Synopsis	Enter the rate context
----------	-------------------------------

Context	configure service cpipe string sap string egress qos sap-egress overrides policer reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service cpipe string sap string egress qos sap-egress overrides policer reference rate cir (number keyword)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service cpipe string sap string egress qos sap-egress overrides policer reference rate pir (number keyword)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service cpipe string sap string egress qos sap-egress overrides policer reference stat-mode keyword

Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i>
Tree	queue
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[queue-id] *reference*

Synopsis	Policer unique ID
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i>
Tree	queue
Reference	configure qos sap-egress <i>string</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule
Tree	adaptation-rule
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number
Tree	avg-frame-overhead
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

burst-limit (number | keyword)

Synopsis	Explicit shaping burst size for the queue
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference burst-limit (number keyword)
Tree	burst-limit
Range	1 to 14000000

Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service cpipe string sap string egress qos sap-egress overrides queue <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service cpipe string sap string egress qos sap-egress overrides queue <i>reference</i> drop-tail
Tree	drop-tail
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low

Synopsis	Enter the low context
Context	configure service cpipe string sap string egress qos sap-egress overrides queue <i>reference</i> drop-tail low
Tree	low
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1 2 4 8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the hs-wred-queue context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue
Tree	hs-wred-queue
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

policy *reference*

Synopsis	Slope policy applied to the HSQ queue group queue
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue policy <i>reference</i>
Tree	policy
Reference	configure qos slope-policy <i>string</i>

Introduced 20.10.R1
 Platforms 7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis WRR weight to parent with the queue into the scheduler
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)
reference [hs-wrr-weight](#) *number*
 Tree [hs-wrr-weight](#)
 Range 1 to 127
 Default 1
 Introduced 20.10.R1
 Platforms 7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis MBS
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)
reference [mbs](#) (*number* | *keyword*)
 Tree [mbs](#)
 Range 0 to 1073741824
 Units bytes
 Options auto
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-queue-depth

Synopsis Enable the **monitor-queue-depth** context
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)
reference [monitor-queue-depth](#)
 Tree [monitor-queue-depth](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

parent

Synopsis	Enter the parent context
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference parent
Tree	parent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference parent cir-weight <i>number</i>

Tree	cir-weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

weight number

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference parent weight number
Tree	weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir decimal-number

Synopsis	CIR percent rate
Context	configure service cpipe string sap string egress qos sap-egress overrides queue reference percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the rate context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate pir (<i>number</i> <i>keyword</i>)

Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-egress <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy
Tree	scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enter the overrides context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

scheduler [[scheduler-name](#)] *string*

Synopsis	Enter the scheduler list instance
----------	--

Context	configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string
Tree	scheduler
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[scheduler-name] string

Synopsis	Scheduler name
Context	configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

parent

Synopsis	Enter the parent context
Context	configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent
Tree	parent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the rate context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> rate
Tree	rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000

Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Scheduler policy name
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

endpoint *reference*

Synopsis	Endpoint name
Context	configure service cpipe <i>string</i> sap <i>string</i> endpoint <i>reference</i>
Tree	endpoint
Reference	configure service cpipe <i>string</i> endpoint <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ingress

Synopsis	Enter the ingress context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress
Tree	ingress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the qos context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos
Tree	qos
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos policer-control-policy
Tree	policer-control-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enable the overrides context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos policer-control-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

root

Synopsis	Enter the root context
----------	-------------------------------

Context	configure service cpipe <i>string sap string ingress qos policer-control-policy overrides root</i>
Tree	root
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rate (*number | keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure service cpipe <i>string sap string ingress qos policer-control-policy overrides root max-rate</i> (<i>number keyword</i>)
Tree	max-rate
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure service cpipe <i>string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds</i>
Tree	priority-mbs-thresholds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

min-thresh-separation (*number | keyword*)

Synopsis	Minimum amount of separation buffer space
Context	configure service cpipe <i>string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation</i> (<i>number keyword</i>)
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

priority [[priority-level](#)] *number*

Synopsis Enter the **priority** list instance

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#)
[root](#) [priority-mbs-thresholds](#) [priority](#) *number*

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

[priority-level] *number*

Synopsis Priority level

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#)
[root](#) [priority-mbs-thresholds](#) [priority](#) *number*

Tree [priority](#)

Range 1 to 8

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs-contribution (*number* | *keyword*)

Synopsis Minimum amount of cumulative buffer space allowed

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#)
[root](#) [priority-mbs-thresholds](#) [priority](#) *number* [mbs-contribution](#) (*number* | *keyword*)

Tree [mbs-contribution](#)

Range 0 to 16777216

Units bytes

Options auto

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Policer control policy name
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos policer-control-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos policer-control-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

sap-ingress

Synopsis	Enter the sap-ingress context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress
Tree	sap-ingress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enter the overrides context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-criteria

Synopsis	Enter the ip-criteria context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides ip-criteria
Tree	ip-criteria
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

activate-entry-tag *number*

Synopsis	Tag ID activated for IPv4 criteria
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides ip-criteria activate-entry-tag <i>number</i>
Tree	activate-entry-tag
Range	1 to 255
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-criteria

Synopsis	Enter the ipv6-criteria context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides ipv6-criteria
Tree	ipv6-criteria
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

activate-entry-tag *number*

Synopsis	Tag ID activated for IPv6 criteria
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides ipv6-criteria activate-entry-tag <i>number</i>
Tree	activate-entry-tag
Range	1 to 255
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policer [[policer-id](#)] *reference*

Synopsis	Enter the policer list instance
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides policer <i>reference</i>
Tree	policer
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

[policer-id] reference

Synopsis	Policer unique ID
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference
Tree	policer
Reference	configure qos sap-ingress string policer number
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs (number | keyword)

Synopsis	CBS
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference cbs (number keyword)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs (number | keyword)

Synopsis	MBS
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference mbs (number keyword)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the rate context
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service cpipe string sap string ingress qos sap-ingress overrides policer reference rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides policer reference stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference
Tree	queue
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[queue-id] *reference*

Synopsis	Policer unique ID
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference
Tree	queue
Reference	configure qos sap-ingress <i>string</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference adaptation-rule

Tree	adaptation-rule
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs (number | keyword)

Synopsis	CBS
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference cbs (number keyword)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail
Tree	drop-tail
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low

Synopsis	Enter the low context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail low
Tree	low
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue <i>reference</i> drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824

Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

parent

Synopsis	Enter the parent context
Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference parent
Tree	parent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
----------	---

Context	configure service cpipe <i>string sap string ingress qos sap-ingress overrides queue reference parent cir-weight number</i>
Tree	cir-weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

weight number

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service cpipe <i>string sap string ingress qos sap-ingress overrides queue reference parent weight number</i>
Tree	weight
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service cpipe <i>string sap string ingress qos sap-ingress overrides queue reference percent-rate</i>
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir decimal-number

Synopsis	CIR percent rate
Context	configure service cpipe <i>string sap string ingress qos sap-ingress overrides queue reference percent-rate cir decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the rate context
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos sap-ingress overrides queue reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR rate
----------	----------

Context	configure service cpipe string sap string ingress qos sap-ingress overrides queue reference rate pir (<i>number keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Policy ID
Context	configure service cpipe string sap string ingress qos sap-ingress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-ingress string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queuing-type *keyword*

Synopsis	Queuing type
Context	configure service cpipe string sap string ingress qos sap-ingress queuing-type <i>keyword</i>
Tree	queuing-type
Options	shared, multipoint-shared
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service cpipe string sap string ingress qos scheduler-policy
Tree	scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enter the overrides context
Context	configure service cpipe string sap string ingress qos scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

scheduler [[scheduler-name](#)] *string*

Synopsis	Enter the scheduler list instance
Context	configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

parent

Synopsis Enter the **parent** context

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) [string](#) **parent**

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis Enter the **rate** context

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) [string](#) **rate**

Tree [rate](#)

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string rate cir</i> (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string rate pir</i> (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Scheduler policy name
Context	configure service cpipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy <i>policy-name reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lag

Synopsis	Enter the lag context
Context	configure service cpipe string sap string lag
Tree	lag
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multi-service-site *reference*

Synopsis	Multi service site name
Context	configure service cpipe string sap string multi-service-site reference
Tree	multi-service-site
Reference	configure service customer string multi-service-site string
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service-id *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure service cpipe string service-id number
Tree	service-id
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service-mtu *number*

Synopsis	MTU size
Context	configure service cpipe string service-mtu number
Tree	service-mtu
Range	1 to 9194

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

spoke-sdp [**sdp-bind-id**] *string*

Synopsis Enter the **spoke-sdp** list instance
 Context **configure** *service cpipe string spoke-sdp string*
 Tree *spoke-sdp*
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[sdp-bind-id] *string*

Synopsis SDP binding ID
 Context **configure** *service cpipe string spoke-sdp string*
 Tree *spoke-sdp*
 String Length 3 to 16
 Notes This element is part of a list key.
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis Administrative state of the SDP binding to the service
 Context **configure** *service cpipe string spoke-sdp string admin-state keyword*
 Tree *admin-state*
 Options enable, disable
 Default enable
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bandwidth (*number* | *keyword*)

Synopsis Bandwidth that is reserved for this SDP binding
 Context **configure** *service cpipe string spoke-sdp string bandwidth (number | keyword)*

Tree	bandwidth
Range	0 to 100000000
Units	kilobps
Options	max
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bfd

Synopsis	Enter the bfd context
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> bfd
Tree	bfd
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> bfd bfd-liveness
Tree	bfd-liveness
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

encap *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> bfd bfd-liveness encap <i>keyword</i>
Tree	encap
Options	ipv4
Default	ipv4
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bfd-template *reference*

Synopsis	BFD template associated with the SDP binding
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> bfd bfd-template <i>reference</i>
Tree	bfd-template
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context.
Reference	configure bfd bfd-template <i>string</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

control-word *boolean*

Synopsis	Use control word as part of packet encapsulation
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> control-word <i>boolean</i>
Tree	control-word
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

egress

Synopsis	Enter the egress context
Context	configure service cpipe <i>string</i> spoke-sdp <i>string</i> egress
Tree	egress
Introduced	20.10.R1

Tree [scheduler](#)

Introduced 16.0.R1

Platforms All

[scheduler-name] *string*

Synopsis Scheduler name

Context **configure service customer** *string* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Tree [scheduler](#)

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (**#**, **\$**, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String Length 1 to 32

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

Default	false
Introduced	16.0.R1
Platforms	All

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

mpls-fwd-policy boolean

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean
Tree	mpls-fwd-policy
Description	When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to false , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

rib-api boolean

Synopsis	Use RIB API gRPC service for next-hop resolution
----------	--

Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rib-api <i>boolean</i>
Tree	rib-api
Description	When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to false , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance. When configured to false , IS-IS tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	19.10.R1
Platforms	All

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
----------	---

Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	When configured to true , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route. When configured to false , SR policies are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	When configured to true , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID. When configured to false , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter udp <i>boolean</i>
Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1

Platforms All

weighted-ecmp *boolean*

Synopsis Allow weighted load balancing

Context **configure** *service* *epipe* *string* *bgp-evpn* *mpls* *number* *auto-bind-tunnel* **weighted-ecmp** *boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default false

Introduced 22.7.R1

Platforms All

control-word *boolean*

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable support for control word

Context **configure** *service* *epipe* *string* *bgp-evpn* *mpls* *number* **control-word** *boolean*

Tree [control-word](#)

Description When configured to **true**, the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.

