radius server-policy <i>string</i> servers source-address <i>string</i>
Tree	source-address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stickiness *boolean*

Synopsis	Allow stickiness in a multi-server application
Context	configure aaa radius server-policy <i>string</i> servers stickiness <i>boolean</i>
Tree	stickiness
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time until the next retry to the RADIUS server
Context	configure aaa radius server-policy <i>string</i> servers timeout <i>number</i>
Tree	timeout
Range	1 to 340
Units	seconds
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wpp

Synopsis	Enter the wpp context
Context	configure aaa wpp
Tree	wpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group [[group-name](#)] *string*

Synopsis	Enter the portal-group list instance
Context	configure aaa wpp portal-group <i>string</i>
Tree	portal-group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[\[group-name\]](#) *string*

Synopsis	Portal group name
Context	configure aaa wpp portal-group <i>string</i>
Tree	portal-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the portal group
Context	configure aaa wpp portal-group <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure aaa wpp portal-group <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal [[router-instance](#)] *string* [name](#) *string*

Synopsis	Add a list entry for portal
Context	configure aaa wpp portal-group <i>string</i> portal <i>string</i> name <i>string</i>
Tree	portal
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[router-instance](#)] *string*

Synopsis	Router on which the portal is configured
Context	configure aaa wpp portal-group <i>string</i> portal <i>string</i> name <i>string</i>
Tree	portal
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Web portal server name
Context	configure aaa wpp portal-group <i>string</i> portal <i>string</i> name <i>string</i>
Tree	portal
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-name *string*

Synopsis System name used in WPP protocol messages
Context **configure** *aaa wpp system-name string*
Tree *system-name*
String Length 1 to 16
Introduced 16.0.R6
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