Default false

Introduced 16.0.R1

Platforms All

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>default-route-tag</i> <i>string</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>dynamic-egress-label-limit</i> <i>boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	22.2.R1
Platforms	All

Context	configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Description	<p>This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.</p> <p>This command may be used in conjunction with the sap ingress vlan-translation command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.</p>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

oper-group *reference*

Synopsis	Operational group
Context	configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	<p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.</p>
Reference	configure service oper-group <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

resolution *keyword*

Synopsis	Resolution options for routes
Context	configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> resolution <i>keyword</i>
Tree	resolution

Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1

default-route-tag *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service epipe <i>string</i> bgp-evpn vxlan <i>number</i> default-route-tag <i>string</i>
Tree	default-route-tag

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the default-route-tag, then EVPN keeps tag A when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

ecmp number

Synopsis	Maximum ECMP routes information

Introduced	16.0.R1
Platforms	All

evi-three-byte-auto-rt boolean

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure <i>service epipe string bgp-evpn vxlan number</i> evi-three-byte-auto-rt boolean
Tree	evi-three-byte-auto-rt
Description	When configured to true , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).

Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	21.10.R1
Platforms	All

send-tunnel-encap *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send VXLAN value in encapsulation extended community
Context	configure <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>vxlan</i> <i>number</i> <i>send-tunnel-encap</i> <i>boolean</i>
Tree	<i>send-tunnel-encap</i>
Description	When configured to true , this command sends the VXLAN value in the encapsulation that is advertised with the EVPN routes for the service. The encapsulation is encoded in RFC5512-based tunnel encapsulation extended communities. When configured to false , no encapsulation extended community is sent.
Default	true
Introduced	16.0.R1
Platforms	All

cpu-protection

Synopsis	Enter the cpu-protection context
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection
Tree	cpu-protection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm-monitoring

Synopsis	Enable the eth-cfm-monitoring context
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring
Tree	eth-cfm-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring aggregate
Tree	aggregate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring car
Tree	car
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

policy-id *reference*

Synopsis	CPM protection policy
Context	configure service epipe <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i>
Tree	policy-id
Reference	configure system security cpu-protection policy <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service epipe <i>string</i> sap <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service epipe <i>string</i> sap <i>string</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection <i>policy</i> <i>string</i>
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the egress context
Context	configure service epipe <i>string</i> sap <i>string</i> egress
Tree	egress
Introduced	16.0.R1
Platforms	All

agg-rate

Synopsis	Enter the agg-rate context
Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: agg-rate or percent-agg-rate .
Introduced	16.0.R1
Platforms	All

adaptation-rule *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate adaptation-rule <i>keyword</i>
Tree	adaptation-rule
Options	max, min, closest
Default	closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

burst-limit (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i>
Tree	limit-unused-bandwidth
Default	false
Introduced	16.0.R1
Platforms	All

queue-frame-based-accounting *boolean*

Synopsis	Enable frame based accounting on policers and queues
----------	--

Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate queue-frame-based-accounting <i>boolean</i>
Tree	queue-frame-based-accounting
Default	false
Introduced	16.0.R1
Platforms	All

rate number

Synopsis	Enforced aggregate rate for all queues
Context	configure service epipe <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i>
Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

filter

Synopsis	Enter the filter context
Context	configure service epipe <i>string</i> sap <i>string</i> egress filter
Tree	filter
Introduced	16.0.R1
Platforms	All

ip reference

Synopsis	IPv4 filter policy name
Context	configure service epipe <i>string</i> sap <i>string</i> egress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>string</i>
Introduced	16.0.R1
Platforms	All

ipv6 reference

Synopsis	IPv6 filter policy name
Context	configure service epipe <i>string</i> sap <i>string</i> egress filter ipv6 reference
Tree	ipv6
Reference	configure filter ipv6-filter <i>string</i>
Introduced	16.0.R1
Platforms	All

mac reference

Synopsis	MAC filter policy name
Context	configure service epipe <i>string</i> sap <i>string</i> egress filter mac reference
Tree	mac
Reference	configure filter mac-filter <i>string</i>
Introduced	16.0.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos
Tree	qos
Introduced	16.0.R1
Platforms	All

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy
Tree	policer-control-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

overrides

Synopsis	Enable the overrides context
Context	configure service epipe string sap string egress qos policer-control-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

root

Synopsis	Enter the root context
Context	configure service epipe string sap string egress qos policer-control-policy overrides root
Tree	root
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure service epipe string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure service epipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds
Tree	priority-mbs-thresholds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>)
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority [[priority-level](#)] *number*

Synopsis	Enter the priority list instance
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[priority-level] *number*

Synopsis	Priority level
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs-contribution (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>)

Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policy-name *reference*

Synopsis	Policer control policy name
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos policer-control-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos policer-control-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

qinq-mark-top-only *boolean*

Synopsis	Mark top Q-tags
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i>
Tree	qinq-mark-top-only
Default	false
Introduced	16.0.R1
Platforms	All

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress
Tree	sap-egress
Introduced	16.0.R1
Platforms	All

overrides

Synopsis	Enter the overrides context
Context	configure service epipe string sap string egress qos sap-egress overrides
Tree	overrides
Introduced	16.0.R1
Platforms	All

hs-secondary-shaper string

Synopsis	HS Secondary Shaper
Context	configure service epipe string sap string egress qos sap-egress overrides hs-secondary-shaper string
Tree	hs-secondary-shaper
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wrr-group [group-id] reference

Synopsis	Enter the hs-wrr-group list instance
Context	configure service epipe string sap string egress qos sap-egress overrides hs-wrr-group reference
Tree	hs-wrr-group
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

[group-id] reference

Synopsis	HS WRR group identifier
Context	configure service epipe string sap string egress qos sap-egress overrides hs-wrr-group reference
Tree	hs-wrr-group
Reference	configure qos sap-egress string hs-wrr-group number
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7750 SR-7/12/12e

hs-class-weight *number*

Synopsis Class weight override of the WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)
reference [hs-class-weight](#) *number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)
reference [percent-rate](#) *decimal-number*

Tree [percent-rate](#)

Range 0.01 to 100.00

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)
reference [rate](#) (*number* | *keyword*)

Tree [rate](#)

Range 1 to 2000000000

Units kilobps

Options max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

policer [**policer-id**] *reference*

Synopsis	Enter the policer list instance
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i>
Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] *reference*

Synopsis	Policer unique ID
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i>
Tree	policer
Reference	configure qos sap-egress <i>string</i> policer <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (*number* | *keyword*)

Synopsis	MBS
----------	-----

Context	configure service epipe string sap string egress qos sap-egress overrides policer reference mbs (<i>number keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service epipe string sap string egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service epipe string sap string egress qos sap-egress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service epipe string sap string egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference
Tree	queue
Introduced	16.0.R1
Platforms	All

[queue-id] *reference*

Synopsis	Policer unique ID
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference

Tree	queue
Reference	configure qos sap-egress <i>string</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	All

cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

drop-tail

Synopsis	Enter the drop-tail context
----------	------------------------------------

Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	All

low

Synopsis	Enter the low context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1 2 4 8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the hs-wred-queue context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> hs-wred-queue
Tree	hs-wred-queue
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> hs-wred-queue policy reference
Tree	policy
Reference	configure qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis	WRR weight to parent with the queue into the scheduler
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> hs-wrr-weight <i>number</i>
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824

Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth
Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1

Platforms All

parent

Synopsis Enter the **parent** context

Context **configure service epipe string sap string egress qos sap-egress overrides queue reference parent**

Tree [parent](#)

Introduced 16.0.R1

Platforms All

cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group

Context **configure service epipe string sap string egress qos sap-egress overrides queue reference parent cir-weight number**

Tree [cir-weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

weight *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure service epipe string sap string egress qos sap-egress overrides queue reference parent weight number**

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

percent-rate

Synopsis Enter the **percent-rate** context

Context **configure service epipe string sap string egress qos sap-egress overrides queue reference percent-rate**

Tree [percent-rate](#)

Notes	The following elements are part of a choice: percent-rate or rate .

scheduler [**scheduler-name**] *string*

Synopsis	Enter the scheduler list instance
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service epipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context

Platforms	All

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure service epipe string sap string eth-cfm
Tree	eth-cfm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	configure service epipe string sap string eth-cfm ais boolean
Tree	ais
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-fc-stats

Synopsis	Enter the collect-lmm-fc-stats context
Context	configure service epipe string sap string eth-cfm collect-lmm-fc-stats
Tree	collect-lmm-fc-stats
Description	Commands in this context configure per forwarding class (FC) LMM information collection.

The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.

This command and the **collect-imm-stats** command are mutually exclusive when there is entity resource contention.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	configure service epipe string sap string eth-cfm collect-imm-fc-stats fc keyword
Tree	fc
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-imm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile keyword

Synopsis	Forwarding class name for profile-aware counter
Context	configure service epipe string sap string eth-cfm collect-imm-fc-stats fc-in-profile keyword
Tree	fc-in-profile
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-imm-fc-stats context.</p>

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-imm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm collect-imm-stats <i>boolean</i>
Tree	collect-imm-stats
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the mep list instance
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Reference	configure eth-cfm domain <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Reference	configure eth-cfm domain <i>string</i> association <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais

Synopsis	Enable the ais context
----------	-------------------------------

Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais
Tree	ais
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais client-meg-level <i>number</i>
Tree	client-meg-level
Range	1 to 7
Max. Instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interface-support <i>boolean</i>
Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification](#) [fng-alarm-time](#) *number*

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification](#) [fng-reset-time](#) *number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis Generate CCM messages

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [ccm](#) *boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

direction *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
----------	-------------------------

Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword
Tree	direction
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern

Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed boolean

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed boolean

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace

Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> lbm-svc-act-responder <i>boolean</i>
Tree	lbm-svc-act-responder
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>string</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>

Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> primary-vlan <i>boolean</i>
Tree	primary-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip **primary-vlan** (*number* | *keyword*)

Synopsis	Enter the mip list instance
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MIP
Context	configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) mac-address <i>string</i>
Tree	mac-address
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-ctag-levels *number*

Synopsis Squelch levels using additional VLAN C-Tag space

Context **configure** **service** **epipe** *string* **sap** *string* **eth-cfm** **squelch-ingress-ctag-levels** *number*

Tree [squelch-ingress-ctag-levels](#)

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.

Range 0 to 7

Max. 8

Instances

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis Levels for which ETH-CFM packets are silently discarded

Context **configure** **service** **epipe** *string* **sap** *string* **eth-cfm** **squelch-ingress-levels** *number*

Tree [squelch-ingress-levels](#)

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range 0 to 7

Max. 8

Instances

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet

Synopsis Enter the **ethernet** context

Context **configure service epipe string sap string ethernet**

Tree [ethernet](#)

Introduced 20.5.R1

Platforms All

llf

Synopsis Enter the **llf** context

Context **configure service epipe string sap string ethernet llf**

Tree [llf](#)

Description Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.

The Ethernet port must be configured for null encapsulation.

This feature is also supported in Epipes with BGP-EVPN enabled. In this case, upon removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains operationally up). The port transitions to the operationally up state when the EVPN destination is created.

Introduced 20.5.R1

Platforms All

admin-state *keyword*

Synopsis	Enter the scheduler list instance
Context	configure service epipe <i>string sap string ingress qos scheduler-policy overrides scheduler string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[[scheduler-name](#)] *string*

Synopsis	Scheduler name
Context	configure service epipe <i>string sap string ingress qos scheduler-policy overrides scheduler string</i>

Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context

udx2

Synopsis	Enable the udx2 context
Context	configure service epipe string segment-routing-v6 number micro-segment-locator reference function udx2
Tree	udx2
Description	Commands in this context configure the SRv6 micro-segment uDX2 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and cross-connect to the egress SAP occurs in the Epipe service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis	SRv6 function value
Context	configure service epipe string segment-routing-v6 number micro-segment-locator reference function udx2 value number
Tree	value
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	configure <i>service</i> <i>epipe</i> <i>string</i> <i>service-id</i> <i>number</i>
Tree	<i>service-id</i>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

service-mtu *number*

Synopsis	MTU size
Context	configure <i>service</i> <i>epipe</i> <i>string</i> <i>service-mtu</i> <i>number</i>
Tree	<i>service-mtu</i>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	16.0.R1
Platforms	All

Platforms All

adv-service-mtu *number*

Synopsis Service MTU used in signaling

Context **configure** *service epipe string spoke-sdp string* **adv-service-mtu** *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP, instead of the service MTU. However, the configuration does not affect the locally enforced value, which is still based on the service MTU.

This MTU value cannot be configured on a spoke-SDP that is bound to an SDP with the **adv-mtu-override** command (**configure service sdp** context).

When unconfigured, an adjusted service MTU is used (**service-mtu** command).

Range 0 to 9782

Introduced 21.5.R1

Platforms All

bfd-template reference

Synopsis BFD template associated with the SDP binding

Context **configure service epipe string spoke-sdp string bfd bfd-template reference**

Tree [bfd-template](#)

Description This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum

transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.

Reference	configure bfd bfd-template <i>string</i>
Introduced	21.2.R1
Platforms	All

failure-action *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> bfd failure-action <i>keyword</i>
Tree	failure-action
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

wait-for-up-timer *number*

Synopsis	Time waited for BFD up status
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	<p>This command configures the time interval that is used to wait for a BFD session to come up.</p> <p>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.</p>
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

collect-stats *boolean*

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> csf multiplier <i>decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

direction *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
----------	-------------------------

Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword</i>
Tree	direction
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i>

Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</i>
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed boolean

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</i>
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed boolean

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i>
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</i>

Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

Synopsis Process service activation streams in ETH-CFM LBM

Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **lbm-svc-act-responder** *boolean*

Tree [lbm-svc-act-responder](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **low-priority-defect** *keyword*

Tree [low-priority-defect](#)

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Default mac-rem-err-xcon

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis MAC address of the MEP

Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **mac-address** *string*

Tree [mac-address](#)

Description This command specifies the MAC address of the MEP.

When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> primary-vlan <i>boolean</i>
Tree	primary-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip **primary-vlan** (*number* | *keyword*)

Synopsis	Enter the mip list instance
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
----------	--------------------------------------

Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MIP
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) mac-address <i>string</i>
Tree	mac-address
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

snelch- ingress-ctag-levels *number*

Synopsis	Snelch levels using additional VLAN C-Tag space
Context	configure service epipe string spoke-sdp string eth-cfm snelch- ingress-ctag-levels number
Tree	snelch- ingress-ctag-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

snelch- ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	configure service epipe string spoke-sdp string eth-cfm snelch- ingress-levels number
Tree	snelch- ingress-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

force-vc-forwarding *keyword*

Synopsis	VC forwarding action
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

hash-label

Synopsis	Enable the hash-label context
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths.
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	16.0.R1
Platforms	All

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes. The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	16.0.R1
Platforms	All

use-sdp-bmac-lsb *boolean*

Synopsis Allow the spoke SDP to be part of a redundant pseudo-wire within PBB Epipe service

Context	configure service epipe <i>string spoke-sdp string source-bmac use-sdp-bmac-lsb boolean</i>
Tree	use-sdp-bmac-lsb
Default	false
Introduced	16.0.R1
Platforms	All

transit-policy

Synopsis	Enable the transit-policy context
Context	configure service epipe <i>string spoke-sdp string transit-policy</i>
Tree	transit-policy
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	configure service epipe <i>string spoke-sdp string transit-policy ip reference</i>
Tree	ip
Reference	configure application-assurance group <i>number partition number transit-ip-policy number</i>
Notes	The following elements are part of a mandatory choice: ip or prefix .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
----------	---------------------

Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> transit-policy prefix <i>reference</i>
Tree	prefix
Reference	configure application-assurance group <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i>
Notes	The following elements are part of a mandatory choice: ip or prefix .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vc-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Virtual circuit type associated with the SDP binding
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> vc-type <i>keyword</i>
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service epipe <i>string</i> spoke-sdp <i>string</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

test *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	configure service epipe string test boolean
Tree	test
Default	false
Introduced	16.0.R1
Platforms	All

vc-switching boolean

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	configure service epipe string vc-switching boolean
Tree	vc-switching
Default	false
Introduced	16.0.R1
Platforms	All

vpn-id number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	configure service epipe string vpn-id number
Tree	vpn-id
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

vxlan

Synopsis	Enter the vxlan context
Context	configure service epipe string vxlan

Tree	vxlan
Introduced	16.0.R1
Platforms	All

instance [[vxlan-instance](#)] *number*

Synopsis	Enter the instance list instance
Context	configure service epipe <i>string</i> vxlan instance <i>number</i>
Tree	instance
Max. Instances	1
Introduced	16.0.R1
Platforms	All

[vxlan-instance] *number*

Synopsis	VXLAN instance
Context	configure service epipe <i>string</i> vxlan instance <i>number</i>
Tree	instance
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

egress-vtep

Synopsis	Enter the egress-vtep context
Context	configure service epipe <i>string</i> vxlan instance <i>number</i> egress-vtep
Tree	egress-vtep
Introduced	16.0.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VTEP IP address used when originating VXLAN packets
----------	---

Context	configure service epipe <i>string vxlan instance number egress-vtep ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	ip-address
Introduced	16.0.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group associated with egress VTEP address
Context	configure service epipe <i>string vxlan instance number egress-vtep oper-group reference</i>
Tree	oper-group
Reference	configure service oper-group <i>string</i>
Introduced	16.0.R1
Platforms	All

vni *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VNI of the VXLAN
Context	configure service epipe <i>string vxlan instance number vni number</i>
Tree	vni
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

source-vtep (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Vxlan source virtual tunnel endpoint information
Context	configure service epipe <i>string vxlan source-vtep (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	source-vtep
Introduced	16.0.R1

Platforms All

ies [service-name] string

Synopsis Enter the **ies** list instance
Context **configure service ies** string
Tree **ies**
Introduced 16.0.R1
Platforms All

[service-name] string

Synopsis Administrative service name
Context **configure service ies** string
Tree **ies**
String Length 1 to 64
Notes This element is part of a list key.
Introduced 16.0.R1
Platforms All

aa-interface [interface-name] string

Synopsis Enter the **aa-interface** list instance
Context **configure service ies** string **aa-interface** string
Tree **aa-interface**
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[interface-name] string

Synopsis Interface name
Context **configure service ies** string **aa-interface** string
Tree **aa-interface**
String Length 1 to 32
Notes This element is part of a list key.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service ies <i>string aa-interface string admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string aa-interface string description string</i>
Tree	description
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	configure service ies <i>string aa-interface string ip-mtu number</i>
Tree	ip-mtu
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
----------	-------------------------------

Context	configure service ies <i>string aa-interface string ipv4</i>
Tree	ipv4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis	Enable the primary context
Context	configure service ies <i>string aa-interface string ipv4 primary</i>
Tree	primary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure service ies <i>string aa-interface string ipv4 primary address string</i>
Tree	address
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>string aa-interface string ipv4 primary prefix-length number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis	Enter the sap list instance
----------	------------------------------------

Context	configure service ies <i>string aa-interface string sap string</i>
Tree	sap
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis	SAP ID
Context	configure service ies <i>string aa-interface string sap string</i>
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service ies <i>string aa-interface string sap string admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string aa-interface string sap string description string</i>
Tree	description
String Length	1 to 160
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the egress context
Context	configure service ies <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress
Tree	egress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis	Enter the filter context
Context	configure service ies <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress filter
Tree	filter
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip reference

Synopsis	IPv4 filter policy name
Context	configure service ies <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress filter ip reference
Tree	ip
Reference	configure filter ip-filter <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the qos context
Context	configure service ies <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress qos
Tree	qos
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service ies string aa-interface string sap string egress qos sap-egress
Tree	sap-egress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	configure service ies string aa-interface string sap string egress qos sap-egress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-egress string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fwd-wholesale

Synopsis	Enter the fwd-wholesale context
Context	configure service ies string aa-interface string sap string fwd-wholesale
Tree	fwd-wholesale
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pppoe-service *reference*

Synopsis	PPPoE service name
Context	configure service ies string aa-interface string sap string fwd-wholesale pppoe-service <i>reference</i>
Tree	pppoe-service
Reference	configure service epipe string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the ingress context
Context	configure service ies string aa-interface string sap string ingress
Tree	ingress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the qos context
Context	configure service ies string aa-interface string sap string ingress qos
Tree	qos
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-ingress

Synopsis	Enter the sap-ingress context
Context	configure service ies string aa-interface string sap string ingress qos sap-ingress
Tree	sap-ingress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the overrides context
Context	configure service ies string aa-interface string sap string ingress qos sap-ingress overrides
Tree	overrides
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policy ID
----------	-----------

Context	configure service ies <i>string aa-interface string sap string ingress qos sap-ingress policy-name reference</i>
Tree	policy-name
Reference	configure qos sap-ingress <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis	Enter the lag context
Context	configure service ies <i>string aa-interface string sap string lag</i>
Tree	lag
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp-interface [[interface-name](#)] *string*

Synopsis	Enter the aarp-interface list instance
Context	configure service ies <i>string aarp-interface string</i>
Tree	aarp-interface
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[interface-name](#)] *string*

Synopsis	Interface name
Context	configure service ies <i>string aarp-interface string</i>
Tree	aarp-interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service ies <i>string aarp-interface</i> <i>string admin-state</i> <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string aarp-interface</i> <i>string description</i> <i>string</i>
Tree	description
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	configure service ies <i>string aarp-interface</i> <i>string ip-mtu</i> <i>number</i>
Tree	ip-mtu
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [**sdp-bind-id**] *string*

Synopsis	Enter the spoke-sdp list instance
Context	configure service ies <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string</i>
Tree	spoke-sdp
Max. Instances	1

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sdp-bind-id] *string*

Synopsis SDP binding ID
 Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string* [spoke-sdp](#) *string*
 Tree [spoke-sdp](#)
 String Length 3 to 16
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Synopsis Enable the **aarp** context
 Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string* [spoke-sdp](#) *string* [aarp](#)
 Tree [aarp](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis AARP instance ID
 Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string* [spoke-sdp](#) *string* [aarp](#) *id* *reference*

Synopsis	Enter the eth-cfm context
Context	configure service ies string eth-cfm
Tree	eth-cfm
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

igmp-host-tracking

Synopsis	Enter the igmp-host-tracking context
Context	configure service ies string igmp-host-tracking
Tree	igmp-host-tracking
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	configure service ies string igmp-host-tracking admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

expiry-time *number*

Synopsis	Time that the system continues to track inactive hosts
Context	configure service ies string igmp-host-tracking expiry-time number
Tree	expiry-time
Range	1 to 65535
Units	seconds
Default	260
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [*interface-name*] *string*

Synopsis Enter the **interface** list instance

Context **configure service ies string interface string**

Tree [interface](#)

Description Commands in this context create a logical IP routing interface. When created, attributes such as an IP address and SAP ID can be associated with the IP interface.