3.2 application-assurance commands

```

configure
- application-assurance

3.2.1 application-assurance command descriptions

application-assurance

Synopsis	Enter the application-assurance context
Context	configure application-assurance
Tree	application-assurance
Description	Commands in this context configure the attributes of Application Assurance (AA) operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp [[aarp-id](#)] *number*

Synopsis	Enter the aarp list instance
Context	configure application-assurance aarp <i>number</i>
Tree	aarp
Description	Commands in this context define an Application Assurance Redundancy Protocol (AARP) instance. This instance is paired with the same AARP ID in a peer node, as part of the configuration to provide flow and packet asymmetry removal for traffic of a multi-homed SAP or spoke SDP.
Max. Instances	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[aarp-id\]](#) *number*

Synopsis	AARP ID
Context	configure application-assurance aarp <i>number</i>
Tree	aarp
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AARP instance
Context	configure application-assurance aarp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance aarp <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

master-selection-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP master selection mode
Context	configure application-assurance aarp <i>number</i> master-selection-mode <i>keyword</i>
Tree	master-selection-mode
Description	This command configures the AARP mode of operation with the peer instance. The modes affect the AARP state machine behavior according to the specified behavior.
Options	minimize-switchovers, inter-chassis-efficiency, priority-based-balance
Default	minimize-switchovers
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP peer IP address
Context	configure application-assurance aarp <i>number</i> peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer
Description	This command defines the IP address of the AARP peer router, which must be a routable system IP address. If no peer is configured when the AARP is administratively enabled, it is configured as a single node AARP instance.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-endpoint

Synopsis	Enter the peer-endpoint context
Context	configure application-assurance aarp <i>number</i> peer-endpoint
Tree	peer-endpoint
Description	Commands in this context specify the attributes of the peer endpoint parent AA subscriber of the AARP peer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap

Synopsis	Enable the sap context
Context	configure application-assurance aarp <i>number</i> peer-endpoint sap
Tree	sap
Notes	The following elements are part of a choice: sap or spoke-sdp .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword*

Synopsis	Encapsulation type for peer endpoint SAP
----------	--

Context	configure application-assurance aarp <i>number</i> peer-endpoint sap encap-type <i>keyword</i>
Tree	encap-type
Options	null, dot1q, qinq
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-id *string*

Synopsis	AARP peer endpoint SAP ID
Context	configure application-assurance aarp <i>number</i> peer-endpoint sap sap-id <i>string</i>
Tree	sap-id
String Length	1 to 45
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp *string*

Synopsis	AARP peer endpoint spoke SDP
Context	configure application-assurance aarp <i>number</i> peer-endpoint spoke-sdp <i>string</i>
Tree	spoke-sdp
String Length	3 to 16
Notes	The following elements are part of a choice: sap or spoke-sdp .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP priority
Context	configure application-assurance aarp <i>number</i> priority <i>number</i>

Tree	priority
Description	This command defines the priority for the AARP instance. The priority value is used to determine the master and backup upon initialization or rebalance.
Range	0 to 255
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the cflowd context
Context	configure application-assurance cflowd
Tree	cflowd
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [[field-name](#)] *string*

Synopsis	Enter the field list instance
Context	configure application-assurance cflowd field <i>string</i>
Tree	field
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[field-name] *string*

Synopsis	Cflowd record field name
Context	configure application-assurance cflowd field <i>string</i>
Tree	field
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance cflowd field <i>string</i> comment <i>string</i>
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute

Synopsis	Enter the flow-attribute context
Context	configure application-assurance flow-attribute
Tree	flow-attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

attribute [[attribute-name](#)] *string*

Synopsis	Enter the attribute list instance
Context	configure application-assurance flow-attribute attribute <i>string</i>
Tree	attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[attribute-name] *string*

Synopsis	Attribute name
Context	configure application-assurance flow-attribute attribute <i>string</i>
Tree	attribute
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance flow-attribute attribute <i>string</i> comment <i>string</i>
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [[aa-group-id](#)] *number*

Synopsis	Enter the group list instance
Context	configure application-assurance group <i>number</i>
Tree	group
Description	Commands in this context configure an Application Assurance group and partition parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[aa-group-id] *number*

Synopsis	AA group ID
Context	configure application-assurance group <i>number</i>
Tree	group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

certificate-profile [[cert-prof-name](#)] *string*

Synopsis	Enter the certificate-profile list instance
Context	configure application-assurance group <i>number</i> certificate-profile <i>string</i>
Tree	certificate-profile
Description	Commands in this context create a certificate profile to be used for certificate-based encryption in HTTP header enrichment.

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[cert-prof-name] *string*

Synopsis AA group certificate profile name
 Context **configure** [application-assurance](#) [group](#) *number* [certificate-profile](#) *string*
 Tree [certificate-profile](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the AA certificate profile
 Context **configure** [application-assurance](#) [group](#) *number* [certificate-profile](#) *string* **admin-state** *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [application-assurance](#) [group](#) *number* [certificate-profile](#) *string* **description** *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

file string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate file name
Context	configure application-assurance group <i>number</i> certificate-profile <i>string</i> file <i>string</i>
Tree	file
String Length	1 to 95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the cflowd context
Context	configure application-assurance group <i>number</i> cflowd
Tree	cflowd
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of cflowd export
Context	configure application-assurance group <i>number</i> cflowd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collector [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [port](#) *number*

Synopsis	Enter the collector list instance
Context	configure application-assurance group <i>number</i> cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	collector

Description	Commands in this context configure flow data collectors for cflowd data. In the current release, the system supports IPv4 addresses only for the cflowd collector host.
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote cflowd collector host
Context	configure application-assurance group <i>number</i> cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	collector
Description	This command configures the IP address of the remote cflowd collector host.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port number

Synopsis	Cflowd collector host port number
Context	configure application-assurance group <i>number</i> cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	collector
Description	This command configures the UDP port number used by the remote cflowd collector host.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the cflowd export
----------	---

Context	configure application-assurance group number cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comprehensive

Synopsis	Enter the comprehensive context
Context	configure application-assurance group number cflowd comprehensive
Tree	comprehensive
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-rate *number*

Synopsis	Cflowd flow sampling rate
Context	configure application-assurance group number cflowd comprehensive flow-rate number
Tree	flow-rate
Range	1 to 1000
Units	flows per second
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-rate-2 *number*

Synopsis	Cflowd per-flow second sampling rate
Context	configure application-assurance group <i>number</i> cflowd comprehensive flow-rate-2 number
Tree	flow-rate-2
Range	1 to 1000
Units	flows per second
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template

Synopsis	Enter the template context
Context	configure application-assurance group <i>number</i> cflowd comprehensive template
Tree	template
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic-fields

Synopsis	Enter the dynamic-fields context
Context	configure application-assurance group <i>number</i> cflowd comprehensive template dynamic-fields
Tree	dynamic-fields
Description	Commands in this context configure the fields that are included in the exported cflowd template.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the dynamic fields
Context	configure application-assurance group <i>number</i> cflowd comprehensive template dynamic-fields admin-state keyword
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [[field-name](#)] *string*

Synopsis	Add a list entry for field
Context	configure application-assurance group number cflowd comprehensive template dynamic-fields field <i>string</i>
Tree	field
Description	This command adds a dynamic field to be included in the exported cflowd template.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[field-name] *string*

Synopsis	Cflowd template dynamic field name
Context	configure application-assurance group number cflowd comprehensive template dynamic-fields field <i>string</i>
Tree	field
Description	<p>This command specifies the name of the field to be included in the exported cflowd template.</p> <ul style="list-style-type: none"> • Common to all templates are the following values: flowStartSeconds flowDuration Milliseconds postIppPrecedence aaProt aaApp aaAppGrp hostName hostName Extended deviceId deviceMfgId deviceOsId ipFamily deviceOsVer1 device OsVer2 deviceOsVer3 aniType aniTopology aniCongestionState apn charge Id mnc imsi msisdn sgw-sgsnAddr pgw-ggsnAddr bsid ratType regionId cellId timeZone aaChargingGrp flowAttr_video flowAttr_abr_service flowAttr_audio flowAttr_encrypted flowAttr_download flowAttr_upload flowAttr_realtime_communication aaSubTetheringState imei ipTTL imei roamingStatus mcc uli chargingChar plmnid customerId • When AA is deployed in FWA SR, the following value applies: ApnExtended • For the rtp-voice template only, the following values apply: flowStartSeconds flowDuration Milliseconds postIppPrecedence aaProt aaApp aaAppGrp rtpBurstCount rtpAvgBurstLengthMs rtpGapCount rtpAvgGapLengthMs MAPDV RBurst RGap SSRC • For the rtp-video template only, the following values apply: flowStartSeconds flowDuration Milliseconds postIppPrecedence aaProt aaApp aaAppGrp rtpRefClockRate MOSAV VSTQ estimatedPSNR GoPType avgGoPLength avgInterIframeGap imageWidth imageHeight frameRate slicesPerIframe SSRC video

Interlaced | IFrameReceived | IFrameImpaired | PFrameReceived | PFrameImpaired
 | BFrameReceived | BFrameImpaired | SIFrameReceived | SIFrameImpaired |
 SPFrameReceived | SPFrameImpaired | frameInterArrivalJitter | IFrameInterArrival
 Jitter | avgFrameArrivalDelay

- For the rtp-audio template only, the following values apply: flowStartSeconds | flow
 DurationMilliseconds | postIpPrecedence | aaProt | aaApp | aaAppGrp | rtpBurst
 Count | rtpAvgBurstLengthPkts | rtpGapCount | rtpAvgGapLengthPkts | PPDVM | rtp
 NumAudioChannels | rtpRefClockRate | rtpPeakAudioBw | SSRC | hostName
- For volume and comprehensive templates, the following values apply: tcpSessionEst
 Delay | tcpRetransmittedBytes | tcpRetransmittedPackets

String Length 1 to 32

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field-selection *keyword*

Synopsis Field selection method

Context **configure** [application-assurance](#) [group](#) *number* [cflowd](#) [comprehensive](#) [template](#) [field-selection](#) *keyword*

Tree [field-selection](#)

Description This command configures the method for selecting the fields to be included in the exported cflowd template.

Options legacy, dynamic

Default legacy

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direct-export

Synopsis Enter the **direct-export** context

Context **configure** [application-assurance](#) [group](#) *number* [cflowd](#) [direct-export](#)

Tree [direct-export](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collector [*collector-id*] *number*

Synopsis	Enter the collector list instance
Context	configure application-assurance group number cflowd direct-export collector number
Tree	collector
Max. Instances	16
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[collector-id] *number*

Synopsis	Cflowd direct export collector ID
Context	configure application-assurance group number cflowd direct-export collector number
Tree	collector
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) *port number*

Synopsis	Enter the address list instance
Context	configure application-assurance group number cflowd direct-export collector number address (ipv4-address-no-zone ipv6-address-no-zone) port number
Tree	address
Description	Commands in this context configure the cflowd direct export collector IP address. In the current release, the system supports IPv4 addresses only for the cflowd direct export collector.
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote cflowd collector host
----------	--

Context	configure application-assurance group <i>number</i> cflowd direct-export collector <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	address
Description	This command configures the IP address of the remote cflowd collector host.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port number

Synopsis	Cflowd collector host port number
Context	configure application-assurance group <i>number</i> cflowd direct-export collector <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i>
Tree	address
Description	This command configures the UDP port number used by the remote cflowd collector host.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the direct export collector
Context	configure application-assurance group <i>number</i> cflowd direct-export collector <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command sets the administrative state of the cflowd direct export collector. In the current release, the system supports IPv4 addresses only for the cflowd direct export collector.
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number cflowd direct-export collector number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id number

Synopsis	Cflowd direct export VLAN ID
Context	configure application-assurance group number cflowd direct-export vlan-id number
Tree	vlan-id
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-override

Synopsis	Enter the export-override context
Context	configure application-assurance group number cflowd export-override
Tree	export-override
Description	<p>Commands in this context configure the AA subtype used in the cflowd record export. The cflowd statistics exported to the cflowd collector look identical to AA for the type of system defined by the mode. The following cflowd export fields are affected:</p> <ul style="list-style-type: none"> • The cflowd export observation point (field 138) mode is derived from the export-override category that is selected. • The cflowd export AA_Subscriber_Type (field 12) mode is modified as configured, using existing field types. • The cflowd interface name is used as the sub-ID field, optionally modified to use the configured mode and prefix commands for global identifiers. <p>All AA cflowd record types are affected by export override. To change the export override or prefix, cflowd must first be disabled. When this command is set back to the default, the prefix is also set back to its default.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA cflowd export override mode
Context	configure application-assurance group number cflowd export-override mode keyword
Tree	mode
Description	This command specifies the type of system emulated for the cflowd export.
Options	mobile, ifname-obfuscate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA group cflowd export override prefix
Context	configure application-assurance group number cflowd export-override prefix string
Tree	prefix
Description	This command specifies the prefix-string associated with the export override. The prefix string specifies up to an 8 character string. If the 8 character prefix is "ABCDEFG_" for a particular node, the cflowd export override would generate IPv4 interface names such as ABCDEF_G_255.255.255.255 or IPv6 as ABCDEF_G_2001:DB8:EF01:2345::/64. By default, the prefix is left blank.
String Length	1 to 8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache [[dns-ip-cache-name](#)] *string*

Synopsis	Enter the dns-ip-cache list instance
Context	configure application-assurance group number dns-ip-cache string
Tree	dns-ip-cache
Description	Commands in this context configure a DNS IP cache that is used to snoop DNS requests generated by subscribers, to populate a cache of IP addresses that match a specified list of domain names. In the context of strengthening URL-content charging, Operators may also specify a list of trusted DNS servers to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[dns-ip-cache-name] *string*

Synopsis	DNS IP cache name within the AA group
Context	configure application-assurance group number dns-ip-cache string
Tree	dns-ip-cache
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the AA DNS IP cache object

Context **configure** [application-assurance](#) [group](#) [number](#) [dns-ip-cache](#) [string](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance](#) [group](#) [number](#) [dns-ip-cache](#) [string](#) **description** *string*

Tree [description](#)

String Length 1 to 80

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-match

Synopsis Enter the **dns-match** context

Context **configure** [application-assurance](#) [group](#) [number](#) [dns-ip-cache](#) [string](#) **dns-match**

Tree [dns-match](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

domain [[domain-name](#)] *string*

Synopsis Enter the **domain** list instance

Context **configure** [application-assurance](#) [group](#) [number](#) [dns-ip-cache](#) [string](#) **dns-match** **domain** *string*

Tree [domain](#)

Description	Commands in this context configure a domain expression to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[domain-name] *string*

Synopsis	DNS IP cache domain name
Context	configure application-assurance group number dns-ip-cache string dns-match domain string
Tree	domain
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression *string*

Synopsis	AA DNS domain expression to match
Context	configure application-assurance group number dns-ip-cache string dns-match domain string expression string
Tree	expression
Description	This command specifies a domain name expression string used to define a pattern match. The domain expression uses the same syntax as the expressions used in configure application-assurance group partition policy app-filter entry app-filters configuration.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trusted-server-address [[dns-server-address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Enter the trusted-server-address list instance
Context	configure application-assurance group number dns-ip-cache string dns-match trusted-server-address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	trusted-server-address

Description	Commands in this context configure a trusted DNS server address. DNS responses from this DNS server are used to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[dns-server-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Trusted DNS server address
Context	configure application-assurance group number dns-ip-cache string dns-match trusted-server-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	trusted-server-address
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-name *string*

Synopsis	DNS server name
Context	configure application-assurance group number dns-ip-cache string dns-match trusted-server-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) server-name string
Tree	server-name
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-cache

Synopsis	Enter the ip-cache context
Context	configure application-assurance group number dns-ip-cache string ip-cache
Tree	ip-cache
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark value for the DNS IP cache
----------	---

Context	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i> ip-cache high-watermark <i>number</i>
Tree	high-watermark
Description	This command configures the high watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the threshold, the system generates a trap.
Range	0 to 100
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark value for the DNS IP cache
Context	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i> ip-cache low-watermark <i>number</i>
Tree	low-watermark
Description	This command configures the low watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the high watermark threshold, the system generates a trap based on the high watermark. The trap clears after the number of cached IP addresses drops below the configured low watermark value.
Range	0 to 100
Default	80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

size *number*

Synopsis	Maximum number of IP addresses stored in the cache
Context	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i> ip-cache size <i>number</i>
Tree	size
Range	10 to 64000
Default	10
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-address [[static-ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for static-address
Context	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i> ip-cache static-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	static-address
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[static-ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Trusted IP address for the DNS IP cache
Context	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i> ip-cache static-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	static-address
Description	This command configures an IP address to be used as a trusted IP address. For packets whose destination IP address matches that of the trusted IP address, a cache hit is assumed.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich [[http-enrich-name](#)] *string*

Synopsis	Enter the http-enrich list instance
Context	configure application-assurance group <i>number</i> http-enrich <i>string</i>
Tree	http-enrich
Description	Commands in this context configure the attributes of the HTTP enrichment policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[http-enrich-name] *string*

Synopsis	HTTP header enrichment policy name
Context	configure application-assurance group <i>number</i> http-enrich <i>string</i>
Tree	http-enrich
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the HTTP enrichment policy
Context	configure application-assurance group number http-enrich string admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number http-enrich string description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [[field-name](#)] *string*

Synopsis	Enter the field list instance
Context	configure application-assurance group number http-enrich string field <i>string</i>
Tree	field
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[field-name](#)] *string*

Synopsis	Field name to insert into the HTTP header
Context	configure application-assurance group number http-enrich string field <i>string</i>

Tree	field
Description	<p>This command specifies the field type to insert into the HTTP header. The command must be repeated for each field to be inserted. The same field cannot be inserted twice into the header under different header names.</p> <p>Note: AA can insert two copies of the following fields in the same HTTP header (with a different header name):</p> <p>imei-hyphenated, imei-hyphenated-2, imsi, imsi-2, static-string, static-string-2, user-location-raw, and user-location-raw2.</p> <p>The following field types are supported in any deployment:</p> <p>static-string - header name for the inserted string static-string-2 - header name for the inserted string subscriber-id - header name for the subscriber ID subscriber-ip - header name for the subscriber IP address</p> <p>The following field types are supported in Fixed Wireless Access (FWA) deployments only:</p> <p>apn - complete APN string apn-ni - APN Network Identifier (APN-NI) used by the UE billing-type - UE charging type (charging characteristics) dynamic-acr - dynamic Anonymous Customer Record (ACR) static-acr - static ACR imei-hyphenated - subscriber IMEI with format AABBBBBB-CCCCCC-EE imei-hyphenated-2 - subscriber IMEI with format AABBBBBB-CCCCCC-EE imei-sv - subscriber IMEI with format AABBBBBBCCCCCEE imsi - subscriber IMSI imsi-2 - subscriber IMSI msisdn - subscriber MSISDN msisdn-ts - subscriber MSISDN appended with the UNIX timestamp msisdn-without-cc - subscriber MSISDN without a country code pgw-ggsn-address - PGW/GGSN address serving the UE plmn-id - Public Land Mobile Network (PLMN) ID of the SGSN/MME rat-type - Radio Access Technology (RAT) type timestamp - timestamp inserted in UNIX time format; for example, 1531204313 user-location - UE LOCATION (ULI) user-location-3gpp - ULI encoded as defined in 3GPP 29.061 user-location-raw - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX> Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16 user-location-raw-2 - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX></p>

Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aes-initialization-vector *string*

Synopsis	Initialization vector for the AES CBC encryption
Context	configure application-assurance group number http-enrich string field string aes-initialization-vector string
Tree	aes-initialization-vector
Description	This command configures the initialization vector used for the AES CBC encryption. The vector consists of 34 characters, that is, 0x followed by exactly 32 hexadecimal characters.
String Length	34
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *boolean*

Synopsis	Enable anti-spoofing
Context	configure application-assurance group number http-enrich string field string anti-spoof boolean
Tree	anti-spoof
Description	When configured to true , this command enables the HTTP header enrichment anti-spoofing functionality.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-line-id *boolean*

Synopsis	Enable calling line identification
Context	configure application-assurance group number http-enrich string field string calling-line-id boolean
Tree	calling-line-id

Description	When configured to true , this command configures the HTTP header for “x-up-calling-line-id” anti-spoofing.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encode

Synopsis	Enter the encode context
Context	configure application-assurance group number http-enrich string field string encode
Tree	encode
Description	Commands in this context configure the encoding applied to the HTTP header enrichment field.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name used for encryption
Context	configure application-assurance group number http-enrich string field string encode cert-profile reference
Tree	cert-profile
Reference	configure application-assurance group number certificate-profile string
Notes	The following elements are part of a choice: cert-profile or key .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key

Synopsis	Enter the key context
Context	configure application-assurance group number http-enrich string field string encode key
Tree	key
Description	Commands in this context configure the encryption fields.
Notes	The following elements are part of a choice: cert-profile or key .
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis Encoding type

Context **configure** [application-assurance](#) [group](#) [number](#) [http-enrich](#) [string](#) [field](#) [string](#) [encode](#) [key](#) [type](#) *keyword*

Tree [type](#)

Description This command configures the encoding/ encryption method.

Options md5, rc4, rc4-md5-base64, aes128, aes256, aes128cbc, aes256cbc

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *string*

Synopsis Secret key for encrypting the field

Context **configure** [application-assurance](#) [group](#) [number](#) [http-enrich](#) [string](#) [field](#) [string](#) [encode](#) [key](#) [value](#) *string*

Tree [value](#)

String Length 1 to 114

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

md5-salt *string*

Synopsis MD5 salt string

Context **configure** [application-assurance](#) [group](#) [number](#) [http-enrich](#) [string](#) [field](#) [string](#) [md5-salt](#) [string](#)

Tree [md5-salt](#)

Description This command configures an MD5 salt string. The configured string is appended to the parameter before performing MD5 hashing of the field.

String Length 1 to 16

Introduced 22.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	HTTP header field name
Context	configure application-assurance group number http-enrich string field string name string
Tree	name
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-string *string*

Synopsis	HTTP header enrichment template field static string
Context	configure application-assurance group number http-enrich string field string static-string string
Tree	static-string
String Length	1 to 16
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type-enrichment

Synopsis	Enter the rat-type-enrichment context
Context	configure application-assurance group number http-enrich string rat-type-enrichment
Tree	rat-type-enrichment
Description	Commands in this context configure Radio Access Type (RAT) enrichment.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [[rat-type-name](#)] *keyword*

Synopsis	Enter the rat-type list instance
Context	configure application-assurance group number http-enrich string rat-type-enrichment rat-type keyword

Tree	rat-type
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[rat-type-name] *keyword*

Synopsis	RAT type name
Context	configure application-assurance group <i>number</i> http-enrich <i>string</i> rat-type-enrichment rat-type <i>keyword</i>
Tree	rat-type
Description	This command configures a customised RAT value for the specified RAT-Type.
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-string *string*

Synopsis	Customised RAT type value
Context	configure application-assurance group <i>number</i> http-enrich <i>string</i> rat-type-enrichment rat-type <i>keyword</i> rat-string <i>string</i>
Tree	rat-string
String Length	1 to 31
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-error-redirect [[http-error-redirect-name](#)] *string*

Synopsis	Enter the http-error-redirect list instance
Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i>
Tree	http-error-redirect
Description	Commands in this context configure an HTTP error redirect policy that contains important information relevant to the redirect server.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[http-error-redirect-name] *string*

Synopsis HTTP error redirect policy name

Context **configure** [application-assurance group number](#) [http-error-redirect string](#)

Tree [http-error-redirect](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the HTTP error redirect object

Context **configure** [application-assurance group number](#) [http-error-redirect string](#) [admin-state keyword](#)

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance group number](#) [http-error-redirect string](#) [description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

error-code [[error-code-value](#)] *number*

Synopsis Enter the **error-code** list instance

Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> error-code <i>number</i>
Tree	error-code
Description	Commands in this context configure the HTTP error status codes to which a redirect action is applied. Only messages with sizes less than that configured for the custom-message-size command are eligible for redirect action.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[error-code-value] *number*

Synopsis	HTTP error code value for an HTTP error redirect
Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> error-code <i>number</i>
Tree	error-code
Range	400 to 999
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-message-size *number*

Synopsis	HTTP error redirect error code custom message size
Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> error-code <i>number</i> custom-message-size <i>number</i>
Tree	custom-message-size
Description	This command specifies the maximum message size above which an HTTP error redirect is not performed.
Max. Range	0 to 4294967295
Units	octets
Default	1024
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-host *string*

Synopsis	HTTP host for the HTTP error redirect object
----------	--

Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> http-host <i>string</i>
Tree	http-host
Description	This command specifies the HTTP hostname of the landing server (Barefruit or Xerocole). It is used in the HTTP GET operation from the client (which is being redirected) to the redirect search landing server. The hostname must contain a valid IP address or HTTP hostname or URI for the HTTP GET from the client to the landing server.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

participant-id *string*

Synopsis	Participant ID for the HTTP error redirect object
Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> participant-id <i>string</i>
Tree	participant-id
Description	This command specifies a string assigned to the operator by Barefruit. It is used by Barefruit landing servers (applies to template # 1 only).
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the HTTP error redirect object
Context	configure application-assurance group <i>number</i> http-error-redirect <i>string</i> template <i>number</i>
Tree	template
Description	This command configures the template of parameters passed from the AA-ISA to the redirect server using JavaScript in the redirect packet. The template is specific to the redirect server used in the network. Currently, two partners are supported with AA-ISA redirect solution, Barefruit, and Xerocole.
Max. Range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification [[http-notification-name](#)] *string*

Synopsis	Enter the http-notification list instance
Context	configure application-assurance group number http-notification string
Tree	http-notification
Description	Commands in this context configure an HTTP notification object for the subscriber in-browser notification.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[http-notification-name] *string*

Synopsis	HTTP notification policy name
Context	configure application-assurance group number http-notification string
Tree	http-notification
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA HTTP notification object
Context	configure application-assurance group number http-notification string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number http-notification string description string
Tree	description

String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval (*number* | *keyword*)

Synopsis	Minimum HTTP response notification interval
Context	configure application-assurance group <i>number</i> http-notification string interval (<i>number</i> <i>keyword</i>)
Tree	interval
Range	1 to 1440
Units	minutes
Options	one-time
Default	one-time
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

script-url *string*

Synopsis	Script URL inserted into the HTTP response
Context	configure application-assurance group <i>number</i> http-notification string script-url <i>string</i>
Tree	script-url
Description	This command configures the URL of the script used by the HTTP notification policy.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the AA HTTP notification object
Context	configure application-assurance group <i>number</i> http-notification string template <i>number</i>
Tree	template
Description	This command configures the template that defines the format and attributes included in the HTTP notification message.
Max. Range	0 to 4294967295

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect [[http-redirect-name](#)] *string*

Synopsis Enter the **http-redirect** list instance
 Context **configure** [application-assurance](#) [group](#) *number* [http-redirect](#) *string*
 Tree [http-redirect](#)
 Description Commands in this context configure the parameters of the HTTP redirect policy.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[http-redirect-name] *string*

Synopsis HTTP redirect policy name
 Context **configure** [application-assurance](#) [group](#) *number* [http-redirect](#) *string*
 Tree [http-redirect](#)
 Description This command specifies the applied HTTP redirect name. If no redirect name is specified, HTTP redirect is not enabled.
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the AA HTTP redirect object
 Context **configure** [application-assurance](#) [group](#) *number* [http-redirect](#) *string* [admin-state](#) *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

captive-redirect

Synopsis	Enter the captive-redirect context
Context	configure application-assurance group number http-redirect string captive-redirect
Tree	captive-redirect
Description	<p>Commands in this context configure the captive redirect capability for an HTTP redirect policy. HTTP redirect policies using captive redirect can be used in conjunction with a session-filter policy to terminate TCP flows in the ISA-AA card before reaching the Internet to redirect subscribers to the predefined redirect URL.</p> <p>Non-HTTP TCP flows are TCP reset. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber.</p> <p>The operator can select the URL arguments to include in the redirect URL using either a specific template ID or by configuring the redirect URL using a supported macro substitution keyword.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id number

Synopsis	Captive redirect VLAN ID
Context	configure application-assurance group number http-redirect string captive-redirect vlan-id number
Tree	vlan-id
Description	This command configures the VLAN ID for a captive redirect. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber.
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number http-redirect string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-https *boolean*

Synopsis	Enable HTTPS redirect
Context	configure application-assurance group number http-redirect string redirect-https <i>boolean</i>
Tree	redirect-https
Description	When set to true , the HTTP redirect policy redirects HTTPS sessions to the configured redirect URL.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-url *string*

Synopsis	HTTP redirect URL
Context	configure application-assurance group number http-redirect string redirect-url <i>string</i>
Tree	redirect-url
Description	<p>This command configures the HTTP redirect URL which is the URL (page) that the user is redirected to when an HTTP redirect takes effect.</p> <p>The operator can select the URL arguments to include in the redirect URL, using either a specific template ID or by configuring any of the following macro substitution keywords:</p> <ul style="list-style-type: none"> • \$URL - The Request-URI in the HTTP GET Request received • \$SUB - The subscriber ID • \$IP - The IP address of the subscriber host • \$RTRID - The router ID • \$URLPRM - The HTTP URL parameter associated with the subscriber • \$MAC - The UE MAC address • \$SAP - The UE SAP • \$CID - The circuit ID or interface ID of the subscriber • \$RID - The remote ID of the subscriber • \$CATID - The URL filter web-service rating category identifier • \$CATNAME - The URL filter web-service rating category name <p>Only ESM and ESM-MAC sub types support \$MAC, \$SAP, \$CID, and \$RID macro substitution.</p>
String Length	1 to 255
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-client-reset *boolean*

Synopsis Enable TCP client reset

Context **configure** [application-assurance group number](#) [http-redirect string](#) [tcp-client-reset boolean](#)

Tree [tcp-client-reset](#)

Description When configured to **true**, this command enables an HTTP-redirect policy to initiate a TCP reset towards the client if the AA policy results in a redirect with packet drop but the HTTP redirect cannot be delivered. Scenarios for this include HTTP (TLS) sessions, blocking of non-HTTP TCP traffic, and blocking of existing flows after a policy re-evaluation of an existing subscriber.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis Template ID for the HTTP redirect object

Context **configure** [application-assurance group number](#) [http-redirect string](#) [template number](#)

Tree [template](#)

Description This command configures the template that defines which parameters are appended to the HTTP host redirect field in the redirect message. The HTTP redirect template provides HTTP 302 redirect containing only the URL specified in the redirect policy, with no other parameters.

Max. Range 0 to 4294967295

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-assist

Synopsis Enter the **ip-identification-assist** context

Context **configure** [application-assurance group number](#) [ip-identification-assist](#)

Tree [ip-identification-assist](#)

Description Commands in this context configure the IP identification assist feature, which uses IP addresses to assist in traffic identification.

This optional mechanism is enabled by default and consults an internally generated and stored database when app-filters fail to classify the traffic as one of the configured applications from the AppDB.

Use the **configure application-assurance group ip-identification-assist admin-state** command to disable the administrative state of the IP identification assist feature.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of IP identification assist
Context	configure application-assurance group number ip-identification-assist admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

passive-dns

Synopsis	Enter the passive-dns context
Context	configure application-assurance group number ip-identification-assist passive-dns
Tree	passive-dns
Description	Commands in this context configure passive DNS monitoring for the IP identification assist feature.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use passive DNS monitoring to collect IP addresses
Context	configure application-assurance group number ip-identification-assist passive-dns monitor boolean

Tree	monitor
Description	When configured to true , the router collects IP addresses by passively monitoring DNS traffic. The router uses the collected IP addresses to build its internal database.
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trusted-server [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the trusted-server list instance
Context	configure application-assurance group number ip-identification-assist passive-dns trusted-server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	trusted-server
Description	Commands in this context configure a DNS server that the IP identification assist feature is allowed to passively monitor.
Max. Instances	64
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the DNS server
Context	configure application-assurance group number ip-identification-assist passive-dns trusted-server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	trusted-server
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment string

Synopsis	Name or description to associate with the DNS server
Context	configure application-assurance group number ip-identification-assist passive-dns trusted-server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) comment string
Tree	comment
String Length	0 to 32

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

partition [[aa-partition-id](#)] *number*

Synopsis	Enter the partition list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i>
Tree	partition
Description	Commands in this context configure the AA partition-related policies.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[aa-partition-id] *number*

Synopsis	Partition ID within the AA group
Context	configure application-assurance group <i>number</i> partition <i>number</i>
Tree	partition
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-congestion-detection

Synopsis	Enter the aa-sub-congestion-detection context
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection
Tree	aa-sub-congestion-detection
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of congestion detection
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [[rat-type-name](#)] *keyword*

Synopsis	Enter the rat-type list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection rat-type <i>keyword</i>
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[rat-type-name] *keyword*

Synopsis	Mobile radio access technology (RAT) type
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection rat-type <i>keyword</i>
Tree	rat-type
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtr-threshold (*number* | *keyword*)

Synopsis	Round trip time congestion threshold for a RAT type
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection rat-type <i>keyword</i> rtr-threshold (<i>number</i> <i>keyword</i>)
Tree	rtr-threshold

Description	This command configures the maximum acceptable round trip time (RTT) under no congestion. Any measured RTT above the threshold is considered an indication of possible congestion.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold (*number* | *keyword*)

Synopsis	Round trip time congestion threshold
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection rtt-threshold (<i>number</i> <i>keyword</i>)
Tree	rtt-threshold
Description	This command configures the default round trip delay threshold used by the DEM gateway algorithm to determine subscriber congestion for NLB-DEM. This default value is used when the current RAT-Type is not known, or has no associated configured RTT threshold.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Default	173
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold-tolerance *number*

Synopsis	RTT threshold tolerance for congestion detection
Context	configure application-assurance group <i>number</i> partition <i>number</i> aa-sub-congestion-detection rtt-threshold-tolerance <i>number</i>
Tree	rtt-threshold-tolerance
Description	This command configures the round trip delay threshold tolerance used by the DEM gateway algorithm to determine subscriber-level congestion.
Range	0 to 100
Units	percent

Default	50
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-remote *boolean*

Synopsis	Reverse subscriber traffic direction
Context	configure application-assurance group number partition number aa-sub-remote <i>boolean</i>
Tree	aa-sub-remote
Description	When configured to true , the direction of the from-subscriber and to-subscriber traffic is reversed for this group partition.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-network-location

Synopsis	Enter the access-network-location context
Context	configure application-assurance group number partition number access-network-location
Tree	access-network-location
Description	Commands in this context configure parameters related to dynamic experience management, also known as Access Network Location (ANL).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source [[source-type](#)] *keyword*

Synopsis	Enter the source list instance
Context	configure application-assurance group number partition number access-network-location source <i>keyword</i>
Tree	source
Description	Commands in this context configure location sources for dynamic experience management.
Max. Instances	1

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[source-type] *keyword*

Synopsis	Access network location source
Context	configure application-assurance group <i>number</i> partition <i>number</i> access-network-location source <i>keyword</i>
Tree	source
Description	This command specifies the location or access technology. AA supports access points for WLGW access points or ULI-2gpp for mobile (for example, FWA).
Options	mobile-3g, access-point, uli-3gpp
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [[rat-type-name](#)] *keyword*

Synopsis	Enter the rat-type list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> access-network-location source <i>keyword</i> rat-type <i>keyword</i>
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[rat-type-name] *keyword*

Synopsis	Access network location RAT type
Context	configure application-assurance group <i>number</i> partition <i>number</i> access-network-location source <i>keyword</i> rat-type <i>keyword</i>
Tree	rat-type
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold (*number* | *keyword*)

Synopsis	RTT congestion threshold for a RAT type
Context	configure application-assurance group <i>number</i> partition <i>number</i> access-network-location source <i>keyword</i> rat-type <i>keyword</i> rtt-threshold (<i>number</i> <i>keyword</i>)
Tree	rtt-threshold
Description	This command specifies the maximum acceptable round trip time (RTT) under no congestion. Any measured RTT above the threshold is considered an indication of possible congestion.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold (*number* | *keyword*)

Synopsis	Source round trip time congestion threshold
Context	configure application-assurance group <i>number</i> partition <i>number</i> access-network-location source <i>keyword</i> rtt-threshold (<i>number</i> <i>keyword</i>)
Tree	rtt-threshold
Description	This command configures the default round trip delay threshold used by the DEM gateway algorithm to determine ANL congestion. This default value is used when either the ANL RAT-Type is not known or has no associated configured RTT threshold.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Default	173
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold-tolerance *number*

Synopsis	Source round trip time congestion threshold tolerance
Context	configure application-assurance group number partition number access-network-location source keyword rtt-threshold-tolerance number
Tree	rtt-threshold-tolerance
Description	This command configures the ANL round trip delay threshold tolerance used by the DEM gateway algorithm to determine ANL-level congestion.
Range	0 to 100
Units	percent
Default	50
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-level *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Access network location source level
Context	configure application-assurance group number partition number access-network-location source keyword source-level keyword
Tree	source-level
Options	cell, transport-network-link, mac-vlan
Default	cell
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aqp-initial-lookup *boolean*

Synopsis	Enable AQP initial lookup
Context	configure application-assurance group number partition number aqp-initial-lookup boolean
Tree	aqp-initial-lookup
Description	When configured to true , this command allows AA to perform application QoS policy (AQP) lookups on flows prior to complete application identification. As usual, AQP will be looked up again when identification is complete. Without this, AA executes AQPs that

are part of the sub-default policy. The sub-default policy is formed by regular AQPs that contain ASOs, subID, or flow direction as matching conditions.

This behavior is required, for example, to apply GTP and SCTP filtering on the first packet of a new GTP/SCTP flow (AQP matching conditions).

When configured to **false**, AA only performs AQP lookups when identification is complete.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the cflowd context
Context	configure application-assurance group number partition number cflowd
Tree	cflowd
Description	Commands in this context configure the AA partition-based cflowd fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-type [[flow-export-type](#)] *keyword*

Synopsis	Enter the export-type list instance
Context	configure application-assurance group number partition number cflowd export-type keyword
Tree	export-type
Description	Commands in this context configure the scope of traffic subjected to AA cflowd export.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[flow-export-type] *keyword*

Synopsis	Cflowd flow export type for the partition
Context	configure application-assurance group number partition number cflowd export-type keyword
Tree	export-type
Description	This command allows the operator to configure the scope of traffic that can be sampled for cflowd export for the configured cflowd template.

Options	volume, tcp-performance, rtp-performance, comprehensive
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of cflowd export
Context	configure application-assurance group <i>number</i> partition <i>number</i> cflowd export-type <i>keyword</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group [[app-group-name](#)] *reference*

Synopsis	Enter the app-group list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> cflowd export-type <i>keyword</i> app-group <i>reference</i>
Tree	app-group
Description	Commands in this context configure application groups for flow sampling and cflowd export.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[app-group-name] *reference*

Synopsis	Application group name
Context	configure application-assurance group <i>number</i> partition <i>number</i> cflowd export-type <i>keyword</i> app-group <i>reference</i>
Tree	app-group
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-group <i>string</i>
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-choice *keyword*

Synopsis	Cflowd rate to use for sampling
Context	configure application-assurance group number partition number cflowd export-type keyword app-group reference rate-choice keyword
Tree	rate-choice
Options	flow-rate, flow-rate-2
Default	flow-rate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application [[application-name](#)] *reference*

Synopsis	Enter the application list instance
Context	configure application-assurance group number partition number cflowd export-type keyword application reference
Tree	application
Description	Commands in this context configure applications for flow sampling and cflowd export.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[application-name] *reference*

Synopsis	Application name
Context	configure application-assurance group number partition number cflowd export-type keyword application reference

facility *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA syslog facility
Context	configure application-assurance group number partition number event-log string syslog facility keyword
Tree	facility
Description	This command configures the syslog facility. The syslog facility is an information field associated with a syslog message. It is defined by the syslog protocol and provides an indication of which part of the system originated the message.
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port for syslog events
Context	configure application-assurance group number partition number event-log string syslog port number
Tree	port
Max. Range	0 to 65535
Default	514
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

severity *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Syslog message severity level threshold
Context	configure application-assurance group number partition number event-log string syslog severity <i>keyword</i>
Tree	severity
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA service port VLAN ID for sending syslog traffic
Context	configure application-assurance group number partition number event-log string syslog vlan-id <i>number</i>
Tree	vlan-id
Description	This command configures the service port VLAN ID to be used by application assurance to provide syslog events. This VLAN ID also needs to be configured for the application assurance interface.
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the gtp context
Context	configure application-assurance group number partition number gtp
Tree	gtp
Description	Commands in this context configure GTP parameters.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of GTP
Context	configure application-assurance group <i>number</i> partition <i>number</i> gtp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter [[gtp-filter-name](#)] *string*

Synopsis	Enter the gtp-filter list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> gtp gtp-filter <i>string</i>
Tree	gtp-filter
Description	Commands in this context allow AA to treat traffic on UDP port number 2152 as GTP-U. Without further specifying any other parameters within this GTP context, AA performs basic GTP-U header sanity checks and discards packets that are malformed. This GTP context also allows the operator to configure various GTP filters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[gtp-filter-name] *string*

Synopsis	GTP filter name
Context	configure application-assurance group <i>number</i> partition <i>number</i> gtp gtp-filter <i>string</i>
Tree	gtp-filter
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number gtp gtp-filter string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-in-gtp *keyword*

Synopsis	GTP in GTP packet filtering
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-in-gtp keyword
Tree	gtp-in-gtp
Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-tunnel-database

Synopsis	Enter the gtp-tunnel-database context
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-tunnel-database
Tree	gtp-tunnel-database
Description	Commands in this context configure GTP advanced firewall functions, such as validating GTP tunnels, sequence numbers, and source IP addresses).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tunnel-endpoint-limit *number*

Synopsis	Default GTP tunnel endpoint limit
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-tunnel-database default-tunnel-endpoint-limit number

Tree	default-tunnel-endpoint-limit
Description	This command configures the maximum number of GTP endpoints requested in GTP-C messages by using, for example, the PDP Context Create message type. The validate-gtp-tunnels command must be enabled before using this command.
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-gtp-tunnels *boolean*

Synopsis	Enable GTP tunnel validation
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-tunnel-database validate-gtp-tunnels <i>boolean</i>
Tree	validate-gtp-tunnels
Description	When configured to true , this command configures GTP tunnel validation. This allows for the validation of TEIDs and is a prerequisite for sequence checking and UE IP address validation. This command is only applicable when AA GTP FW is deployed on S8/S5/Gp/Gn interfaces. The gtp-inspection command in the configure application-assurance group partition gtp context must be configured to true before using this command. When configured to false , the GTP tunnels cannot be validated.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-sequence-number *boolean*

Synopsis	Enable GTP sequence number checking
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-tunnel-database validate-sequence-number <i>boolean</i>
Tree	validate-sequence-number
Description	When configured to true , this command enables GTP sequence number checking. GTP packets that fail the sequence number check are discarded. The validate-gtp-tunnels command in the configure application-assurance group partition gtp gtp-filter gtp-tunnel-database context must be configured to true before using this command. When configured to false , the GTP packet sequence number cannot be checked.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-source-ip-addr *boolean*

Synopsis	Validate source IP address in GTP frames
Context	configure application-assurance group number partition number gtp gtp-filter string gtp-tunnel-database validate-source-ip-addr boolean
Tree	validate-source-ip-addr
Description	<p>When configured to true, this command enables checking for spoofed or invalid UE IP addresses. Upstream GTP packets that contain invalid UE IP addresses are discarded. When a packet is dropped due to source-ip-address “invalid source IP add”, the statistics counter is updated.</p> <p>The validate-gtp-tunnels command in the configure application-assurance group partition gtp gtp-filter gtp-tunnel-database context must be configured to true before using this command.</p> <p>When configured to false, the spoofed or invalid UE IP addresses cannot be checked.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi-apn-filter

Synopsis	Enter the imsi-apn-filter context
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter
Tree	imsi-apn-filter
Description	<p>Commands in this context configure IMSI and APN filtering.</p> <p>The gtpc-inspection command in the configure application-assurance group partition gtp context must be configured to true before using this command.</p> <p>This command is only applicable to the GTP packets that contain IMSI or APN information elements (IEs).</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Synopsis	IMSI APN filter default action
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter default-action keyword
Tree	default-action
Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number
Tree	entry
Description	Commands in this context configure an entry within the IMSI-APN filter to allow for IMSI-APN match and action configuration.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis	AA IMSI-APN filter entry ID
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number
Tree	entry
Description	This command specifies the index in the IMSI-APN list that defines a custom filtering action.
Range	1031 to 2030
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action keyword

Synopsis	IMSI APN filter entry action
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number action keyword
Tree	action
Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn string

Synopsis	APN as GTP filter match criterion
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number apn string
Tree	apn
Description	This command configures a matching condition for an APN configured as a GTP filter. If no APN is specified, the entry is not checked for the APN IE in GTP-C packets. The values for this command are: <ul style="list-style-type: none"> • string: The extracted APN must match string exactly. • ^string: The extracted APN must start with string. • string\$: The extracted APN must end with string. • WILDCARD_APN: Special string that indicates that the extracted APN must be "*" (that is, a length octet with value one, followed by the ASCII code for the asterisk) • EMPTY_APN: Special string that indicates that the extracted APN must be empty (that is, "") • ANY_APN: Special string that indicates that the extracted APN IE must be present and can have any value in order for the filter entry to match
String Length	1 to 100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi-mcc-mnc-prefix string

Synopsis	IMSI (MCC-MNC) prefix as GTP filter match criterion
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number imsi-mcc-mnc-prefix string

Tree	imsi-mcc-mnc-prefix
Description	This command configures a matching condition for the IMSI (MCC-MNC) prefix. This string represents the IMSI prefix to be matched against the IMSI IE of the packet, or the special value ANY_IMSI to indicate that an IMSI IE must be present as a matching condition regardless of the IMSI IE value. If no MCC-MNC prefix is specified, the entry will match GTP packets that have an IMSI IE containing any value.
String Length	1 to 8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-gsn

Synopsis	Enter the src-gsn context
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number src-gsn
Tree	src-gsn
Description	Commands in this context configure a matching condition for the GSN IP address. The IP address value is checked only against the source IP address of the GTP packets that contain an APN IE or an IMSI IE.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Source GSN IP address prefix as filter match criterion
Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number src-gsn ip-prefix (ipv4-prefix ipv6-prefix)
Tree	ip-prefix
Description	This command specifies a valid unicast address associated with the IMSI-APN filter entry.
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	Source GSN IP address prefix list as match criterion
----------	--

Context	configure application-assurance group number partition number gtp gtp-filter string imsi-apn-filter entry number src-gsn ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the log context
Context	configure application-assurance group number partition number gtp gtp-filter string log
Tree	log
Description	Commands in this context configure the AA group partition GTP filter log.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action keyword

Synopsis	GTP filter action to be logged
Context	configure application-assurance group number partition number gtp gtp-filter string log action keyword
Tree	action
Options	deny, permit, all
Default	deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log reference

Synopsis	Event-log name to capture GTP filter events
Context	configure application-assurance group number partition number gtp gtp-filter string log event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-payload-length *number*

Synopsis Maximum allowed GTP payload length
 Context **configure** [application-assurance group number partition number gtp gtp-filter string](#)
[max-payload-length number](#)
 Tree [max-payload-length](#)
 Range 0 to 65535
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-type

Synopsis Enter the **message-type** context
 Context **configure** [application-assurance group number partition number gtp gtp-filter string](#)
[message-type](#)
 Tree [message-type](#)
 Description Commands in this context configure the GTP message-type filtering. If no message type is specified within a filter, all GTP message types are allowed.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Synopsis GTP message type default action
 Context **configure** [application-assurance group number partition number gtp gtp-filter string](#)
[message-type default-action keyword](#)
 Tree [default-action](#)
 Options deny, permit
 Default permit
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [**entry-id**] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group number partition number gtp gtp-filter string message-type entry number
Tree	entry
Description	Commands in this context configure an entry for a specific GTPv1 message type value.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis	GTP filter entry ID
Context	configure application-assurance group number partition number gtp gtp-filter string message-type entry number
Tree	entry
Description	This command specifies the index in the GTPv1 message value list that defines a custom message-type action.
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	GTPv1 filter message entry action
Context	configure application-assurance group number partition number gtp gtp-filter string message-type entry number action keyword
Tree	action
Options	deny, permit
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtpc-inspection *boolean*

Synopsis	Enable inspection of GTP-C packets
Context	configure application-assurance group <i>number</i> partition <i>number</i> gtp gtpc-inspection <i>boolean</i>
Tree	gtpc-inspection

Description	When configured to true , this command enables the inspection of GTP-C packets. This is relevant only when AA GTP FW is deployed on S8/S5/Gp/Gn interfaces. This command must be enabled before configuring related features, such as APN filtering, GTP tunnel validation, message-type-v2 filtering, sequence number validation, and SRC IP validation. When configured to false , GTP-C packet inspection cannot be performed.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the log context
Context	configure application-assurance group number partition number gtp log
Tree	log
Description	Commands in this context configure the AA group partition GTP log.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action keyword

Synopsis	GTP log action
Context	configure application-assurance group number partition number gtp log action keyword
Tree	action
Description	This command specifies the action on which the GTP log is raised.
Options	deny, permit, all
Default	deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log reference

Synopsis	Event log reference for logging GTP events
Context	configure application-assurance group number partition number gtp log event-log reference
Tree	event-log

Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode keyword**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	GTP mode
Context	configure application-assurance group number partition number gtp mode keyword
Tree	mode
Options	filtering, untunneling
Default	filtering
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-match-all-requests boolean

Synopsis	Enable HTTP matching for all requests for an expression
Context	configure application-assurance group number partition number http-match-all-requests boolean
Tree	http-match-all-requests
Description	When configured to true , this command enables HTTP matching for all requests for an HTTP expression. When configured to false , this command restores the default and removes the matching request for this particular expression.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-x-online-host boolean

Synopsis	Enable X-Online-Host header field
Context	configure application-assurance group number partition number http-x-online-host boolean

Tree	http-x-online-host
Description	When configured to true , this command enables the X-Online-Host header field as a replacement for the HTTP Host header field.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-contribute *boolean*

Synopsis	Contribute traffic info from this partition to group
Context	configure application-assurance group number partition number ip-identification-contribute <i>boolean</i>
Tree	ip-identification-contribute
Description	When configured to true , the router collects information from traffic in this partition and contributes it to the database that is built by the IP identification assist feature at the group level.
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list [[ip-prefix-list-name](#)] *string*

Synopsis	Enter the ip-prefix-list list instance
Context	configure application-assurance group number partition number ip-prefix-list <i>string</i>
Tree	ip-prefix-list
Description	Commands in this context configure an IP prefix list.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-prefix-list-name] *string*

Synopsis	AA IP prefix list name
Context	configure application-assurance group number partition number ip-prefix-list <i>string</i>
Tree	ip-prefix-list
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Description	Commands in this context configure an IP prefix within the list.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	AA IP prefix
Context	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	AA IP prefix name
----------	-------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i> prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) name <i>string</i>
Tree	name
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy

Synopsis	Enter the policy context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy
Tree	policy
Description	Commands in this context configure the fields for the Application Assurance policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-filter

Synopsis	Enter the app-filter context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter
Tree	app-filter
Description	Commands in this context configure an application filter for Application Assurance.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i>
Tree	entry
Description	<p>Commands in this context create an application filter entry.</p> <p>Application filter entries are an ordered list. The lowest numerical entry that matches the flow defines the application for that flow.</p> <p>An application filter entry or entries configure match attributes of an application.</p>
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis Application filter entry ID

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-filter](#) [entry](#) *number*

Tree [entry](#)

Range 1 to 65535

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the AA application filter entry

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-filter](#) [entry](#) *number* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application *reference*

Synopsis Application name

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-filter](#) [entry](#) *number* [application](#) *reference*

Tree [application](#)

Reference **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [application](#) *string*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number policy app-filter entry number <i>description string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression [[expr-index](#)] *number*

Synopsis	Enter the expression list instance
Context	configure application-assurance group number partition number policy app-filter entry number expression number
Tree	expression
Description	Commands in this context configure string values to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[expr-index](#)] *number*

Synopsis	Application filter matching expression identifier
Context	configure application-assurance group number partition number policy app-filter entry number expression number
Tree	expression
Range	1 to 4
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *string*

Synopsis	Exact match for application filter matching expression
Context	configure application-assurance group number partition number policy app-filter entry number expression number eq string
Tree	eq

String Length	1 to 255
Notes	The following elements are part of a mandatory choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match for application filter matching expression
Context	configure application-assurance group number partition number policy app-filter entry number expression number neq string
Tree	neq
String Length	1 to 255
Notes	The following elements are part of a mandatory choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type keyword

Synopsis	Application filter matching expression type
Context	configure application-assurance group number partition number policy app-filter entry number expression number type keyword
Tree	type
Options	http-host, http-uri, http-referer, sip-ua, sip-uri, sip-mt, citrix-app, http-user-agent, h323-product-id, tls-cert-subj-org-name, tls-cert-subj-common-name, rtsp-host, rtsp-uri, rtsp-ua, rtmp-page-host, rtmp-page-uri, rtmp-swf-host, rtmp-swf-uri, rtmp-tc-host, rtmp-tc-uri, dns-domain-name
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-direction keyword

Synopsis	Traffic flow direction for the application filter entry
Context	configure application-assurance group number partition number policy app-filter entry number flow-setup-direction keyword
Tree	flow-setup-direction
Options	subscriber-to-network, network-to-subscriber, both

Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-match-all-requests *boolean*

Synopsis	Enable HTTP matching for all requests
Context	configure application-assurance group number partition number policy app-filter entry number http-match-all-requests boolean
Tree	http-match-all-requests
Description	When configured to true , this command enables HTTP matching for all requests for an HTTP expression. When configured to false , this command restores the default for this app-filter entry which matches the first request.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-port

Synopsis	Enter the http-port context
Context	configure application-assurance group number partition number policy app-filter entry number http-port
Tree	http-port
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-filter entry number http-port eq
Tree	eq
Description	Commands in this context configure the exact value as the match criterion.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis Port list name

Context **configure** [application-assurance group number](#) [partition number](#) [policy app-filter entry number](#) [http-port eq port-list reference](#)

Tree [port-list](#)

Reference **configure** [application-assurance group number](#) [partition number](#) [port-list string](#)

Notes The following elements are part of a choice: **port-list** or **port-number**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis Server port number

Context **configure** [application-assurance group number](#) [partition number](#) [policy app-filter entry number](#) [http-port eq port-number number](#)

Tree [port-number](#)

Range 0 | 1 to 65535

Default 0

Notes The following elements are part of a choice: **port-list** or **port-number**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis Enter the **neq** context

Context **configure** [application-assurance group number](#) [partition number](#) [policy app-filter entry number](#) [http-port neq](#)

Tree [neq](#)

Description Commands in this context configure the non-match criterion used.

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Port list name
Context	configure application-assurance group number partition number policy app-filter entry number http-port neq port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: port-list or port-number .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number
Context	configure application-assurance group number partition number policy app-filter entry number http-port neq port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list or port-number .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-assist *boolean*

Synopsis	Enable IP identification assist for this entry
Context	configure application-assurance group number partition number policy app-filter entry number ip-identification-assist boolean
Tree	ip-identification-assist
Description	<p>When configured to true, the router performs a network IP address lookup that overrides the assigned application if it finds the network IP address in its internal application-IP database.</p> <p>If an IP match is found, the application assigned from the app-filter is overridden with the application from the IP lookup. This also affects the app-group and charging group.</p> <p>If an IP match is not found, the application assigned from the app-filter is not overridden and remains (including the app-group and charging group).</p>

When configured to **false**, this command disables the router from performing a network IP address lookup and overriding the assigned application.

Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol

Synopsis	Enter the ip-protocol context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> ip-protocol
Tree	ip-protocol
Description	Commands in this context configure the IP protocol to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq (*number* | *keyword*)

Synopsis	Exact match criterion used for the IP protocol number
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> ip-protocol eq (<i>number</i> <i>keyword</i>)
Tree	eq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq (*number* | *keyword*)

Synopsis	Non-match criterion used for the IP protocol number
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> ip-protocol neq (<i>number</i> <i>keyword</i>)
Tree	neq
Range	0 to 255

Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-address

Synopsis	Enter the network-address context
Context	configure application-assurance group number partition number policy app-filter entry number network-address
Tree	network-address
Description	Commands in this context configure the network address to use for the application filter entry. The network address is the address on the network side of AA, independent of whether the subscriber is acting as a client or server and is not normally used in AA app-filters. The network address will match the destination IP address in a from-sub flow or the source IP address in a to-sub flow.
Notes	The following elements are part of a choice: network-address or server-address .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-filter entry number network-address eq
Tree	eq
Description	Commands in this context specify an exact value as the match criterion for the network address.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix
----------	-----------

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> network-address eq ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> network-address eq ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the neq context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> network-address neq
Tree	neq
Description	Commands in this context specify the non-match criterion used for the network address.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> network-address neq ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	configure application-assurance group number partition number policy app-filter entry number network-address neq ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enter the protocol context
Context	configure application-assurance group number partition number policy app-filter entry number protocol
Tree	protocol
Description	Commands in this context configure the protocol signature in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq (*string* | *named-item*)

Synopsis	Exact match criterion used for the AA protocol name
Context	configure application-assurance group number partition number policy app-filter entry number protocol eq (string named-item)
Tree	eq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq (*string* | *named-item*)

Synopsis	Non-match criterion used for the AA protocol name
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> protocol neq (<i>string</i> <i>named-item</i>)
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-address

Synopsis	Enter the server-address context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> server-address
Tree	server-address
Description	Commands in this context configure the server address to use for the application filter entry. The server address is the address on the server end of a client-server session.
Notes	The following elements are part of a choice: network-address or server-address .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> server-address eq
Tree	eq
Description	Commands in this context configure the attributes of the IP address used for the exact match criterion for the application flow.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	DNS IP cache name
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq dns-ip-cache reference
Tree	dns-ip-cache
Reference	configure application-assurance group number dns-ip-cache string
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP prefix
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq ip-prefix (ipv4-prefix ipv6-prefix)
Tree	ip-prefix
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

masked-ip

Synopsis	Enter the masked-ip context
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq masked-ip
Tree	masked-ip
Description	Commands in this context configure the attributes of a masked IP address.
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address mask
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq masked-ip address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	address
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

netmask (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address mask
Context	configure application-assurance group number partition number policy app-filter entry number server-address eq masked-ip netmask (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	netmask
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the neq context
Context	configure application-assurance group number partition number policy app-filter entry number server-address neq
Tree	neq

Description	Commands in this context configure the attributes of the IP address used for non-matching criteria in the application flow.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	DNS IP cache name
Context	configure application-assurance group <i>number</i> partition number policy app-filter entry <i>number</i> server-address neq dns-ip-cache <i>reference</i>
Tree	dns-ip-cache
Reference	configure application-assurance group <i>number</i> dns-ip-cache <i>string</i>
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix
Context	configure application-assurance group <i>number</i> partition number policy app-filter entry <i>number</i> server-address neq ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	configure application-assurance group <i>number</i> partition number policy app-filter entry <i>number</i> server-address neq ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure application-assurance group <i>number</i> partition number ip-prefix-list <i>string</i>

Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

masked-ip

Synopsis	Enter the masked-ip context
Context	configure application-assurance group number partition number policy app-filter entry number server-address neq masked-ip
Tree	masked-ip
Description	Commands in this context configure the attributes of a masked IP address.
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , ip-prefix-list , or masked-ip .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address mask
Context	configure application-assurance group number partition number policy app-filter entry number server-address neq masked-ip address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	address
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

netmask (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address mask
Context	configure application-assurance group number partition number policy app-filter entry number server-address neq masked-ip netmask (ipv4-address-no-zone ipv6-address-no-zone)
Tree	netmask
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-port

Synopsis	Enter the server-port context
Context	configure application-assurance group number partition number policy app-filter entry number server-port
Tree	server-port
Description	Commands in this context specify the server TCP or UDP port number to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-filter entry number server-port eq
Tree	eq
Description	Commands in this context configure the exact value as the match criterion for the server TCP or UDP number in the app-filter.
Notes	The following elements are part of a choice: eq , gt , lt , or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

first-packet-policy *keyword*

Synopsis	TCP/UDP port application to apply
Context	configure application-assurance group number partition number policy app-filter entry number server-port eq first-packet-policy keyword
Tree	first-packet-policy
Options	first-packet-trusted, first-packet-validate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Port-list name used in application filter criteria
----------	--

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> server-port eq port-list reference
Tree	port-list
Reference	configure application-assurance group <i>number</i> partition <i>number</i> port-list string
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> server-port eq port-number <i>number</i>
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry <i>number</i> server-port eq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
----------	----------------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry number server-port eq range end <i>number</i>
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	TCP/UDP starting port number
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry number server-port eq range start <i>number</i>
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gt

Synopsis	Enter the gt context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry number server-port gt
Tree	gt
Description	Commands in this context specify the greater than value as the match criterion for the server port number for the app-filter.
Notes	The following elements are part of a choice: eq , gt , lt , or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number number

Synopsis	Server port number used as match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-filter entry number server-port gt port-number <i>number</i>

Tree	port-number
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt

Synopsis	Enter the lt context
Context	configure application-assurance group number partition number policy app-filter entry number server-port lt
Tree	lt
Description	Commands in this context specify the less than value as the match criterion for the server port number for the app-filter.
Notes	The following elements are part of a choice: eq , gt , lt , or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number number

Synopsis	Server port number used as match criterion
Context	configure application-assurance group number partition number policy app-filter entry number server-port lt port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the neq context
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq
Tree	neq

Description	Commands in this context configure non-match criterion used for the server TCP or UDP number in the app-filter.
Notes	The following elements are part of a choice: eq , gt , lt , or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Port-list name used in application filter criteria
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq range
Tree	range

Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	TCP/UDP ending port number
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	TCP/UDP starting port number
Context	configure application-assurance group number partition number policy app-filter entry number server-port neq range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group [[application-group-name](#)] *string*

Synopsis	Enter the app-group list instance
Context	configure application-assurance group number partition number policy app-group string
Tree	app-group
Description	Commands in this context create an application group for an application assurance policy.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[application-group-name] *string*

Synopsis Application group name

Context **configure** [application-assurance group number partition number policy app-group string](#)

Tree [app-group](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group *reference*

Synopsis Charging group used in the AA application group policy

Context **configure** [application-assurance group number partition number policy app-group string charging-group reference](#)

Tree [charging-group](#)

Reference **configure** [application-assurance group number partition number policy charging-group string](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance group number partition number policy app-group string description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis App group export ID used in RADIUS accounting export

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-group <i>string</i> export-id <i>number</i>
Tree	export-id
Description	This command assigns an export ID value to a charging group, an application group, or an application that RADIUS accounting uses for accounting export identification. This export ID is encoded in the top two bytes of the RADIUS accounting VSA to identify which charging group the counter value represents. If no export ID is assigned, the counter cannot be added to the AA subscriber stats RADIUS export-type. After a charging group index is referenced, it cannot be deleted without removing the reference.
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile [[app-profile-name](#)] *string*

Synopsis	Enter the app-profile list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Tree	app-profile
Description	Commands in this context create an application profile and configure the profile parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[app-profile-name] *string*

Synopsis	App-profile name
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Tree	app-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-suppressible *boolean*

Synopsis	Enable AA suppression for subs with this app profile
----------	--

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> aa-sub-suppressible <i>boolean</i>
Tree	aa-sub-suppressible
Description	When configured to true , this command configures the ability to suppress Application Assurance for subscribers with this application profile. This function is used in the context of an SRRP group interface. If an SRRP group interface is configured as configure service ies subscriber-interface group-interface suppress-aa-sub or configure service vprn subscriber-interface group-interface suppress-aa-sub , subscribers with an application profile configured as suppressible are not diverted to Application Assurance.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

capacity-cost *number*

Synopsis	Application profile capacity cost
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> capacity-cost <i>number</i>
Tree	capacity-cost
Description	This command configures an application profile capacity cost. Capacity cost based load balancing allows a cost to be assigned to diverted SAPs (with the application profile). This allows for load balancing SAPs between ISAs and acts as a threshold to notify the operator if capacity planning is exceeded.
Range	1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] *reference*

Synopsis	Enter the characteristic list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> characteristic <i>reference</i>
Tree	characteristic
Description	Commands in this context assign one of the existing values of an existing application service option characteristic to the application profile.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[characteristic-name] reference

Synopsis Application service option characteristic name

Context **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-profile](#) [string](#) [characteristic](#) [reference](#)

Tree [characteristic](#)

Reference **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-service-options](#) [characteristic](#) [string](#)

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value reference

Synopsis ASO characteristic value name

Context **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-profile](#) [string](#) [characteristic](#) [reference](#) [value](#) [reference](#)

Tree [value](#)

Reference **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-service-options](#) [characteristic](#) [string](#) [value](#) [string](#)

Notes This element is mandatory.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis Text description

Context **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-profile](#) [string](#) [description](#) [string](#)

Tree [description](#)

String Length 1 to 80

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

divert *boolean*

Synopsis	Enable traffic redirection to AA ISAs or ESA VMs
Context	configure application-assurance group number partition number policy app-profile string divert <i>boolean</i>
Tree	divert
Description	When configured to true , this command enables the redirection of traffic to AA ISAs or ESA VMs for the system-wide forwarding classes diverted to Application Assurance (configure isa application-assurance-group divert-fc) for AA subscribers using this application profile. When configured to false , this command stops the redirection of traffic to AA ISAs or ESA VMs for the AA subscribers using this application profile.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-qos-policy

Synopsis	Enter the app-qos-policy context
Context	configure application-assurance group number partition number policy app-qos-policy
Tree	app-qos-policy
Description	Commands in this context configure an application QoS policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group number partition number policy app-qos-policy entry <i>number</i>
Tree	entry
Description	Commands in this context create an application QoS policy (AQP) entry. A flow that matches multiple AQP entries will have multiple AQP entries actions applied. If a conflict occurs for two or more actions, the action from the AQP entry with the lowest numerical value takes precedence.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] number

Synopsis	AQP entry ID
Context	configure application-assurance group number partition number policy app-qos-policy entry number
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the action context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action
Tree	action
Description	Commands in this context configure AQP actions to be performed on flows that match the match criteria of the AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

abandon-tcp-optimization boolean

Synopsis	Abandon TCPO for this entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action abandon-tcp-optimization boolean
Tree	abandon-tcp-optimization
Description	When configured to true , this command disables TCPO for flows matching this AQP entry.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bandwidth-policer

Synopsis	Enter the bandwidth-policer context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action bandwidth-policer
Tree	bandwidth-policer
Description	<p>Commands in this context assign an existing bandwidth policer as an action on flows matching this AQP entry.</p> <p>The match criteria for the AQP entry must specify a unidirectional traffic direction before a policer action can be configured. If a policer is used in one direction in an AQP match entry, the same policer name cannot be used by another AQP entry that uses different traffic direction match criteria.</p> <p>When multiple policers apply to a single flow, the final action on a packet is the worst case of all policer outcomes (for example, if one of the policers marks packet out of profile, the final marking will reflect that).</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anl reference

Synopsis	Access network locator bandwidth policer
Context	configure application-assurance group number partition number policy app-qos-policy entry number action bandwidth-policer anl reference
Tree	anl
Description	This command creates an Application Assurance policy profile for a policer instance for each ANL that limits traffic bandwidth in the scope of that ANL. For ANL, only single-bucket bandwidth policers can be configured.
Reference	configure application-assurance group number policer anl-bandwidth-policer string
Notes	The following elements are part of a choice: anl , dual-bucket , or single-bucket .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-bucket reference

Synopsis	Dual bucket bandwidth limiting policer
Context	configure application-assurance group number partition number policy app-qos-policy entry number action bandwidth-policer dual-bucket reference
Tree	dual-bucket

Description	This command creates an Application Assurance policy profile for a dual bucket (PIR) bandwidth limiting policer.
Reference	configure application-assurance group number policer dual-bucket-bandwidth-policer string
Notes	The following elements are part of a choice: anl , dual-bucket , or single-bucket .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

single-bucket *reference*

Synopsis	Single bucket bandwidth limiting policer
Context	configure application-assurance group number partition number policy app-qos-policy entry number action bandwidth-policer single-bucket reference
Tree	single-bucket
Description	This command creates an Application Assurance policy profile for a single bucket (PIR) bandwidth limiting policer.
Reference	configure application-assurance group number policer single-bucket-bandwidth-policer string
Notes	The following elements are part of a choice: anl , dual-bucket , or single-bucket .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	DNS IP cache name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action dns-ip-cache reference
Tree	dns-ip-cache
Reference	configure application-assurance group number dns-ip-cache string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

drop *boolean*

Synopsis	Enable drop action for the AQP entry
----------	--------------------------------------

Context	configure application-assurance group number partition number policy app-qos-policy entry number action drop boolean
Tree	drop
Description	When configured to true , all flow traffic matching this AQP entry is dropped. The drop action is performed first and no other action is invoked on that flow even if multiple other actions exist for the flow because of one or more AQP entry matches. When configured to false , this command disables the drop action on flows matching this AQP entry.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

error-drop

Synopsis	Enable the error-drop context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action error-drop
Tree	error-drop
Description	Commands in this context configure a drop action for error flows (for instance, bad IP checksums or TCP/UDP port 0).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log action for the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action error-drop event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-count-limit-policer

Synopsis	Enter the flow-count-limit-policer context
----------	---

Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-count-limit-policer
Tree	flow-count-limit-policer
Description	<p>Commands in this context assign an existing flow count limit policer as an action on flows matching this AQP entry.</p> <p>The match criteria for the AQP entry must specify a unidirectional traffic direction before a policer action can be configured. If a policer is used in one direction in an AQP match entry, the same policer name cannot be used by another AQP entry that uses different traffic direction match criteria.</p> <p>When multiple policers are applied to a single flow, the final action on a packet is the worst case of all policer outcomes (for example, if one of the policers marks packet out of profile, the final marking will reflect that).</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-count-limit-policer event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-name *reference*

Synopsis	Policer name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-count-limit-policer policer-name reference
Tree	policer-name
Description	This command specifies the name of the flow count limit policer for flows matching the AQP entry. The policer name is configured in the configure application-assurance group policer context.
Reference	configure application-assurance group number policer flow-count-limit-policer string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-rate-policer

Synopsis	Enter the flow-setup-rate-policer context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-setup-rate-policer
Tree	flow-setup-rate-policer
Description	<p>Commands in this context assign an existing flow setup rate policer as an action on flows matching this AQP entry.</p> <p>The match criteria for the AQP entry must specify a unidirectional traffic direction before a policer action can be configured. If a policer is used in one direction in an AQP match entry, the same policer name cannot be used for another AQP entry that uses different traffic direction match criteria.</p> <p>When multiple policers are applied to a single flow, the final action on a packet is the worst case of all policer outcomes (for example, if one of the policers marks a packet out of profile, the final marking reflects that).</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log reference

Synopsis	Events log name for flow-setup rate policer
Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-setup-rate-policer event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-name reference

Synopsis	Policer name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action flow-setup-rate-policer policer-name reference
Tree	policer-name
Description	This command specifies the name of the flow setup rate policer for flows matching this AQP entry.
Reference	configure application-assurance group number policer flow-setup-rate-policer string
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fragment-drop

Synopsis Enter the **fragment-drop** context

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number action fragment-drop](#)

Tree [fragment-drop](#)

Description Commands in this context specify the drop action options to apply to fragments.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

drop-scope *keyword*

Synopsis Fragment-drop scope

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number action fragment-drop drop-scope keyword](#)

Tree [drop-scope](#)

Description This command specifies which fragments to drop as an action on flows matching this AQP entry.

Options all, out-of-order

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis Event log name

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number action fragment-drop event-log reference](#)

Tree [event-log](#)

Reference **configure** [application-assurance group number partition number event-log string](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter *reference*

Synopsis	GTP filter executed for flows matching this AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action gtp-filter reference
Tree	gtp-filter
Reference	configure application-assurance group number partition number gtp gtp-filter string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich *reference*

Synopsis	HTTP header enrichment action for the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action http-enrich reference
Tree	http-enrich
Description	This command configures the HTTP header enrichment template name that is applied as defined in the tmnxBsxHttpEnrichTable. An empty value specifies no HTTP header enrichment template.
Reference	configure application-assurance group number http-enrich string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-error-redirect *reference*

Synopsis	HTTP error redirect for the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action http-error-redirect reference
Tree	http-error-redirect
Description	This command specifies the HTTP error redirect that is applied as defined in the redirect table. An empty value specifies no HTTP error redirect.
Reference	configure application-assurance group number http-error-redirect string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification *reference*

Synopsis	HTTP notification to use for flows matching AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action http-notification reference
Tree	http-notification
Reference	configure application-assurance group number http-notification string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enter the http-redirect context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action http-redirect
Tree	http-redirect
Description	Commands in this context assign an existing HTTP redirect policy as an action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-type *keyword*

Synopsis	Flow type for HTTP redirect of flows matching the entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action http-redirect flow-type keyword
Tree	flow-type
Description	<p>This command assigns an existing HTTP redirect policy as an action on flows matching this AQP entry. The redirect only takes effect if the matching flows are HTTP and the condition specified is met.</p> <p>The condition specified by dropped flows means the flow is dropped due to an AQP action, such as flow rate, count policers, or drop actions. The admitted flows condition allows the operator to redirect HTTP traffic to a web portal while allowing non-HTTP traffic matching the same AQP rule to be forwarded.</p> <p>No HTTP redirect takes place if the HTTP redirect action and a drop/flow-police action are part of the default AQP policy. In this case, any flow drop actions take place before identification of the application/application-group.</p>
Options	dropped-flows, admitted-flows
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *reference*

Synopsis HTTP redirect policy name

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [http-redirect](#) *name* *reference*

Tree [name](#)

Description This command specifies the name of an existing HTTP policy redirect.

Reference **configure** [application-assurance](#) [group](#) *number* [http-redirect](#) *string*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-source

Synopsis Enter the **mirror-source** context

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [mirror-source](#)

Tree [mirror-source](#)

Description Commands in this context configure an application-based policy mirroring service that uses the AQP entry of this AA ISA as a mirror source.

When configured, the AQP entry becomes a mirror source for IP packets seen by AA. The mirrored packet is an IP packet analyzed by AA and does not include encapsulations present on the incoming interfaces.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all-inclusive *boolean*

Synopsis Mirror flows matching the AQP subscriber default policy

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [mirror-source](#) [all-inclusive](#) *boolean*

Tree [all-inclusive](#)

Description This command specifies that all packets during the identification phase that could match a given AQP rule are mirrored in addition to packets after an application identification completes that match the AQP rule. This ensures that all packets of a flow are mirrored at a cost of sending some unidentified packets, which after the application is identified no longer match this AQP entry.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-service *reference*

Synopsis	Mirror source service ID for flows matching the entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action mirror-source mirror-service reference
Tree	mirror-service
Description	This command specifies the mirror source service ID to use for flows that match this policy.
Reference	configure mirror mirror-dest string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-drop

Synopsis	Enable the overload-drop context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action overload-drop
Tree	overload-drop
Description	Commands in this context configure a drop action for cases where flow records are not created (overload). This command is only applicable to ISA2 hardware.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action overload-drop event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remark

Synopsis	Enter the remark context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action remark
Tree	remark
Description	Commands in this context configure the remark action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dscp

Synopsis	Enter the dscp context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action remark dscp
Tree	dscp
Description	<p>Commands in this context configure the DSCP remark action or actions on flows matching this AQP entry.</p> <p>All packets for all flows matching this AQP entry are remarked to the configured DSCP name.</p> <p>DSCP remark can only be applied when the entry remarks forwarding class or forwarding class and priority. In-profile and out-of-profile of a packet for DSCP remark is assessed after all AQP policing and priority remarking actions have taken place.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

in-profile keyword

Synopsis	DSCP name to remark matching in-profile flows
Context	configure application-assurance group number partition number policy app-qos-policy entry number action remark dscp in-profile keyword
Tree	in-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

out-profile *keyword*

Synopsis DSCP name to remark matching out-of-profile flows

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [remark](#) [dscp](#) **out-profile** *keyword*

Tree [out-profile](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fc *keyword*

Synopsis FC remark action for flows matching this entry

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [remark](#) **fc** *keyword*

Tree [fc](#)

Options be, l2, af, l1, h2, ef, h1, nc

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *keyword*

Synopsis Priority to use to remark flows matching this entry

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-qos-policy](#) [entry](#) *number* [action](#) [remark](#) **priority** *keyword*

Tree [priority](#)

Options low, high, auto

Default auto

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp-filter *reference*

Synopsis	SCTP filter to use for flows matching the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action sctp-filter reference
Tree	sctp-filter
Reference	configure application-assurance group number partition number sctp-filter string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter *reference*

Synopsis	Session filter to use for flows matching the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action session-filter reference
Tree	session-filter
Reference	configure application-assurance group number partition number session-filter string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-mss-adjust *number*

Synopsis	TCP MSS adjustment traffic action and size
Context	configure application-assurance group number partition number policy app-qos-policy entry number action tcp-mss-adjust number
Tree	tcp-mss-adjust
Range	160 to 10240
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate *reference*

Synopsis	TCP validation policy action for entry matching flows
Context	configure application-assurance group number partition number policy app-qos-policy entry number action tcp-validate reference
Tree	tcp-validate

Description	This command assigns an existing TCP validation policy as an action on flows matching this AQP entry. TCP validation can only be called from AQP entries that: <ul style="list-style-type: none"> • have no matching conditions that relate to information extracted from the incoming IP packets; for example, no application or IP address. • allow the following match conditions: none, aa-sub, characteristic, traffic-direction (both only), traffic-direction cannot be unidirectional (from or to sub). It can either be set to both or left unspecified.
Reference	configure application-assurance group number partition number tcp-validate string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tls-enrich *reference*

Synopsis	HTTP TLS enrichment action for the AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number action tls-enrich reference
Tree	tls-enrich
Reference	configure application-assurance group number http-enrich string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-filter

Synopsis	Enter the url-filter context
Context	configure application-assurance group number partition number policy app-qos-policy entry number action url-filter
Tree	url-filter
Description	Commands in this context configure a URL filter action for flows matching this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic *reference*

Synopsis	URL filter characteristic used for matching AQP entries
Context	configure application-assurance group number partition number policy app-qos-policy entry number action url-filter characteristic reference

Tree	characteristic
Reference	configure application-assurance group number partition number policy app-service-options characteristic string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name reference

Synopsis	URL filter name
Context	configure application-assurance group number partition number policy app-qos-policy entry number action url-filter name reference
Tree	name
Reference	configure application-assurance group number url-filter string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the AA AQP entry
Context	configure application-assurance group number partition number policy app-qos-policy entry number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number partition number policy app-qos-policy entry number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the match context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match
Tree	match
Description	Commands in this context configure flow match rules for this AQP entry. A flow matches this AQP entry only if it matches all match rules defined (logical AND of all rules). If no match rule is specified, the entry will match all flows.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the aa-sub context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub
Tree	aa-sub
Description	Commands in this context specify a Service Access Point (SAP) or an Enhanced Subscriber Management (ESM) subscriber as matching criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm

Synopsis	Enter the esm context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm
Tree	esm
Description	Commands in this context configure the ESM fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: esm , esm-mac , sap , spoke-sdp , or transit .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion used for the ESM subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm eq string
Tree	eq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match criterion used for ESM subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm neq string
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm-mac

Synopsis	Enter the esm-mac context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm-mac
Tree	esm-mac
Description	Commands in this context configure the ESM MAC fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: esm , esm-mac , sap , spoke-sdp , or transit .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion used for ESM MAC subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm-mac eq string
Tree	eq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match criterion used for AA subscriber ESM MAC
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub esm-mac neq string
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap

Synopsis	Enter the sap context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub sap
Tree	sap
Description	Commands in this context configure the SAP fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: esm , esm-mac , sap , spoke-sdp , or transit .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion used for the SAP subscriber
----------	---

Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub sap eq string
Tree	eq
String Length	1 to 45
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match criterion used for the SAP subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub sap neq string
Tree	neq
String Length	1 to 45
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp

Synopsis	Enter the spoke-sdp context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub spoke-sdp
Tree	spoke-sdp
Description	Commands in this context configure the spoke SDP fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: esm , esm-mac , sap , spoke-sdp , or transit .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion used for a spoke SDP subscriber
----------	---

Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub spoke-sdp eq string
Tree	eq
String Length	3 to 16
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match criterion used for a spoke SDP subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub spoke-sdp neq string
Tree	neq
String Length	3 to 16
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit

Synopsis	Enter the transit context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub transit
Tree	transit
Description	Commands in this context configure the transit fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: esm , esm-mac , sap , spoke-sdp , or transit .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion used for a transit AA subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub transit eq string

Tree	eq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq string

Synopsis	Non-match criterion used for a transit AA subscriber
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub transit neq string
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-tethering keyword

Synopsis	Tethering detection status for flow match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match aa-sub-tethering keyword
Tree	aa-sub-tethering
Description	This command configures the match criteria for subscribers in a tethering state.
Options	not-applicable, detected, not-detected
Default	not-applicable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group

Synopsis	Enter the app-group context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match app-group
Tree	app-group

Description	Commands in this context add an application group to the match criteria used by this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq reference

Synopsis	Exact match criterion used for the application group
Context	configure application-assurance group number partition number policy app-qos-policy entry number match app-group eq reference
Tree	eq
Reference	configure application-assurance group number partition number policy app-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq reference

Synopsis	Non-match criterion used for the application group
Context	configure application-assurance group number partition number policy app-qos-policy entry number match app-group neq reference
Tree	neq
Reference	configure application-assurance group number partition number policy app-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the application context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match application
Tree	application
Description	Commands in this context add an application to match criteria used by this AQP entry.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis Exact match criterion used for the application

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *reference*

Synopsis Non-match criterion used for the application

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number match application neq reference](#)

Tree [neq](#)

Reference **configure** [application-assurance group number partition number policy application string](#)

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] *reference*

Synopsis Enter the **characteristic** list instance

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number match characteristic reference](#)

Tree [characteristic](#)

Description Commands in this context configure an existing characteristic and its value to the match criteria used by this AQP entry.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[characteristic-name] reference

Synopsis	ASO characteristic name for AQP entry matching
Context	configure application-assurance group number partition number policy app-qos-policy entry number match characteristic reference
Tree	characteristic
Reference	configure application-assurance group number partition number policy app-service-options characteristic string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq reference

Synopsis	Match criterion used for AQP match characteristic
Context	configure application-assurance group number partition number policy app-qos-policy entry number match characteristic reference eq reference
Tree	eq
Reference	configure application-assurance group number partition number policy app-service-options characteristic string value string
Notes	The following elements are part of a mandatory choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq reference

Synopsis	Non-match criterion used for AQP match characteristic
Context	configure application-assurance group number partition number policy app-qos-policy entry number match characteristic reference neq reference
Tree	neq
Reference	configure application-assurance group number partition number policy app-service-options characteristic string value string
Notes	The following elements are part of a mandatory choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Synopsis	Enter the charging-group context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match charging-group
Tree	charging-group
Description	Commands in this context add a charging group to match criteria used by this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq reference

Synopsis	Match criterion used for the charging group
Context	configure application-assurance group number partition number policy app-qos-policy entry number match charging-group eq reference
Tree	eq
Reference	configure application-assurance group number partition number policy charging-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq reference

Synopsis	Non-match criterion used for the charging group
Context	configure application-assurance group number partition number policy app-qos-policy entry number match charging-group neq reference
Tree	neq
Reference	configure application-assurance group number partition number policy charging-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dscp

Synopsis	Enter the dscp context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dscp
Tree	dscp
Description	Commands in this context add a DSCP name to the match criteria used by this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq keyword

Synopsis	Exact match criterion used for the DSCP
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dscp eq keyword
Tree	eq
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq keyword

Synopsis	Non-match criterion used for the DSCP
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dscp neq keyword
Tree	neq
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the dst-ip context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-ip eq
Tree	eq
Description	Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address prefix used for match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-ip eq ip-prefix (ipv4-prefix ipv6-prefix)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
----------	---

Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-ip eq ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list string
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the neq context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-ip neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified address or prefix.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address prefix used for match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-ip neq ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-ip neq ip-prefix-list reference
Tree	ip-prefix-list

Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the dst-port context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port
Tree	dst-port
Description	Commands in this context configure a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port eq
Tree	eq
Description	Commands in this context specify the exact match criterion. A successful match occurs when the flow matches the specified port.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port eq port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: port-list , port-number , or range .

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port eq port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port eq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port eq range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis TCP/UDP starting port number

Context **configure** application-assurance group number partition number policy app-qos-policy entry number match dst-port eq range start number

Tree [start](#)

Range 0 | 1 to 65535

Default 0

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis Enter the **neq** context

Context **configure** application-assurance group number partition number policy app-qos-policy entry number match dst-port neq

Tree [neq](#)

Description Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified port.

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list reference

Synopsis IP port list used as match criterion

Context **configure** application-assurance group number partition number policy app-qos-policy entry number match dst-port neq port-list reference

Tree [port-list](#)

Reference **configure** application-assurance group number partition number port-list string

Notes The following elements are part of a choice: **port-list**, **port-number**, or **range**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-port neq port-number <i>number</i>
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-port neq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy app-qos-policy entry <i>number</i> match dst-port neq range end <i>number</i>
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	TCP/UDP starting port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match dst-port neq range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [[flow-attribute-name](#)] *string*

Synopsis	Enter the flow-attribute list instance
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string
Tree	flow-attribute
Description	Commands in this context configure a flow attribute to use as match criteria. The supported options are: <ul style="list-style-type: none"> • abr_service • audio • download • encrypted • esni • real_time_communication • upload • video
Max. Instances	10
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[flow-attribute-name] *string*

Synopsis	Flow attribute name used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string

Tree	flow-attribute
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

confidence

Synopsis	Enter the confidence context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string confidence
Tree	confidence
Description	Commands in this context configure the confidence level of the flow attribute for use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq number

Synopsis	Exact match criterion for the flow-attribute confidence
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string confidence eq number
Tree	eq
Range	0 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gte number

Synopsis	Greater than or equal to for confidence match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string confidence gte number
Tree	gte
Range	0 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt number

Synopsis	Less than value for confidence match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match flow-attribute string confidence lt number
Tree	lt
Range	1 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol

Synopsis	Enter the ip-protocol context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match ip-protocol
Tree	ip-protocol
Description	Commands in this context configure the IP protocol to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq (number | keyword)

Synopsis	Exact match criterion used for the IP protocol
Context	configure application-assurance group number partition number policy app-qos-policy entry number match ip-protocol eq (number keyword)
Tree	eq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq (*number* | *keyword*)

Synopsis Non-match criterion used for the IP protocol

Context **configure** [application-assurance group](#) *number* [partition](#) *number* [policy app-qos-policy entry](#) *number* [match ip-protocol neq](#) (*number* | *keyword*)

Tree [neq](#)

Range 0 to 255

Options tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-ip

Synopsis Enter the **src-ip** context

Context **configure** [application-assurance group](#) *number* [partition](#) *number* [policy app-qos-policy entry](#) *number* [match src-ip](#)

Tree [src-ip](#)

Description Commands in this context configure a source IP address to use as match criteria.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis Enter the **eq** context

Context **configure** [application-assurance group](#) *number* [partition](#) *number* [policy app-qos-policy entry](#) *number* [match src-ip eq](#)

Tree [eq](#)

Description Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP address prefix used for match criterion

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number match src-ip eq ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Tree [ip-prefix](#)

Notes The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis IP address prefix list used for match criterion

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number match src-ip eq ip-prefix-list reference](#)

Tree [ip-prefix-list](#)

Reference **configure** [application-assurance group number partition number ip-prefix-list string](#)

Notes The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis Enter the **neq** context

Context **configure** [application-assurance group number partition number policy app-qos-policy entry number match src-ip neq](#)

Tree [neq](#)

Description Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified address or prefix.

Notes The following elements are part of a choice: **eq** or **neq**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address prefix used for match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-ip neq ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-ip neq ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-port

Synopsis	Enter the src-port context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port
Tree	src-port
Description	Commands in this context specify a source IP port, a source port list, or a source range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the eq context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq

Tree	eq
Description	Commands in this context specify the exact match criterion. A successful match occurs when the flow matches the specified port.
Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq range
Tree	range

Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	TCP/UDP ending port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	TCP/UDP starting port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port eq range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the neq context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified port.

Notes	The following elements are part of a choice: eq or neq .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq port-number number
Tree	port-number
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: port-list , port-number , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the range context
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: port-list , port-number , or range .

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	TCP/UDP ending port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	TCP/UDP starting port number
Context	configure application-assurance group number partition number policy app-qos-policy entry number match src-port neq range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-direction keyword

Synopsis	Traffic direction to which AQP match entry is applied
Context	configure application-assurance group number partition number policy app-qos-policy entry number match traffic-direction keyword
Tree	traffic-direction
Options	subscriber-to-network, network-to-subscriber, both
Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-service-options

Synopsis	Enter the app-service-options context
Context	configure application-assurance group number partition number policy app-service-options
Tree	app-service-options
Description	Commands in this context configure application service option characteristics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] *string*

Synopsis	Enter the characteristic list instance
Context	configure application-assurance group number partition number policy app-service-options characteristic string
Tree	characteristic
Description	Commands in this context create the characteristic of the application service options.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[characteristic-name](#)] *string*

Synopsis	ASO characteristic name
Context	configure application-assurance group number partition number policy app-service-options characteristic string
Tree	characteristic
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-value *string*

Synopsis	ASO characteristic default value
Context	configure application-assurance group number partition number policy app-service-options characteristic string default-value string

Tree	default-value
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value [[value-name](#)] *string*

Synopsis	Add a list entry for value
Context	configure application-assurance group number partition number policy app-service-options characteristic string value string
Tree	value
Description	Commands in this context configure a characteristic value.
Max. Instances	64
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[value-name] *string*

Synopsis	ASO characteristic value name
Context	configure application-assurance group number partition number policy app-service-options characteristic string value string
Tree	value
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application [[application-name](#)] *string*

Synopsis	Enter the application list instance
Context	configure application-assurance group number partition number policy application string
Tree	application
Description	Commands in this context configure the policy application of the Application Assurance group partition.

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[application-name] *string*

Synopsis Application name
 Context **configure** [application-assurance group number partition number policy application](#)
string
 Tree [application](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group *reference*

Synopsis Application group associated with the application
 Context **configure** [application-assurance group number partition number policy application](#)
string app-group reference
 Tree [app-group](#)
 Reference **configure** [application-assurance group number partition number policy app-group](#) *string*
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group *reference*

Synopsis Charging group associated with the application
 Context **configure** [application-assurance group number partition number policy application](#)
string charging-group reference
 Tree [charging-group](#)
 Reference **configure** [application-assurance group number partition number policy charging-group](#)
string
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number policy application string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	Application export ID used for RADIUS accounting
Context	configure application-assurance group number partition number policy application string export-id number
Tree	export-id
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-filter

Synopsis	Enter the charging-filter context
Context	configure application-assurance group number partition number policy charging-filter
Tree	charging-filter
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group number partition number policy charging-filter entry number
Tree	entry
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] number

Synopsis	Charging filter entry ID in the AA partition policy
Context	configure application-assurance group number partition number policy charging-filter entry number
Tree	entry
Description	This command defines a charging filter entry ID. Charging filter entries are an ordered list; the lowest numerical entry that matches the flow, defines the charging filter for this flow.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the AA charging filter entry
Context	configure application-assurance group number partition number policy charging-filter entry number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group reference

Synopsis	Charging group to associate to flows matching the entry
Context	configure application-assurance group number partition number policy charging-filter entry number charging-group reference
Tree	charging-group
Description	This command associates a charging group to the flows that match the charging filter entry.
Reference	configure application-assurance group number partition number policy charging-group string
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance group number partition number policy charging-filter entry number description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis Enter the **match** context

Context **configure** [application-assurance group number partition number policy charging-filter entry number match](#)

Tree [match](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group

Synopsis Enter the **app-group** context

Context **configure** [application-assurance group number partition number policy charging-filter entry number match app-group](#)

Tree [app-group](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis Exact value as the match criterion

Context **configure** [application-assurance group number partition number policy charging-filter entry number match app-group eq reference](#)

Tree [eq](#)

Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	configure application-assurance group number partition number policy app-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq reference

Synopsis	Non-matching application to resolve to a charging group
Context	configure application-assurance group number partition number policy charging-filter entry number match app-group neq reference
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	configure application-assurance group number partition number policy app-group string
Notes	The following elements are part of a choice: eq or neq .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the application context
Context	configure application-assurance group number partition number policy charging-filter entry number match application
Tree	application
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq reference

Synopsis	Exact value as the match criterion
Context	configure application-assurance group number partition number policy charging-filter entry number match application eq reference
Tree	eq

Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	configure application-assurance group number partition number policy application string
Notes	The following elements are part of a choice: eq or neq .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *reference*

Synopsis	Non-matching application to resolve to a charging group
Context	configure application-assurance group number partition number policy charging-filter entry number match application neq reference
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	configure application-assurance group number partition number policy application string
Notes	The following elements are part of a choice: eq or neq .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [[flow-attribute-name](#)] *string*

Synopsis	Enter the flow-attribute list instance
Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string
Tree	flow-attribute
Max. Instances	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[flow-attribute-name] *string*

Synopsis	Flow attribute name match criteria
----------	------------------------------------

Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string
Tree	flow-attribute
Description	This command adds a flow attribute to the match criteria used by this charging filter entry.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

confidence

Synopsis	Enter the confidence context
Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string confidence
Tree	confidence
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq number

Synopsis	Exact value as the match criterion
Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string confidence eq number
Tree	eq
Description	This command specifies that a successful match occurs when the flow attribute confidence level is equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gte number

Synopsis	Confidence value to resolve to a charging group
----------	---

Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string confidence gte number
Tree	gte
Description	This command specifies that a successful match occurs when the flow attribute confidence level is greater than or equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt number

Synopsis	Less than value as the match criterion
Context	configure application-assurance group number partition number policy charging-filter entry number match flow-attribute string confidence lt number
Tree	lt
Description	This command specifies that a successful match occurs when the flow attribute confidence level is less than the specified value.
Range	1 to 100
Notes	The following elements are part of a choice: eq , gte , or lt .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethered-flow

Synopsis	Enable the tethered-flow context
Context	configure application-assurance group number partition number policy charging-filter entry number match tethered-flow
Tree	tethered-flow
Description	Commands in this context add the tethering status to the match criteria used by this charging filter entry.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [**charging-group-name**] *string*

Synopsis	Enter the charging-group list instance
Context	configure application-assurance group number partition number policy charging-group string
Tree	charging-group
Description	Commands in this context create a charging group for an Application Assurance policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[charging-group-name] *string*

Synopsis	Charging group name
Context	configure application-assurance group number partition number policy charging-group string
Tree	charging-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number policy charging-group string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	Charging group export ID used for RADIUS accounting
Context	configure application-assurance group number partition number policy charging-group string export-id number
Tree	export-id

Description	This command assigns an export ID value to a charging group, an app application group, or an application to be used for accounting export identification in RADIUS accounting. This ID is encoded in the top 2 bytes of the RADIUS accounting VSA to identify which charging group the counter value represents.
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

notify-start-stop *keyword*

Synopsis	Start and stop notification for the charging group
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy charging-group <i>string</i> notify-start-stop <i>keyword</i>
Tree	notify-start-stop
Options	none, flow, charging-group
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-protocol [[custom-protocol-id](#)] *string*

Synopsis	Enter the custom-protocol list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy custom-protocol <i>string</i>
Tree	custom-protocol
Description	<p>Commands in this context configure custom protocols.</p> <p>Custom protocols allow the creation of TCP and UDP-based custom protocols that employ pattern-match at offset in the protocol signature definition.</p> <p>Operator-configurable custom protocols are evaluated ahead of any Nokia-provided protocol signature in order of custom protocol ID within the context the protocol is defined. The lower ID is matched first in case of flow matching multiple custom protocols.</p> <p>Custom protocols must be created before they can be used in an application definition but do not have to be enabled. To reference a custom protocol in an application definition, or any other CLI configuration one must use the protocol name that is a concatenation of “custom_” and, (for example, custom_01, custom_02 ... custom_10, and so on). This concatenation is also used when reporting custom protocol statistics.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[custom-protocol-id] string

Synopsis	Custom protocol ID for the AA policy custom protocol
Context	configure application-assurance group number partition number policy custom-protocol string
Tree	custom-protocol
Description	This command configures the index into the protocol list that defines a custom protocol for Application Assurance.
String Length	9
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the custom protocol
Context	configure application-assurance group number partition number policy custom-protocol string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number partition number policy custom-protocol string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression [[expr-index](#)] *number*

Synopsis	Enter the expression list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy custom-protocol string expression <i>number</i>
Tree	expression
Description	Commands in this context configure an expression string value for pattern-based custom protocols match. A flow matches a custom protocol if the specified string is found at an offset of a TCP/UDP of the first payload packet.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[expr-index](#)] *number*

Synopsis	Expression substring index for custom protocol matching
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy custom-protocol string expression <i>number</i>
Tree	expression
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Flow direction for custom-protocol expression matching
Context	configure application-assurance group <i>number</i> partition <i>number</i> policy custom-protocol string expression <i>number</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the protocol direction to match against for a custom protocol.
Options	client-to-server, server-to-client, any
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq string

Synopsis	Exact match criterion for custom protocol expression
Context	configure application-assurance group number partition number policy custom-protocol string expression number eq string
Tree	eq
String Length	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

offset number

Synopsis	Offset in protocol flow to start custom-protocol match
Context	configure application-assurance group number partition number policy custom-protocol string expression number offset number
Tree	offset
Description	This command configures the offset into the protocol payload where the expr-string match criteria starts.
Range	0 to 127
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP protocol number for custom-protocol match criterion
Context	configure application-assurance group number partition number policy custom-protocol string ip-protocol keyword
Tree	ip-protocol
Description	This command configures the IP protocol number of the TCP and UDP-based custom protocols.
Options	tcp, udp
Notes	This element is mandatory.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-charging-group *reference*

Synopsis	Default charging group
Context	configure application-assurance group number partition number policy default-charging-group reference
Tree	default-charging-group
Description	This command associates a charging group with any applications or application groups that do not have an explicitly assigned charging group for the Application Assurance policy.
Reference	configure application-assurance group number partition number policy charging-group string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tethered-charging-group *reference*

Synopsis	Default charging group for tethered traffic
Context	configure application-assurance group number partition number policy default-tethered-charging-group reference
Tree	default-tethered-charging-group
Description	This command configures the default charging group to be assigned to all flows which are classified as tethered. For flows that have been identified as tethered, the AA will replace the charging group configured at the application level with the charging group configured for tethered traffic (that is, configured with default-tethered-charging-group).
Reference	configure application-assurance group number partition number policy charging-group string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-override

Synopsis	Enter the policy-override context
Context	configure application-assurance group number partition number policy-override
Tree	policy-override

Description	Commands in this context configure policy override parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the aa-sub context
Context	configure application-assurance group number partition number policy-override aa-sub
Tree	aa-sub
Description	Commands in this context configure the AA policy override subscriber fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis	Enter the sap list instance
Context	configure application-assurance group number partition number policy-override aa-sub sap string
Tree	sap
Description	Commands in this context configure the Service Access Point (SAP) within the partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[sap-id](#)] *string*

Synopsis	AA subscriber SAP ID
Context	configure application-assurance group number partition number policy-override aa-sub sap string
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] *reference*

Synopsis	Enter the characteristic list instance
Context	configure application-assurance group number partition number policy-override aa-sub sap string characteristic reference
Tree	characteristic
Description	Commands in this context configure an override characteristic and value.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[characteristic-name] *reference*

Synopsis	ASO characteristic name
Context	configure application-assurance group number partition number policy-override aa-sub sap string characteristic reference
Tree	characteristic
Reference	configure application-assurance group number partition number policy app-service-options characteristic string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *reference*

Synopsis	Characteristic value used in subscriber policy override
Context	configure application-assurance group number partition number policy-override aa-sub sap string characteristic reference value reference
Tree	value
Reference	configure application-assurance group number partition number policy app-service-options characteristic string value string
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [[sdp-bind-id](#)] *string*

Synopsis	Enter the spoke-sdp list instance
----------	--

Context	configure application-assurance group number partition number policy-override aa-sub spoke-sdp string
Tree	spoke-sdp
Description	Commands in this context configure the Service Distribution Point (SDP) for the policy override.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sdp-bind-id] [string](#)

Synopsis	Spoke SDP ID for an AA subscriber
Context	configure application-assurance group number partition number policy-override aa-sub spoke-sdp string
Tree	spoke-sdp
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] [reference](#)

Synopsis	Enter the characteristic list instance
Context	configure application-assurance group number partition number policy-override aa-sub spoke-sdp string characteristic reference
Tree	characteristic
Description	Commands in this context configure an override characteristic and value.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[characteristic-name] [reference](#)

Synopsis	ASO characteristic name
Context	configure application-assurance group number partition number policy-override aa-sub spoke-sdp string characteristic reference
Tree	characteristic

Reference	configure application-assurance group number partition number policy app-service-options characteristic string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value reference

Synopsis	Characteristic value used in subscriber policy override
Context	configure application-assurance group number partition number policy-override aa-sub spoke-sdp string characteristic reference value reference
Tree	value
Reference	configure application-assurance group number partition number policy app-service-options characteristic string value string
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit [[transit-sub-name](#)] string

Synopsis	Enter the transit list instance
Context	configure application-assurance group number partition number policy-override aa-sub transit string
Tree	transit
Description	Commands in this context configure the AA transit subscriber fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[transit-sub-name](#)] string

Synopsis	Transit subscriber name
Context	configure application-assurance group number partition number policy-override aa-sub transit string
Tree	transit
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [[characteristic-name](#)] *reference*

Synopsis Enter the **characteristic** list instance
 Context **configure** [application-assurance group number partition number policy-override aa-sub transit string characteristic reference](#)
 Tree [characteristic](#)
 Description Commands in this context configure an override characteristic and value.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[characteristic-name] *reference*

Synopsis ASO characteristic name
 Context **configure** [application-assurance group number partition number policy-override aa-sub transit string characteristic reference](#)
 Tree [characteristic](#)
 Reference **configure** [application-assurance group number partition number policy app-service-options characteristic string](#)
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *reference*

Synopsis Characteristic value used in subscriber policy override
 Context **configure** [application-assurance group number partition number policy-override aa-sub transit string characteristic reference value reference](#)
 Tree [value](#)
 Reference **configure** [application-assurance group number partition number policy app-service-options characteristic string value string](#)
 Notes This element is mandatory.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list [[port-list-name](#)] *string*

Synopsis	Enter the port-list list instance
Context	configure application-assurance group number partition number port-list string
Tree	port-list
Description	<p>Commands in this context define an AA group or partition named port list, which contains a list of port numbers or port ranges.</p> <p>The port list is then referenced in AA policy application filters, allowing increased flexibility in the use of server ports or HTTP proxy ports for application definition.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[port-list-name] *string*

Synopsis	Port list name
Context	configure application-assurance group number partition number port-list string
Tree	port-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number port-list string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port [[port-number](#)] *number*

Synopsis	Add a list entry for port
----------	----------------------------------

Context	configure application-assurance group number partition number port-list string port number
Tree	port
Description	Commands in this context specify the server TCP or UDP port number to use in the port list definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[port-number] *number*

Synopsis	Port number
Context	configure application-assurance group number partition number port-list string port number
Tree	port
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range [start](#) *number* [end](#) *number*

Synopsis	Add a list entry for range
Context	configure application-assurance group number partition number port-list string range start number end number
Tree	range
Description	Commands in this context configure the AA group or partition named port-list range.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Start value for the port range in the AA port list
Context	configure application-assurance group number partition number port-list string range start number end number
Tree	range
Range	0 to 65534

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	End value for the port range in the AA port list
Context	configure application-assurance group number partition number port-list string range start number end number
Tree	range
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp-filter [[sctp-filter-name](#)] *string*

Synopsis	Enter the sctp-filter list instance
Context	configure application-assurance group number partition number sctp-filter string
Tree	sctp-filter
Description	Commands in this context configure the Stream Control Transmission Protocol (SCTP) fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sctp-filter-name] *string*

Synopsis	SCTP filter name
Context	configure application-assurance group number partition number sctp-filter string
Tree	sctp-filter
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number sctp-filter string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log for packets dropped by the SCTP filter
Context	configure application-assurance group number partition number sctp-filter string event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppid

Synopsis	Enter the ppid context
Context	configure application-assurance group number partition number sctp-filter string ppid
Tree	ppid
Description	Commands in this context configure actions for specific or default Payload Protocol Identifiers (PPIDs).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Synopsis	Default action for all SCTP PPIDs
Context	configure application-assurance group number partition number sctp-filter string ppid default-action keyword
Tree	default-action
Options	deny, permit

Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> sctp-filter <i>string</i> ppid entry <i>number</i>
Tree	entry
Description	Commands in this context specify SCTP PPID values and the corresponding action to apply.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis	SCTP filter PPID entry ID
Context	configure application-assurance group <i>number</i> partition <i>number</i> sctp-filter <i>string</i> ppid entry <i>number</i>
Tree	entry
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	SCTP filter PPID entry action
Context	configure application-assurance group <i>number</i> partition <i>number</i> sctp-filter <i>string</i> ppid entry <i>number</i> action <i>keyword</i>
Tree	action
Options	deny, permit
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value (*number* | *keyword*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PPID entry value
Context	configure application-assurance group <i>number</i> partition <i>number</i> sctp-filter <i>string</i> ppid entry <i>number</i> value (<i>number</i> <i>keyword</i>)
Tree	value
Range	0 to 4294967295
Options	iaa, m2ua, m3ua, sua, m2pa, v5ua, h.248, bicc/q.2150.3, tali, dua, asap, enr, h.323, q.ipc/q.2150.3, simco, ddp-segment-chunk, ddp-stream-session-control, s1-application-protocol, rua, hnbap, forces-hp, forces-mp, forces-lp, sbc-ap, nbap, x2ap, ircp, lcs-ap, mpich2, service-area-broadcast-protocol, fractal-generator-protocol, ping-pong-protocol, calcapp-protocol, scripting-service-protocol, netperformer-protocol-control-channel, netperformer-protocol-data-channel, echo, discard, daytime, character-generator, 3gpp-rna, 3gpp-m2ap, 3gpp-m3ap, ssh-over-sctp, diameter-in-a-sctp-data-chunk, diameter-in-a-dtls/sctp-data-chunk, r14p.-ber-encoded-asn.1-over-sctp, webrtc-control, domstring-last, binary-data-partial, binary-data-last, domstring-partial, 3gpp-pua, webrtc-string-empty, webrtc-binary-empty, 3gpp-xwap, 3gpp-xw-control-plane, 3gpp-ng-application-protocol, 3gpp-xn-application-protocol, 3gpp-f1-application-protocol, http-sctp, 3gpp-e1-application-protocol, ele2-lawful-interception, 3gpp-ngap-over-dtls-over-sctp, 3gpp-xnap-over-dtls-over-sctp, 3gpp-f1ap-over-dtls-over-sctp, 3gpp-e1ap-over-dtls-over-sctp, e2-cp, e2-up, e2-du, 3gpp-w1ap
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppid-range

Synopsis	Enter the ppid-range context
Context	configure application-assurance group <i>number</i> partition <i>number</i> sctp-filter <i>string</i> ppid-range
Tree	ppid-range
Description	Commands in this context specify the range of PPID values that are allowed by the AA SCTP filter firewall.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum PPID value
Context	configure application-assurance group number partition number sctp-filter string ppid-range max number
Tree	max
Description	This command configures the maximum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be greater or equal to the minimum PPID value.
Range	0 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min number

Synopsis	Minimum PPID value
Context	configure application-assurance group number partition number sctp-filter string ppid-range min number
Tree	min
Description	This command configures the minimum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be less than or equal to the maximum PPID value.
Range	0 to 4294967295
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter [[session-filter-name](#)] *string*

Synopsis	Enter the session-filter list instance
Context	configure application-assurance group number partition number session-filter string
Tree	session-filter
Description	Commands in this context create a session filter.
Max. Instances	300
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[session-filter-name] *string*

Synopsis Session filter name

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [session-filter](#) *string*

Tree [session-filter](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis Enter the **default-action** context

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [session-filter](#) *string*
[default-action](#)

Tree [default-action](#)

Description Commands in this context specify the default action to take for packets that do not match any filter entries.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis Default action for packets not matching filter entries

Context **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [session-filter](#) *string*
[default-action](#) [action](#) *keyword*

Tree [action](#)

Options deny, permit

Default deny

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event logging of default action
Context	configure application-assurance group number partition number session-filter string default-action event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number session-filter string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group number partition number session-filter string entry number
Tree	entry
Description	Commands in this context configure an AA session filter match entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis	Entry ID for the session filter entry
Context	configure application-assurance group number partition number session-filter string entry number
Tree	entry
Range	1 to 65535

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the action context
Context	configure application-assurance group number partition number session-filter string entry number action
Tree	action
Description	Commands in this context configure the action for this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deny

Synopsis	Deny sessions matching the criteria
Context	configure application-assurance group number partition number session-filter string entry number action deny
Tree	deny
Notes	The following elements are part of a choice: deny , http-redirect , permit , or tcp-optimizer .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log reference

Synopsis	Event log name used to log the action
Context	configure application-assurance group number partition number session-filter string entry number action event-log reference
Tree	event-log
Reference	configure application-assurance group number partition number event-log string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for matching sessions
Context	configure application-assurance group number partition number session-filter string entry number action http-redirect reference
Tree	http-redirect
Reference	configure application-assurance group number http-redirect string
Notes	The following elements are part of a choice: deny , http-redirect , permit , or tcp-optimizer .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

permit

Synopsis	Permit sessions that match the criteria
Context	configure application-assurance group number partition number session-filter string entry number action permit
Tree	permit
Notes	The following elements are part of a choice: deny , http-redirect , permit , or tcp-optimizer .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer *reference*

Synopsis	TCP optimizer to handle sessions matching the criteria
Context	configure application-assurance group number partition number session-filter string entry number action tcp-optimizer reference
Tree	tcp-optimizer
Reference	configure application-assurance group number tcp-optimizer string
Notes	The following elements are part of a choice: deny , http-redirect , permit , or tcp-optimizer .
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number session-filter string entry number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the match context
Context	configure application-assurance group number partition number session-filter string entry number match
Tree	match
Description	Commands in this context configure session conditions for this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the dst-ip context
Context	configure application-assurance group number partition number session-filter string entry number match dst-ip
Tree	dst-ip
Description	Commands in this context configure the destination IP address to match.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	Destination IPs in specified DNS IP Cache
Context	configure application-assurance group number partition number session-filter string entry number match dst-ip dns-ip-cache reference
Tree	dns-ip-cache
Reference	configure application-assurance group number dns-ip-cache string

Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match dst-ip ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match dst-ip ip-prefix-list reference
Tree	ip-prefix-list
Reference	configure application-assurance group number partition number ip-prefix-list string
Notes	The following elements are part of a choice: dns-ip-cache , ip-prefix , or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the dst-port context
Context	configure application-assurance group number partition number session-filter string entry number match dst-port
Tree	dst-port
Description	Commands in this context specify a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq number

Synopsis	Match criterion used for destination or source port
Context	configure application-assurance group number partition number session-filter string entry number match dst-port eq number
Tree	eq
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gt number

Synopsis	Greater than match criterion for the port number
Context	configure application-assurance group number partition number session-filter string entry number match dst-port gt number
Tree	gt
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt number

Synopsis	Less than match criterion for the port
Context	configure application-assurance group number partition number session-filter string entry number match dst-port lt number
Tree	lt
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list reference

Synopsis	Destination or source port list
Context	configure application-assurance group number partition number session-filter string entry number match dst-port port-list reference
Tree	port-list
Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the range context
Context	configure application-assurance group number partition number session-filter string entry number match dst-port range
Tree	range
Description	Commands in this context specify a destination IP port, a destination port list, or a destination range to use as match criteria.
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match dst-port range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the port range as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match dst-port range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol (*number* | *keyword*)

Synopsis	IP protocol as a match criterion
Context	configure application-assurance group number partition number session-filter string entry number match ip-protocol (number keyword)
Tree	ip-protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-ip

Synopsis	Enter the src-ip context
Context	configure application-assurance group number partition number session-filter string entry number match src-ip
Tree	src-ip
Description	Commands in this context specify a source IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Source IP address prefix as match criterion
----------	---

Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-ip ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	Source IP address prefix list as match criterion
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure application-assurance group <i>number</i> partition <i>number</i> ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: ip-prefix or ip-prefix-list .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-port

Synopsis	Enter the src-port context
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-port
Tree	src-port
Description	Commands in this context specify a source IP port, a source port list, or a source range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Match criterion used for destination or source port
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 1 to 65535

Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gt number

Synopsis	Greater than match criterion for the port number
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt number

Synopsis	Less than match criterion for the port
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	0 1 to 65535
Default	0
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list reference

Synopsis	Destination or source port list
Context	configure application-assurance group <i>number</i> partition <i>number</i> session-filter <i>string</i> entry <i>number</i> match src-port port-list <i>reference</i>
Tree	port-list

Reference	configure application-assurance group number partition number port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the range context
Context	configure application-assurance group number partition number session-filter string entry number match src-port range
Tree	range
Description	Commands in this context specify a destination IP port, a destination port list, or a destination range to use as match criteria.
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match src-port range end number
Tree	end
Range	0 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the port range as match criterion
Context	configure application-assurance group number partition number session-filter string entry number match src-port range start number
Tree	start
Range	0 1 to 65535
Default	0

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

shallow-inspection *boolean*

Synopsis	Enable shallow inspection
Context	configure application-assurance group number partition number shallow-inspection boolean
Tree	shallow-inspection
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Enter the statistics context
Context	configure application-assurance group number partition number statistics
Tree	statistics
Description	Commands in this context configure accounting and billing statistics for this AA group.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-admit-deny

Synopsis	Enter the aa-admit-deny context
Context	configure application-assurance group number partition number statistics aa-admit-deny
Tree	aa-admit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure application-assurance group number partition number statistics aa-admit-deny accounting-policy reference

Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-admit-deny collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter-stats *boolean*

Synopsis	Include GTP filter admit-deny statistics in records
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-admit-deny gtp-filter-stats <i>boolean</i>
Tree	gtp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats *boolean*

Synopsis	Include admit-deny policer statistics in records
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-admit-deny policer-stats <i>boolean</i>
Tree	policer-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats-resources *boolean*

Synopsis	Allocate resources for policer admit-deny statistics
Context	configure application-assurance group number partition number statistics aa-admit-deny policer-stats-resources <i>boolean</i>
Tree	policer-stats-resources
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp-filter-stats *boolean*

Synopsis	Include SCTP filter admit-deny statistics in accounting
Context	configure application-assurance group number partition number statistics aa-admit-deny sctp-filter-stats <i>boolean</i>
Tree	sctp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter-stats *boolean*

Synopsis	Include session filter admit-deny statistics in records
Context	configure application-assurance group number partition number statistics aa-admit-deny session-filter-stats <i>boolean</i>
Tree	session-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate-stats *boolean*

Synopsis	Include TCP validate admit-deny statistics in records
Context	configure application-assurance group number partition number statistics aa-admit-deny tcp-validate-stats <i>boolean</i>
Tree	tcp-validate-stats
Default	false

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-app-group

Synopsis	Enter the aa-app-group context
Context	configure application-assurance group number partition number statistics aa-app-group
Tree	aa-app-group
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure application-assurance group number partition number statistics aa-app-group accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure application-assurance group number partition number statistics aa-app-group collect-stats boolean
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-application

Synopsis	Enter the aa-application context
Context	configure application-assurance group number partition number statistics aa-application

Tree	aa-application
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure application-assurance group number partition number statistics aa-application accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure application-assurance group number partition number statistics aa-application collect-stats boolean
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-partition

Synopsis	Enter the aa-partition context
Context	configure application-assurance group number partition number statistics aa-partition
Tree	aa-partition
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
----------	-------------------

Context	configure application-assurance group number partition number statistics aa-partition accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure application-assurance group number partition number statistics aa-partition collect-stats boolean
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethering-stats *boolean*

Synopsis	Collect tethering statistics
Context	configure application-assurance group number partition number statistics aa-partition tethering-stats boolean
Tree	tethering-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-type-stats *boolean*

Synopsis	Collect traffic type statistics
Context	configure application-assurance group number partition number statistics aa-partition traffic-type-stats boolean
Tree	traffic-type-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-protocol

Synopsis	Enter the aa-protocol context
Context	configure application-assurance group number partition number statistics aa-protocol
Tree	aa-protocol
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure application-assurance group number partition number statistics aa-protocol accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of protocol statistics
Context	configure application-assurance group number partition number statistics aa-protocol admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure application-assurance group number partition number statistics aa-protocol collect-stats boolean
Tree	collect-stats
Default	false

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the aa-sub context
Context	configure application-assurance group number partition number statistics aa-sub
Tree	aa-sub
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure application-assurance group number partition number statistics aa-sub accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-stats-export-using *keyword*

Synopsis	Method of statistics export to be used
Context	configure application-assurance group number partition number statistics aa-sub aggregate-stats-export-using keyword
Tree	aggregate-stats-export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group [[app-group-name](#)] *reference*

Synopsis	Enter the app-group list instance
----------	--

Context	configure application-assurance group number partition number statistics aa-sub app-group reference
Tree	app-group
Description	Commands in this context configure accounting and statistics collection parameters for AA application groups for a specific AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[app-group-name] *reference*

Synopsis	Application group name
Context	configure application-assurance group number partition number statistics aa-sub app-group reference
Tree	app-group
Reference	configure application-assurance group number partition number policy app-group string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	configure application-assurance group number partition number statistics aa-sub app-group reference export-using keyword
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application [[application-name](#)] *reference*

Synopsis	Enter the application list instance
Context	configure application-assurance group number partition number statistics aa-sub application reference
Tree	application

Description	Commands in this context configure the AA subscriber accounting statistics for the export of AA applications for an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[application-name] *reference*

Synopsis	Application name
Context	configure application-assurance group number partition number statistics aa-sub application reference
Tree	application
Reference	configure application-assurance group number partition number policy application string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	configure application-assurance group number partition number statistics aa-sub application reference export-using keyword
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [[charging-group-name](#)] *reference*

Synopsis	Enter the charging-group list instance
Context	configure application-assurance group number partition number statistics aa-sub charging-group reference
Tree	charging-group
Description	Commands in this context configure AA subscriber accounting statistics for the export of AA charging groups of an AA group/partition.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[charging-group-name] reference

Synopsis	Charging group name
Context	configure application-assurance group number partition number statistics aa-sub charging-group reference
Tree	charging-group
Description	This command specifies the AA charging group to be included in the exported accounting records.
Reference	configure application-assurance group number partition number policy charging-group string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using keyword

Synopsis	Method used to export statistics
Context	configure application-assurance group number partition number statistics aa-sub charging-group reference export-using keyword
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats boolean

Synopsis	Collect statistics
Context	configure application-assurance group number partition number statistics aa-sub collect-stats boolean
Tree	collect-stats
Default	false
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

exclude-tcp-retrans *boolean*

Synopsis Exclude TCP retransmission and error statistics

Context **configure** [application-assurance group number partition number statistics aa-sub](#)
[exclude-tcp-retrans boolean](#)

Tree [exclude-tcp-retrans](#)

Description When configured to **true**, TCP errors and retransmission packets are not counted for the purpose of content-based billing. **Note:** This command is only applicable to EPC. This setting has no impact on app/app-group aggregate AA stats.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-stats *boolean*

Synopsis Collect maximum throughput statistics

Context **configure** [application-assurance group number partition number statistics aa-sub](#)
[max-throughput-stats boolean](#)

Tree [max-throughput-stats](#)

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol [[protocol-name](#)] *string*

Synopsis Enter the **protocol** list instance

Context **configure** [application-assurance group number partition number statistics aa-sub](#)
[protocol string](#)

Tree [protocol](#)

Description Commands in this context configure AA subscriber accounting statistics for the export of aa-sub protocols of an AA group/partition.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[protocol-name] string

Synopsis	AA protocol name
Context	configure application-assurance group number partition number statistics aa-sub protocol string
Tree	protocol
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using keyword

Synopsis	Method used to export statistics
Context	configure application-assurance group number partition number statistics aa-sub protocol string export-using keyword
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy reference

Synopsis	RADIUS accounting policy name
Context	configure application-assurance group number partition number statistics aa-sub radius-accounting-policy reference
Tree	radius-accounting-policy
Reference	configure application-assurance radius-accounting-policy string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

usage-monitoring boolean

Synopsis	Collect usage monitoring statistics
----------	-------------------------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub usage-monitoring <i>boolean</i>
Tree	usage-monitoring
Description	When configured to true , this command allows the system to activate Gx usage monitoring at AA group/partition level, if enough usage monitoring resources exist for all existing subs. When configured to false , this command silently removes all monitoring instances (no PCRF notifications) for AA subscribers and all subsequent AA Gx usage monitoring messages are ignored.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-study [[study-type](#)] *keyword*

Synopsis	Enter the aa-sub-study list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub-study <i>keyword</i>
Tree	aa-sub-study
Description	Commands in this context configure accounting and statistics collection parameters per AA special study subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[study-type] *keyword*

Synopsis	Statistic type that the study is using
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub-study <i>keyword</i>
Tree	aa-sub-study
Options	protocol, application
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the aa-sub context
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub
Tree	aa-sub
Description	<p>Commands in this context add an existing subscriber identification to a group of special study subscribers.</p> <p>Identifying a group of special study subscribers allows statistics and accounting records for those subscribers to be collected for protocols and applications through Application Assurance. When adding a subscriber to the special study group, accounting records and statistics generation commence immediately. When removing a subscriber from the group, special study statistics and accounting records for that subscriber in the current interval are lost.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm [[esm-sub-name](#)] *string*

Synopsis	Add a list entry for esm
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub esm string
Tree	esm
Description	Commands in this context configure the ESM fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[esm-sub-name] *string*

Synopsis	ESM subscriber name
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub esm string
Tree	esm
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm-mac [**esm-mac-sub-name**] *string*

Synopsis	Add a list entry for esm-mac
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub esm-mac <i>string</i>
Tree	esm-mac
Description	Commands in this context configure the ESM MAC fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[esm-mac-sub-name] *string*

Synopsis	ESM MAC subscriber name
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub esm-mac <i>string</i>
Tree	esm-mac
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [**sap-id**] *string*

Synopsis	Add a list entry for sap
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub sap <i>string</i>
Tree	sap
Description	Commands in this context configure the Service Access Point (SAP) for the purpose of enabling special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis	AA subscriber SAP ID
Context	configure application-assurance group number partition number statistics aa-sub-study <i>keyword</i> aa-sub sap <i>string</i>

Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [[sdp-bind-id](#)] *string*

Synopsis	Add a list entry for spoke-sdp
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub-study <i>keyword</i> aa-sub spoke-sdp <i>string</i>
Tree	spoke-sdp
Description	Commands in this context specify the spoke SDP ID and VC ID for the purpose of including the subscriber into AA special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sdp-bind-id] *string*

Synopsis	Spoke SDP ID for an AA subscriber
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub-study <i>keyword</i> aa-sub spoke-sdp <i>string</i>
Tree	spoke-sdp
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit [[transit-sub-name](#)] *string*

Synopsis	Add a list entry for transit
Context	configure application-assurance group <i>number</i> partition <i>number</i> statistics aa-sub-study <i>keyword</i> aa-sub transit <i>string</i>
Tree	transit
Description	Commands in the context specify an existing transit subscriber to be included in AA sub special study statistics.

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[transit-sub-name] *string*

Synopsis Transit subscriber name
 Context **configure** [application-assurance group number partition number statistics aa-sub-study](#)
keyword aa-sub transit string
 Tree [transit](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis Accounting policy ID
 Context **configure** [application-assurance group number partition number statistics aa-sub-study](#)
keyword accounting-policy reference
 Tree [accounting-policy](#)
 Reference **configure** [log accounting-policy number](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis Collect statistics
 Context **configure** [application-assurance group number partition number statistics aa-sub-study](#)
keyword collect-stats boolean
 Tree [collect-stats](#)
 Default false
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate [[tcp-validate-name](#)] *string*

Synopsis	Enter the tcp-validate list instance
Context	configure application-assurance group number partition number tcp-validate string
Tree	tcp-validate
Description	Commands in this context configure a TCP validation policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tcp-validate-name] *string*

Synopsis	TCP validation policy name
Context	configure application-assurance group number partition number tcp-validate string
Tree	tcp-validate
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number partition number tcp-validate string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the log context
Context	configure application-assurance group number partition number tcp-validate string log
Tree	log
Description	Commands in this context enable event logging of traffic dropped by TCP validation.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all *boolean*

Synopsis Enable logging of all dropped TCP packets

Context **configure** [application-assurance group number partition number tcp-validate string log](#)
[all boolean](#)

Tree [all](#)

Description When configured to **true**, all dropped TCP packets are logged, including the following:

- packets received after an RST and discarded
- packets received before TCP session establishment (before SYN) and discarded

An event log must also be configured to enable logging of all dropped packets.

When configured to **false**, discards related to the described cases are not captured in any event log.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis Event log name

Context **configure** [application-assurance group number partition number tcp-validate string log](#)
[event-log reference](#)

Tree [event-log](#)

Reference **configure** [application-assurance group number partition number event-log string](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

strict *boolean*

Synopsis Enable strict checking of TCP traffic

Context **configure** [application-assurance group number partition number tcp-validate string strict](#)
[boolean](#)

Tree [strict](#)

Description When configured to **true**, the command specifies whether enforcement of TCP sequence and acknowledgment numbers are applied. If a packet does not meet the

expected sequence or acknowledgment number, it is dropped. This command should only be enabled if the expected bit error rate or packet loss is low.

For example, if acknowledgments are lost before being detected by AA, the server timeouts are triggered and retransmissions occur. If strict is enabled, these retransmissions resemble a reply attack and are dropped by AA.

When configured to **false**, the command removes the TCP sequence and acknowledgment number enforcement.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethering-detection

Synopsis	Enter the tethering-detection context
Context	configure application-assurance group number partition number tethering-detection
Tree	tethering-detection
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of tethering detection
Context	configure application-assurance group number partition number tethering-detection admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

single-device

Synopsis	Enter the single-device context
Context	configure application-assurance group number partition number tethering-detection single-device
Tree	single-device

Description	Commands in this context configure the single-device fields and expected TTL values for flow-level tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expected-ttl *[ttl] number*

Synopsis	Add a list entry for expected-ttl
Context	configure application-assurance group number partition number tethering-detection single-device expected-ttl number
Tree	expected-ttl
Description	Commands in this context configure the TTL values for single-device tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ttl] *number*

Synopsis	Expected TTL traffic value from host devices
Context	configure application-assurance group number partition number tethering-detection single-device expected-ttl number
Tree	expected-ttl
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

threshold-crossing-alert

Synopsis	Enter the threshold-crossing-alert context
Context	configure application-assurance group number partition number threshold-crossing-alert
Tree	threshold-crossing-alert
Description	Commands in this context configure the generation of threshold crossing alerts (TCAs).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

criteria [*criteria-id*] *keyword direction keyword*

Synopsis	Enter the criteria list instance
Context	configure application-assurance group number partition number threshold-crossing-alert criteria <i>keyword direction keyword</i>
Tree	criteria
Description	Commands in this context configure the TCA criteria for the partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[criteria-id] *keyword*

Synopsis	Statistics TCA criteria ID
Context	configure application-assurance group number partition number threshold-crossing-alert criteria <i>keyword direction keyword</i>
Tree	criteria
Options	error-drop, fragment-drop-out-of-order, fragment-drop-all, overload-drop, gtp-sanity-drop
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for the criteria statistics TCA
Context	configure application-assurance group number partition number threshold-crossing-alert criteria <i>keyword direction keyword</i>
Tree	criteria
Options	from-sub, to-sub
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark threshold
----------	--------------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert criteria <i>keyword</i> direction <i>keyword</i> high-watermark <i>number</i>
Tree	high-watermark
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark threshold
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert criteria <i>keyword</i> direction <i>keyword</i> low-watermark <i>number</i>
Tree	low-watermark
Range	0 to 4294967294
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter [[gtp-filter-name](#)] *reference* [criteria](#) *keyword* [direction](#) *keyword*

Synopsis	Enter the gtp-filter list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert gtp-filter <i>reference</i> criteria <i>keyword</i> direction <i>keyword</i>
Tree	gtp-filter
Description	Commands in this context configure TCA generation for a GTP filter.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[gtp-filter-name] *reference*

Synopsis	GTP filter name for TCA generation
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert gtp-filter <i>reference</i> criteria <i>keyword</i> direction <i>keyword</i>
Tree	gtp-filter
Reference	configure application-assurance group <i>number</i> partition <i>number</i> gtp gtp-filter <i>string</i>

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

criteria *keyword*

Synopsis	Criteria ID for GTP filter TCA
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter reference criteria keyword direction keyword
Tree	gtp-filter
Options	max-payload-length, message-type-default-action, header-sanity, message-type-gtpv2-default-action, imsi-apn-filter-default-action, validate-gtp-tunnels, validate-sequence-number, validate-src-ip-addr, missing-mandatory-ie, gtp-in-gtp, gtp-tunnel-database-full, gtp-tunnel-endpoint-limit
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for the GTP filter TCA
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter reference criteria keyword direction keyword
Tree	gtp-filter
Options	from-sub, to-sub
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark threshold
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter reference criteria keyword direction keyword high-watermark number
Tree	high-watermark
Range	1 to 4294967295
Default	4294967295

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark threshold
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter reference criteria keyword direction keyword low-watermark number
Tree	low-watermark
Range	0 to 4294967294
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter-entry [[gtp-filter-name](#)] *reference entry-id number direction keyword*

Synopsis	Enter the gtp-filter-entry list instance
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter-entry reference entry-id number direction keyword
Tree	gtp-filter-entry
Description	Commands in this context configure the AA GTP filter entry TCA fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[gtp-filter-name] *reference*

Synopsis	AA GTP filter name for TCA configuration
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter-entry reference entry-id number direction keyword
Tree	gtp-filter-entry
Reference	configure application-assurance group number partition number gtp gtp-filter string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry-id *number*

Synopsis	Entry ID
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert gtp-filter-entry <i>reference</i> entry-id <i>number</i> direction <i>keyword</i>
Tree	gtp-filter-entry
Description	This command configures the identifier for the statistics TCA GTP filter V1 message type entry, V2 message type entry, or imsi-apn filter entry.
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Traffic direction for GTP filter entry TCA

Tree	gtp-filter-entry
Options	from-sub, to-sub
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark threshold
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert gtp-filter-entry <i>reference</i> entry-id <i>number</i> direction <i>keyword</i> high-watermark <i>number</i>
Tree	high-watermark
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark threshold
Context	configure application-assurance group number partition number threshold-crossing-alert gtp-filter-entry reference entry-id number direction keyword low-watermark number
Tree	low-watermark
Range	0 to 4294967294
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer [[policer-name](#)] *string direction keyword*

Synopsis	Enter the policer list instance
Context	configure application-assurance group number partition number threshold-crossing-alert policer string direction keyword
Tree	policer
Description	Commands in this context configure a TCA for the counter capturing drops or admit events.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[policer-name] *string*

Synopsis	Policer name for TCA generation
Context	configure application-assurance group number partition number threshold-crossing-alert policer string direction keyword
Tree	policer
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for the policer TCA
----------	--

Context	configure application-assurance group number partition number threshold-crossing-alert policer string direction keyword

Synopsis	Enter the tcp-validate list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert tcp-validate <i>reference</i> direction <i>keyword</i>
Tree	tcp-validate
Description	Commands in this context configure TCP validation policy TCA fields for the partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tcp-validate-name] *reference*

Synopsis	AA TCP validate name for configuration
Context	configure application-assurance group <i>number</i> partition <i>number</i> threshold-crossing-alert tcp-validate <i>reference</i> direction <i>keyword</i>
Tree	tcp-validate
Reference	configure application-assurance group <i>number</i> partition <i>number</i> tcp-validate <i>string</i>
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for TCA configuration
----------	--

Context	configure application-assurance group number partition number threshold-crossing-alert tcp-validate reference direction keyword
Tree	tcp-validate
Options	from-sub, to-sub
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark threshold
Context	configure application-assurance group number partition number threshold-crossing-alert tcp-validate reference direction keyword high-watermark number
Tree	high-watermark
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark threshold
Context	configure application-assurance group number partition number threshold-crossing-alert tcp-validate reference direction keyword low-watermark number
Tree	low-watermark
Range	0 to 4294967294
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-ip-policy [[ip-policy-id](#)] *number*

Synopsis	Enter the transit-ip-policy list instance
Context	configure application-assurance group number partition number transit-ip-policy number
Tree	transit-ip-policy

Description	Commands in this context define a transit AA subscriber IP policy. Transit AA subscribers are managed by the system through the use of this policy assigned to services, which determines how transit subs are created and removed for that service.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-policy-id] number

Synopsis	IP transit policy ID
Context	configure application-assurance group number partition number transit-ip-policy number
Tree	transit-ip-policy
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-app-profile reference

Synopsis	Default AA application profile
Context	configure application-assurance group number partition number transit-ip-policy number default-app-profile reference
Tree	default-app-profile
Reference	configure application-assurance group number partition number policy app-profile string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number partition number transit-ip-policy number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detect-seen-ip *boolean*

Synopsis	Detect transit subscribers based on IP address
Context	configure application-assurance group number partition number transit-ip-policy number detect-seen-ip <i>boolean</i>
Tree	detect-seen-ip
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the dhcp context
Context	configure application-assurance group number partition number transit-ip-policy number dhcp
Tree	dhcp
Description	Commands in this context enable dynamic DHCP-based management of transit aa-subs for the transit IP policy. Dynamic DHCP-based management and other types of management of transit subs for a transit IP policy are mutually exclusive.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for learning DHCP dynamic transits
Context	configure application-assurance group number partition number transit-ip-policy number dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the diameter context
----------	-----------------------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-ip-policy <i>number</i> diameter
Tree	diameter
Description	Commands in this context configure dynamic Diameter-based management of transit AA subs for the transit IP policy. This is mutually exclusive to other types of management of transit subs for a given transit IP policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for Diameter dynamic transits
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-ip-policy <i>number</i> diameter admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application-policy *reference*

Synopsis	Diameter application policy name for IP transit policy
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-ip-policy <i>number</i> diameter application-policy <i>reference</i>
Tree	application-policy
Reference	configure subscriber-mgmt diameter-gx-policy <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address-prefix-length *number*

Synopsis	Length of the AA transit IP policy IPv6 address prefix
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-ip-policy <i>number</i> ipv6-address-prefix-length <i>number</i>
Tree	ipv6-address-prefix-length
Range	32 to 64

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the radius context
Context	configure application-assurance group number partition number transit-ip-policy number radius
Tree	radius
Description	Commands in this context enable dynamic RADIUS-based management of transit aa-subs for the transit IP policy. This is mutually exclusive to other types of management of transit subs for a given transit IP policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of learning RADIUS dynamic transit
Context	configure application-assurance group number partition number transit-ip-policy number radius admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	configure application-assurance group number partition number transit-ip-policy number radius authentication-policy <i>reference</i>
Tree	authentication-policy
Reference	configure subscriber-mgmt radius-authentication-policy <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

seen-ip-radius-acct-policy *reference*

Synopsis	RADIUS accounting policy to enable seen-IP notification
Context	configure application-assurance group number partition number transit-ip-policy number radius seen-ip-radius-acct-policy reference
Tree	seen-ip-radius-acct-policy
Reference	configure application-assurance radius-accounting-policy string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-aa-sub [[transit-aa-sub-name](#)] *string*

Synopsis	Enter the static-aa-sub list instance
Context	configure application-assurance group number partition number transit-ip-policy number static-aa-sub string
Tree	static-aa-sub
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[transit-aa-sub-name] *string*

Synopsis	Static transit subscriber name
Context	configure application-assurance group number partition number transit-ip-policy number static-aa-sub string
Tree	static-aa-sub
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name
Context	configure application-assurance group number partition number transit-ip-policy number static-aa-sub string app-profile reference
Tree	app-profile
Reference	configure application-assurance group number partition number policy app-profile string

Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip [**address**] (*ipv4-unicast-address* | *ipv6-prefix*)

Synopsis	Add a list entry for ip
Context	configure application-assurance group number partition number transit-ip-policy number static-aa-sub string ip (<i>ipv4-unicast-address</i> <i>ipv6-prefix</i>)
Tree	ip
Description	Commands in this context configure the IP address for a static transit aa-sub.
Max. Instances	32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[address] (*ipv4-unicast-address* | *ipv6-prefix*)

Synopsis	IP address for an AA static transit subscriber
Context	configure application-assurance group number partition number transit-ip-policy number static-aa-sub string ip (<i>ipv4-unicast-address</i> <i>ipv6-prefix</i>)
Tree	ip
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy
Context	configure application-assurance group number partition number transit-ip-policy number sub-ident-policy reference
Tree	sub-ident-policy
Description	This command defines the subscriber identification policy for the transit IP policy that will be associated with a SAP. The subscriber identification policy must be defined prior to associating the profile with a SAP in the configure subscriber-mgmt sub-ident-policy context. Subscribers are managed by the system through the use of subscriber identification strings. A subscriber identification string uniquely identifies a subscriber.

For static hosts, the subscriber identification string is explicitly defined with each static subscriber host.

For dynamic hosts, the subscriber identification string must be derived from the DHCP ACK message sent to the subscriber host. The default value for the string is the content of Option 82 CIRCUIT-ID and REMOTE-ID fields interpreted as an octet string. As an option, the DHCP ACK message may be processed by a subscriber identification policy which has the capability to parse the message into an alternative ASCII or octet string value.

When multiple hosts on the same port are associated with the same subscriber identification string, they are considered to be host members of the same subscriber. A subscriber identification policy can also be used for identifying dynamic transit subscriber names.

Reference	configure subscriber-mgmt sub-ident-policy string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-auto-create

Synopsis	Enter the transit-auto-create context
Context	configure application-assurance group number partition number transit-ip-policy number transit-auto-create
Tree	transit-auto-create
Description	Commands in this context enable the seen-IP auto creation of transit subscribers using the transit IP policy name and subscriber IP address as the aa-sub name. The default app-profile configured against the transit IP policy is applied to these subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the automatic dynamic transits
Context	configure application-assurance group number partition number transit-ip-policy number transit-auto-create admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inactivity-monitor *boolean*

Synopsis	Monitor inactivity on auto-created transit subscribers
Context	configure application-assurance group number partition number transit-ip-policy number transit-auto-create inactivity-monitor boolean
Tree	inactivity-monitor
Description	<p>When configured to true, this command enables the auto-removal of inactive transit subscribers. Periodically, AA removes any inactive auto-created subscribers. An inactive subscriber is defined as having no active flows in the last period.</p> <p>When configured to false, this command disables the auto-removal of inactive transit subscribers.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-prefix-policy [[prefix-policy-id](#)] *number*

Synopsis	Enter the transit-prefix-policy list instance
Context	configure application-assurance group number partition number transit-prefix-policy number
Tree	transit-prefix-policy
Description	Commands in this context define a transit AA subscriber prefix policy. Transit AA subscribers are managed by the system through the use of this policy assigned to services, which determines how transit subscribers are created and removed for that service.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[prefix-policy-id] *number*

Synopsis	Transit prefix policy ID
Context	configure application-assurance group number partition number transit-prefix-policy number
Tree	transit-prefix-policy
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance group number partition number transit-prefix-policy number description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis Enter the **entry** list instance

Context **configure** [application-assurance group number partition number transit-prefix-policy number entry number](#)

Tree [entry](#)

Description Commands in this context configure the index to a specific entry of a transit prefix policy.

Max. Instances 4095

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis ID for a transit prefix policy entry

Context **configure** [application-assurance group number partition number transit-prefix-policy number entry number](#)

Tree [entry](#)

Range 1 to 4294967295

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub *reference*

Synopsis	Name of the transit prefix AA subscriber
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> entry <i>number</i> aa-sub <i>reference</i>
Tree	aa-sub
Reference	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> static-aa-sub <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the match context
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> entry <i>number</i> match
Tree	match
Description	Commands in this context configure transit prefix policy entry match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-ip (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	AA subscriber IP address prefix
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> entry <i>number</i> match aa-sub-ip (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aa-sub-ip
Description	This command configures a transit prefix subscriber IP address prefix. It is used when the site is on the local side, the same side of the system as the parent SAP. The local aa-sub-ip addresses represent the source IP in the from-SAP direction and destination IP in the to-SAP direction.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-ip (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Network IP address prefix
----------	---------------------------

Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> entry <i>number</i> match network-ip (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	network-ip
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-aa-sub [[transit-aa-sub-name](#)] *string*

Synopsis	Enter the static-aa-sub list instance
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> static-aa-sub <i>string</i>
Tree	static-aa-sub
Max. Instances	4095
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[transit-aa-sub-name] *string*

Synopsis	Static transit subscriber name
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> static-aa-sub <i>string</i>
Tree	static-aa-sub
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name
Context	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> static-aa-sub <i>string</i> app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Notes	This element is mandatory.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

is-remote *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Set transit subscriber as remote
Context	configure application-assurance group number partition number transit-prefix-policy number static-aa-sub string is-remote boolean
Tree	is-remote
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wap1x

Synopsis	Enter the wap1x context
Context	configure application-assurance group number partition number wap1x
Tree	wap1x
Description	Commands in this context configure the Wireless Application Protocol (WAP) 1.X.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WAP1x detection
Context	configure application-assurance group number partition number wap1x admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer

Synopsis	Enter the policer context
Context	configure application-assurance group number policer
Tree	policer
Description	<p>Commands in this context create application assurance policer profiles of a specified type. Policers can be bandwidth or flow-limiting and can have a granularity of system scope (limits traffic entering AA ISA for all or a subset of AA subscribers) or a subscriber scope (limits apply to each AA subscriber traffic).</p> <p>The policer type and granularity can only be configured during creation. They cannot be modified. The policer profile must be removed from all AQPs to be removed. Changes to policer profile parameters take effect immediately for policers instantiated as a result of AQP actions using this profile.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anl-bandwidth-policer [\[policer-name\]](#) *string*

Synopsis	Enter the anl-bandwidth-policer list instance
Context	configure application-assurance group number policer anl-bandwidth-policer <i>string</i>
Tree	anl-bandwidth-policer
Description	Commands in this context configure the AA ANL policer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[policer-name] *string*

Synopsis	Policer name
Context	configure application-assurance group number policer anl-bandwidth-policer <i>string</i>
Tree	anl-bandwidth-policer
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	configure application-assurance group number policer anl-bandwidth-policer string action keyword
Tree	action
Description	<p>This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic.</p> <p>Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic.</p> <p>When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.</p>
Options	permit-deny, priority-mark
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure application-assurance group number policer anl-bandwidth-policer string adaptation-rule
Tree	adaptation-rule
Description	<p>Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.</p>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *keyword*

Synopsis	Peak information rate value for the adaptation rule
Context	configure application-assurance group number policer anl-bandwidth-policer string adaptation-rule pir keyword
Tree	pir

Description	This command configures the adaptation rule to be used while computing the operational PIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.
Options	max, min, closest
Default	closest
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number policer anl-bandwidth-policer <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs *number*

Synopsis	ANL bandwidth policer maximum burst size
Context	configure application-assurance group number policer anl-bandwidth-policer <i>string</i> mbs <i>number</i>
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-percentage *number*

Synopsis	Rate used by Access-Network-Location policers
----------	---

Context	configure application-assurance group <i>number</i> policer anl-bandwidth-policer <i>string</i> rate-percentage <i>number</i>
Tree	rate-percentage
Description	This command configures the stage 1 congestion percentage used by Access-Network-Location (ANL) policers. Because ANL total bandwidth is dynamically measured and estimated by AA, this command allows the operator to configure the ratio of that measured bandwidth to be used by the ANL policer as the policer rate. No limiting is performed if not specified.
Range	0 to 200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-percentage-stage-2 *number*

Synopsis	Rate used by Access-Network-Location policers
Context	configure application-assurance group <i>number</i> policer anl-bandwidth-policer <i>string</i> rate-percentage-stage-2 <i>number</i>
Tree	rate-percentage-stage-2
Description	This command configures the stage 2 congestion percentage rate used by Access-Network-Location (ANL) policers. Because ANL stage2 total bandwidth is dynamically measured and estimated by AA, this command allows the operator to configure the ratio of that measured bandwidth to be used by the ANL stage2 policer as the policer rate. When unconfigured, limiting is not performed.
Range	0 to 200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-bucket-bandwidth-policer [[policer-name](#)] *string*

Synopsis	Enter the dual-bucket-bandwidth-policer list instance
Context	configure application-assurance group <i>number</i> policer dual-bucket-bandwidth-policer <i>string</i>
Tree	dual-bucket-bandwidth-policer
Description	Commands in this context configure the dual-bucket bandwidth policer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[policer-name] string

Synopsis	Policer name
Context	configure application-assurance group number policer dual-bucket-bandwidth-policer string
Tree	dual-bucket-bandwidth-policer
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure application-assurance group number policer dual-bucket-bandwidth-policer string adaptation-rule
Tree	adaptation-rule
Description	Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cir keyword

Synopsis	Committed information rate value for adaptation rule
Context	configure application-assurance group number policer dual-bucket-bandwidth-policer string adaptation-rule cir keyword
Tree	cir
Description	This command configures the CIR for the dual-bucket-bandwidth-policer adaptation rule policer. Nokia recommends configuring CIR larger than twice the maximum MTU for the traffic handled by the policer to allow for some burstiness of the traffic. The CIR is configurable for dual-bucket bandwidth policers only.
Options	max, min, closest
Default	closest
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir keyword

Synopsis Peak information rate value for the adaptation rule

Context **configure** application-assurance group number policer dual-bucket-bandwidth-policer string adaptation-rule pir keyword

Tree pir

Description This command configures the adaptation rule to be used while computing the operational PIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.

Options max, min, closest

Default closest

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cbs number

Synopsis Committed burst size when in congested state

Context **configure** application-assurance group number policer dual-bucket-bandwidth-policer string cbs number

Tree cbs

Description This command configures the committed burst size (CBS) for a policer. Nokia recommends that CBS is configured larger than twice the maximum MTU for the traffic handled by the policer to allow for some burstiness of the traffic. CBS is configurable for dual-bucket bandwidth policers only.

Range 0 to 131071

Units kilobytes

Default 0

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cir (number | keyword)

Synopsis Committed information rate value for the policer

Context **configure** application-assurance group number policer dual-bucket-bandwidth-policer string cir (number | keyword)

Tree	cir
Description	This command configures the CIR for the dual-bucket-bandwidth-policer policer. Nokia recommends that the CIR is configured larger than twice the maximum MTU for the traffic handled by the policer to allow for some burstiness of the traffic. The CIR is configurable for dual-bucket bandwidth policers only.
Range	0 to 100000000
Units	kilobps
Options	max

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	configure application-assurance group number policer flow-count-limit-policer <i>string</i> action <i>keyword</i>
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	configure application-assurance group number policer flow-setup-rate-policer string
Tree	flow-setup-rate-policer
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	configure application-assurance group number policer flow-setup-rate-policer string action keyword
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic.

When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.

Options	permit-deny, priority-mark
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure application-assurance group number policer flow-setup-rate-policer string adaptation-rule
Tree	adaptation-rule
Description	Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir (*number* | *keyword*)

Synopsis	Peak information rate value for the congestion override
Context	configure application-assurance group <i>number</i> policer single-bucket-bandwidth-policer string congestion-override-stage-2 pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 100000000
Units	kilobps
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group <i>number</i> policer single-bucket-bandwidth-policer string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

granularity *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Policer granularity
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string granularity keyword
Tree	granularity
Options	system, subscriber
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs number

Synopsis	Bandwidth policer maximum burst size
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string mbs number
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir (number | keyword)

Synopsis	Peak information rate value for the bandwidth policer
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string pir (number keyword)
Tree	pir
Range	1 to 100000000
Units	kilobps
Options	max
Default	max
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time-of-day-override [*tod-override-id*] *number*

Synopsis Enter the **time-of-day-override** list instance

Context **configure** *application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number*

Tree [time-of-day-override](#)

Description Commands in this context configure the time of day override policy for a given policer. Rate/mbs/cbs/flow-rate/flow-count configured in each override-id will override the default policer values at the specified time of day configured in the override.

Max. Instances 8

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tod-override-id] *number*

Synopsis ID for time of day override

Context **configure** *application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number*

Tree [time-of-day-override](#)

Range 1 to 255

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of this time of day policer

Context **configure** *application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs number

Synopsis	Bandwidth policer MBS for time of day override
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number mbs number
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir (number | keyword)

Synopsis	Peak information rate value for time of day override
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number pir (number keyword)
Tree	pir
Range	1 to 100000000
Units	kilobps
Options	max
Default	max
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time-range

Synopsis Enter the **time-range** context

Context **configure** [application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range](#)

Tree [time-range](#)

Description Commands in this context configure the days of the week policer override is enabled as well as the time policer override starts and ends. When using a daily override the operator can select which days during the week from Sunday to Saturday it is applicable along with the start/end hour/min time range repeated over these days. When using a weekly override the operator can select between which days in the week the policy start up to the hours/min for both start day and end day.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

daily

Synopsis Enable the **daily** context

Context **configure** [application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range daily](#)

Tree [daily](#)

Description Commands in this context configure the daily start and end times for policer override.

Notes The following elements are part of a choice: **daily** or **weekly**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all-days

Synopsis Enable policer override on every day

Context **configure** [application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range daily all-days](#)

Tree [all-days](#)

Notes The following elements are part of a choice: **all-days** or **on**.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end string

Synopsis	Daily end time
Context	configure application-assurance group <i>number</i> policer single-bucket-bandwidth-policer string time-of-day-override <i>number</i> time-range daily end string
Tree	end
Description	This command configures the daily end time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.
String Length	3 to 5
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

on keyword

Synopsis	Policer override on selected days
Context	configure application-assurance group <i>number</i> policer single-bucket-bandwidth-policer string time-of-day-override <i>number</i> time-range daily on keyword
Tree	on
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Max. Instances	6
Notes	The following elements are part of a choice: all-days or on .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start string

Synopsis	Daily start time
Context	configure application-assurance group <i>number</i> policer single-bucket-bandwidth-policer string time-of-day-override <i>number</i> time-range daily start string
Tree	start
Description	This command configures the daily start time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.

String Length	3 to 5
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

weekly

Synopsis	Enable the weekly context
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly
Tree	weekly
Description	Commands in this context configure the weekly start and end times for policer override.
Notes	The following elements are part of a choice: daily or weekly .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end

Synopsis	Enable the end context
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly end
Tree	end
Description	Commands in this context configure the weekly end time for policer override. When using a weekly override, the operator can select between which days in the week the policy ends up to the hours or minutes for both start of the day and end of the day.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

day keyword

Synopsis	Weekly end day
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly end day keyword
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes	This element is mandatory.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time string

Synopsis	Weekly end time
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly end time string
Tree	time
Description	This command configures the weekly end time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.
String Length	3 to 5
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start

Synopsis	Enable the start context
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly start
Tree	start
Description	Commands in this context configure the weekly start time for policer override.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

day keyword

Synopsis	Weekly start day
Context	configure application-assurance group number policer single-bucket-bandwidth-policer string time-of-day-override number time-range weekly start day keyword
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes	This element is mandatory.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time string

Synopsis Weekly start time

Context **configure** [application-assurance group number policer single-bucket-bandwidth-policer string](#) [time-of-day-override number time-range weekly start time string](#)

Tree [time](#)

Description This command configures the weekly start time of the policer override.

The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.

String Length 3 to 5

Notes This element is mandatory.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer [\[tcp-optimizer-name\]](#) *string*

Synopsis Enter the **tcp-optimizer** list instance

Context **configure** [application-assurance group number tcp-optimizer string](#)

Tree [tcp-optimizer](#)

Description Commands in this context configure the TCP optimizer policy. When a TCP optimizer policy is removed or deleted, the existing flows using this policy are abandoned, and optimization is stopped.

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[tcp-optimizer-name] *string*

Synopsis TCP optimizer name

Context **configure** [application-assurance group number tcp-optimizer string](#)

Tree [tcp-optimizer](#)

Description This command configures the name of the TCP optimizer policy.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dack-timeout *number*

Synopsis Delayed acknowledgment timeout for client and server

Context **configure** [application-assurance group number tcp-optimizer string dack-timeout number](#)

Tree [dack-timeout](#)

Description This command configures a delay ACK (DACK) timeout for the TCP optimizer. By entering this command a default of 200 ms timeout is enabled for delayed acknowledgment. This value is not configurable.

Range 200

Units milliseconds

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** [application-assurance group number tcp-optimizer string description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-cwnd *number*

Synopsis Initial congestion window of the TCP optimizer

Context **configure** [application-assurance group number tcp-optimizer string initial-cwnd number](#)

Tree [initial-cwnd](#)

Description This command configures the initial TCP congestion window (cwnd) used during the TCP Slow Start (SS) period.

Range 1 to 256

Default 8

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-ss-threshold (*number* | *keyword*)

Synopsis	Initial TCP Slow Start threshold for client and server
Context	configure application-assurance group <i>number</i> tcp-optimizer <i>string</i> initial-ss-threshold (<i>number</i> <i>keyword</i>)
Tree	initial-ss-threshold
Description	This command configures the initial Slow Start (SS) threshold for a specific TCP optimizer policy. Nokia recommends setting the threshold close to the access network Bandwidth Delay Product (BDP).
Range	0 to 1000000
Units	kilobytes
Options	auto
Default	1000000
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-rtt-threshold *number*

Synopsis	Network round trip time threshold
Context	configure application-assurance group <i>number</i> tcp-optimizer <i>string</i> network-rtt-threshold <i>number</i>
Tree	network-rtt-threshold
Description	This command configures the threshold of the Round Trip Time (RTT) delay of the network side (between AA and the content provider) above which TCP Optimization (TCPO) is performed. This enables the operator to disable optimization for content that is served from a location close to the TCP optimizer.
Range	1 to 100
Units	milliseconds
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-stack *keyword*

Synopsis	TCP stack congestion control algorithm
Context	configure application-assurance group <i>number</i> tcp-optimizer <i>string</i> tcp-stack <i>keyword</i>
Tree	tcp-stack
Description	This command configures the TCP stack used toward the subscriber.

Note: The TCP stack used toward the core network is new-reno, and it is not configurable. TCP BBR, TCP Illinois, and TCP Westwood implement a sender-side modification of the TCP congestion window algorithm that improves the performance of TCP Reno in wireless networks with lossy links.

Options	westwood, illinois, new-reno, bbr
Default	westwood
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-filter [[url-filter-name](#)] *string*

Synopsis	Enter the url-filter list instance
Context	configure application-assurance group number url-filter string
Tree	url-filter
Description	Commands in this context configure a URL filter action for flows of a specific type matching this entry. If no URL filters are specified, then no URL filters are evaluated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[url-filter-name] *string*

Synopsis	URL filter name
Context	configure application-assurance group number url-filter string
Tree	url-filter
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA URL filter
Context	configure application-assurance group number url-filter string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apply-function-specific-behaviour *boolean*

Synopsis	Use function-specific behavior for action or redirect
Context	configure application-assurance group number url-filter string apply-function-specific-behaviour <i>boolean</i>
Tree	apply-function-specific-behaviour
Description	<p>When configured to true, the function-specific configurations for URL list, ICAP, and web service (url-list, icap, and web-service) are used for default action (default-action) and HTTP redirect (http-redirect).</p> <p>When configured to false, the configuration at the URL filter level (url-filter) is used for default action and HTTP redirect.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the default-action context
Context	configure application-assurance group number url-filter string default-action
Tree	default-action
Description	<p>Commands in this context configure the default action to take effect when the URL filter cannot be used. This may occur in the following cases:</p> <ul style="list-style-type: none"> • for the local URL list when the URL list is shut down or the file is not loaded due to an error. • in the case of ICAP or web filtering when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default URL filter action
Context	configure application-assurance group number url-filter string default-action allow
Tree	allow

Description	When configured, the router allows all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default URL filter action
Context	configure application-assurance group number url-filter string default-action block-all
Tree	block-all
Description	When configured, the router blocks all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL name for block and redirect request action
Context	configure application-assurance group number url-filter string default-action block-http-redirect reference
Tree	block-http-redirect
Description	This command specifies the URL that the user is directed to when the router blocks traffic. The information page can be different from the page the user is redirected to when the site that the user tried to access is found in the URL filter. This page is configured using the configure application-assurance group url-filter http-redirect command.
Reference	configure application-assurance group number http-redirect string
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
----------	------------------

Context	configure application-assurance group <i>number</i> url-filter <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for a blocked HTTP request
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> http-redirect <i>reference</i>
Tree	http-redirect
Reference	configure application-assurance group <i>number</i> http-redirect <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-request-filtering *keyword*

Synopsis	HTTP filtering for all HTTP requests
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> http-request-filtering <i>keyword</i>
Tree	http-request-filtering
Options	all, first
Default	all
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icap

Synopsis	Enter the icap context
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> icap
Tree	icap
Description	Commands in this context configure the URL filter ICAP policy fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-x-header *string*

Synopsis	Custom x-header field name to include in ICAP requests
Context	configure application-assurance group number url-filter string icap custom-x-header string
Tree	custom-x-header
Description	This command configures the URL filter ICAP policy to include a new x-header field; the content of the x-header is populated based on the AQP URL filter action which can optionally specify the ASO characteristic value to include in the x-header.
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the default-action context
Context	configure application-assurance group number url-filter string icap default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	configure application-assurance group number url-filter string icap default-action allow
Tree	allow
Description	When configured, this command allows all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action
Context	configure application-assurance group number url-filter string icap default-action block-all
Tree	block-all
Description	When configured, this command blocks all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when URL filter cannot be used
Context	configure application-assurance group number url-filter string icap default-action block-http-redirect reference
Tree	block-http-redirect
Description	This command blocks traffic and redirects the user to an information page, which can be different than the page the user is redirected to when the site they attempted to access was found in the URL filter; this page is configured using the configure application-assurance group url-filter http-redirect command.
Reference	configure application-assurance group number http-redirect string
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect object used when ICAP blocks HTTP request
Context	configure application-assurance group number url-filter string icap http-redirect reference
Tree	http-redirect
Reference	configure application-assurance group number http-redirect string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) port number

Synopsis	Enter the server list instance
Context	configure application-assurance group number url-filter string icap server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	server
Description	Commands in this context configure the IP address and server port of the ICAP server. In the current release, the system supports IPv4 addresses only for the ICAP server.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	ICAP server IP address
Context	configure application-assurance group number url-filter string icap server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	server
Description	This command configures the ICAP server address. In the current release, the system supports IPv4 addresses only for the ICAP server.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port number

Synopsis	ICAP server port
Context	configure application-assurance group number url-filter string icap server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	server
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this URL filter ICAP server
Context	configure application-assurance group number url-filter string icap server (ipv4-address-no-zone ipv6-address-no-zone) port number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number url-filter string icap server (ipv4-address-no-zone ipv6-address-no-zone) port number description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VLAN ID of the ICAP server service port
Context	configure application-assurance group number url-filter string icap vlan-id number
Tree	vlan-id
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-filtering

Synopsis	Enter the local-filtering context
----------	--

Context	configure application-assurance group <i>number</i> url-filter <i>string</i> local-filtering
Tree	local-filtering
Description	Commands in this context configure a URL filter policy for local filtering to filter traffic based on a list of URLs located on a file stored in the router compact flash.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow-list *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local filtering URL list for allowed URLs
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> local-filtering allow-list <i>reference</i>
Tree	allow-list
Reference	configure application-assurance group <i>number</i> url-list <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deny-list [[url-list-name](#)] *reference*

Synopsis	Enter the deny-list list instance
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> local-filtering deny-list <i>reference</i>
Tree	deny-list
Description	Commands in this context configure a list of denied URLs to be added to the local URL filter policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[url-list-name] *reference*

Synopsis	URL list name
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> local-filtering deny-list <i>reference</i>

Tree	deny-list
Description	This command adds a deny-list URL list to the local URL filter policy.
Reference	configure application-assurance group number url-list string
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the default-action context
Context	configure application-assurance group number url-filter string local-filtering deny-list reference default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen in the case of a local URL list when the URL list is disabled or the file is not loaded due to an error.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	configure application-assurance group number url-filter string local-filtering deny-list reference default-action allow
Tree	allow
Description	This command allows all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action
Context	configure application-assurance group number url-filter string local-filtering deny-list reference default-action block-all
Tree	block-all

Description	This command blocks all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when URL filter cannot be used
Context	configure application-assurance group number url-filter string local-filtering deny-list reference default-action block-http-redirect reference
Tree	block-http-redirect
Description	This command blocks traffic and redirects the user to an information page, which can be different than the page the user is redirected to when the site they attempted to access was found in the URL filter; this page is configured using the configure application-assurance group url-filter http-redirect command.
Reference	configure application-assurance group number http-redirect string
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect object applied to blocked HTTP requests
Context	configure application-assurance group number url-filter string local-filtering deny-list reference http-redirect reference
Tree	http-redirect
Reference	configure application-assurance group number http-redirect string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

web-service

Synopsis	Enter the web-service context
Context	configure application-assurance group number url-filter string web-service
Tree	web-service

Description	Commands in this context configure the URL filter policy using web-service filtering. The operator must configure the web service, hostname, DNS server to use, the AA interface VLAN ID, and provision the category profiles.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

category-set *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service category ID
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service category-set <i>number</i>
Tree	category-set
Range	1 to 65535
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classification-overrides

Synopsis	Enter the classification-overrides context
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service classification-overrides
Tree	classification-overrides
Description	Commands in this context create a classification override and allow the operator to manually set the category of a hostname.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [[entry-id](#)] *number*

Synopsis	Enter the entry list instance
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service classification-overrides entry <i>number</i>
Tree	entry

Description	Commands in this context configure a classification override, manually setting the category of a hostname.
Max. Instances	200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[entry-id] *number*

Synopsis	Classification override entry ID
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service classification-overrides entry <i>number</i>
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

category-name *string*

Synopsis	Web service category name
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service classification-overrides entry <i>number</i> category-name <i>string</i>
Tree	category-name
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression *string*

Synopsis	Hostname of the configured override category
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service classification-overrides entry <i>number</i> expression <i>string</i>
Tree	expression
String Length	1 to 255
Notes	This element is mandatory.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classifier *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service classifier
Context	configure application-assurance group number url-filter string web-service classifier <i>keyword</i>
Tree	classifier
Options	web-service-1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the default-action context
Context	configure application-assurance group number url-filter string web-service default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	configure application-assurance group number url-filter string web-service default-action allow
Tree	allow
Description	This command allows all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action
Context	configure application-assurance group number url-filter string web-service default-action block-all
Tree	block-all
Description	This command blocks all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when traffic is blocked
Context	configure application-assurance group number url-filter string web-service default-action block-http-redirect reference
Tree	block-http-redirect
Description	This command specifies the HTTP URL to be redirected to when traffic is blocked. This URL can be different than the URL the user is redirected to when the site they attempted to access was found in the URL filter (which is configured in the configure application-assurance group url-filter http-redirect command).
Reference	configure application-assurance group number http-redirect string
Notes	The following elements are part of a choice: allow , block-all , or block-http-redirect .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-profile *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service default profile
----------	-----------------------------

Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service default-profile <i>reference</i>
Tree	default-profile
Reference	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-server (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service DNS server
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service dns-server (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	dns-server
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service fully qualified domain name
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service fqdn <i>string</i>
Tree	fqdn
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	Web service HTTP redirect
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service http-redirect <i>reference</i>

Tree	http-redirect
Reference	configure application-assurance group number http-redirect string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile [[profile-name](#)] *string*

Synopsis	Enter the profile list instance
Context	configure application-assurance group number url-filter string web-service profile string
Tree	profile
Description	Commands in this context configure the category profiles of the web service.
Max. Instances	8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[profile-name] *string*

Synopsis	Web service profile name
Context	configure application-assurance group number url-filter string web-service profile string
Tree	profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block

Synopsis	Enter the block context
Context	configure application-assurance group number url-filter string web-service profile string block
Tree	block
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

category [*category-name*] *string*

Synopsis	Add a list entry for category
Context	configure application-assurance group number url-filter string web-service profile string block category string
Tree	category
Description	Commands in this context configure the category that is blocked in the category profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[category-name] *string*

Synopsis	Web service profile category name to be blocked
Context	configure application-assurance group number url-filter string web-service profile string block category string
Tree	category
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number url-filter string web-service profile string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web-service VLAN ID
Context	configure application-assurance group <i>number</i> url-filter <i>string</i> web-service vlan-id <i>number</i>
Tree	vlan-id
Description	This command configures the VLAN ID on which the AA ISA emits the traffic mapping to a preconfigured AA interface.
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-list [[url-list-name](#)] *string*

Synopsis	Enter the url-list list instance
Context	configure application-assurance group <i>number</i> url-list <i>string</i>
Tree	url-list
Description	Commands in this context configure a URL list object. The URL list points to a file containing a list of URLs located on the system Compact Flash and is then referenced in a URL filter object to filter and redirect subscribers when a URL from this file is accessed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[url-list-name] *string*

Synopsis	URL list name
Context	configure application-assurance group <i>number</i> url-list <i>string</i>
Tree	url-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the URL list
Context	configure application-assurance group <i>number</i> url-list <i>string</i> admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure application-assurance group number url-list string description string
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

file *string*

Synopsis	File name of the URL list on compact flash
Context	configure application-assurance group number url-list string file string
Tree	file
String Length	1 to 180
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

host-expressions *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow URL list to contain hostnames with wildcards
Context	configure application-assurance group number url-list string host-expressions boolean
Tree	host-expressions
Description	When configured to true , this command adds hostnames with wildcards to the URL list. When configured to false , the URL list containing hostnames with wildcards is removed from the configuration.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key string

Synopsis	URL list decryption key
Context	configure application-assurance group number url-list string key string
Tree	key
Description	This command configures the secret key for decrypting the URL list.
String Length	1 to 115
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

size keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size limit of the URL list
Context	configure application-assurance group number url-list string size keyword
Tree	size
Options	standard, extended
Default	standard
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich

Synopsis	Enter the http-enrich context
Context	configure application-assurance http-enrich
Tree	http-enrich
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [[field-name](#)] *string*

Synopsis	Enter the field list instance
Context	configure application-assurance http-enrich field <i>string</i>
Tree	field
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[field-name] *string*

Synopsis	HTTP enrich field name (void, do not use)
Context	configure application-assurance http-enrich field <i>string</i>
Tree	field
Description	This command should not be used by the operators. Configuring it has no effect. Operators should use the commands in the application-assurance group context.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance http-enrich field <i>string</i> comment <i>string</i>
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-error-redirect

Synopsis	Enter the http-error-redirect context
Context	configure application-assurance http-error-redirect
Tree	http-error-redirect
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

error-code [[error-code-number](#)] *number*

Synopsis	Enter the error-code list instance
Context	configure application-assurance http-error-redirect error-code <i>number</i>
Tree	error-code
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[error-code-number](#)] *number*

Synopsis	Error code for HTTP error redirection
Context	configure application-assurance http-error-redirect error-code <i>number</i>
Tree	error-code
Range	400 to 999
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance http-error-redirect error-code <i>number</i> comment <i>string</i>
Tree	comment

String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template [[template-id](#)] *number*

Synopsis	Enter the template list instance
Context	configure application-assurance http-error-redirect template <i>number</i>
Tree	template
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[template-id] *number*

Synopsis	HTTP error redirect template ID
Context	configure application-assurance http-error-redirect template <i>number</i>
Tree	template
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance http-error-redirect template <i>number</i> comment <i>string</i>
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification

Synopsis	Enter the http-notification context
Context	configure application-assurance http-notification
Tree	http-notification
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template [[template-id](#)] *number*

Synopsis	Enter the template list instance
Context	configure application-assurance http-notification template <i>number</i>
Tree	template
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[template-id](#)] *number*

Synopsis	HTTP notification template ID
Context	configure application-assurance http-notification template <i>number</i>
Tree	template
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance http-notification template <i>number</i> comment <i>string</i>
Tree	comment

String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enter the http-redirect context
Context	configure application-assurance http-redirect
Tree	http-redirect
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template [[template-id](#)] *number*

Synopsis	Enter the template list instance
Context	configure application-assurance http-redirect template <i>number</i>
Tree	template
Description	Commands in this context should not be used by the operators. Configuring them has no effect. Operators should use the commands in the application-assurance group context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[template-id\]](#) *number*

Synopsis	HTTP redirect template ID
Context	configure application-assurance http-redirect template <i>number</i>
Tree	template
Description	This command specifies the HTTP policy redirect template ID. The available options are: 1 - JavaScript based redirect embedded in HTTP 200 OK response with a predefined number of arguments automatically appended to the redirect URL 2 - HTTP 302 redirect with a predefined number of arguments automatically appended to the redirect URL

	3 - HTTP 302 redirect with no parameters appended to the URL (empty)
	4 - Empty redirect format using JavaScript
	5 - Redirect supporting macro substitution using HTTP 302
	6 - Redirect supporting macro substitution using JavaScript
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	User information comment
Context	configure application-assurance http-redirect template <i>number</i> comment <i>string</i>
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol [[protocol-name](#)] *string*

Synopsis	Enter the protocol list instance
Context	configure application-assurance protocol <i>string</i>
Tree	protocol
Description	Commands in this context configure the administrative state of system-wide protocols. Some protocols are always enabled and cannot be disabled. These are "base protocols" that were present in R1 of the release. Some protocols are disabled by default and can be enabled. There are protocols that were introduced post R1, which are all enabled by default but may be disabled if not desired.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[protocol-name] *string*

Synopsis	AA protocol name
Context	configure application-assurance protocol <i>string</i>
Tree	protocol

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the protocol
Context	configure application-assurance protocol <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [[rad-acct-plcy-name](#)] *string*

Synopsis	Enter the radius-accounting-policy list instance
Context	configure application-assurance radius-accounting-policy <i>string</i>
Tree	radius-accounting-policy
Description	Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the configure application-assurance radius-accounting-policy context.
Max. Instances	8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[rad-acct-plcy-name] *string*

Synopsis	AA RADIUS accounting policy name
Context	configure application-assurance radius-accounting-policy <i>string</i>
Tree	radius-accounting-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [application-assurance](#) [radius-accounting-policy](#) *string* [description](#) *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interim-update-interval *number*

Synopsis AA RADIUS accounting policy interim update interval
 Context **configure** [application-assurance](#) [radius-accounting-policy](#) *string* [interim-update-interval](#) *number*
 Tree [interim-update-interval](#)
 Range 5 to 1080
 Units minutes
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-server

Synopsis Enter the **radius-accounting-server** context
 Context **configure** [application-assurance](#) [radius-accounting-policy](#) *string* [radius-accounting-server](#)
 Tree [radius-accounting-server](#)
 Description Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the **configure application-assurance radius-accounting-policy** context.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Access algorithm for the list of RADIUS servers
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server access-algorithm <i>keyword</i>
Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server retry <i>number</i>
Tree	retry
Range	1 to 10
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router or VPRN service name
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server router-instance <i>string</i>
Tree	router-instance
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [[server-index](#)] *number*

Synopsis	Enter the server list instance
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server server <i>number</i>
Tree	server

Description	Commands in this context configure the RADIUS server and the RADIUS server IP address, index, and key values. RADIUS servers are accessed in order from lowest to highest index for authentication requests until a response from a server is received. A higher indexed server is only queried if no response is received from a lower indexed server (which implies that the server is not available). If a response from a server is received, no other RADIUS servers are queried.
Max. Instances	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[server-index] number

Synopsis	RADIUS accounting server index
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server server <i>number</i>
Tree	server
Description	This command configures the index for the RADIUS server. The index determines the sequence in which the servers are queried for authentication requests. Servers are queried in order from lowest to highest index.
Range	1 to 5
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address string

Synopsis	RADIUS server IP address
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server server <i>number</i> address <i>string</i>
Tree	address
Description	This command configures the IP address of the RADIUS server. Two RADIUS servers cannot have the same IP address. An error message is generated if the server address is a duplicate.
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port number

Synopsis	RADIUS server UDP port used for authentication
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server server <i>number</i> port <i>number</i>
Tree	port
Range	1 to 65535
Default	1813
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secret string

Synopsis	RADIUS server secret key
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server server <i>number</i> secret <i>string</i>
Tree	secret
Description	This command configures the secret key to access the RADIUS server. This secret key must match the password on the RADIUS server.
String Length	1 to 54
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-address string

Synopsis	Source IP address of RADIUS packets
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server source-address <i>string</i>
Tree	source-address
Description	This command configures the source IP address of the RADIUS packet. The system IP address must be configured for the RADIUS client to work. The system IP address must only be configured if the source address is not specified. When this command reverts to its default, the source address is determined at the moment the request is sent. This address is also used in the nas-ip-address command in the configure aaa radius isa-policy accounting include-attributes and configure aaa radius isa-policy

authentication include-attributes contexts as it is set to the system IP address if no source address was given.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	RADIUS accounting server response timeout
Context	configure application-assurance radius-accounting-policy <i>string</i> radius-accounting-server <i>timeout</i> <i>number</i>
Tree	timeout
Range	1 to 90
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

significant-change *number*

Synopsis	Change delta for RADIUS accounting record updates
Context	configure application-assurance radius-accounting-policy <i>string</i> significant-change <i>number</i>
Tree	significant-change
Description	This command configures the number of changes required to generate the record.
Range	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

usage-alert-thresholds

Synopsis	Enter the usage-alert-thresholds context
Context	configure application-assurance usage-alert-thresholds
Tree	usage-alert-thresholds
Description	Commands in this context configure the AA performance monitoring alerts.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-high-wmark (*number* | *keyword*)

Synopsis	High watermark for bit rate alarms
Context	configure application-assurance usage-alert-thresholds bit-rate-high-wmark (<i>number</i> <i>keyword</i>)
Tree	bit-rate-high-wmark
Description	This command configures the high watermark for bit rate alarms. The value must be larger than or equal to the low watermark value.
Range	1 to 100000
Units	megabps
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-low-wmark *number*

Synopsis	Low watermark for bit rate alarms
Context	configure application-assurance usage-alert-thresholds bit-rate-low-wmark <i>number</i>
Tree	bit-rate-low-wmark
Description	This command configures the utilization of the flow records on the ISA-AA group when the full alarm is cleared by the agent.
Range	0 to 99999
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-high-wmark (*number* | *keyword*)

Synopsis	High watermark for datapath CPU alarms
Context	configure application-assurance usage-alert-thresholds datapath-cpu-high-wmark (<i>number</i> <i>keyword</i>)
Tree	datapath-cpu-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.

Range	0 to 100
Units	percent
Options	max
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-low-wmark *number*

Synopsis	Low watermark for datapath CPU alarms
Context	configure application-assurance usage-alert-thresholds datapath-cpu-low-wmark <i>number</i>
Tree	datapath-cpu-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.
Range	0 to 100
Units	percent
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-rate-high-wmark (*number* | *keyword*)

Synopsis	High watermark for flow setup rate
Context	configure application-assurance usage-alert-thresholds flow-setup-rate-high-wmark (<i>number</i> <i>keyword</i>)
Tree	flow-setup-rate-high-wmark
Description	This command configures the system-wide high watermark threshold for per-ISA throughput in packets/second when an alarm is raised by the agent. The value must be larger than or equal to the packet-rate-low-wmark value.
Range	1 to 2000000
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-rate-low-wmark *number*

Synopsis	Low watermark for flow setup rate
Context	configure application-assurance usage-alert-thresholds flow-setup-rate-low-wmark <i>number</i>
Tree	flow-setup-rate-low-wmark
Description	This command configures the flow setup rate on the ISA-AA when a flow setup alarm is raised by the agent.
Range	0 to 1999999
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-high-wmark *number*

Synopsis	Flow table high watermark
Context	configure application-assurance usage-alert-thresholds flow-table-high-wmark <i>number</i>
Tree	flow-table-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the flow table size for the per-ISA utilization of the flow records when a full alarm is raised by the agent.
Range	0 to 100
Units	percent
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-low-wmark *number*

Synopsis	Flow table low watermark
Context	configure application-assurance usage-alert-thresholds flow-table-low-wmark <i>number</i>
Tree	flow-table-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the flow table size for per-ISA.
Range	0 to 100
Units	percent

Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-rate-high-wmark (*number* | *keyword*)

Synopsis	Packet rate high watermark
Context	configure application-assurance usage-alert-thresholds packet-rate-high-wmark (<i>number</i> <i>keyword</i>)
Tree	packet-rate-high-wmark
Description	This command configures the packet rate on the ISA-AA when a packet rate alarm is raised by the agent.
Range	1 to 148809524
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-rate-low-wmark *number*

Synopsis	Packet rate low watermark
Context	configure application-assurance usage-alert-thresholds packet-rate-low-wmark <i>number</i>
Tree	packet-rate-low-wmark
Description	This command configures the packet rate on the ISA-AA when a packet rate alarm is cleared by the agent.
Range	0 to 148809523
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.3 aps commands