Introduced 16.0.R1

Platforms All

[interface-name] *string*

Synopsis Interface name

Context **configure service ies string interface string**

Tree [interface](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

admin-state *keyword*

Synopsis Administrative state of the interface

Context **configure service ies string interface string admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms All

cflowd-parameters

Synopsis Enter the **cflowd-parameters** context

Context	configure service ies <i>string</i> interface <i>string</i> cflowd-parameters
Tree	cflowd-parameters
Introduced	16.0.R1
Platforms	All

sampling [**sampling-type**] *keyword*

Synopsis	Enter the sampling list instance
Context	configure service ies <i>string</i> interface <i>string</i> cflowd-parameters sampling <i>keyword</i>
Tree	sampling
Introduced	16.0.R1
Platforms	All

[sampling-type] *keyword*

Synopsis	Traffic sampling type
Context	configure service ies <i>string</i> interface <i>string</i> cflowd-parameters sampling <i>keyword</i>
Tree	sampling
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

direction *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	configure service ies <i>string</i> interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R1

Platforms All

sample-profile (*keyword | number*)

Synopsis Sample profile ID

Context **configure service ies** *string* **interface** *string* **cflowd-parameters sampling** *keyword* **sample-profile** (*keyword | number*)

Tree **sample-profile**

Description This command defines the sampling rate profile associated with this interface.

Max. Range 0 to 4294967295

Options 1

Introduced 19.5.R1

Platforms All

type *keyword*

Synopsis Type of cflowd analysis

Context **configure service ies** *string* **interface** *string* **cflowd-parameters sampling** *keyword* **type** *keyword*

Tree **type**

Description This command configures the cflowd sampling type on the associated IP interface.

Options acl, interface

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

cpu-protection *reference*

Synopsis CPU protection policy

dynamic-tunnel-redundant-nexthop *string*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	configure service ies <i>string</i> interface <i>string</i> dynamic-tunnel-redundant-nexthop <i>string</i>
Tree	dynamic-tunnel-redundant-nexthop
Description	This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service.
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: dynamic or manual .
Introduced	22.7.R1
Platforms	VSR

keys [[security-association](#)] *number* [direction](#) *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the keys list instance
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

[security-association] *number*

Synopsis	SA entry ID
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

direction *keyword*

Synopsis	Direction of the IPsec tunnel
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i>
Tree	keys
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

authentication-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	configure service ies string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword authentication-key string
Tree	authentication-key
String Length	1 to 130
Introduced	22.7.R1
Platforms	VSR

encryption-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	configure service ies string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword encryption-key string
Tree	encryption-key
String Length	1 to 66
Introduced	22.7.R1
Platforms	VSR

ipsec-transform *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i>
Tree	ipsec-transform
Reference	configure ipsec ipsec-transform <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

spi *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i>
Tree	spi
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383

Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> local-gateway-address-override (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records esp <i>number</i>
Tree	esp
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> max-history-key-records ike <i>number</i>
Tree	ike
Range	1 to 3
Introduced	22.7.R1
Platforms	VSR

pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	22.7.R1
Platforms	VSR

private-sap *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> private-sap <i>number</i>
Tree	private-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

private-service *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> private-service <i>string</i>

Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String Length	1 to 64
Introduced	22.7.R1
Platforms	VSR

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true

Introduced 22.7.R1
 Platforms VSR

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv6 hosts

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* **propagate-pmtu-v6** *boolean*

Tree [propagate-pmtu-v6](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

public-tcp-mss-adjust (*number | keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) on the public network

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* **public-tcp-mss-adjust** (*number | keyword*)

Tree [public-tcp-mss-adjust](#)

Description This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.

Range 512 to 9000

Units bytes

Options auto

Introduced 22.7.R1

Platforms VSR

remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> remote-gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-gateway-address
Introduced	22.7.R1
Platforms	VSR

replay-window *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	22.7.R1
Platforms	VSR

security-policy**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy

Tree	security-policy
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

id number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy <i>id number</i>
Tree	id
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

strict-match boolean

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>

Default	false
Introduced	22.7.R1
Platforms	VSR

ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	configure service ies <i>string</i> interface <i>string</i> ipsec ipv6-exception <i>reference</i>
Tree	ipv6-exception
Description	This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.
Reference	configure filter ipv6-exception <i>string</i>
Introduced	22.7.R1
Platforms	VSR

public-sap *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	configure service ies <i>string</i> interface <i>string</i> ipsec public-sap <i>number</i>
Tree	public-sap
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

tunnel-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	configure service ies <i>string</i> interface <i>string</i> ipsec tunnel-group <i>reference</i>
Tree	tunnel-group
Reference	configure isa tunnel-group <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

addresses

Synopsis	Enter the addresses context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 addresses
Tree	addresses
Introduced	16.0.R1
Platforms	All

address [ipv4-address] *string*

Synopsis	Enter the address list instance
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 addresses address <i>string</i>
Tree	address
Introduced	16.0.R1
Platforms	All

[ipv4-address] *string*

Synopsis	IPv4 address for the interface
----------	--------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> ipv4 addresses address <i>string</i>
Tree	address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 addresses address <i>string</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 allow-directed-broadcasts <i>boolean</i>
Tree	allow-directed-broadcasts
Default	false
Introduced	16.0.R1
Platforms	All

bfd

Synopsis	Enter the bfd context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd
Tree	bfd
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive *number*

Synopsis	BFD receive interval over this interface
----------	--

Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 bfd type <i>keyword</i>
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np.

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dhcp

Synopsis	Enter the dhcp context
Context	configure service ies string interface string ipv4 dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure service ies string interface string ipv4 dhcp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure service ies string interface string ipv4 dhcp description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

gi-address *string*

Synopsis	GI address for the DHCP relay
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp gi-address <i>string</i>
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	All

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 511999
Introduced	16.0.R1
Platforms	All

option-82

Synopsis	Enter the option-82 context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82

Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	configure service ies string interface string ipv4 dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	All

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service ies string interface string ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	All

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service ies string interface string ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

none

Synopsis	Do not include the circuit ID
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

sap-id

Synopsis	Use the SAP ID
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple

Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

remote-id

Synopsis	Enter the remote-id context
Context	configure service ies string interface string ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service ies string interface string ipv4 dhcp option-82 remote-id ascii-string string
Tree	ascii-string
String Length	1 to 32
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	All

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service ies string interface string ipv4 dhcp option-82 remote-id mac
Tree	mac

Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	All

none

Synopsis	Do not include the remote ID
Context	configure service ies string interface string ipv4 dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	All

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

client-mac-address boolean

Synopsis	Send the MAC address in the VSO
Context	configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option client-mac-address boolean
Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	All

pool-name boolean

Synopsis	Send the pool name in the VSO
----------	-------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i>
Tree	pool-name
Default	false
Introduced	16.0.R1
Platforms	All

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	16.0.R1
Platforms	All

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	All

string *string*

Synopsis	User-defined ASCII string for the VSO
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option string <i>string</i>
Tree	string
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	All

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

emulated-server *string*

Synopsis	IP address used as the DHCP server address for the SAP
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i>
Tree	emulated-server

Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
Introduced	16.0.R1
Platforms	All

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies string interface string ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	All

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service ies string interface string ipv4 dhcp proxy-server lease-time radius-override boolean
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	All

value *number*

Synopsis	DHCP lease time
Context	configure service ies string interface string ipv4 dhcp proxy-server lease-time value number
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

relay-plain-bootp *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	configure service ies string interface string ipv4 dhcp relay-plain-bootp <i>boolean</i>
Tree	relay-plain-bootp
Default	false
Introduced	16.0.R1
Platforms	All

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service ies string interface string ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	16.0.R1
Platforms	All

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service ies string interface string ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i>
Tree	release-update-src-ip
Default	false
Introduced	16.0.R1
Platforms	All

siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i>
Tree	siaddr-override
Introduced	16.0.R1
Platforms	All

release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i>
Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	IP addresses for DHCP server requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp server <i>string</i>
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
----------	--

Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i>
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	All

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	All

use-arp *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp use-arp <i>boolean</i>
Tree	use-arp
Default	false
Introduced	16.0.R1
Platforms	All

icmp

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255

Introduced	19.10.R1
Platforms	All

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure service ies string interface string ipv4 neighbor-discovery learn-unsolicited boolean
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	16.0.R1
Platforms	All

limit

Synopsis	Enter the limit context
Context	configure service ies string interface string ipv4 neighbor-discovery limit
Tree	limit
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	configure service ies string interface string ipv4 neighbor-discovery limit log-only boolean
Tree	log-only

Default	false
Introduced	16.0.R1
Platforms	All

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Range	0 to 524288
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Threshold value that triggers a warning message
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1

Platforms All

populate *boolean*

Synopsis Allow static and dynamic hosts to be populated in system ARP cache

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery populate](#) *boolean*

Tree [populate](#)

Default false

Introduced 16.0.R1

Platforms All

proactive-refresh *boolean*

Synopsis Send a single refresh message before entry timeout

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery proactive-refresh](#) *boolean*

Tree [proactive-refresh](#)

Description When configured to **true**, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).

When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default false

Introduced 16.0.R1

Platforms All

proxy-arp-policy *reference*

admin-state keyword

Synopsis	Administrative state of VRRP
Context	configure service ies string interface string ipv4 vrrp number admin-state keyword
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

authentication-key string

Synopsis	Password for simple text authentication
Context	configure service ies string interface string ipv4 vrrp number authentication-key string

Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

backup string

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies string interface string ipv4 vrrp number backup string
Tree	backup
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>

mac *string*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure <i>service ies string interface string ipv4 vrrp number mac string</i>
Tree	<i>mac</i>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p>

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced	16.0.R1
Platforms	All

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>service ies string interface string ipv4 vrrp number master-int-inherit boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure <i>service ies string interface string ipv4 vrrp number message-interval number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies string interface string ipv4 vrrp number monitor-oper-group reference
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group string
Introduced	22.2.R1
Platforms	All

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies string interface string ipv4 vrrp number ntp-reply boolean
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.

When configured to **false**, the router does not process NTP requests.

Default	false
Introduced	20.2.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service ies string interface string ipv4 vrrp number oper-group reference
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group string
Introduced	16.0.R1
Platforms	All

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service ies string interface string ipv4 vrrp number owner boolean
Tree	owner
Description	When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to false , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure <i>service ies string interface string ipv4 vrrp number</i> passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>service ies string interface string ipv4 vrrp number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	VRRP priority control policy
----------	------------------------------

Context	configure service ies string interface string ipv4 vrrp number policy reference
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy number
Introduced	16.0.R1
Platforms	All

preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service ies string interface string ipv4 vrrp number preempt boolean
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

priority number

Synopsis	Base priority for the VRRP
Context	configure service ies string interface string ipv4 vrrp number priority number
Tree	priority
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ssh-reply <i>boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	16.0.R1
Platforms	All

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	16.0.R1
Platforms	All

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

address [ipv6-address] *string*

Synopsis	Enter the address list instance
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i>
Tree	address
Introduced	16.0.R1
Platforms	All

[ipv6-address] *string*

Synopsis	IPv6 address assigned to the interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i>
Tree	address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> duplicate-address-detection <i>boolean</i>
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD). When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure <i>service ies</i> <i>string</i> interface <i>string</i> ipv6 <i>address</i> <i>string</i> eui-64 <i>boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure <i>service ies</i> <i>string</i> interface <i>string</i> ipv6 <i>address</i> <i>string</i> prefix-length <i>number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure <i>service ies</i> <i>string</i> interface <i>string</i> ipv6 <i>address</i> <i>string</i> primary-preference <i>number</i>
Tree	primary-preference
Description	This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.