```
configure
- aps number
- advertise-interval number
- annexb
- wait-to-restore-time number
- working-circuit reference
- apply-groups reference
- apply-groups-exclude reference
- hold-time number
- neighbor (ipv4-address-no-zone | ipv6-address-no-zone)
- protect-circuit reference
- revert
- time number
- switching-mode keyword
- working-circuit reference
```

3.3.1 aps command descriptions

aps [group-id] *number*

Synopsis	Enter the aps list instance
Context	configure aps <i>number</i>
Tree	aps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[group-id] *number*

Synopsis	APS group ID
Context	configure aps <i>number</i>
Tree	aps
Range	1 to 128
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

advertise-interval *number*

Synopsis	Time between subsequent advertisement messages
Context	configure aps <i>number</i> advertise-interval <i>number</i>
Tree	advertise-interval
Range	10 to 650
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

annexb

Synopsis	Enable the annexb context
Context	configure aps <i>number</i> annexb

Tree	annexb
Notes	The following elements are part of a choice: annexb or (neighbor , protect-circuit , revert , and working-circuit).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

wait-to-restore-time *number*

Synopsis	Annex B mode operation wait to restore time
Context	configure aps <i>number</i> annexb wait-to-restore-time <i>number</i>
Tree	wait-to-restore-time
Description	This command specifies the delay after which the newly active section becomes the primary section after a switchover from the primary section to the secondary section occurs and the switch request clears normally.
Range	0 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	configure aps <i>number</i> annexb working-circuit <i>reference</i>
Tree	working-circuit
Reference	configure port <i>string</i>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

hold-time *number*

Synopsis	Time to wait for an advertisement packet
Context	configure aps <i>number</i> hold-time <i>number</i>

Tree	hold-time
Range	10 to 650
Units	deciseconds
Default	30
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

neighbor (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Neighbor IP address for multi-chassis APS
Context	configure aps <i>number</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	neighbor
Notes	The following elements are part of a choice: annexb or (neighbor , protect-circuit , revert , and working-circuit).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

protect-circuit *reference*

Synopsis	Protection circuit port for the APS group
Context	configure aps <i>number</i> protect-circuit <i>reference</i>
Tree	protect-circuit
Reference	configure port <i>string</i>
Notes	The following elements are part of a choice: annexb or (neighbor , protect-circuit , revert , and working-circuit).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

revert

Synopsis	Enable the revert context
Context	configure aps <i>number</i> revert
Tree	revert
Notes	The following elements are part of a choice: annexb or (neighbor , protect-circuit , revert , and working-circuit).

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

time *number*

Synopsis	Wait time before switching back to the working circuit
Context	configure aps <i>number</i> revert <i>time</i> <i>number</i>
Tree	time
Range	0 60 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

switching-mode *keyword*

Synopsis	Switching mode for the APS port
Context	configure aps <i>number</i> switching-mode <i>keyword</i>
Tree	switching-mode
Options	uni-directional, bi-directional
Default	bi-directional
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	configure aps <i>number</i> working-circuit <i>reference</i>
Tree	working-circuit
Reference	configure port <i>string</i>
Notes	The following elements are part of a choice: annexb or (neighbor , protect-circuit , revert , and working-circuit).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

3.4 bfd commands

```
configure
- bfd
  - apply-groups reference
  - apply-groups-exclude reference
  - bfd-template string
    - apply-groups reference
    - apply-groups-exclude reference
    - echo-receive number
    - multiplier number
    - receive-interval number
    - transmit-interval number
    - type keyword
  - seamless-bfd
    - reflector string
      - admin-state keyword
      - apply-groups reference
      - apply-groups-exclude reference
      - description string
      - discriminator number
      - local-state keyword
```

3.4.1 bfd command descriptions

bfd

Synopsis	Enter the bfd context
Context	configure bfd
Tree	bfd
Introduced	16.0.R1
Platforms	All

bfd-template [[name](#)] *string*

Synopsis	Enter the bfd-template list instance
Context	configure bfd bfd-template <i>string</i>
Tree	bfd-template
Introduced	16.0.R1
Platforms	All

[name] *string*

Synopsis	BFD template name
Context	configure bfd bfd-template <i>string</i>
Tree	bfd-template
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

echo-receive *number*

Synopsis	Echo receive interval
Context	configure bfd bfd-template <i>string</i> echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds

Default	100
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Detection multiplier
Context	configure bfd bfd-template <i>string</i> multiplier <i>number</i>
Tree	multiplier
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive interval
Context	configure bfd bfd-template <i>string</i> receive-interval <i>number</i>
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit interval
Context	configure bfd bfd-template <i>string</i> transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure bfd bfd-template <i>string</i> type <i>keyword</i>
Tree	type
Options	cpm-np, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

seamless-bfd

Synopsis	Enter the seamless-bfd context
Context	configure bfd seamless-bfd
Tree	seamless-bfd
Introduced	19.7.R1
Platforms	All

reflector [*name*] *string*

Synopsis	Enter the reflector list instance
Context	configure bfd seamless-bfd reflector <i>string</i>
Tree	reflector
Max. Instances	1
Introduced	19.7.R1
Platforms	All

[name] *string*

Synopsis	S-BFD reflector name
Context	configure bfd seamless-bfd reflector <i>string</i>
Tree	reflector
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1

Platforms All

admin-state *keyword*

Synopsis Administrative state of the seamless BFD reflector
 Context **configure** [bfd seamless-bfd reflector](#) *string* **admin-state** *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 19.7.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure** [bfd seamless-bfd reflector](#) *string* **description** *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 19.7.R1
 Platforms All

discriminator *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Discriminator of the seamless BFD reflector
 Context **configure** [bfd seamless-bfd reflector](#) *string* **discriminator** *number*
 Tree [discriminator](#)
 Range 524288 to 526335
 Introduced 19.7.R1
 Platforms All

local-state *keyword*

Synopsis	Local state of the seamless BFD reflector
Context	configure bfd seamless-bfd reflector <i>string</i> local-state <i>keyword</i>
Tree	local-state
Options	admin-down, up
Default	up
Introduced	19.7.R1
Platforms	All

3.5.1 bmp command descriptions

bmp

Synopsis	Enter the bmp context
Context	configure bmp
Tree	bmp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the BMP operation
Context	configure bmp admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

collector

Synopsis	Enter the collector context
Context	configure bmp collector
Tree	collector
Introduced	19.10.R1
Platforms	VSR-NRC

admin-state *keyword*

Synopsis	Administrative state of the BMP collector
Context	configure bmp collector admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable

Introduced 19.10.R1
 Platforms VSR-NRC

connection

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **connection** context
 Context **configure** [bmp collector connection](#)
 Tree [connection](#)
 Introduced 19.10.R1
 Platforms VSR-NRC

ipv4

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **ipv4** context
 Context **configure** [bmp collector connection ipv4](#)
 Tree [ipv4](#)
 Introduced 19.10.R1
 Platforms VSR-NRC

address *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv4 address
 Context **configure** [bmp collector connection ipv4 address](#) *string*
 Tree [address](#)
 Introduced 19.10.R1

Platforms VSR-NRC

port number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv4 TCP destination port number

Context **configure** bmp collector connection ipv4 port number

Tree port

Range 1 to 65535

Default 4210

Introduced 19.10.R1

Platforms VSR-NRC

ipv6

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **ipv6** context

Context **configure** bmp collector connection ipv6

Tree ipv6

Introduced 19.10.R1

Platforms VSR-NRC

address string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv6 address

Context **configure** bmp collector connection ipv6 address string

Tree address

Introduced 19.10.R1

Platforms VSR-NRC

port *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv6 TCP destination port
 Context **configure** [bmp collector connection ipv6](#) *port number*
 Tree [port](#)
 Range 1 to 65535
 Default 4210
 Introduced 19.10.R1
 Platforms VSR-NRC

station [[name](#)] *string*

Synopsis Enter the **station** list instance
 Context **configure** [bmp station](#) *string*
 Tree [station](#)
 Max. Instances 8
 Introduced 16.0.R1
 Platforms All

[name] *string*

Synopsis BMP monitoring station name
 Context **configure** [bmp station](#) *string*
 Tree [station](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

admin-state *keyword*

Synopsis	Administrative state of the BMP monitoring station
Context	configure bmp station <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

connection

Synopsis	Enter the connection context
Context	configure bmp station <i>string</i> connection
Tree	connection
Introduced	16.0.R1
Platforms	All

connect-retry *number*

Synopsis	Maximum time between connection attempts
Context	configure bmp station <i>string</i> connection connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Local IP address to communicate with monitoring station
Context	configure bmp station <i>string</i> connection local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-address

Introduced	16.0.R1
Platforms	All

router-instance *string*

Synopsis	Router instance used to reach the BMP station
Context	configure bmp station string connection router-instance string
Tree	router-instance
Default	Base
Introduced	16.0.R4
Platforms	All

station-address

Synopsis	Enter the station-address context
Context	configure bmp station string connection station-address
Tree	station-address
Introduced	16.0.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote BMP monitoring station
Context	configure bmp station string connection station-address ip-address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	ip-address
Introduced	16.0.R1
Platforms	All

port *number*

Synopsis	BMP monitoring station port
Context	configure bmp station string connection station-address port number
Tree	port
Range	1 to 65535
Introduced	16.0.R1

Platforms All

tcp-keepalive

Synopsis Enter the **tcp-keepalive** context
Context **configure** **bmp station** *string* **connection tcp-keepalive**
Tree **tcp-keepalive**
Introduced 16.0.R1
Platforms All

admin-state *keyword*

Synopsis Administrative state of the TCP keepalive
Context **configure** **bmp station** *string* **connection tcp-keepalive admin-state** *keyword*
Tree **admin-state**
Options enable, disable
Default disable
Introduced 16.0.R1
Platforms All

keep-count *number*

Synopsis Keepalive threshold before connection is declared down
Context **configure** **bmp station** *string* **connection tcp-keepalive keep-count** *number*
Tree **keep-count**
Range 3 to 100
Default 4
Introduced 16.0.R1
Platforms All

keep-idle *number*

Synopsis Time until the first TCP keepalive probe is sent
Context **configure** **bmp station** *string* **connection tcp-keepalive keep-idle** *number*
Tree **keep-idle**

Range	1 to 100000
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

keep-interval *number*

Synopsis	Time between two TCP keepalive probes
Context	configure bmp station <i>string</i> connection tcp-keepalive keep-interval <i>number</i>
Tree	keep-interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure bmp station <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

family

Synopsis	Enter the family context
Context	configure bmp station <i>string</i> family
Tree	family
Description	Commands in this context specify the address families that are reported to a BMP monitoring station.
Introduced	16.0.R1
Platforms	All

evpn boolean

Synopsis	Support EVPN address family
Context	configure bmp station string family evpn boolean
Tree	evpn
Default	false
Introduced	16.0.R4
Platforms	All

ipv4 boolean

Synopsis	Support IPv4 address family
Context	configure bmp station string family ipv4 boolean
Tree	ipv4
Default	true
Introduced	16.0.R1
Platforms	All

ipv6 boolean

Synopsis	Support IPv6 address family
Context	configure bmp station string family ipv6 boolean
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

l2-vpn boolean

Synopsis	Support L2 VPN address family
Context	configure bmp station string family l2-vpn boolean
Tree	l2-vpn
Default	false
Introduced	16.0.R4
Platforms	All

label-ipv4 *boolean*

Synopsis	Support labeled IPv4 address family
Context	configure bmp station <i>string</i> family label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Support labeled IPv6 address family
Context	configure bmp station <i>string</i> family label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

mcast-ipv4 *boolean*

Synopsis	Support IPv4 multicast address family
Context	configure bmp station <i>string</i> family mcast-ipv4 <i>boolean</i>
Tree	mcast-ipv4
Default	false
Introduced	16.0.R4
Platforms	All

mcast-ipv6 *boolean*

Synopsis	Support IPv6 multicast address family
Context	configure bmp station <i>string</i> family mcast-ipv6 <i>boolean</i>
Tree	mcast-ipv6
Default	false
Introduced	16.0.R4
Platforms	All

mcast-vpn-ipv4 *boolean*

Synopsis	Support IPv4 VPN multicast address family
Context	configure bmp station <i>string</i> family mcast-vpn-ipv4 <i>boolean</i>
Tree	mcast-vpn-ipv4
Default	false
Introduced	16.0.R4
Platforms	All

mcast-vpn-ipv6 *boolean*

Synopsis	Support IPv6 VPN multicast address family
Context	configure bmp station <i>string</i> family mcast-vpn-ipv6 <i>boolean</i>
Tree	mcast-vpn-ipv6
Default	false
Introduced	16.0.R4
Platforms	All

sr-policy-ipv4 *boolean*

Synopsis	Support SR policy IPv4 address family
Context	configure bmp station <i>string</i> family sr-policy-ipv4 <i>boolean</i>
Tree	sr-policy-ipv4
Default	false
Introduced	22.5.R1
Platforms	All

sr-policy-ipv6 *boolean*

Synopsis	Support SR policy IPv6 address family
Context	configure bmp station <i>string</i> family sr-policy-ipv6 <i>boolean</i>
Tree	sr-policy-ipv6
Default	false
Introduced	22.5.R1
Platforms	All

vpn-ipv4 *boolean*

Synopsis	Support VPN IPv4 address family
Context	configure bmp station string family vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Support VPN IPv6 address family
Context	configure bmp station string family vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

initiation-message *string*

Synopsis	Free form initiation message sent to monitoring station
Context	configure bmp station string initiation-message <i>string</i>
Tree	initiation-message
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

report-local-routes *boolean*

Synopsis	Allow local route reporting to BMP monitoring station
Context	configure bmp station string report-local-routes <i>boolean</i>
Tree	report-local-routes
Default	false
Introduced	16.0.R1
Platforms	All

stats-report-interval *number*

Synopsis	Frequency of reports sent to the BMP monitoring station
Context	configure bmp station <i>string</i> stats-report-interval <i>number</i>
Tree	stats-report-interval
Range	15 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

3.6 bof commands

```

bof
- auto-boot
- dhcp
  - client-id (keyword | hex-string | string)
  - inband
    - disabled boolean
    - null-encapsulation boolean
    - vlan number
    - vlan-discovery boolean
  - include-user-class boolean
  - ipv4 boolean
  - ipv6 boolean
  - management-port boolean
- ospf
  - mtu number
  - neid string
  - neip-ipv4 string
  - neip-ipv6 string
  - vendor-id number
- port-mtu number
- timeout number
- auto-configure
- ipv4
  - dhcp
    - client-id (hex-string | string)
    - include-user-class boolean
    - timeout number
- ipv6
  - dhcp
    - client-id (hex-string | string)
    - client-type keyword
    - include-user-class boolean
    - timeout number
- configuration
  - encrypt boolean
  - encryption-key string
  - password string
  - primary-location string
  - secondary-location string
  - tertiary-location string
- console
  - speed number
  - wait-time number
- dns
  - domain string
  - primary-server (ipv4-address-no-zone | ipv6-address-no-zone)
  - secondary-server (ipv4-address-no-zone | ipv6-address-no-zone)
  - tertiary-server (ipv4-address-no-zone | ipv6-address-no-zone)
- image
  - primary-location string
  - secondary-location string
  - tertiary-location string
- li
  - local-save boolean
  - separate boolean
- license
  - primary-location string
- port string
  - autonegotiate keyword

```

bof port duplex

- **duplex** *keyword*
- **speed** *number*
- **router** *string*
- **interface** *string*
 - **cpm** *keyword*
 - **ipv4**
 - **ip-address** *string*
 - **prefix-length** *number*
 - **ipv6**
 - **ipv6-address** *string*
 - **prefix-length** *number*
 - **ip-mtu** *number*
- **static-routes**
 - **route** (*ipv4-prefix | ipv6-prefix*)
 - **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)
- **system**
 - **base-mac-address** *string*
 - **fips-140-2** *boolean*
 - **persistent-indices** *boolean*
 - **profile** *keyword*

3.6.1 bof command descriptions

bof

Synopsis	Configure system boot options
Context	bof
Tree	bof
Description	<p>This command creates or edits the boot option file (BOF) for the specified local storage device.</p> <p>A BOF file specifies where the system searches for runtime images, configuration files, and other operational parameters during system initialization.</p> <p>BOF parameters can be modified. Changes can be saved to a specified compact flash. The BOF must be located in the root directory of either an internal or external compact flash local to the system and have the mandatory filename of bof.cfg.</p> <p>When modifications are made to in-memory parameters that are currently in use or operating, the changes are effective immediately. For example, if the IP address of the management port is changed, the change takes place immediately.</p> <p>Only one entry of the BOF configuration command statement can be saved once the statement has been found to be syntactically correct.</p> <p>When opening an existing BOF that is not the BOF used in the most recent boot, a message is issued notifying the user that the parameters will not affect the operation of the node.</p> <p>No default boot option file exists. The router boots with the factory default boot sequence and options.</p>
Introduced	20.10.R1
Platforms	All

auto-boot

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the auto-boot context
Context	bof auto-boot
Tree	auto-boot
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

dhcp

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-boot dhcp
Tree	dhcp
Notes	The following elements are part of a choice: dhcp or ospf .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

client-id (*keyword | hex-string | string*)

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-boot dhcp client-id (<i>keyword hex-string string</i>)
Tree	client-id
String Length	3 to 118
Options	use-chassis-mac-address
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

inband

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the inband context
Context	bof auto-boot dhcp inband
Tree	inband
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

disabled *boolean***Note:**

The new value of this element takes effect when the router boots.

Synopsis	Do not use in-band ports
Context	bof auto-boot dhcp inband disabled <i>boolean</i>
Tree	disabled
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

null-encapsulation *boolean***Note:**

The new value of this element takes effect when the router boots.

Synopsis	Use null encapsulation
Context	bof auto-boot dhcp inband null-encapsulation <i>boolean</i>
Tree	null-encapsulation
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

vlan *number***Note:**

The new value of this element takes effect when the router boots.

Synopsis	In-band VLAN ID
Context	bof auto-boot dhcp inband vlan <i>number</i>
Tree	vlan
Range	1 to 4094

Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

vlan-discovery *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Use VLAN discovery
Context	bof auto-boot dhcp inband vlan-discovery <i>boolean</i>
Tree	vlan-discovery
Default	true
Notes	The following elements are part of a choice: disabled , null-encapsulation , vlan , or vlan-discovery .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

include-user-class *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Include user class in auto boot provisioning
Context	bof auto-boot dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

ipv4 *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv4
----------	-------------------------

Context	bof auto-boot dhcp ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

ipv6 *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv6
Context	bof auto-boot dhcp ipv6 <i>boolean</i>
Tree	ipv6
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

management-port *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Use auto boot on the management port
Context	bof auto-boot dhcp management-port <i>boolean</i>
Tree	management-port
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

ospf

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the ospf context
Context	bof auto-boot ospf

Tree	ospf
Notes	The following elements are part of a choice: dhcp or ospf .
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

mtu number**Note:**

The new value of this element takes effect when the router boots.

Synopsis	OSPF MTU
Context	bof auto-boot ospf mtu number
Tree	mtu
Range	512 to 9786
Units	bytes
Default	1500
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

neid string**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Network element ID
Context	bof auto-boot ospf neid string
Tree	neid
String Length	3
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

neip-ipv4 string**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Network element IPv4 address
Context	bof auto-boot ospf neip-ipv4 string
Tree	neip-ipv4
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

neip-ipv6 string

Note:

The new value of this element takes effect when the router boots.

Synopsis	Network element IPv6 address
Context	bof auto-boot ospf neip-ipv6 string
Tree	neip-ipv6
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

vendor-id number

Note:

The new value of this element takes effect when the router boots.

Synopsis	Vendor ID
Context	bof auto-boot ospf vendor-id number
Tree	vendor-id
Range	1 to 254
Default	140
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

port-mtu number

Note:

The new value of this element takes effect when the router boots.

Synopsis	Port MTU setting
Context	bof auto-boot port-mtu number

Tree	port-mtu
Range	512 to 9800
Units	bytes
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

timeout *number*

Note:

The new value of this element takes effect when the router boots.

Synopsis	ZTP timeout
Context	bof auto-boot timeout <i>number</i>
Tree	timeout
Description	This command configures the Zero Touch Provisioning timeout, which is the total time allowed for the ZTP process to execute successfully. If the ZTP process is unsuccessful (in the case of auto-boot using OSPF, if no OSPF adjacency is found), the node is first rebooted, then the ZTP process is retried.
Range	30 to 1440
Units	minutes
Introduced	22.7.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

auto-configure

Synopsis	Enter the auto-configure context
Context	bof auto-configure
Tree	auto-configure
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

ipv4

Synopsis	Enter the ipv4 context
Context	bof auto-configure ipv4
Tree	ipv4

Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

dhcp

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-configure ipv4 dhcp
Tree	dhcp
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

client-id (*hex-string* | *string*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-configure ipv4 dhcp client-id (<i>hex-string</i> <i>string</i>)
Tree	client-id
String Length	3 to 256
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

include-user-class *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	Include user class information
Context	bof auto-configure ipv4 dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

timeout *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	DHCP timeout
Context	bof auto-configure ipv4 dhcp timeout <i>number</i>
Tree	timeout
Range	1 to 65535
Default	30
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

ipv6

Synopsis	Enter the ipv6 context
Context	bof auto-configure ipv6
Tree	ipv6
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

dhcp

Note:

The new value of this element takes effect when the router boots.

Synopsis	Enable the dhcp context
Context	bof auto-configure ipv6 dhcp
Tree	dhcp
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

client-id (*hex-string* | *string*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-configure ipv6 dhcp client-id (<i>hex-string</i> <i>string</i>)
Tree	client-id
String Length	3 to 250
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

client-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP client type
Context	bof auto-configure ipv6 dhcp client-type <i>keyword</i>
Tree	client-type

Options	duid-enterprise, duid-link-local
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

include-user-class *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	Include user class information
Context	bof auto-configure ipv6 dhcp include-user-class <i>boolean</i>
Tree	include-user-class
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

timeout *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the router boots.

Synopsis	DHCP timeout
Context	bof auto-configure ipv6 dhcp timeout <i>number</i>
Tree	timeout
Range	1 to 65535
Default	30
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

configuration

Synopsis	Enter the configuration context
Context	bof configuration
Tree	configuration
Introduced	20.10.R1
Platforms	All

encrypt *boolean*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enable encryption of BOF configuration files
Context	bof configuration encrypt <i>boolean</i>
Tree	encrypt
Description	<p>When configured to true, this command enables encryption of the BOF using AES256 and SHA256.</p> <p>When the BOF is encrypted on the compact flash, it is still reachable using the BOF interactive menu during node startup, and fields can be modified using the BOF interactive menu.</p>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encryption-key *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Secret key for encryption of configuration files
Context	bof configuration encryption-key <i>string</i>
Tree	encryption-key
Description	<p>This command creates a key to be used by AES256 and SHA256 for configuration file encryption and hashing. This key is used for all configuration files (primary, secondary, and tertiary).</p> <p>After creating or deleting a key, save the configuration file with the current encryption key state.</p>

String Length 1 to 71
 Introduced 21.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis Password for boot-time modification of boot options
 Context [bof configuration password string](#)
 Tree [password](#)
 String Length 1 to 71
 Introduced 21.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary-location *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis Primary configuration location
 Context [bof configuration primary-location string](#)
 Tree [primary-location](#)
 String Length 1 to 180
 Introduced 20.10.R1
 Platforms All

secondary-location *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis Secondary configuration location
 Context [bof configuration secondary-location string](#)
 Tree [secondary-location](#)
 String Length 1 to 180

Introduced	20.10.R1
Platforms	All

tertiary-location *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Tertiary configuration location
Context	bof configuration tertiary-location <i>string</i>
Tree	tertiary-location
String Length	1 to 180
Introduced	20.10.R1
Platforms	All

console

Synopsis	Enter the console context
Context	bof console
Tree	console
Introduced	20.10.R1
Platforms	All

speed *number*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Console port speed
Context	bof console speed <i>number</i>
Tree	speed
Range	9600 19200 38400 57600 115200
Units	bps
Default	19200
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

wait-time *number*

Note:

The new value of this element takes effect when the router boots.

Synopsis Wait time for interrupt to change boot parameters
 Context [bof console wait-time number](#)
 Tree [wait-time](#)
 Range 1 to 10
 Units seconds
 Default 3
 Introduced 20.10.R1
 Platforms All

dns

Synopsis Enter the **dns** context

[router-name] *string*

Synopsis	Administrative router name
Context	bof port <i>string</i>
Tree	port
String Length	1 to 64

Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

autonegotiate *keyword*

**Note:**

The new value of this element takes effect when the candidate is committed.

Synopsis	Auto-negotiate speed and duplex type on Ethernet port
Context	bof port string autonegotiate keyword
Tree	autonegotiate
Options	false, true
Default	true
Introduced	20.10.R1
Platforms	All

duplex *keyword*

**Note:**

The new value of this element takes effect when the candidate is committed.

Synopsis	Duplex type for the Ethernet port
Context	bof port string duplex keyword
Tree	duplex
Options	full, half
Default	full
Introduced	20.10.R1
Platforms	All

speed *number*

**Note:**

The new value of this element takes effect when the candidate is committed.

Synopsis	Speed of the Ethernet port
----------	----------------------------

Context	<code>bof port string speed number</code>
Tree	<code>speed</code>
Range	10 100 1000
Units	megabps
Default	100
Introduced	20.10.R1
Platforms	All

router [`router-name`] *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enter the router list instance
Context	<code>bof router string</code>
Tree	<code>router</code>
Max. Instances	1
Introduced	20.10.R1
Platforms	All

[router-name] *string*

Synopsis	Administrative router name
Context	<code>bof router string</code>
Tree	<code>router</code>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

interface [`interface-name`] *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enter the interface list instance
Context	bof router <i>string</i> interface <i>string</i>
Tree	interface
Max. Instances	1
Introduced	20.10.R1
Platforms	All

[interface-name] *string*

Synopsis	Router interface name
Context	bof router <i>string</i> interface <i>string</i>
Tree	interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

cpm [[cpm-type](#)] *keyword*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enter the cpm list instance
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i>
Tree	cpm
Introduced	20.10.R1
Platforms	All

[cpm-type] *keyword*

Synopsis	CPM type
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i>
Tree	cpm
Options	active, standby, a, b, c, d
Notes	This element is part of a list key.

Introduced	20.10.R1
Platforms	All

ipv4

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enable the ipv4 context
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv4
Tree	ipv4
Introduced	20.10.R1
Platforms	All

ip-address *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	IPv4 address assigned to the interface
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv4 ip-address <i>string</i>
Tree	ip-address
Description	This command assigns an IP address to the management Ethernet port on a CPM. The active and standby IP addresses must be on the same subnet.
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

prefix-length *number*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	IPv4 address prefix length
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv4 prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32

Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

ipv6

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enable the ipv6 context
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv6
Tree	ipv6
Introduced	20.10.R1
Platforms	All

ipv6-address *string*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	IPv6 address assigned to the interface
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv6 ipv6-address <i>string</i>
Tree	ipv6-address
Description	This command assigns an IP address to the management Ethernet port on a CPM. The active and standby IP addresses must be on the same subnet.
Introduced	20.10.R1
Platforms	All

prefix-length *number*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	IPv6 address prefix length
Context	bof router <i>string</i> interface <i>string</i> cpm <i>keyword</i> ipv6 prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 128

Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

ip-mtu *number*

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Interface IP MTU
Context	bof router <i>string</i> interface <i>string</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command configures the MTU for IP packets transmitted out the interface of the management router instance associated to the management port.</p> <p>The operational MTU for the port is set to the lesser of the values configured with this command and the management port MTU.</p> <p>If the interface supports IPv6 packets, the command value must be set to 1280 or higher.</p>
Range	512 to 9786
Units	bytes
Introduced	20.10.R1
Platforms	All

static-routes

Synopsis	Enter the static-routes context
Context	bof router <i>string</i> static-routes
Tree	static-routes
Introduced	20.10.R1
Platforms	All

route [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Enter the route list instance
----------	--------------------------------------

Context	bof router string static-routes route (ipv4-prefix ipv6-prefix)
Tree	route
Introduced	20.10.R1
Platforms	All

[ip-prefix] (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP prefix for the static route
Context	bof router string static-routes route (ipv4-prefix ipv6-prefix)
Tree	route
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Note:

The new value of this element takes effect when the candidate is committed.

Synopsis	Next-hop IP address
Context	bof router string static-routes route (ipv4-prefix ipv6-prefix) next-hop (ipv4-address-no-zone ipv6-address-no-zone)
Tree	next-hop
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

system

Synopsis	Enter the system context
Context	bof system
Tree	system

Introduced	20.10.R1
Platforms	All

base-mac-address *string*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Base system MAC address
Context	bof system base-mac-address <i>string</i>
Tree	base-mac-address
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS-20, 7950 XRS-20e, VSR

fips-140-2 *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Operate in FIPS 140-2 mode
Context	bof system fips-140-2 <i>boolean</i>
Tree	fips-140-2
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS

persistent-indices *boolean*

Note:

The new value of this element takes effect when the router boots.

Synopsis	Classic and mixed management mode persistent indices
Context	bof system persistent-indices <i>boolean</i>
Tree	persistent-indices
Introduced	20.10.R1
Platforms	All

profile *keyword*

**Note:**

The new value of this element takes effect when the router boots.

Synopsis	System capabilities profile
Context	bof system profile <i>keyword</i>
Tree	profile
Options	profile-a, profile-b
Introduced	20.10.R1
Platforms	All

3.7 call-trace commands

```
configure
- call-trace
  - apply-groups reference
  - apply-groups-exclude reference
  - buffering boolean
  - location keyword
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - size-limit (number | keyword)
  - max-files-number number
  - primary-cf keyword
  - trace-profile string
    - applications
      - connectivity-management boolean
      - gx boolean
      - gy boolean
      - ladb boolean
      - msap boolean
      - nasreq boolean
      - ppp-event boolean
      - python boolean
      - radius-acct boolean
      - radius-auth boolean
    - apply-groups reference
    - apply-groups-exclude reference
    - description string
    - events keyword
    - output
      - debug
      - live
        - fqdn string
        - ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
        - port number
        - router-instance string
      - local-storage
    - size-limit number
    - time-limit number
```

3.7.1 call-trace command descriptions

call-trace

Synopsis	Enter the call-trace context
Context	configure call-trace
Tree	call-trace
Description	Commands in this context configure the attributes of the call trace debugging functionality.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

buffering *boolean*

Synopsis	Buffer messages until the trace key is known
Context	configure call-trace buffering <i>boolean</i>
Tree	buffering
Description	<p>When configured to true, the router buffers initial messages for sessions where the trace key is not yet known, for example, a username for a PPP session.</p> <p>When the trace key, for example, a username, indicates a match for a traced session, the router sends the buffered messages immediately. If the key does not match a trace, the router discards the buffered messages.</p> <p>When configured to false, the router does not buffer any messages and therefore initial messages may not be traced.</p>
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

location [[location-type](#)] *keyword*

Synopsis	Enter the location list instance
Context	configure call-trace location <i>keyword</i>
Tree	location
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[location-type] keyword

Synopsis	Compact flash card to be used
Context	configure call-trace location <i>keyword</i>
Tree	location
Options	cf1, cf2
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of compact flash for log storage
Context	configure call-trace location <i>keyword</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

size-limit (number | keyword)

Synopsis	Maximum cumulative size of call trace files on the card
Context	configure call-trace location <i>keyword</i> size-limit (<i>number</i> <i>keyword</i>)
Tree	size-limit
Range	1 to 65536
Options	unlimited
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-files-number number

Synopsis	Maximum number of files call trace can create
Context	configure call-trace max-files-number <i>number</i>

Tree	max-files-number
Range	1 to 1024
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary-cf *keyword*

Synopsis	Primary CF card as local storage location
Context	configure call-trace primary-cf <i>keyword</i>
Tree	primary-cf
Options	cf1, cf2
Default	cf1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace-profile [[name](#)] *string*

Synopsis	Enter the trace-profile list instance
Context	configure call-trace trace-profile <i>string</i>
Tree	trace-profile
Description	Commands in this context configure the attributes of the call-trace profile list.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Call trace profile name
Context	configure call-trace trace-profile <i>string</i>
Tree	trace-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

applications

Synopsis	Enter the applications context
Context	configure call-trace trace-profile <i>string</i> applications
Tree	applications
Description	Commands in this context configure call trace attributes for the specified application.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connectivity-management *boolean*

Synopsis	Trace messages used for connectivity protocols
Context	configure call-trace trace-profile <i>string</i> applications connectivity-management <i>boolean</i>
Tree	connectivity-management
Description	When configured to true , this command enables call trace for connectivity protocols, such as DHCP, ARP, and DHCPv6, and events related to connectivity management; for example, migrant or data-triggered host creation, idling, or session timeout. When configured to false , connectivity protocols are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx *boolean*

Synopsis	Trace Diameter messages used for the Gx application
Context	configure call-trace trace-profile <i>string</i> applications gx <i>boolean</i>
Tree	gx
Description	When configured to true , this command enables call trace for Diameter messages used for the Gx application. When configured to false , Diameter Gx messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy *boolean*

Synopsis	Trace Diameter messages used for the Gy application
----------	---

Context	configure call-trace trace-profile <i>string applications gy boolean</i>
Tree	gy
Description	When configured to true , this command enables call trace for Diameter messages used for the Gy application. When configured to false , Diameter Gy messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ludb boolean

Synopsis	Trace local user database lookups
Context	configure call-trace trace-profile <i>string applications ludb boolean</i>
Tree	ludb
Description	When configured to true , this command enables call trace for Local User Data Base (LUDB) lookups. When configured to false , LUDB lookups are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap boolean

Synopsis	Trace MSAP creation events
Context	configure call-trace trace-profile <i>string applications msap boolean</i>
Tree	msap
Description	When configured to true , this command enables tracing of Managed Service Access Point (MSAP) creation events. When configured to false , MSAP create events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq boolean

Synopsis	Trace Diameter messages used for NASREQ application
Context	configure call-trace trace-profile <i>string applications nasreq boolean</i>

Tree	nasreq
Description	When configured to true , this command enables call trace for Diameter messages used for the Diameter Network Access Server Requirements (NASREQ) application. When configured to false , Diameter NASREQ messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-event *boolean*

Synopsis	Allow tracing for PPP state machine related events
Context	configure call-trace trace-profile <i>string</i> applications ppp-event <i>boolean</i>
Tree	ppp-event
Description	When configured to true , events related to the PPP state machine are traced. This configuration may result in a large amount of event messages. When configured to false , tracing is not activated for PPP state machine events.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python *boolean*

Synopsis	Trace Python script execution
Context	configure call-trace trace-profile <i>string</i> applications python <i>boolean</i>
Tree	python
Description	When configured to true , this command enables tracing of Python script execution. When configured to false , Python script execution is not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-acct *boolean*

Synopsis	Trace messages and events for RADIUS-based accounting
Context	configure call-trace trace-profile <i>string</i> applications radius-acct <i>boolean</i>
Tree	radius-acct

Description	When configured to true , this command enables tracing of messages and events related to RADIUS-based accounting. When configured to false , RADIUS-based accounting messages and events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth *boolean*

Synopsis	Trace RADIUS authentication messages and events
Context	configure call-trace trace-profile <i>string</i> applications radius-auth <i>boolean</i>
Tree	radius-auth
Description	When configured to true , this command enables tracing of messages and events related to RADIUS authentication, including CoA and Disconnect. When configured to false , messages and events related to RADIUS authentication are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure call-trace trace-profile <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events *keyword*

Synopsis	Events to include in the captured trace
Context	configure call-trace trace-profile <i>string</i> events <i>keyword</i>
Tree	events
Options	public-only, all

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

output

Synopsis	Enter the output context
Context	configure call-trace trace-profile <i>string</i> output
Tree	output
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

debug

Synopsis	Enable output to the debug log
Context	configure call-trace trace-profile <i>string</i> output debug
Tree	debug
Notes	The following elements are part of a choice: debug , live , or local-storage .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

live

Synopsis	Enable the live context
Context	configure call-trace trace-profile <i>string</i> output live
Tree	live
Notes	The following elements are part of a choice: debug , live , or local-storage .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fqdn *string*

Synopsis	Fully qualified domain name of live output destination
Context	configure call-trace trace-profile <i>string</i> output live fqdn <i>string</i>
Tree	fqdn
String Length	1 to 255

Notes	The following elements are part of a mandatory choice: fqdn or ip-address .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the live output destination server
Context	configure call-trace trace-profile <i>string</i> output live ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a mandatory choice: fqdn or ip-address .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port number

Synopsis	TCP IP port
Context	configure call-trace trace-profile <i>string</i> output live port number
Tree	port
Range	1 to 65536
Default	29770
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance or VPRN service name
Context	configure call-trace trace-profile <i>string</i> output live router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-storage

Synopsis	Destination for output
Context	configure call-trace trace-profile <i>string</i> output local-storage
Tree	local-storage
Notes	The following elements are part of a choice: debug , live , or local-storage .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

size-limit *number*

Synopsis	Maximum data output for a single call trace operation
Context	configure call-trace trace-profile <i>string</i> size-limit <i>number</i>
Tree	size-limit
Range	1 to 1000
Units	megabytes
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

time-limit *number*

Synopsis	Maximum time for a single call trace job
Context	configure call-trace trace-profile <i>string</i> time-limit <i>number</i>
Tree	time-limit
Range	1 to 604800
Units	seconds
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

3.8.1 card command descriptions

card [*slot-number*] *number*

Synopsis	Enter the card list instance
Context	configure card <i>number</i>
Tree	card
Description	Commands in this context cover attributes for specific chassis slots for physical cards. Cards include IOM, IMM, and XCM. In SR OS, cards cover IOM, IMM, and XCM.
Introduced	16.0.R1
Platforms	All

[slot-number] *number*

Synopsis	Slot number within the chassis
Context	configure card <i>number</i>
Tree	card
Description	This command configures a unique value that identifies the card slot within a chassis in the system.
Range	1 to 20
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the card
Context	configure card <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

card-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Card type

Context **configure** *card number* **card-type** *keyword*

Tree **card-type**

Description This command adds an IOM, IMM, XCM to the device configuration for the slot.

The card type can be pre-provisioned, meaning that the card does not need to be installed in the chassis.

A card must be provisioned before any contained object can be configured: MDA, XIOM, XMA, MDA-s, connector, or port. A card can only be provisioned in a slot if the card type is allowed in the slot. An error message is generated if an attempt is made to provision a card type that is not allowed.

If a card is inserted that does not match the configured card type for the slot, a log event and facility alarm is raised. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event and facility alarm are raised if an administratively enabled card is removed from the chassis. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event is issued when a card is removed that is administratively disabled.

Because IMMs do not have the capability to install separate MDAs, the configuration of the MDAs is automatic. This configuration only includes the default options such as default buffer policies. Commands to manage the MDA remain in the MDA configuration context.

Some card hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two card types that are the same, except for a “-ptp” suffix to indicate the second loadset. A hard reset of the card occurs when switching between the two provisioned types.

An appropriate alarm is raised if a partial or complete card failure is detected. The alarm is cleared when the error condition ceases.

Options xcm-x20, imm40-10gb-sfp, imm4-100gb-cxp, iom4-e, iom-a, imm-1pac-fp3, imm-2pac-fp3, iom4-e-hs, imm4-100gb-cfp4, iom-e, iom-v, iom4-e-b, iom-sar-hm, xcm2-x20, iom-1, xcm-14s, imm40-10gb-sfp-ptp, iom-ixr-r6, imm36-100g-qsfp28, imm48-sfp+2-qsfp28, iom5-e, xcm-7s, imm48-sfp++6-qsfp28, xcm-1s, xcm-2s, imm24-sfp++8-sfp28+2-qsfp28, iom-sar-hmc, imm14-10g-sfp++4-1g-tx, iom-ixr-r4, imm6-qsfpdd+48-sfp56, imm32-qsfp28+4-qsfpdd, i48-800g-qsfpdd-1x, imm36-qsfpdd, imm4-1g-tx+20-1g-sfp+6-10g-sfp+, iom-ixr-r6d, xcm2-7s, i24-800g-qsfpdd-1, imm36-800g-qsfpdd, xcm2-14s, i48-400g-qsfpdd-1, i80-200g-sfpdd+12-400g-qsfpdd-1, i40-200g-sfpdd+6-800g-qsfpdd-1, i80-200g-sfpdd+12-800g-qsfpdd-1x, xcm-2se, xcm-14s-b, xcm-7s-b

Introduced	16.0.R1
Platforms	All

fail-on-error *boolean*

Synopsis Set operational state of the card to Failed upon error

Context **configure** *card number* **fail-on-error** *boolean*

Tree **fail-on-error**

Description When configured to **true**, this command controls the behavior of the card when any one of a specific set of card level errors is encountered in the system.

When this command is set to **true**, and any one (or more) of the specific errors is detected, the operational state of the card is set to failed. This failed state persists until the **clear card** command is issued (reset) or the card is removed and reinserted (reseated). If the condition persists after reseating the card, contact Nokia support to investigate more.

Nokia only recommends configuring this command to **true** when the network is designed to be able to route traffic around a failed card (redundant cards, nodes, or other paths exist).

The list of specific errors includes the following:

CHASSIS event ID# 2063 - tmnxEqCardPChipMemoryEvent

CHASSIS event ID# 2076 - tmnxEqCardPChipCamEvent

CHASSIS event ID# 2059 - tmnxEqCardPChipError (for ingress Ethernet only)

CHASSIS event ID# 2098 - tmnxEqCardQChipBufMemoryEvent

CHASSIS event ID# 2099 - tmnxEqCardQChipStatsMemoryEvent

CHASSIS event ID# 2101 - tmnxEqCardQChipIntMemoryEvent

CHASSIS event ID# 2103 - tmnxEqCardChipIfCellEvent

On platforms with integrated CPM and IOM, IMM, or XCM, the node is rebooted if this command is set to **true** and one of the card level errors is encountered. The tmnxEqCardPChipError is only considered as a trigger for this command for ingress FCS errors (not egress FCS errors).

Note: On the detection of the event or error in the system, the reporting of the event (logs) and the fail-on-error behavior of the card are independent. Log event control configuration determines whether the events are reported in logs (or SNMP traps, and so on) and the fail-on-error configuration determines the behavior of the card. This implies that the card can be configured to fail-on-error even if the events are suppressed (some may be suppressed in the system by default). To facilitate post-failure analysis, Nokia recommends reporting the specific events or errors and that **configure log log-events** be enabled when this command is set to **true**.

Default false

Introduced 16.0.R1

Platforms All

filter-profile *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Filter profile for the card
Context	configure <i>card number filter-profile keyword</i>
Tree	filter-profile
Description	This command controls the resources allocated to ingress and egress IPv4 and IPv6 filters on a per-line card basis on the SR-a platform.
Options	none, profile-a
Default	none
Introduced	19.10.R1
Platforms	7750 SR-a

fp [[fp-number](#)] *number*

Synopsis	Enter the fp list instance
Context	configure <i>card number fp number</i>
Tree	fp
Description	Commands in this context configure forwarding plane (FP) specific options on the card.
Introduced	16.0.R1
Platforms	All

[fp-number] *number*

Synopsis	Forwarding plane within the card
Context	configure <i>card number fp number</i>
Tree	fp
Range	1 to 12
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure <i>card number fp number egress</i>
Tree	egress
Introduced	16.0.R1
Platforms	All

hs-fixed-high-thresh-delta *number*

Synopsis	High threshold delta on the forwarding plane
Context	configure <i>card number fp number egress hs-fixed-high-thresh-delta number</i>
Tree	hs-fixed-high-thresh-delta
Description	<p>This command specifies the egress aggregate shaper high burst limit threshold delta for this HSQ IOM FP.</p> <p>An aggregate rate can be applied to each egress HSQ queue group, HS secondary shaper, and (for subscribers configured with HS SLA expanded mode) primary shaper that manages the maximum burst limit over a specified shaping rate. Each aggregate shaper supports two thresholds that are used in conjunction with the low burst class setting. The system uses the lowest value attainable for each low threshold aggregate burst limit without causing shaper under run conditions.</p> <p>The high burst limit threshold is determined by adding the configured value of this command to the aggregate low burst limit threshold value. An operator must set this configured value to at least two times the maximum frame size to prevent lower threshold class forwarding from also affecting the higher threshold classes when forwarding larger packet sizes. An insufficiently high threshold delta defeats the intended purpose of mapping classes to the higher threshold.</p>
Range	0 to 65536
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-pool-policy *reference*

Synopsis	HS pool policy
Context	configure <i>card number fp number egress hs-pool-policy reference</i>
Tree	hs-pool-policy
Description	This command specifies the HS pool policy for the FP.

An HS pool policy contains the required parameters to create and size root and mid-tier buffer pools on an HSQ IOM, and applies a slope policy to each. A single HS pool policy is supported per port FP.

This command is only applicable to the HSQ IOM (iom4-e-hs) and fails if configured on other card types.

Reference	configure qos hs-pool-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

wred-queue-control

Synopsis	Enter the wred-queue-control context
Context	configure card number fp number egress wred-queue-control
Tree	wred-queue-control
Description	Commands in this context configure the aggregate Weighted Random Early Detection (WRED) queue options for all WRED queues on an egress forwarding plane.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the WRED queue control function
Context	configure card number fp number egress wred-queue-control admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-allocation *decimal-number*

Synopsis	Buffer allocation for WRED queue buffer pools
Context	configure card number fp number egress wred-queue-control buffer-allocation <i>decimal-number</i>
Tree	buffer-allocation
Description	This command defines the percentage of buffers to set aside for WRED queue buffer pools.

Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reserved-cbs *decimal-number*

Synopsis	Buffers for queues operating within CBS thresholds
Context	configure card <i>number</i> fp <i>number</i> egress wred-queue-control reserved-cbs <i>decimal-number</i>
Tree	reserved-cbs
Description	<p>This command specifies the percentage of buffers within the WRED mega-pool to set aside for WRED queues operating within the configured CBS thresholds. The forwarding plane protects against WRED queue buffer starvation by setting aside a portion of the buffers within the WRED mega-pool.</p> <p>This threshold defines when a WRED queue requests buffers from the reserved portion of the WRED mega-pool and when it starts requesting buffers from the shared portion of the mega-pool. With proper oversubscription provisioning, a seldom active queue is not denied a buffer from the mega-pool when the shared portion of the mega-pool is congested.</p>
Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

slope-policy *reference*

Synopsis	Slope policy for the forwarding plane
Context	configure card <i>number</i> fp <i>number</i> egress wred-queue-control slope-policy <i>reference</i>
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fp-resource-policy *reference*

**WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Resource policy to manage resources on the FP
Context	configure <i>card number fp number fp-resource-policy reference</i>
Tree	fp-resource-policy
Description	<p>This command configures an FP resource policy used to manage resources on a forwarding plane that is FP4-based and later.</p> <p>The system creates a default policy that applies to all FP4 and later FPs. If an FP resource policy is removed from an FP, the system automatically applies the default policy to that FP. The system prevents the modification or deletion of the default policy, and the deletion of any user-created policy that is applied to an FP.</p>
Reference	configure qos fp-resource-policy string
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

hi-bw-mcast-src

Synopsis	Enable the hi-bw-mcast-src context
Context	configure <i>card number fp number hi-bw-mcast-src</i>
Tree	hi-bw-mcast-src
Description	<p>Commands in this context configure the attributes to designate the FP as a high-bandwidth IP multicast source, expecting the ingress traffic to include high-bandwidth IP multicast traffic.</p> <p>When configured, the system attempts to allocate a dedicated multicast switch fabric plane (MSFP) to the forwarding plane. When a group is specified, all FPs in the group share the same MSFP.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

alarm *boolean*

Synopsis	Raise an alarm when multiple traffic taps share a plane
Context	configure <i>card number fp number hi-bw-mcast-src alarm boolean</i>

Tree	alarm
Description	When configured to true , the router generates an event if the MDA must share an MSFP with another MDA in a different group. MDAs within the same group that share an MSFP do not generate an event. Additionally, if a failure occurs during normal operation or resources are removed, the system generates an event if it cannot maintain separation of MSFPs for the MDAs. When configured to false , the router does not generate events.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

default-paths-only *boolean*

Synopsis	Allocate the default paths to dedicated MSFPs
Context	configure card number fp number hi-bw-mcast-src default-paths-only <i>boolean</i>
Tree	default-paths-only
Description	When configured to true , the system only attempts to allocate the two default paths (one high priority and one low priority) to dedicated MSFPs. When configured to false , the default path allocation is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

group *number*

Synopsis	Logical MSFP group for the MDA
Context	configure card number fp number hi-bw-mcast-src group <i>number</i>
Tree	group
Description	This command specifies the logical MSFP group for the MDA. If a group is specified, all FPs in the group share the same MSFP.
Range	0 to 32
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

ingress

Synopsis	Enter the ingress context
Context	configure card <i>number</i> fp <i>number</i> ingress
Tree	ingress
Introduced	16.0.R1

access

Synopsis	Enter the access context
Context	configure card <i>number</i> fp <i>number</i> ingress access
Tree	access
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue-group [[queue-group-name](#)] *reference* [instance-id](#) *number*

Synopsis	Enter the queue-group list instance
Context	configure card <i>number</i> fp <i>number</i> ingress access queue-group <i>reference</i> instance-id <i>number</i>
Tree	queue-group
Description	Commands in this context create a named queue group template on the ingress forwarding plane of an IOM or IMM.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[[queue-group-name](#)] *reference*

Synopsis	Queue group name
Context	configure card <i>number</i> fp <i>number</i> ingress access queue-group <i>reference</i> instance-id <i>number</i>
Tree	queue-group
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

instance-id *number*

Synopsis Instance ID

Context **configure** *card number* *fp number* *ingress access queue-group reference* *instance-id number*

Tree [queue-group](#)

Range 1 to 65535

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

accounting-policy *reference*

Synopsis Accounting policy for the FP ingress queue group

Context **configure** *card number* *fp number* *ingress access queue-group reference* *instance-id number* *accounting-policy reference*

Tree [accounting-policy](#)

Description This command configures an accounting policy for the FP ingress queue group. You can only apply accounting policies associated with service billing to SAPs. Only associate the accounting policy with one interface at a time.

Reference **configure** [log accounting-policy](#) *number*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

collect-stats *boolean*

Synopsis Collect statistics on FP ingress queue group

Context **configure** *card number* *fp number* *ingress access queue-group reference* *instance-id number* *collect-stats* *boolean*

Tree [collect-stats](#)

Description When configured to **true**, the system collects accounting and statistical data for the queue group on the FP.

When configured to **false**, the system still accumulates the statistics; however, the CPU does not obtain the results and write them to the billing file.

If this command is set to **true** (after it had previously been set to **false**), the counters written to the billing file include the traffic collected when the command was set to **false**.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description string

max-rate (number | keyword)

Synopsis	Maximum rate override
----------	-----------------------

Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-control-policy overrides max-rate (number keyword)</i>
Tree	max-rate
Description	<p>This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.</p> <p>For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.</p> <p>Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.</p> <p>If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.</p>
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds</i>
Tree	priority-mbs-thresholds
Description	<p>Commands in this context configure the derivative for the shared portion and fair portion for each priority level.</p> <p>The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

min-threshold-separation (*number* | *keyword*)

Synopsis Minimum separation between any two active thresholds

policer-overrides

Synopsis	Enter the policer-overrides context
Context	configure <i>card</i> <i>number</i> <i>fp</i> <i>number</i> <i>ingress</i> <i>access</i> <i>queue-group</i> <i>reference</i> <i>instance-id</i> <i>number</i> <i>policer-overrides</i>
Tree	policer-overrides
Description	Commands in this context configure specific overrides to one or more policers created on the SAP through SAP ingress QoS policies.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer [*policer-id*] *reference*

Synopsis	Enter the policer list instance
Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference</i>
Tree	<i>policer</i>
Description	<p>Commands in this context create, modify, or delete a policer. Policers are created and used in a similar manner to queues. Unlike queues that have dedicated counters, policers allow various stat-mode settings that define the counters to be associated with the policer. Packet byte offset provides a policer with the ability to modify the size of each packet based on a defined number of bytes. All policers must be created within the QoS policies.</p> <p>After a policer is created, it cannot be deleted from the QoS policy unless all forwarding classes mapped to the policer are first moved to other policers or queues.</p> <p>The system allows a policer to be created on a SAP QoS policy regardless of the ability to support policers on objects where the policy is currently applied. The system only scans the current objects for policer support and sufficient resources to create the policer when a forwarding class is first mapped to the policer ID. If the policer cannot be created because one or more instances of the policy do not support policing or have insufficient resources to create the policer, the forwarding class mapping fails.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[*policer-id*] *reference*

Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference</i>
Tree	<i>policer</i>
Reference	configure <i>qos queue-group-templates ingress queue-group string policer number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (*number* | *keyword*)

Synopsis	CBS tolerance allowed by the policer
Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference cbs (number keyword)</i>

Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (*number* | *keyword*)

Synopsis	Maximum burst tolerance allowed by the policer
Context	configure card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size adjustment
----------	------------------------

Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>packet-byte-offset number</i>
Tree	packet-byte-offset
Description	<p>This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.</p> <p>Use this command to add downstream frame encapsulation or remove portions of packet headers.</p> <p>When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.</p>
Range	-32 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>rate</i>
Tree	rate
Description	<p>Commands in this context configure the metering and optional profiling rates of the policer.</p> <p>The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	CIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress access queue-group reference</i> <i>instance-id number</i> <i>policer-overrides policer reference</i> <i>rate cir (number keyword)</i>
Tree	cir
Description	<p>This command overrides the default CIR rate of the policer.</p> <p>When the policer is first created, the profiling rate defaults to 0 kb/s.</p>

When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.

Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	PIR for the policer
Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference rate pir</i> (<i>number</i> <i>keyword</i>)
Tree	pir
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	configure <i>card number fp number ingress access queue-group reference instance-id number policer-overrides policer reference stat-mode keyword</i>
Tree	stat-mode
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

dist-cpu-protection

Synopsis	Enter the dist-cpu-protection context
Context	configure <i>card number</i> <i>fp number</i> <i>ingress</i> dist-cpu-protection
Tree	dist-cpu-protection
Description	Commands in this context configure the distributed CPU protection forwarding plane settings.
Introduced	21.2.R1
Platforms	All

dynamic-enforcement-policer-pool *number*

Synopsis	Number of policers reserved as enforcement policers use
Context	configure <i>card number</i> <i>fp number</i> <i>ingress</i> dist-cpu-protection dynamic-enforcement-policer-pool <i>number</i>
Tree	dynamic-enforcement-policer-pool
Description	<p>This command reserves a set of policers for use as dynamic enforcement policers for the Distributed CPU Protection (DCP) feature. Policers are allocated from this pool and instantiated as per-object per-protocol dynamic enforcement policers after a local monitor is triggered for an object, such as a SAP or network interface.</p> <p>A change to this configured value automatically clears the high water mark, timestamp, and failed allocation count.</p> <p>If the command is configured to a value below the currently used or allocated number, all dynamic policers are returned to the free pool (and traffic returns to the local monitors).</p>
Range	1000 to 32000
Introduced	21.2.R1
Platforms	All

mcast-path-management

Synopsis	Enter the mcast-path-management context

amber-alarm-threshold number

Synopsis	Amber alarm threshold allowed on oversubscription
Context	configure card number fp number ingress network pool string amber-alarm-threshold number
Tree	amber-alarm-threshold
Description	This command configures the threshold for the amber alarm on oversubscription.

If both amber and red alarm thresholds are configured, the amber alarm threshold must be equal to or less than the red alarm threshold.

Range	1 to 1000
Units	percent
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

red-alarm-threshold *number*

Synopsis	Red alarm threshold allowed on oversubscription
Context	configure <i>card number fp number ingress network pool string red-alarm-threshold number</i>
Tree	red-alarm-threshold
Description	This command configures the threshold for the red alarm on oversubscription. If both amber and red alarm thresholds are configured, the red alarm threshold must be equal to or exceed the amber alarm threshold.
Range	1 to 1000
Units	percent
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

resv-cbs

Synopsis	Enter the resv-cbs context
Context	configure <i>card number fp number ingress network pool string resv-cbs</i>
Tree	resv-cbs
Description	Commands in this context specify the pool buffer settings. The commands do not set aside buffers within the buffer pool for CBS reservation. The CBS value per queue only determines the point at which enqueueing packets are subject to a RED slope. CBS oversubscription can result in a queue operating within its CBS configuration and still being unable to enqueue a packet due to unavailable buffers.
Introduced	19.5.R1
Platforms	All

amber-alarm-action

Synopsis	Enter the amber-alarm-action context
----------	---

Context	configure card number fp number ingress network pool string resv-cbs amber-alarm-action
Tree	amber-alarm-action
Description	<p>Commands in this context specify settings for the reserved Committed Burst Size (CBS) and step change when the amber alert threshold is exceeded.</p> <p>The reserved CBS defines the amount of buffer space within the pool that is not considered shared.</p>
Introduced	19.5.R1
Platforms	All

max number

Synopsis	Maximum reserved CBS size of the pool
Context	configure card number fp number ingress network pool string resv-cbs amber-alarm-action max number
Tree	max
Description	<p>This command configures the maximum reserved CBS size of the pool.</p> <p>To enable adaptive CBS sizing, this command and the step command must be configured.</p> <p>The value for this command must not be more than the configure card fp ingress network pool resv-cbs cbs command.</p> <p>When the configure card fp ingress network pool resv-cbs cbs command is set to a value of zero (0), adaptive CBS sizing is disabled.</p>
Range	1 to 100
Units	percent
Introduced	19.5.R1
Platforms	All

step number

Synopsis	Step-size percentage for reserved CBS size of the pool
Context	configure card number fp number ingress network pool string resv-cbs amber-alarm-action step number
Tree	step
Description	<p>This command configures the step-size percentage for the reserved CBS size of the pool.</p> <p>To enable adaptive CBS sizing, this command and the max command must be configured.</p>

When the **configure card fp ingress network pool resv-cbs cbs** command is set to a value of zero (0), adaptive CBS sizing is disabled.

Range	1 to 100
Units	percent
Introduced	19.5.R1
Platforms	All

cbs *number*

Synopsis	Pool size reserved for CBS
Context	configure card number fp number ingress network pool string resv-cbs cbs number
Tree	cbs
Description	This command configures the percentage of pool size reserved for CBS. For network, the default value is computed as the sum of the CBS request by the entities using the pool. For access, the default value is 30%.
Range	0 to 100
Units	percent
Introduced	19.5.R1
Platforms	All

slope-policy *reference*

Synopsis	Slope policy
Context	configure card number fp number ingress network pool string slope-policy reference
Tree	slope-policy
Description	This command specifies the slope policy that defines the high and low priority RED slope parameters and the time average factor.
Reference	configure qos slope-policy string
Introduced	19.5.R1
Platforms	All

queue-group [[queue-group-name](#)] *reference instance-id number*

Synopsis	Enter the queue-group list instance
Context	configure card number fp number ingress network queue-group reference instance-id number

Tree	queue-group
Description	Commands in this context configure IOM ingress network forwarding plane queue-group settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[queue-group-name] reference

Synopsis	Queue group name
Context	configure card number fp number ingress network queue-group reference instance-id number
Tree	queue-group
Reference	configure qos queue-group-templates ingress queue-group string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

instance-id number

Synopsis	Instance ID
Context	configure card number fp number ingress network queue-group reference instance-id number
Tree	queue-group
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

accounting-policy reference

Synopsis	Accounting policy for the FP ingress queue group
Context	configure card number fp number ingress network queue-group reference instance-id number accounting-policy reference
Tree	accounting-policy

Description	This command configures an accounting policy for the FP ingress queue group. You can only apply accounting policies associated with service billing to SAPs. Only associate the accounting policy with one interface at a time.
Reference	configure log accounting-policy <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

collect-stats *boolean*

Synopsis	Collect statistics on FP ingress queue group
Context	configure card <i>number</i> fp <i>number</i> ingress network queue-group <i>reference</i> instance-id <i>number</i> collect-stats <i>boolean</i>
Tree	collect-stats
Description	<p>When configured to true, the system collects accounting and statistical data for the queue group on the FP.</p> <p>When configured to false, the system still accumulates the statistics; however, the CPU does not obtain the results and write them to the billing file.</p> <p>If this command is set to true (after it had previously been set to false), the counters written to the billing file include the traffic collected when the command was set to false.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description *string*

Synopsis	Text description
Context	configure card <i>number</i> fp <i>number</i> ingress network queue-group <i>reference</i> instance-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer-control-policy

Synopsis	Enter the policer-control-policy context
----------	---

Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-control-policy</i>
Tree	policer-control-policy
Description	Commands in this context configure the IOM ingress network forwarding plane queue-group policer control policy settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

overrides

Synopsis	Enable the overrides context
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides</i>
Tree	overrides
Description	Commands in this context configure the IOM ingress network forwarding plane queue-group policer control policy override settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

max-rate (*number* | *keyword*)

Synopsis	Maximum rate override
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides max-rate (number keyword)</i>
Tree	max-rate
Description	<p>This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.</p> <p>For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.</p> <p>Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.</p>

If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds
Tree	priority-mbs-thresholds
Description	Commands in this context configure settings to derive the shared portion and fair portion for each priority level. The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

min-threshold-separation (*number* | *keyword*)

Synopsis	Minimum separation between any two active thresholds
Context	configure card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds min-threshold-separation (<i>number</i> <i>keyword</i>)
Tree	min-threshold-separation
Description	This command configures the minimum separation between any two active thresholds in the parent policer.
Range	0 to 16777216
Units	bytes
Options	auto

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority [[level](#)] *number*

Synopsis	Enter the priority list instance
Context	configure card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds priority <i>number</i>
Tree	priority
Description	Commands in this context configure the list of priority MBS threshold priority settings for IOM ingress network forwarding plane queue-group policer control policy overrides.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[level] *number*

Synopsis	Priority level, higher number is stricter
Context	configure card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds priority <i>number</i>
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs-contribution (*number* | *keyword*)

Synopsis	MBS contribution size override
Context	configure card number fp number ingress network queue-group reference instance-id number policer-control-policy overrides priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>)
Tree	mbs-contribution
Description	This command specifies the packet burst capacity required at the parent policer for a specified priority level with at least one child, and where the total capacity also includes the capacity of all lower thresholds.
Range	0 to 16777216
Units	bytes

Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policy-name *reference*

Synopsis	Policer control policy name
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-control-policy policy-name reference</i>
Tree	policy-name
Reference	configure qos policer-control-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer-overrides

Synopsis	Enter the policer-overrides context
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides</i>
Tree	policer-overrides
Description	Commands in this context configure the policer overrides for the IOM ingress network forwarding plane queue-groups.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer [[policer-id](#)] *reference*

Synopsis	Enter the policer list instance
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference</i>
Tree	policer
Description	Commands in this context configure the list of policer override parameters for IOM ingress network forwarding plane queue-groups.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] reference

Synopsis	Policer ID
Context	configure card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference
Tree	policer
Reference	configure qos queue-group-templates ingress queue-group string policer number
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (number | keyword)

Synopsis	CBS tolerance allowed by the policer
Context	configure card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference cbs (number keyword)
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (number | keyword)

Synopsis	Maximum burst tolerance allowed by the policer
Context	configure card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference mbs (number keyword)
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold.

If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate.

The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.

Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size adjustment
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference packet-byte-offset number</i>
Tree	packet-byte-offset
Description	<p>This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.</p> <p>Use this command to add downstream frame encapsulation or remove portions of packet headers.</p> <p>When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.</p>
Range	-32 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure <i>card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference rate</i>
Tree	rate
Description	Commands in this context configure the metering and optional profiling rates of the policer.

The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	CIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress network queue-group reference instance-id number policer-overrides policer reference rate cir</i> (<i>number</i> <i>keyword</i>)
Tree	cir
Description	This command overrides the default CIR rate of the policer. When the policer is first created, the profiling rate defaults to 0 kb/s. When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	PIR for the policer
Context	configure <i>card number</i> <i>fp number</i> <i>ingress network queue-group reference instance-id number policer-overrides policer reference rate pir</i> (<i>number</i> <i>keyword</i>)
Tree	pir
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When max is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 2000000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	configure card number fp number ingress network queue-group reference instance-id number policer-overrides policer reference stat-mode <i>keyword</i>
Tree	stat-mode
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue-policy *reference*

Synopsis	Network queue policy
Context	configure card number fp number ingress network queue-policy reference
Tree	queue-policy
Reference	configure qos network-queue string
Introduced	19.5.R1
Platforms	All

policy-accounting

Synopsis	Enter the policy-accounting context
Context	configure card number fp number ingress policy-accounting
Tree	policy-accounting
Description	Commands in this context configure policy accounting. Use policy accounting to collect statistics about the amount of traffic matching particular routes or to police traffic associated with certain routes as destinations of the traffic.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

classes *number*

Synopsis	Number of accounting classes for the forwarding plane
Context	configure <i>card number fp number ingress policy-accounting classes number</i>
Tree	classes
Description	This command specifies the maximum number of source and destination classes that can be instantiated for accounting purposes on the interfaces of a specific card or FP. When unconfigured, resources are not reserved for source or destination classes.
Range	1000 to 128000
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policers *number*

Synopsis	Number of policer resources for policy accounting
Context	configure <i>card number fp number ingress policy-accounting policers number</i>
Tree	policers
Range	1 to 64000
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ingress-buffer-allocation *decimal-number*

Synopsis	Ingress buffer pool allocation for the forwarding plane
Context	configure <i>card number fp number ingress-buffer-allocation decimal-number</i>
Tree	ingress-buffer-allocation
Description	This command configures an ingress buffer allocation for the FP. Ingress buffer allocation applies to user-accessible buffers (total buffers less those reserved for system use). The ingress buffer allocation determines how much of the user-accessible buffers are available for ingress purposes. The remaining buffers are available for egress purposes.
Range	20.00 to 80.00
Units	percent

Default	50.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

init-extract-prio-mode *keyword*

Synopsis	Initial drop priority mode of extracted traffic
Context	configure <i>card number fp number</i> init-extract-prio-mode <i>keyword</i>
Tree	init-extract-prio-mode
Description	<p>This command specifies the scheme to select the initial drop priority of extracted control plane traffic.</p> <p>The initial drop priority of extracted packets can be either low or high priority. The drop priority can be altered subsequently by mechanisms such as CPU protection.</p> <p>High priority traffic receives preferential treatment in control plane congestion situations over low priority traffic.</p>
Options	uniform, l3-classify
Default	uniform
Introduced	16.0.R1
Platforms	All

stable-pool-sizing *boolean*

Synopsis	Enable stable pool sizing for the forwarding plane
Context	configure <i>card number fp number</i> stable-pool-sizing <i>boolean</i>
Tree	stable-pool-sizing
Description	<p>When configured to true, the router provides a stable buffer pool allocation environment for all default port buffer pools on the forwarding plane. This stable environment is provided at the expense of optimal buffer allocation between the various port buffer pools.</p> <p>When configured to false, the router disables stable pool sizing on the forwarding plane. Existing buffer pools are resized according to normal pool sizing behavior.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the card
Context	configure card <i>number level keyword</i>
Tree	level
Description	<p>This command configures the license level of the card.</p> <p>New generations of cards include variants controlled by hardware and software licensing. For these cards, the license level must be provisioned in addition to the card type. A card cannot become operational unless the provisioned license level matches the license level of the card installed into the slot. The set of license levels varies by card type.</p> <p>The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress user queues and egress policers. Changes to the provisioned license level may be blocked if configuration exists that would not be permitted with the new target license level.</p> <p>If the license level is not specified, the level is set to the highest license level for that card.</p>
Options	unrestricted, he, er, cr, he1200g+, er1200g+, cr1200g+, he400g, er400g, cr400g, he400g+, er400g+, cr400g+, he800g+, er800g+, cr800g+, he4800g+, er4800g+, cr4800g+, he4800g, er4800g, cr4800g, he2400g+, er2400g+, cr2400g+, he2400g, er2400g, cr2400g, he9600g, er9600g, cr9600g, he14400g, er14400g, cr14400g, he14400g+, er14400g+, cr14400g+, he2800g+, er2800g+, cr2800g+, he6000g+, er6000g+, cr6000g+, he18000g+, er18000g+, cr18000g+, he19200g, er19200g, cr19200g
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1se

mda [[mda-slot](#)] *number*

Synopsis	Enter the mda list instance
Context	configure card <i>number mda number</i>
Tree	mda
Description	Commands in this context cover attributes for specific MDA and XMA.
Introduced	16.0.R1
Platforms	All

[mda-slot] number

Synopsis	MDA or XMA slot
Context	configure card <i>number</i> mda <i>number</i>
Tree	mda
Range	1 to 6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the access context
Context	configure card <i>number</i> mda <i>number</i> access
Tree	access
Description	Commands in this context configure egress and ingress pool policy parameters. Access egress and ingress pools are only allocated on channelized MDAs.
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure card <i>number</i> mda <i>number</i> access egress
Tree	egress
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure card <i>number</i> mda <i>number</i> access ingress
Tree	ingress
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the MDA
Context	configure <i>card number mda number admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

clock-mode

Synopsis	Enter the clock-mode context
Context	configure <i>card number mda number clock-mode</i>
Tree	clock-mode
Description	Commands in this context define the clock mode on the MDA. This context is supported only on CES MDAs.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

mode *keyword*

Synopsis	Clock mode
Context	configure <i>card number mda number clock-mode mode keyword</i>
Tree	mode
Options	adaptive, differential
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

timestamp-freq *number*

Synopsis	Differential timestamp frequency
Context	configure <i>card number mda number clock-mode timestamp-freq number</i>
Tree	timestamp-freq
Range	19440 77760 103680

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

egress-xpl

Synopsis	Enter the egress-xpl context
Context	configure <i>card number mda number</i> egress-xpl
Tree	egress-xpl
Description	Commands in this context specify settings for the fail-on-error feature.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	Threshold value for XPL errors
Context	configure <i>card number mda number</i> egress-xpl threshold <i>number</i>
Tree	threshold
Description	This command configures the threshold for XPL errors. If the number of XPL errors exceeds the threshold value defined by the window <i>value</i> command, the MDA is placed in the failed state.
Range	1 to 1000000
Units	xpl errors
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window *number*

Synopsis	Time interval to measure XPL error frequency
Context	configure <i>card number mda number</i> egress-xpl window <i>number</i>
Tree	window
Description	This command configures the time interval used to measure the frequency of XPL errors for the fail-on-error feature. If the number of XPL errors exceeds the threshold value in defined by this command, the MDA is placed in the Failed state.
Range	1 to 1440
Units	minutes

Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

event [*type*] *keyword*

Synopsis	Enter the event list instance
Context	configure <i>card number</i> <i>mda number</i> event <i>keyword</i>
Tree	event
Description	Commands in this context allow the user to control the action taken when a specific hardware error event is raised against the target MDA. If no event action has been created for a specific event type, the management plane of the router ignores the hardware errors related to that event type.
Introduced	19.7.R1
Platforms	All

[type] *keyword*

Synopsis	MDA event type being monitored
Context	configure <i>card number</i> <i>mda number</i> event <i>keyword</i>
Tree	event
Description	This command configures the type of event to be acted upon. <ul style="list-style-type: none"> • soft-error — Defines the action to take when soft errors are detected on the MDA. • internal-frame-loss — Provides system detected frame loss in the traffic transiting the MDA. • memory-error — Provides the user options to handle MDA memory error events on MDAs. This feature is supported on FP2- and FP3-based Ethernet MDAs and IMMs. • data-link-error — Provides the user options to handle datapath link errors on an MDA.
Options	soft-error , internal-frame-loss , memory-error , datapath-link-error
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

action *keyword*

Synopsis	Action when a specific hardware error event is raised
----------	---

Context	configure card number mda number event keyword action keyword
Tree	action
Description	<p>This command defines the action taken when a specific hardware error event is detected on the target MDA.</p> <p>When no event action is specified for an event type, the hardware errors related to the event type are ignored by the management plane of the router.</p> <p>Actions include the following:</p> <ul style="list-style-type: none"> • log-only — Pass the log event to log management. No other action is taken. • reset-md — Reset the MDA. • fail-md — Set the operational state of the MDA to Failed. This Failed state persists until the clear mda command is issued (reset) or the MDA is removed and reinserted (re-seated).
Options	none, log-only, reset, fail
Introduced	19.7.R1
Platforms	All

fail-on-error *boolean*

Synopsis	Set operational state to Failed if an error is detected
Context	configure card number mda number fail-on-error boolean
Tree	fail-on-error
Description	<p>When configured to true, the fail-on-error feature is enabled on the MDA. When a defined rate of egress or ingress XPL errors occur on an MDA within a specified time interval, the MDA is placed in the Failed state. This can force an APS switchover or traffic to be rerouted.</p> <p>The purpose of this feature is to avoid situations where traffic is forced to use a physical link that suffers from errors but is still technically operational. The feature uses values configured in the configure card mda egress-xpl and configure card mda ingress-xpl contexts.</p> <p>See "Fail-on-error overview" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Troubleshooting Guide</i> for more information.</p>
Default	false
Introduced	16.0.R1
Platforms	All

ingress-xpl

Synopsis	Enter the ingress-xpl context
----------	--------------------------------------

Context	configure card number mda number ingress-xpl
Tree	ingress-xpl
Description	Commands in this context specify settings for ingress XPL error occurrences.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	Threshold value for XPL errors
Context	configure card number mda number ingress-xpl threshold <i>number</i>
Tree	threshold
Description	This command configures the threshold for XPL errors. If the number of XPL errors exceeds the threshold value defined by the window <i>value</i> command, the MDA is placed in the failed state.
Range	1 to 1000000
Units	xpl errors
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window *number*

Synopsis	Time interval to measure XPL error frequency
Context	configure card number mda number ingress-xpl window <i>number</i>
Tree	window
Description	This command configures the time interval used to measure the frequency of XPL errors for the fail-on-error feature. If the number of XPL errors exceeds the threshold value in defined by this command, the MDA is placed in the Failed state.
Range	1 to 1440
Units	minutes
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mda-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MDA type for the slot
Context	configure card number mda number mda-type keyword
Tree	mda-type
Description	<p>This command provisions a specific MDA type to the device configuration for the slot. The MDA can be pre-provisioned and an MDA must be provisioned before connectors or ports can be configured.</p> <p>A maximum of two MDAs can be provisioned on an IOM or XCM. XMAs are provisioned using MDA commands.</p> <p>A medium severity alarm is generated if an MDA is inserted that does not match the MDA type configured for the slot. This alarm is cleared when the correct MDA is inserted or the configuration is modified. A high severity alarm is raised when an administratively enabled MDA is removed from the chassis. This alarm is cleared if either the correct MDA type is inserted or the configuration is modified. A low severity alarm is issued if an MDA is removed that is administratively disabled.</p> <p>An MDA can only be provisioned in a slot if the MDA type is allowed in the MDA slot. An error message is generated when an MDA is provisioned in a slot where it is not allowed.</p>

Some MDA hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two MDA types that are the same, except for a “-ptp” suffix to indicate the second loadset. A hard reset of the MDA occurs when switching between the two provisioned types.

An alarm is raised if partial or complete MDA failure is detected. The alarm is cleared when the error condition ceases.

New generations of XMAs include variants controlled through hardware and software licensing. For these XMA, the license level must be provisioned in addition to the MDA type. An XMA cannot become operational unless the provisioned license level matches the license level of the XMA installed into the slot.

The set of license levels varies by MDA type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress queues and egress policers. Changes to the provisioned license level may be blocked if configuration that would not be permitted with the new target license level exists. If the license level is not specified, the level is set to the highest license level for that XMA.

Tree	ingress
Introduced	16.0.R1
Platforms	All

power-priority-level *number*

Synopsis	Power priority level for the MDA
Context	configure card <i>number</i> mda <i>number</i> power-priority-level <i>number</i>
Tree	power-priority-level
Range	1 to 200
Default	150
Introduced	16.0.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

reset-on-recoverable-error *boolean*

Synopsis	Reset MDA for fatal memory parity error on a Q-chip
Context	configure <i>card number</i> <i>mda number</i> reset-on-recoverable-error <i>boolean</i>
Tree	reset-on-recoverable-error
Description	When configured to true , the MDA resets when a fatal memory parity error is detected on a Q-chip of the MDA, regardless of the setting of the fail-on-error configuration for the MDA. When configured to false , the recovery action is taken instead of resetting the MDA.
Default	false
Introduced	16.0.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

sync-e *keyword*

Synopsis	Synchronous Ethernet capability
Context	configure <i>card number</i> <i>mda number</i> sync-e <i>keyword</i>
Tree	sync-e
Description	This command enables synchronous Ethernet on the MDA. When enabled, any port on the MDA can be used as a source port in the central frequency clock configuration, under the configure system central-frequency-clock context.
Options	true, false
Introduced	16.0.R1
Platforms	All

upgrade [*upgrade-index*] *number*

Synopsis	Enter the upgrade list instance
Context	configure <i>card number</i> <i>mda number</i> upgrade <i>number</i>
Tree	upgrade
Description	Commands in this context configure the license level upgrade for the MDA. You can apply multiple upgrades to an MDA. The first upgrade must use index 1, then index 2, and so on. When removing upgrades, remove the largest index first, followed by the next largest, and so on. Some upgrades require a hard reset of the MDA to take effect. In general, this is required when the full duplex bandwidth changes as a result of the upgrade.
Introduced	16.0.R4

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

power-save boolean

Synopsis	Place card in power-save mode when not in use
Context	configure <i>card number power-save boolean</i>
Tree	<i>power-save</i>
Description	<p>When configured to true, this command enables the power-save mode on the card when it is not in use. The power-save mode allows the card to be installed and configured in a platform for future use, while having minimal impact on the overall power consumption.</p> <p>A card placed in the power-save mode is reset, forced into an idle state, and consumes minimal power. In power save mode, the download of a software image to the card is not allowed. The card must be administratively disabled before it is placed in the power-save mode.</p> <p>Cards in the power save mode do not count in the intelligent power management budget and they also do not pass traffic.</p> <p>When configured to false, this command removes the card from power-save mode.</p>
Default	false
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a8, 7750 SR-2e, 7750 SR-3e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

reset-on-recoverable-error boolean

Synopsis	Reset card for fatal memory parity error on a Q-chip
Context	configure <i>card number reset-on-recoverable-error boolean</i>
Tree	<i>reset-on-recoverable-error</i>
Description	When configured to true , the card is reset when a fatal memory parity error is detected on a Q-chip of the card, regardless of the setting of the fail-on-error configuration for the card.

	When configured to false , the recovery action is taken instead of resetting the card.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

upgrade [*upgrade-index*] *number*

Synopsis	Enter the upgrade list instance
Context	configure <i>card number upgrade number</i>
Tree	<i>upgrade</i>
Description	<p>Commands in this context assign a license level upgrade to the card, XIOM, or XMA. There can be multiple upgrades applied to a card, XIOM, or XMA. The first upgrade must use index 1, and then next index 2, and so on. Also, when removing upgrades, the largest index must be removed first, and then the next largest removed, and so on.</p> <p>The path indicates the starting level and the new level that will apply due to the upgrade. For example, "cr1200g-cr1600g" can be applied to an XMA that is currently at the cr1200g level and after application of the upgrade, the operational level of the XMA will be cr1600g.</p> <p>There must be an upgrade license available for the path specified. Available upgrades can be checked using the show licensing entitlements command.</p> <p>Some upgrades require a hard reset of the card or MDA to take effect. In general, this is required when the Full Duplex bandwidth is being changed.</p>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-1se

virtual-scheduler-adjustment

Synopsis	Enter the virtual-scheduler-adjustment context
Context	configure <i>card number</i> virtual-scheduler-adjustment
Tree	virtual-scheduler-adjustment
Description	Commands in this context configure virtual scheduler parameters. This is only applicable to queues and policers associated to a scheduler.
Introduced	16.0.R1
Platforms	All

internal-scheduler-weight-mode *keyword*

Synopsis	Internal scheduler weight mode
----------	--------------------------------

Context	configure <i>card number</i> virtual-scheduler-adjustment internal-scheduler-weight-mode <i>keyword</i>
Tree	internal-scheduler-weight-mode
Description	This command specifies the internal scheduler (tier 0) weight mode for all ingress queues on a LAG on the card on which it is applied.
Options	auto, force-equal, offered-load, capped-offered-load
Default	auto
Introduced	16.0.R1
Platforms	All

interval

Synopsis	Enter the interval context
Context	configure <i>card number</i> virtual-scheduler-adjustment interval
Tree	interval
Introduced	16.0.R1
Platforms	All

rate-calculation-minimum

Synopsis	Enter the rate-calculation-minimum context
Context	configure <i>card number</i> virtual-scheduler-adjustment interval rate-calculation-minimum
Tree	rate-calculation-minimum
Description	<p>Commands in this context override the default minimum time that must elapse before a policer or queue's offered rate can be recalculated. A minimum time between offered rate calculations is enforced to both prevent inaccurate estimation of the offered rate and excessive input to the virtual scheduler process.</p> <p>To smooth out rapidly fluctuating offered rates, the system averages the measured offered rate with a window of previously measured offered traffic statistics and knowledge of the time between the samples.</p>
Introduced	16.0.R1
Platforms	All

fast-queue *decimal-number*

Synopsis	Minimum rate calculation time for fast queues
----------	---

Context	configure <i>card number</i> virtual-scheduler-adjustment interval rate-calculation-minimum fast-queue <i>decimal-number</i>
Tree	fast-queue
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

slow-queue *decimal-number*

Synopsis	Minimum rate calculation time for slow queues
Context	configure <i>card number</i> virtual-scheduler-adjustment interval rate-calculation-minimum slow-queue <i>decimal-number</i>
Tree	slow-queue
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

scheduler-run-minimum *decimal-number*

Synopsis	Minimum time of the scheduler run
Context	configure <i>card number</i> virtual-scheduler-adjustment interval scheduler-run-minimum <i>decimal-number</i>
Tree	scheduler-run-minimum
Description	<p>This command overrides the default minimum time that must elapse before a virtual scheduler can redistribute bandwidth based on changes to the offered rates of member policers or queues.</p> <p>A minimum run interval is enforced to manage the number of batched queue changes before reacting to the changed rates. Because the periodic function of determining policer or queue offered rates is performed sequentially, the interval allows the policer and queue rates to be determined before the bandwidth distribution to the policers and queues.</p>
Range	0.01 to 1000.00
Units	percent
Default	100.00

Introduced	16.0.R1
Platforms	All

task-scheduling *decimal-number*

Synopsis	Task scheduling interval
Context	configure <i>card number</i> virtual-scheduler-adjustment interval task-scheduling <i>decimal-number</i>
Tree	task-scheduling
Description	This command overrides the system default time interval for scheduling the hierarchical virtual scheduler task. By default, the system wakes the virtual scheduler task every 50 ms which is equivalent to five 10 ms timer ticks.
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

slow-queue-threshold-rate *number*

Synopsis	Slow queue threshold rate
Context	configure <i>card number</i> virtual-scheduler-adjustment slow-queue-threshold-rate <i>number</i>
Tree	slow-queue-threshold-rate
Description	This command overrides the system default threshold rate used to place policers and queues in the slow queue category. Slow rate policers and queues use a different minimum rate calculation interval time than fast rate queues. The fast rate threshold is derived by multiplying the adjusted slow rate threshold by a factor of 1.5. Configuring a value of zero (0) forces all policers and queues to be treated as fast rate queues.
Range	0 to 1000000
Units	kilobps
Default	1000
Introduced	16.0.R1
Platforms	All

xiom [*xiom-slot*] *string*

Synopsis	Enter the xiom list instance
Context	configure card number xiom string
Tree	xiom
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[xiom-slot] *string*

Synopsis	XIOM slot ID
Context	configure card number xiom string
Tree	xiom
String Length	2
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

admin-state *keyword*

Synopsis	Administrative state of the XIOM
Context	configure card number xiom string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

fail-on-error *boolean*

Synopsis	Set operational state of the card to failed on error
Context	configure card number xiom string fail-on-error boolean
Tree	fail-on-error

Description	When configured to true , the operational state of the card is set to failed when at least one of a specific set of card-level errors is detected. The failed state persists until the operator reseats the card or resets it using the clear command.
Default	false
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

level keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the XIOM
Context	configure card number xiom string level keyword
Tree	level
Description	<p>This command provisions the license level of the XIOM, which controls aspects related to connector provisioning and consumption of hardware egress queues and policers.</p> <p>An XIOM only becomes operational if the provisioned license level matches the license level of the card installed into the slot.</p> <p>The set of license levels varies by XIOM type. Changes to the provisioned license level may be blocked if a configuration exists that is not permitted with the new target license level.</p> <p>If the license level is not specified, the level is set to the highest license level for the XIOM.</p>
Options	unrestricted, he800g+, er800g+, cr800g+, he1500g+, er1500g+, cr1500g+, he1600g+, er1600g+, cr1600g+, he2400g+, er2400g+, cr2400g+, he3000g+, er3000g+, cr3000g+
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mda [mda-slot] number

Synopsis	Enter the mda list instance
Context	configure card number xiom string mda number
Tree	mda
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[mda-slot] number

Synopsis	MDA slot number
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i>
Tree	mda
Range	1 to 2
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

admin-state keyword

Synopsis	Administrative state of the MDA
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mda-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MDA-s type provisioned for the XIOM slot
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> mda-type <i>keyword</i>
Tree	mda-type
Description	<p>This command provisions the MDA-s type for the XIOM slot.</p> <p>The MDA-s type can be preprovisioned, which means that the MDA-s does not have to be installed in the chassis.</p> <p>You can preprovision the MDA type before you install the MDA in the chassis. An MDA-s can only be provisioned in a slot that is vacant. No other MDA-s can be provisioned (configured) for that particular slot. An error message or log event is generated if the wrong MDA type is provisioned or inserted.</p>
Options	ms6-200gb-cfp2-dco, ms3-200gb-cfp2-dco, ms16-100gb-sfpdd+4-100gb-qsfp28, ms18-100gb-qsfp28, ms4-400gb-qsfpdd+4-100gb-qsfp28, ms24-10/100gb-sfpdd,

	ms2-400gb-qsfpdd+2-100gb-qsfp28, ms8-100gb-sfpdd+2-100gb-qsfp28, ms16-sdd+4-qsfp28-b, ms8-sdd+2-qsfp28-b
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

power-priority-level *number*

Synopsis	Power priority level for the XIOM MDA-s
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> power-priority-level <i>number</i>
Tree	power-priority-level
Description	This command configures the power-priority level for the XIOM MDA-s. Consider the following suggestions when configuring the power-priority level: <ul style="list-style-type: none"> • The lowest number has the highest priority. • Use the priority numbers from 1 to 100 for modules that are essential for system operation. • Use the priority numbers from 101 to 200 for non-essential modules.
Range	1 to 200
Default	150
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

sync-e *keyword*

Synopsis	Synchronous Ethernet capability
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> sync-e <i>keyword</i>
Tree	sync-e
Options	true, false
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

xconnect

Synopsis	Enter the xconnect context
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> xconnect
Tree	xconnect
Introduced	21.5.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

mac [*mac-id*] *number*

Synopsis Enter the **mac** list instance

Context **configure** *card number xiom string mda number xconnect mac number*

Tree [mac](#)

Introduced 21.5.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[mac-id] *number*

Synopsis MAC ID for the MDA cross-connect

Context **configure** *card number xiom string mda number xconnect mac number*

Tree [mac](#)

Range 1 to 12

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis Text description

Context **configure** *card number xiom string mda number xconnect mac number description string*

Tree [description](#)

String Length 0 to 255

Introduced 21.5.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

loopback [*loopback-id*] *number*

Synopsis Enter the **loopback** list instance

Context **configure** *card number xiom string mda number xconnect mac number loopback number*

Tree [loopback](#)

Description	Commands in this context configure a MAC loopback on a MAC chip. The system and services only start using the loopback when a port is associated with it. For example, port 1/1/m1/1, where m1 represents the MAC ID.
Introduced	21.5.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[loopback-id] *number*

Synopsis	Loopback ID for the MDA cross-connect
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> xconnect mac <i>number</i> loopback <i>number</i>
Tree	loopback
Range	1 to 2
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

bandwidth *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum bandwidth for a Layer 2 rate for MAC loopback
Context	configure card <i>number</i> xiom <i>string</i> mda <i>number</i> xconnect mac <i>number</i> loopback <i>number</i> bandwidth <i>number</i>
Tree	bandwidth
Range	10 25 40 100 400
Units	gigabps
Default	100
Introduced	21.5.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

description *string*

Synopsis	Text description
----------	------------------

Context	configure <i>card number xiom string mda number xconnect mac number loopback number description string</i>
Tree	<i>description</i>
String Length	0 to 255
Introduced	21.5.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

reset-on-recoverable-error *boolean*

Synopsis	Reset XIOM for fatal memory parity error on a Q-chip
Context	configure <i>card number xiom string reset-on-recoverable-error boolean</i>
Tree	<i>reset-on-recoverable-error</i>
Description	When configured to true , the XIOM is reset when a fatal memory parity error is detected on a Q-chip of the XIOM, regardless of the setting of the fail-on-error configuration for the XIOM. When configured to false , the recovery action is taken instead of resetting the XIOM.
Default	false
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

upgrade [*upgrade-index*] *number*

Synopsis	Enter the upgrade list instance
Context	configure <i>card number xiom string upgrade number</i>
Tree	<i>upgrade</i>
Description	Commands in this context assign a license level upgrade to the XIOM. Multiple upgrades can be applied to an XIOM. The first upgrade must use index 1, then index 2, and so on. When removing upgrades, the largest index must be removed first, followed by the next largest, and so on. Some upgrades require a hard reset of the XIOM to take effect. In general, this is required when the Full Duplex bandwidth is changed as a result of the upgrade.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[upgrade-index] *number*

Synopsis	Order of the upgrade value
----------	----------------------------

Context	configure card number xiom string upgrade number
Tree	upgrade
Range	1 to 6
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

path keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upgrade name
Context	configure card number xiom string upgrade number path keyword
Tree	path
Description	This command specifies the upgrade name. An upgrade license must be available for the specified path. Available upgrades can be checked using the show licensing entitlements command.
Options	cr800g-cr1500g+, er800g-er1500g+, he800g-he1500g+, cr1600g-cr2400g+, er1600g-er2400g+, he1600g-he2400g+, cr2400g-cr3000g+, er2400g-er3000g+, he2400g-he3000g+, cr-er800g+, er-he800g+, cr-er1500g+, er-he1500g+, cr-er1600g+, er-he1600g+, cr-er2400g+, er-he2400g+, cr-er3000g+, er-he3000g+
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

xiom-type keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	XIOM type
Context	configure card number xiom string xiom-type keyword
Tree	xiom-type
Description	This command associates the XIOM type with the slot.

The XIOM type can be preprovisioned, which means that the XIOM does not have to be installed in the chassis.

An XIOM must be provisioned before an MDA-s, a connector, or a port can be configured. An XIOM can only be provisioned in a slot that is vacant. After an XIOM is provisioned in the slot, no other XIOM can be provisioned (configured) for the slot.

An XIOM can only be provisioned in a slot if the XIOM type is allowed in the slot. An error message is generated if an attempt is made to provision an XIOM type that is not allowed.

If an XIOM is inserted that does not match the configured XIOM type for the slot, then a log event and a facility alarm are raised. The alarm is cleared when the correct XIOM type is installed or the configuration is modified.

A log event and a facility alarm are raised if an administratively enabled XIOM is removed from the chassis. The alarm is cleared when the correct XIOM type is installed or the configuration is modified. A log event is issued when an XIOM is removed that is administratively disabled.

XIOMs are controlled by hardware and software licensing. In addition to the XIOM type, the license level must be provisioned using the **level** command.

Options	iom-s-3.0t, iom-s-1.5t
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

3.9.1 cflowd command descriptions

cflowd

Synopsis	Enable the cflowd context
Context	configure cflowd
Tree	cflowd
Introduced	16.0.R1
Platforms	All

active-flow-timeout *number*

Synopsis	Maximum time before an active flow is exported
Context	configure cflowd active-flow-timeout <i>number</i>
Tree	active-flow-timeout
Description	<p>This command configures the maximum time before an active flow is aged out of the active cache. If an individual flow is active for the configured time, the flow is exported and a new flow is created on the next packet sampled for the flow.</p> <p>This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.</p>
Range	30 to 36000
Units	seconds
Default	1800
Introduced	20.2.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of cflowd
Context	configure cflowd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

analyze-gre-payload *boolean*

Synopsis	Perform cflowd analysis on the inner IP packet
Context	configure cflowd analyze-gre-payload <i>boolean</i>
Tree	analyze-gre-payload
Default	false
Introduced	16.0.R1
Platforms	All

analyze-l2tp-traffic *boolean*

Synopsis	Analyze the inner IP header of an L2TP packet
Context	configure cflowd analyze-l2tp-traffic <i>boolean</i>
Tree	analyze-l2tp-traffic
Description	<p>When configured to true, cflowd looks for and analyzes the inner IP header of an L2TPv2 frame.</p> <p>L2TPv2 traffic is identified by either the source or destination UDP port numbering that is set to 1701.</p> <p>When configured to false, the analysis is not performed.</p>
Default	false
Introduced	19.10.R1
Platforms	All

analyze-v4overv6-traffic *boolean*

Synopsis	Analyze the inner IPv4 packet within an IPv6 packet
Context	configure cflowd analyze-v4overv6-traffic <i>boolean</i>
Tree	analyze-v4overv6-traffic
Description	<p>When configured to true, cflowd looks for and analyzes the inner IPv4 header of IPv4overIPv6 frames that include MAP-E as well as DSLite and SAM traffic.</p> <p>When configured to false, the analysis is not performed.</p>
Default	false
Introduced	19.10.R1
Platforms	All

cache-size *number*

Synopsis	Maximum number of active flows in the flow cache table
Context	configure cflowd cache-size <i>number</i>
Tree	cache-size
Range	1000 to 2000000
Units	flows
Introduced	16.0.R1
Platforms	All

collector [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [port number](#)

Synopsis	Enter the collector list instance
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	collector
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote cflowd collector host
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	collector
Description	This command specifies the IP address of the remote cflowd collector host to receive the exported cflowd data.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

port number

Synopsis	UDP port number of the remote cflowd collector host
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number
Tree	collector

Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the cflowd collector
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

aggregation

Synopsis	Enter the aggregation context
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation
Tree	aggregation
Introduced	16.0.R1
Platforms	All

as-matrix *boolean*

Synopsis	Base aggregation data based on AS information
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation as-matrix <i>boolean</i>
Tree	as-matrix
Default	false
Introduced	16.0.R1
Platforms	All

destination-prefix *boolean*

Synopsis	Aggregate data based on destination prefix information
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation destination-prefix <i>boolean</i>
Tree	destination-prefix
Default	false
Introduced	16.0.R1
Platforms	All

protocol-port *boolean*

Synopsis	Aggregate flows based on the IP protocol and ports
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation protocol-port <i>boolean</i>
Tree	protocol-port
Default	false
Introduced	16.0.R1
Platforms	All

raw *boolean*

Synopsis	Export flow data without aggregation
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation raw <i>boolean</i>
Tree	raw
Default	false
Introduced	16.0.R1
Platforms	All

source-destination-prefix *boolean*

Synopsis	Aggregate data based on prefix information
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number aggregation source-destination-prefix <i>boolean</i>
Tree	source-destination-prefix
Default	false

Introduced	16.0.R1
Platforms	All

source-prefix *boolean*

Synopsis	Aggregate flows based on the source prefix information
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number aggregation source-prefix <i>boolean</i>
Tree	source-prefix
Default	false
Introduced	16.0.R1
Platforms	All

autonomous-system-type *keyword*

Synopsis	Basis of the AS information included in flow data
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number autonomous-system-type <i>keyword</i>
Tree	autonomous-system-type
Options	origin, peer
Default	origin
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number description <i>string</i>
Tree	description
String Length	1 to 80

Platforms	All

vprn-network-interface [service-name reference](#) [network-interface-name reference](#)

Synopsis	Add a list entry for vprn-network-interface
----------	--

Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number export-filter interface-list service vprn-network-interface service-name reference network-interface-name reference
Tree	vprn-network-interface
Introduced	16.0.R4
Platforms	All

service-name *reference*

Synopsis	Administrative service name
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number export-filter interface-list service vprn-network-interface service-name reference network-interface-name reference
Tree	vprn-network-interface
Reference	configure service vprn <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

network-interface-name *reference*

Synopsis	Network interface name
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number export-filter interface-list service vprn-network-interface service-name reference network-interface-name reference
Tree	vprn-network-interface
Description	This command specifies the network interface name. Interface names must be unique within the group of defined IP interfaces for the configure router interface and configure service ies interface commands. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes and must start with a letter.
Reference	configure service vprn <i>string</i> network-interface <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

router [**router-instance**] *string*

Synopsis	Add a list entry for router
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number export-filter router <i>string</i>
Tree	router
Introduced	16.0.R1
Platforms	All

[router-instance] *string*

Synopsis	Router instance name
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number export-filter router <i>string</i>
Tree	router
Description	This command specifies the router instance name. Only "Base" is supported.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

router-instance *string*

Synopsis	Router or service name
Context	configure cflowd collector (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) port number router-instance <i>string</i>
Tree	router-instance
Description	This command specifies the routing instance used to route traffic to the associated collector IP address. The "Base" routing instance is the fallback if no route is found. No fallback mechanism is supported for "Base" and "VPRN".
Default	management
Introduced	16.0.R1
Platforms	All

template-set *keyword*

Synopsis	Templates sent to the collector
----------	---------------------------------

Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number template-set keyword
Tree	template-set
Description	This command specifies the set of templates sent to the collector when using cflowd Version 9 or Version 10.
Options	not-applicable, basic, mpls-ip, l2-ip, mpls-transport, compact, fastpath
Introduced	16.0.R1
Platforms	All

version number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Flow data collector version
Context	configure cflowd collector (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) port number version number
Tree	version
Range	5 8 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

enhanced-distribution boolean

Synopsis	Include ingress port ID in hashing algorithm for cflowd
Context	configure cflowd enhanced-distribution boolean
Tree	enhanced-distribution
Default	false
Introduced	16.0.R1
Platforms	7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

export-mode keyword

Synopsis	Export mode for flow data
Context	configure cflowd export-mode keyword

Tree	export-mode
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

inactive-flow-timeout *number*

Synopsis	Time without matching packet before flow is inactive
Context	configure cflowd inactive-flow-timeout <i>number</i>
Tree	inactive-flow-timeout
Description	This command configures the time interval that must elapse without a packet matching a flow before the flow is considered inactive. This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.
Range	10 to 600
Units	seconds
Default	15
Introduced	20.2.R1
Platforms	All

inband-collector-export-only *boolean*

Synopsis	Export the traffic to all collectors only via in-band interfaces
Context	configure cflowd inband-collector-export-only <i>boolean</i>
Tree	inband-collector-export-only
Default	false
Introduced	16.0.R1
Platforms	All

overflow *number*

Synopsis	Percentage of entries to remove from Cflowd cache when the maximum number of entries is exceeded
Context	configure cflowd overflow <i>number</i>
Tree	overflow

Range	1 to 50
Units	percent
Default	1
Introduced	16.0.R1
Platforms	All

sample-profile [\[profile-id\]](#) *number*

Synopsis	Enter the sample-profile list instance
Context	configure cflowd sample-profile <i>number</i>
Tree	sample-profile
Max. Instances	5
Introduced	19.5.R1
Platforms	All

[\[profile-id\]](#) *number*

Synopsis	The unique specifier of this sample-profile
Context	configure cflowd sample-profile <i>number</i>
Tree	sample-profile
Range	1 to 5
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

metering-process *keyword*

Synopsis	Metering process for samples taken
Context	configure cflowd sample-profile <i>number</i> metering-process <i>keyword</i>
Tree	metering-process
Description	This command specifies the type of metering process to use for the samples taken from the associated interfaces.
Options	standard, fp-accelerated
Default	standard

Introduced	21.10.R1
Platforms	7750 SR-7s, 7750 SR-14s, 7950 XRS-20e

sample-rate *number*

Synopsis	Cflowd sampling rate for sample profile ID
Context	configure cflowd sample-profile <i>number</i> sample-rate <i>number</i>
Tree	sample-rate
Description	This command defines the cflowd sampling rate for the sample profile ID. The sample rate indicates that the associated interface samples 1 in N packets for cflowd analysis. You can only associate one rate profile below 1:256 with a specific IOM, IMM, or XMA.
Range	1 to 60000
Default	1000
Introduced	19.5.R1
Platforms	All

template-retransmit *number*

Synopsis	Time to resend template information
Context	configure cflowd template-retransmit <i>number</i>
Tree	template-retransmit
Range	10 to 600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

use-vrtr-if-index *boolean*

Synopsis	Export flow data using virtual router interface indexes
Context	configure cflowd use-vrtr-if-index <i>boolean</i>
Tree	use-vrtr-if-index
Default	false
Introduced	16.0.R1

Platforms All

3.10 chassis commands

```

3.10.1 chassis command descriptions

chassis [*chassis-class*] *keyword chassis-number number*

Synopsis	Enter the chassis list instance
Context	configure chassis <i>keyword chassis-number number</i>
Tree	<i>chassis</i>
Introduced	16.0.R1
Platforms	All

[chassis-class] *keyword*

Synopsis	Functional use of the physical chassis
Context	configure chassis <i>keyword chassis-number number</i>
Tree	<i>chassis</i>
Options	router
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

chassis-number *number*

Synopsis	Unique index to identify this physical chassis
Context	configure chassis <i>keyword chassis-number number</i>
Tree	<i>chassis</i>
Range	1 to 100
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

monitor-filter-door *boolean*

Synopsis	Allow filter door monitoring
Context	configure chassis <i>keyword chassis-number number monitor-filter-door boolean</i>

Tree	monitor-filter-door
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7s, 7750 SR-14s

peq [[peq-slot](#)] *number*

Synopsis	Enter the peq list instance
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> peq <i>number</i>
Tree	peq
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

[peq-slot] *number*

Synopsis	Unique identifier index for a power supply tray in the chassis
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> peq <i>number</i>
Tree	peq
Range	1 to 31
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PEQ
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> peq <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

input-power-mode *number*

Synopsis	Input power mode of the PEQ
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> peq <i>number</i> input-power-mode <i>number</i>
Tree	input-power-mode
Range	60 80
Units	amperes
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

peq-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	APEQ type
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> peq <i>number</i> peq-type <i>keyword</i>
Tree	peq-type
Options	apeq-dc-2000, apeq-dc-2200-2800, apeq-ac-3000, apeq-hvdc-3000, apeq-dc-4275, ixr-ac-hvdc-3000, ixr-dc-3000, apeq-ac-4400
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

power-connection-module [[pcm-slot](#)] *number*

Synopsis	Enter the power-connection-module list instance
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> power-connection-module <i>number</i>
Tree	power-connection-module
Introduced	16.0.R1
Platforms	7950 XRS-20e

[pcm-slot] *number*

Synopsis	Unique identifier index for a power control module in the chassis
Context	configure chassis <i>keyword</i> chassis-number <i>number</i> power-connection-module <i>number</i>

Tree	power-connection-module
Range	1 to 12
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7950 XRS-20e

pcm-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PCM type

3.12.1 debug command descriptions

debug

Synopsis	Configure application or protocol tracing
Context	debug
Tree	debug
Description	Commands in this context enable detailed debugging information for various protocols and router functions.
Introduced	21.5.R1
Platforms	All

call-trace

Synopsis	Enter the call-trace context
Context	debug call-trace
Tree	call-trace
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe

Synopsis	Enter the ipoe context
Context	debug call-trace ipoe
Tree	ipoe
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace [\[name\]](#) *string*

Synopsis	Enter the trace list instance
Context	debug call-trace ipoe trace <i>string</i>
Tree	trace
Max. Instances	50

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Unique trace name
Context	debug call-trace ipoe trace <i>string</i>
Tree	trace
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit ID of the sessions to trace
Context	debug call-trace ipoe trace <i>string</i> circuit-id <i>string</i>
Tree	circuit-id
Description	This command configures the circuit ID of the sessions to trace. The circuit ID filter is ignored if it is not part of the IPoE session key.
String Length	1 to 255
Notes	The following elements are part of a choice: circuit-id or remote-id .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC address of the sessions to trace
----------	--------------------------------------

Context	<code>debug call-trace ipoe trace string mac string</code>
Tree	<code>mac</code>
String Length	1 to 17
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-jobs *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of trace jobs
Context	<code>debug call-trace ipoe trace string max-jobs number</code>
Tree	<code>max-jobs</code>
Range	1 to 50
Default	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profile *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Call trace profile applied for the trace
Context	<code>debug call-trace ipoe trace string profile string</code>
Tree	<code>profile</code>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Remote ID of the sessions to trace
Context	<code>debug call-trace ipoe trace string remote-id string</code>
Tree	<code>remote-id</code>
Description	This command configures the remote ID of the sessions to trace. The remote ID filter is ignored if it is not part of the IPoE session key.
String Length	1 to 255
Notes	The following elements are part of a choice: circuit-id or remote-id .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP ID of the sessions to trace
Context	<code>debug call-trace ipoe trace string sap string</code>
Tree	<code>sap</code>
String Length	1 to 45
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace-existing-sessions *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable call trace for existing sessions
Context	<code>debug call-trace ipoe trace string trace-existing-sessions boolean</code>
Tree	<code>trace-existing-sessions</code>

Description	When configured to true , the system traces existing sessions. When configured to false , only new sessions are traced.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the pppoe context
Context	debug call-trace pppoe
Tree	pppoe
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace [[name](#)] *string*

Synopsis	Enter the trace list instance
Context	debug call-trace pppoe trace <i>string</i>
Tree	trace
Max. Instances	50
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[\[name\]](#) *string*

Synopsis	Unique trace name
Context	debug call-trace pppoe trace <i>string</i>
Tree	trace
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit ID of the sessions to trace
Context	debug call-trace pppoe trace <i>string circuit-id string</i>
Tree	circuit-id
String Length	1 to 255
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC address of the sessions to trace
Context	debug call-trace pppoe trace <i>string mac string</i>
Tree	mac
String Length	1 to 17
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-jobs *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of trace jobs
Context	debug call-trace pppoe trace <i>string max-jobs number</i>
Tree	max-jobs
Range	1 to 50
Default	1
Introduced	22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profile string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Call trace profile applied for the trace

Context [debug call-trace pppoe trace string profile string](#)

Tree [profile](#)

String Length 1 to 32

Notes This element is mandatory.

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Remote ID of the sessions to trace

Context [debug call-trace pppoe trace string remote-id string](#)

Tree [remote-id](#)

String Length 1 to 255

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis SAP ID of the sessions to trace

Context [debug call-trace pppoe trace string sap string](#)

Tree	sap
String Length	1 to 45
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace-existing-sessions *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable call trace for existing sessions
Context	debug call-trace pppoe trace string trace-existing-sessions boolean
Tree	trace-existing-sessions
Description	When configured to true , the system traces existing sessions. When configured to false , only new sessions are traced.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PPPoE username of the sessions to trace
Context	debug call-trace pppoe trace string user-name string
Tree	user-name
String Length	1 to 253
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the wlan-gw context
Context	debug call-trace wlan-gw

Tree	wlan-gw
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ue [[name](#)] *string*

Synopsis	Enter the ue list instance
Context	debug call-trace wlan-gw ue string
Tree	ue
Max. Instances	50
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Unique trace name
Context	debug call-trace wlan-gw ue string
Tree	ue
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC address of the sessions to trace
Context	debug call-trace wlan-gw ue string mac string
Tree	mac
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profile *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Call trace profile applied for the trace
Context	<code>debug call-trace wlan-gw ue string profile string</code>
Tree	<code>profile</code>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag [*lag-name*] *string*

Synopsis	Enter the lag list instance
Context	<code>debug lag string</code>
Tree	<code>lag</code>
Description	Commands in this context configure debugging for Link Aggregation Group (LAG).
Introduced	22.7.R1
Platforms	All

[*lag-name*] *string*

Synopsis	LAG name
Context	<code>debug lag string</code>
Tree	<code>lag</code>
Description	This command specifies the LAG name. In model-driven interfaces, the LAG name is used for configuration references and show commands. A service provider or administrator can use the defined LAG name to identify and manage LAGs within the SR OS platforms. The LAG name must always start with "lag-".
String Length	1 to 27
Notes	This element is part of a list key.
Introduced	22.7.R1

Platforms All

bfd *boolean*

Synopsis Enable debugging for BFD
Context [debug lag string bfd boolean](#)
Tree [bfd](#)
Default false
Introduced 22.7.R1
Platforms All

config *boolean*

Synopsis Enable debugging for configuration changes
Context [debug lag string config boolean](#)
Tree [config](#)
Default false
Introduced 22.7.R1
Platforms All

iom-updates *boolean*

Synopsis Enable debugging for IOM updates
Context [debug lag string iom-updates boolean](#)
Tree [iom-updates](#)
Default false
Introduced 22.7.R1
Platforms All

lACP-packets *boolean*

Synopsis Enable debugging for LACP packets
Context [debug lag string lACP-packets boolean](#)
Tree [lACP-packets](#)
Default false

Introduced 22.7.R1
Platforms All

multi-chassis *boolean*

Synopsis Enable debugging for multi-chassis LAG
Context [debug lag string multi-chassis boolean](#)
Tree [multi-chassis](#)
Default false
Introduced 22.7.R1
Platforms All

multi-chassis-packets *boolean*

Synopsis Enable debugging for multi-chassis packets
Context [debug lag string multi-chassis-packets boolean](#)
Tree [multi-chassis-packets](#)
Default false
Introduced 22.7.R1
Platforms All

port [[port-id](#)] *string*

Synopsis Enter the **port** list instance
Context [debug lag string port string](#)
Tree [port](#)
Introduced 22.7.R1
Platforms All

[port-id] *string*

Synopsis Unique identifier for the port in the LAG
Context [debug lag string port string](#)
Tree [port](#)
Notes This element is part of a list key.