If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

track-srrp *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> track-srrp <i>number</i>
Tree	track-srrp

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 bfd type <i>keyword</i>
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	All

route-tag *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i>
Tree	route-tag

Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	20.2.R1
Platforms	All

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure service ies string interface string ipv6 neighbor-discovery learn-unsolicited keyword
Tree	learn-unsolicited
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set. When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

limit

Synopsis	Enter the limit context
Context	configure service ies string interface string ipv6 neighbor-discovery limit
Tree	limit
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	configure service ies string interface string ipv6 neighbor-discovery limit log-only boolean
Tree	log-only
Description	When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.

When configured to **false**, the router does not send the warning message.

Default	false
Introduced	16.0.R1
Platforms	All

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure service ies string interface string ipv6 neighbor-discovery limit max-entries number
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface. When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure service ies string interface string ipv6 neighbor-discovery limit threshold number
Tree	threshold
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	configure service ies string interface string ipv6 neighbor-discovery local-proxy-nd boolean
Tree	local-proxy-nd

Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	16.0.R1
Platforms	All

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>
Tree	proxy-nd-policy
Reference	configure policy-options policy-statement <i>string</i>

Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p>

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

backup string

Synopsis	Virtual router IP addresses for the interface
Context	configure service ies string interface string ipv6 vrrp number backup string
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Max. Instances	4
Introduced	16.0.R1

mac *string*

Synopsis	Virtual MAC address to use in ARP responses
Context	configure <i>service ies string interface string ipv6 vrrp number mac string</i>
Tree	<i>mac</i>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p>

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced	16.0.R1
Platforms	All

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>service ies string interface string ipv6 vrrp number master-int-inherit boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure <i>service ies string interface string ipv6 vrrp number message-interval number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	10 to 4095
Units	centiseconds
Default	100
Introduced	16.0.R1
Platforms	All

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure service ies string interface string ipv6 vrrp number monitor-oper-group reference
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group string
Introduced	22.2.R1
Platforms	All

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure service ies string interface string ipv6 vrrp number ntp-reply boolean
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.

When configured to **false**, the router does not process NTP requests.

Default	false
Introduced	20.2.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure service ies string interface string ipv6 vrrp number oper-group reference
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group string
Introduced	16.0.R1
Platforms	All

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure service ies string interface string ipv6 vrrp number owner boolean
Tree	owner
Description	When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to false , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure <i>service ies string interface string ipv6 vrrp number</i> passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>service ies string interface string ipv6 vrrp number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	VRRP priority control policy
----------	------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	16.0.R1
Platforms	All

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> preempt <i>boolean</i>
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Base priority for the VRRP
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> priority <i>number</i>
Tree	priority
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp number standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp number telnet-reply <i>boolean</i>
Tree	telnet-reply
Description	When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> traceroute-reply <i>boolean</i>
Tree	traceroute-reply
Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

load-balancing

Synopsis	Enter the load-balancing context
Context	configure service ies <i>string</i> interface <i>string</i> load-balancing
Tree	load-balancing
Introduced	16.0.R1
Platforms	All

flow-label-load-balancing *boolean*

Synopsis	Enable flow label load balancing
Context	configure service ies <i>string</i> interface <i>string</i> load-balancing flow-label-load-balancing <i>boolean</i>
Tree	flow-label-load-balancing
Description	<p>When configured to true, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.</p> <p>When configured to false, the router disables load balancing in ECMP and LAG.</p>
Default	false
Introduced	21.5.R1
Platforms	All

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure service ies <i>string</i> interface <i>string</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

spi-load-balancing *boolean*

Synopsis	Enable SPI use in hashing
Context	configure service ies <i>string</i> interface <i>string</i> load-balancing spi-load-balancing <i>boolean</i>
Tree	spi-load-balancing
Description	When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

teid-load-balancing *boolean*

Synopsis	Enable use of TEID in hashing
Context	configure service ies <i>string</i> interface <i>string</i> load-balancing teid-load-balancing <i>boolean</i>
Tree	teid-load-balancing
Default	false
Introduced	16.0.R1
Platforms	All

loopback *boolean*

Synopsis	Use interface as a loopback interface
----------	---------------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> loopback <i>boolean</i>
Tree	loopback
Default	false
Introduced	16.0.R1
Platforms	All

mac string

Synopsis	MAC address for the interface
Context	configure service ies <i>string</i> interface <i>string</i> mac <i>string</i>
Tree	mac
Introduced	16.0.R1
Platforms	All

mac-accounting boolean

Synopsis	Enable MAC accounting functionality
Context	configure service ies <i>string</i> interface <i>string</i> mac-accounting <i>boolean</i>
Tree	mac-accounting
Default	false
Introduced	16.0.R1
Platforms	All

monitor-oper-group reference

Synopsis	Operational group to monitor
Context	configure service ies <i>string</i> interface <i>string</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>string</i>
Introduced	16.0.R1
Platforms	All

multi-chassis-shunting-profile reference

Synopsis	Multi-chassis shunting profile name
----------	-------------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> multi-chassis-shunting-profile <i>reference</i>
Tree	multi-chassis-shunting-profile
Description	This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.
Reference	configure router <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i>
Notes	The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multicast-network-domain *reference*

Synopsis	Network domain name
Context	configure service ies <i>string</i> interface <i>string</i> multicast-network-domain <i>reference</i>
Tree	multicast-network-domain
Reference	configure router <i>string</i> network-domains network-domain <i>string</i>
Introduced	16.0.R1
Platforms	All

ping-template

Synopsis	Enable the ping-template context
Context	configure service ies <i>string</i> interface <i>string</i> ping-template
Tree	ping-template
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the ping template
Context	configure service ies <i>string</i> interface <i>string</i> ping-template admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

destination-address *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ping template destination address

Context **configure** [service ies](#) *string* [interface](#) *string* [ping-template destination-address](#) *string*

Tree [destination-address](#)

Description This command configures the address to where the ICMP echo requests are directed to test connectivity. The source of the ICMP echo request is the primary IPv4 address of the interface under which the ping-template is configured. The destination address must be on the same subnet as the source IP address.

Unnumbered interfaces and loopback addresses are not supported.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

name *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Ping template name

Context **configure** [service ies](#) *string* [interface](#) *string* [ping-template name](#) *reference*

Tree [name](#)

Description This command configures the name of the ping template to be assigned to the IP interface.

Reference **configure** [test-oam icmp ping-template](#) *string*

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ptp-hw-assist

Synopsis Enter the **ptp-hw-assist** context

Context	configure service ies <i>string</i> interface <i>string</i> ptp-hw-assist
Tree	ptp-hw-assist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PTP time stamping assist
Context	configure service ies <i>string</i> interface <i>string</i> ptp-hw-assist admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support. Only one interface per physical port can have ptp-hw-assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

radius-auth-policy *reference*

Synopsis	Authentication policy
Context	configure service ies <i>string</i> interface <i>string</i> radius-auth-policy <i>reference</i>
Tree	radius-auth-policy
Reference	configure subscriber-mgmt radius-authentication-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [**sap-id**] *string*

Synopsis	Enter the sap list instance
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i>
Tree	sap

Max. Instances	1
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

anti-spoof *keyword*

Synopsis	Anti-spoof filtering
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> anti-spoof <i>keyword</i>
Tree	anti-spoof
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bandwidth *number*

Synopsis	SAP bandwidth
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> bandwidth <i>number</i>
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

calling-station-id *string*

Synopsis	Calling station ID
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> calling-station-id <i>string</i>
Tree	calling-station-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	16.0.R1
Platforms	All

cpu-protection

Synopsis	Enter the cpu-protection context
Context	configure service ies string interface string sap string cpu-protection
Tree	cpu-protection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm-monitoring

Synopsis	Enable the eth-cfm-monitoring context
Context	configure service ies string interface string sap string cpu-protection eth-cfm-monitoring
Tree	eth-cfm-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	configure service ies string interface string sap string cpu-protection eth-cfm-monitoring aggregate
Tree	aggregate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	configure service ies string interface string sap string cpu-protection eth-cfm-monitoring car
Tree	car
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

mac-monitoring

Synopsis	Monitor MAC for CPU protection

Tree	percent-rate
Range	0.01 to 100.00
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference rate (<i>number</i> <i>keyword</i>)
Tree	rate
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

policer [[policer-id](#)] *reference*

Synopsis	Enter the policer list instance
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference
Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] *reference*

Synopsis	Policer unique ID
----------	-------------------

Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference
Tree	policer
Reference	configure qos sap-egress string policer number
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
----------	---

Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir decimal-number

Synopsis	CIR percent rate
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir decimal-number

Synopsis	PIR percent rate
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis	Enter the rate context
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Mode of statistics collected by the policer
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue [[queue-id](#)] *reference*

Synopsis	Enter the queue list instance
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference
Tree	queue
Introduced	16.0.R1
Platforms	All

[queue-id] *reference*

Synopsis	Policer unique ID
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference
Tree	queue
Reference	configure qos sap-egress <i>string</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adaptation-rule

Synopsis	Enter the adaptation-rule context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference adaptation-rule
Tree	adaptation-rule

Introduced 16.0.R1
 Platforms All

cir *keyword*

Synopsis Constraint used when deriving the operational CIR value
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides](#) [queue reference](#) [adaptation-rule](#) [pir keyword](#)
 Tree [cir](#)
 Options max, min, closest
 Introduced 16.0.R1
 Platforms All

pir *keyword*

Synopsis Constraint used when deriving the operational PIR value
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides](#) [queue reference](#) [adaptation-rule](#) [pir keyword](#)
 Tree [pir](#)
 Options max, min, closest
 Introduced 16.0.R1
 Platforms All

avg-frame-overhead *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides](#) [queue reference](#) [avg-frame-overhead decimal-number](#)
 Tree [avg-frame-overhead](#)
 Range 0.00 to 100.00
 Introduced 16.0.R1
 Platforms All

burst-limit (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue

Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference burst-limit (number keyword)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

cbs (number | keyword)

Synopsis	CBS
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference cbs (number keyword)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

drop-tail

Synopsis	Enter the drop-tail context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	All

low

Synopsis	Enter the low context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail low
Tree	low

Introduced 16.0.R1
 Platforms All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [drop-tail](#) [low](#) [percent-reduction-from-mbs](#) (*number* | *keyword*)
 Tree [percent-reduction-from-mbs](#)
 Range 0 to 100
 Options auto
 Introduced 16.0.R1
 Platforms All

hs-class-weight *number*

Synopsis Class weight override for the queue
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [hs-class-weight](#) *number*
 Tree [hs-class-weight](#)
 Range 1 | 2 | 4 | 8
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

hs-wred-queue

Synopsis Enter the **hs-wred-queue** context
 Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [hs-wred-queue](#)
 Tree [hs-wred-queue](#)
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

policy *reference*

Synopsis Slope policy applied to the HSQ queue group queue

Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference
Tree	policy
Reference	configure qos slope-policy string
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis	WRR weight to parent with the queue into the scheduler
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference mbs (number keyword)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth

Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference parent
Tree	parent
Introduced	16.0.R1
Platforms	All

cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Introduced	16.0.R1
Platforms	All

weight *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference parent weight <i>number</i>
Tree	weight
Range	0 to 100
Introduced	16.0.R1
Platforms	All

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	All

cir *decimal-number*

Synopsis	CIR percent rate
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00

Introduced	16.0.R1
Platforms	All

pir *decimal-number*

Synopsis	PIR percent rate
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference rate
Tree	rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	16.0.R1
Platforms	All

cir (*number* | *keyword*)

Synopsis	CIR rate
Context	configure service ies string interface string sap string egress qos sap-egress overrides queue reference rate cir (<i>number</i> <i>keyword</i>)
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

pir (*number* | *keyword*)

Synopsis	PIR rate
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate pir (<i>number</i> <i>keyword</i>)
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-egress <i>string</i>
Introduced	16.0.R1
Platforms	All

port-redirect-group

Synopsis	Enter the port-redirect-group context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress port-redirect-group
Tree	port-redirect-group
Introduced	16.0.R1
Platforms	All

group-name *reference*

Synopsis	Name of the queue group redirect list policy
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress port-redirect-group group-name <i>reference</i>
Tree	group-name

Reference	configure qos queue-group-templates egress queue-group <i>string</i>
Introduced	16.0.R1
Platforms	All

instance *number*

Synopsis	Instance of port queue group
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress port-redirect-group instance <i>number</i>
Tree	instance
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy
Tree	scheduler-policy
Introduced	16.0.R1
Platforms	All

overrides

Synopsis	Enter the overrides context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	All

scheduler [[scheduler-name](#)] *string*

Synopsis	Enter the scheduler list instance
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i>

Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> parent
Tree	parent
Introduced	16.0.R1
Platforms	All

cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	configure <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight number</i>
Tree	<i>cir-weight</i>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	configure <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string parent weight number</i>
Tree	<i>weight</i>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the rate context
Context	configure <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string rate</i>

Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure service ies string interface string sap string eth-cfm
Tree	eth-cfm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-fc-stats

Synopsis	Enter the collect-lmm-fc-stats context
Context	configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats
Tree	collect-lmm-fc-stats
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats fc keyword
Tree	fc
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc

Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats fc-in-profile <i>keyword</i>
Tree	fc-in-profile
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-stats <i>boolean</i>
Tree	collect-lmm-stats
Description	<p>When configured to true, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The show eth-cfm collect-lmm-stats command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to false, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis Enter the **mep** list instance

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.

Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm <i>boolean</i>
Tree	ccm
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf
Tree	csf
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number*

Tree [multiplier](#)

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis Text description

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis Enable the **eth-test** context

Context **configure** *service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test*

Tree [eth-test](#)

Description Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
----------	---------------------------------------

Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation keyword

Synopsis	Fault propagation for the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation keyword
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed

Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority <i>number</i>
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed <i>boolean</i>
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	<p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold

Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i>
Tree	squelch-ingress-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max.	8
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> clear-df-bit <i>boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum. When configured to false , clearing of the DF bit is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

delivery-service *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> delivery-service <i>string</i>

Tree	delivery-service
Description	This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel. The GRE tunnel does not come up until a valid delivery service is configured.
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

Tree	icmp6-generation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> icmp6-generation packet-too-big
Tree	packet-too-big
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> icmp6-generation packet-too-big admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

number *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> icmp6-generation packet-too-big number <i>number</i>
Tree	number
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

seconds *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
----------	--

Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> icmp6-generation packet-too-big seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> ip-mtu <i>number</i>
Tree	ip-mtu
Description	<p>This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.</p> <p>When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.</p>
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> ipsec-transport-mode-profile <i>reference</i>
Tree	ipsec-transport-mode-profile

Reference	configure ipsec ipsec-transport-mode-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	local-ip-address
Description	This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6). When this command specifies an IPv6 address, it must be a global unicast address.
Introduced	16.0.R1
Platforms	All

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> pmtu-discovery-aging <i>number</i>
Tree	pmtu-discovery-aging
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the private side
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v6 *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	configure <i>service ies string interface string sap string ip-tunnel string propagate-pmtu-v6 boolean</i>
Tree	propagate-pmtu-v6
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust (*number | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	configure <i>service ies string interface string sap string ip-tunnel string public-tcp-mss-adjust (number keyword)</i>
Tree	public-tcp-mss-adjust
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassemble (*number | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
----------	------------------------------

Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> reassemble (<i>number</i> <i>keyword</i>)
Tree	reassemble
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> remote-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

ipsec-gateway [**name**] *string*

Synopsis	Enter the ipsec-gateway list instance
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i>
Tree	ipsec-gateway
Max. Instances	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	IPsec gateway name
----------	--------------------

Context	configure service ies string interface string sap string ipsec-gateway string
Tree	ipsec-gateway
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the IPsec gateway
Context	configure service ies string interface string sap string ipsec-gateway string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert

Synopsis	Enter the cert context
Context	configure service ies string interface string sap string ipsec-gateway string cert
Tree	cert
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name
Context	configure service ies string interface string sap string ipsec-gateway string cert cert-profile reference
Tree	cert-profile
Reference	configure ipsec cert-profile string
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

Synopsis	Enter the status-verify context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> cert status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> cert status-verify default-result <i>keyword</i>
Tree	default-result
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Options	revoked, good
Default	revoked
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> cert status-verify primary <i>keyword</i>
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> cert status-verify secondary <i>keyword</i>
Tree	secondary
Options	none, crl , ocsp
Default	none
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> cert trust-anchor-profile <i>reference</i>
Tree	trust-anchor-profile
Reference	configure ipsec trust-anchor-profile <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db

Synopsis	Enable the client-db context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> client-db
Tree	client-db
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fallback *boolean*

Synopsis	Fall back to the default authentication policy
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> client-db fallback <i>boolean</i>
Tree	fallback

Description	When configured to true , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database. When configured to false and the client database lookup fails to return a matched result, the system fails the tunnel setup.
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name reference

Synopsis	Client database name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> client-db <i>name reference</i>
Tree	name
Reference	configure ipsec client-db <i>string</i>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-secure-service

Synopsis	Enable the default-secure-service context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> default-secure-service
Tree	default-secure-service
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> default-secure-service interface <i>string</i>

Tree	interface
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-name *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> default-secure-service service-name <i>string</i>
Tree	service-name
String Length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tunnel-template *reference*

Synopsis	Default tunnel policy template for the gateway
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> default-tunnel-template <i>reference</i>
Tree	default-tunnel-template
Reference	configure ipsec tunnel-template <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-address-assignment

Synopsis	Enter the dhcp-address-assignment context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment
Tree	dhcp-address-assignment
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcpv4

Synopsis	Enable the dhcpv4 context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment dhcpv4
Tree	dhcpv4
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment dhcpv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gi-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment dhcpv4 gi-address <i>string</i>
Tree	gi-address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment dhcpv4 send-release <i>boolean</i>
Tree	send-release
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the server context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> dhcp-address-assignment dhcpv4 server

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> local address-assignment ipv4 secondary-pool <i>string</i>
Tree	secondary-pool
String Length	1 to 32
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the ipv6 context
Context	configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6
Tree	ipv6
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6 dhcp-server string
Tree	dhcp-server
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6 pool string
Tree	pool
String Length	1 to 32

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> local address-assignment ipv6 router-instance <i>string</i>
Tree	router-instance
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> local gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	gateway-address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enter the id context
Context	configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> local id
Tree	id

Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	configure service ies string interface string sap string ipsec-gateway string local id auto
Tree	auto
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	configure service ies string interface string sap string ipsec-gateway string local id fqdn string
Tree	fqdn
String Length	1 to 255
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	configure service ies string interface string sap string ipsec-gateway string local id ipv4 string
Tree	ipv4
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6 ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#))

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	configure service ies string interface string sap string ipsec-gateway string local id ipv6 (ipv4-address-no-zone ipv6-address-no-zone)
Tree	ipv6
Notes	The following elements are part of a choice: auto , fqdn , ipv4 , or ipv6 .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-history-key-records

Synopsis	Enter the max-history-key-records context
Context	configure service ies string interface string sap string ipsec-gateway string max-history-key-records
Tree	max-history-key-records
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp number

Synopsis	Maximum number of recent records
Context	configure service ies string interface string sap string ipsec-gateway string max-history-key-records esp number
Tree	esp
Range	1 to 48
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike number

Synopsis	Maximum number of historical IKE keys recorded
Context	configure service ies string interface string sap string ipsec-gateway string max-history-key-records ike number
Tree	ike
Range	1 to 3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key string

Synopsis	Pre-shared key for the IPsec gateway
Context	configure service ies string interface string sap string ipsec-gateway string pre-shared-key string
Tree	pre-shared-key
String Length	1 to 115
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the radius context
Context	configure service ies string interface string sap string ipsec-gateway string radius
Tree	radius
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	configure service ies string interface string sap string ipsec-gateway string radius accounting-policy reference
Tree	accounting-policy
Reference	configure ipsec radius accounting-policy string
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	configure service ies string interface string sap string ipsec-gateway string radius authentication-policy reference
Tree	authentication-policy
Reference	configure ipsec radius authentication-policy string
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	configure service ies string interface string sap string ipsec-gateway string ts-list reference
Tree	ts-list
Reference	configure ipsec ts-list string
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis	Enter the lag context
Context	configure service ies string interface string sap string lag
Tree	lag
Introduced	16.0.R1

Platforms All

link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure** *service ies string interface string sap string lag link-map-profile number*

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

per-link-hash

Synopsis Enter the **per-link-hash** context

Context **configure** *service ies string interface string sap string lag per-link-hash*

Tree [per-link-hash](#)

Introduced 16.0.R1

Platforms All

class *number*

Synopsis Class used on LAG egress using weighted per-link-hash

Context **configure** *service ies string interface string sap string lag per-link-hash class number*

Tree [class](#)

Range 1 to 3

Default 1

Introduced 16.0.R1

Platforms All

weight number

Synopsis	Weight used on LAG egress using weighted per-link-hash

bfd-template reference

Synopsis	BFD template associated with the SDP binding
Context	configure service ies string interface string spoke-sdp string bfd bfd-template reference
Tree	bfd-template
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context.
Reference	configure bfd bfd-template string
Introduced	21.2.R1
Platforms	All

failure-action keyword

Synopsis	VCCV BFD action taken on the SDP binding
Context	configure service ies string interface string spoke-sdp string bfd failure-action keyword

Tree	failure-action
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

wait-for-up-timer *number*

Synopsis	Time waited for BFD up status
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	This command configures the time interval that is used to wait for a BFD session to come up. This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> collect-stats <i>boolean</i>

collect-imm-fc-stats

Synopsis	Enter the collect-imm-fc-stats context
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-imm-fc-stats
Tree	collect-imm-fc-stats

Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-lmm-fc-stats fc <i>keyword</i>
Tree	fc
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile keyword

Synopsis	Forwarding class name for profile-aware counter
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-lmm-fc-stats fc-in-profile <i>keyword</i>
Tree	fc-in-profile
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p>