Introduced 22.7.R1
Platforms All

bfd *boolean*

Synopsis Enable debugging for BFD
Context [debug lag string port string bfd boolean](#)
Tree [bfd](#)
Default false
Introduced 22.7.R1
Platforms All

config *boolean*

Synopsis Enable debugging for configuration changes
Context [debug lag string port string config boolean](#)
Tree [config](#)
Default false
Introduced 22.7.R1
Platforms All

lACP-packets *boolean*

Synopsis Enable debugging for LACP packets
Context [debug lag string port string lACP-packets boolean](#)
Tree [lACP-packets](#)
Default false
Introduced 22.7.R1
Platforms All

multi-chassis *boolean*

Synopsis Enable debugging for multi-chassis LAG
Context [debug lag string port string multi-chassis boolean](#)
Tree [multi-chassis](#)

Default	false
Introduced	22.7.R1
Platforms	All

port-states *boolean*

Synopsis	Enable debugging for port-state changes
Context	debug lag <i>string</i> port <i>string</i> port-states <i>boolean</i>
Tree	port-states
Default	false
Introduced	22.7.R1
Platforms	All

redundancy *boolean*

Synopsis	Enable debugging for redundancy
Context	debug lag <i>string</i> port <i>string</i> redundancy <i>boolean</i>
Tree	redundancy
Default	false
Introduced	22.7.R1
Platforms	All

selection-logic *boolean*

Synopsis	Enable debugging for selection logic
Context	debug lag <i>string</i> port <i>string</i> selection-logic <i>boolean</i>
Tree	selection-logic
Default	false
Introduced	22.7.R1
Platforms	All

state-machine *boolean*

Synopsis	Enable debugging for state-machine changes
Context	debug lag <i>string</i> port <i>string</i> state-machine <i>boolean</i>

Tree	state-machine
Default	false
Introduced	22.7.R1
Platforms	All

timers *boolean*

Synopsis	Enable debugging for timers
Context	debug lag string port string timers <i>boolean</i>
Tree	timers
Default	false
Introduced	22.7.R1
Platforms	All

port-states *boolean*

Synopsis	Enable debugging for port-state changes
Context	debug lag string port-states <i>boolean</i>
Tree	port-states
Default	false
Introduced	22.7.R1
Platforms	All

redundancy *boolean*

Synopsis	Enable debugging for redundancy
Context	debug lag string redundancy <i>boolean</i>
Tree	redundancy
Default	false
Introduced	22.7.R1
Platforms	All

selection-logic *boolean*

Synopsis	Enable debugging for selection logic
----------	--------------------------------------

Context	debug lag <i>string</i> selection-logic <i>boolean</i>
Tree	selection-logic
Default	false
Introduced	22.7.R1
Platforms	All

state-machine *boolean*

Synopsis	Enable debugging for state-machine changes
Context	debug lag <i>string</i> state-machine <i>boolean</i>
Tree	state-machine
Default	false
Introduced	22.7.R1
Platforms	All

timers *boolean*

Synopsis	Enable debugging for timers
Context	debug lag <i>string</i> timers <i>boolean</i>
Tree	timers
Default	false
Introduced	22.7.R1
Platforms	All

nat

Synopsis	Enter the nat context
Context	debug nat
Tree	nat
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-aware

Synopsis	Enter the I2-aware context
----------	-----------------------------------

Context	debug nat l2-aware
Tree	l2-aware
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber [[subscriber-id](#)] *string*

Synopsis	Add a list entry for subscriber
Context	debug nat l2-aware subscriber string
Tree	subscriber
Max. Instances	16
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[subscriber-id] *string*

Synopsis	L2-aware subscriber ID
Context	debug nat l2-aware subscriber string
Tree	subscriber
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp

Synopsis	Enter the upnp context
Context	debug nat l2-aware upnp
Tree	upnp
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber [**subscriber-id**] *string*

Synopsis	Enter the subscriber list instance
Context	debug nat l2-aware upnp subscriber string
Tree	subscriber
Max. Instances	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[subscriber-id] *string*

Synopsis	L2-aware subscriber ID
Context	debug nat l2-aware upnp subscriber string
Tree	subscriber
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

events *boolean*

Synopsis	Enable UPnP event debugging
Context	debug nat l2-aware upnp subscriber string events boolean
Tree	events
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the packets context
Context	debug nat l2-aware upnp subscriber string packets
Tree	packets
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail *boolean*

Synopsis	Include IP, UDP, and TCP headers in UPnP packet debug
Context	debug nat l2-aware upnp subscriber string packets detail boolean
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

large-scale

Synopsis	Enter the large-scale context
Context	debug nat large-scale
Tree	large-scale
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-stack-lite

Synopsis	Enter the dual-stack-lite context
Context	debug nat large-scale dual-stack-lite
Tree	dual-stack-lite
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber [inside-router string b4-address string](#)

Synopsis	Add a list entry for subscriber
Context	debug nat large-scale dual-stack-lite subscriber inside-router string b4-address string
Tree	subscriber
Max. Instances	16
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Inside router instance name
Context	debug nat large-scale dual-stack-lite subscriber inside-router <i>string</i> b4-address <i>string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

b4-address *string*

Synopsis	IPv6 B4 address of the DS-Lite subscriber
Context	debug nat large-scale dual-stack-lite subscriber inside-router <i>string</i> b4-address <i>string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat44

Synopsis	Enter the nat44 context
Context	debug nat large-scale nat44
Tree	nat44
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber [inside-router](#) *string* [ip-address](#) *string*

Synopsis	Add a list entry for subscriber
Context	debug nat large-scale nat44 subscriber inside-router <i>string</i> ip-address <i>string</i>
Tree	subscriber
Max. Instances	16
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Inside router instance name
Context	debug nat large-scale nat44 subscriber inside-router <i>string ip-address string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	Inside IPv4 address of the NAT44 subscriber
Context	debug nat large-scale nat44 subscriber inside-router <i>string ip-address string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat64

Synopsis	Enter the nat64 context
Context	debug nat large-scale nat64
Tree	nat64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber [inside-router](#) *string ipv6-prefix string*

Synopsis	Add a list entry for subscriber
Context	debug nat large-scale nat64 subscriber inside-router <i>string ipv6-prefix string</i>
Tree	subscriber
Max. Instances	16
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Inside router instance name
Context	debug nat large-scale nat64 subscriber inside-router <i>string</i> ipv6-prefix <i>string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix *string*

Synopsis	NAT64 IPv6 prefix of the subscriber
Context	debug nat large-scale nat64 subscriber inside-router <i>string</i> ipv6-prefix <i>string</i>
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-import

Synopsis	Enter the nat-import context
Context	debug nat nat-import
Tree	nat-import
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

route [[ip-address](#)] (*ipv4-unicast-address* | *keyword*) [inside-router](#) *string*

Synopsis	Add a list entry for route
Context	debug nat nat-import route (<i>ipv4-unicast-address</i> <i>keyword</i>) inside-router <i>string</i>
Tree	route
Max. Instances	32
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] (*ipv4-unicast-address* | *keyword*)

Synopsis	IPv4 address of imported route, or any
Context	debug nat nat-import route (<i>ipv4-unicast-address</i> <i>keyword</i>) inside-router <i>string</i>
Tree	route
Options	any
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Router name or VPRN service name, or any
Context	debug nat nat-import route (<i>ipv4-unicast-address</i> <i>keyword</i>) inside-router <i>string</i>
Tree	route
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pcp

Synopsis	Enter the pcp context
Context	debug nat pcp
Tree	pcp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router [[router-instance](#)] *string*

Synopsis	Enter the router list instance
Context	debug nat pcp router <i>string</i>
Tree	router
Max. Instances	8
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[router-instance] *string*

Synopsis Inside router instance name
 Context [debug nat pcp router](#) *string*
 Tree [router](#)
 Notes This element is part of a list key.
 Introduced 22.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [[name](#)] *string*

Synopsis Enter the **server** list instance
 Context [debug nat pcp router](#) *string* [server](#) *string*
 Tree [server](#)
 Max. Instances 8
 Introduced 22.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis PCP server name
 Context [debug nat pcp router](#) *string* [server](#) *string*
 Tree [server](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 22.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis Enter the **packets** context
 Context [debug nat pcp router](#) *string* [server](#) *string* [packets](#)

Tree	packets
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail *boolean*

Synopsis	Enable the detailed PCP packet debug output
Context	debug nat pcp router <i>string</i> server <i>string</i> packets detail <i>boolean</i>
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the PCP packet debugging
Context	debug nat pcp router <i>string</i> server <i>string</i> packets direction <i>keyword</i>
Tree	direction
Options	ingress, egress, both
Default	ingress
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router [[router-instance](#)] *string*

Synopsis	Enter the router list instance
Context	debug router <i>string</i>
Tree	router
Introduced	22.5.R1
Platforms	All

[router-instance] *string*

Synopsis	Router name or VPRN service name
Context	debug router <i>string</i>

Tree	router
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

dhcp

Synopsis	Enter the dhcp context
Context	debug router string dhcp
Tree	dhcp
Description	<p>Commands in this context enable DHCP debug for all packets in the specified routing instance or VPRN service, or for specific packets matching the specific MAC addresses, SAP identifiers, or interface names.</p> <p>When a DHCP packet matches a specified filter and is conforming the configured debug mode for that filter, the packet debug is available in the specified detail level. DHCP debug filter criteria are applied in the following order:</p> <ol style="list-style-type: none"> 1. MAC address 2. SAP identifier 3. interface names 4. all packets <p>Up to 8 MAC address filters, 8 SAP identifier filters, 4 interface name filters, and 4 all-packet filters can be specified simultaneously across all routing instances and VPRN services.</p>
Introduced	22.10.R1
Platforms	All

all-packets

Synopsis	Enable the all-packets context
Context	debug router string dhcp all-packets
Tree	all-packets
Introduced	22.10.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
----------	---------------------------------------

Context	debug router <i>string</i> dhcp all-packets detail-level <i>keyword</i>
Tree	detail-level
Options	high, medium, low
Default	high
Introduced	22.10.R1
Platforms	All

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router <i>string</i> dhcp all-packets mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped, dropped-only, ingress-and-dropped
Default	egress-ingress-and-dropped
Introduced	22.10.R1
Platforms	All

interface [[interface-name](#)] *string*

Synopsis	Enter the interface list instance
Context	debug router <i>string</i> dhcp interface <i>string</i>
Tree	interface
Introduced	22.10.R1
Platforms	All

[interface-name] *string*

Synopsis	Interface name
Context	debug router <i>string</i> dhcp interface <i>string</i>
Tree	interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	<code>debug router string dhcp interface string detail-level keyword</code>
Tree	<code>detail-level</code>
Options	high, medium, low
Default	high
Introduced	22.10.R1
Platforms	All

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	<code>debug router string dhcp interface string mode keyword</code>
Tree	<code>mode</code>
Options	egress-ingress-and-dropped, dropped-only, ingress-and-dropped
Default	egress-ingress-and-dropped
Introduced	22.10.R1
Platforms	All

mac [*address*] *string*

Synopsis	Enter the mac list instance
Context	<code>debug router string dhcp mac string</code>
Tree	<code>mac</code>
Introduced	22.10.R1
Platforms	All

[address] *string*

Synopsis	MAC address matching the client hardware address field
Context	<code>debug router string dhcp mac string</code>
Tree	<code>mac</code>
Notes	This element is part of a list key.
Introduced	22.10.R1

Platforms All

detail-level *keyword*

Synopsis Detail level of the DHCP debug output
 Context [debug router](#) *string* [dhcp mac](#) *string* **detail-level** *keyword*
 Tree [detail-level](#)
 Options high, medium, low
 Default high
 Introduced 22.10.R1
 Platforms All

mode *keyword*

Synopsis DHCP packets present in the debug output
 Context [debug router](#) *string* [dhcp mac](#) *string* **mode** *keyword*
 Tree [mode](#)
 Options egress-ingress-and-dropped, dropped-only, ingress-and-dropped
 Default egress-ingress-and-dropped
 Introduced 22.10.R1
 Platforms All

sap [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance
 Context [debug router](#) *string* [dhcp sap](#) *string*
 Tree [sap](#)
 Introduced 22.10.R1
 Platforms All

[[sap-id](#)] *string*

Synopsis SAP ID
 Context [debug router](#) *string* [dhcp sap](#) *string*
 Tree [sap](#)

String Length	1 to 45
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router <i>string</i> dhcp sap <i>string</i> detail-level <i>keyword</i>
Tree	detail-level
Options	high, medium, low
Default	high
Introduced	22.10.R1
Platforms	All

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router <i>string</i> dhcp sap <i>string</i> mode <i>keyword</i>
Tree	mode
Options	egress-ingress-and-dropped, dropped-only, ingress-and-dropped
Default	egress-ingress-and-dropped
Introduced	22.10.R1
Platforms	All

igmp

Synopsis	Enter the igmp context
Context	debug router <i>string</i> igmp
Tree	igmp
Introduced	22.10.R1
Platforms	All

group-interface

Synopsis	Enable the group-interface context
Context	debug router <i>string</i> igmp group-interface
Tree	group-interface
Introduced	22.10.R1
Platforms	All

all-group-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> igmp group-interface all-group-interfaces
Tree	all-group-interfaces
Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	22.10.R1
Platforms	All

forwarding-service *string*

Synopsis	ID of the forwarding service to trace
Context	debug router <i>string</i> igmp group-interface forwarding-service <i>string</i>
Tree	forwarding-service
String Length	1 to 64
Default	.././router-instance
Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	22.10.R1
Platforms	All

group-interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> igmp group-interface group-interface-name <i>string</i>
Tree	group-interface-name
String Length	1 to 32

Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	22.10.R1
Platforms	All

host

Synopsis	Enable the host context
Context	debug router string igmp host
Tree	host
Introduced	22.10.R1
Platforms	All

group-interface

Synopsis	Enter the group-interface context
Context	debug router string igmp host group-interface
Tree	group-interface
Introduced	22.10.R1
Platforms	All

forwarding-service *string*

Synopsis	ID of the forwarding service to trace
Context	debug router string igmp host group-interface forwarding-service string
Tree	forwarding-service
String Length	1 to 64
Default	<code>.././router-instance</code>
Introduced	22.10.R1
Platforms	All

group-interface-name *string*

Synopsis	Interface name
Context	debug router string igmp host group-interface group-interface-name string

Tree	group-interface-name
String Length	1 to 32
Introduced	22.10.R1
Platforms	All

ip-address *string*

Synopsis	IP address of the host to trace
Context	debug router <i>string</i> igmp host ip-address <i>string</i>
Tree	ip-address
Introduced	22.10.R1
Platforms	All

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> igmp interface
Tree	interface
Introduced	22.10.R1
Platforms	All

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> igmp interface all-interfaces
Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> igmp interface interface-name <i>string</i>

Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

mcs

Synopsis	Enable the mcs context
Context	debug router string igmp mcs
Tree	mcs
Description	Commands in this context enable debugging for IGMP multicast servers.
Introduced	22.10.R1
Platforms	All

all-interfaces

Synopsis	Trace all interfaces
Context	debug router string igmp mcs all-interfaces
Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router string igmp mcs interface-name string
Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1

Platforms All

miscellaneous *boolean*

Synopsis Enable tracing of miscellaneous events
Context [debug router string igmp miscellaneous boolean](#)
Tree [miscellaneous](#)
Default false
Introduced 22.10.R1
Platforms All

packet

Synopsis Enable the **packet** context
Context [debug router string igmp packet](#)
Tree [packet](#)
Introduced 22.10.R1
Platforms All

all-origins

Synopsis Trace all origins
Context [debug router string igmp packet all-origins](#)
Tree [all-origins](#)
Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced 22.10.R1
Platforms All

dropped *boolean*

Synopsis Enable tracing for dropped packets
Context [debug router string igmp packet dropped boolean](#)
Tree [dropped](#)
Default true

Introduced 22.10.R1
Platforms All

egress *boolean*

Synopsis Enable tracing for transmitted packets
Context [debug router](#) *string* [igmp packet egress](#) *boolean*
Tree [egress](#)
Default true
Introduced 22.10.R1
Platforms All

group-interface-name *string*

Synopsis Interface name
Context [debug router](#) *string* [igmp packet group-interface-name](#) *string*
Tree [group-interface-name](#)
String Length 1 to 32
Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced 22.10.R1
Platforms All

host-ip-address *string*

Synopsis Address of the host to trace
Context [debug router](#) *string* [igmp packet host-ip-address](#) *string*
Tree [host-ip-address](#)
Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced 22.10.R2
Platforms All

ingress *boolean*

Synopsis Enable tracing for received packets

Context	<code>debug router string igmp packet ingress boolean</code>
Tree	<code>ingress</code>
Default	true
Introduced	22.10.R1
Platforms	All

interface-ip-address *string*

Synopsis	Source address of the packet to trace
Context	<code>debug router string igmp packet interface-ip-address string</code>
Tree	<code>interface-ip-address</code>
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R2
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	<code>debug router string igmp packet interface-name string</code>
Tree	<code>interface-name</code>
String Length	1 to 32
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R1
Platforms	All

type *keyword*

Synopsis	Packet type to trace
Context	<code>debug router string igmp packet type keyword</code>
Tree	<code>type</code>
Options	all, query, v1-report, v2-report, v2-leave, v3-report
Default	all
Introduced	22.10.R1

Platforms All

mld

Synopsis Enter the **mld** context
 Context [debug router string mld](#)

 Introduced 22.10.R1
 Platforms All

group-interface

Synopsis Enable the **group-interface** context
 Context [debug router string mld group-interface](#)
 Tree [group-interface](#)
 Introduced 22.10.R1
 Platforms All

all-group-interfaces

Synopsis Trace all interfaces
 Context [debug router string mld group-interface all-group-interfaces](#)
 Tree [all-group-interfaces](#)
 Notes The following elements are part of a mandatory choice: **all-group-interfaces** or **(forwarding-service and group-interface-name)**.
 Introduced 22.10.R1
 Platforms All

forwarding-service *string*

Synopsis ID of the forwarding service to trace
 Context [debug router string mld group-interface forwarding-service string](#)
 Tree [forwarding-service](#)
 String Length 1 to 64
 Default [.././router-instance](#)

Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	22.10.R1
Platforms	All

group-interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> mld group-interface group-interface-name <i>string</i>
Tree	group-interface-name
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all-group-interfaces or (forwarding-service and group-interface-name).
Introduced	22.10.R1
Platforms	All

host

Synopsis	Enable the host context
Context	debug router <i>string</i> mld host
Tree	host
Introduced	22.10.R1
Platforms	All

group-interface

Synopsis	Enter the group-interface context
Context	debug router <i>string</i> mld host group-interface
Tree	group-interface
Introduced	22.10.R1
Platforms	All

forwarding-service *string*

Synopsis	ID of the forwarding service to trace
Context	debug router <i>string</i> mld host group-interface forwarding-service <i>string</i>

Tree	forwarding-service
String Length	1 to 64
Default	<code>.././router-instance</code>
Introduced	22.10.R1
Platforms	All

group-interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> mld host group-interface group-interface-name <i>string</i>
Tree	group-interface-name
String Length	1 to 32
Introduced	22.10.R1
Platforms	All

ip-address *string*

Synopsis	IP address of the host to trace
Context	debug router <i>string</i> mld host ip-address <i>string</i>
Tree	ip-address
Introduced	22.10.R1
Platforms	All

interface

Synopsis	Enable the interface context
Context	debug router <i>string</i> mld interface
Tree	interface
Introduced	22.10.R1
Platforms	All

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> mld interface all-interfaces

Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> mld interface interface-name <i>string</i>
Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

mcs

Synopsis	Enable the mcs context
Context	debug router <i>string</i> mld mcs
Tree	mcs
Introduced	22.10.R1
Platforms	All

all-interfaces

Synopsis	Trace all interfaces
Context	debug router <i>string</i> mld mcs all-interfaces
Tree	all-interfaces
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> mld mcs interface-name <i>string</i>
Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: all-interfaces or interface-name .
Introduced	22.10.R1
Platforms	All

miscellaneous *boolean*

Synopsis	Enable the tracing of miscellaneous events
Context	debug router <i>string</i> mld miscellaneous <i>boolean</i>
Tree	miscellaneous
Default	false
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	debug router <i>string</i> mld packet
Tree	packet
Introduced	22.10.R1
Platforms	All

all-origins

Synopsis	Allow trace for all origins
Context	debug router <i>string</i> mld packet all-origins
Tree	all-origins
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R1

Platforms All

dropped *boolean*

Synopsis Enable tracing for dropped packets
Context [debug router](#) *string* [mld packet](#) [dropped](#) *boolean*
Tree [dropped](#)
Default true
Introduced 22.10.R1
Platforms All

egress *boolean*

Synopsis Enable tracing for transmitted packets
Context [debug router](#) *string* [mld packet](#) [egress](#) *boolean*
Tree [egress](#)
Default true
Introduced 22.10.R1
Platforms All

group-interface-name *string*

Synopsis Interface name
Context [debug router](#) *string* [mld packet](#) [group-interface-name](#) *string*
Tree [group-interface-name](#)
String Length 1 to 32
Notes The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced 22.10.R1
Platforms All

host-ip-address *string*

Synopsis Address of the host to trace
Context [debug router](#) *string* [mld packet](#) [host-ip-address](#) *string*

Tree	host-ip-address
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R2
Platforms	All

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug router <i>string</i> mld packet ingress <i>boolean</i>
Tree	ingress
Default	true
Introduced	22.10.R1
Platforms	All

interface-ip-address *string*

Synopsis	Source address of the packet to trace
Context	debug router <i>string</i> mld packet interface-ip-address <i>string</i>
Tree	interface-ip-address
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R2
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> mld packet interface-name <i>string</i>
Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a choice: all-origins , group-interface-name , host-ip-address , interface-ip-address , or interface-name .
Introduced	22.10.R1
Platforms	All

type keyword

Synopsis	Packet type
Context	debug router string mld packet type keyword
Tree	type
Options	all, query, v1-report, v2-report
Default	all
Introduced	22.10.R1
Platforms	All

msdp

Synopsis	Enter the msdp context
Context	debug router string msdp
Tree	msdp
Description	Commands in this context configure debugging for the Multicast Source Discovery Protocol (MSDP).
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	debug router string msdp packet
Tree	packet
Introduced	22.10.R1
Platforms	All

all-packet-types

Synopsis	Enable MSDP debugging for all packets
Context	debug router string msdp packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	22.10.R1

Platforms All

packet-types

Synopsis Enter the **packet-types** context

Context [debug router string msdp packet packet-types](#)

Tree [packet-types](#)

Notes The following elements are part of a choice: **all-packet-types** or **packet-types**.

Introduced 22.10.R1

Platforms All

keep-alive

Synopsis Enable the **keep-alive** context

Context [debug router string msdp packet packet-types keep-alive](#)

Tree [keep-alive](#)

Introduced 22.10.R1

Platforms All

peer-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Peer address used to trace packets

Context [debug router string msdp packet packet-types keep-alive peer-address \(*ipv4-address-no-zone | ipv6-address-no-zone*\)](#)

Tree [peer-address](#)

Introduced 22.10.R1

Platforms All

sa-request

Synopsis Enable the **sa-request** context

Context [debug router string msdp packet packet-types sa-request](#)

Tree [sa-request](#)

Introduced 22.10.R1

Platforms All

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router string msdp packet packet-types sa-request peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	22.10.R1
Platforms	All

sa-response

Synopsis	Enable the sa-response context
Context	debug router string msdp packet packet-types sa-response
Tree	sa-response
Introduced	22.10.R1
Platforms	All

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router string msdp packet packet-types sa-response peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	22.10.R1
Platforms	All

source-active

Synopsis	Enable the source-active context
Context	debug router string msdp packet packet-types source-active
Tree	source-active
Introduced	22.10.R1
Platforms	All

peer-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer address used to trace packets
Context	debug router string msdp packet packet-types source-active peer-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	22.10.R1
Platforms	All

pim

Synopsis	Enable the pim context
Context	debug router string msdp pim
Tree	pim
Description	Commands in this context enable MSDP PIM debugging.
Introduced	22.10.R1
Platforms	All

group-address *string*

Synopsis	IP multicast group address used to trace events
Context	debug router string msdp pim group-address string
Tree	group-address
Introduced	22.10.R1
Platforms	All

rtm

Synopsis	Enable the rtm context
Context	debug router string msdp rtm
Tree	rtm
Description	Commands in this context enable MSDP route table manager (RTM) debugging.
Introduced	22.10.R1
Platforms	All

rp-address string

Synopsis	IP multicast RP address used to trace events
Context	debug router string msdp rtm rp-address string
Tree	rp-address
Introduced	22.10.R1
Platforms	All

sa-db

Synopsis	Enable the sa-db context
Context	debug router string msdp sa-db
Tree	sa-db
Description	Commands in this context enable MSDP source-active database debugging.
Introduced	22.10.R1
Platforms	All

group-address string

Synopsis	IP multicast group address used to trace events
Context	debug router string msdp sa-db group-address string
Tree	group-address
Introduced	22.10.R1
Platforms	All

rp-address string

Synopsis	IP multicast RP address used to trace events
Context	debug router string msdp sa-db rp-address string
Tree	rp-address
Introduced	22.10.R1
Platforms	All

source-address string

Synopsis	Source address used to trace events
----------	-------------------------------------

Context	<code>debug router <i>string</i> msdp sa-db source-address <i>string</i></code>
Tree	<code>source-address</code>
Introduced	22.10.R1
Platforms	All

mtrace

Synopsis	Enter the mtrace context
Context	<code>debug router <i>string</i> mtrace</code>
Tree	<code>mtrace</code>
Introduced	22.10.R1
Platforms	All

miscellaneous

Synopsis	Enable the miscellaneous context
Context	<code>debug router <i>string</i> mtrace miscellaneous</code>
Tree	<code>miscellaneous</code>
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	<code>debug router <i>string</i> mtrace packet</code>
Tree	<code>packet</code>
Introduced	22.10.R1
Platforms	All

all-packet-types

Synopsis	Enable debugging for all packets
Context	<code>debug router <i>string</i> mtrace packet all-packet-types</code>
Tree	<code>all-packet-types</code>
Notes	The following elements are part of a choice: all-packet-types or packet-types .

Introduced 22.10.R1
Platforms All

packet-types

Synopsis Enter the **packet-types** context
Context [debug router string mtrace packet packet-types](#)

 Context [debug router string pim events interface interface-name string](#)
 Tree [interface-name](#)
 String Length 1 to 32
 Introduced 22.10.R1
 Platforms All

jp

Synopsis Enable the **jp** context
 Context [debug router string pim events jp](#)
 Tree [jp](#)
 Description Commands in this context enable debugging for PIM join and prune mechanisms.
 Notes The following elements are part of a choice: (**adjacency, assert, auto-rp, bgp, bier-inband, bsr, data, db, dynmldp, extranet, graft, interface, jp, mofrr, mrrib, msg, mvpn-rtcache, red, register, rpfv, rtm, s-pmsi, and tunnel-interface**) or **all**.
 Introduced 22.10.R1
 Platforms All

detail *boolean*

Synopsis Enable detail tracing
 Context [debug router string pim events jp detail boolean](#)
 Tree [detail](#)
 Default false
 Introduced 22.10.R1
 Platforms All

group-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP multicast group address used to trace events

Context	<code>debug router string pim events jp group-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>group-address</code>
Introduced	22.10.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug router string pim events jp source-address</code> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	<code>source-address</code>
Introduced	22.10.R1
Platforms	All

mofrr

Synopsis	Enable the mofrr context
Context	<code>debug router string pim events mofrr</code>
Tree	<code>mofrr</code>
Description	Commands in this context enable debugging for PIM Multicast-only Fast Reroute (MoFRR).
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

mrrib

Synopsis	Enable the mrrib context
Context	<code>debug router string pim events mrrib</code>
Tree	<code>mrrib</code>
Description	Commands in this context enable Multicast Routing Information Base (MRIB) debugging.

Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router <i>string</i> pim events mrrib detail <i>boolean</i>
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	All

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP multicast group address used to trace events
Context	debug router <i>string</i> pim events mrrib group-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	group-address
Introduced	22.10.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	debug router <i>string</i> pim events mrrib source-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Introduced	22.10.R1
Platforms	All

msg

Synopsis	Enable the msg context
----------	-------------------------------

Context	debug router string pim events msg
Tree	msg
Notes	The following elements are part of a choice: (adjacency, assert, auto-rp, bgp, bier-inband, bsr, data, db, dynmldp, extranet, graft, interface, jp, mofrr, mrrib, msg, mvpn-rtcache, red, register, rpfv, rtm, s-pmsi, and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

mvpn-rtcache

Synopsis	Enable the mvpn-rtcache context
Context	debug router string pim events mvpn-rtcache
Tree	mvpn-rtcache
Description	Commands in this context enable debugging for the PIM MVPN route cache.
Notes	The following elements are part of a choice: (adjacency, assert, auto-rp, bgp, bier-inband, bsr, data, db, dynmldp, extranet, graft, interface, jp, mofrr, mrrib, msg, mvpn-rtcache, red, register, rpfv, rtm, s-pmsi, and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

group-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Group address used to trace events
Context	debug router string pim events mvpn-rtcache group-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	group-address
Introduced	22.10.R1
Platforms	All

peer-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Peer address used to trace events
Context	debug router string pim events mvpn-rtcache peer-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	peer-address
Introduced	22.10.R1

Platforms All

red

Synopsis Enable the **red** context

Context [debug router string pim events red](#)

Tree [red](#)

Description Commands in this context enable debugging for PIM redundancy messages to the standby CPM.

Notes The following elements are part of a choice: (**adjacency, assert, auto-rp, bgp, bier-inband, bsr, data, db, dynmldp, extranet, graft, interface, jp, mofrr, mrrib, msg, mvpn-rtcache, red, register, rpfv, rtm, s-pmsi**, and **tunnel-interface**) or **all**.

Introduced 22.10.R1

Platforms All

detail *boolean*

Synopsis Enable detail tracing

Context [debug router string pim events red detail boolean](#)

rtm

Synopsis Enable the **rtm** context
 Context [debug router string pim events rtm](#)
 Tree [rtm](#)
 Notes The following elements are part of a choice: (**adjacency**, **assert**, **auto-rp**, **bgp**, **bier-inband**, **bsr**, **data**, **db**, **dynmldp**, **extranet**, **graft**, **interface**, **jp**, **mofrr**, **mrrib**, **msg**, **mvpn-rtcach**, **red**, **register**, **rpfv**, **rtm**, **s-pmsi**, and **tunnel-interface**) or **all**.
 Introduced 22.10.R1
 Platforms All

detail *boolean*

Synopsis Enable detail tracing
 Context [debug router string pim events rtm detail boolean](#)
 Tree [detail](#)
 Default false
 Introduced 22.10.R1
 Platforms All

s-pmsi

Synopsis Enable the **s-pmsi** context
 Context [debug router string pim events s-pmsi](#)
 Tree [s-pmsi](#)

Description	Commands in this context enable debugging for the PIM selective provider multicast service interface.
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

detail *boolean*

Synopsis	Enable detail tracing
Context	debug router string pim events s-pmsi detail boolean
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	All

vpn-source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	VPN source address used to trace events
Context	debug router string pim events s-pmsi vpn-source-address (ipv4-address-no-zone ipv6-address-no-zone)
Tree	vpn-source-address
Introduced	22.10.R1
Platforms	All

tunnel-interface

Synopsis	Enable the tunnel-interface context
Context	debug router string pim events tunnel-interface
Tree	tunnel-interface
Notes	The following elements are part of a choice: (adjacency , assert , auto-rp , bgp , bier-inband , bsr , data , db , dynmldp , extranet , graft , interface , jp , mofrr , mrrib , msg , mvpn-rtcache , red , register , rpfv , rtm , s-pmsi , and tunnel-interface) or all .
Introduced	22.10.R1
Platforms	All

ldp-p2mp-id *number*

Synopsis	LDP P2MP ID
Context	debug router <i>string</i> pim events tunnel-interface ldp-p2mp-id <i>number</i>
Tree	ldp-p2mp-id
Range	1 to 8192
Introduced	22.10.R1
Platforms	All

rsvp-p2mp *string*

Synopsis	RSVP P2MP LSP name
Context	debug router <i>string</i> pim events tunnel-interface rsvp-p2mp <i>string</i>
Tree	rsvp-p2mp
String Length	1 to 32
Introduced	22.10.R1
Platforms	All

sender-address *string*

Synopsis	IP address of the sender
Context	debug router <i>string</i> pim events tunnel-interface sender-address <i>string</i>
Tree	sender-address
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	debug router <i>string</i> pim packet
Tree	packet
Introduced	22.10.R1
Platforms	All

all-origins

Synopsis	Enable trace for all origins
Context	<code>debug router string pim packet all-origins</code>
Tree	<code>all-origins</code>
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	22.10.R1
Platforms	All

all-packet-types

Synopsis	Enable PIM debugging for all packets
Context	<code>debug router string pim packet all-packet-types</code>
Tree	<code>all-packet-types</code>
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	22.10.R1
Platforms	All

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	<code>debug router string pim packet egress boolean</code>
Tree	<code>egress</code>
Default	true
Introduced	22.10.R1
Platforms	All

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	<code>debug router string pim packet ingress boolean</code>
Tree	<code>ingress</code>
Default	true
Introduced	22.10.R1
Platforms	All

interface-name *string*

Synopsis	Interface name
Context	debug router <i>string</i> pim packet interface-name <i>string</i>
Tree	interface-name
String Length	1 to 32
Notes	The following elements are part of a choice: all-origins or interface-name .
Introduced	22.10.R1
Platforms	All

ipv4 *boolean*

Synopsis	Enable tracing for PIM IPv4 packets
Context	debug router <i>string</i> pim packet ipv4 <i>boolean</i>
Tree	ipv4
Default	true
Introduced	22.10.R1
Platforms	All

ipv6 *boolean*

Synopsis	Enable tracing for PIM IPv6 packets
Context	debug router <i>string</i> pim packet ipv6 <i>boolean</i>
Tree	ipv6
Default	true
Introduced	22.10.R1
Platforms	All

[[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS client
Context	debug router <i>string</i> radius proxy <i>string</i> client-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	client-address
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the RADIUS proxy debug output
Context	debug router <i>string</i> radius proxy <i>string</i> detail-level <i>keyword</i>
Tree	detail-level
Options	low, high
Default	low
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the RADIUS proxy packet debugging
Context	debug router <i>string</i> radius proxy <i>string</i> direction <i>keyword</i>
Tree	direction
Options	ingress, egress, both
Default	both
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dropped-only *boolean*

Synopsis	Show dropped packets only
Context	debug router <i>string</i> radius proxy <i>string</i> dropped-only <i>boolean</i>
Tree	dropped-only
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types
Tree	packet-types

Notes	The following elements are part of a mandatory choice: all-packet-types or packet-types .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-accept *boolean*

Synopsis	Debug Access-Accept packets
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types access-accept <i>boolean</i>
Tree	access-accept
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-challenge *boolean*

Synopsis	Debug Access-Challenge packets
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types access-challenge <i>boolean</i>
Tree	access-challenge
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-reject *boolean*

Synopsis	Debug Access-Reject packets
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types access-reject <i>boolean</i>
Tree	access-reject
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-request *boolean*

Synopsis	Debug Access-Request packets
----------	------------------------------

Context	debug router <i>string</i> radius proxy <i>string</i> packet-types access-request <i>boolean</i>
Tree	access-request
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-request *boolean*

Synopsis	Debug Accounting-Request packets
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types accounting-request <i>boolean</i>
Tree	accounting-request
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-response *boolean*

Synopsis	Debug Accounting-Response packets
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types accounting-response <i>boolean</i>
Tree	accounting-response
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other *boolean*

Synopsis	Debug other packet types
Context	debug router <i>string</i> radius proxy <i>string</i> packet-types other <i>boolean</i>
Tree	other
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

servers

Synopsis	Enable the servers context
Context	debug router <i>string</i> radius servers
Tree	servers
Introduced	22.5.R1
Platforms	All

attribute [*name*] *string*

Synopsis	Enter the attribute list instance
Context	debug router <i>string</i> radius servers attribute <i>string</i>
Tree	attribute
Max. Instances	10
Introduced	22.5.R1
Platforms	All

[*name*] *string*

Synopsis	Attribute filter name
Context	debug router <i>string</i> radius servers attribute <i>string</i>
Tree	attribute
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

extended-type *number*

Synopsis	RADIUS attribute extended type
Context	debug router <i>string</i> radius servers attribute <i>string</i> extended-type <i>number</i>
Tree	extended-type
Range	1 to 255
Introduced	22.5.R1
Platforms	All

transaction *boolean*

Synopsis	Debug request and response transaction
Context	debug router <i>string</i> radius servers attribute <i>string</i> transaction <i>boolean</i>
Tree	transaction
Default	false
Introduced	22.5.R1
Platforms	All

type *number*

Synopsis	RADIUS attribute type
Context	debug router <i>string</i> radius servers attribute <i>string</i> type <i>number</i>
Tree	type
Range	1 to 255
Notes	This element is mandatory.
Introduced	22.5.R1
Platforms	All

value

Synopsis	Enter the value context
Context	debug router <i>string</i> radius servers attribute <i>string</i> value
Tree	value
Introduced	22.5.R1
Platforms	All

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Attribute value specified as an IP address
Context	debug router <i>string</i> radius servers attribute <i>string</i> value address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	The following elements are part of a choice: address , hex , integer , prefix , or string .
Introduced	22.5.R1

Platforms All

hex string

Synopsis Attribute value specified as a hexadecimal string

Context [debug router string radius servers attribute string value hex string](#)

Tree [hex](#)

String Length 1 to 253

Notes The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.

Introduced 22.5.R1

Platforms All

integer number

Synopsis Attribute value specified as an integer

Context [debug router string radius servers attribute string value integer number](#)

Tree [integer](#)

Max. Range 0 to 4294967295

Notes The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.

Introduced 22.5.R1

Platforms All

prefix (ipv4-prefix | ipv6-prefix)

Synopsis Attribute value specified as an IP prefix

Context [debug router string radius servers attribute string value prefix \(ipv4-prefix | ipv6-prefix\)](#)

Tree [prefix](#)

Notes The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.

Introduced 22.5.R1

Platforms All

string string

Synopsis Attribute value specified as a string

Context [debug router string radius servers attribute string value string string](#)

Tree	string
String Length	1 to 253
Notes	The following elements are part of a choice: address , hex , integer , prefix , or string .
Introduced	22.5.R1
Platforms	All

vendor-specific

Synopsis	Enter the vendor-specific context
Context	debug router string radius servers attribute string vendor-specific
Tree	vendor-specific
Introduced	22.5.R1
Platforms	All

encoding

Synopsis	Enter the encoding context
Context	debug router string radius servers attribute string vendor-specific encoding
Tree	encoding
Introduced	22.5.R1
Platforms	All

length-size *number*

Synopsis	Size of the vendor-length field
Context	debug router string radius servers attribute string vendor-specific encoding length-size number
Tree	length-size
Range	0 to 2
Default	1
Introduced	22.5.R1
Platforms	All

type-size *number*

Synopsis	Size of the vendor-type field
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific encoding <i>type-size number</i>
Tree	type-size
Range	1 to 4
Default	1
Introduced	22.5.R1
Platforms	All

vendor (*number* | *keyword*)

Synopsis	RADIUS vendor ID
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific vendor (<i>number</i> <i>keyword</i>)
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	22.5.R1
Platforms	All

vendor-type *number*

Synopsis	RADIUS vendor specific type
Context	debug router <i>string</i> radius servers attribute <i>string</i> vendor-specific vendor-type <i>number</i>
Tree	vendor-type
Max. Range	0 to 4294967295
Introduced	22.5.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the RADIUS debug output
Context	debug router <i>string</i> radius servers detail-level <i>keyword</i>
Tree	detail-level

Options	low, medium, high
Default	medium
Introduced	22.5.R1
Platforms	All

packet-types

Synopsis	Enter the packet-types context
Context	debug router <i>string</i> radius servers packet-types
Tree	packet-types
Introduced	22.7.R1
Platforms	All

accounting *boolean*

Synopsis	Debug accounting packets
Context	debug router <i>string</i> radius servers packet-types accounting <i>boolean</i>
Tree	accounting
Default	true
Introduced	22.7.R1
Platforms	All

authentication *boolean*

Synopsis	Debug authentication packets
Context	debug router <i>string</i> radius servers packet-types authentication <i>boolean</i>
Tree	authentication
Default	true
Introduced	22.7.R1
Platforms	All

coa *boolean*

Synopsis	Debug CoA and DM packets
Context	debug router <i>string</i> radius servers packet-types coa <i>boolean</i>

Tree	coa
Default	true
Introduced	22.7.R1
Platforms	All

server-address [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for server-address
Context	debug router string radius servers server-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	server-address
Max. Instances	10
Introduced	22.5.R1
Platforms	All

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	debug router string radius servers server-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	server-address
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

vrrp

Synopsis	Enter the vrrp context
Context	debug router string vrrp
Tree	vrrp
Introduced	22.10.R1
Platforms	All

events

Synopsis	Enter the events context
Context	debug router string vrrp events
Tree	events
Description	Commands in this context enable debugging for VRRP events and state changes.
Introduced	22.10.R1
Platforms	All

all-events

Synopsis	Enable the all-events context
Context	debug router string vrrp events all-events
Tree	all-events
Introduced	22.10.R1
Platforms	All

interface [[interface-name](#)] *string*

Synopsis	Enter the interface list instance
Context	debug router string vrrp events interface string
Tree	interface
Introduced	22.10.R1
Platforms	All

[[interface-name](#)] *string*

Synopsis	Interface name
Context	debug router string vrrp events interface string
Tree	interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

all-vrids

Synopsis	Enable the all-vrids context
Context	debug router <i>string</i> vrrp events interface <i>string</i> all-vrids
Tree	all-vrids
Introduced	22.10.R5
Platforms	All

ipv4

Synopsis	Enter the ipv4 context
Context	debug router <i>string</i> vrrp events interface <i>string</i> ipv4
Tree	ipv4
Introduced	22.10.R1
Platforms	All

vrid [[virtual-router-id](#)] *number*

Synopsis	Add a list entry for vrid
Context	debug router <i>string</i> vrrp events interface <i>string</i> ipv4 vrid <i>number</i>
Tree	vrid
Max. Instances	4
Introduced	22.10.R1
Platforms	All

[[virtual-router-id](#)] *number*

Synopsis	Virtual router ID to debug
Context	debug router <i>string</i> vrrp events interface <i>string</i> ipv4 vrid <i>number</i>
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	debug router string vrrp events interface string ipv6
Tree	ipv6
Introduced	22.10.R1
Platforms	All

vrid [[virtual-router-id](#)] *number*

Synopsis	Add a list entry for vrid
Context	debug router string vrrp events interface string ipv6 vrid number
Tree	vrid
Max. Instances	4
Introduced	22.10.R1
Platforms	All

[\[virtual-router-id\]](#) *number*

Synopsis	Virtual router ID to debug
Context	debug router string vrrp events interface string ipv6 vrid number
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enter the packet context
Context	debug router string vrrp packet
Tree	packet
Description	Commands in this context enable debugging for VRRP packet exchanges.
Introduced	22.10.R1

Platforms All

all-packets

Synopsis Enable the **all-packets** context
 Context [debug router string vrrp packet all-packets](#)
 Tree [all-packets](#)
 Introduced 22.10.R1
 Platforms All

interface [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance
 Context [debug router string vrrp packet interface string](#)
 Tree [interface](#)
 Introduced 22.10.R1
 Platforms All

[\[interface-name\]](#) *string*

Synopsis Interface name
 Context [debug router string vrrp packet interface string](#)
 Tree [interface](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 22.10.R1
 Platforms All

all-vrids

Synopsis Enable the **all-vrids** context
 Context [debug router string vrrp packet interface string all-vrids](#)
 Tree [all-vrids](#)
 Introduced 22.10.R5
 Platforms All

ipv4

Synopsis	Enter the ipv4 context
Context	debug router string vrrp packet interface string ipv4
Tree	ipv4
Introduced	22.10.R1
Platforms	All

vrid [[virtual-router-id](#)] *number*

Synopsis	Add a list entry for vrid
Context	debug router string vrrp packet interface string ipv4 vrid number
Tree	vrid
Max. Instances	4
Introduced	22.10.R1
Platforms	All

[\[virtual-router-id\]](#) *number*

Synopsis	Virtual router ID to debug
Context	debug router string vrrp packet interface string ipv4 vrid number
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	debug router string vrrp packet interface string ipv6
Tree	ipv6
Introduced	22.10.R1
Platforms	All

vrid [*virtual-router-id*] *number*

Synopsis	Add a list entry for vrid
Context	debug router string vrrp packet interface string ipv6 vrid number
Tree	vrid
Max. Instances	4
Introduced	22.10.R1
Platforms	All

[virtual-router-id] *number*

Synopsis	Virtual router ID to debug
Context	debug router string vrrp packet interface string ipv6 vrid number
Tree	vrid
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

wpp

Synopsis	Enter the wpp context
Context	debug router string wpp
Tree	wpp
Introduced	22.7.R1
Platforms	All

packets

Synopsis	Enable the packets context
Context	debug router string wpp packets
Tree	packets
Introduced	22.7.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the WPP packet debug output
Context	debug router <i>string</i> wpp packets detail-level <i>keyword</i>
Tree	detail-level
Options	low, high
Default	low
Introduced	22.7.R1
Platforms	All

portal [[name](#)] *string*

Synopsis	Enter the portal list instance
Context	debug router <i>string</i> wpp portal <i>string</i>
Tree	portal
Introduced	22.7.R1
Platforms	All

[name] *string*

Synopsis	WPP portal name
Context	debug router <i>string</i> wpp portal <i>string</i>
Tree	portal
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

packets

Synopsis	Enter the packets context
Context	debug router <i>string</i> wpp portal <i>string</i> packets
Tree	packets
Introduced	22.7.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the WPP packet debug output
Context	<code>debug router string wpp portal string packets detail-level keyword</code>
Tree	<code>detail-level</code>
Options	low, high
Default	low
Introduced	22.7.R1
Platforms	All

service

Synopsis	Enter the service context
Context	<code>debug service</code>
Tree	<code>service</code>
Introduced	22.10.R1
Platforms	All

vpls [*service-name*] *string*

Synopsis	Enter the vpls list instance
Context	<code>debug service vpls string</code>
Tree	<code>vpls</code>
Introduced	22.10.R1
Platforms	All

[service-name] *string*

Synopsis	Administrative service name
Context	<code>debug service vpls string</code>
Tree	<code>vpls</code>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	debug service vpls string igmp-snooping
Tree	igmp-snooping
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	debug service vpls string igmp-snooping packet
Tree	packet
Introduced	22.10.R1
Platforms	All

detail *keyword*

Synopsis	Detail level of the debug output
Context	debug service vpls string igmp-snooping packet detail keyword
Tree	detail
Options	low, medium, high
Default	medium
Introduced	22.10.R1
Platforms	All

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	debug service vpls string igmp-snooping packet dropped boolean
Tree	dropped
Default	true
Introduced	22.10.R1
Platforms	All

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug service vpls <i>string</i> igmp-snooping packet egress <i>boolean</i>
Tree	egress
Default	true
Introduced	22.10.R1
Platforms	All

evpn-mpls *boolean*

Synopsis	Allow debugging for EVPN-MPLS destinations
Context	debug service vpls <i>string</i> igmp-snooping packet evpn-mpls <i>boolean</i>
Tree	evpn-mpls
Default	false
Introduced	22.10.R1
Platforms	All

evpn-vxlan [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [vni](#) *number*

Synopsis	Add a list entry for evpn-vxlan
Context	debug service vpls <i>string</i> igmp-snooping packet evpn-vxlan (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) vni <i>number</i>
Tree	evpn-vxlan
Max. Instances	8
Introduced	22.10.R1
Platforms	All

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the VXLAN Tunnel Endpoint
Context	debug service vpls <i>string</i> igmp-snooping packet evpn-vxlan (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) vni <i>number</i>
Tree	evpn-vxlan
Notes	This element is part of a list key.

Introduced	22.10.R1
Platforms	All

vni number

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls string igmp-snooping packet evpn-vxlan (ipv4-address-no-zone ipv6-address-no-zone) vni number
Tree	evpn-vxlan
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

ingress boolean

Synopsis	Enable tracing for received packets
Context	debug service vpls string igmp-snooping packet ingress boolean
Tree	ingress
Default	true
Introduced	22.10.R1
Platforms	All

mac [mac-address] string

Synopsis	Add a list entry for mac
Context	debug service vpls string igmp-snooping packet mac string
Tree	mac
Max. Instances	8
Introduced	22.10.R1
Platforms	All

[mac-address] string

Synopsis	MAC address
----------	-------------

Context	<code>debug service vpls string igmp-snooping packet mac string</code>
Tree	<code>mac</code>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

sap [`sap-id`] *string*

Synopsis	Add a list entry for sap
Context	<code>debug service vpls string igmp-snooping packet sap string</code>
Tree	<code>sap</code>
Max. Instances	8
Introduced	22.10.R1
Platforms	All

[sap-id] *string*

Synopsis	SAP ID
Context	<code>debug service vpls string igmp-snooping packet sap string</code>
Tree	<code>sap</code>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

sdp-bind [`sdp-bind-id`] *string*

Synopsis	Add a list entry for sdp-bind
Context	<code>debug service vpls string igmp-snooping packet sdp-bind string</code>
Tree	<code>sdp-bind</code>
Max. Instances	8
Introduced	22.10.R1
Platforms	All

[sdp-bind-id] *string*

Synopsis	SDP bind ID
Context	debug service vpls <i>string</i> igmp-snooping packet sdp-bind <i>string</i>
Tree	sdp-bind
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

mld-snooping

Synopsis	Enter the mld-snooping context
Context	debug service vpls <i>string</i> mld-snooping
Tree	mld-snooping
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the packet context
Context	debug service vpls <i>string</i> mld-snooping packet
Tree	packet
Introduced	22.10.R1
Platforms	All

detail *keyword*

Synopsis	Detail level of the debug output
Context	debug service vpls <i>string</i> mld-snooping packet detail <i>keyword</i>
Tree	detail
Options	low, medium, high
Default	medium
Introduced	22.10.R1
Platforms	All

dropped *boolean*

Synopsis	Enable tracing for dropped packets
Context	debug service vpls <i>string</i> mld-snooping packet dropped <i>boolean</i>
Tree	dropped
Default	true
Introduced	22.10.R1
Platforms	All

egress *boolean*

Synopsis	Enable tracing for transmitted packets
Context	debug service vpls <i>string</i> mld-snooping packet egress <i>boolean</i>
Tree	egress
Default	true
Introduced	22.10.R1
Platforms	All

evpn-mpls *boolean*

Synopsis	Allow debugging for EVPN-MPLS destinations
Context	debug service vpls <i>string</i> mld-snooping packet evpn-mpls <i>boolean</i>
Tree	evpn-mpls
Default	false
Introduced	22.10.R1

 Introduced 22.10.R1
 Platforms All

group-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP multicast group address used to trace events

Context	<code>debug service vpls string pim-snooping events jp group-address (ipv4-address-no-zone ipv6-address-no-zone)</code>
Tree	<code>group-address</code>
Introduced	22.10.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source address used to trace events
Context	<code>debug service vpls string pim-snooping events jp source-address (ipv4-address-no-zone ipv6-address-no-zone)</code>
Tree	<code>source-address</code>
Introduced	22.10.R1
Platforms	All

mcs

Synopsis	Enable the mcs context
Context	<code>debug service vpls string pim-snooping events mcs</code>
Tree	<code>mcs</code>
Description	Commands in this context enable debugging for PIM snooping multi-chassis synchronization.
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	22.10.R1
Platforms	All

detail *boolean*

Synopsis	Enable detail tracing
Context	<code>debug service vpls string pim-snooping events mcs detail boolean</code>
Tree	<code>detail</code>
Default	false
Introduced	22.10.R1
Platforms	All

port

Synopsis	Enable the port context
Context	debug service vpls string pim-snooping events port
Tree	port
Notes	The following elements are part of a choice: (adjacency , db , jp , mcs , port , and red) or all .
Introduced	22.10.R1
Platforms	All

detail *boolean*

Synopsis	Enable detail tracing
Context	debug service vpls string pim-snooping events port detail boolean
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	All

evpn-mpls

Synopsis	Enable tracing for EVPN-MPLS ports
Context	debug service vpls string pim-snooping events port evpn-mpls
Tree	evpn-mpls
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

sap-id *string*

Synopsis	SAP ID
Context	debug service vpls string pim-snooping events port sap-id string
Tree	sap-id
String Length	1 to 45

Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

sdp-bind-id *string*

Synopsis	SDP bind ID
Context	debug service vpls <i>string</i> pim-snooping events port sdp-bind-id <i>string</i>
Tree	sdp-bind-id
String Length	3 to 16
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

vni *number*

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls <i>string</i> pim-snooping events port vni <i>number</i>
Tree	vni
Range	1 to 16777215
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

vtep (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the tunnel endpoint
Context	debug service vpls <i>string</i> pim-snooping events port vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vtep
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1

Platforms All

red

Synopsis Enable the **red** context

Context [debug service vpls string pim-snooping events red](#)

Tree [red](#)

Description Commands in this context enable debugging for PIM messages sent to the standby CPM.

Notes The following elements are part of a choice: (**adjacency**, **db**, **jp**, **mcs**, **port**, and **red**) or **all**.

Introduced 22.10.R1

Platforms All

detail *boolean*

Synopsis Enable detail tracing

Context [debug service vpls string pim-snooping events red detail boolean](#)

Tree [detail](#)

Default false

Introduced 22.10.R1

Platforms All

packet

Synopsis Enable the **packet** context

Context [debug service vpls string pim-snooping packet](#)

Tree [packet](#)

Introduced 22.10.R1

Platforms All

all-origins

Synopsis Allow tracing on all ports

Context [debug service vpls string pim-snooping packet all-origins](#)

Tree [all-origins](#)

Notes	The following elements are part of a choice: all-origins or port .
Introduced	22.10.R1
Platforms	All

all-packet-types

Synopsis	Enable PIM debugging for all packets
Context	debug service vpls <i>string</i> pim-snooping packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	22.10.R1
Platforms	All

packet-types

Synopsis	Enter the packet-types context
Context	debug service vpls <i>string</i> pim-snooping packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: all-packet-types or packet-types .
Introduced	22.10.R1
Platforms	All

hello *boolean*

Synopsis	Debug Hello packets
Context	debug service vpls <i>string</i> pim-snooping packet packet-types hello <i>boolean</i>
Tree	hello
Default	false
Introduced	22.10.R1
Platforms	All

jp *boolean*

Synopsis	Debug join and prune packets
Context	debug service vpls <i>string</i> pim-snooping packet packet-types jp <i>boolean</i>

Tree	jp
Default	false
Introduced	22.10.R1
Platforms	All

port

Synopsis	Enable the port context
Context	debug service vpls string pim-snooping packet port
Tree	port
Notes	The following elements are part of a choice: all-origins or port .
Introduced	22.10.R1
Platforms	All

evpn-mpls

Synopsis	Enable tracing for EVPN-MPLS ports
Context	debug service vpls string pim-snooping packet port evpn-mpls
Tree	evpn-mpls
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

sap-id *string*

Synopsis	SAP ID
Context	debug service vpls string pim-snooping packet port sap-id string
Tree	sap-id
String Length	1 to 45
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

sdp-bind-id *string*

Synopsis	SDP bind ID
Context	debug service vpls <i>string</i> pim-snooping packet port sdp-bind-id <i>string</i>
Tree	sdp-bind-id
String Length	3 to 16
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

vni *number*

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls <i>string</i> pim-snooping packet port vni <i>number</i>
Tree	vni
Range	1 to 16777215
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

vtep (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the tunnel endpoint
Context	debug service vpls <i>string</i> pim-snooping packet port vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	vtep
Notes	The following elements are part of a mandatory choice: evpn-mpls , sap-id , sdp-bind-id , or (vni and vtep).
Introduced	22.10.R1
Platforms	All

subscriber-mgmt

Synopsis	Enter the subscriber-mgmt context
Context	debug subscriber-mgmt

Tree	subscriber-mgmt
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the gtp context
Context	debug subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

events *boolean*

Synopsis	Enable GTP event debugging
Context	debug subscriber-mgmt gtp events <i>boolean</i>
Tree	events
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi [[imsi-instance](#)] *string*

Synopsis	Add a list entry for imsi
Context	debug subscriber-mgmt gtp imsi <i>string</i>
Tree	imsi
Max. Instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[imsi-instance](#)] *string*

Synopsis	IMSI of GTP sessions to debug
----------	-------------------------------

Context	debug subscriber-mgmt gtp imsi <i>string</i>
Tree	imsi
String Length	0 to 15
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the packets context
Context	debug subscriber-mgmt gtp packets
Tree	packets
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the GTP packet debug output
Context	debug subscriber-mgmt gtp packets detail-level <i>keyword</i>
Tree	detail-level
Options	high, low
Default	low
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	GTP packets to include in the debug output
Context	debug subscriber-mgmt gtp packets mode <i>keyword</i>
Tree	mode
Options	all, dropped
Default	dropped
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **router string**

Synopsis	Enter the peer list instance
Context	debug subscriber-mgmt gtp peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) router string
Tree	peer
Max. Instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Remote IP address of the GTP peer
Context	debug subscriber-mgmt gtp peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) router string
Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router string

Synopsis	Router instance where GTP peer packets are expected
Context	debug subscriber-mgmt gtp peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) router string
Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port number

Synopsis	UDP source (Rx packets) / destination (Tx packets) port
Context	debug subscriber-mgmt gtp peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) router string udp-port number

Tree	udp-port
Description	This command configures the UDP source port of received packets or the UDP destination port of transmitted packets.
Range	0 1 to 65535
Default	2123
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

system

Synopsis	Enter the system context
Context	debug system
Tree	system
Introduced	21.5.R1
Platforms	All

grpc

Synopsis	Enter the grpc context
Context	debug system grpc
Tree	grpc
Introduced	21.5.R1
Platforms	All

client

Synopsis	Enter the client context
Context	debug system grpc client
Tree	client
Introduced	21.5.R1
Platforms	All

all

Synopsis	Enable debugging for all clients
----------	----------------------------------

Context	debug system grpc client all
Tree	all
Notes	The following elements are part of a choice: all or ip-address .
Introduced	21.5.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address for debugging
Context	debug system grpc client ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: all or ip-address .
Introduced	21.5.R1
Platforms	All

type keyword

Synopsis	RPCs or service types to debug
Context	debug system grpc type keyword
Tree	type
Options	gnmi-capabilities, gnmi-get, gnmi-set, gnmi-subscribe, rib-api-modify, rib-api-getversion, gnoi-cert-mgmt-rpcs, gnoi-file-rpcs, gnoi-system-rpcs
Max. Instances	10
Introduced	21.5.R1
Platforms	All

grpc-tunnel

Synopsis	Enter the grpc-tunnel context
Context	debug system grpc-tunnel
Tree	grpc-tunnel
Introduced	22.10.R1
Platforms	All

tunnel

Synopsis	Enter the tunnel context
Context	debug system grpc-tunnel tunnel
Tree	tunnel
Introduced	22.10.R1
Platforms	All

all

Synopsis	Set debug output for all tunnels
Context	debug system grpc-tunnel tunnel all
Tree	all
Notes	The following elements are part of a choice: all or name .
Introduced	22.10.R1
Platforms	All

name *string*

Synopsis	Name of the tunnel to restrict the debug output
Context	debug system grpc-tunnel tunnel name <i>string</i>
Tree	name
String Length	1 to 32
Notes	The following elements are part of a choice: all or name .
Introduced	22.10.R1
Platforms	All

http-connections

Synopsis	Enable the http-connections context
Context	debug system http-connections
Tree	http-connections
Introduced	22.10.R1
Platforms	All

client-ip-prefix (*ipv4-prefix | ipv6-prefix | keyword*)

Synopsis	HTTP client IP prefix
Context	debug system http-connections client-ip-prefix (<i>ipv4-prefix ipv6-prefix keyword</i>)
Tree	client-ip-prefix
Options	any
Default	any
Introduced	22.10.R1
Platforms	All

management-interface

Synopsis	Enter the management-interface context
Context	debug system management-interface
Tree	management-interface
Introduced	21.5.R1
Platforms	All

netconf *keyword*

Synopsis	Debugging verbosity for NETCONF
Context	debug system management-interface netconf <i>keyword</i>
Tree	netconf
Options	error, warning, info
Introduced	21.5.R1
Platforms	All

remote-management

Synopsis	Enter the remote-management context
Context	debug system management-interface remote-management
Tree	remote-management
Introduced	21.7.R1
Platforms	All

manager

Synopsis	Enter the manager context
Context	debug system management-interface remote-management manager
Tree	manager
Introduced	21.7.R1
Platforms	All

all

Synopsis	Enable debug of all managers
Context	debug system management-interface remote-management manager all
Tree	all
Notes	The following elements are part of a choice: all or manager-name .
Introduced	21.7.R1
Platforms	All

manager-name [[name](#)] *string*

Synopsis	Add a list entry for manager-name
Context	debug system management-interface remote-management manager manager-name <i>string</i>
Tree	manager-name
Notes	The following elements are part of a choice: all or manager-name .
Introduced	21.7.R1
Platforms	All

[\[name\]](#) *string*

Synopsis	Manager name
Context	debug system management-interface remote-management manager manager-name <i>string</i>
Tree	manager-name
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1

Platforms All

service *boolean*

Synopsis Enable service level debug
 Context [debug system management-interface remote-management service *boolean*](#)
 Tree [service](#)
 Default false
 Introduced 21.7.R1
 Platforms All

wlan-gw

Synopsis Enter the **wlan-gw** context
 Context [debug wlan-gw](#)
 Tree [wlan-gw](#)
 Introduced 22.5.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [*id*] *number*

Synopsis Enter the **group** list instance
 Context [debug wlan-gw group *number*](#)
 Tree [group](#)
 Max. Instances 1
 Introduced 22.5.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis WLAN-GW group ID in the system
 Context [debug wlan-gw group *number*](#)
 Tree [group](#)
 Range 1 to 4

Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis	Enable the learn-ap-mac context
Context	debug wlan-gw group number learn-ap-mac
Tree	learn-ap-mac
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-remote-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the remote tunnel endpoint
Context	debug wlan-gw group number learn-ap-mac tunnel-remote-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	tunnel-remote-address
Notes	This element is mandatory.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistic [[type](#)] *keyword name string*

Synopsis	Enter the statistic list instance
Context	debug wlan-gw group number statistic keyword name string
Tree	statistic
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[type\]](#) *keyword*

Synopsis	Type of statistic to trace
Context	debug wlan-gw group number statistic keyword name string
Tree	statistic

Options	packet-error, host-error, bd-error, forwarding, reassembly, aa, radius, arp, dhcp4, dhcp6, icmp4, icmp6
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name string

Synopsis	Name of the statistic to trace
Context	debug wlan-gw group number statistic keyword name string
Tree	statistic
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

capture-packet boolean

Synopsis	Set a single packet capture trigger for the statistic
Context	debug wlan-gw group number statistic keyword name string capture-packet boolean
Tree	capture-packet
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue

Synopsis	Enable the ue context
Context	debug wlan-gw group number ue
Tree	ue
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bridge-domain *number*

Synopsis	Bridge domain of the UEs to debug
Context	debug wlan-gw group number ue bridge-domain number
Tree	bridge-domain
Range	1 to 4294967295
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *string*

Synopsis	MAC address of the UE to debug
Context	debug wlan-gw group number ue mac-address string
Tree	mac-address
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocols

Synopsis	Enable the protocols context
Context	debug wlan-gw group number ue protocols
Tree	protocols
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *boolean*

Synopsis	Enable debugging for the ARP protocol
Context	debug wlan-gw group number ue protocols arp boolean
Tree	arp
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp4 boolean

Synopsis	Enable debugging for the DHCP protocol
Context	debug wlan-gw group number ue protocols dhcp4 boolean
Tree	dhcp4
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6 boolean

Synopsis	Enable debugging for the DHCPv6 protocol
Context	debug wlan-gw group number ue protocols dhcp6 boolean
Tree	dhcp6
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp4 boolean

Synopsis	Enable debugging for the ICMP protocol
Context	debug wlan-gw group number ue protocols icmp4 boolean
Tree	icmp4
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6 boolean

Synopsis	Enable debugging for the ICMPv6 protocol
Context	debug wlan-gw group number ue protocols icmp6 boolean
Tree	icmp6
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius boolean

Synopsis	Enable debugging for the RADIUS protocol
Context	debug wlan-gw group <i>number</i> ue protocols radius <i>boolean</i>
Tree	radius
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.13 esa commands

    - vm-type keyword
```

3.13.1 esa command descriptions

esa [[esa-id](#)] *number*

Synopsis	Enter the esa list instance
Context	configure esa <i>number</i>
Tree	esa
Description	Commands in this context configure the Extended Services Appliance (ESA) instance.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[esa-id] *number*

Synopsis	ESA ID
Context	configure esa <i>number</i>
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the ESA
Context	configure esa <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *string*

Synopsis	Text description
----------	------------------

Context	configure <i>esa number description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

host-port [*host-port*] *string*

Synopsis	Add a list entry for host-port
Context	configure <i>esa number host-port string</i>
Tree	<i>host-port</i>
Max. Instances	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[host-port] *string*

Synopsis	Ethernet port associated with the ESA
Context	configure <i>esa number host-port string</i>
Tree	<i>host-port</i>
Description	This command configures an Ethernet port associated with the ESA-VM instance. The port ID must be the same as the port ID associated with the ESA context on which the ESA-VM is configured.
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm [*vm-id*] *number*

Synopsis	Enter the vm list instance
Context	configure <i>esa number vm number</i>
Tree	<i>vm</i>
Description	Commands in this context configure the ESA-VM instance.
Introduced	20.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[vm-id] number

Synopsis VM ID
 Context **configure** *esa number vm number*
 Tree *vm*
 Range 1 to 4
 Notes This element is part of a list key.
 Introduced 20.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state keyword

Synopsis Administrative state of the ESA-VM instance
 Context **configure** *esa number vm number admin-state keyword*
 Tree *admin-state*
 Description This command configures the administrative state of the ESA-VM instance. The state affects the operational state of the instance and all entities contained within the instance; however, configuration settings or statistics are not changed, reset, or removed.
 Options enable, disable
 Default disable
 Introduced 20.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

cores number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Number of CPU physical cores allocated to the ESA-VM
 Context **configure** *esa number vm number cores number*
 Tree *cores*
 Description This command specifies the number of CPU physical cores allocated to the ESA-VM instance. If an invalid value is configured for the number of cores, the VM remains in a failed state.

Range	0 to 128
Default	0
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *string*

Synopsis	Text description
Context	configure <i>esa number vm number description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

host-port *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet port associated with the ESA-VM instance
Context	configure <i>esa number vm number host-port reference</i>
Tree	<i>host-port</i>
Description	This command configures an Ethernet port associated with the ESA-VM instance. The port ID must be the same as the port ID associated with the ESA context on which the ESA-VM is configured.
Reference	configure <i>esa number host-port string</i>
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

memory *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of memory allocated to the ESA-VM
----------	--

Context	configure <i>esa number vm number memory number</i>
Tree	<i>memory</i>
Range	0 to 256
Units	gigabytes
Default	0
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ESA-VM type
Context	configure <i>esa number vm number vm-type keyword</i>
Tree	<i>vm-type</i>
Options	aa, bb, tunnel, video
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

```

3.14.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default-domain

Synopsis	Enter the default-domain context
Context	configure eth-cfm default-domain
Tree	default-domain
Description	<p>Commands in this context configure MIP creation parameters per index (bridge-identifier <i>bridge-id</i> vlan <i>vlan-id</i>) if the MIP creation statement exists as part of the service connection.</p> <p>The MIP creation statement must be present on the connection before any configuration can occur for a MIP under this context. Whether a MIP uses the default-domain creation method is determined by the MIP authoritative nature of the eth-cfm domain association. The eth-cfm default-domain MIP creation is considered only if the eth-cfm domain association is not authoritative.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [[bridge-name](#)] *string* **vlan** (*number* | *keyword*)

Synopsis	Enter the bridge-identifier list instance
Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>)
Tree	bridge-identifier
Description	<p>Commands in this context configure the references required to link the CFM function with the service context, allowing the entry of MIP-specific parameters for the index in the default domain table.</p> <p>The info and info detail commands do not display any entries for the instance unless they have previously been accessed. The possible candidates for the instance can be located using the show eth-cfm default-domain command.</p>

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[bridge-name] *string*

Synopsis	Bridge name in the default domain table
Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>)
Tree	bridge-identifier
Description	This command specifies the bridge name to enter in the default domain associated with the MIP.
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan (*number* | *keyword*)

Synopsis	VLAN ID for the default domain
Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>)
Tree	bridge-identifier
Description	This command configures a VLAN ID for the default domain.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information
Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>) id-permission <i>keyword</i>
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.

Options	none, chassis, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation

Synopsis	Enter the mhf-creation context
Context	configure eth-cfm default-domain bridge-identifier string vlan (<i>number</i> <i>keyword</i>) mhf-creation
Tree	mhf-creation
Description	Commands in this context configure the MIP method of creation. MIP creation mode and other factors are part of the MIP creation authority (association or default-domain) logic. The MIP creation algorithm may result in multiple potential MIPs. Only the lowest-level valid MIP is instantiated.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level (*number* | *keyword*)

Synopsis	Requested level of the MIP
Context	configure eth-cfm default-domain bridge-identifier string vlan (<i>number</i> <i>keyword</i>) mhf-creation level (<i>number</i> <i>keyword</i>)
Tree	level
Description	This command configures the requested level of the MIP. This is used by the MIP creation algorithm to determine its validity in comparison to other ETH-CFM MIPs and MEPs. If the level is configured as defer , the level value is inherited from the global read-only system values.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-type *keyword*

Synopsis	MIP creation mode
----------	-------------------

Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>) mhf-creation mhf-type <i>keyword</i>
Tree	mhf-type
Options	none, default, explicit, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority (*number* | *keyword*)

Synopsis	Priority of the Linktrace Response
Context	configure eth-cfm default-domain bridge-identifier <i>string</i> vlan (<i>number</i> <i>keyword</i>) mip-ltr-priority (<i>number</i> <i>keyword</i>)
Tree	mip-ltr-priority
Description	This command allows the operator to set the priority of the Linktrace Response Message (ETH-LTR) from a MIP for this association.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

domain [**md-admin-name**] *string*

Synopsis	Enter the domain list instance
Context	configure eth-cfm domain <i>string</i>
Tree	domain
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[md-admin-name] *string*

Synopsis	Unique domain name
Context	configure eth-cfm domain <i>string</i>
Tree	domain
String Length	1 to 64

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

association [[ma-admin-name](#)] *string*

Synopsis	Enter the association list instance
Context	configure eth-cfm domain <i>string</i> association <i>string</i>
Tree	association
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[ma-admin-name] *string*

Synopsis	Domain association name
Context	configure eth-cfm domain <i>string</i> association <i>string</i>
Tree	association
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

auto-mep-discovery *boolean*

Synopsis	Allow remote MEP automatic discovery
Context	configure eth-cfm domain <i>string</i> association <i>string</i> auto-mep-discovery <i>boolean</i>
Tree	auto-mep-discovery
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [[bridge-name](#)] *string*

Synopsis	Enter the bridge-identifier list instance
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i>

Tree	bridge-identifier
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[bridge-name] *string*

Synopsis	Bridge name that links to the service
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i>
Tree	bridge-identifier
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i> id-permission <i>keyword</i>
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation *keyword*

Synopsis	MIP method of creation
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i> mhf-creation <i>keyword</i>
Tree	mhf-creation

Options	none, default, explicit, static
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *number*

Synopsis	Priority of the Linktrace Response Message (ETH-LTR) from a MIP
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i> mip-ltr-priority <i>number</i>
Tree	mip-ltr-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *number*

Synopsis	VLAN ID for the default domain index
Context	configure eth-cfm domain <i>string</i> association <i>string</i> bridge-identifier <i>string</i> vlan <i>number</i>
Tree	vlan
Range	1 to 4094
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the ccm-hold-time context
Context	configure eth-cfm domain <i>string</i> association <i>string</i> ccm-hold-time
Tree	ccm-hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Additional time before a MEP declares a fault, in CCM timeout conditions
----------	--

Context	configure eth-cfm domain string association string ccm-hold-time down number
Tree	down
Range	1 to 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-interval keyword

Synopsis	CCM transmission interval for all MEPs in association
Context	configure eth-cfm domain string association string ccm-interval keyword
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-id-permission keyword

Synopsis	Sender ID TLV information for facility base MEPs
Context	configure eth-cfm domain string association string facility-id-permission keyword
Tree	facility-id-permission
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icc-based string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	configure eth-cfm domain string association string icc-based string
Tree	icc-based

String Length	8 to 13
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

integer number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	configure eth-cfm domain string association string integer number
Tree	integer
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-index number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	configure eth-cfm domain string association string ma-index number
Tree	ma-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mep [mep-id] number

Synopsis	Enter the remote-mep list instance
----------	---

Context	configure eth-cfm domain string association string remote-mep number
Tree	remote-mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[mep-id] number

Synopsis	Remote MEP ID
Context	configure eth-cfm domain string association string remote-mep number
Tree	remote-mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mac string

Synopsis	Remote MAC Address for transmitting CFM packets to remote MEPs
Context	configure eth-cfm domain string association string remote-mep number remote-mac string
Tree	remote-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

string string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in raw ASCII string format
Context	configure eth-cfm domain string association string string string
Tree	string
String Length	1 to 45
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vid number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Primary VLAN ID for the Maintenance Association name
Context	configure <i>eth-cfm domain string association string vid number</i>
Tree	<i>vid</i>
Range	0 to 4094
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpn-id string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN ID for the Maintenance Association name
Context	configure <i>eth-cfm domain string association string vpn-id string</i>
Tree	<i>vpn-id</i>
String Length	0 to 15
Notes	The following elements are part of a mandatory choice: icc-based , integer , string , vid , or vpn-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dns string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Domain name like text string derived from a DNS name
Context	configure <i>eth-cfm domain string dns string</i>
Tree	<i>dns</i>
String Length	1 to 43
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

format keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain name not to be provided
Context	configure <i>eth-cfm domain string format keyword</i>
Tree	<i>format</i>
Options	none
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain Level (MD Level)
Context	configure <i>eth-cfm domain string level number</i>
Tree	<i>level</i>
Range	0 to 7

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain MAC name
Context	configure eth-cfm domain string mac string
Tree	mac
String Length	13 to 23
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-index number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	The index of the Maintenance Domain (MD)
Context	configure eth-cfm domain string md-index number
Tree	md-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

name string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain name
Context	configure eth-cfm domain <i>string name string</i>
Tree	<i>name</i>
String Length	1 to 43
Notes	The following elements are part of a mandatory choice: dns , format , mac , or name .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

3.15 eth-ring commands

```

configure
- eth-ring number
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- ccm-hold-time
- down number
- up number
- compatible-version number

- guard-time number
- node-id string
- path string
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- description string
- eth-cfm
- mep md-admin-name reference ma-admin-name reference mep-id number
- admin-state keyword
- alarm-notification
- fng-alarm-time number
- fng-reset-time number
- apply-groups reference
- apply-groups-exclude reference
- ccm boolean
- ccm-ltm-priority number
- ccm-padding-size number
- control-mep boolean
- description string
- eth-test
- bit-error-threshold number
- test-pattern
- crc-tlv boolean
- pattern keyword
- grace
- eth-ed
- max-rx-defect-window number
- priority number
- rx-eth-ed boolean
- tx-eth-ed boolean
- eth-vsm-grace
- rx-eth-vsm-grace boolean
- tx-eth-vsm-grace boolean
- low-priority-defect keyword
- mac-address string
- one-way-delay-threshold number
- port-and-raps-tag string
- rpl-end boolean
- revert-time number
- rpl-node keyword
- sub-ring
- interconnect
- propagate-topology-change boolean
- ring-id reference
- vpls
- type keyword

```

3.15.1 eth-ring command descriptions

eth-ring [[ring-index](#)] *number*

Synopsis	Enter the eth-ring list instance
Context	configure eth-ring <i>number</i>
Tree	eth-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[ring-index] *number*

Synopsis	Ring ID
Context	configure eth-ring <i>number</i>
Tree	eth-ring
Range	1 to 128
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring
Context	configure eth-ring <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the ccm-hold-time context
Context	configure eth-ring <i>number</i> ccm-hold-time
Tree	ccm-hold-time

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Hold timer for down event dampening
Context	configure eth-ring <i>number</i> ccm-hold-time down <i>number</i>
Tree	down
Range	1 to 5000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

up *number*

Synopsis	Hold timer for recovery reporting
Context	configure eth-ring <i>number</i> ccm-hold-time up <i>number</i>
Tree	up
Range	0 to 5000
Units	deciseconds
Default	20
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

compatible-version *number*

Synopsis	Compatibility version for the Ethernet ring
Context	configure eth-ring <i>number</i> compatible-version <i>number</i>
Tree	compatible-version
Range	1 to 2
Default	2
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure eth-ring number description string
Tree	description
String Length	0 to 80
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

guard-time *number*

Synopsis	Ethernet ring guard time
Context	configure eth-ring number guard-time number
Tree	guard-time
Range	1 to 20
Units	deciseconds
Default	5
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

node-id *string*

Synopsis	MAC address of the RPL link
Context	configure eth-ring number node-id string
Tree	node-id
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

path [*path-index*] *string*

Synopsis	Enter the path list instance
Context	configure eth-ring number path string
Tree	path
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[path-index] *string*

Synopsis	Path ID
Context	configure eth-ring number path string
Tree	path
String Length	1
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring path
Context	configure eth-ring number path string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure eth-ring number path string description string
Tree	description
String Length	0 to 80
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure eth-ring number path string eth-cfm
Tree	eth-cfm
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep *md-admin-name reference* *ma-admin-name reference* *mep-id number*

Synopsis Enter the **mep** list instance

Context **configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number**

Tree **mep**

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name reference

Synopsis Maintenance Domain (MD) name

Context **configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number**

Tree **mep**

Reference **configure eth-cfm domain string**

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name reference

Synopsis Maintenance Association (MA) name

Context **configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number**

Tree **mep**

Reference **configure eth-cfm domain string association string**

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id number

Synopsis Maintenance Endpoint (MEP) ID

Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
----------	---

Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm <i>boolean</i>
Tree	ccm
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7

Default	7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

control-mep *boolean*

Synopsis	Enable Ethernet ring control on the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> control-mep <i>boolean</i>
Tree	control-mep
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed priority <i>number</i>
Tree	priority
Range	0 to 7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed rx-eth-ed <i>boolean</i>
Tree	rx-eth-ed

Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed tx-eth-ed <i>boolean</i>
Tree	tx-eth-ed
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	<p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure eth-ring <i>number</i> path <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	all-def
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
----------	------------------------

Context	configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold number

Synopsis	Threshold time limit for the one-way delay test
Context	configure eth-ring number path string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-and-raps-tag string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port ID and Ring APS tag ID
Context	configure eth-ring number path string port-and-raps-tag string
Tree	port-and-raps-tag
String Length	1 to 45
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rpl-end *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable path as a Ring Protection Link (RPL) end
Context	configure eth-ring number path string rpl-end boolean
Tree	rpl-end
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

revert-time *number*

Synopsis	Revert time for the Ethernet ring
Context	configure eth-ring number revert-time number
Tree	revert-time
Range	0 60 to 720
Units	seconds
Default	300
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rpl-node *keyword*

Synopsis	Ring Protection Link (RPL) type for the Ethernet ring
Context	configure eth-ring number rpl-node keyword
Tree	rpl-node
Options	owner, neighbor
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sub-ring

Synopsis	Enter the sub-ring context
Context	configure eth-ring number sub-ring

Tree	sub-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interconnect

Synopsis	Enter the interconnect context
Context	configure eth-ring number sub-ring interconnect
Tree	interconnect
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

propagate-topology-change *boolean*

Synopsis	Propagate topology changes
Context	configure eth-ring number sub-ring interconnect propagate-topology-change boolean
Tree	propagate-topology-change
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ring-id *reference*

Synopsis	Ring instance of the connection ring for the sub-ring
Context	configure eth-ring number sub-ring interconnect ring-id reference
Tree	ring-id
Reference	configure eth-ring number
Notes	The following elements are part of a choice: ring-id or vpls .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpls

Synopsis	Connect sub-ring to VPLS ID that contains sub-ring SAP
Context	configure eth-ring number sub-ring interconnect vpls

Tree	vpls
Notes	The following elements are part of a choice: ring-id or vpls .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

Synopsis	Sub-ring type
Context	configure eth-ring <i>number</i> sub-ring type <i>keyword</i>
Tree	type
Options	virtual-link, non-virtual-link
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

3.16.1 filter command descriptions

filter

Synopsis	Enter the filter context
Context	configure filter
Tree	filter
Introduced	16.0.R1
Platforms	All

dhcp-filter [[filter-id](#)] *number*

Synopsis	Enter the dhcp-filter list instance
Context	configure filter dhcp-filter <i>number</i>
Tree	dhcp-filter
Introduced	16.0.R1
Platforms	All

[\[filter-id\]](#) *number*

Synopsis	Unique DHCP filter policy ID
Context	configure filter dhcp-filter <i>number</i>
Tree	dhcp-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the default-action context
Context	configure filter dhcp-filter <i>number</i> default-action
Tree	default-action
Introduced	16.0.R1

Platforms All

bypass-host-creation

Synopsis Host creation options to bypass
 Context **configure filter dhcp-filter number default-action bypass-host-creation**
 Tree [bypass-host-creation](#)
 Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis DHCP host creation when the filter entry is matched
 Context **configure filter dhcp-filter number default-action drop**
 Tree [drop](#)
 Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
 Introduced 16.0.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure filter dhcp-filter number description string**
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms All

entry [[entry-id](#)] *number*

Synopsis Enter the **entry** list instance
 Context **configure filter dhcp-filter number entry number**
 Tree [entry](#)

Max. Instances	10
Introduced	16.0.R1
Platforms	All

[entry-id] number

Synopsis	DHCP filter entry ID
Context	configure filter dhcp-filter number entry number
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the action context
Context	configure filter dhcp-filter number entry number action
Tree	action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	configure filter dhcp-filter number entry number action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched
----------	---

Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	16.0.R1
Platforms	All

option

Synopsis	Enable the option context
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option
Tree	option
Introduced	16.0.R1
Platforms	All

absent

Synopsis	Require the absence of related option
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enable the match context
Context	configure filter dhcp-filter <i>number</i> entry <i>number</i> option match
Tree	match
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	16.0.R1
Platforms	All

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
----------	--

Context	configure filter dhcp-filter number entry number option match exact boolean
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

hex string

Synopsis	Matching pattern for the filtered option
Context	configure filter dhcp-filter number entry number option match hex string
Tree	hex
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	16.0.R1
Platforms	All

invert boolean

Synopsis	Invert (partial) matching criteria
Context	configure filter dhcp-filter number entry number option match invert boolean
Tree	invert
Default	false
Introduced	16.0.R1
Platforms	All

string string

Synopsis	Matching pattern for the filtered option
Context	configure filter dhcp-filter number entry number option match string string
Tree	string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	16.0.R1
Platforms	All

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	configure filter dhcp-filter <i>number entry number option number number</i>
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

present

Synopsis	Require the presence of related option
Context	configure filter dhcp-filter <i>number entry number option present</i>
Tree	present
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	16.0.R1
Platforms	All

dhcp6-filter [[filter-id](#)] *number*

Synopsis	Enter the dhcp6-filter list instance
Context	configure filter dhcp6-filter <i>number</i>
Tree	dhcp6-filter
Introduced	16.0.R1
Platforms	All

[filter-id] *number*

Synopsis	Unique DHCP filter policy ID
Context	configure filter dhcp6-filter <i>number</i>
Tree	dhcp6-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

default-action

Synopsis Enable the **default-action** context
 Context **configure filter dhcp6-filter number default-action**
 Tree [default-action](#)
 Introduced 16.0.R1
 Platforms All

bypass-host-creation

Synopsis Enable the **bypass-host-creation** context
 Context **configure filter dhcp6-filter number default-action bypass-host-creation**
 Tree [bypass-host-creation](#)
 Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

na boolean

Synopsis Bypass the DHCPv6 NA host creation
 Context **configure filter dhcp6-filter number default-action bypass-host-creation na boolean**
 Tree [na](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pd boolean

Synopsis Bypass the DHCPv6 PD host creation
 Context **configure filter dhcp6-filter number default-action bypass-host-creation pd boolean**
 Tree [pd](#)
 Default true
 Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis Drop DHCPv6 message (do not process)
 Context **configure filter dhcp6-filter number default-action drop**
 Tree [drop](#)
 Notes The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
 Introduced 16.0.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure filter dhcp6-filter number description string**
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms All

entry [[entry-id](#)] *number*

Synopsis Enter the **entry** list instance
 Context **configure filter dhcp6-filter number entry number**
 Tree [entry](#)
 Max. Instances 10
 Introduced 16.0.R1
 Platforms All

[[entry-id](#)] *number*

Synopsis DHCP filter entry ID
 Context **configure filter dhcp6-filter number entry number**
 Tree [entry](#)

Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the action context
Context	configure filter dhcp6-filter number entry number action
Tree	action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Enable the bypass-host-creation context
Context	configure filter dhcp6-filter number entry number action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

na boolean

Synopsis	Bypass the DHCPv6 NA host creation
Context	configure filter dhcp6-filter number entry number action bypass-host-creation na boolean
Tree	na
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pd boolean

Synopsis	Bypass the DHCPv6 PD host creation
----------	------------------------------------

Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i> action bypass-host-creation pd <i>boolean</i>
Tree	pd
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop DHCPv6 message (do not process)
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: bypass-host-creation or drop .
Introduced	16.0.R1
Platforms	All

option

Synopsis	Enable the option context
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i> option
Tree	option
Introduced	16.0.R1
Platforms	All

absent

Synopsis	Require the absence of related option
Context	configure filter dhcp6-filter <i>number</i> entry <i>number</i> option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enable the match context
Context	configure filter dhcp6-filter number entry number option match
Tree	match
Notes	The following elements are part of a mandatory choice: absent , match , or present .
Introduced	16.0.R1
Platforms	All

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
Context	configure filter dhcp6-filter number entry number option match exact boolean
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

hex *string*

Synopsis	Matching pattern for the filtered option
Context	configure filter dhcp6-filter number entry number option match hex string
Tree	hex
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: hex or string .
Introduced	16.0.R1
Platforms	All

invert *boolean*

Synopsis	Invert (partial) matching criteria
Context	configure filter dhcp6-filter number entry number option match invert boolean
Tree	invert
Default	false
Introduced	16.0.R1

Platforms All

string *string*

Synopsis Matching pattern for the filtered option
 Context **configure** [filter](#) [dhcp6-filter](#) *number* [entry](#) *number* [option](#) [match](#) *string* *string*
 Tree [string](#)
 String Length 1 to 127
 Notes The following elements are part of a mandatory choice: **hex** or **string**.
 Introduced 16.0.R1
 Platforms All

number *number*

Synopsis Number for DHCP or DHCPv6 option to filter on
 Context **configure** [filter](#) [dhcp6-filter](#) *number* [entry](#) *number* [option](#) [number](#) *number*
 Tree [number](#)
 Range 0 to 255
 Notes This element is mandatory.
 Introduced 16.0.R1
 Platforms All

present

Synopsis Require the presence of related option
 Context **configure** [filter](#) [dhcp6-filter](#) *number* [entry](#) *number* [option](#) [present](#)
 Tree [present](#)
 Notes The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
 Introduced 16.0.R1
 Platforms All

gre-tunnel-template [[gre-tunnel-template-name](#)] *string*

Synopsis Enter the **gre-tunnel-template** list instance
 Context **configure** [filter](#) [gre-tunnel-template](#) *string*

Tree	gre-tunnel-template
Max. Instances	8191
Introduced	16.0.R1
Platforms	All

[gre-tunnel-template-name] *string*

Synopsis	GRE tunnel template ID
Context	configure filter gre-tunnel-template <i>string</i>
Tree	gre-tunnel-template
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure filter gre-tunnel-template <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R2
Platforms	All

ipv4

Synopsis	Enter the ipv4 context
Context	configure filter gre-tunnel-template <i>string</i> ipv4
Tree	ipv4
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	16.0.R1
Platforms	All

destination-address [[address](#)] *string*

Synopsis	Add a list entry for destination-address
Context	configure filter gre-tunnel-template <i>string ipv4 destination-address string</i>
Tree	destination-address
Description	This command defines a destination for the GRE IP header used to encapsulate the matching IPv4/IPv6 packet. A single destination address can be specified for an IPv6 gre-tunnel-template . Traffic matching the associated IPv4 or IPv6 filter is hashed across any available ECMP or UCMP route next hop available to the destination address. If no destination address is available, then matching traffic follows the configured pbr-down-action-override action, if configured. If no pbr-down-action-override is configured traffic is discarded.
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[address] *string*

Synopsis	Destination IPv4 address
Context	configure filter gre-tunnel-template <i>string ipv4 destination-address string</i>
Tree	destination-address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

gre-key (*keyword | number*)

Synopsis	GRE key
Context	configure filter gre-tunnel-template <i>string ipv4 gre-key (keyword number)</i>
Tree	gre-key
Max. Range	0 to 4294967295
Options	if-index
Introduced	16.0.R1
Platforms	All

skip-ttl-decrement *boolean*

Synopsis	Decrement TTL
Context	configure filter gre-tunnel-template <i>string</i> ipv4 skip-ttl-decrement <i>boolean</i>
Tree	skip-ttl-decrement
Default	false
Introduced	16.0.R1
Platforms	All

source-address *string*

Synopsis	Source IP address of the GRE encapsulated
Context	configure filter gre-tunnel-template <i>string</i> ipv4 source-address <i>string</i>
Tree	source-address
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	configure filter gre-tunnel-template <i>string</i> ipv6
Tree	ipv6
Notes	The following elements are part of a choice: ipv4 or ipv6 .
Introduced	22.7.R1
Platforms	All

destination-address [*address*] *string*

Synopsis	Add a list entry for destination-address
Context	configure filter gre-tunnel-template <i>string</i> ipv6 destination-address <i>string</i>
Tree	destination-address
Max. Instances	1
Introduced	22.7.R1
Platforms	All

[address] *string*

Synopsis	IPv6 destination address
Context	configure filter gre-tunnel-template <i>string ipv6 destination-address string</i>
Tree	destination-address
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

gre-key *keyword*

Synopsis	Include a key value in GRE header
Context	configure filter gre-tunnel-template <i>string ipv6 gre-key keyword</i>
Tree	gre-key
Description	This command includes a key value in the GRE header of ifIndex of the ingress interface.
Options	if-index
Introduced	22.7.R1
Platforms	All

skip-hop-decrement *boolean*

Synopsis	Decrement TTL of the received packet
Context	configure filter gre-tunnel-template <i>string ipv6 skip-hop-decrement boolean</i>
Tree	skip-hop-decrement
Description	When configured to true , the system decrements the TTL of the IP packet matching the IPv4 or IPv6 filter when it is encapsulated into the GRE tunnel header. When configured to false , the system increases the TTL of the received packet.
Default	false
Introduced	22.7.R1
Platforms	All

source-address *string*

Synopsis	Source IPv6 address of the GRE encapsulated
----------	---

Context	configure filter gre-tunnel-template <i>string</i> ipv6 source-address <i>string</i>
Tree	source-address
Introduced	22.7.R1
Platforms	All

ip-exception [[filter-name](#)] *string*

Synopsis	Enter the ip-exception list instance
Context	configure filter ip-exception <i>string</i>
Tree	ip-exception
Introduced	20.10.R1
Platforms	VSR

[filter-name] *string*

Synopsis	Filter name
Context	configure filter ip-exception <i>string</i>
Tree	ip-exception
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	VSR

description *string*

Synopsis	Text description
Context	configure filter ip-exception <i>string</i> description <i>string</i>

Introduced	20.10.R1
Platforms	VSR

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	IP address to match
Context	configure filter ip-exception string entry number match dst-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Introduced	20.10.R1
Platforms	VSR

mask string

Synopsis	Mask applied as an AND to the IP address
Context	configure filter ip-exception string entry number match dst-ip mask string
Tree	mask
Introduced	20.10.R1
Platforms	VSR

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ip-exception string entry number match dst-port
Tree	dst-port
Introduced	20.10.R1
Platforms	VSR

eq number

Synopsis	Exact match criterion
Context	configure filter ip-exception string entry number match dst-port eq number
Tree	eq
Range	0 to 65535

Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	20.10.R1
Platforms	VSR

gt number

Synopsis	Condition on being greater than the specified value.
Context	configure filter ip-exception string entry number match dst-port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	20.10.R1
Platforms	VSR

lt number

Synopsis	Condition on being less than the specified value.
Context	configure filter ip-exception string entry number match dst-port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	20.10.R1
Platforms	VSR

range

Synopsis	Enable the range context
Context	configure filter ip-exception string entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , or range .
Introduced	20.10.R1
Platforms	VSR

end number

Synopsis	Upper bound of the port range to match
Context	configure filter ip-exception string entry number match dst-port range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

start number

Synopsis	Lower bound of the port range to match
Context	configure filter ip-exception string entry number match dst-port range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

icmp

Synopsis	Enter the icmp context
Context	configure filter ip-exception string entry number match icmp
Tree	icmp
Introduced	20.10.R1
Platforms	VSR

 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

action

Synopsis Enable the **action** context
 Context **configure filter ip-filter string entry number action**
 Tree [action](#)
 Introduced 16.0.R1
 Platforms All

accept

Synopsis Accept regular routing to forward a matching packet
 Context **configure filter ip-filter string entry number action accept**
 Tree [accept](#)
 Notes The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
 Introduced 16.0.R1
 Platforms All

accept-when

Synopsis Enable the **accept-when** context
 Context **configure filter ip-filter string entry number action accept-when**
 Tree [accept-when](#)

Introduced	19.5.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ip-filter string entry number action accept-when pattern
Tree	pattern
Introduced	19.5.R1
Platforms	All

expression string

Synopsis	Pattern expression to match
Context	configure filter ip-filter string entry number action accept-when pattern expression string
Tree	expression
String Length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

mask string

Synopsis	Mask for the pattern expression
Context	configure filter ip-filter string entry number action accept-when pattern mask string
Tree	mask
String Length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-type keyword

Synopsis	Starting point reference for offset value of pattern
----------	--

Context	configure filter ip-filter <i>string</i> entry <i>number</i> action accept-when pattern offset-type <i>keyword</i>
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action accept-when pattern offset-value <i>number</i>
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

drop

Synopsis	Drop a packet matching this entry
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

drop-when

Synopsis	Enable the drop-when context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action drop-when
Tree	drop-when
Introduced	16.0.R1

Platforms All

extracted-traffic

Synopsis Drop traffic extracted to CPM
 Context **configure filter ip-filter string entry number action drop-when extracted-traffic**
 Tree [extracted-traffic](#)
 Introduced 16.0.R1
 Platforms All

packet-length

Synopsis Enable the **packet-length** context
 Context **configure filter ip-filter string entry number action drop-when packet-length**
 Tree [packet-length](#)
 Notes The following elements are part of a choice: **packet-length** or **tll**.
 Introduced 16.0.R1
 Platforms All

eq number

Synopsis Exact match criterion for the length
 Context **configure filter ip-filter string entry number action drop-when packet-length eq number**
 Tree [eq](#)
 Range 0 to 65535
 Notes The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
 Introduced 16.0.R1
 Platforms All

gt number

Synopsis Greater than match criterion for the length
 Context **configure filter ip-filter string entry number action drop-when packet-length gt number**
 Tree [gt](#)
 Range 0 to 65534

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ip-filter string entry number action drop-when packet-length lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number action drop-when packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the length range
Context	configure filter ip-filter string entry number action drop-when packet-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the length range
Context	configure filter ip-filter string entry number action drop-when packet-length range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ip-filter string entry number action drop-when pattern
Tree	pattern
Introduced	16.0.R4
Platforms	All

expression string

Synopsis	Pattern expression to match
Context	configure filter ip-filter string entry number action drop-when pattern expression string
Tree	expression
String Length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask string

Synopsis	Mask for the pattern expression
Context	configure filter ip-filter string entry number action drop-when pattern mask string
Tree	mask
String Length	3 to 18
Notes	This element is mandatory.

Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action drop-when pattern offset-type <i>keyword</i>
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action drop-when pattern offset-value <i>number</i>
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

ttl

Synopsis	Enable the ttl context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action drop-when ttl
Tree	ttl
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Equal to condition match value
Context	configure filter ip-filter string entry number action drop-when ttl eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than condition match value
Context	configure filter ip-filter string entry number action drop-when ttl gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than condition match value
Context	configure filter ip-filter string entry number action drop-when ttl lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number action drop-when ttl range
Tree	range

Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ip-filter string entry number action drop-when ttl range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the range
Context	configure filter ip-filter string entry number action drop-when ttl range start number
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fc keyword

Synopsis	Class name to be forwarded for matching packets
Context	configure filter ip-filter string entry number action fc keyword
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the forward context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

bonding-connection *number*

Synopsis	Connection ID over which packet is forwarded
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward bonding-connection <i>number</i>
Tree	bonding-connection
Range	1 to 2
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esi-l2

Synopsis	Enable the esi-l2 context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward esi-l2
Tree	esi-l2
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

esi-value *string*

Synopsis	ESI of the first ESI-identified appliance
----------	---

Context	configure filter ip-filter string entry number action forward esi-l2 esi-value string
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls reference

Synopsis	VPLS service name
Context	configure filter ip-filter string entry number action forward esi-l2 vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

esi-l3

Synopsis	Enable the esi-l3 context
Context	configure filter ip-filter string entry number action forward esi-l3
Tree	esi-l3
Notes	The following elements are part of a choice: bonding-connection, esi-l2, esi-l3, gre-tunnel, lsp, mpls-policy, next-hop, redirect-policy, router-instance, sap, sdp, srte-policy, or vprn-target.
Introduced	16.0.R1
Platforms	All

esi-value string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ESI of the first ESI-identified appliance
Context	configure filter ip-filter string entry number action forward esi-l3 esi-value string
Tree	esi-value

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sf-ip string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the service function to forward traffic
Context	configure filter ip-filter string entry number action forward esi-l3 sf-ip string
Tree	sf-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vas-interface reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Egress R-VPLS IP interface name
Context	configure filter ip-filter string entry number action forward esi-l3 vas-interface reference
Tree	vas-interface
Reference	configure service vprn string interface string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPRN service name
Context	configure filter ip-filter <i>string entry number action forward esi-l3 vprn reference</i>
Tree	vprn
Reference	configure service vprn <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

gre-tunnel *reference*

Synopsis	GRE tunnel template ID that sets the location where an encapsulated matching packet is transported
Context	configure filter ip-filter <i>string entry number action forward gre-tunnel reference</i>
Tree	gre-tunnel
Reference	configure filter gre-tunnel-template <i>string</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

lsp *string*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ip-filter <i>string entry number action forward lsp string</i>
Tree	lsp
String Length	1 to 64
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

mpls-policy

Synopsis	Enable the mpls-policy context
----------	---------------------------------------

Context	configure filter ip-filter string entry number action forward mpls-policy
Tree	mpls-policy
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	19.10.R1
Platforms	All

endpoint string

Synopsis	MPLS forwarding policy endpoint IPv4 address
Context	configure filter ip-filter string entry number action forward mpls-policy endpoint string
Tree	endpoint
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ip-filter string entry number action forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

interface-name string

Synopsis	IP interface name that forwards matching packets
Context	configure filter ip-filter string entry number action forward next-hop interface-name string
Tree	interface-name
String Length	1 to 32

Notes	The following elements are part of a mandatory choice: interface-name , nh-ip , or nh-ip-vrf .
Introduced	16.0.R1
Platforms	All

nh-ip

Synopsis	Enable the nh-ip context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward next-hop nh-ip
Tree	nh-ip
Notes	The following elements are part of a mandatory choice: interface-name , nh-ip , or nh-ip-vrf .
Introduced	16.0.R1
Platforms	All

address *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward next-hop nh-ip address <i>string</i>
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward next-hop nh-ip indirect <i>boolean</i>
Tree	indirect
Default	false
Introduced	16.0.R1

Platforms All

nh-ip-vrf

Synopsis Enable the **nh-ip-vrf** context

Context **configure filter ip-filter string entry number action forward next-hop nh-ip-vrf**

Tree [nh-ip-vrf](#)

Notes The following elements are part of a mandatory choice: **interface-name**, **nh-ip**, or **nh-ip-vrf**.

Introduced 16.0.R1

Platforms All

address string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis IPv4 address of next hop to forward matching packets

Context **configure filter ip-filter string entry number action forward next-hop nh-ip-vrf address string**

Tree [address](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

indirect boolean

Synopsis Allow next hop to be indirectly reachable

Context **configure filter ip-filter string entry number action forward next-hop nh-ip-vrf indirect boolean**

Tree [indirect](#)

Default false

Introduced 16.0.R1

Platforms All

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ip-filter <i>string</i> entry number action forward next-hop nh-ip-vrf router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

redirect-policy *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop or forward next hop router that forwards a packet that matches this entry
Context	configure filter ip-filter <i>string</i> entry number action forward redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	configure filter redirect-policy <i>string</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	configure filter ip-filter <i>string</i> entry number action forward router-instance <i>string</i>
Tree	router-instance

Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap

Synopsis	Enable the sap context
Context	configure filter ip-filter string entry number action forward sap
Tree	sap
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap-id reference

Synopsis	VPLS Ethernet SAP ID used to forward matching packets
Context	configure filter ip-filter string entry number action forward sap sap-id reference
Tree	sap-id
Reference	configure service vpls string sap string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls reference

Synopsis	VPLS associated with the SAP
Context	configure filter ip-filter string entry number action forward sap vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

sdp

Synopsis Enable the **sdp** context

Context **configure filter ip-filter string entry number action forward sdp**

Tree **sdp**

Notes The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, or **vprn-target**.

Introduced 16.0.R1

Platforms All

sdp-bind-id string

Synopsis VPLS SDP bind ID used to forward matching packets

Context **configure filter ip-filter string entry number action forward sdp sdp-bind-id string**

Tree **sdp-bind-id**

String Length 3 to 16

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

vpls reference

Synopsis VPLS associated with the SDP

Context **configure filter ip-filter string entry number action forward sdp vpls reference**

Tree **vpls**

Reference **configure service vpls string**

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

srte-policy

Synopsis	Enable the srte-policy context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward srte-policy
Tree	srte-policy
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	19.10.R1
Platforms	All

color *number*

Synopsis	SR-TE policy color ID
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward srte-policy color <i>number</i>
Tree	color
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

endpoint *string*

Synopsis	SR-TE policy endpoint IPv4 address
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward srte-policy endpoint <i>string</i>
Tree	endpoint
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

vprn-target

Synopsis	Enable the vprn-target context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action forward vprn-target
Tree	vprn-target

Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

adv-prefix string

Synopsis	Advertised IP prefix for target destination
Context	configure filter ip-filter string entry number action forward vprn-target adv-prefix string
Tree	adv-prefix
Introduced	16.0.R1
Platforms	All

bgp-nh string

Synopsis	Target BGP next hop IP address
Context	configure filter ip-filter string entry number action forward vprn-target bgp-nh string
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

lsp string

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ip-filter string entry number action forward vprn-target lsp string
Tree	lsp
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

vprn reference

Synopsis	Routing context used for route lookup
Context	configure filter ip-filter string entry number action forward vprn-target vprn reference

Tree	vprn
Reference	configure service vprn <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

gtp-local-breakout

Synopsis	Break out matching traffic locally from a GTP tunnel for GTP-subscriber-hosts, or forward for other entities
Context	configure filter ip-filter <i>string</i> entry number action gtp-local-breakout
Tree	gtp-local-breakout
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the http-redirect context
Context	configure filter ip-filter <i>string</i> entry number action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	configure filter ip-filter <i>string</i> entry number action http-redirect allow-override <i>boolean</i>
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to true , the RADIUS VSA can override the HTTP redirect URL.

When configured to **false**, the HTTP redirect URL is not overridden.
This does not apply if the CPF option is specified for the URL.

Default	false
Introduced	16.0.R1
Platforms	All

url (*keyword* | *http-redirect-url*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	configure filter ip-filter string entry number action http-redirect url (<i>keyword</i> <i>http-redirect-url</i>)
Tree	url
Description	<p>This command specifies the URL to use for HTTP redirection for this filter entry.</p> <p>A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only.</p> <p>The following macro substitutions may be used:</p> <p>\$URL — request-URI in the HTTP GET request received</p> <p>\$MAC — a string that represents the MAC address of the subscriber host</p> <p>\$IP — a string that represents the IP address of the subscriber host</p> <p>\$SUB — a string that represents the subscriber ID</p> <p>\$SAP — a string that represents a SAP ID</p> <p>\$SAPDESC — description string configured on the SAP</p> <p>\$CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format)</p> <p>\$RID — a string that represents the remote ID of the subscriber host (hexadecimal format)</p>
String Length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	configure filter ip-filter <i>string entry number action ignore-match</i>
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

l2-aware-nat-bypass *boolean*

Synopsis	Divert traffic from an L2-Aware NAT subscriber
Context	configure filter ip-filter <i>string entry number action l2-aware-nat-bypass boolean</i>
Tree	l2-aware-nat-bypass
Description	<p>When configured to true, the filter action selectively diverts traffic from a L2-Aware NAT subscriber away from NAT. This action is only applicable to L2-Aware NAT subscribers and must be configured together with action accept. Traffic identified in the match condition bypasses L2-Aware NAT. An example is to bypass NAT for on-net destinations (within the customer network).</p> <p>For selective NAT bypass to take effect, in addition to IP filter configuration, the L2-Aware NAT subscriber must be specifically enabled for selective bypass via the allow-bypass configuration option in the configure subscriber-mgmt sub-profile nat allow-bypass context.</p> <p>When configured to false, traffic that is not classified for bypass automatically diverts to L2-Aware NAT, unless it is explicitly configured in the IP filter action to be dropped.</p>
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enable the nat context
Context	configure filter ip-filter <i>string entry number action nat</i>
Tree	nat
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis NAT policy name when action is NAT
 Context **configure** filter ip-filter *string* entry *number* action nat nat-policy *reference*
 Tree [nat-policy](#)
 Reference **configure** service nat nat-policy *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit

Synopsis Enable the **rate-limit** context
 Context **configure** filter ip-filter *string* entry *number* action rate-limit
 Tree [rate-limit](#)
 Introduced 16.0.R1

extracted-traffic

Synopsis Limit the rate of traffic extracted to the CPM
 Context **configure** filter ip-filter *string* entry *number* action rate-limit extracted-traffic
 Tree [extracted-traffic](#)
 Introduced 22.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

packet-length

Synopsis Enable the **packet-length** context
 Context **configure** filter ip-filter *string* entry *number* action rate-limit packet-length
 Tree [packet-length](#)
 Notes The following elements are part of a choice: **packet-length** or **ttl**.

Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit packet-length eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit packet-length gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit packet-length lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number action rate-limit packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the length range
Context	configure filter ip-filter string entry number action rate-limit packet-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the length range
Context	configure filter ip-filter string entry number action rate-limit packet-length range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ip-filter string entry number action rate-limit pattern
Tree	pattern

Introduced 16.0.R4
Platforms All

expression *string*

Synopsis Pattern expression to match
Context **configure** [filter](#) [ip-filter](#) *string* [entry](#) *number* [action](#) [rate-limit](#) [pattern](#) [expression](#) *string*
Tree [expression](#)
String Length 3 to 18
Notes This element is mandatory.
Introduced 16.0.R4
Platforms All

mask *string*

Synopsis Mask for the pattern expression
Context **configure** [filter](#) [ip-filter](#) *string* [entry](#) *number* [action](#) [rate-limit](#) [pattern](#) [mask](#) *string*
Tree [mask](#)
String Length 3 to 18
Notes This element is mandatory.
Introduced 16.0.R4
Platforms All

offset-type *keyword*

Synopsis Starting point reference for offset value of pattern
Context **configure** [filter](#) [ip-filter](#) *string* [entry](#) *number* [action](#) [rate-limit](#) [pattern](#) [offset-type](#) *keyword*
Tree [offset-type](#)
Options layer-3, layer-4, data, dns-qtype
Notes This element is mandatory.
Introduced 16.0.R4
Platforms All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit pattern offset-value <i>number</i>
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

pir (*number* | *keyword*)

Synopsis	Peak information rate
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	0 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: pir or pps-pir .
Introduced	16.0.R1
Platforms	All

pps-pir (*number* | *keyword*)

Synopsis	Peak information rate
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action rate-limit pps-pir (<i>number</i> <i>keyword</i>)
Tree	pps-pir
Range	0 to 100000000
Units	packets per second
Options	max
Notes	The following elements are part of a mandatory choice: pir or pps-pir .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

t*ttl*

Synopsis	Enable the ttl context
Context	configure filter ip-filter string entry number action rate-limit ttl
Tree	ttl
Notes	The following elements are part of a choice: packet-length or ttl .
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	configure filter ip-filter string entry number action rate-limit ttl eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than condition match value
Context	configure filter ip-filter string entry number action rate-limit ttl gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	configure filter ip-filter string entry number action rate-limit ttl lt number
Tree	lt
Range	1 to 255

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number action rate-limit ttl range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ip-filter string entry number action rate-limit ttl range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the range
Context	configure filter ip-filter string entry number action rate-limit ttl range start number
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

reassemble

Synopsis	Forward matching packets to reassembly function
Context	configure filter ip-filter <i>string entry number action reassemble</i>
Tree	reassemble
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remark

Synopsis	Enable the remark context
Context	configure filter ip-filter <i>string entry number action remark</i>
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp keyword

Synopsis	Destination SAP
Context	configure filter ip-filter <i>string entry number action remark dscp keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

secondary

Synopsis	Enable the secondary context
Context	configure filter ip-filter <i>string entry number action secondary</i>

Tree	secondary
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the forward context
Context	configure filter ip-filter string entry number action secondary forward
Tree	forward
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ip-filter string entry number action secondary forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ip-filter string entry number action secondary forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

address string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets
Context	configure filter ip-filter string entry number action secondary forward next-hop nh-ip-vrf address string
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect boolean

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ip-filter string entry number action secondary forward next-hop nh-ip-vrf indirect boolean
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

router-instance string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ip-filter string entry number action secondary forward next-hop nh-ip-vrf router-instance string
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sap

Synopsis	Enable the sap context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action secondary forward sap
Tree	sap
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap-id reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP ID used to forward packets matching the entry
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action secondary forward sap sap-id <i>reference</i>
Tree	sap-id
Reference	configure service vpls <i>string</i> sap <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls reference

Synopsis	VPLS the sdp-bind-id belongs to
Context	configure filter ip-filter <i>string</i> entry <i>number</i> action secondary forward sap vpls <i>reference</i>
Tree	vpls
Reference	configure service vpls <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sdp

Synopsis	Enable the sdp context
Context	configure filter ip-filter string entry number action secondary forward sdp
Tree	sdp
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

sdp-bind-id *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPLS SDP bind ID used to forward matching packets
Context	configure filter ip-filter string entry number action secondary forward sdp sdp-bind-id string
Tree	sdp-bind-id
String Length	3 to 16
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS associated with the SDP
Context	configure filter ip-filter string entry number action secondary forward sdp vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn-target

Synopsis	Enable the vprn-target context
----------	---------------------------------------

Context	configure filter ip-filter string entry number action secondary forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	21.7.R1
Platforms	All

adv-prefix string

Synopsis	Advertised IP prefix for the target destination
Context	configure filter ip-filter string entry number action secondary forward vprn-target adv-prefix string
Tree	adv-prefix
Introduced	21.7.R1
Platforms	All

bgp-nh string

Synopsis	Target BGP next hop IP address
Context	configure filter ip-filter string entry number action secondary forward vprn-target bgp-nh string
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

lsp string

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ip-filter string entry number action secondary forward vprn-target lsp string
Tree	lsp
String Length	1 to 64
Introduced	21.7.R1
Platforms	All

vprn reference

Synopsis	Routing context used for route lookup
Context	configure filter ip-filter <i>string</i> entry number action secondary forward vprn-target vprn reference
Tree	vprn
Reference	configure service vprn <i>string</i>
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

remark

Synopsis	Enable the remark context
Context	configure filter ip-filter <i>string</i> entry number action secondary remark
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp keyword

Synopsis	Destination SAP
Context	configure filter ip-filter <i>string</i> entry number action secondary remark dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
----------	--

Context	configure filter ip-filter <i>string</i> <i>entry number</i> <i>action tcp-mss-adjust</i>
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: accept , drop , forward , gtp-local-breakout , http-redirect , ignore-match , nat , reassemble , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure filter ip-filter <i>string</i> <i>entry number</i> <i>description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

egress-pbr *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBR that has an effect when this filter is applied on egress
Context	configure filter ip-filter <i>string</i> <i>entry number</i> <i>egress-pbr keyword</i>
Tree	egress-pbr
Options	true, true-with-l4lb
Introduced	16.0.R1
Platforms	All

filter-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd ACL mode
Context	configure filter ip-filter <i>string</i> <i>entry number</i> <i>filter-sample boolean</i>
Tree	filter-sample
Default	false
Introduced	16.0.R1

Platforms All

interface-sample *boolean*

Synopsis Sample matching traffic if IP interface is set to cflowd interface mode
 Context **configure filter ip-filter** *string entry number interface-sample boolean*
 Tree [interface-sample](#)
 Default true
 Introduced 16.0.R1
 Platforms All

log *reference*

Synopsis Log that is used for packets matching this entry
 Context **configure filter ip-filter** *string entry number log reference*
 Tree [log](#)
 Reference **configure filter log** *number*
 Introduced 16.0.R1
 Platforms All

match

Synopsis Enter the **match** context
 Context **configure filter ip-filter** *string entry number match*
 Tree [match](#)
 Description Commands in this context configure match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
 Introduced 16.0.R1
 Platforms All

destination-class *number*

Synopsis Destination class as a match criterion
 Context **configure filter ip-filter** *string entry number match destination-class number*
 Tree [destination-class](#)

Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the destination-class-lookup command (under the ingress context for the service interface) to be enabled (set to true).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

dscp keyword

Synopsis	DSCP used as an IP filter match criterion
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match dst-ip
Tree	dst-ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	16.0.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	IPv4 address used as the match criterion
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match dst-ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1

Platforms All

ip-prefix-list *reference*

Synopsis IPv4 address prefix list used as match criterion

Context **configure** filter ip-filter *string* entry *number* match dst-ip ip-prefix-list *reference*

Tree [ip-prefix-list](#)

Reference **configure** filter match-list ip-prefix-list *string*

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms All

mask *string*

Synopsis IPv4 address mask used as the match criterion

Context **configure** filter ip-filter *string* entry *number* match dst-ip mask *string*

Tree [mask](#)

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms All

dst-port

Synopsis Enter the **dst-port** context

Context **configure** filter ip-filter *string* entry *number* match dst-port

Tree [dst-port](#)

Notes The following elements are part of a choice: **port** or (**dst-port** and **src-port**).

Introduced 16.0.R1

Platforms All

eq *number*

Synopsis Exact match criterion for the port number

Context **configure** filter ip-filter *string* entry *number* match dst-port eq *number*

Tree [eq](#)

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than match criterion for the port number
Context	configure filter ip-filter string entry number match dst-port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the port number
Context	configure filter ip-filter string entry number match dst-port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter string entry number match dst-port port-list reference
Tree	port-list
Reference	configure filter match-list port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range as port match criterion
Context	configure filter ip-filter string entry number match dst-port range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ip-filter string entry number match dst-port range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fragment keyword

Synopsis	Match criterion for fragmented packets
Context	configure filter ip-filter string entry number match fragment keyword
Tree	fragment
Options	false, true, first-only, non-first-only

Introduced	16.0.R1
Platforms	All

icmp

Synopsis	Enter the icmp context
Context	configure filter ip-filter string entry number match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	All

code number

Synopsis	ICMP code value to match
Context	configure filter ip-filter string entry number match icmp code number
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	All

type number

Synopsis	ICMP type value to match
Context	configure filter ip-filter string entry number match icmp type number
Tree	type
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the ip context
Context	configure filter ip-filter string entry number match ip
Tree	ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).

Introduced	21.10.R1
Platforms	All

address (*ipv4-address* | *ipv4-prefix-with-host-bits*)

Synopsis	IPv4 address used as the match criterion
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip address (<i>ipv4-address</i> <i>ipv4-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	21.10.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IP4 address prefix list used as match criterion
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip ip-prefix-list <i>reference</i>
Tree	ip-prefix-list
Reference	configure filter match-list ip-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	21.10.R1
Platforms	All

mask *string*

Synopsis	IPv4 address mask used as the match criterion
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip mask <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	21.10.R1
Platforms	All

ip-option

Synopsis	Enable the ip-option context
----------	-------------------------------------

Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip-option
Tree	ip-option
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Mask that is ANDed with ip-option value in the packet header
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip-option mask <i>number</i>
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	Specific IP option to match
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match ip-option type <i>number</i>
Tree	type
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiple-option *boolean*

Synopsis	Match based on presence of multiple options in header
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match multiple-option <i>boolean</i>
Tree	multiple-option
Introduced	16.0.R1
Platforms	All

option-present *boolean*

Synopsis	Match on the presence of any IP option in the packet
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match option-present <i>boolean</i>
Tree	option-present
Introduced	16.0.R1
Platforms	All

packet-length

Synopsis	Enable the packet-length context
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match packet-length
Tree	packet-length
Introduced	19.5.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match packet-length eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match packet-length gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ip-filter string entry number match packet-length lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number match packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

end number

Synopsis	Upper bound of the length range
Context	configure filter ip-filter string entry number match packet-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

start number

Synopsis	Lower bound of the length range
Context	configure filter ip-filter string entry number match packet-length range start number
Tree	start
Range	0 to 65534

Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

port

Synopsis	Enter the port context
Context	configure filter ip-filter string entry number match port
Tree	port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Exact match criterion for the port number
Context	configure filter ip-filter string entry number match port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than match criterion for the port number
Context	configure filter ip-filter string entry number match port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the port number
Context	configure filter ip-filter string entry number match port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter string entry number match port port-list reference
Tree	port-list
Reference	configure filter match-list port-list string
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number match port range
Tree	range
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range.
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range as port match criterion
Context	configure filter ip-filter string entry number match port range end number
Tree	end
Range	1 to 65535

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ip-filter string entry number match port range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

protocol (number | keyword)

Synopsis	IP protocol identifier as a match criterion
Context	configure filter ip-filter string entry number match protocol (number keyword)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: protocol or protocol-list .
Introduced	16.0.R1
Platforms	All

protocol-list reference

Synopsis	Name of the protocol list as a match criterion
Context	configure filter ip-filter string entry number match protocol-list reference
Tree	protocol-list
Reference	configure filter match-list protocol-list string
Notes	The following elements are part of a choice: protocol or protocol-list .
Introduced	20.7.R1

Platforms All

src-ip

Synopsis Enter the **src-ip** context

Context **configure filter ip-filter string entry number match src-ip**

Tree [src-ip](#)

Notes The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).

Introduced 16.0.R1

Platforms All

address (*ipv4-address | ipv4-prefix-with-host-bits*)

Synopsis IPv4 address used as the match criterion

Context **configure filter ip-filter string entry number match src-ip address (*ipv4-address | ipv4-prefix-with-host-bits*)**

Tree [address](#)

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms All

ip-prefix-list *reference*

Synopsis IP4 address prefix list used as match criterion

Context **configure filter ip-filter string entry number match src-ip ip-prefix-list *reference***

Tree [ip-prefix-list](#)

Reference **configure filter match-list ip-prefix-list string**

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms All

mask *string*

Synopsis IPv4 address mask used as the match criterion

Context **configure filter ip-filter string entry number match src-ip mask *string***

Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ip-prefix-list .
Introduced	16.0.R1
Platforms	All

src-mac

Synopsis	Enable the src-mac context
Context	configure filter ip-filter string entry number match src-mac
Tree	src-mac
Introduced	19.5.R1
Platforms	All

address string

Synopsis	MAC address used as the match criterion
Context	configure filter ip-filter string entry number match src-mac address string
Tree	address
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

mask string

Synopsis	MAC address mask as the match criterion
Context	configure filter ip-filter string entry number match src-mac mask string
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	19.5.R1
Platforms	All

src-port

Synopsis	Enter the src-port context
Context	configure filter ip-filter string entry number match src-port

Tree	src-port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the port number
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match src-port eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the port number
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match src-port gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the port number
Context	configure filter ip-filter <i>string</i> entry <i>number</i> match src-port lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ip-filter <i>string entry number match src-port port-list reference</i>
Tree	port-list
Reference	configure filter match-list port-list <i>string</i>
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter <i>string entry number match src-port range</i>
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range as port match criterion
Context	configure filter ip-filter <i>string entry number match src-port range end number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ip-filter <i>string entry number match src-port range start number</i>
Tree	start
Range	0 to 65534

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

src-route-option *boolean*

Synopsis	Match based on presence of source route option
Context	configure filter ip-filter <i>string</i> entry number match src-route-option <i>boolean</i>
Tree	src-route-option
Introduced	16.0.R1
Platforms	All

tcp-established

Synopsis	Match packets containing the TCP flag as ACK or RST
Context	configure filter ip-filter <i>string</i> entry number match tcp-established
Tree	tcp-established
Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the tcp-flags context
Context	configure filter ip-filter <i>string</i> entry number match tcp-flags
Tree	tcp-flags
Notes	The following elements are part of a choice: tcp-established or tcp-flags .
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Match TCP ACK as per value of the ACK TCP flag bit
Context	configure filter ip-filter <i>string</i> entry number match tcp-flags ack <i>boolean</i>
Tree	ack

Introduced 16.0.R1
Platforms All

cwr boolean

Synopsis Match TCP CWR as per value of the CWR TCP flag bit
Context **configure filter ip-filter string entry number match tcp-flags cwr boolean**
Tree [cwr](#)
Introduced 16.0.R1
Platforms All

ece boolean

Synopsis Match TCP ECE as per value of the ECE TCP flag bit
Context **configure filter ip-filter string entry number match tcp-flags ece boolean**
Tree [ece](#)
Introduced 16.0.R1
Platforms All

fin boolean

Synopsis Match TCP FIN as per value of the FIN TCP flag bit
Context **configure filter ip-filter string entry number match tcp-flags fin boolean**
Tree [fin](#)
Introduced 16.0.R1
Platforms All

ns boolean

Synopsis Match TCP NS as per value of the NS TCP flag bit
Context **configure filter ip-filter string entry number match tcp-flags ns boolean**
Tree [ns](#)
Introduced 16.0.R1
Platforms All

psh boolean

Synopsis	Match TCP PSH as per value of the PSH TCP flag bit
Context	configure filter ip-filter string entry number match tcp-flags psh boolean
Tree	psh
Introduced	16.0.R1
Platforms	All

rst boolean

Synopsis	Match TCP RST as per value of the RST TCP flag bit
Context	configure filter ip-filter string entry number match tcp-flags rst boolean
Tree	rst
Introduced	16.0.R1
Platforms	All

syn boolean

Synopsis	Match TCP SYN as per value of the SYN TCP flag bit
Context	configure filter ip-filter string entry number match tcp-flags syn boolean
Tree	syn
Introduced	16.0.R1
Platforms	All

urg boolean

Synopsis	Match TCP URG as per value of the URG TCP flag bit
Context	configure filter ip-filter string entry number match tcp-flags urg boolean
Tree	urg
Introduced	16.0.R1
Platforms	All

ttl

Synopsis	Enable the ttl context
Context	configure filter ip-filter string entry number match ttl

Tree	ttl
Introduced	21.10.R1
Platforms	All

eq number

Synopsis	Equal to condition match value
Context	configure filter ip-filter string entry number match ttl eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range.
Introduced	21.10.R1
Platforms	All

gt number

Synopsis	Greater than condition match value
Context	configure filter ip-filter string entry number match ttl gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range.
Introduced	21.10.R1
Platforms	All

lt number

Synopsis	Less than condition match value
Context	configure filter ip-filter string entry number match ttl lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range.
Introduced	21.10.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ip-filter string entry number match ttl range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	21.10.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ip-filter string entry number match ttl range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

start number

Synopsis	Lower bound of the range
Context	configure filter ip-filter string entry number match ttl range start number
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

pbr-down-action-override keyword

Synopsis	Action when PBR or PBF target for this entry is not available
Context	configure filter ip-filter string entry number pbr-down-action-override keyword

Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	configure filter ip-filter <i>string</i> entry number sample-profile <i>reference</i>
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	configure cflowd sample-profile <i>number</i>
Introduced	20.10.R1
Platforms	All

sticky-dest (*number* | *keyword*)

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	configure filter ip-filter <i>string</i> entry number sticky-dest (<i>number</i> <i>keyword</i>)
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
----------	--------------

Context	configure filter ip-filter <i>string filter-id number</i>
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of this filter definition
Context	configure filter ip-filter <i>string scope keyword</i>
Tree	scope
Options	exclusive, template, embedded, system
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	configure filter ip-filter <i>string shared-policer boolean</i>
Tree	shared-policer
Description	<p>When configured to true, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP.</p> <p>When configured to false, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.</p>
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the subscriber-mgmt context
Context	configure filter ip-filter <i>string subscriber-mgmt</i>
Tree	subscriber-mgmt
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-specific-entry

Synopsis Enter the **host-specific-entry** context

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry**

Tree [host-specific-entry](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-control

Synopsis Enter the **credit-control** context

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry credit-control**

Tree [credit-control](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis Enable the **range** context

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry credit-control range**

Tree [range](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis Upper bound of range for credit control filter entries

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry credit-control range end number**

Tree [end](#)

Range 1 to 2097151

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis Lower bound of range for credit control filter entries

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry credit-control range start number**

Tree [start](#)

Range 1 to 2097151

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter-rule

Synopsis Enter the **filter-rule** context

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry filter-rule**

Tree [filter-rule](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis Enable the **range** context

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry filter-rule range**

Tree [range](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis Upper bound of range for inserting filter rule entries

Context **configure filter ip-filter string subscriber-mgmt host-specific-entry filter-rule range end number**

Tree [end](#)

Range 1 to 2097151

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of range for inserting filter rule entries

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [dst-ip](#) [mask](#) *string*

Tree [mask](#)

Notes The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.

Introduced 20.10.R1

Platforms VSR

dst-port

Synopsis Enter the **dst-port** context

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [dst-port](#)

Tree [dst-port](#)

Notes The following elements are part of a choice: **port** or (**dst-port** and **src-port**).

Introduced 20.10.R1

Platforms VSR

eq *number*

Synopsis Exact match criterion for the port number

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [dst-port](#) [eq](#) *number*

Tree [eq](#)

Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

gt number

Synopsis	Greater than match criterion for the port number
Context	configure filter ipv6-exception string entry number match dst-port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

lt number

Synopsis	Less than match criterion for the port number
Context	configure filter ipv6-exception string entry number match dst-port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-exception string entry number match dst-port port-list reference
Tree	port-list
Reference	configure filter match-list port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

range

Synopsis	Enable the range context
Context	configure filter ipv6-exception <i>string entry number match dst-port range</i>
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

end number

Synopsis	Upper bound of the port range as port match criterion
Context	configure filter ipv6-exception <i>string entry number match dst-port range end number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ipv6-exception <i>string entry number match dst-port range start number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

icmp

Synopsis	Enter the icmp context
Context	configure filter ipv6-exception <i>string entry number match icmp</i>
Tree	icmp
Introduced	20.10.R1

Platforms VSR

code number

Synopsis ICMPv6 code value to match
 Context **configure filter ipv6-exception string entry number match icmp code number**
 Tree [code](#)
 Range 0 to 255
 Introduced 20.10.R1
 Platforms VSR

type number

Synopsis ICMPv6 type value to match
 Context **configure filter ipv6-exception string entry number match icmp type number**
 Tree [type](#)
 Range 0 to 255
 Introduced 20.10.R1
 Platforms VSR

next-header (number | keyword)

Synopsis IP protocol to match
 Context **configure filter ipv6-exception string entry number match next-header (number | keyword)**
 Tree [next-header](#)
 Range 0 to 255
 Options tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
 Introduced 20.10.R1
 Platforms VSR

port

Synopsis Enter the **port** context

Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match <i>port</i>
Tree	port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	20.10.R1
Platforms	VSR

eq *number*

Synopsis	Exact match criterion for the port number
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match <i>port</i> eq <i>number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

gt *number*

Synopsis	Greater than match criterion for the port number
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match <i>port</i> gt <i>number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

lt *number*

Synopsis	Less than match criterion for the port number
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match <i>port</i> lt <i>number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1

Platforms VSR

port-list *reference*

Synopsis Name of the port list as the match criterion

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [port](#) [port-list](#) *reference*

Tree [port-list](#)

Reference **configure** filter [match-list](#) [port-list](#) *string*

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 20.10.R1

Platforms VSR

range

Synopsis Enable the **range** context

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [port](#) [range](#)

Tree [range](#)

Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced 20.10.R1

Platforms VSR

end *number*

Synopsis Upper bound of the port range as port match criterion

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [port](#) [range](#) [end](#) *number*

Tree [end](#)

Range 1 to 65535

Notes This element is mandatory.

Introduced 20.10.R1

Platforms VSR

start *number*

Synopsis Lower bound of the port range as port match criterion

Context **configure** filter [ipv6-exception](#) *string* [entry](#) *number* [match](#) [port](#) [range](#) [start](#) *number*

Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

src-ip

Synopsis	Enter the src-ip context
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match src-ip
Tree	src-ip
Introduced	20.10.R1
Platforms	VSR

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	IPv6 address used as the match criterion
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match src-ip address (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	20.10.R1
Platforms	VSR

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-exception <i>string</i> entry <i>number</i> match src-ip ipv6-prefix-list <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	20.10.R1
Platforms	VSR

mask string

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-exception string entry number match src-ip mask string
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	20.10.R1
Platforms	VSR

src-port

Synopsis	Enter the src-port context
Context	configure filter ipv6-exception string entry number match src-port
Tree	src-port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	20.10.R1
Platforms	VSR

eq number

Synopsis	Exact match criterion for the port number
Context	configure filter ipv6-exception string entry number match src-port eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	20.10.R1
Platforms	VSR

gt number

Synopsis	Greater than match criterion for the port number
Context	configure filter ipv6-exception string entry number match src-port gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .

Introduced	20.10.R1
Platforms	VSR

lt number

Synopsis	Less than match criterion for the port number
Context	configure filter ipv6-exception string entry number match src-port lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range .
Introduced	20.10.R1
Platforms	VSR

port-list reference

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-exception string entry number match src-port port-list reference
Tree	port-list
Reference	configure filter match-list port-list string
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range .
Introduced	20.10.R1
Platforms	VSR

range

Synopsis	Enable the range context
Context	configure filter ipv6-exception string entry number match src-port range
Tree	range
Notes	The following elements are part of a choice: eq, gt, lt, port-list, or range .
Introduced	20.10.R1
Platforms	VSR

end number

Synopsis	Upper bound of the port range as port match criterion
----------	---

Context	configure filter ipv6-exception <i>string entry number match src-port range end number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ipv6-exception <i>string entry number match src-port range start number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

filter-id number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Filter ID
Context	configure filter ipv6-exception <i>string filter-id number</i>
Tree	filter-id
Range	1 to 65535
Introduced	20.10.R1
Platforms	VSR

ipv6-filter [[filter-name](#)] *string*

Synopsis	Enter the ipv6-filter list instance
Context	configure filter ipv6-filter <i>string</i>
Tree	ipv6-filter
Introduced	16.0.R1

Platforms All

[filter-name] *string*

Synopsis Filter name
 Context **configure filter ipv6-filter** *string*
 Tree [ipv6-filter](#)
 String Length 1 to 64
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

chain-to-system-filter *boolean*

Synopsis Chain filter policy to the active IPvX system filter policy
 Context **configure filter ipv6-filter** *string chain-to-system-filter* *boolean*
 Tree [chain-to-system-filter](#)
 Default false
 Introduced 16.0.R1
 Platforms All

default-action *keyword*

Synopsis Action for packets that do not match any entry
 Context **configure filter ipv6-filter** *string default-action* *keyword*
 Tree [default-action](#)
 Options drop, accept
 Default drop
 Introduced 16.0.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure filter ipv6-filter** *string description* *string*

Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

embed

Synopsis	Enter the embed context
Context	configure filter ipv6-filter <i>string embed</i>
Tree	embed
Description	Commands in this context embed a previously defined IPv6 embedded filter policy or Hybrid OpenFlow switch instance into an exclusive, template, or system filter policy at the specified offset value. Rules derived from the BGP FlowSpec can also be embedded into template filter policies only.
Introduced	16.0.R1
Platforms	All

filter [[name](#)] *reference offset number*

Synopsis	Enter the filter list instance
Context	configure filter ipv6-filter <i>string embed filter reference offset number</i>
Tree	filter
Introduced	16.0.R1
Platforms	All

[\[name\]](#) *reference*

Synopsis	IPv6 policy to be embedded in the filter
Context	configure filter ipv6-filter <i>string embed filter reference offset number</i>
Tree	filter
Reference	configure filter ipv6-filter <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

offset number

Synopsis	Offset of the inserted entries
Context	configure filter ipv6-filter string embed filter reference offset number
Tree	filter
Range	0 to 2097150
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state keyword

Synopsis	Administrative state of the embedded filter
Context	configure filter ipv6-filter string embed filter reference offset number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

flowspec offset number

Synopsis	Enter the flowspec list instance
Context	configure filter ipv6-filter string embed flowspec offset number
Tree	flowspec
Introduced	16.0.R1
Platforms	All

offset number

Synopsis	Offset of the inserted entries
Context	configure filter ipv6-filter string embed flowspec offset number
Tree	flowspec
Range	0 to 2097151
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the embedded filter
Context	configure filter ipv6-filter string embed flowspec offset number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

group *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface group ID for an external configured set of flowspec rules
Context	configure filter ipv6-filter string embed flowspec offset number group number
Tree	group
Range	0 to 16383
Introduced	16.0.R1
Platforms	All

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Virtual router for an external configured set of flowspec rules
Context	configure filter ipv6-filter string embed flowspec offset number router-instance string
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

openflow [of-switch] *reference offset number*

Synopsis Enter the **openflow** list instance

Context **configure filter ipv6-filter string embed openflow reference offset number**

Tree [openflow](#)

Introduced 16.0.R4

Platforms All

[of-switch] *reference*

Synopsis Referenced Hybrid OpenFlow Switch (OFS) name

Context **configure filter ipv6-filter string embed openflow reference offset number**

Tree [openflow](#)

Reference **configure openflow of-switch string**

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms All

offset number

Synopsis Offset of the inserted entries

Context **configure filter ipv6-filter string embed openflow reference offset number**

Tree [openflow](#)

Range 0 to 2097150

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms All

admin-state keyword

Synopsis Administrative state of the embedded filter

Context **configure filter ipv6-filter string embed openflow reference offset number admin-state keyword**

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

grt

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Global routing context
Context	configure filter ipv6-filter <i>string</i> embed openflow <i>reference</i> <i>offset</i> <i>number</i> grt
Tree	grt
Notes	The following elements are part of a choice: grt , system , (sap and vpls), or vprn .

entry [**entry-id**] *number*

Synopsis	Enter the entry list instance
Context	configure filter ipv6-filter string entry number
Tree	entry
Introduced	16.0.R1
Platforms	All

[entry-id] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	configure filter ipv6-filter string entry number
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the action context
Context	configure filter ipv6-filter string entry number action
Tree	action
Introduced	16.0.R1
Platforms	All

accept

Synopsis	Accept regular routing to forward a matching packet
Context	configure filter ipv6-filter string entry number action accept
Tree	accept

Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

accept-when

Synopsis	Enable the accept-when context
Context	configure filter ipv6-filter string entry number action accept-when
Tree	accept-when
Introduced	19.5.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ipv6-filter string entry number action accept-when pattern
Tree	pattern
Introduced	19.5.R1
Platforms	All

expression *string*

Synopsis	Pattern expression to match
Context	configure filter ipv6-filter string entry number action accept-when pattern expression string
Tree	expression
String Length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

mask *string*

Synopsis	Mask for the pattern expression
Context	configure filter ipv6-filter string entry number action accept-when pattern mask string

Tree	mask
String Length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action accept-when pattern offset-type <i>keyword</i>
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action accept-when pattern offset-value <i>number</i>
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

drop

Synopsis	Drop a packet matching this entry
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .

Introduced	16.0.R1
Platforms	All

drop-when

Synopsis	Enable the drop-when context
Context	configure filter ipv6-filter string entry number action drop-when
Tree	drop-when
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Drop traffic extracted to CPM
Context	configure filter ipv6-filter string entry number action drop-when extracted-traffic
Tree	extracted-traffic
Introduced	16.0.R1
Platforms	All

hop-limit

Synopsis	Enable the hop-limit context
Context	configure filter ipv6-filter string entry number action drop-when hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	configure filter ipv6-filter string entry number action drop-when hop-limit eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .

Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than condition match value
Context	configure filter ipv6-filter string entry number action drop-when hop-limit gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than condition match value
Context	configure filter ipv6-filter string entry number action drop-when hop-limit lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter string entry number action drop-when hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq, gt, lt, or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ipv6-filter string entry number action drop-when hop-limit range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the range
Context	configure filter ipv6-filter string entry number action drop-when hop-limit range start number
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ipv6-filter string entry number action drop-when pattern
Tree	pattern
Introduced	16.0.R4
Platforms	All

expression string

Synopsis	Pattern expression to match
Context	configure filter ipv6-filter string entry number action drop-when pattern expression string
Tree	expression
String Length	3 to 18

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask string

Synopsis	Mask for the pattern expression
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action drop-when pattern <i>mask</i> <i>string</i>
Tree	mask
String Length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type keyword

Synopsis	Starting point reference for offset value of pattern
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action drop-when pattern <i>offset-type</i> <i>keyword</i>
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4

offset-value number

Synopsis	Offset value for the pattern expression
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action drop-when pattern <i>offset-value</i> <i>number</i>
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

payload-length

Synopsis	Enable the payload-length context
Context	configure filter ipv6-filter string entry number action drop-when payload-length
Tree	payload-length
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Exact match criterion for the length
Context	configure filter ipv6-filter string entry number action drop-when payload-length eq number
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than match criterion for the length
Context	configure filter ipv6-filter string entry number action drop-when payload-length gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ipv6-filter string entry number action drop-when payload-length lt number

Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>string entry number action drop-when payload-length range</i>
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the length range
Context	configure filter ipv6-filter <i>string entry number action drop-when payload-length range end number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the length range
Context	configure filter ipv6-filter <i>string entry number action drop-when payload-length range start number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

fc keyword

Synopsis Class name to be forwarded for matching packets
 Context **configure** filter *ipv6-filter* *string* *entry* *number* *action* **fc** *keyword*
 Tree **fc**
 Options be, l2, af, l1, h2, ef, h1, nc
 Introduced 16.0.R1
 Platforms All

forward

Synopsis Enter the **forward** context
 Context **configure** filter *ipv6-filter* *string* *entry* *number* *action* **forward**
 Tree **forward**
 Notes The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, or **tcp-mss-adjust**.
 Introduced 16.0.R1
 Platforms All

bonding-connection *number*

Synopsis Connection ID over which packet is forwarded
 Context **configure** filter *ipv6-filter* *string* *entry* *number* *action* **forward** **bonding-connection** *number*
 Tree **bonding-connection**
 Range 1 to 2
 Notes The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, or **vprn-target**.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esi-l2

Synopsis	Enable the esi-l2 context
Context	configure filter ipv6-filter <i>string</i> <i>entry</i> <i>number</i> <i>action forward</i> esi-l2
Tree	esi-l2
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

esi-value *string*

Synopsis	ESI of the first ESI-identified appliance
Context	configure filter ipv6-filter <i>string</i> <i>entry</i> <i>number</i> <i>action forward</i> esi-l2 esi-value <i>string</i>
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS service name
Context	configure filter ipv6-filter <i>string</i> <i>entry</i> <i>number</i> <i>action forward</i> esi-l2 vpls <i>reference</i>
Tree	vpls
Reference	configure service vpls <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

esi-l3

Synopsis	Enable the esi-l3 context
Context	configure filter ipv6-filter <i>string</i> <i>entry</i> <i>number</i> <i>action forward</i> esi-l3
Tree	esi-l3

Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

esi-value *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ESI of the first ESI-identified appliance
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward esi-l3 esi-value <i>string</i>
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sf-ip *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the service function to forward traffic
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward esi-l3 sf-ip <i>string</i>
Tree	sf-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vas-interface *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Egress R-VPLS IP interface name
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward esi-I3 <i>vas-interface reference</i>
Tree	vas-interface
Reference	configure service vprn <i>string</i> interface <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPRN service name
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward esi-I3 <i>vprn reference</i>
Tree	vprn
Reference	configure service vprn <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

gre-tunnel *reference*

Synopsis	GRE tunnel template ID that sets the location where an encapsulated matching packet is transported
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward gre-tunnel <i>reference</i>
Tree	gre-tunnel
Reference	configure filter gre-tunnel-template <i>string</i>
Notes	The following elements are part of a choice: bonding-connection , esi-I2 , esi-I3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

lsp string

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ipv6-filter string entry number action forward lsp string
Tree	lsp
String Length	1 to 64
Notes	The following elements are part of a choice: bonding-connection, esi-l2, esi-l3, gre-tunnel, lsp, mpls-policy, next-hop, redirect-policy, router-instance, sap, sdp, srte-policy, or vprn-target.
Introduced	16.0.R1
Platforms	All

mpls-policy

Synopsis	Enable the mpls-policy context
Context	configure filter ipv6-filter string entry number action forward mpls-policy
Tree	mpls-policy
Notes	The following elements are part of a choice: bonding-connection, esi-l2, esi-l3, gre-tunnel, lsp, mpls-policy, next-hop, redirect-policy, router-instance, sap, sdp, srte-policy, or vprn-target.
Introduced	19.10.R1
Platforms	All

endpoint string

Synopsis	MPLS forwarding policy endpoint IPv6 address
Context	configure filter ipv6-filter string entry number action forward mpls-policy endpoint string
Tree	endpoint
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ipv6-filter string entry number action forward next-hop
Tree	next-hop

Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

nh-ip

Synopsis	Enable the nh-ip context
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip
Tree	nh-ip
Notes	The following elements are part of a mandatory choice: nh-ip or nh-ip-vrf .
Introduced	16.0.R1
Platforms	All

address string

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip address string
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect boolean

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip indirect boolean
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	The following elements are part of a mandatory choice: nh-ip or nh-ip-vrf .
Introduced	16.0.R1
Platforms	All

address string

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip-vrf address string
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect boolean

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ipv6-filter string entry number action forward next-hop nh-ip-vrf indirect boolean
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

router-instance string

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward next-hop nh-ip-vrf router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

redirect-policy *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop or forward next hop router that forwards a packet that matches this entry
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward redirect-policy <i>reference</i>
Tree	redirect-policy
Reference	configure filter redirect-policy <i>string</i>
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

router-instance *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward router-instance <i>string</i>
Tree	router-instance
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap

Synopsis	Enable the sap context
Context	configure filter ipv6-filter string entry number action forward sap
Tree	sap
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap-id reference

Synopsis	VPLS Ethernet SAP ID used to forward matching packets
Context	configure filter ipv6-filter string entry number action forward sap sap-id reference
Tree	sap-id
Reference	configure service vpls string sap string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls reference

Synopsis	VPLS associated with the SAP
Context	configure filter ipv6-filter string entry number action forward sap vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sdp

Synopsis	Enable the sdp context
Context	configure filter ipv6-filter string entry number action forward sdp

Tree	sdp
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	16.0.R1
Platforms	All

sdp-bind-id *string*

Synopsis	VPLS SDP bind ID used to forward matching packets
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward sdp sdp-bind-id <i>string</i>
Tree	sdp-bind-id
String Length	3 to 16
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS associated with the SDP
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward sdp vpls <i>reference</i>
Tree	vpls
Reference	configure service vpls <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

srte-policy

Synopsis	Enable the srte-policy context
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action forward srte-policy
Tree	srte-policy
Notes	The following elements are part of a choice: bonding-connection , esi-l2 , esi-l3 , gre-tunnel , lsp , mpls-policy , next-hop , redirect-policy , router-instance , sap , sdp , srte-policy , or vprn-target .
Introduced	19.10.R1

Platforms All

color number

Synopsis SR-TE policy color ID

Context **configure filter ipv6-filter string entry number action forward srte-policy color number**

Tree [color](#)

Range 0 to 4294967295

Notes This element is mandatory.

Introduced 19.10.R1

Platforms All

endpoint string

Synopsis SR-TE policy endpoint IPv6 address

Context **configure filter ipv6-filter string entry number action forward srte-policy endpoint string**

Tree [endpoint](#)

Notes This element is mandatory.

Introduced 19.10.R1

Platforms All

vprn-target

Synopsis Enable the **vprn-target** context

Context **configure filter ipv6-filter string entry number action forward vprn-target**

Tree [vprn-target](#)

Notes The following elements are part of a choice: **bonding-connection, esi-l2, esi-l3, gre-tunnel, lsp, mpls-policy, next-hop, redirect-policy, router-instance, sap, sdp, srte-policy, or vprn-target.**

Introduced 16.0.R1

Platforms All

adv-prefix string

Synopsis Advertised IP prefix for target destination

Context **configure filter ipv6-filter string entry number action forward vprn-target adv-prefix string**

Tree	adv-prefix
Introduced	16.0.R1
Platforms	All

bgp-nh string

Synopsis	Target BGP next hop IP address
Context	configure filter ipv6-filter string entry number action forward vprn-target bgp-nh string
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

lsp string

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ipv6-filter string entry number action forward vprn-target lsp string
Tree	lsp
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

vprn reference

Synopsis	Routing context used for route lookup
Context	configure filter ipv6-filter string entry number action forward vprn-target vprn reference
Tree	vprn
Reference	configure service vprn string
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

http-redirect

Synopsis	Enable the http-redirect context
----------	---

Context	configure filter ipv6-filter string entry number action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	configure filter ipv6-filter string entry number action http-redirect allow-override boolean
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to true , the RADIUS VSA can override the HTTP redirect URL. When configured to false , the HTTP redirect URL is not overridden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

url (*keyword* | *http-redirect-url*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	configure filter ipv6-filter string entry number action http-redirect url (keyword http-redirect-url)
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry. A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only. The following macro substitutions may be used: \$URL — request-URI in the HTTP GET request received

\$MAC — a string that represents the MAC address of the subscriber host

\$IP — a string that represents the IP address of the subscriber host

\$SUB — a string that represents the subscriber ID

\$SAP — a string that represents a SAP ID

\$SAPDESC — description string configured on the SAP

\$CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format)

\$RID — a string that represents the remote ID of the subscriber host (hexadecimal format)

String Length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	configure filter ipv6-filter <i>string entry number action ignore-match</i>
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	All

nat

Synopsis	Enable the nat context
Context	configure filter ipv6-filter <i>string entry number action nat</i>
Tree	nat
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action nat nat-policy <i>reference</i>
Tree	nat-policy
Reference	configure service nat nat-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-type *keyword*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT type to assign when action is NAT
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action nat nat-type <i>keyword</i>
Tree	nat-type
Options	dslite, nat64
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit

Synopsis	Enable the rate-limit context
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> action rate-limit
Tree	rate-limit
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Limit the rate of traffic extracted to the CPM
----------	--

Context	configure filter ipv6-filter string entry number action rate-limit extracted-traffic
Tree	extracted-traffic
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

hop-limit

Synopsis	Enable the hop-limit context
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	16.0.R1
Platforms	All

eq number

Synopsis	Equal to condition match value
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit eq number
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than condition match value
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit gt number
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than condition match value
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ipv6-filter string entry number action rate-limit hop-limit range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the range
----------	--------------------------

Context	configure filter ipv6-filter string entry number action rate-limit hop-limit range start number
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pattern

Synopsis	Enable the pattern context
Context	configure filter ipv6-filter string entry number action rate-limit pattern
Tree	pattern
Introduced	16.0.R4
Platforms	All

expression *string*

Synopsis	Pattern expression to match
Context	configure filter ipv6-filter string entry number action rate-limit pattern expression string
Tree	expression
String Length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *string*

Synopsis	Mask for the pattern expression
Context	configure filter ipv6-filter string entry number action rate-limit pattern mask string
Tree	mask
String Length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	configure filter ipv6-filter string entry number action rate-limit pattern offset-type keyword
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	configure filter ipv6-filter string entry number action rate-limit pattern offset-value number
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

payload-length

Synopsis	Enable the payload-length context
Context	configure filter ipv6-filter string entry number action rate-limit payload-length
Tree	payload-length
Notes	The following elements are part of a choice: hop-limit or payload-length .
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ipv6-filter string entry number action rate-limit payload-length eq number

Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

gt number

Synopsis	Greater than match criterion for the length
Context	configure filter ipv6-filter string entry number action rate-limit payload-length gt number
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

lt number

Synopsis	Less than match criterion for the length
Context	configure filter ipv6-filter string entry number action rate-limit payload-length lt number
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter string entry number action rate-limit payload-length range
Tree	range
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the length range
Context	configure filter ipv6-filter string entry number action rate-limit payload-length range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the length range
Context	configure filter ipv6-filter string entry number action rate-limit payload-length range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pir (number | keyword)

Synopsis	Peak information rate
Context	configure filter ipv6-filter string entry number action rate-limit pir (number keyword)
Tree	pir
Range	0 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: pir or pps-pir .
Introduced	16.0.R1
Platforms	All

pps-pir (*number | keyword*)

Synopsis	Peak information rate
Context	configure filter ipv6-filter <i>string entry number action rate-limit pps-pir</i> (<i>number keyword</i>)
Tree	pps-pir
Range	0 to 100000000
Units	packets per second
Options	max
Notes	The following elements are part of a mandatory choice: pir or pps-pir .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

remark

Synopsis	Enable the remark context
Context	configure filter ipv6-filter <i>string entry number action remark</i>
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	Destination SAP
Context	configure filter ipv6-filter <i>string entry number action remark dscp keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

secondary

Synopsis	Enable the secondary context
Context	configure filter ipv6-filter string entry number action secondary
Tree	secondary
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the forward context
Context	configure filter ipv6-filter string entry number action secondary forward
Tree	forward
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

next-hop

Synopsis	Enable the next-hop context
Context	configure filter ipv6-filter string entry number action secondary forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

nh-ip-vrf

Synopsis	Enable the nh-ip-vrf context
Context	configure filter ipv6-filter string entry number action secondary forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

address string

Synopsis	IPv6 address of next hop to forward matching packets
Context	configure filter ipv6-filter string entry number action secondary forward next-hop nh-ip-vrf address string
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect boolean

Synopsis	Allow next hop to be indirectly reachable
Context	configure filter ipv6-filter string entry number action secondary forward next-hop nh-ip-vrf indirect boolean
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

router-instance string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	configure filter ipv6-filter string entry number action secondary forward next-hop nh-ip-vrf router-instance string
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sap

Synopsis	Enable the sap context
Context	configure filter ipv6-filter string entry number action secondary forward sap
Tree	sap
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

sap-id reference**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP ID used to forward packets matching the entry
Context	configure filter ipv6-filter string entry number action secondary forward sap sap-id reference
Tree	sap-id
Reference	configure service vpls string sap string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls reference

Synopsis	VPLS the sdp-bind-id belongs to
Context	configure filter ipv6-filter string entry number action secondary forward sap vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sdp

Synopsis	Enable the sdp context
Context	configure filter ipv6-filter string entry number action secondary forward sdp
Tree	sdp
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	16.0.R1
Platforms	All

sdp-bind-id *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPLS SDP bind ID used to forward matching packets
Context	configure filter ipv6-filter string entry number action secondary forward sdp sdp-bind-id string
Tree	sdp-bind-id
String Length	3 to 16
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS associated with the SDP
Context	configure filter ipv6-filter string entry number action secondary forward sdp vpls reference
Tree	vpls
Reference	configure service vpls string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn-target

Synopsis	Enable the vprn-target context
Context	configure filter ipv6-filter string entry number action secondary forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: next-hop , sap , sdp , or vprn-target .
Introduced	21.7.R1
Platforms	All

adv-prefix string

Synopsis	Advertised IP prefix for the target destination
Context	configure filter ipv6-filter string entry number action secondary forward vprn-target adv-prefix string
Tree	adv-prefix
Introduced	21.7.R1
Platforms	All

bgp-nh string

Synopsis	Target BGP next hop IP address
Context	configure filter ipv6-filter string entry number action secondary forward vprn-target bgp-nh string
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

lsp string

Synopsis	LSP that is specified to forward a packet matching this entry
Context	configure filter ipv6-filter string entry number action secondary forward vprn-target lsp string
Tree	lsp
String Length	1 to 64
Introduced	21.7.R1

Platforms All

vprn *reference*

Synopsis Routing context used for route lookup

Context **configure** [filter](#) [ipv6-filter](#) *string* [entry](#) *number* [action](#) [secondary](#) [forward](#) [vprn-target](#) [vprn](#) *reference*

Tree [vprn](#)

Reference **configure** [service](#) [vprn](#) *string*

Notes This element is mandatory.