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-lmm-stats <i>boolean</i>
Tree	collect-lmm-stats
Description	<p>When configured to true, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The show eth-cfm collect-lmm-stats command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to false, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm <i>boolean</i>
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> csf multiplier <i>decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1

eth-test

Synopsis	Enable the eth-test context
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed

Tree [rx-eth-vsm-grace](#)

Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
----------	---

Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm squelch-ingress-levels <i>number</i>
Tree	squelch-ingress-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hash-label

Synopsis	Enable the hash-label context
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths.
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	16.0.R1
Platforms	All

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> hash-label signal-capability
Tree	signal-capability
Description	<p>When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.</p> <p>The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.</p>
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> ingress

advertise [[route-type](#)] *keyword*

Synopsis	Enter the advertise list instance
----------	--

Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The learn-dynamic command must be set to false when using this functionality.
Introduced	19.10.R1
Platforms	All

[route-type] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp advertise <i>keyword</i>
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp advertise <i>keyword</i> route-tag <i>number</i>
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	19.10.R1
Platforms	All

flood-garp-and-unknown-req *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp flood-garp-and-unknown-req <i>boolean</i>
Tree	flood-garp-and-unknown-req
Description	When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to false , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	19.10.R1
Platforms	All

learn-dynamic *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp learn-dynamic <i>boolean</i>
Tree	learn-dynamic
Default	true
Introduced	19.10.R1
Platforms	All

nd

Synopsis	Enter the nd context
Context	configure service ies <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd
Tree	nd
Introduced	20.5.R1

down

Synopsis Enter the **down** context
 Context **configure** [service](#) [ies](#) *string* [redundant-interface](#) *string* [hold-time](#) [ipv4](#) [down](#)
 Tree [down](#)
 Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up

Synopsis	Enter the up context
Context	configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Up hold time for the IP interface

description *string*

Synopsis Text description

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* **description** *string*

Tree [description](#)

String Length 1 to 255

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fwd-service *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding service name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> fwd-service <i>reference</i>
Tree	fwd-service
Reference	configure service vprn <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fwd-subscriber-interface *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding subscriber interface name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> fwd-subscriber-interface <i>reference</i>
Tree	fwd-subscriber-interface
Reference	configure service vprn <i>string</i> subscriber-interface <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface [[group-interface-name](#)] *string*

Synopsis	Enter the group-interface list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i>
Tree	group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[group-interface-name] *string*

Synopsis	Group interface name
----------	----------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i>
Tree	group-interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bonding-parameters

Synopsis	Enter the bonding-parameters context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> bonding-parameters
Tree	bonding-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of ESM connection bonding
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> bonding-parameters admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

connection [[connection-index](#)] *number*

Synopsis Enter the **connection** list instance

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [bonding-parameters](#) [connection](#) *number*

Tree [connection](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[connection-index] *number*

Synopsis Bonding connection index

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [bonding-parameters](#) [connection](#) *number*

Tree [connection](#)

Range 1 to 2

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service *string*

Synopsis Connection service

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [bonding-parameters](#) [connection](#) *number* [service](#) *string*

Tree [service](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fpe reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FPE that provisions bonding functionality
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> bonding-parameters fpe <i>reference</i>
Tree	fpe
Reference	configure fwd-path-ext fpe <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multicast

Synopsis	Enter the multicast context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> bonding-parameters multicast
Tree	multicast
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

connection (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multicast connection
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> bonding-parameters multicast connection (<i>number</i> <i>keyword</i>)
Tree	connection
Range	1 to 2
Options	use-incoming
Default	use-incoming
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

brg

Synopsis	Enter the brg context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> brg
Tree	brg
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BRG
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> brg admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authenticated-brg-only *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow BRGs that have been pre-authenticated
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> brg authenticated-brg-only <i>boolean</i>
Tree	authenticated-brg-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-brg-profile *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default BRG profile for new BRGs
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> brg default-brg-profile <i>reference</i>
Tree	default-brg-profile
Reference	configure subscriber-mgmt vrgw brg-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cflowd-parameters

Synopsis	Enter the cflowd-parameters context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters
Tree	cflowd-parameters
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sampling [[sampling-type](#)] *keyword*

Synopsis	Enter the sampling list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i>
Tree	sampling
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[sampling-type] *keyword*

Synopsis	Traffic sampling type
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i>
Tree	sampling

Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i>
Tree	direction
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sample-profile (*keyword* | *number*)

Synopsis	Sample profile ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> sample-profile (<i>keyword</i> <i>number</i>)
Tree	sample-profile
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Type of cflowd analysis
----------	-------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> type <i>keyword</i>
Tree	type
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data-trigger

Synopsis	Enter the data-trigger context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger
Tree	data-trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of data-triggered host creation
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-routes-track-srrp

Synopsis Enable the **dynamic-routes-track-srrp** context
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [dynamic-routes-track-srrp](#)
 Tree [dynamic-routes-track-srrp](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis Time before route state updated after SRRP transition
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [dynamic-routes-track-srrp](#) [hold-time](#) *number*
 Tree [hold-time](#)
 Range 1 to 50
 Units deciseconds
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-parameters

Synopsis Enter the **gtp-parameters** context
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [gtp-parameters](#)
 Tree [gtp-parameters](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of GTP access
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [gtp-parameters](#) [admin-state](#) *keyword*

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

fpe reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PE that provisions the GTP user interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters fpe <i>reference</i>
Tree	fpe
Reference	configure fwd-path-ext fpe <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gx-policy reference

Synopsis	Diameter application policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gx-policy <i>reference</i>
Tree	gx-policy
Reference	configure subscriber-mgmt diameter-gx-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the ingress context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress
Tree	ingress
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-accounting *reference*

Synopsis Ingress policy accounting template name

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ingress-policy-accounting](#) *reference*

Tree [policy-accounting](#)

Reference **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string*

Introduced 19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s

ingress-stats *boolean*

Synopsis Collect ingress interface statistics

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ingress-stats](#) *boolean*

Tree [ingress-stats](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis Interface IP MTU

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ip-mtu](#) *number*

Tree [ip-mtu](#)

Range 512 to 9786

Units bytes

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-linking

Synopsis Enter the **ipoe-linking** context

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking
Tree	ipoe-linking
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of IPoE host linking
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-router-advertisement *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i>
Tree	gratuitous-router-advertisement
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shared-circuit-id *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable circuit ID in DHCPv4 Option82 to validate DHCPv6
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking shared-circuit-id <i>boolean</i>
Tree	shared-circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session

Synopsis	Enter the ipoe-session context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session
Tree	ipoe-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of IPoE session management
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-auth

Synopsis	Enter the force-auth context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth
Tree	force-auth
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cid-change *boolean*

Synopsis	Ignore min-auth-interval when circuit ID changed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth cid-change <i>boolean</i>
Tree	cid-change
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rid-change *boolean*

Synopsis	Ignore min-auth-interval when remote ID changed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth rid-change <i>boolean</i>
Tree	rid-change
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE Session policy to be used for new sessions
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session ipoe-session-policy <i>reference</i>
Tree	ipoe-session-policy
Reference	configure subscriber-mgmt ipoe-session-policy <i>string</i>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval (*keyword* | *number*)

Synopsis	Minimum time between two authentication attempts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session min-auth-interval (<i>keyword</i> <i>number</i>)
Tree	min-auth-interval
Range	1 to 32000000
Units	seconds
Options	infinite, always-reauthenticate
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-session-timeout *keyword*

Synopsis	Session timeout attribute to be interpreted
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session radius-session-timeout <i>keyword</i>
Tree	radius-session-timeout
Options	absolute, ignore, backwards-compatible
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-limit *number*

Synopsis	Maximum number of sessions per SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session sap-session-limit <i>number</i>
Tree	sap-session-limit
Range	1 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis	Maximum number of sessions on this group interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session session-limit <i>number</i>
Tree	session-limit
Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateless-redundancy *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session stateless-redundancy <i>boolean</i>
Tree	stateless-redundancy
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for IPoE session authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session user-db <i>reference</i>
Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies string subscriber-interface string group-interface string ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

arp-host

Synopsis	Enter the arp-host context
Context	configure service ies string subscriber-interface string group-interface string ipv4 arp-host
Tree	arp-host
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of ARP hosts
Context	configure service ies string subscriber-interface string group-interface string ipv4 arp-host admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	configure service ies string subscriber-interface string group-interface string ipv4 arp-host host-limit number
Tree	host-limit
Range	1 to 524287
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis	Minimum authentication interval
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host min-auth-interval <i>number</i>
Tree	min-auth-interval
Range	1 to 6000
Units	minutes
Default	15
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-host-limit *number*

Synopsis	Maximum number of ARP hosts per SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host sap-host-limit <i>number</i>
Tree	sap-host-limit
Range	1 to 131071
Default	1
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the dhcp context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications dhcp <i>boolean</i>
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications ppp <i>boolean</i>
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter reference

Synopsis	DHCP filter ID for the group interface
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp filter reference
Tree	filter
Reference	configure filter dhcp-filter number
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address string

Synopsis	GI address for the DHCP relay
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp gi-address string
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

I2-header

Synopsis	Enable the I2-header context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate I2-header
Tree	I2-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string*

Synopsis	IEEE address used in anti-spoofing entries for the SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate I2-header mac <i>string</i>
Tree	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	1 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-circuit-id *boolean*

Synopsis	Enable Option 82 circuit ID on relayed DHCP packets
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp match-circuit-id <i>boolean</i>
Tree	match-circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-selection

Synopsis	Enter the offer-selection context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection
Tree	offer-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the client-mac context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: client-mac or server .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac discover-delay <i>number</i>
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.

Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac mac-address <i>keyword</i>
Tree	mac-address
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i>
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [**ipv4-address**] *string*

Synopsis	Enter the server list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i>
Tree	server

Max. Instances	8
Notes	The following elements are part of a choice: client-mac or server .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *string*

Synopsis	IP address of the DHCP server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i>
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i>
Tree	discover-delay
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the option-82 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82
Tree	option-82

Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ifindex

Synopsis	Use the interface index for the circuit ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the circuit ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use the SAP ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple

Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Enter the remote-id context
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 remote-id ascii-string string
Tree	ascii-string
String Length	1 to 32
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac

Synopsis	Use the MAC address for the remote ID
----------	---------------------------------------

Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 remote-id mac</i>
Tree	mac
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the remote ID
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 remote-id none</i>
Tree	none
Notes	The following elements are part of a choice: ascii-string , mac , or none .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 vendor-specific-option</i>
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 vendor-specific-option client-mac-address boolean</i>
Tree	client-mac-address
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool-name *boolean*

Synopsis Send the pool name in the VSO

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 vendor-specific-option pool-name** *boolean*

Tree [pool-name](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis Send SAP ID in the sub-option of the DHCP relay packet

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 vendor-specific-option sap-id** *boolean*

Tree [sap-id](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *boolean*

Synopsis Send the service ID in the Vendor Specific Option

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 vendor-specific-option service-id** *boolean*

Tree [service-id](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis User-defined ASCII string for the VSO

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 vendor-specific-option string** *string*

Tree	string
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i>
Tree	emulated-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	DHCP lease time
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python policy name

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp](#) [python-policy](#) *reference*

Tree [python-policy](#)

Description This command associates a Python policy name with the interface.