Introduced 21.7.R1

Platforms All

remark

Synopsis Enable the **remark** context

Context **configure** [filter](#) [ipv6-filter](#) *string* [entry](#) *number* [action](#) [secondary](#) [remark](#)

Tree [remark](#)

Introduced 16.0.R1

Platforms All

dscp *keyword*

Synopsis Destination SAP

Context **configure** [filter](#) [ipv6-filter](#) *string* [entry](#) *number* [action](#) [secondary](#) [remark](#) [dscp](#) *keyword*

Tree [dscp](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Context	configure filter ipv6-filter string entry number action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: accept , drop , forward , http-redirect , ignore-match , nat , or tcp-mss-adjust .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure filter ipv6-filter string entry number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

egress-pbr keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBR that has an effect when this filter is applied on egress
Context	configure filter ipv6-filter string entry number egress-pbr keyword
Tree	egress-pbr
Options	true, true-with-l4lb
Introduced	16.0.R1
Platforms	All

filter-sample boolean

Synopsis	Sample matching traffic if IP interface is set to cflowd ACL mode
Context	configure filter ipv6-filter string entry number filter-sample boolean

Tree	filter-sample
Default	false
Introduced	16.0.R1
Platforms	All

interface-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd interface mode
Context	configure filter ipv6-filter <i>string</i> entry number interface-sample <i>boolean</i>
Tree	interface-sample
Default	true
Introduced	16.0.R1
Platforms	All

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	configure filter ipv6-filter <i>string</i> entry number log <i>reference</i>
Tree	log
Reference	configure filter log <i>number</i>
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the match context
Context	configure filter ipv6-filter <i>string</i> entry number match
Tree	match
Description	Commands in this context provide match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	16.0.R1
Platforms	All

destination-class *number*

Synopsis	Destination class as a match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match destination-class <i>number</i>
Tree	destination-class
Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the destination-class-lookup command (under the ingress context for the service interface) to be enabled (set to true).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match dscp <i>keyword</i>
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the dst-ip context
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match dst-ip
Tree	dst-ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	16.0.R1
Platforms	All

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	IPv6 address used as the match criterion
----------	--

Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match dst-ip <i>address</i> (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match dst-ip <i>ipv6-prefix-list</i> <i>reference</i>
Tree	ipv6-prefix-list
Reference	configure filter match-list <i>ipv6-prefix-list</i> <i>string</i>
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match dst-ip <i>mask</i> <i>string</i>
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the dst-port context
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match <i>dst-port</i>
Tree	dst-port
Notes	The following elements are part of a choice: port or (dst-port and src-port).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the port number
Context	configure filter ipv6-filter <i>string entry number match dst-port eq number</i>
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the port number
Context	configure filter ipv6-filter <i>string entry number match dst-port gt number</i>
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the port number
Context	configure filter ipv6-filter <i>string entry number match dst-port lt number</i>
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	configure filter ipv6-filter <i>string entry number match dst-port port-list reference</i>
Tree	port-list

Reference	configure filter match-list port-list string
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter string entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: eq , gt , lt , port-list , or range .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the port range as port match criterion
Context	configure filter ipv6-filter string entry number match dst-port range end number
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ipv6-filter string entry number match dst-port range start number
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

extension-header

Synopsis	Enter the extension-header context
Context	configure filter ipv6-filter string entry number match extension-header
Tree	extension-header
Introduced	16.0.R1
Platforms	All

ah boolean

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	configure filter ipv6-filter string entry number match extension-header ah boolean
Tree	ah
Introduced	16.0.R1
Platforms	All

esp boolean

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	configure filter ipv6-filter string entry number match extension-header esp boolean
Tree	esp
Introduced	16.0.R1
Platforms	All

hop-by-hop boolean

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	configure filter ipv6-filter string entry number match extension-header hop-by-hop boolean
Tree	hop-by-hop
Introduced	16.0.R2
Platforms	All

routing-type0 boolean

Synopsis	Match a packet as per the existence of a routing Extension Header
----------	---

Context	configure filter ipv6-filter string entry number match extension-header routing-type0 boolean
Tree	routing-type0
Introduced	16.0.R1
Platforms	All

flow-label

Synopsis	Enable the flow-label context
Context	configure filter ipv6-filter string entry number match flow-label
Tree	flow-label
Introduced	16.0.R1
Platforms	All

mask number

Synopsis	Flow label mask for the IPv6 filter entry
Context	configure filter ipv6-filter string entry number match flow-label mask number
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575
Introduced	16.0.R1
Platforms	All

value number

Synopsis	Flow label as a match criterion
Context	configure filter ipv6-filter string entry number match flow-label value number
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

fragment *keyword*

Synopsis Match criterion for fragmented packages
 Context **configure filter ipv6-filter** *string entry number match fragment keyword*
 Tree [fragment](#)
 Options false, true, first-only, non-first-only
 Introduced 16.0.R1
 Platforms All

hop-limit

Synopsis Enable the **hop-limit** context
 Context **configure filter ipv6-filter** *string entry number match hop-limit*
 Tree [hop-limit](#)
 Introduced 21.10.R1
 Platforms All

eq *number*

Synopsis Equal to condition match value
 Context **configure filter ipv6-filter** *string entry number match hop-limit eq number*
 Tree [eq](#)
 Range 0 to 255
 Notes The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
 Introduced 21.10.R1
 Platforms All

gt *number*

Synopsis Greater than condition match value
 Context **configure filter ipv6-filter** *string entry number match hop-limit gt number*
 Tree [gt](#)
 Range 0 to 254

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	21.10.R1
Platforms	All

lt number

Synopsis	Less than condition match value
Context	configure filter ipv6-filter string entry number match hop-limit lt number
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	21.10.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter string entry number match hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	21.10.R1
Platforms	All

end number

Synopsis	Upper bound of the range
Context	configure filter ipv6-filter string entry number match hop-limit range end number
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

start number

Synopsis	Lower bound of the range
Context	configure filter ipv6-filter <i>string entry number match hop-limit range start number</i>
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

icmp

Synopsis	Enter the icmp context
Context	configure filter ipv6-filter <i>string entry number match icmp</i>
Tree	icmp
Introduced	16.0.R1
Platforms	All

code number

Synopsis	ICMPv6 code value to match
Context	configure filter ipv6-filter <i>string entry number match icmp code number</i>
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	All

type number

Synopsis	ICMPv6 type value to match
Context	configure filter ipv6-filter <i>string entry number match icmp type number</i>
Tree	type
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the ip context
Context	configure filter ipv6-filter string entry number match ip
Tree	ip
Notes	The following elements are part of a choice: ip or (dst-ip and src-ip).
Introduced	21.10.R1
Platforms	All

address (*ipv6-address* | *ipv6-prefix-with-host-bits*)

Synopsis	IPv6 address used as the match criterion
Context	configure filter ipv6-filter string entry number match ip address (<i>ipv6-address</i> <i>ipv6-prefix-with-host-bits</i>)
Tree	address
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	21.10.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	configure filter ipv6-filter string entry number match ip ipv6-prefix-list reference
Tree	ipv6-prefix-list
Reference	configure filter match-list ipv6-prefix-list string
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .
Introduced	21.10.R1
Platforms	All

mask *string*

Synopsis	IPv6 address mask used as the match criterion
Context	configure filter ipv6-filter string entry number match ip mask string
Tree	mask
Notes	The following elements are part of a choice: (address and mask) or ipv6-prefix-list .

Introduced	21.10.R1
Platforms	All

next-header (*number* | *keyword*)

Synopsis	IP protocol to match
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match next-header (<i>number</i> <i>keyword</i>)
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: next-header or next-header-list .
Introduced	16.0.R1
Platforms	All

next-header-list *reference*

Synopsis	Name of the protocol list as a match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match next-header-list <i>reference</i>
Tree	next-header-list
Reference	configure filter match-list protocol-list <i>string</i>
Notes	The following elements are part of a choice: next-header or next-header-list .
Introduced	20.7.R1
Platforms	All

packet-length

Synopsis	Enable the packet-length context
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match packet-length
Tree	packet-length
Introduced	19.5.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	configure filter ipv6-filter <i>string entry number match packet-length eq number</i>
Tree	eq
Range	40 to 65575
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	configure filter ipv6-filter <i>string entry number match packet-length gt number</i>
Tree	gt
Range	40 to 65574
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	configure filter ipv6-filter <i>string entry number match packet-length lt number</i>
Tree	lt
Range	41 to 65575
Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter ipv6-filter <i>string entry number match packet-length range</i>
Tree	range

Notes	The following elements are part of a mandatory choice: eq , gt , lt , or range .
Introduced	19.5.R1
Platforms	All

end number

Synopsis	Upper bound of packet length range as match criterion

start number

Synopsis	Lower bound of the port range as port match criterion
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> match src-port range start <i>number</i>
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

tcp-established

Synopsis Match packets containing the TCP flag as ACK or RST

Context **configure filter ipv6-filter string entry number match tcp-established**

Tree [tcp-established](#)

Notes The following elements are part of a choice: **tcp-established** or **tcp-flags**.

Introduced 22.10.R1

Platforms All

tcp-flags

Synopsis Enter the **tcp-flags** context

Context **configure filter ipv6-filter string entry number match tcp-flags**

Tree [tcp-flags](#)

Notes The following elements are part of a choice: **tcp-established** or **tcp-flags**.

Introduced 16.0.R1

Platforms All

ack boolean

Synopsis Match TCP ACK as per value of the ACK TCP flag bit

Context **configure filter ipv6-filter string entry number match tcp-flags ack boolean**

Tree [ack](#)

Introduced 16.0.R1

Platforms All

cwr boolean

Synopsis Match TCP CWR as per value of the CWR TCP flag bit

Context **configure filter ipv6-filter string entry number match tcp-flags cwr boolean**

Tree [cwr](#)

Introduced 16.0.R1

Platforms All

ece boolean

Synopsis	Match TCP ECE as per value of the ECE TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags ece boolean
Tree	ece
Introduced	16.0.R1
Platforms	All

fin boolean

Synopsis	Match TCP FIN as per value of the FIN TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags fin boolean
Tree	fin
Introduced	16.0.R1
Platforms	All

ns boolean

Synopsis	Match TCP NS as per value of the NS TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags ns boolean
Tree	ns
Introduced	16.0.R1
Platforms	All

psh boolean

Synopsis	Match TCP PSH as per value of the PSH TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags psh boolean
Tree	psh
Introduced	16.0.R1
Platforms	All

rst boolean

Synopsis	Match TCP RST as per value of the RST TCP flag bit
----------	--

Context	configure filter ipv6-filter string entry number match tcp-flags rst boolean
Tree	rst
Introduced	16.0.R1
Platforms	All

syn boolean

Synopsis	Match TCP SYN as per value of the SYN TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags syn boolean
Tree	syn
Introduced	16.0.R1
Platforms	All

urg boolean

Synopsis	Match TCP URG as per value of the URG TCP flag bit
Context	configure filter ipv6-filter string entry number match tcp-flags urg boolean
Tree	urg
Introduced	16.0.R1
Platforms	All

pbr-down-action-override keyword

Synopsis	Action when PBR or PBF target for this entry is not available
Context	configure filter ipv6-filter string entry number pbr-down-action-override keyword
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile reference

Synopsis	Cflowd sample profile ID to match packets
Context	configure filter ipv6-filter string entry number sample-profile reference
Tree	sample-profile

Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	configure cflowd sample-profile <i>number</i>
Introduced	20.10.R1
Platforms	All

sticky-dest (*number* | *keyword*)

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	configure filter ipv6-filter <i>string</i> entry <i>number</i> sticky-dest (<i>number</i> <i>keyword</i>)
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 filter identifier
Context	configure filter ipv6-filter <i>string</i> filter-id <i>number</i>
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of this filter definition
Context	configure filter ipv6-filter <i>string</i> scope <i>keyword</i>

Tree	scope
Options	exclusive, template, embedded, system
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	configure filter ipv6-filter <i>string</i> shared-policer <i>boolean</i>
Tree	shared-policer
Description	When configured to true , and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to false , and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the subscriber-mgmt context
Context	configure filter ipv6-filter <i>string</i> subscriber-mgmt
Tree	subscriber-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

 Platforms All

priority number

Synopsis IEEE 802.1p value used as a MAC filter match criterion
 Context **configure filter mac-filter string entry number match dot1p priority number**
 Tree [priority](#)
 Range 0 to 7
 Notes This element is mandatory.
 Introduced 16.0.R1
 Platforms All

dst-mac

Synopsis Enable the **dst-mac** context
 Context **configure filter mac-filter string entry number match dst-mac**
 Tree [dst-mac](#)

Introduced 16.0.R1
Platforms All

address string

Synopsis MAC address used as the match criterion
Context **configure filter mac-filter string entry number match dst-mac address string**
Tree [address](#)
Notes This element is mandatory.
Introduced 16.0.R1
Platforms All

mask string

Synopsis MAC address mask as the match criterion
Context **configure filter mac-filter string entry number match dst-mac mask string**
Tree [mask](#)
Default ff:ff:ff:ff:ff:ff
Introduced 16.0.R1
Platforms All

etype string

Synopsis Ethernet type
Context **configure filter mac-filter string entry number match etype string**
Tree [etype](#)
String Length 5 to 6
Introduced 16.0.R1
Platforms All

frame-type keyword

Synopsis MAC frame as match criteria
Context **configure filter mac-filter string entry number match frame-type keyword**
Tree [frame-type](#)

Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Introduced	16.0.R1
Platforms	All

inner-tag

Synopsis	Enable the inner-tag context
Context	configure filter mac-filter <i>string</i> entry <i>number</i> match inner-tag
Tree	inner-tag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask number

Synopsis	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context	configure filter mac-filter <i>string</i> entry <i>number</i> match inner-tag mask <i>number</i>
Tree	mask
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tag number

Synopsis	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Context	configure filter mac-filter <i>string</i> entry <i>number</i> match inner-tag tag <i>number</i>
Tree	tag
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

isid

Synopsis	Enter the isid context
Context	configure filter mac-filter string entry number match isid
Tree	isid
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the range context
Context	configure filter mac-filter string entry number match isid range
Tree	range
Notes	The following elements are part of a choice: range or value .
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the ISID range
Context	configure filter mac-filter string entry number match isid range end number
Tree	end
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start number

Synopsis	Lower bound of the ISID range
Context	configure filter mac-filter string entry number match isid range start number
Tree	start
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

value number

Synopsis Lowest value of 24-bit service instance identifier for the service matching this entry

Context **configure filter mac-filter string entry number match isid value number**

Tree [value](#)

Range 0 to 16777215

Notes The following elements are part of a choice: **range** or **value**.

Introduced 16.0.R1

Platforms All

llc-dsap

Synopsis Enable the **llc-dsap** context

Context **configure filter mac-filter string entry number match llc-dsap**

Tree [llc-dsap](#)

Introduced 16.0.R1

Platforms All

dsap number

Synopsis DSAP value

Context **configure filter mac-filter string entry number match llc-dsap dsap number**

Tree [dsap](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

mask number

Synopsis Destination SAP mask

Context **configure filter mac-filter string entry number match llc-dsap mask number**

Tree [mask](#)

Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

llc-ssap

Synopsis	Enable the llc-ssap context
Context	configure filter mac-filter string entry number match llc-ssap
Tree	llc-ssap
Introduced	16.0.R1
Platforms	All

mask number

Synopsis	Source SAP mask
Context	configure filter mac-filter string entry number match llc-ssap mask number
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

ssap number

Synopsis	Source or destination SAP value
Context	configure filter mac-filter string entry number match llc-ssap ssap number
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

outer-tag

Synopsis	Enable the outer-tag context
Context	configure filter mac-filter string entry number match outer-tag
Tree	outer-tag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask number

Synopsis	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context	configure filter mac-filter string entry number match outer-tag mask number
Tree	mask
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tag number

Synopsis	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Context	configure filter mac-filter string entry number match outer-tag tag number
Tree	tag
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

snap-oui keyword

Synopsis	Parameter snap-oui as a MAC filter match criteria
Context	configure filter mac-filter string entry number match snap-oui keyword
Tree	snap-oui
Options	zero, non-zero

Introduced	16.0.R1
Platforms	All

snap-pid *number*

Synopsis	Parameter snap-pid as a MAC filter match criteria
Context	configure filter mac-filter string entry number match snap-pid number
Tree	snap-pid
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

src-mac

Synopsis	Enable the src-mac context
Context	configure filter mac-filter string entry number match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	All

address *string*

Synopsis	MAC address used as the match criterion
Context	configure filter mac-filter string entry number match src-mac address string
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	MAC address mask as the match criterion
Context	configure filter mac-filter string entry number match src-mac mask string
Tree	mask
Default	ff:ff:ff:ff:ff:ff

Introduced 16.0.R1
 Platforms All

pbr-down-action-override *keyword*

Synopsis Action when PBR or PBF target for this entry is not available
 Context **configure** filter mac-filter string entry number pbr-down-action-override keyword
 Tree pbr-down-action-override
 Options drop, forward, filter-default-action
 Introduced 16.0.R1
 Platforms All

sticky-dest (*number* | *keyword*)

Synopsis Time before action with available PBR or PBF destination and highest priority
 Context **configure** filter mac-filter string entry number sticky-dest (*number* | *keyword*)
 Tree sticky-dest
 Range 0 to 65535
 Units seconds
 Options no-hold-time-up
 Introduced 16.0.R1
 Platforms All

filter-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis MAC filter ID
 Context **configure** filter mac-filter string filter-id number
 Tree filter-id
 Range 1 to 65535
 Introduced 16.0.R1
 Platforms All

scope keyword

Synopsis	Scope of this filter definition
Context	configure filter mac-filter <i>string scope keyword</i>
Tree	scope
Options	exclusive, template, embedded, system
Default	template
Introduced	16.0.R1
Platforms	All

type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC filter policy
Context	configure filter mac-filter <i>string type keyword</i>
Tree	type
Options	normal, isid, vid
Default	normal
Introduced	16.0.R1
Platforms	All

match-list

Synopsis	Enter the match-list context
Context	configure filter match-list
Tree	match-list
Introduced	16.0.R1
Platforms	All

ip-prefix-list [[prefix-list-name](#)] *string*

Synopsis	Enter the ip-prefix-list list instance
Context	configure filter match-list ip-prefix-list <i>string</i>

Tree	ip-prefix-list
Introduced	16.0.R1
Platforms	All

[prefix-list-name] *string*

Synopsis	IP prefix list name
Context	configure filter match-list ip-prefix-list <i>string</i>
Tree	ip-prefix-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

apply-path

Synopsis	Enter the apply-path context
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path
Tree	apply-path
Introduced	16.0.R1
Platforms	All

bgp-peers [[criterion-index](#)] *number*

Synopsis	Enter the bgp-peers list instance
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path bgp-peers <i>number</i>
Tree	bgp-peers
Introduced	16.0.R1
Platforms	All

[criterion-index] *number*

Synopsis	BGP peers auto-generation configuration index
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path bgp-peers <i>number</i>
Tree	bgp-peers

Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

group *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance group configuration
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path bgp-peers <i>number</i> group <i>string</i>
Tree	group
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

neighbor *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance neighbor configuration
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path bgp-peers <i>number</i> neighbor <i>string</i>
Tree	neighbor
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

router-instance *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Target routing instance
Context	configure filter match-list ip-prefix-list <i>string</i> apply-path bgp-peers <i>number</i> router-instance <i>string</i>
Tree	router-instance
Default	Base
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure filter match-list ip-prefix-list <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

prefix [**ip-prefix**] *string*

Synopsis	Add a list entry for prefix
Context	configure filter match-list ip-prefix-list <i>string</i> prefix <i>string</i>
Tree	prefix
Description	<p>Commands in this context add IPv4 prefixes to the prefix match list. Prefixes can overlap IPv4 address space.</p> <p>An IPv4 prefix addition is blocked if resource exhaustion is detected anywhere in the system due to filter policies that use the prefix list.</p>
Max. Instances	8192
Introduced	16.0.R1
Platforms	All

[ip-prefix] string

Synopsis	IPv4 prefix to be added to the prefix list
Context	configure filter match-list ip-prefix-list <i>string</i> prefix <i>string</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	16.0.R3
Platforms	All

prefix-exclude [ip-prefix] string

Synopsis	Add a list entry for prefix-exclude
Context	configure filter match-list ip-prefix-list <i>string</i> prefix-exclude <i>string</i>
Tree	prefix-exclude
Description	Commands in this context exclude IPv4 prefixes from the prefix match list. This command is mutually exclusive with the apply-path command.
Max. Instances	512
Introduced	16.0.R4
Platforms	All

[ip-prefix] string

Synopsis	IPv4 prefix to be added to the prefix list
Context	configure filter match-list ip-prefix-list <i>string</i> prefix-exclude <i>string</i>
Tree	prefix-exclude
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

ipv6-prefix-list [prefix-list-name] string

Synopsis	Enter the ipv6-prefix-list list instance
Context	configure filter match-list ipv6-prefix-list <i>string</i>
Tree	ipv6-prefix-list
Introduced	16.0.R1

Platforms All

[prefix-list-name] *string*

Synopsis IP prefix list name
 Context **configure** filter match-list ipv6-prefix-list *string*
 Tree [ipv6-prefix-list](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

apply-path

unicast-rt-test

Synopsis	Enable the unicast-rt-test context
Context	configure filter redirect-policy <i>string destination</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) unicast-rt-test
Tree	unicast-rt-test
Introduced	16.0.R1
Platforms	All

notify-dest-change *boolean*

Synopsis	Send notifications when the active destination changes
Context	configure filter redirect-policy <i>string notify-dest-change</i> <i>boolean</i>
Tree	notify-dest-change
Description	When configured to true , notifications (such as Log and SNMP) are sent when the active destination of a redirect policy changes. No notification is sent when there are no more active destinations (as this scenario is covered by another notification). When configured to false , the notification generation is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

router-instance *string*

3.17.1 fwd-path-ext command descriptions

fwd-path-ext

Synopsis	Enter the fwd-path-ext context
Context	configure fwd-path-ext
Tree	fwd-path-ext
Description	Commands in this context configure a Forwarding Path Extension (FPE). Some applications that rely on PXC functionality utilize FPE to simplify the configuration of these applications.
Introduced	16.0.R1
Platforms	All

fpe [[fpe-id](#)] *number*

Synopsis	Enter the fpe list instance
Context	configure fwd-path-ext fpe <i>number</i>
Tree	fpe
Description	Commands in this context configure the Forwarding Path Extension (FPE), which associates an application with a PXC (a paired set of PXC sub-ports or a paired set of PXC-based LAGs).
Introduced	16.0.R1
Platforms	All

[\[fpe-id\]](#) *number*

Synopsis	FPE ID
Context	configure fwd-path-ext fpe <i>number</i>
Tree	fpe
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

application

Synopsis	Enter the application context
Context	configure fwd-path-ext fpe number application
Tree	application
Description	Commands in this context configure the attributes of the FPE application.
Introduced	16.0.R1
Platforms	All

pw-port-extension

Synopsis	Enable the pw-port-extension context
Context	configure fwd-path-ext fpe number application pw-port-extension
Tree	pw-port-extension
Description	Commands in this context configure the type of the cross-connect required to terminate an external tunnel to an anchored PW port. The system automatically builds the internal infrastructure required to perform the tunnel termination on a PW port. PW ports support the following types of tunnels: <ul style="list-style-type: none">• GRE/MPLS PW with SDP of type MPLS or GRE• L2oGRE bridged Ethernet over GRE, where GRE protocol number is 0x6558
Introduced	22.2.R1
Platforms	All

interface-a

Synopsis	Enter the interface-a context
Context	configure fwd-path-ext fpe number application pw-port-extension interface-a
Tree	interface-a
Description	Commands in this context configure the command options for network interface-a of the PW port extension FPE.
Introduced	22.10.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure fwd-path-ext fpe number application pw-port-extension interface-a qos

Tree	qos
Introduced	22.10.R1
Platforms	All

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	configure fwd-path-ext fpe number application pw-port-extension interface-a qos network-policy reference
Tree	network-policy
Reference	configure qos network string
Introduced	22.10.R1
Platforms	All

interface-b

Synopsis	Enter the interface-b context
Context	configure fwd-path-ext fpe number application pw-port-extension interface-b
Tree	interface-b
Description	Commands in this context configure command options for network interface-b of the PW port extension FPE.
Introduced	22.10.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure fwd-path-ext fpe number application pw-port-extension interface-b qos
Tree	qos
Introduced	22.10.R1
Platforms	All

Reference	configure qos network string
Introduced	22.10.R1
Platforms	All

srv6

Synopsis	Enable the srv6 context
Context	configure fwd-path-ext fpe number application srv6
Tree	srv6
Description	Commands in this context configure the SRv6 FPE application used for origination or termination of SRv6 tunnels.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-a

Synopsis	Enter the interface-a context
Context	configure fwd-path-ext fpe number application srv6 interface-a
Tree	interface-a
Description	Commands in this context configure the parameters of network interface-a of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the qos context
Context	configure fwd-path-ext fpe number application srv6 interface-a qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	configure fwd-path-ext fpe number application srv6 interface-a qos network-policy reference
Tree	network-policy
Reference	configure qos network string
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-b

Synopsis	Enter the interface-b context
Context	configure fwd-path-ext fpe number application srv6 interface-b
Tree	interface-b
Description	Commands in this context configure the parameters of network interface-b of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

mtu *number*

Synopsis	MTU size of SRv6 origination FPE interface-b
Context	configure fwd-path-ext fpe number application srv6 interface-b mtu number
Tree	mtu
Description	<p>This command configures the Maximum Transfer Unit (MTU) of interface-b of the SRv6 origination FPE.</p> <p>The MTU is used to check if an IPv4 service packet should be fragmented and if an IPv6 service packet should be dropped when tunneled over SRv6.</p> <p>The minimum value is the IPv6 minimum MTU value. The maximum value is set to the maximum Ethernet port MTU (9800) minus 14 bytes for Null Ethernet encapsulation.</p>
Range	0 1280 to 9786
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the qos context
Context	configure fwd-path-ext fpe number application srv6 interface-b qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy reference

Synopsis	Network QoS policy applied to the FPE interface
Context	configure fwd-path-ext fpe number application srv6 interface-b qos network-policy reference
Tree	network-policy
Reference	configure qos network string
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

type keyword

Synopsis	SRv6 FPE application type
Context	configure fwd-path-ext fpe number application srv6 type keyword
Tree	type
Description	<p>This command specifies if the SRv6 FPE application is used for origination or termination of SRv6 tunnels.</p> <p>A dedicated SRv6 FPE is required for origination and termination of SRv6 tunnels on services and they cannot share the same FPE.</p> <p>A single FPE can be configured for SRv6 origination. One or more FPEs can be configured for SRv6 termination, where a termination SRv6 FPE is assigned one or more configured locators.</p> <p>Transit SRv6 routers do not require SRv6 FPEs.</p>
Options	origination, termination
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sub-mgmt-extension *boolean*

Synopsis	Enable FPE for subscriber management extensions
Context	configure fwd-path-ext fpe number application sub-mgmt-extension boolean
Tree	sub-mgmt-extension
Description	When configured to true , the FPE is used for subscriber management extensions. The FPE can be used for multiple subscriber management applications, but it cannot be used for other applications. When configured to false , the FPE is not used for subscriber management extensions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan

Synopsis	Enable the vxlan context
Context	configure fwd-path-ext fpe number application vxlan
Tree	vxlan
Introduced	22.2.R1
Platforms	All

router-instance *string*

Synopsis	Router instance for VXLAN termination
Context	configure fwd-path-ext fpe number application vxlan router-instance string
Tree	router-instance
Default	Base
Introduced	22.2.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure fwd-path-ext fpe number description string
Tree	description
String Length	1 to 80

Introduced	16.0.R1
Platforms	All

multi-path

Synopsis	Enable the multi-path context
Context	configure fwd-path-ext fpe number multi-path
Tree	multi-path
Description	Commands in this context configure a multipath FPE that can contain multiple PXC ports or LAGs of PXC ports.
Notes	The following elements are part of a choice: multi-path or path .
Introduced	21.10.R1
Platforms	All

path [path-id] number

Synopsis	Enter the path list instance
Context	configure fwd-path-ext fpe number multi-path path number
Tree	path
Description	Commands in this context configure a multipath FPE forwarding path. A single path in a multipath FPE can contain a single PXC port or a LAG of PXC ports.
Introduced	21.10.R1
Platforms	All

[path-id] number

Synopsis	Multipath FPE forwarding path ID
Context	configure fwd-path-ext fpe number multi-path path number
Tree	path
Range	1 to 64
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

pxc reference

Synopsis	Dedicated PXC ID used by the FPE path
Context	configure fwd-path-ext fpe number multi-path path number pxc reference
Tree	pxc
Reference	configure port-xc pxc number
Notes	The following elements are part of a choice: pxc or (xc-lag-a and xc-lag-b).
Introduced	21.10.R1
Platforms	All

xc-lag-a reference

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	configure fwd-path-ext fpe number multi-path path number xc-lag-a reference
Tree	xc-lag-a
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate xc-lag-a with the LAG containing either supports.a or supports.b. The system does not enforce a match between xc-lag-a and the LAG ID containing supports.a.
Reference	configure lag string
Notes	The following elements are part of a choice: pxc or (xc-lag-a and xc-lag-b).
Introduced	21.10.R1
Platforms	All

xc-lag-b reference

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	configure fwd-path-ext fpe number multi-path path number xc-lag-b reference
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate xc-lag-b with the LAG containing either supports.a or supports.b. The system does not enforce a match between xc-lag-b and the LAG ID containing supports.b.
Reference	configure lag string
Notes	The following elements are part of a choice: pxc or (xc-lag-a and xc-lag-b).

Notes The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).

Introduced 16.0.R1

Platforms All

xc-lag-a reference

Synopsis PXC LAG identifier dedicated to the FPE path

Context **configure fwd-path-ext fpe number path xc-lag-a reference**

Tree [xc-lag-a](#)

Description This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-a** with the LAG containing either supports.a or supports.b. The system does not enforce a match between **xc-lag-a** and the LAG ID containing supports.a.

Reference **configure lag string**

Notes The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).

Introduced 16.0.R4

Platforms All

xc-lag-b reference

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	configure fwd-path-ext fpe number path xc-lag-b reference
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate xc-lag-b with the LAG containing either supports.a or supports.b. The system does not enforce a match between xc-lag-b and the LAG ID containing supports.b.
Reference	configure lag string
Notes	The following elements are part of a choice: pxc or (xc-lag-a and xc-lag-b).
Introduced	16.0.R4
Platforms	All

sdp-id-range

Synopsis	Enable the sdp-id-range context
Context	configure fwd-path-ext sdp-id-range
Tree	sdp-id-range
Description	<p>Commands in this context configure the SDP ID range used by the FPE based PW port and VXLAN termination applications.</p> <p>Each configured FPE-based PW port is associated with two internal SDPs (one in each direction) whose IDs are allocated from the configured SDP ID range. When the FPE is associated with VXLAN termination, an internal SDP is allocated from the configured SDP ID range and is used for R-VPLS services that terminate VXLAN IPv6. A spoke SDP per VXLAN IPv6 R-VPLS service is created on that SDP for egress processing of the packets. The SDP ID range cannot be modified if any of its IDs are currently in use.</p>
Introduced	16.0.R1
Platforms	All

end number

Synopsis	Upper bound of the SDP ID range
Context	configure fwd-path-ext sdp-id-range end number

3.19.1 ipsec command descriptions

ipsec

Synopsis	Enter the ipsec context
Context	configure ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	16.0.R4
Platforms	All

cert-profile [[name](#)] *string*

Synopsis	Enter the cert-profile list instance
Context	configure ipsec cert-profile <i>string</i>
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. Instances	10200
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[name\]](#) *string*

Synopsis	Certificate profile name
Context	configure ipsec cert-profile <i>string</i>
Tree	cert-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the certificate profile
----------	---

Context	configure ipsec cert-profile <i>string admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [*id*] *number*

Synopsis	Enter the entry list instance
Context	configure ipsec cert-profile <i>string entry number</i>
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	Certificate profile entry ID
Context	configure ipsec cert-profile <i>string entry number</i>
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert *string*

Synopsis	File name of the imported certificate for the entry
Context	configure ipsec cert-profile <i>string entry number cert string</i>
Tree	cert
String Length	1 to 95
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key string

Synopsis File name of the imported key used for authentication
 Context **configure ipsec cert-profile string entry number key string**
 Tree [key](#)
 String Length 1 to 95
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rsa-signature keyword

Synopsis Signature scheme for the RSA key
 Context **configure ipsec cert-profile string entry number rsa-signature keyword**
 Tree [rsa-signature](#)
 Options pkcs1, pss
 Default pkcs1
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-chain

Synopsis Enter the **send-chain** context
 Context **configure ipsec cert-profile string entry number send-chain**
 Tree [send-chain](#)
 Description Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the **cert** command in the same entry.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ca-profile reference

Synopsis CA certificate to send to the peer
 Context **configure ipsec cert-profile string entry number send-chain ca-profile reference**

Tree	ca-profile
Reference	configure system security pki ca-profile <i>string</i>
Max. Instances	7
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db [[name](#)] *string*

Synopsis	Enter the client-db list instance
Context	configure ipsec client-db <i>string</i>
Tree	client-db
Max. Instances	1000
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	IPsec client database name
Context	configure ipsec client-db <i>string</i>
Tree	client-db
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	configure ipsec client-db <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client [id] *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **client** list instance

Context **configure ipsec client-db** *string client number*

Tree [client](#)

Description Commands in this context configure the IPsec client entry in the client database.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis Client ID

Context **configure ipsec client-db** *string client number*

Tree [client](#)

Range 1 to 8000

Notes This element is part of a list key.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Administrative state of the database client

Context **configure ipsec client-db** *string client number admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-name *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Client name
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* [client-name](#) *string*
 Tree [client-name](#)
 String Length 1 to 32
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credential

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **credential** context
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* [credential](#)
 Tree [credential](#)
 Description Commands in this context authenticate peers.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Pre-shared key used to authenticate peers
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* [credential](#) [pre-shared-key](#) *string*

Tree	pre-shared-key
String Length	1 to 115
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

identification

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the identification context
Context	configure ipsec client-db <i>string client number</i> identification
Tree	identification
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

idi

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the idi context
Context	configure ipsec client-db <i>string client number</i> identification idi
Tree	idi
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any IDi value as a match
Context	configure ipsec client-db <i>string client number</i> identification idi any <i>boolean</i>
Tree	any

Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used as the match criteria for the IDi
Context	configure ipsec client-db string client number identification idi fqdn string
Tree	fqdn
String Length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn-suffix string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN suffix used as the match criteria for the IDi
Context	configure ipsec client-db string client number identification idi fqdn-suffix string
Tree	fqdn-suffix
String Length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-prefix *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 prefix used as the match criteria for the IDi
Context	configure ipsec client-db <i>string</i> client <i>number</i> identification idi ipv4-prefix <i>string</i>
Tree	ipv4-prefix
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-prefix-any *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv4 prefix as a match for the IDi
Context	configure ipsec client-db <i>string</i> client <i>number</i> identification idi ipv4-prefix-any <i>boolean</i>
Tree	ipv4-prefix-any
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 prefix used as the match criteria for the IDi
Context	configure ipsec client-db <i>string</i> client <i>number</i> identification idi ipv6-prefix <i>string</i>
Tree	ipv6-prefix
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .

Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix-any *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Accept any valid IPv6 prefix as a match for the IDi
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* [identification](#) [idi](#) **ipv6-prefix-any** *boolean*
 Tree [ipv6-prefix-any](#)
 Notes The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **rfc822**, or **rfc822-suffix**.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rfc822 *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Email address (RFC 822) used as match criteria for IDi
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* [identification](#) [idi](#) **rfc822** *string*
 Tree [rfc822](#)
 String Length 0 to 255
 Notes The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **rfc822**, or **rfc822-suffix**.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rfc822-suffix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Email address domain (RFC 822) as IDi match criteria
Context	configure ipsec client-db <i>string client number identification idi rfc822-suffix string</i>
Tree	rfc822-suffix
String Length	0 to 255
Notes	The following elements are part of a mandatory choice: any , fqdn , fqdn-suffix , ipv4-prefix , ipv4-prefix-any , ipv6-prefix , ipv6-prefix-any , rfc822 , or rfc822-suffix .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-ip-prefix

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the peer-ip-prefix context
Context	configure ipsec client-db <i>string client number identification peer-ip-prefix</i>
Tree	peer-ip-prefix
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP prefix used as the match criteria
Context	configure ipsec client-db <i>string client number identification peer-ip-prefix ip-prefix (ipv4-prefix ipv6-prefix)</i>
Tree	ip-prefix
Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-only *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv4 address as a match
Context	configure ipsec client-db <i>string</i> client <i>number</i> identification peer-ip-prefix ipv4-only <i>boolean</i>
Tree	ipv4-only
Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-only *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv6 address as a match
Context	configure ipsec client-db <i>string</i> client <i>number</i> identification peer-ip-prefix ipv6-only <i>boolean</i>
Tree	ipv6-only
Notes	The following elements are part of a mandatory choice: ip-prefix , ipv4-only , or ipv6-only .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-interface *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private interface name used for tunnel setup
Context	configure ipsec client-db <i>string</i> client <i>number</i> private-interface <i>string</i>
Tree	private-interface

String Length 1 to 32
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-service-name *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Name of the private service used for tunnel setup
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* **private-service-name** *string*
 Tree [private-service-name](#)
 String Length 1 to 64
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ts-list *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Traffic selector list used by the tunnel
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* **ts-list** *string*
 Tree [ts-list](#)
 String Length 1 to 32
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-template *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Tunnel template ID
 Context **configure** [ipsec client-db](#) *string* [client](#) *number* **tunnel-template** *number*

Tree	tunnel-template
Range	1 to 2048
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure ipsec client-db <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match-list

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the match-list context
Context	configure ipsec client-db <i>string</i> match-list
Tree	match-list
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

idi *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use IDi type in the IPsec client matching process
Context	configure ipsec client-db <i>string</i> match-list idi <i>boolean</i>
Tree	idi
Default	false
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-ip-prefix *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Use the peer tunnel IP address in the matching process

Context **configure ipsec client-db string match-list peer-ip-prefix** *boolean*

Tree [peer-ip-prefix](#)

Default false

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy [*id*] *number*

Synopsis Enter the **ike-policy** list instance

Context **configure ipsec ike-policy** *number*

Tree [ike-policy](#)

Description Commands in this context configure an Internet Key Exchange (IKE) policy.

Max. Instances 2048

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis IKE policy ID

Context **configure ipsec ike-policy** *number*

Tree [ike-policy](#)

Range 1 to 2048

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure ipsec ike-policy number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dpd

Synopsis	Enable the dpd context
Context	configure ipsec ike-policy number dpd
Tree	dpd
Description	Commands in this context configure the dead peer detection mechanism.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval number

Synopsis	DPD interval
Context	configure ipsec ike-policy number dpd interval number
Tree	interval
Description	This command specifies the DPD interval. Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	configure ipsec ike-policy <i>number</i> dpd max-retries <i>number</i>
Tree	max-retries
Range	2 to 5
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	configure ipsec ike-policy <i>number</i> dpd reply-only <i>boolean</i>
Tree	reply-only
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	configure ipsec ike-policy <i>number</i> ike-transform <i>reference</i>
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.
Reference	configure ipsec ike-transform <i>number</i>
Max. Instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-1

Synopsis	Enter the ike-version-1 context
----------	--

Context	configure ipsec ike-policy <i>number ike-version-1</i>
Tree	ike-version-1
Description	Commands in this context configure the IKE version 1 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: ike-version-1 or ike-version-2 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	configure ipsec ike-policy <i>number ike-version-1 auth-method keyword</i>
Tree	auth-method
Options	psk, plain-psk-xauth
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-mode *keyword*

Synopsis	Mode of operation
Context	configure ipsec ike-policy <i>number ike-version-1 ike-mode keyword</i>
Tree	ike-mode
Options	main, aggressive
Default	main
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with policy on its own side
Context	configure ipsec ike-policy <i>number ike-version-1 own-auth-method keyword</i>
Tree	own-auth-method
Options	symmetric
Default	symmetric

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ph1-responder-delete-notify *boolean*

Synopsis	Send delete notification for IKEv1 phase 1 removal
Context	configure ipsec ike-policy <i>number</i> ike-version-1 ph1-responder-delete-notify <i>boolean</i>
Tree	ph1-responder-delete-notify
Description	When configured to true , a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder. When configured to false , no notification is sent.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-2

Synopsis	Enable the ike-version-2 context
Context	configure ipsec ike-policy <i>number</i> ike-version-2
Tree	ike-version-2
Description	Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: ike-version-1 or ike-version-2 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	configure ipsec ike-policy <i>number</i> ike-version-2 auth-method <i>keyword</i>
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	configure ipsec ike-policy <i>number</i> ike-version-2 auto-eap-method <i>keyword</i>
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ikev2-fragment

Synopsis	Enable the ikev2-fragment context
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment
Tree	ikev2-fragment
Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum size of the IKEv2 packet
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment mtu <i>number</i>
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassemble-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	configure ipsec ike-policy <i>number</i> ike-version-2 ikev2-fragment reassemble-timeout <i>number</i>
Tree	reassemble-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with IKE policy on own side
Context	configure ipsec ike-policy <i>number</i> ike-version-2 own-auth-method <i>keyword</i>
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	configure ipsec ike-policy <i>number</i> ike-version-2 own-auto-eap-method <i>keyword</i>
Tree	own-auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	configure ipsec ike-policy <i>number</i> ike-version-2 send-idr-after-eap-success <i>boolean</i>
Tree	send-idr-after-eap-success
Description	When configured to true , the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to false , the IDr payload is not included in the last IKE.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	configure ipsec ike-policy <i>number</i> ipsec-lifetime <i>number</i>
Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

limit-init-exchange

Synopsis	Enter the limit-init-exchange context
Context	configure ipsec ike-policy <i>number</i> limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
----------	--

Context	configure ipsec ike-policy number limit-init-exchange admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reduced-max-exchange-timeout (*number* | *keyword*)

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	configure ipsec ike-policy number limit-init-exchange reduced-max-exchange-timeout (<i>number</i> <i>keyword</i>)
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this specified value. If the none option is configured for this command, the timeout value remains unchanged.
Range	2 to 60
Units	seconds
Options	none
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lockout

Synopsis	Enable the lockout context
Context	configure ipsec ike-policy number lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block (*number* | *keyword*)

Synopsis	Time a client is blocked for failed authentications
Context	configure ipsec ike-policy <i>number</i> lockout block (<i>number</i> <i>keyword</i>)
Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	Time interval for failed attempts threshold
Context	configure ipsec ike-policy <i>number</i> lockout duration <i>number</i>
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	configure ipsec ike-policy <i>number</i> lockout failed-attempts <i>number</i>
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	configure ipsec ike-policy <i>number</i> lockout max-port-per-ip <i>number</i>
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication
Context	configure ipsec ike-policy <i>number</i> match-peer-id-to-cert <i>boolean</i>
Tree	match-peer-id-to-cert
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-traversal

Synopsis	Enable the nat-traversal context
Context	configure ipsec ike-policy <i>number</i> nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	configure ipsec ike-policy <i>number</i> nat-traversal force <i>boolean</i>

Tree	force
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	configure ipsec ike-policy <i>number</i> nat-traversal force-keep-alive <i>boolean</i>
Tree	force-keep-alive
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	configure ipsec ike-policy <i>number</i> nat-traversal keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	120 to 600
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs

Synopsis	Enable the pfs context
Context	configure ipsec ike-policy <i>number</i> pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy on the IPsec tunnel using the policy. PFS provides for a new Diffie-Hellman (DH) key exchange each time the Security Association (SA) key is renegotiated. When the SA key expires, another key is generated (if the SA remains up).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	configure ipsec ike-policy <i>number</i> pfs dh-group <i>keyword</i>
Tree	dh-group
Description	This command specifies which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

relay-unsolicited-cfg-attribute

Synopsis	Enter the relay-unsolicited-cfg-attribute context
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip4-address <i>boolean</i>
Tree	internal-ip4-address
Description	When configured to true , the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	configure ipsec ike-policy number relay-unsolicited-cfg-attribute internal-ip4-dns <i>boolean</i>
Tree	internal-ip4-dns
Description	When configured to true , the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	configure ipsec ike-policy number relay-unsolicited-cfg-attribute internal-ip4-netmask <i>boolean</i>
Tree	internal-ip4-netmask
Description	When configured to true , the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	configure ipsec ike-policy number relay-unsolicited-cfg-attribute internal-ip6-address <i>boolean</i>
Tree	internal-ip6-address
Description	When configured to true , the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	configure ipsec ike-policy <i>number</i> relay-unsolicited-cfg-attribute internal-ip6-dns <i>boolean</i>
Tree	internal-ip6-dns
Description	When configured to true , the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform [*id*] *number*

Synopsis	Enter the ike-transform list instance
Context	configure ipsec ike-transform <i>number</i>
Tree	ike-transform
Max. Instances	4096
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	IKE transform instance ID
Context	configure ipsec ike-transform <i>number</i>
Tree	ike-transform
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
----------	--

Context	configure ipsec ike-transform <i>number dh-group keyword</i>
Tree	dh-group
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-auth-algorithm *keyword*

Synopsis	IKE authentication algorithm for IKE transform instance
Context	configure ipsec ike-transform <i>number ike-auth-algorithm keyword</i>
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorithm for the IKE transform instance
Context	configure ipsec ike-transform <i>number ike-encryption-algorithm keyword</i>
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	configure ipsec ike-transform <i>number ike-prf-algorithm keyword</i>
Tree	ike-prf-algorithm
Description	This command specifies the pseudo-random function algorithm used for IKE security association.

If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, **same-as-auth** cannot be used for the IKE PRF algorithm.

Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	configure ipsec ike-transform <i>number</i> isakmp-lifetime <i>number</i>
Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform [*id*] *number*

Synopsis	Enter the ipsec-transform list instance
Context	configure ipsec ipsec-transform <i>number</i>
Tree	ipsec-transform
Description	<p>Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.</p> <p>IPsec transform policy assignments to a tunnel require the tunnel to be shut down.</p>
Max. Instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	IPsec transform policy ID
Context	configure ipsec ipsec-transform <i>number</i>

Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	configure ipsec ipsec-transform <i>number</i> esp-auth-algorithm <i>keyword</i>
Tree	esp-auth-algorithm
Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session
Context	configure ipsec ipsec-transform <i>number</i> esp-encryption-algorithm <i>keyword</i>
Tree	esp-encryption-algorithm
Description	<p>This command specifies the encryption algorithm used for the IPsec session. Encryption applies only to ESP configurations. If encryption is not defined, ESP is not used.</p> <p>Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state.</p> <p>When AES-GCM or AES-GMAC is configured:</p> <ul style="list-style-type: none"> the authentication encryption must be set to auth-encryption the system does not include the authentication algorithm in the ESP proposal of the SA payload IPsec transform cannot be used for manual keying
Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac

Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	configure ipsec ipsec-transform number extended-sequence-number <i>boolean</i>
Tree	extended-sequence-number
Description	When configured to true , this command enables 64-bit extended sequence numbering support. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around. When configured to false , only 32-bit sequence numbering is supported.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	configure ipsec ipsec-transform number ipsec-lifetime <i>number</i>
Tree	ipsec-lifetime
Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation
Context	configure ipsec ipsec-transform number pfs-dh-group <i>keyword</i>
Tree	pfs-dh-group

Description	This command specifies the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile [*name*] *string*

Synopsis	Enter the ipsec-transport-mode-profile list instance
Context	configure ipsec ipsec-transport-mode-profile <i>string</i>
Tree	ipsec-transport-mode-profile
Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	IPsec transport mode profile name string
Context	configure ipsec ipsec-transport-mode-profile <i>string</i>
Tree	ipsec-transport-mode-profile
Description	This command specifies the name of the IPsec transport mode profile.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key-exchange

Synopsis Enter the **key-exchange** context

Context **configure ipsec ipsec-transport-mode-profile** *string* **key-exchange**

Tree [key-exchange](#)

Description Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic

Synopsis Enter the **dynamic** context

Context **configure ipsec ipsec-transport-mode-profile** *string* **key-exchange dynamic**

Tree [dynamic](#)

Description Commands in this context configure dynamic keying for the transport mode profile.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-establish *boolean*

Synopsis Attempt to establish a phase 1 exchange automatically

Context **configure ipsec ipsec-transport-mode-profile** *string* **key-exchange dynamic auto-establish** *boolean*

Tree [auto-establish](#)

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert

Synopsis Enter the **cert** context

Context **configure ipsec ipsec-transport-mode-profile** *string* **key-exchange dynamic cert**

Tree [cert](#)

Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert cert-profile <i>reference</i>
Tree	cert-profile
Reference	configure ipsec cert-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

Synopsis	Enter the status-verify context
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert status-verify primary <i>keyword</i>
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert status-verify secondary <i>keyword</i>
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enter the id context
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: <ul style="list-style-type: none"> • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn string

Synopsis	FQDN used as the local ID IKE type
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic id fqdn string
Tree	fqdn
String Length	1 to 255
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 string

Synopsis	IPv4 as the local ID type
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic id ipv4 string
Tree	ipv4
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv6 used as the local IKE ID type
----------	------------------------------------

Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic id ipv6 (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	ipv6
Notes	The following elements are part of a choice: fqdn , ipv4 , or ipv6 .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy *reference*

Synopsis	IKE policy ID
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic ike-policy <i>reference</i>
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The ipsec-transport-mode-profile configuration only supports IKEv2.
Reference	configure ipsec ike-policy <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic ipsec-transform <i>reference</i>
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	configure ipsec ipsec-transform <i>number</i>
Max. Instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *string*

Synopsis	Pre-shared key for IKE authentication
----------	---------------------------------------

Context	configure ipsec ipsec-transport-mode-profile <i>string</i> key-exchange dynamic pre-shared-key <i>string</i>
Tree	pre-shared-key
String Length	1 to 115
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp *number*

Synopsis	Maximum number of recent records
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike *number*

Synopsis	Maximum number of historical IKE key records
Context	configure ipsec ipsec-transport-mode-profile <i>string</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size
Context	configure ipsec ipsec-transport-mode-profile <i>string replay-window number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the radius context
Context	configure ipsec radius
Tree	radius
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy [*name*] *string*

Synopsis	Enter the accounting-policy list instance
Context	configure ipsec radius accounting-policy <i>string</i>
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. Instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[*name*] *string*

Synopsis	RADIUS accounting policy name
Context	configure ipsec radius accounting-policy <i>string</i>
Tree	accounting-policy

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the include-radius-attribute context
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute acct-stats <i>boolean</i>
Tree	acct-stats
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute called-station-id <i>boolean</i>
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute calling-station-id <i>boolean</i>
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute framed-ip-addr <i>boolean</i>
Tree	framed-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute framed-ipv6-prefix <i>boolean</i>
Tree	framed-ipv6-prefix
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	configure ipsec radius accounting-policy <i>string</i> include-radius-attribute nas-identifier <i>boolean</i>
Tree	nas-identifier
Default	false

Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis Include the NAS-IP-Address attribute
Context **configure** [ipsec radius accounting-policy](#) *string* [include-radius-attribute nas-ip-addr](#) *boolean*
Tree [nas-ip-addr](#)
Default false
Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis Include the NAS-Port-Id attribute
Context **configure** [ipsec radius accounting-policy](#) *string* [include-radius-attribute nas-port-id](#) *boolean*
Tree [nas-port-id](#)
Default false
Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis Referenced RADIUS server policy
Context **configure** [ipsec radius accounting-policy](#) *string* [radius-server-policy reference](#)
Tree [radius-server-policy](#)
Reference **configure** [aaa radius server-policy](#) *string*
Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis Enter the **update-interval** context
Context **configure** [ipsec radius accounting-policy](#) *string* [update-interval](#)

Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

jitter number

Synopsis	Jitter interval for sending each interim-update packet
Context	configure ipsec radius accounting-policy <i>string</i> update-interval jitter number
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets. When unconfigured, the system uses 10% of the update interval value.
Range	0 to 3600
Units	seconds
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value number

Synopsis	Update interval of the RADIUS accounting data
Context	configure ipsec radius accounting-policy <i>string</i> update-interval value number
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 5 to 259200
Units	minutes
Default	10
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy [name] string

Synopsis	Enter the authentication-policy list instance
Context	configure ipsec radius authentication-policy <i>string</i>

Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. Instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	RADIUS authentication policy name
Context	configure ipsec radius authentication-policy <i>string</i>
Tree	authentication-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the include-radius-attribute context
Context	configure ipsec radius authentication-policy <i>string</i> include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	configure ipsec radius authentication-policy <i>string</i> include-radius-attribute called-station-id <i>boolean</i>
Tree	called-station-id
Default	false
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis Include the Calling-Station-Id attribute

Context **configure ipsec radius authentication-policy** *string* **include-radius-attribute calling-station-id** *boolean*

Tree [calling-station-id](#)

Default false

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-cert-subject-key-id *boolean*

Synopsis Include the Subject Key Identifier

Context **configure ipsec radius authentication-policy** *string* **include-radius-attribute client-cert-subject-key-id** *boolean*

Tree [client-cert-subject-key-id](#)

Description When configured to **true**, the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier.
See the *7450 ESS, 7750 SR, 7950 XRS, and VSR RADIUS Attributes Reference Guide* for more information.

Default false

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis Include the NAS-Identifier attribute

Context **configure ipsec radius authentication-policy** *string* **include-radius-attribute nas-identifier** *boolean*

Tree [nas-identifier](#)

Default false

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	configure ipsec radius authentication-policy <i>string</i> include-radius-attribute nas-ip-addr <i>boolean</i>
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	configure ipsec radius authentication-policy <i>string</i> include-radius-attribute nas-port-id <i>boolean</i>
Tree	nas-port-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Password used in RADIUS access requests
Context	configure ipsec radius authentication-policy <i>string</i> password <i>string</i>
Tree	password
String Length	1 to 115
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	configure ipsec radius authentication-policy <i>string</i> radius-server-policy <i>reference</i>
Tree	radius-server-policy
Reference	configure aaa radius server-policy <i>string</i>
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

show-ipsec-keys *boolean*

Synopsis Show IPsec IKE and ESP keys in the output

Context **configure** [ipsec show-ipsec-keys](#) *boolean*

Tree [show-ipsec-keys](#)

Description When configured to **true**, this command allows IPsec keys to be (optionally) included in the display output of certain **debug** and **admin** commands.
When configured to **false**, the key display is disabled.

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-sa [[name](#)] *string*

Synopsis Enter the **static-sa** list instance

Context **configure** [ipsec static-sa](#) *string*

Tree [static-sa](#)

Max. Instances 1000

Introduced 16.0.R6

Platforms All

[name] *string*

Synopsis Static SA name

Context **configure** [ipsec static-sa](#) *string*

Tree [static-sa](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R6

Platforms All

authentication

Synopsis	Enable the authentication context
Context	configure ipsec static-sa string authentication
Tree	authentication
Introduced	16.0.R6
Platforms	All

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	configure ipsec static-sa string authentication algorithm keyword
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

key *string*

Synopsis	Key used for the authentication algorithm
Context	configure ipsec static-sa string authentication key string
Tree	key
String Length	1 to 54
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

description *string*

Synopsis	Text description
Context	configure ipsec static-sa string description string
Tree	description
String Length	1 to 32
Introduced	16.0.R6

Platforms All

direction *keyword*

Synopsis Direction to which the static SA entry can be applied

Context **configure ipsec static-sa** *string direction keyword*

Tree [direction](#)

Options inbound, outbound, bidirectional

Default bidirectional

Introduced 16.0.R6

Platforms All

protocol *keyword*

Synopsis IPsec protocol used with the static SA

Context **configure ipsec static-sa** *string protocol keyword*

Tree [protocol](#)

Options ah, esp

Default esp

Introduced 16.0.R6

Platforms All

spi *number*

Synopsis Security Parameter Index (SPI) for the static SA

Context **configure ipsec static-sa** *string spi number*

Tree [spi](#)

Description This command specifies the SPI for the static SA.

When the **direction** command is set to **inbound**, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the **direction** command is set to **outbound**, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet.

When unconfigured, the static SA cannot be used.

Range 256 to 16383

Introduced 16.0.R6

Platforms All

trust-anchor-profile [[name](#)] *string*

Synopsis Enter the **trust-anchor-profile** list instance
 Context **configure ipsec trust-anchor-profile** *string*
 Tree [trust-anchor-profile](#)
 Max. Instances 10128
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis Trust anchor profile name for IPsec tunnel or gateway
 Context **configure ipsec trust-anchor-profile** *string*
 Tree [trust-anchor-profile](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor [[ca-profile](#)] *reference*

Synopsis Add a list entry for **trust-anchor**
 Context **configure ipsec trust-anchor-profile** *string* **trust-anchor** *reference*
 Tree [trust-anchor](#)
 Description Commands in this context configure a CA profile as a trust anchor CA.
 Max. Instances 8
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ca-profile] *reference*

Synopsis Name of the CA profile as a trust anchor profile

Context	configure ipsec trust-anchor-profile <i>string</i> <i>trust-anchor</i> <i>reference</i>
Tree	trust-anchor
Reference	configure system security pki ca-profile <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ts-list [[name](#)] *string*

Synopsis	Enter the ts-list list instance
Context	configure ipsec ts-list <i>string</i>
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. Instances	32768
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Traffic Selector (TS) list name
Context	configure ipsec ts-list <i>string</i>
Tree	ts-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enter the local context
Context	configure ipsec ts-list <i>string</i> local
Tree	local
Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the entry list instance
Context	configure ipsec ts-list string local entry number
Tree	entry
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	TS list entry ID
Context	configure ipsec ts-list string local entry number
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enable the address context
Context	configure ipsec ts-list string local entry number address
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	configure ipsec ts-list string local entry number address prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	The following elements are part of a mandatory choice: prefix or range .

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the range context
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> address range
Tree	range
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Lower bound of the IP address range for the entry
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> address range begin (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	begin
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Upper bound of the IP address range
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> address range end (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	end
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the protocol context
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol

Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any

Synopsis	Match any protocol ID
Context	configure ipsec ts-list <i>string local entry number</i> protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the id context
Context	configure ipsec ts-list <i>string local entry number</i> protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the icmp context
Context	configure ipsec ts-list <i>string local entry number</i> protocol id icmp
Tree	icmp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number protocol id icmp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number protocol id icmp port-range</i>
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>string local entry number protocol id icmp port-range begin-icmp-code number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
----------	------------------------------------

Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id icmp port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id icmp port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id icmp port-range end-icmp-type <i>number</i>
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6

Synopsis	Enter the icmp6 context
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id icmp6
Tree	icmp6

Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number</i> protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number</i> protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>string local entry number</i> protocol id icmp6 port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis Lower bound of the ICMP type range

Context **configure** [ipsec ts-list](#) *string* [local entry](#) *number* [protocol id icmp6](#) [port-range](#) [begin-icmp-type](#) *number*

Tree [begin-icmp-type](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis Upper bound of the ICMP code range

Context **configure** [ipsec ts-list](#) *string* [local entry](#) *number* [protocol id icmp6](#) [port-range](#) [end-icmp-code](#) *number*

Tree [end-icmp-code](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis Upper bound of the ICMP type range

Context **configure** [ipsec ts-list](#) *string* [local entry](#) *number* [protocol id icmp6](#) [port-range](#) [end-icmp-type](#) *number*

Tree [end-icmp-type](#)

Range 0 to 255

Notes This element is mandatory.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mipv6

Synopsis	Enter the mipv6 context
Context	configure ipsec ts-list <i>string local entry number protocol id mipv6</i>
Tree	mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number protocol id mipv6 opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number protocol id mipv6 port-range</i>
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id mipv6 port-range begin number</i>
Tree	begin

Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id mipv6 port-range end <i>number</i>
Tree	end
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol-id-with-any-port (*keyword* | *number*)

Synopsis	Protocol ID that accepts any port value
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id protocol-id-with-any-port (<i>keyword</i> <i>number</i>)
Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp

Synopsis	Enter the sctp context
Context	configure ipsec ts-list <i>string</i> local entry <i>number</i> protocol id sctp
Tree	sctp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number protocol id sctp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number protocol id sctp port-range</i>
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id sctp port-range begin number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id sctp port-range end number</i>
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure ipsec ts-list <i>string local entry number protocol id tcp</i>
Tree	tcp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number protocol id tcp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number protocol id tcp port-range</i>
Tree	port-range

Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id tcp port-range begin number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id tcp port-range end number</i>
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure ipsec ts-list <i>string local entry number protocol id udp</i>
Tree	udp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string local entry number protocol id udp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string local entry number protocol id udp port-range</i>
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id udp port-range begin number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string local entry number protocol id udp port-range end number</i>
Tree	end
Range	0 to 65535

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote

Synopsis	Enter the remote context
Context	configure ipsec ts-list string remote
Tree	remote
Description	Commands in this context configure a remote TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] number

Synopsis	Enter the entry list instance
Context	configure ipsec ts-list string remote entry number
Tree	entry
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] number

Synopsis	TS list entry ID
Context	configure ipsec ts-list string remote entry number
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enable the address context
----------	-----------------------------------

Context	configure ipsec ts-list <i>string remote entry number address</i>
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	configure ipsec ts-list <i>string remote entry number address prefix (ipv4-prefix ipv6-prefix)</i>
Tree	prefix
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the range context
Context	configure ipsec ts-list <i>string remote entry number address range</i>
Tree	range
Notes	The following elements are part of a mandatory choice: prefix or range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Lower bound of the IP address range for the entry
Context	configure ipsec ts-list <i>string remote entry number address range begin (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	begin
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Upper bound of the IP address range
Context	configure ipsec ts-list <i>string remote entry number address range end</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	end
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the protocol context
Context	configure ipsec ts-list <i>string remote entry number protocol</i>
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any

Synopsis	Match any protocol ID
Context	configure ipsec ts-list <i>string remote entry number protocol any</i>
Tree	any
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the id context
Context	configure ipsec ts-list <i>string remote entry number protocol id</i>
Tree	id
Notes	The following elements are part of a mandatory choice: any or id .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the icmp context
Context	configure ipsec ts-list <i>string remote entry number protocol id icmp</i>
Tree	icmp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string remote entry number protocol id icmp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string remote entry number protocol id icmp port-range</i>
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
----------	------------------------------------

Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp port-range end-icmp-type <i>number</i>
Tree	end-icmp-type

Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6

Synopsis	Enter the icmp6 context
Context	configure ipsec ts-list string remote entry number protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list string remote entry number protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list string remote entry number protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp6 port-range begin-icmp-code <i>number</i>
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp6 port-range begin-icmp-type <i>number</i>
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id icmp6 port-range end-icmp-code <i>number</i>
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
----------	------------------------------------

Context	configure ipsec ts-list <i>string remote entry number protocol id icmp6 port-range end-icmp-type number</i>
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mipv6

Synopsis	Enter the mipv6 context
Context	configure ipsec ts-list <i>string remote entry number protocol id mipv6</i>
Tree	mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string remote entry number protocol id mipv6 opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string remote entry number protocol id mipv6 port-range</i>
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id mipv6 port-range begin <i>number</i>
Tree	begin
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id mipv6 port-range end <i>number</i>
Tree	end
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol-id-with-any-port (*keyword* | *number*)

Synopsis	Protocol ID that accepts any port value
Context	configure ipsec ts-list <i>string</i> remote entry <i>number</i> protocol id protocol-id-with-any-port (<i>keyword</i> <i>number</i>)
Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp

Synopsis Enter the **sctp** context

Context **configure ipsec ts-list** *string* *remote entry number* *protocol id* **sctp**

Tree **sctp**

Notes The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mip6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis Support OPAQUE ports

Context **configure ipsec ts-list** *string* *remote entry number* *protocol id* **sctp opaque**

Tree **opaque**

Description This command allows the protocol ID to be accepted even when the port information is not available.

Notes The following elements are part of a choice: **opaque** or **port-range**.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis Enable the **port-range** context

Context **configure ipsec ts-list** *string* *remote entry number* *protocol id* **sctp port-range**

Tree **port-range**

Notes The following elements are part of a choice: **opaque** or **port-range**.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis Lower bound of the port range

Context	configure ipsec ts-list <i>string remote entry number protocol id sctp port-range begin number</i>
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string remote entry number protocol id sctp port-range end number</i>
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure ipsec ts-list <i>string remote entry number protocol id tcp</i>
Tree	tcp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mip6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string remote entry number protocol id tcp opaque</i>
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list string remote entry number protocol id tcp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin number

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list string remote entry number protocol id tcp port-range begin number
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list string remote entry number protocol id tcp port-range end number
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure ipsec ts-list <i>string</i> <i>remote entry number</i> <i>protocol id</i> udp
Tree	udp
Notes	The following elements are part of a mandatory choice: icmp , icmp6 , mipv6 , protocol-id-with-any-port , sctp , tcp , or udp .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	configure ipsec ts-list <i>string</i> <i>remote entry number</i> <i>protocol id</i> udp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the port-range context
Context	configure ipsec ts-list <i>string</i> <i>remote entry number</i> <i>protocol id</i> udp port-range
Tree	port-range
Notes	The following elements are part of a choice: opaque or port-range .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	configure ipsec ts-list <i>string</i> <i>remote entry number</i> <i>protocol id</i> udp port-range begin <i>number</i>
Tree	begin

Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the port range
Context	configure ipsec ts-list <i>string</i> remote entry number protocol id udp port-range end number
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-template [id] number

Synopsis	Enter the tunnel-template list instance
Context	configure ipsec tunnel-template <i>number</i>
Tree	tunnel-template
Max. Instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] number

Synopsis	Tunnel template ID
Context	configure ipsec tunnel-template <i>number</i>
Tree	tunnel-template
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear-df-bit *boolean*

Synopsis	Clear the Do-not-Fragment (DF) bit
Context	configure <i>ipsec tunnel-template number clear-df-bit boolean</i>
Tree	<i>clear-df-bit</i>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

copy-traffic-class-upon-decapsulation *boolean*

Synopsis	Enable traffic class copy upon decapsulation
Context	configure <i>ipsec tunnel-template number copy-traffic-class-upon-decapsulation boolean</i>
Tree	<i>copy-traffic-class-upon-decapsulation</i>
Description	<p>When configured to true, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).</p> <p>When configured to false, the system does not copy the traffic class from the outer IP packet to the payload IP packet header upon decapsulation.</p>
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure <i>ipsec tunnel-template number description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	configure <i>ipsec tunnel-template number encapsulated-ip-mtu number</i>

Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-generation

Synopsis	Enter the icmp-generation context
Context	configure ipsec tunnel-template <i>number</i> icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

frag-required

Synopsis	Enter the frag-required context
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required admin-state <i>keyword</i>
Tree	admin-state

Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for sending ICMP messages
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure ipsec tunnel-template <i>number</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6-generation

Synopsis	Enter the icmp6-generation context
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation
Tree	icmp6-generation
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pkt-too-big

Synopsis	Enter the pkt-too-big context
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big interval <i>number</i>
Tree	interval
Range	1 to 60

Units	seconds
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	configure ipsec tunnel-template <i>number</i> icmp6-generation pkt-too-big message-count <i>number</i>
Tree	message-count
Range	10 to 1000
Default	100
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi
Context	configure ipsec tunnel-template <i>number</i> ignore-default-route <i>boolean</i>
Tree	ignore-default-route
Description	When configured to true , any full range traffic selector is ignored when creating a reverse route. When configured to false , no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	configure ipsec tunnel-template <i>number</i> ip-mtu <i>number</i>
Tree	ip-mtu
Range	512 to 9000
Units	octets

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	configure ipsec tunnel-template <i>number</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Max. Instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	configure ipsec tunnel-template <i>number</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	configure ipsec tunnel-template <i>number</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side. When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.

Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure ipsec tunnel-template <i>number</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	configure ipsec tunnel-template <i>number</i> propagate-pmtu-v6 <i>boolean</i>
Tree	propagate-pmtu-v6
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust (*number* | *keyword*)

Synopsis	New TCP MSS value on the public side
Context	configure ipsec tunnel-template <i>number</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet. When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.

Range	512 to 9000
Units	octets
Options	auto
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	configure ipsec tunnel-template <i>number</i> replay-window <i>number</i>
Tree	replay-window
Range	32 64 128 256 512
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	configure ipsec tunnel-template <i>number</i> sp-reverse-route <i>keyword</i>
Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.20.1 isa command descriptions

isa

Synopsis	Enter the isa context
Context	configure isa
Tree	isa
Description	Commands in this context configure the Integrated Services Adapter (ISA).
Introduced	16.0.R1
Platforms	All

application-assurance-group [[aa-group-id](#)] *number*

Synopsis	Enter the application-assurance-group list instance
Context	configure isa application-assurance-group <i>number</i>
Tree	application-assurance-group
Max. Instances	7
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[aa-group-id\]](#) *number*

Synopsis	AA group ID
Context	configure isa application-assurance-group <i>number</i>
Tree	application-assurance-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-scale *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AA group sub-scale
Context	configure isa application-assurance-group number aa-sub-scale keyword
Tree	aa-sub-scale
Options	residential, vpn, mobile-gateway, lightweight-internet, residential-8k, residential-16k, residential-32k, residential-64k, vpn-1k, vpn-2k, vpn-4k, vpn-8k, mobile-gateway-1m, mobile-gateway-2m, lightweight-internet-512k
Default	residential
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this AA group
Context	configure isa application-assurance-group number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

backup

Synopsis	Enter the backup context
Context	configure isa application-assurance-group number backup
Tree	backup
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] number vm number

Synopsis	Add a list entry for esa
----------	---------------------------------

Context	configure isa application-assurance-group number backup esa number vm number
Tree	esa
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[esa-id] number

Synopsis	ESA ID
Context	configure isa application-assurance-group number backup esa number vm number
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm number

Synopsis	VM ID within the ESA
Context	configure isa application-assurance-group number backup esa number vm number
Tree	esa
Range	1 to 4
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa [mda-id] string

Synopsis	Add a list entry for isa
Context	configure isa application-assurance-group number backup isa string
Tree	isa
Max. Instances	1
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[mda-id] *string*

Synopsis MDA/ISA ID
 Context **configure isa application-assurance-group number backup isa string**
 Tree [isa](#)
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure isa application-assurance-group number description string**
 Tree [description](#)
 String Length 1 to 80
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

divert-fc *keyword*

Synopsis Diverted traffic forwarding class
 Context **configure isa application-assurance-group number divert-fc keyword**
 Tree [divert-fc](#)
 Options be, l2, af, l1, h2, ef, h1, nc
 Max. 8
 Instances
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failure-mode *keyword*

Synopsis Mode of operation when no ISA-AA cards are available
 Context **configure isa application-assurance-group number failure-mode keyword**

Tree	failure-mode
Options	fail-to-open
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [\[flow-attribute-name\]](#) *string*

Synopsis	Add a list entry for flow-attribute
Context	configure isa application-assurance-group <i>number</i> flow-attribute <i>string</i>
Tree	flow-attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[flow-attribute-name] *string*

Synopsis	Flow attribute name
Context	configure isa application-assurance-group <i>number</i> flow-attribute <i>string</i>
Tree	flow-attribute
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich-max-packet-size *number*

Synopsis	Maximum HTTP enriched packet size
Context	configure isa application-assurance-group <i>number</i> http-enrich-max-packet-size <i>number</i>
Tree	http-enrich-max-packet-size
Range	576 to 9212
Units	octets
Default	1500
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-capacity-cost-high-threshold *number*

Synopsis	Capacity cost high threshold for the ISA-AA group
Context	configure isa application-assurance-group <i>number</i> isa-capacity-cost-high-threshold <i>number</i>
Tree	isa-capacity-cost-high-threshold
Range	0 to 4294967294
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-capacity-cost-low-threshold *number*

Synopsis	Capacity cost low threshold for the ISA-AA group
Context	configure isa application-assurance-group <i>number</i> isa-capacity-cost-low-threshold <i>number</i>
Tree	isa-capacity-cost-low-threshold
Range	1 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum-isa-generation *number*

Synopsis	Minimum ISA generation for this AA group
Context	configure isa application-assurance-group <i>number</i> minimum-isa-generation <i>number</i>
Tree	minimum-isa-generation
Range	1 to 2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-cut-through *boolean*

Synopsis	Enable cut-through of traffic if ISA is in overload
Context	configure isa application-assurance-group <i>number</i> overload-cut-through <i>boolean</i>
Tree	overload-cut-through
Default	false
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-sub-quarantine

Synopsis Enter the **overload-sub-quarantine** context

Context **configure isa application-assurance-group number overload-sub-quarantine**

Tree [overload-sub-quarantine](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of overload subscriber quarantine

Context **configure isa application-assurance-group number overload-sub-quarantine admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis Enter the **primary** context

Context **configure isa application-assurance-group number primary**

Tree [primary](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [*esa-id*] *number vm number*

Synopsis Add a list entry for **esa**

Context **configure isa application-assurance-group number primary esa number vm number**

Tree [esa](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[esa-id] *number*

Synopsis ESA ID

Context **configure** isa application-assurance-group number primary esa number vm number

Tree esa

Range 1 to 16

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm *number*

Synopsis VM ID within the ESA

Context **configure** isa application-assurance-group number primary esa number vm number

Tree esa

Range 1 to 4

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa [mda-id] *string*

Synopsis Add a list entry for **isa**

Context **configure** isa application-assurance-group number primary isa string

Tree isa

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[mda-id] *string*

Synopsis MDA/ISA ID

Context **configure** isa application-assurance-group number primary isa string

Tree isa

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the qos context
Context	configure isa application-assurance-group number qos
Tree	qos
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the egress context
Context	configure isa application-assurance-group number qos egress
Tree	egress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

from-subscriber

Synopsis	Enter the from-subscriber context
Context	configure isa application-assurance-group number qos egress from-subscriber
Tree	from-subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

buffer-pool

Synopsis	Enter the buffer-pool context
Context	configure isa application-assurance-group number qos egress from-subscriber buffer-pool
Tree	buffer-pool
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name string

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Name of the buffer pool used for this ISA group

Context **configure isa application-assurance-group number qos egress from-subscriber buffer-pool name string**

Tree [name](#)

String Length 1 to 32

Default default

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

resv-cbs number

Synopsis Reserved CBS for this ISA group

Context **configure isa application-assurance-group number qos egress from-subscriber buffer-pool resv-cbs number**

Tree [resv-cbs](#)

Range 0 to 100

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

slope-policy reference

Synopsis Slope policy name

Context **configure isa application-assurance-group number qos egress from-subscriber buffer-pool slope-policy reference**

Tree [slope-policy](#)

Reference **configure qos slope-policy string**

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-scheduler-policy *reference*

Synopsis	Port scheduler policy name
Context	configure isa application-assurance-group <i>number</i> qos egress from-subscriber port-scheduler-policy <i>reference</i>
Tree	port-scheduler-policy
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue-policy *reference*

Synopsis	Queue policy name
Context	configure isa application-assurance-group <i>number</i> qos egress from-subscriber queue-policy <i>reference</i>
Tree	queue-policy
Reference	configure qos network-queue <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wa-shared-high-wmark (*number* | *keyword*)

Synopsis	High watermark for weighted average utilization
Context	configure isa application-assurance-group <i>number</i> qos egress from-subscriber wa-shared-high-wmark (<i>number</i> <i>keyword</i>)
Tree	wa-shared-high-wmark
Range	1 to 100
Units	percent
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wa-shared-low-wmark *number*

Synopsis	Low watermark for the weighted average utilization
----------	--

Context	configure isa application-assurance-group <i>number</i> qos egress from-subscriber wa-shared-low-wmark <i>number</i>
Tree	wa-shared-low-wmark
Range	0 to 99
Units	percent
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-subscriber

Synopsis	Enter the to-subscriber context
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber
Tree	to-subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

buffer-pool

Synopsis	Enter the buffer-pool context
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber buffer-pool
Tree	buffer-pool
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the buffer pool used for this ISA group
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber buffer-pool <i>name string</i>
Tree	<i>name</i>
String Length	1 to 32

Default	default
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

resv-cbs *number*

Synopsis	Reserved CBS for this ISA group
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber buffer-pool resv-cbs <i>number</i>
Tree	resv-cbs
Range	0 to 100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

slope-policy *reference*

Synopsis	Slope policy name
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber buffer-pool slope-policy <i>reference</i>
Tree	slope-policy
Reference	configure qos slope-policy <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-scheduler-policy *reference*

Synopsis	Port scheduler policy name
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber port-scheduler-policy reference
Tree	port-scheduler-policy
Reference	configure qos port-scheduler-policy <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue-policy *reference*

Synopsis	Queue policy name
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber queue-policy <i>reference</i>
Tree	queue-policy
Reference	configure qos network-queue <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wa-shared-high-wmark (*number* | *keyword*)

Synopsis	High watermark for weighted average utilization
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber wa-shared-high-wmark (<i>number</i> <i>keyword</i>)
Tree	wa-shared-high-wmark
Range	1 to 100
Units	percent
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wa-shared-low-wmark *number*

Synopsis	Low watermark for the weighted average utilization
Context	configure isa application-assurance-group <i>number</i> qos egress to-subscriber wa-shared-low-wmark <i>number</i>
Tree	wa-shared-low-wmark
Range	0 to 99
Units	percent
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

shared-resources

Synopsis	Enter the shared-resources context
Context	configure isa application-assurance-group number shared-resources
Tree	shared-resources
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-tunnel-database *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Percentage of allocated memory resources
Context	configure isa application-assurance-group number shared-resources gtp-tunnel-database number
Tree	gtp-tunnel-database
Range	1 to 100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-advanced-functions *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allocation of resources for TCP advanced functions
Context	configure isa application-assurance-group number shared-resources tcp-advanced-functions number
Tree	tcp-advanced-functions
Range	1 to 100
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-filter-web-service-cache *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of shared memory as a percentage
Context	configure isa application-assurance-group <i>number</i> shared-resources url-filter-web-service-cache <i>number</i>
Tree	url-filter-web-service-cache
Range	1 to 100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Enter the statistics context
Context	configure isa application-assurance-group <i>number</i> statistics
Tree	statistics
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

stats-type [isa-aa-group-stats-type] *keyword*

Synopsis	Enter the stats-type list instance
Context	configure isa application-assurance-group <i>number</i> statistics stats-type <i>keyword</i>
Tree	stats-type
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[isa-aa-group-stats-type] *keyword*

Synopsis	Group performance statistics type
Context	configure isa application-assurance-group <i>number</i> statistics stats-type <i>keyword</i>
Tree	stats-type
Options	aa-performance
Notes	This element is part of a list key.

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis Accounting policy ID used by AA
 Context **configure** isa application-assurance-group number statistics stats-type keyword accounting-policy *reference*
 Tree [accounting-policy](#)
 Reference **configure** log accounting-policy number
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis Enable the collection of statistics
 Context **configure** isa application-assurance-group number statistics stats-type keyword collect-stats *boolean*
 Tree [collect-stats](#)
 Default false
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-prefix-limits

Synopsis Enter the **transit-prefix-limits** context
 Context **configure** isa application-assurance-group number transit-prefix-limits
 Tree [transit-prefix-limits](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-entries *number*

Synopsis Limit of transit prefix IPv4 entries per AA group
 Context **configure** isa application-assurance-group number transit-prefix-limits ipv4-entries *number*

Tree	ipv4-entries
Range	1 to 16383
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-remote-entries *number*

Synopsis	Limit of transit prefix IPv4 remote entries per group
Context	configure isa application-assurance-group <i>number</i> transit-prefix-limits ipv4-remote-entries <i>number</i>
Tree	ipv4-remote-entries
Range	1 to 2047
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-entries *number*

Synopsis	Limit of transit prefix IPv6 entries per AA group
Context	configure isa application-assurance-group <i>number</i> transit-prefix-limits ipv6-entries <i>number</i>
Tree	ipv6-entries
Range	1 to 8191
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-remote-entries *number*

Synopsis	Limit of transit prefix IPv6 remote entries per group
Context	configure isa application-assurance-group <i>number</i> transit-prefix-limits ipv6-remote-entries <i>number</i>
Tree	ipv6-remote-entries
Range	1 to 1023
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm-traffic-distribute-by-ip *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow packet distribution by IP address for virtual AA
Context	configure isa application-assurance-group <i>number</i> vm-traffic-distribute-by-ip <i>boolean</i>
Tree	vm-traffic-distribute-by-ip
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm-traffic-distribute-by-teid *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable load balancing of the traffic using TEID
Context	configure isa application-assurance-group <i>number</i> vm-traffic-distribute-by-teid <i>boolean</i>
Tree	vm-traffic-distribute-by-teid
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Ins-group [*id*] *number*

Synopsis	Enter the Ins-group list instance
Context	configure isa Ins-group <i>number</i>
Tree	Ins-group
Description	Commands in this context configure the ISA L2TP Network Server (LNS) group.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] number

Synopsis	LNS group ID
Context	configure isa lns-group number
Tree	lns-group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the ISA LNS group
Context	configure isa lns-group number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure isa lns-group number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] reference vm reference

Synopsis	Enter the esa list instance
Context	configure isa lns-group number esa reference vm reference
Tree	esa
Max. Instances	6

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**esa-id**] *reference*

Synopsis	ESA ID
Context	configure isa lns-group number esa reference vm reference
Tree	esa
Reference	configure esa number
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm *reference*

Synopsis	VM ID
Context	configure isa lns-group number esa reference vm reference
Tree	esa
Reference	configure esa number vm number
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

drain *boolean*

Synopsis	Redirect subscribers to other ESA VMs
Context	configure isa lns-group number esa reference vm reference drain boolean
Tree	drain
Description	<p>When configured to true, the ESA VM redirects new subscribers to use other ESA VMs.</p> <p>The drain function gracefully redirects subscribers to other ESA VMs and does not allow new subscribers to use the ESA VM. As the existing subscribers terminate their sessions, the ESA VM no longer services any subscribers and can be decommissioned gracefully.</p> <p>When configured to false, the ESA VM is set to the normal working operational state and accepts new LNS subscribers.</p>
Default	false

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

mda [*mda-id*] *string*

Synopsis	Enter the mda list instance
Context	configure isa lns-group <i>number mda string</i>
Tree	mda
Description	Commands in this context configure an ISA LNS group MDA.
Max. Instances	6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[mda-id] *string*

Synopsis	MDA ID for the ISA LNS group
Context	configure isa lns-group <i>number mda string</i>
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

drain *boolean*

Synopsis	Prevent new L2TP sessions from associating with ISA
Context	configure isa lns-group <i>number mda string drain boolean</i>
Tree	drain
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Port policy for the ISA LNS group
Context	configure <i>isa lns-group number port-policy reference</i>
Tree	<i>port-policy</i>
Reference	configure <i>port-policy string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group [*id*] *number*

Synopsis	Enter the nat-group list instance
Context	configure <i>isa nat-group number</i>
Tree	<i>nat-group</i>
Max. Instances	4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	NAT group ID
Context	configure <i>isa nat-group number</i>
Tree	<i>nat-group</i>
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the NAT group
Context	configure <i>isa nat-group number admin-state keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure isa nat-group <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [[esa-id](#)] *reference* [vm](#) *reference*

Synopsis	Add a list entry for esa
Context	configure isa nat-group <i>number</i> esa <i>reference</i> vm <i>reference</i>
Tree	esa
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[esa-id] *reference*

Synopsis	Provisioned ESA ID
Context	configure isa nat-group <i>number</i> esa <i>reference</i> vm <i>reference</i>
Tree	esa
Reference	configure esa <i>number</i>
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm reference

Synopsis	VM ID for the provisioned BB ISA
Context	configure isa nat-group number esa reference vm reference
Tree	esa
Reference	configure esa number vm number
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

log

Synopsis	Enter the log context
Context	configure isa nat-group number log
Tree	log
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-events *boolean*

Synopsis	Suppress LSN events when RADIUS accounting is enabled
Context	configure isa nat-group number log suppress-lsn-events <i>boolean</i>
Tree	suppress-lsn-events
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification
Context	configure isa nat-group number log suppress-lsn-sub-blocks-free <i>boolean</i>
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mda [[mda-id](#)] *string*

Synopsis	Add a list entry for mda
Context	configure isa nat-group number mda string
Tree	mda
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[mda-id] *string*

Synopsis	MDA ID for ISA NAT group
Context	configure isa nat-group number mda string
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy for ISA group
Context	configure isa nat-group number radius-accounting-policy reference
Tree	radius-accounting-policy
Reference	configure aaa radius isa-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundancy

Synopsis	Enter the redundancy context
Context	configure isa nat-group number redundancy
Tree	redundancy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-mda-limit *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active MS-ISAs in the NAT group
Context	configure isa nat-group <i>number</i> redundancy active-mda-limit <i>number</i>
Tree	active-mda-limit
Range	1 to 14
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-chassis

Synopsis	Enable the inter-chassis context
Context	configure isa nat-group <i>number</i> redundancy inter-chassis
Tree	inter-chassis
Notes	The following elements are part of a choice: inter-chassis or intra-chassis .
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-timeout-on-switchover *number*

Synopsis	Flow timeout immediately following a switchover
Context	configure isa nat-group <i>number</i> redundancy inter-chassis flow-timeout-on-switchover <i>number</i>
Tree	flow-timeout-on-switchover
Description	<p>This command configures the initial flow timeout on the newly active node for the NAT group after a switchover. The timeout is in effect only if there is no traffic present over the flow; otherwise, the first packet over the flow resets the flow timeout to the originally configured value (under the NAT policy configuration).</p> <p>This command configuration restricts the flow timeout to a portion of the originally configured value.</p>
Range	1 to 50

Units	percent
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU for ISA-to-ISA communication
Context	configure isa nat-group <i>number</i> redundancy inter-chassis ip-mtu <i>number</i>
Tree	ip-mtu
Description	This command configures the IP MTU size used to transport flow synchronization records between the ISAs. Multiple flow synchronization events can be packed into a single frame up to the IP MTU size.
Range	512 to 9000
Default	1500
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the keepalive context
Context	configure isa nat-group <i>number</i> redundancy inter-chassis keepalive
Tree	keepalive
Description	Commands in this context configure keepalive messages between the CPMs residing on different chassis and are used to detect the presence of the peering node. If the redundant peer connectivity is lost beyond the limit defined by the keepalive messages, each node in the redundant pair transitions to standalone mode. Keepalive messages use UDP transport.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dropcount *number*

Synopsis	Threshold for lost consecutive keepalive messages
Context	configure isa nat-group <i>number</i> redundancy inter-chassis keepalive dropcount <i>number</i>
Tree	dropcount

Description	This command configures the threshold for the number of consecutive keepalive messages that are lost between the redundant nodes before the connection is declared down. When the peer is considered unreachable, each node transitions to standalone mode.
Range	2 to 20
Default	2
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between two consecutive keepalive messages
Context	configure isa nat-group <i>number</i> redundancy inter-chassis keepalive interval <i>number</i>
Tree	interval
Description	This command configures the interval at which the keepalive messages are periodically sent between the redundant nodes (CPMs) to verify the presence of the peer. If peer connectivity is lost, each node transitions to standalone mode.
Range	2 to 250
Units	deciseconds
Default	30
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-range-start *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs in the NAT group
Context	configure isa nat-group <i>number</i> redundancy inter-chassis local-ip-range-start <i>string</i>
Tree	local-ip-range-start
Description	This command configures the initial IP address for the ISAs in the NAT group. Consecutive IP addresses are automatically assigned for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the

purpose of flow synchronization. Traffic from the member ISA with the initial IP address is sent to the initial IP address from the remote IP range.

Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [[oper-group](#)] *reference*

Synopsis	Enter the monitor-oper-group list instance
Context	configure isa nat-group number redundancy inter-chassis monitor-oper-group reference
Tree	monitor-oper-group
Description	Commands in this context specify monitoring settings for objects in an operational group, such as SAPs, BFD sessions, or VRRP sessions, in order to adjust the overall health of the node in a redundant inter-chassis NAT system. A state change of the objects in the operational group influences the health of a NAT node in a redundant configuration.
Max. Instances	4
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[oper-group] *reference*

Synopsis	Operational group name
Context	configure isa nat-group number redundancy inter-chassis monitor-oper-group reference
Tree	monitor-oper-group
Reference	configure service oper-group string
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

health-drop *number*

Synopsis	Overall health drop of the NAT group on a state change
Context	configure isa nat-group number redundancy inter-chassis monitor-oper-group reference health-drop number
Tree	health-drop
Range	1 to 255

Default	1
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor-port [*port-id*] *string*

Synopsis	Enter the monitor-port list instance
Context	configure isa nat-group number redundancy inter-chassis monitor-port <i>string</i>
Tree	monitor-port
Description	Commands in this context specify monitoring settings for a port carrying NAT traffic, in order to adjust the overall health of the node in a redundant inter-chassis NAT system. A state change of a monitored port influences the health of a NAT node in a redundant configuration.
Max. Instances	16
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[port-id] *string*

Synopsis	Port ID
Context	configure isa nat-group number redundancy inter-chassis monitor-port <i>string</i>
Tree	monitor-port
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

health-drop *number*

Synopsis	Overall health drop of the NAT group on a state change
Context	configure isa nat-group number redundancy inter-chassis monitor-port <i>string</i> health-drop <i>number</i>
Tree	health-drop
Range	1 to 255
Default	1
Introduced	20.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

preferred *boolean*

Synopsis Set the preferred activity status for the node

Context **configure** isa nat-group number redundancy inter-chassis preferred *boolean*

Tree [preferred](#)

Description When configured to **true**, the system designates the node in a redundant NAT system with the preferred activity status. The preferred status comes into consideration only when both redundant nodes have equal health values. If the peer traffic-serving node has an equal health value but does not have the preferred designation, a switch of activity occurs to route traffic to the preferred node. The switchover could cause a brief interruption in traffic flow.

When configured to **false**, the preferred designation is not set for the node.

Default false

Introduced 20.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-ip-range-start *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Starting IP address for ISAs on the remote node

Context **configure** isa nat-group number redundancy inter-chassis remote-ip-range-start *string*

Tree [remote-ip-range-start](#)

Description This command configures the initial IP address for the ISAs in the NAT group on the remote node. Consecutive IP addresses are automatically assigned for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. Traffic from the member ISA with the initial local IP address is sent to the initial IP address from the remote IP range.

Introduced 20.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replication-threshold *number*

Synopsis	Minimum time to wait before a NAT flow is synchronized
Context	configure isa nat-group <i>number</i> redundancy inter-chassis replication-threshold <i>number</i>
Tree	replication-threshold
Description	This command configures the minimum time to wait before a NAT flow is replicated (synchronized) to the standby node.
Range	0 to 300
Units	seconds
Default	20
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router instance for the ISA-to-ISA communication
Context	configure isa nat-group <i>number</i> redundancy inter-chassis router-instance <i>string</i>
Tree	router-instance
Description	This command specifies the routing instance through which ISAs on redundant nodes communicate with each other and synchronize their flow state.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync *boolean*

Synopsis	Synchronize NAT flows between nodes
Context	configure isa nat-group <i>number</i> redundancy inter-chassis sync <i>boolean</i>
Tree	sync
Default	true
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

intra-chassis

Synopsis Enter the **intra-chassis** context

Context **configure isa nat-group number redundancy intra-chassis**

Tree [intra-chassis](#)

Notes The following elements are part of a choice: **inter-chassis** or **intra-chassis**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-active

Synopsis Enter the **active-active** context

Context **configure isa nat-group number redundancy intra-chassis active-active**

Tree [active-active](#)

Notes The following elements are part of a choice: **active-active**, **active-standby**, or **I2aware-bypass**.

Range	1 to 6291456
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp-mappings *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of UPnP mappings per member
Context	configure isa nat-group <i>number</i> session-limits upnp-mappings <i>number</i>
Tree	upnp-mappings
Description	This command specifies the maximum number of Universal Plug and Play (UPnP) mappings per member.
Range	1 to 524288
Default	524288
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure isa nat-group <i>number</i> session-limits watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	Session limit high watermark for each MDA in the group
Context	configure isa nat-group <i>number</i> session-limits watermarks high <i>number</i>
Tree	high
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis Session limit low watermark for each MDA in the group

Context **configure** [isa nat-group](#) *number* [session-limits watermarks low](#) *number*

Tree [low](#)

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group [*id*] *number*

Synopsis Enter the **tunnel-group** list instance

Context **configure** [isa tunnel-group](#) *number*

Tree [tunnel-group](#)

Description Commands in this context create or edit a tunnel group. A tunnel group is a set of one or more MS-ISAs that support the origination and termination of IPsec and IP/GRE tunnels. On a VSR, the **isa-scale-mode** command must be specified, which defines the maximum number of tunnels on each ISA.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[*id*] *number*

Synopsis Tunnel group ID

Context **configure** [isa tunnel-group](#) *number*

Tree [tunnel-group](#)

Range 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the ISA tunnel group
Context	configure isa tunnel-group number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

backup *string*

Synopsis	IPsec module configured in the slot to the IPsec group
Context	configure isa tunnel-group number backup string
Tree	backup
Notes	The following elements are part of a choice: multi-active or (backup and primary).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure isa tunnel-group number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-responder-only *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Act as an IKE responder except upon MC-IPsec switchover
Context	configure isa tunnel-group number ipsec-responder-only boolean
Tree	ipsec-responder-only

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-scale-mode *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel limit on each ISA for the tunnel group
Context	configure isa tunnel-group <i>number</i> isa-scale-mode <i>keyword</i>
Tree	isa-scale-mode
Options	tunnel-limit-2k, tunnel-limit-32k, tunnel-limit-64k, tunnel-limit-8, tunnel-limit-32
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-active

Synopsis	Enable the multi-active context
Context	configure isa tunnel-group <i>number</i> multi-active
Tree	multi-active
Notes	The following elements are part of a choice: multi-active or (backup and primary).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-isa-number *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of active MS-ISAs in the tunnel group
Context	configure isa tunnel-group <i>number</i> multi-active active-isa-number <i>number</i>
Tree	active-isa-number

Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [[esa-id](#)] *reference* [vm](#) *reference*

Synopsis	Add a list entry for esa
Context	configure isa tunnel-group <i>number</i> multi-active esa <i>reference</i> vm <i>reference</i>
Tree	esa
Notes	The following elements are part of a choice: esa , isa , or member-pool .
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[esa-id] *reference*

Synopsis	ESA ID
Context	configure isa tunnel-group <i>number</i> multi-active esa <i>reference</i> vm <i>reference</i>
Tree	esa
Reference	configure esa <i>number</i>
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm *reference*

Synopsis	ESM-VM ID
Context	configure isa tunnel-group <i>number</i> multi-active esa <i>reference</i> vm <i>reference</i>
Tree	esa
Reference	configure esa <i>number</i> vm <i>number</i>
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

isa [*isa-id*] *string*

Synopsis	Add a list entry for isa
Context	configure isa tunnel-group <i>number</i> multi-active isa <i>string</i>
Tree	isa
Notes	The following elements are part of a choice: esa , isa , or member-pool .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[isa-id] *string*

Synopsis	ISA ID associated with the tunnel member pool
Context	configure isa tunnel-group <i>number</i> multi-active isa <i>string</i>
Tree	isa
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

member-pool *reference*

Synopsis	Tunnel-member pool name
Context	configure isa tunnel-group <i>number</i> multi-active member-pool <i>reference</i>
Tree	member-pool
Reference	configure isa tunnel-member-pool <i>string</i>
Notes	The following elements are part of a choice: esa , isa , or member-pool .
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *string*

Synopsis	Primary ISA IPsec module assigned for the tunnel group
Context	configure isa tunnel-group <i>number</i> primary <i>string</i>
Tree	primary
Notes	The following elements are part of a choice: multi-active or (backup and primary).
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassemble

Synopsis Enter the **reassemble** context
Context **configure isa tunnel-group number reassemble**
Tree [reassemble](#)
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-wait-time *number*

Synopsis Maximum time to receive fragments for packet reassembly
Context **configure isa tunnel-group number reassemble max-wait-time number**
Tree [max-wait-time](#)
Range 1 to 5000
Units milliseconds
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

stats-collection

Synopsis Enter the **stats-collection** context
Context **configure isa tunnel-group number stats-collection**
Tree [stats-collection](#)
Description Commands in this context configure the ISA statistics collection.
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-dp-cpu-usage *boolean*

Synopsis Collect statistics used to derive ISA DP CPU usage
Context **configure isa tunnel-group number stats-collection isa-dp-cpu-usage boolean**
Tree [isa-dp-cpu-usage](#)
Description When configured to **true**, this command collects statistics used to derive ISA CPU DP usage and impacts the ISA performance.

	When configured to false , statistics are not collected.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

strict-esp-sequence-number-ordering *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict ESP sequence number ordering
Context	configure <i>isa</i> tunnel-group <i>number</i> strict-esp-sequence-number-ordering <i>boolean</i>
Tree	strict-esp-sequence-number-ordering
Description	When configured to true , the router enables strict ESP sequence number ordering. When ESP sequence number ordering is enabled, the outbound ESP sequence number of a CHILD_SA must be in the same order as when clear packets are received by the same CHILD_SA.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

tunnel-member-pool [*name*] *string*

Synopsis	Enter the tunnel-member-pool list instance
Context	configure <i>isa</i> tunnel-member-pool <i>string</i>
Tree	tunnel-member-pool
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	ISA tunnel-member pool name
Context	configure <i>isa</i> tunnel-member-pool <i>string</i>
Tree	tunnel-member-pool
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure isa tunnel-member-pool <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [[esa-id](#)] *reference* [vm](#) *reference*

Synopsis	Add a list entry for esa
Context	configure isa tunnel-member-pool <i>string</i> esa <i>reference</i> vm <i>reference</i>
Tree	esa
Description	Commands in this context add specified ESA-VMs to the pool.
Max. Instances	16
Notes	The following elements are part of a choice: esa or isa .
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[esa-id] *reference*

Synopsis	ESA ID
Context	configure isa tunnel-member-pool <i>string</i> esa <i>reference</i> vm <i>reference</i>
Tree	esa
Reference	configure esa <i>number</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm reference

Synopsis	ESM-VM ID
Context	configure isa tunnel-member-pool <i>string</i> esa reference vm reference
Tree	esa
Reference	configure esa number vm number
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

isa [isa-id] string

Synopsis	Add a list entry for isa
Context	configure isa tunnel-member-pool <i>string</i> isa string
Tree	isa
Max. Instances	16
Notes	The following elements are part of a choice: esa or isa .
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[isa-id] string

Synopsis	ISA ID associated with the tunnel member pool
Context	configure isa tunnel-member-pool <i>string</i> isa string
Tree	isa
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

video-group [video-group-id] number

Synopsis	Enter the video-group list instance
Context	configure isa video-group <i>number</i>
Tree	video-group

Max. Instances	4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[video-group-id] *number*

Synopsis	Video group identifier
Context	configure isa video-group <i>number</i>
Tree	video-group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

ad-insert *boolean*

WARNING:

This element is deprecated and will be removed in a future release.

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable the ad insert server for the ISA video group
Context	configure isa video-group <i>number ad-insert</i> <i>boolean</i>
Tree	ad-insert
Default	false
Introduced	16.0.R1
Deprecated	22.10.R3
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

admin-state *keyword*

Synopsis	Administrative state of the video group
Context	configure isa video-group <i>number admin-state keyword</i>

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-iom-limit *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of WLAN-GW IOMs used as active IOMs
Context	configure <i>isa wlan-gw-group number active-iom-limit number</i>
Tree	active-iom-limit
Range	1 to 7
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-mda-limit *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of ISA MDAs in active use by the group
Context	configure <i>isa wlan-gw-group number active-mda-limit number</i>
Tree	active-mda-limit
Range	1 to 14
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the WLAN Gateway group
Context	configure isa wlan-gw-group number admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure isa wlan-gw-group number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

distributed-sub-mgmt

Synopsis	Enter the distributed-sub-mgmt context
Context	configure isa wlan-gw-group number distributed-sub-mgmt
Tree	distributed-sub-mgmt
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-aa-group *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA AA group for WLAN-GW DSM subscribers
Context	configure isa wlan-gw-group number distributed-sub-mgmt isa-aa-group reference
Tree	isa-aa-group
Reference	configure isa application-assurance-group number

Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-aa-oversubscription-factor *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of WLAN GW ISAs that a single ISA can serve
Context	configure <i>isa wlan-gw-group number distributed-sub-mgmt isa-aa-oversubscription-factor number</i>
Tree	isa-aa-oversubscription-factor
Range	1 to 10
Default	1
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

esa [[esa-id](#)] *reference vm reference*

Synopsis	Add a list entry for esa
Context	configure <i>isa wlan-gw-group number esa reference vm reference</i>
Tree	esa
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

[esa-id] *reference*

Synopsis	ESA ID
Context	configure <i>isa wlan-gw-group number esa reference vm reference</i>
Tree	esa
Reference	configure <i>esa number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

vm reference

Synopsis	VM ID
Context	configure isa wlan-gw-group <i>number</i> esa reference <i>vm reference</i>
Tree	esa
Reference	configure esa <i>number</i> <i>vm number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

iom [slot-number] reference

Synopsis	Add a list entry for iom
Context	configure isa wlan-gw-group <i>number</i> iom reference
Tree	iom
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[slot-number] reference

Synopsis	IOM slot to use in the WLAN-GW group
Context	configure isa wlan-gw-group <i>number</i> iom reference
Tree	iom
Reference	configure card <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mda [mda-id] string

Synopsis	Add a list entry for mda
Context	configure isa wlan-gw-group <i>number</i> mda string
Tree	mda
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s

[mda-id] *string*

Synopsis MDA slot value
 Context **configure** *isa wlan-gw-group number mda string*
 Tree [mda](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s

nat

Synopsis Enter the **nat** context
 Context **configure** *isa wlan-gw-group number nat*
 Tree [nat](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis Enter the **log** context
 Context **configure** *isa wlan-gw-group number nat log*
 Tree [log](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-events *boolean*

Synopsis Suppress LSN events when RADIUS accounting is enabled
 Context **configure** *isa wlan-gw-group number nat log suppress-lsn-events boolean*
 Tree [suppress-lsn-events](#)
 Default true
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification
Context	configure <i>isa wlan-gw-group number nat log suppress-lsn-sub-blocks-free boolean</i>
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lsn *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use Large Scale NAT
Context	configure <i>isa wlan-gw-group number nat lsn boolean</i>
Tree	lsn
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy for ISA group
Context	configure <i>isa wlan-gw-group number nat radius-accounting-policy reference</i>
Tree	radius-accounting-policy
Reference	configure <i>aaa radius isa-policy string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the session-limits context
Context	configure <i>isa wlan-gw-group number nat session-limits</i>
Tree	session-limits

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis Number of sessions reserved for prioritized sessions
 Context **configure isa wlan-gw-group** *number nat session-limits reserved number*
 Tree [reserved](#)
 Range 1 to 6291456
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp-mappings *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Maximum number of UPnP mappings per member
 Context **configure isa wlan-gw-group** *number nat session-limits upnp-mappings number*
 Tree [upnp-mappings](#)
 Description This command specifies the maximum number of Universal Plug and Play (UPnP) mappings per member.
 Range 1 to 524288
 Default 524288
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context
 Context **configure isa wlan-gw-group** *number nat session-limits watermarks*
 Tree [watermarks](#)
 Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis Session limit high watermark for each MDA in the group

Context **configure** *isa wlan-gw-group number nat session-limits watermarks high number*

Tree [high](#)

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis Session limit low watermark for each MDA in the group

Context **configure** *isa wlan-gw-group number nat session-limits watermarks low number*

Tree [low](#)

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Port policy used to configure ports for the ISA group

Context **configure** *isa wlan-gw-group number port-policy reference*

Tree [port-policy](#)

Reference **configure** *port-policy string*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundancy *keyword*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Hardware unit subject to redundancy
 Context **configure** *isa wlan-gw-group number redundancy keyword*
 Tree [redundancy](#)
 Options iom, mda
 Default iom
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scaling-profile *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis ISA scaling profile identifier
 Context **configure** *isa wlan-gw-group number scaling-profile keyword*
 Tree [scaling-profile](#)
 Options profile1, profile2, profile3
 Default profile1
 Introduced 20.5.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s

tunnel-port-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel port policy for per-tunnel QoS processing
Context	configure isa wlan-gw-group <i>number</i> tunnel-port-policy <i>reference</i>
Tree	tunnel-port-policy
Reference	configure port-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enter the watermarks context
Context	configure isa wlan-gw-group <i>number</i> watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mark [[entity](#)] *keyword*

Synopsis	Enter the mark list instance
Context	configure isa wlan-gw-group <i>number</i> watermarks mark <i>keyword</i>
Tree	mark
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[entity](#)] *keyword*

Synopsis	Entity to be monitored
Context	configure isa wlan-gw-group <i>number</i> watermarks mark <i>keyword</i>
Tree	mark
Options	user-equipment, bridge-domain, radius-proxy-client
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark for the WLAN-GW group
Context	configure isa wlan-gw-group <i>number</i> watermarks mark <i>keyword</i> high <i>number</i>
Tree	high
Range	1 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Low watermark for the WLAN-GW group
Context	configure isa wlan-gw-group <i>number</i> watermarks mark <i>keyword</i> low <i>number</i>
Tree	low
Range	0 to 99
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.21.1 lag command descriptions

lag [*lag-name*] *string*

Synopsis	Enter the lag list instance
Context	configure lag <i>string</i>
Tree	lag
Introduced	16.0.R1
Platforms	All

[lag-name] *string*

Synopsis	LAG name
Context	configure lag <i>string</i>
Tree	lag
String Length	1 to 27
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

access

Synopsis	Enter the access context
Context	configure lag <i>string</i> access
Tree	access
Introduced	16.0.R1
Platforms	All

adapt-qos

Synopsis	Enter the adapt-qos context
Context	configure lag <i>string</i> access adapt-qos
Tree	adapt-qos
Introduced	16.0.R1

Platforms All

include-egr-hash-cfg *boolean*

Synopsis Factor egress hashing into buffer and rate distribution
 Context **configure lag** *string* [access adapt-qos include-egr-hash-cfg](#) *boolean*
 Tree [include-egr-hash-cfg](#)
 Default false
 Introduced 16.0.R1
 Platforms All

mode *keyword*

Synopsis QoS adaptation mode
 Context **configure lag** *string* [access adapt-qos mode](#) *keyword*
 Tree [mode](#)
 Options link, distribute, port-fair
 Introduced 16.0.R1
 Platforms All

bandwidth *number*

Synopsis Administrative bandwidth applied to this LAG
 Context **configure lag** *string* [access bandwidth](#) *number*
 Tree [bandwidth](#)
 Range 1 to 6400000000
 Units bps
 Introduced 16.0.R1
 Platforms All

booking-factor *number*

Synopsis Booking factor against the administrative bandwidth
 Context **configure lag** *string* [access booking-factor](#) *number*
 Tree [booking-factor](#)

Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

per-fp-egr-queuing *boolean*

Synopsis	Per FP egress queuing
Context	configure lag <i>string</i> access per-fp-egr-queuing <i>boolean</i>
Tree	per-fp-egr-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-ing-queuing *boolean*

Synopsis	Enable ingress queuing per forwarding port
Context	configure lag <i>string</i> access per-fp-ing-queuing <i>boolean</i>
Tree	per-fp-ing-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-sap-instance *boolean*

Synopsis	SAP instance allocation on a LAG
Context	configure lag <i>string</i> access per-fp-sap-instance <i>boolean</i>
Tree	per-fp-sap-instance
Default	false
Introduced	16.0.R1
Platforms	All

adaptive-load-balancing

Synopsis	Enable the adaptive-load-balancing context
----------	---

Context	configure lag string adaptive-load-balancing
Tree	adaptive-load-balancing
Introduced	20.10.R1
Platforms	All

bandwidth-threshold *number*

Synopsis	Minimum bandwidth for adaptive load balancing
Context	configure lag string adaptive-load-balancing bandwidth-threshold <i>number</i>
Tree	bandwidth-threshold
Range	0 to 100
Units	percent
Introduced	22.10.R1
Platforms	All

interval *number*

Synopsis	The statistics pooling interval for the LAG ports
Context	configure lag string adaptive-load-balancing interval <i>number</i>
Tree	interval
Range	15 30 60 120
Units	seconds
Default	30
Introduced	21.5.R1
Platforms	All

tolerance *number*

Synopsis	Threshold that triggers link utilization optimization
Context	configure lag string adaptive-load-balancing tolerance <i>number</i>
Tree	tolerance
Description	This command configures the threshold value that is based on the difference between the most-loaded and least-loaded links in a LAG. When the threshold value is exceeded, the adaptive load balancing operation attempts to optimize traffic distribution between LAG links.
Range	1 to 100

Units	percent
Default	20
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LAG
Context	configure lag <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure lag <i>string</i> bfd-liveness
Tree	bfd-liveness
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the ipv4 context
Context	configure lag <i>string</i> bfd-liveness ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	configure lag <i>string</i> bfd-liveness ipv4 admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	configure lag <i>string</i> bfd-liveness ipv4 bfd-on-distributing-only <i>boolean</i>
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *string*

Synopsis	BFD source address
Context	configure lag <i>string</i> bfd-liveness ipv4 local-ip-address <i>string</i>
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

max-admin-down-time (*number* | *keyword*)

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	configure lag <i>string</i> bfd-liveness ipv4 max-admin-down-time (<i>number</i> <i>keyword</i>)
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time (*number* | *keyword*)

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	configure lag <i>string bfd-liveness ipv4 max-setup-time</i> (<i>number</i> <i>keyword</i>)
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	configure lag <i>string bfd-liveness ipv4 multiplier</i> <i>number</i>
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	configure lag <i>string bfd-liveness ipv4 receive-interval</i> <i>number</i>
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *string*

Synopsis	BFD destination address
Context	configure lag <i>string</i> bfd-liveness ipv4 remote-ip-address <i>string</i>
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	configure lag <i>string</i> bfd-liveness ipv4 transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	configure lag <i>string</i> bfd-liveness ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	configure lag <i>string</i> bfd-liveness ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	configure lag <i>string</i> bfd-liveness ipv6 bfd-on-distributing-only <i>boolean</i>
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *string*

Synopsis	BFD source address
Context	configure lag <i>string</i> bfd-liveness ipv6 local-ip-address <i>string</i>
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

max-admin-down-time (*number* | *keyword*)

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	configure lag <i>string</i> bfd-liveness ipv6 max-admin-down-time (<i>number</i> <i>keyword</i>)
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time (*number* | *keyword*)

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	configure lag <i>string</i> bfd-liveness ipv6 max-setup-time (<i>number</i> <i>keyword</i>)
Tree	max-setup-time
Range	0 to 60000

Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	configure lag <i>string</i> bfd-liveness ipv6 multiplier <i>number</i>
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	configure lag <i>string</i> bfd-liveness ipv6 receive-interval <i>number</i>
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *string*

Synopsis	BFD destination address
Context	configure lag <i>string</i> bfd-liveness ipv6 remote-ip-address <i>string</i>
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	configure lag <i>string</i> bfd-liveness ipv6 transmit-interval <i>number</i>
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

soft-reset-extension *boolean*

Synopsis	Extend BFD timers during soft reset
Context	configure lag <i>string</i> bfd-liveness soft-reset-extension <i>boolean</i>
Tree	soft-reset-extension
Default	true
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure lag <i>string</i> description <i>string</i>

Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interface-support <i>boolean</i>

Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm boolean

Synopsis Generate CCM messages

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean**

Tree **ccm**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority number

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number**

Tree **ccm-ltm-priority**

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size number

Synopsis Number of octets of padding to insert in CCM packets

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number**

Tree **ccm-padding-size**

Description This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range 3 to 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore *keyword*

Synopsis TLV to ignore on reception

Context **configure lag** *string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-tlv-ignore keyword*

Tree [ccm-tlv-ignore](#)

Description This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine.

When unconfigured, the MEP processes all the recognized TLVs.

Options interface-status, port-status

Max. Instances 2

Introduced 16.0.R6

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis Collect statistics for loss measurement message tests

Context **configure lag** *string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-stats boolean*

Tree [collect-lmm-stats](#)

Description When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis Enable the **csf** context

Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number**

Tree [bit-error-threshold](#)

Range 0 to 11840

Units bit errors

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis Enter the **test-pattern** context

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern**

Tree [test-pattern](#)

Description Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis Generate a CRC checksum

Context **configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean**

Tree [crc-tlv](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> facility-fault <i>boolean</i>
Tree	facility-fault
Description	When configured to true , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to false , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure lag string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean

Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed tx-eth-ed <i>boolean</i>
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	<p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure lag <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
----------	------------------------

Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan (*number* | *keyword*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outer VLAN ID of the tunnel
Context	configure lag <i>string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number vlan (number keyword)</i>
Tree	vlan
Range	1 to 4094
Options	none
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hash-weight-threshold

Synopsis	Enter the hash-weight-threshold context
Context	configure lag string hash-weight-threshold
Tree	hash-weight-threshold
Introduced	19.10.R1
Platforms	All

action keyword

Synopsis	Action when the sum of the hash weight is not exceeded
Context	configure lag string hash-weight-threshold action keyword
Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	19.10.R1
Platforms	All

cost number

Synopsis	Static cost of the LAG
Context	configure lag string hash-weight-threshold cost number
Tree	cost
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

value number

Synopsis	Sum of the hash weight values of all active LAG ports
Context	configure lag string hash-weight-threshold value number
Tree	value
Range	1 to 6400000
Introduced	19.10.R1
Platforms	All

hold-time-down *number*

Synopsis	Delay time for reporting the LAG is down
Context	configure lag <i>string</i> hold-time-down <i>number</i>
Tree	hold-time-down
Range	1 to 2000
Units	deciseconds
Introduced	16.0.R1
Platforms	All

lacp

Synopsis	Enable the lacp context
Context	configure lag <i>string</i> lacp
Tree	lacp
Introduced	16.0.R1
Platforms	All

administrative-key *number*

Synopsis	Key to identify the channel group on each LACP port
Context	configure lag <i>string</i> lacp administrative-key <i>number</i>
Tree	administrative-key
Description	<p>This command configures the administrative key that identifies the channel group on each port configured to use LACP.</p> <p>In an MC-LAG configuration, both redundant nodes must be configured with the same key values. In any other case, the key is only locally significant.</p>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	Mode in which LACP operates
----------	-----------------------------

Context	configure lag string lacp mode keyword
Tree	mode
Options	passive, active
Default	passive
Introduced	16.0.R1

system-priority number

Synopsis	System priority value
Context	configure lag string lacp system-priority number
Tree	system-priority
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

lacp-mux-control keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MUX machine control for LACP LAG in active/passive mode
Context	configure lag string lacp-mux-control keyword
Tree	lacp-mux-control
Options	coupled, independent
Default	coupled

Introduced 16.0.R1
Platforms All

lacp-xmit-interval *keyword*

Synopsis Time for periodic transmission
Context **configure lag** *string lacp-xmit-interval keyword*
Tree [lacp-xmit-interval](#)
Options slow, fast
Default fast
Introduced 16.0.R1
Platforms All

lacp-xmit-stdby *boolean*

Synopsis Allow LACP message transmission on standby links
Context **configure lag** *string lacp-xmit-stdby boolean*
Tree [lacp-xmit-stdby](#)
Default true
Introduced 16.0.R1
Platforms All

link-map-profile [[link-map-profile-id](#)] *number*

Synopsis Enter the **link-map-profile** list instance
Context **configure lag** *string link-map-profile number*
Tree [link-map-profile](#)
Introduced 16.0.R1
Platforms All

[link-map-profile-id] *number*

Synopsis Link map profile to control LAG ports
Context **configure lag** *string link-map-profile number*
Tree [link-map-profile](#)

Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure lag <i>string link-map-profile number description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

failure-mode *keyword*

Synopsis	Failure mode of LAG link profile
Context	configure lag <i>string link-map-profile number failure-mode keyword</i>
Tree	failure-mode
Options	per-link-hash, discard
Default	per-link-hash
Introduced	16.0.R1
Platforms	All

link [[port-id](#)] *reference*

Synopsis	Enter the link list instance
Context	configure lag <i>string link-map-profile number link reference</i>
Tree	link
Introduced	16.0.R1
Platforms	All

[port-id] *reference*

Synopsis	Port associated with the link map profile
----------	---

Context	configure lag <i>string</i> link-map-profile <i>number</i> link <i>reference</i>
Tree	link
Reference	configure lag <i>string</i> port <i>reference</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

port-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of the associated port for this entry
Context	configure lag <i>string</i> link-map-profile <i>number</i> link <i>reference</i> port-type <i>keyword</i>
Tree	port-type
Options	primary, secondary
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mac-address *string*

Synopsis	MAC address of the LAG
Context	configure lag <i>string</i> mac-address <i>string</i>
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

max-ports *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ports allowed in the LAG
Context	configure lag <i>string</i> max-ports <i>number</i>
Tree	max-ports
Description	This command configures the maximum number of ports allowed in the LAG. This command must be configured to 64 when the LAG name is a numeric identifier in the range of 1 to 64. If the LAG name is a numeric identifier in the range of 65 to 800, this command must be configured to 32.
Range	32 64
Introduced	21.2.R1
Platforms	All

mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operation mode of the LAG
Context	configure lag <i>string</i> mode <i>keyword</i>
Tree	mode
Options	access, network, hybrid
Default	network
Introduced	16.0.R1
Platforms	All

monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	configure lag <i>string</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>string</i>
Introduced	19.5.R1
Platforms	All

per-link-hash

Synopsis	Enable the per-link-hash context
Context	configure lag string per-link-hash
Tree	per-link-hash
Introduced	16.0.R1
Platforms	All

weighted

Synopsis	Enable the weighted context
Context	configure lag string per-link-hash weighted
Tree	weighted
Introduced	16.0.R1
Platforms	All

auto-rebalance *boolean*

Synopsis	Auto-rebalance SAPs, users, or interfaces for new links
Context	configure lag string per-link-hash weighted auto-rebalance <i>boolean</i>
Tree	auto-rebalance
Default	false
Introduced	16.0.R1
Platforms	All

subscriber-hash-mode *keyword*

Synopsis	Subscriber traffic load balance over LAG member links
Context	configure lag string per-link-hash weighted subscriber-hash-mode <i>keyword</i>
Tree	subscriber-hash-mode
Description	<p>This command configures weighted subscriber traffic to be load balanced over LAG member links. Traffic hashing can be performed based on SAPs or Vports.</p> <p>SAP-based hashing supports weights configured at the subscriber level in the subscriber profile. The SAP hashing mode supports only SAP to subscriber (1:1) deployment models.</p>

Vport-based load balancing supports SAP to subscriber (1:1) and SAP to service (N:1) deployment models.

Options	sap, vport
Default	sap
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port [[port-id](#)] *reference*

Synopsis	Enter the port list instance
Context	configure lag <i>string</i> port <i>reference</i>
Tree	port
Introduced	16.0.R1
Platforms	All

[port-id] *reference*

Synopsis	Identifier to uniquely identify the port in the LAG
Context	configure lag <i>string</i> port <i>reference</i>
Tree	port
Reference	configure port <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

hash-weight (*number* | *keyword*)

Synopsis	Flow hashing distribution between LAG ports
Context	configure lag <i>string</i> port <i>reference</i> hash-weight (<i>number</i> <i>keyword</i>)
Tree	hash-weight
Range	1 to 100000
Options	port-speed
Introduced	19.5.R1
Platforms	All

priority number

Synopsis	Priority of the port in the LAG
Context	configure lag string port reference priority number
Tree	priority
Range	1 to 65535
Default	32768
Introduced	16.0.R1
Platforms	All

sub-group (number | keyword)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subgroup of the port in the LAG
Context	configure lag string port reference sub-group (number keyword)
Tree	sub-group
Range	1 to 8
Options	auto-iom, auto-mds
Default	1
Introduced	16.0.R1
Platforms	All

port-threshold

Synopsis	Enter the port-threshold context
Context	configure lag string port-threshold
Tree	port-threshold
Introduced	16.0.R1
Platforms	All

action keyword

Synopsis	Action when the active links are at or below threshold
Context	configure lag string port-threshold action keyword

Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	16.0.R1
Platforms	All

cost *number*

Synopsis	Static cost of the LAG
Context	configure lag <i>string</i> port-threshold cost <i>number</i>
Tree	cost
Range	1 to 16777215
Introduced	16.0.R3
Platforms	All

value *number*

Synopsis	Active link threshold at which action is taken
Context	configure lag <i>string</i> port-threshold value <i>number</i>
Tree	value
Range	0 to 63
Introduced	16.0.R1
Platforms	All

port-type *keyword*

Synopsis	Port type of the LAG
Context	configure lag <i>string</i> port-type <i>keyword</i>
Tree	port-type
Options	standard, hs
Default	standard
Introduced	16.0.R1
Platforms	All

port-weight-speed *number***WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Speed corresponding to a port weight unit
Context	configure lag <i>string</i> port-weight-speed <i>number</i>
Tree	port-weight-speed
Range	1 10
Units	gigabps
Introduced	16.0.R1
Deprecated	22.10.R1
Platforms	All

selection-criteria

Synopsis	Enter the selection-criteria context
Context	configure lag <i>string</i> selection-criteria
Tree	selection-criteria
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	Criteria to select the active subgroup
Context	configure lag <i>string</i> selection-criteria mode <i>keyword</i>
Tree	mode
Options	highest-count, highest-weight, best-port
Default	highest-count
Introduced	16.0.R1
Platforms	All

slave-to-partner *boolean*

Synopsis	Use slave-to-partner for selection criteria
Context	configure lag <i>string</i> selection-criteria slave-to-partner <i>boolean</i>

Tree	slave-to-partner
Default	false
Introduced	16.0.R1
Platforms	All

subgroup-hold-time (*number* | *keyword*)

Synopsis	Delay time when switching to a new active subgroup
Context	configure lag <i>string</i> selection-criteria subgroup-hold-time (<i>number</i> <i>keyword</i>)
Tree	subgroup-hold-time
Range	0 to 2000
Units	deciseconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

standby-signaling *keyword*

Synopsis	Way of signaling a member port to the remote side
Context	configure lag <i>string</i> standby-signaling <i>keyword</i>
Tree	standby-signaling
Options	lacp, power-off
Default	lacp
Introduced	16.0.R1
Platforms	All

weight-threshold

WARNING:

This element is deprecated and will be removed in a future release.

Synopsis	Enter the weight-threshold context

entry [*li-entry-id*] *number*

Synopsis	Enter the entry list instance
Context	li li-filter li-ip-filter <i>string</i> entry <i>number</i>
Tree	entry
Description	<p>Commands in this context configure an entry for the LI filter.</p> <p>Multiple entries can be created using unique entry ID numbers within the filter. An entry in an LI filter always has an implicit action of “forward”. LI filter entries can be used as LI source entries.</p> <p>The entry numbers for LI filters serve only as keys for managing the entries (deleting entries, and so on). The order of the LI filter entries is not guaranteed to match the entry numbers and the software may reorder entries. Operators must therefore use LI entries in such a way that their relative order is not important.</p> <p>Entries removed from the filter are immediately removed from all services or network ports where the associated filter is applied.</p>
Introduced	19.10.R1
Platforms	All

[li-entry-id] *number*

Synopsis	LI filter entry ID
Context	li li-filter li-ip-filter <i>string</i> entry <i>number</i>

Introduced 19.10.R1

Platforms All

li-ipv6-filter [[li-filter-name](#)] *string*

Synopsis Enter the **li-ipv6-filter** list instance

Context [li li-filter li-ipv6-filter](#) *string*

Tree [li-ipv6-filter](#)

Description Commands in this context create LI IPv6 filter lists, which can be used to create confidential IPv6 filter based LI source entries.

The LI IPv6 filter entries are merged into normal IPv6 filters configured with the **li li-filter associations** and **li li-filter reserved-block** commands. However, the LI IPv6 filter entries are visible only to users with LI permissions.

Introduced 19.10.R1

Platforms All

[li-filter-name] *string*

Synopsis LI filter name

Context [li li-filter li-ipv6-filter](#) *string*

Tree [li-ipv6-filter](#)

Description This command specifies the LI filter name. Filter names cannot start with an underscore character (for example, “_my-filter”) and cannot use the name “default”.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 19.10.R1

session-id *number*

Synopsis	Session ID of the traffic flow
Context	li li-source <i>string</i> li-ip-filter <i>reference</i> entry <i>reference</i> session-id <i>number</i>
Tree	session-id

Description This command configures the session ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This session ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs.

The session ID is only valid and used for mirror services that are configured with **ip-udp-shim** routable encap under the **configure mirror mirror-dest encap layer-3-encap header-type** command. For all types of LI source entries, when the mirror service is configured with **ip-udp-shim** routable encap, a session ID field (as part of the routable encap) is always present in the mirrored packets. If no session ID is configured for an LI source entry, the default value is inserted.

When a mirror service is configured with **ip-gre** routable encap under the header-type command, no session ID is inserted and none is specified against the LI source entries.

session-id *number*

Synopsis	Session ID of the traffic flow
Context	li li-source <i>string</i> li-ipv6-filter <i>reference</i> entry <i>reference</i> session-id <i>number</i>
Tree	session-id
Description	This command configures the session ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This session ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs.

The session ID is only valid and used for mirror services that are configured with **ip-udp-shim** routable encap under the **configure mirror mirror-dest encap layer-3-encap header-type** command. For all types of LI source entries, when the mirror service is configured with **ip-udp-shim** routable encap, a session ID field (as part of the routable encap) is always present in the mirrored packets. If no session ID is configured for an LI source entry, the default value is inserted.

When a mirror service is configured with **ip-gre** routable encap under the header-type command, no session ID is inserted and none is specified against the LI source entries.

Description When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.

Default false

Introduced 19.10.R1

Platforms All

intercept-id *number*

Synopsis Intercept ID of the traffic flow

Context [li](#) [li-source](#) *string* [sap](#) *string* [intercept-id](#) *number*

Tree [intercept-id](#)

Description This command configures the intercept ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs.

For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted.

When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.

Range 1 to 1073741823

Introduced 19.10.R1

Platforms All

netconf

Synopsis	Enable the netconf context
Context	li log log-id string destination netconf
Tree	netconf
Notes	The following elements are part of a choice: memory , netconf , or snmp .
Introduced	20.2.R1
Platforms	All

max-entries *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of events stored in the NETCONF log
Context	li log log-id string destination netconf max-entries number
Tree	max-entries
Description	This command configures the maximum number of events stored in the NETCONF log. If this setting needs to be modified, the log ID must be removed and re-created.
Range	50 to 1024
Default	100

Introduced	20.2.R1
Platforms	All

snmp

Synopsis	Enable the snmp context
Context	li log log-id string destination snmp
Tree	snmp
Notes	The following elements are part of a choice: memory , netconf , or snmp .
Introduced	19.10.R1
Platforms	All

max-entries *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this snmp log
Context	li log log-id string destination snmp max-entries number
Tree	max-entries
Range	50 to 1024
Default	100
Introduced	19.10.R1
Platforms	All

filter *string*

Synopsis	Event filter ID to associate with log ID configuration
Context	li log log-id string filter string
Tree	filter
String Length	1 to 64
Introduced	19.10.R1
Platforms	All

netconf-stream *string*

Synopsis	Destination NETCONF stream name
Context	li log log-id <i>string</i> netconf-stream <i>string</i>
Tree	netconf-stream
String Length	1 to 32
Introduced	20.2.R1
Platforms	All

source

Synopsis	Enter the source context
Context	li log log-id <i>string</i> source
Tree	source
Introduced	19.10.R1
Platforms	All

li *boolean*

Synopsis	Event stream for events configured for LI activities
Context	li log log-id <i>string</i> source li <i>boolean</i>
Tree	li
Default	false
Introduced	19.10.R1
Platforms	All

time-format *keyword*

Synopsis	Time zone to display date and time
Context	li log log-id <i>string</i> time-format <i>keyword</i>
Tree	time-format
Options	utc, local
Default	utc
Introduced	19.10.R1
Platforms	All

mirror-dest-reservation

Synopsis	Enter the mirror-dest-reservation context
Context	li mirror-dest-reservation
Tree	mirror-dest-reservation
Description	Commands in this context configure the attributes to reserve mirror destination resources.
Introduced	19.10.R1
Platforms	All

end number

Synopsis	Upper bound of the mirror destination ID
Context	li mirror-dest-reservation end number
Tree	end
Range	1 to 2147483647
Introduced	19.10.R1
Platforms	All

start number

Synopsis	Lower bound of the mirror destination ID
Context	li mirror-dest-reservation start number
Tree	start
Range	1 to 2147483647
Introduced	19.10.R1
Platforms	All

mirror-dest-template [[name](#)] *string*

Synopsis	Enter the mirror-dest-template list instance
Context	li mirror-dest-template string
Tree	mirror-dest-template
Max. Instances	8
Introduced	19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis Mirror destination template name
 Context [li mirror-dest-template](#) *string*
 Tree [mirror-dest-template](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

layer-3-encap

Synopsis Enter the **layer-3-encap** context
 Context [li mirror-dest-template](#) *string* [layer-3-encap](#)
 Tree [layer-3-encap](#)
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction-bit *boolean*

Synopsis Use highest bit in interception ID for flow direction
 Context [li mirror-dest-template](#) *string* [layer-3-encap](#) [direction-bit](#) *boolean*
 Tree [direction-bit](#)
 Default false
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis The header type of the layer 3 encapsulation.

Context	li mirror-dest-template <i>string</i> layer-3-encap encap-type <i>keyword</i>
Tree	encap-type
Options	ip-udp-shim, ip-gre
Default	ip-udp-shim
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-source *string*

Synopsis	Source IPv4 address for Layer 3 encapsulation
Context	li mirror-dest-template <i>string</i> layer-3-encap ip-source <i>string</i>
Tree	ip-source
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Virtual router instance to inject mirrored packets
Context	li mirror-dest-template <i>string</i> layer-3-encap router-instance <i>string</i>
Tree	router-instance
String Length	1 to 64
Default	Base
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	li mirror-dest-template <i>string</i> layer-3-encap udp
Tree	udp
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

destination number

Synopsis	Destination UDP port
Context	li mirror-dest-template <i>string layer-3-encap udp destination number</i>
Tree	destination
Range	1 to 65535
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source number

Synopsis	Source UDP port
Context	li mirror-dest-template <i>string layer-3-encap udp source number</i>
Tree	source
Range	1 to 65535
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encapsulation type supported by the mirror service
Context	li mirror-dest-template <i>string type keyword</i>
Tree	type
Options	ether, ip-only
Default	ether
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enter the nat context
Context	li nat
Tree	nat

Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

use-outside-ip-address *boolean*

Synopsis	Report outside IP address for L2-Aware NAT subscribers
Context	li nat use-outside-ip-address <i>boolean</i>
Tree	use-outside-ip-address
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the radius context
Context	li radius
Tree	radius
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-dest-template *reference*

Synopsis	RADIUS triggered mirror destination template
Context	li radius mirror-dest-template <i>reference</i>
Tree	mirror-dest-template
Reference	li mirror-dest-template <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

x-interfaces

Synopsis	Enter the x-interfaces context
Context	li x-interfaces
Tree	x-interfaces
Introduced	21.5.R1

Platforms 7750 SR-1, 7750 SR-7/12/12e

admin-state *keyword*

Synopsis Administrative state of the x-interfaces
Context [li x-interfaces admin-state keyword](#)
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 21.5.R1
Platforms 7750 SR-1, 7750 SR-7/12/12e

correlation-id

Synopsis Enter the **correlation-id** context
Context [li x-interfaces correlation-id](#)
Tree [correlation-id](#)
Introduced 21.5.R1
Platforms 7750 SR-1, 7750 SR-7/12/12e

ipoe *keyword*

Synopsis RADIUS accounting ID type for subscriber correlation
Context [li x-interfaces correlation-id ipoe keyword](#)
Tree [ipoe](#)
Options radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default radius-host-acct-id
Introduced 21.5.R1
Platforms 7750 SR-1, 7750 SR-7/12/12e

pppoe *keyword*

Synopsis RADIUS accounting ID type for subscriber correlation
Context [li x-interfaces correlation-id pppoe keyword](#)
Tree [pppoe](#)

Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ine-identifier *string*

Synopsis	Intercepting Network Element (INE) ID
Context	li x-interfaces ine-identifier <i>string</i>
Tree	ine-identifier
String Length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic [[name](#)] *string*

Synopsis	Enter the lic list instance
Context	li x-interfaces lic <i>string</i>
Tree	lic
Max. Instances	18
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[name] *string*

Synopsis	LIC name
Context	li x-interfaces lic <i>string</i>
Tree	lic
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

authentication

Synopsis	Enter the authentication context
Context	li x-interfaces lic string authentication
Tree	authentication
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

password *string*

Synopsis	Password for the X1 and X2 interfaces
Context	li x-interfaces lic string authentication password string
Tree	password
String Length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

private-ki *string*

Synopsis	Private Ki string for the X1 and X2 interfaces
Context	li x-interfaces lic string authentication private-ki string
Tree	private-ki
String Length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

sequence-group *string*

Synopsis	Sequence group for the X1 and X2 interfaces
Context	li x-interfaces lic string authentication sequence-group string
Tree	sequence-group
String Length	1 to 42
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

description string

Synopsis	Text description
Context	li x-interfaces lic string description string
Tree	description
String Length	1 to 80
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

identifier string

Synopsis	LIC ID
Context	li x-interfaces lic string identifier string
Tree	identifier
String Length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the ipv4 context
Context	li x-interfaces lic string ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LIC
Context	li x-interfaces lic string ipv4 ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

port number

Synopsis	TCP port associated with the LIC
Context	li x-interfaces lic <i>string port number</i>
Tree	port
Range	0 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

router-instance string

Synopsis	Virtual router instance used by the X-interfaces
Context	li x-interfaces lic <i>string router-instance string</i>
Tree	router-instance
String Length	0 to 64
Default	
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

user-db string

Synopsis	Location of the data-trigger host for the LIC
Context	li x-interfaces user-db <i>string</i>
Tree	user-db
String Length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x1

Synopsis	Enter the x1 context
Context	li x-interfaces x1
Tree	x1
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the ipv4 context
Context	li x-interfaces x1 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	X1 interface IP address
Context	li x-interfaces x1 ipv4 local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X1 interface
Context	li x-interfaces x1 lic-peer <i>reference</i>
Tree	lic-peer
Reference	li x-interfaces lic <i>string</i>
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-tcp-port *number*

Synopsis	Local TCP port used for the X1 interface
Context	li x-interfaces x1 local-tcp-port <i>number</i>
Tree	local-tcp-port
Range	1 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the timeouts context
Context	li x-interfaces x1 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

message-timeout *number*

Synopsis	Maximum time for the LIC to reply to an X1 message
Context	li x-interfaces x1 timeouts message-timeout <i>number</i>
Tree	message-timeout
Range	180 to 300
Units	seconds
Default	180
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x2

Synopsis	Enter the x2 context
Context	li x-interfaces x2
Tree	x2
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the ipv4 context
Context	li x-interfaces x2 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	X2 interface IP address
Context	li x-interfaces x2 ipv4 local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X2 interface
Context	li x-interfaces x2 lic-peer <i>reference</i>
Tree	lic-peer
Reference	li x-interfaces lic <i>string</i>
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the timeouts context
Context	li x-interfaces x2 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x2 timeouts keep-alive <i>number</i>
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request number

Synopsis	Tx2-normal timeout
Context	li x-interfaces x2 timeouts request number
Tree	request
Range	5 to 30
Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x3

Synopsis	Enter the x3 context
Context	li x-interfaces x3
Tree	x3
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

alarms

Synopsis	Enter the alarms context
Context	li x-interfaces x3 alarms
Tree	alarms
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

cpu-alarm

Synopsis	Enter the cpu-alarm context
Context	li x-interfaces x3 alarms cpu-alarm
Tree	cpu-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold value of the CPU usage alarm
Context	li x-interfaces x3 alarms cpu-alarm high-threshold <i>number</i>
Tree	high-threshold
Range	1 to 100
Units	percent
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

low-threshold *number*

Synopsis	Low threshold value of the CPU usage alarm
Context	li x-interfaces x3 alarms cpu-alarm low-threshold <i>number</i>
Tree	low-threshold
Range	0 to 99
Units	percent
Default	0
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

memory-alarm

Synopsis	Enter the memory-alarm context
Context	li x-interfaces x3 alarms memory-alarm
Tree	memory-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold of the packet buffer memory usage alarm
Context	li x-interfaces x3 alarms memory-alarm high-threshold <i>number</i>
Tree	high-threshold
Range	1 to 100

Units	percent
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

low-threshold *number*

Synopsis	Low threshold of the packet buffer memory usage alarm
Context	li x-interfaces x3 alarms memory-alarm low-threshold <i>number</i>
Tree	low-threshold
Range	0 to 99
Units	percent
Default	0
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

throughput-alarm

Synopsis	Enter the throughput-alarm context
Context	li x-interfaces x3 alarms throughput-alarm
Tree	throughput-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold value of the throughput alarm
Context	li x-interfaces x3 alarms throughput-alarm high-threshold <i>number</i>
Tree	high-threshold
Range	1 to 4294967295
Units	megabps
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

low-threshold *number*

Synopsis	Low threshold value of the throughput alarm
Context	li x-interfaces x3 alarms throughput-alarm low-threshold <i>number</i>
Tree	low-threshold
Range	1 to 4294967295
Units	megabps
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the ipv4 context
Context	li x-interfaces x3 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address-range

Synopsis	Enter the local-address-range context
Context	li x-interfaces x3 ipv4 local-address-range
Tree	local-address-range
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

end *string*

Synopsis	Upper bound of the range
Context	li x-interfaces x3 ipv4 local-address-range end <i>string</i>
Tree	end
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

start string

Synopsis	Lower bound of the range
Context	li x-interfaces x3 ipv4 local-address-range start string
Tree	start
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

li-group number

Synopsis	ISA group of the X3 interface
Context	li x-interfaces x3 li-group number
Tree	li-group
Range	1 to 4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peers [name] reference

Synopsis	Add a list entry for lic-peers
Context	li x-interfaces x3 lic-peers reference
Tree	lic-peers
Max. Instances	16
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[name] reference

Synopsis	Peer LIC for the X3 interface
Context	li x-interfaces x3 lic-peers reference
Tree	lic-peers
Reference	li x-interfaces lic string
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

session-limit *number*

Synopsis	Maximum number of X3 sessions initiated to the LIC
Context	li x-interfaces x3 session-limit <i>number</i>
Tree	session-limit
Range	1 to 32
Default	32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the timeouts context
Context	li x-interfaces x3 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x3 timeouts keep-alive <i>number</i>
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request *number*

Synopsis	Tx3-normal timeout
Context	li x-interfaces x3 timeouts request <i>number</i>
Tree	request
Range	5 to 30

Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

target-retry-wait *number*

Synopsis	Retry interval for target tunnel setup
Context	li x-interfaces x3 timeouts target-retry-wait <i>number</i>
Tree	target-retry-wait
Range	300 to 1200
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

3.23.1 log command descriptions

log

Synopsis	Enter the log context
Context	configure log
Tree	log
Introduced	16.0.R1
Platforms	All

accounting-policy [[policy-id](#)] *number*

Synopsis	Enter the accounting-policy list instance
Context	configure log accounting-policy <i>number</i>
Tree	accounting-policy
Introduced	16.0.R1
Platforms	All

[\[policy-id\]](#) *number*

Synopsis	Accounting policy unique ID
Context	configure log accounting-policy <i>number</i>
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	configure log accounting-policy <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	configure log accounting-policy <i>number</i> align <i>boolean</i>
Tree	align
Description	<p>When the align command is configured to true, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network.</p> <p>When the align command is configured to false, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.</p>
Default	false
Introduced	19.10.R1
Platforms	All

collection-interval *number*

Synopsis	Accounting collection interval
Context	configure log accounting-policy <i>number</i> collection-interval <i>number</i>
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	16.0.R1
Platforms	All

custom-record

Synopsis	Enter the custom-record context
Context	configure log accounting-policy <i>number</i> custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	All

aa-specific

Synopsis	Enter the aa-specific context
Context	configure log accounting-policy <i>number</i> custom-record aa-specific
Tree	aa-specific
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-attributes

Synopsis	Enter the aa-sub-attributes context
Context	configure log accounting-policy <i>number</i> custom-record aa-specific aa-sub-attributes
Tree	aa-sub-attributes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *boolean*

Synopsis	Include application profile to be exported
Context	configure log accounting-policy <i>number</i> custom-record aa-specific aa-sub-attributes app-profile <i>boolean</i>
Tree	app-profile
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-service-options *boolean*

Synopsis	Include application service options
Context	configure log accounting-policy number custom-record aa-specific aa-sub-attributes app-service-options <i>boolean</i>
Tree	app-service-options
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-counters

Synopsis	Enter the aa-sub-counters context
Context	configure log accounting-policy number custom-record aa-specific aa-sub-counters
Tree	aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

long-duration-flow-count *boolean*

Synopsis	Include the long duration flow count
Context	configure log accounting-policy number custom-record aa-specific aa-sub-counters long-duration-flow-count <i>boolean</i>
Tree	long-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

medium-duration-flow-count *boolean*

Synopsis	Include the medium duration flow
Context	configure log accounting-policy number custom-record aa-specific aa-sub-counters medium-duration-flow-count <i>boolean</i>
Tree	medium-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

short-duration-flow-count *boolean*

Synopsis	Include the short duration flow count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific aa-sub-counters short-duration-flow-count <i>boolean</i>
Tree	short-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flow-duration *boolean*

Synopsis	Include the total flow duration count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific aa-sub-counters total-flow-duration <i>boolean</i>
Tree	total-flow-duration
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flows-completed-count *boolean*

Synopsis	Include the total of completed flows count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific aa-sub-counters total-flows-completed-count <i>boolean</i>
Tree	total-flows-completed-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

from-aa-sub-counters

Synopsis	Enter the from-aa-sub-counters context
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters
Tree	from-aa-sub-counters

Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis Include the active flows
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [aa-specific](#) [from-aa-sub-counters](#) [flows-active-count](#) *boolean*
Tree [flows-active-count](#)
Default false
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis Include the admitted flows
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [aa-specific](#) [from-aa-sub-counters](#) [flows-admitted-count](#) *boolean*
Tree [flows-admitted-count](#)
Default false
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-denied-count *boolean*

Synopsis Include the denied flows
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [aa-specific](#) [from-aa-sub-counters](#) [flows-denied-count](#) *boolean*
Tree [flows-denied-count](#)
Default false
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forwarding-class *boolean*

Synopsis Include forwarding class

Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters forwarding-class <i>boolean</i>
Tree	forwarding-class
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-octet-count *boolean*

Synopsis	Include maximum throughput as measured in octet count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters max-throughput-octet-count <i>boolean</i>
Tree	max-throughput-octet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-packet-count *boolean*

Synopsis	Include maximum throughput as measured in packet count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters max-throughput-packet-count <i>boolean</i>
Tree	max-throughput-packet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-timestamp *boolean*

Synopsis	Include timestamp of the maximum throughput
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters max-throughput-timestamp <i>boolean</i>
Tree	max-throughput-timestamp
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-admitted-count *boolean*

Synopsis	Include the admitted octets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters octets-admitted-count <i>boolean</i>
Tree	octets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-denied-count *boolean*

Synopsis	Include the denied octets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters octets-denied-count <i>boolean</i>
Tree	octets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-admitted-count *boolean*

Synopsis	Include the admitted packets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters packets-admitted-count <i>boolean</i>
Tree	packets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-denied-count *boolean*

Synopsis	Include the denied packets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific from-aa-sub-counters packets-denied-count <i>boolean</i>
Tree	packets-denied-count

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-aa-sub-counters

Synopsis	Enter the to-aa-sub-counters context
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters
Tree	to-aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis	Include the active flows
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters flows-active-count <i>boolean</i>
Tree	flows-active-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis	Include the admitted flows
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters flows-admitted-count <i>boolean</i>
Tree	flows-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-denied-count *boolean*

Synopsis	Include the denied flows
----------	--------------------------

Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters flows-denied-count <i>boolean</i>
Tree	flows-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forwarding-class *boolean*

Synopsis	Include forwarding class
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters forwarding-class <i>boolean</i>
Tree	forwarding-class
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-octet-count *boolean*

Synopsis	Include maximum throughput as measured in octet count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters max-throughput-octet-count <i>boolean</i>
Tree	max-throughput-octet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-packet-count *boolean*

Synopsis	Include maximum throughput as measured in packet count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters max-throughput-packet-count <i>boolean</i>
Tree	max-throughput-packet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-timestamp *boolean*

Synopsis	Include timestamp of the maximum throughput
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters max-throughput-timestamp <i>boolean</i>
Tree	max-throughput-timestamp
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-admitted-count *boolean*

Synopsis	Include the admitted octets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters octets-admitted-count <i>boolean</i>
Tree	octets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-denied-count *boolean*

Synopsis	Include the denied octets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters octets-denied-count <i>boolean</i>
Tree	octets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-admitted-count *boolean*

Synopsis	Include the admitted packets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters packets-admitted-count <i>boolean</i>
Tree	packets-admitted-count

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-denied-count *boolean*

Synopsis	Include the denied packets count
Context	configure log accounting-policy <i>number</i> custom-record aa-specific to-aa-sub-counters packets-denied-count <i>boolean</i>
Tree	packets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer [*id*] *number*

Synopsis	Enter the policer list instance
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i>
Tree	policer
Introduced	19.10.R1
Platforms	All

[id] *number*

Synopsis	Policer ID
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

e-counters

Synopsis	Enter the e-counters context
----------	-------------------------------------

Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters
Tree	e-counters
Introduced	19.10.R1
Platforms	All

exceed-profile-octets-discarded-count *boolean*

Synopsis	Include the exceed profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-discarded-count <i>boolean</i>
Tree	exceed-profile-octets-discarded-count
Default	false
Introduced	19.10.R1
Platforms	All

exceed-profile-octets-forwarded-count *boolean*

Synopsis	Include the exceed profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-forwarded-count <i>boolean</i>
Tree	exceed-profile-octets-forwarded-count
Default	false
Introduced	19.10.R1
Platforms	All

exceed-profile-octets-offered-count *boolean*

Synopsis	Include the exceed profile octets offered count
Context	configure log accounting-policy <i>number</i> custom-record policer <i>number</i> e-counters exceed-profile-octets-offered-count <i>boolean</i>
Tree	exceed-profile-octets-offered-count

in-profile-octets-discarded-count *boolean*

Synopsis	Include the in-profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters in-profile-octets-discarded-count <i>boolean</i>
Tree	in-profile-octets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	All

in-profile-octets-forwarded-count *boolean*

Synopsis	Include the in-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters in-profile-octets-forwarded-count <i>boolean</i>
Tree	in-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	All

in-profile-packets-discarded-count *boolean*

Synopsis	Include the in-profile packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters in-profile-packets-discarded-count <i>boolean</i>
Tree	in-profile-packets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	All

in-profile-packets-forwarded-count *boolean*

Synopsis	Include the in-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters in-profile-packets-forwarded-count <i>boolean</i>
Tree	in-profile-packets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	All

out-profile-octets-discarded-count *boolean*

Synopsis	Include the out-profile octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-octets-discarded-count <i>boolean</i>
Tree	out-profile-octets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	All

out-profile-octets-forwarded-count *boolean*

Synopsis	Include the out-of-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-octets-forwarded-count <i>boolean</i>
Tree	out-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	All

out-profile-packets-discarded-count *boolean*

Synopsis	Include the out-profile packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-packets-discarded-count <i>boolean</i>
Tree	out-profile-packets-discarded-count

Default	false
Introduced	16.0.R1
Platforms	All

out-profile-packets-forwarded-count *boolean*

Synopsis	Include the out-of-profile packets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> e-counters out-profile-packets-forwarded-count <i>boolean</i>
Tree	out-profile-packets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	All

i-counters

Synopsis	Enter the i-counters context
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters
Tree	i-counters
Introduced	16.0.R1
Platforms	All

all-octets-offered-count *boolean*

Synopsis	Include the all octets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters all-octets-offered-count <i>boolean</i>
Tree	all-octets-offered-count
Default	false
Introduced	16.0.R1
Platforms	All

all-packets-offered-count *boolean*

Synopsis	Include all packets offered count
----------	-----------------------------------

Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters all-packets-offered-count <i>boolean</i>
Tree	all-packets-offered-count
Default	false
Introduced	16.0.R1
Platforms	All

high-octets-discarded-count *boolean*

Synopsis	Include the high octets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters high-octets-discarded-count <i>boolean</i>
Tree	high-octets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	All

high-octets-offered-count *boolean*

Synopsis	Include the high octets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters high-octets-offered-count <i>boolean</i>
Tree	high-octets-offered-count
Default	false
Introduced	16.0.R1
Platforms	All

high-packets-discarded-count *boolean*

Synopsis	Include the high packets discarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters high-packets-discarded-count <i>boolean</i>
Tree	high-packets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	All

high-packets-offered-count *boolean*

Synopsis	Include the high packets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters high-packets-offered-count <i>boolean</i>
Tree	high-packets-offered-count
Default	false
Introduced	16.0.R1
Platforms	All

in-profile-octets-forwarded-count *boolean*

Synopsis	Include the in-profile octets forwarded count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters in-profile-octets-forwarded-count <i>boolean</i>
Tree	in-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	All

in-profile-packets-forwarded-count *boolean*

Introduced	16.0.R1
Platforms	All

uncoloured-octets-offered-count *boolean*

Synopsis	Include the uncolored octets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters uncoloured-octets-offered-count <i>boolean</i>
Tree	uncoloured-octets-offered-count
Default	false
Introduced	16.0.R1
Platforms	All

uncoloured-packets-offered-count *boolean*

Synopsis	Include the uncolored packets offered count
Context	configure log accounting-policy <i>number</i> custom-record queue <i>number</i> i-counters uncoloured-packets-offered-count <i>boolean</i>
Tree	uncoloured-packets-offered-count
Default	false

Introduced 16.0.R1
Platforms All

ref-aa-specific-counter

Synopsis Enter the **ref-aa-specific-counter** context
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-aa-specific-counter](#)
Tree [ref-aa-specific-counter](#)
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any *boolean*

Synopsis Report a change to any counter
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-aa-specific-counter](#) [any](#) *boolean*
Tree [any](#)
Default false
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ref-policer

Synopsis Enter the **ref-policer** context
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-policer](#)
Tree [ref-policer](#)
Introduced 19.10.R1
Platforms All

all

Synopsis Apply significant change to counters for all policers
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-policer](#) [all](#)
Tree [all](#)
Notes The following elements are part of a choice: **all** or **id**.

Introduced 19.10.R1
Platforms All

e-counters

Synopsis Enter the **e-counters** context
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-policer](#) [e-counters](#)
Tree [e-counters](#)
Introduced 19.10.R1
Platforms All

exceed-profile-octets-discarded-count *boolean*

Synopsis Include the exceed profile octets discarded count
Context **configure** [log accounting-policy](#) *number* [custom-record](#) [ref-policer](#) [e-counters](#) [exceed-profile-octets-discarded-count](#) *boolean*
Tree [exceed-profile-octets-discarded-count](#)
Default false
Introduced 19.10.R1
Platforms All

exceed-profile-octets-forwarded-count *boolean*

Synopsis Include the exceed profile octets forwarded count

Synopsis	Accounting policy record type
Context	configure log accounting-policy <i>number</i> record <i>keyword</i>
Tree	record
Description	<p>This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the show log accounting-records command.</p> <p>To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command.</p> <p>When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command.</p> <p>Note: AA, video, and subscriber records are not applicable to the 7950 XRS.</p>
Options	<p>service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress, combined-mpls-lsp-egress, combined-ldp-lsp-egress, saa, video, aa-performance, complete-ethernet-port, extended-service-ingress-egress, complete-network-ing-egr, aa-partition, complete-pm, aa-admit-deny, network-interface-ingress-octets,</p>

network-interface-egress-octets, network-interface-ingress-packets, network-interface-egress-packets, combined-network-interface-ingress, combined-network-interface-egress, complete-network-interface-ing-egr, access-egress-octets, access-egress-packets, combined-access-egress, combined-network-egress, complete-service-activation-test, combined-mpls-srte-egress