Reference **configure** [python](#) [python-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay-proxy

Synopsis Enable the **relay-proxy** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp](#) [relay-proxy](#)

Tree [relay-proxy](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-update-src-ip *boolean*

Synopsis Update the source IP address of a DHCP RELEASE message

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp](#) [relay-proxy](#) [release-update-src-ip](#) *boolean*

Tree [release-update-src-ip](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

siaddr-override *string*

Synopsis DHCP server IP address for address hiding function

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i>
Tree	siaddr-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i>
Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	IP addresses for DHCP server requests
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp server <i>string</i>
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i>

Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trusted *boolean*

Synopsis	Relay untrusted packets
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	<p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp user-db <i>reference</i>
Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the icmp context
Context	configure service ies string subscriber-interface string group-interface string ipv4 icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure service ies string subscriber-interface string group-interface string ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

param-problem

Synopsis	Enter the param-problem context
Context	configure service ies string subscriber-interface string group-interface string ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure service ies string subscriber-interface string group-interface string ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp param-problem seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirects

Synopsis	Enter the redirects context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects
Tree	redirects
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects number <i>number</i>
Tree	number
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl-expired

Synopsis	Enter the ttl-expired context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired <i>seconds</i> <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-matching-address *boolean*

Synopsis	Use the subscriber interface address as source address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired use-matching-address <i>boolean</i>
Tree	use-matching-address
Description	<p>When configured to true, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to false, the system uses the first configured address.</p>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unreachables

Synopsis	Enter the unreachables context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables number <i>number</i>
Tree	number
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables seconds <i>number</i>
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 ignore-df-bit <i>boolean</i>
Tree	ignore-df-bit
Description	When configured to true , fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented. When configured to false , the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

populate *boolean*

Synopsis	Allow population of static and dynamic hosts
----------	--

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i>
Tree	populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i>
Tree	proxy-arp-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i>
Tree	remote-proxy-arp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i>
Tree	timeout
Range	0 to 65535

Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos-route-lookup *keyword*

Synopsis	QoS route lookup
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 qos-route-lookup <i>keyword</i>
Tree	qos-route-lookup
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

urpf-check

Synopsis	Enable the urpf-check context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check
Tree	urpf-check
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enable the ipv6 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-multiple-wan-addresses *boolean*

Synopsis	Allow multiple WAN addresses
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i>
Tree	allow-multiple-wan-addresses
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-reply

Synopsis	Enter the auto-reply context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply
Tree	auto-reply
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-solicitation *boolean*

Synopsis	Enable auto-reply for NS
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply neighbor-solicitation <i>boolean</i>
Tree	neighbor-solicitation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicitation *boolean*

Synopsis	Enable auto-reply for RS
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply router-solicitation <i>boolean</i>
Tree	router-solicitation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter *reference*

Synopsis	DHCPv6 filter
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 filter <i>reference</i>
Tree	filter
Reference	configure filter dhcp6-filter <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option

Synopsis	Enter the option context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-id

Synopsis	Enter the interface-id context
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id
Tree	interface-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id if-index
Tree	if-index
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string .

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis String for interface ID option in DHCPv6 relay packet
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **dhcp6** **option** **interface-id** *string* *string*
Tree [string](#)
String Length 1 to 80
Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis Send remote ID option in the DHCPv6 relay packet
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **dhcp6** **option** **remote-id** *boolean*
Tree [remote-id](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

override-slaac *boolean*

Synopsis Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **dhcp6** **override-slaac** *boolean*
Tree [override-slaac](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis	Enable the pd-managed-route context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i>
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context
 Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications**
 Tree [client-applications](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp boolean

Synopsis Enable IPoE clients to use DHCP relay or proxy server
 Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications dhcp boolean**
 Tree [dhcp](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp boolean

Synopsis Allow PPPoE clients to use DHCP relay functionality
 Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications ppp boolean**
 Tree [ppp](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime (*number* | *keyword*)

Synopsis Time for prefix to remain preferred on this interface
 Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server preferred-lifetime (*number* | *keyword*)**

Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i>
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-timer *number*

Synopsis	Renew timer (T1)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i>
Tree	renew-timer
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the server-id context
----------	------------------------------------

Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 proxy-server server-id</i>
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 proxy-server server-id</i> duid-en-ascii <i>string</i>
Tree	duid-en-ascii
String Length	1 to 58
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 proxy-server server-id</i> duid-en-hex <i>string</i>
Tree	duid-en-hex
String Length	1 to 118
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 proxy-server server-id</i> duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime (*number* | *keyword*)

Synopsis Time for prefix to remain valid on this interface

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 proxy-server valid-lifetime](#) (*number* | *keyword*)

Tree [valid-lifetime](#)

Range 300 to 4294967294

Units seconds

Options infinite

Default 86400

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python policy

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 python-policy reference](#)

Tree [python-policy](#)

Reference **configure** [python python-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay

Synopsis Enter the **relay** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 relay](#)

Tree [relay](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-selection

Synopsis	Enter the advertise-selection context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection
Tree	advertise-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the client-mac context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: client-mac or server .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac mac-address <i>keyword</i>
Tree	mac-address
Options	odd, even

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the preference-option context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value number

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option value <i>number</i>
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay number

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac solicit-delay <i>number</i>
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the preference-option context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option value <i>number</i>
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [**ipv6-address**] *string*

Synopsis	Enter the server list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i>
Tree	server
Max. Instances	8
Notes	The following elements are part of a choice: client-mac or server .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] *string*

Synopsis	IP address of the DHCPv6 server
----------	---------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i>
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the preference-option context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option value <i>number</i>
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> solicit-delay <i>number</i>
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100

Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection solicit-delay <i>number</i>
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the server instance or the client-mac context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i>
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp boolean

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay client-applications ppp boolean
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis	Enter the lease-split context
Context	configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	<p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> the renew time T1 committed by the server (long renew time) half of the preferred lifetime committed by the server when T1 committed by the server equals zero
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split valid-lifetime <i>number</i>
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	Link address for the DHCPv6 relay messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i>
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	DHCP6 server(s) to which the DHCP6 requests are forwarded
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i>

Tree	server
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay source-address <i>string</i>
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

snooping

Synopsis	Enter the snooping context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping
Tree	snooping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 snooping
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

user-db *reference*

Synopsis	Local user database for authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-db <i>reference</i>
Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-ident *keyword*

Synopsis	DHCP6 user identification for this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-ident <i>keyword</i>
Tree	user-ident
Options	mac, mac-interface-id
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 ipoe-bridged-mode <i>boolean</i>
Tree	ipoe-bridged-mode
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery
Tree	neighbor-discovery

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dad-snooping *boolean*

Synopsis Populate table via duplicate address detection packets
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [neighbor-discovery](#) **dad-snooping** *boolean*
 Tree [dad-snooping](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-limit *number*

Synopsis Maximum neighbor entries learned per SLAAC host
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [neighbor-discovery](#) **neighbor-limit** *number*
 Tree [neighbor-limit](#)
 Range 1 to 8
 Default 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos-route-lookup *keyword*

Synopsis QoS route lookup
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [qos-route-lookup](#) *keyword*
 Tree [qos-route-lookup](#)
 Options destination
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

router-advertisements

Synopsis	Enter the router-advertisements context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements force-mcast <i>keyword</i>
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	900 to 1800

Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the options context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i>
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the dns context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns include-rdnss <i>boolean</i>
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime (*number* | *keyword*)

Synopsis	Maximum time for the RDNSS address to remain valid
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns rdnss-lifetime (<i>number</i> <i>keyword</i>)
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
----------	------------------------------------

Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options managed-configuration boolean</i>
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options mtu</i> (<i>number</i> <i>keyword</i>)
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options other-stateful-configuration boolean</i>
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options reachable-time number</i>
Tree	reachable-time

Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options retransmit-timer <i>number</i>
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime (*number* | *keyword*)

Synopsis	Router lifetime
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>)
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the prefix-options context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options

Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options autonomous <i>boolean</i>
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options on-link <i>boolean</i>
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime (*number* | *keyword*)

Synopsis	Time for a prefix to remain preferred
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>)
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>)
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicit

Synopsis	Enter the router-solicit context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit
Tree	router-solicit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router-solicit authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit inactivity-timer (<i>number</i> <i>keyword</i>)
Tree	inactivity-timer
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis	Minimum time between successive authentication attempts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit min-auth-interval <i>number</i>
Tree	min-auth-interval
Range	1 to 360000
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis	Local user database used for authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit user-db <i>reference</i>
Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

urpf-check

Synopsis	Enable the urpf-check context
----------	--------------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check
Tree	urpf-check
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check mode <i>keyword</i>
Tree	mode
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enter the local-address-assignment context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment
Tree	local-address-assignment
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *boolean*

Synopsis	Request local addresses for non-DHCP/managed IPoE hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications ipoe <i>boolean</i>
Tree	ipoe
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Request local addresses for PPP IPCP hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications ppp <i>boolean</i>
Tree	ppp
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis Default pools

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment ipv4](#) **default-pool** *string*

Tree [default-pool](#)

String Length 1 to 32

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *reference*

Synopsis Local DHCPv4 server for local pools management

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment ipv4](#) **server** *reference*

Tree [server](#)

Reference **configure** [router](#) *string* [dhcp-server dhcpv4](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis Enter the **ipv6** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment ipv6](#)

Tree [ipv6](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies string subscriber-interface string group-interface string local-address-assignment ipv6 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-slaac *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	configure service ies string subscriber-interface string group-interface string local-address-assignment ipv6 client-applications ipoe-slaac <i>boolean</i>
Tree	ipoe-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-wan *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	configure service ies string subscriber-interface string group-interface string local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i>
Tree	ipoe-wan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-slaac *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts
Context	configure service ies string subscriber-interface string group-interface string local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i>
Tree	ppp-slaac
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server reference

Synopsis Local DHCPv6 server for local pools management

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment ipv6 server reference](#)

Tree [server](#)

Reference **configure** [router](#) *string* [dhcp-server dhcpv6](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac string

Synopsis MAC address for the interface

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [mac string](#)

Tree [mac](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq-auth-policy reference

Synopsis Diameter NASREQ application policy to use for authentication

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [nasreq-auth-policy reference](#)

Tree [nasreq-auth-policy](#)

Reference **configure** [subscriber-mgmt diameter-nasreq-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-up-while-empty boolean

Synopsis Enable this group interface without any active SAPs

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [oper-up-while-empty boolean](#)

Tree [oper-up-while-empty](#)

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the pppoe context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
Tree	pppoe
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of PPPoE
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *keyword*

Synopsis	PPPoE anti-spoof filtering
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe anti-spoof <i>keyword</i>
Tree	anti-spoof
Options	mac-sid, mac-sid-ip
Default	mac-sid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client

Synopsis	Enter the dhcp-client context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client
Tree	dhcp-client
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-id *keyword*

Synopsis	Type of information that DHCP option 61 contains
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client client-id <i>keyword</i>
Tree	client-id
Options	mac-pppoe-session-id
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	PPPoE policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe policy <i>reference</i>
Tree	policy
Reference	configure subscriber-mgmt ppp-policy <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python policy used to modify PPPoE packets

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe python-policy reference](#)

Tree [python-policy](#)

Reference **configure** [python python-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-limit *number*

Synopsis Maximum PPPoE sessions per SAP

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe sap-session-limit number](#)

Tree [sap-session-limit](#)

Range 1 to 131071

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis Maximum PPPoE sessions

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe session-limit number](#)

Tree [session-limit](#)

Range 1 to 333823

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe user-db <i>reference</i>
Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *reference*

Synopsis	RADIUS authentication policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> radius-auth-policy <i>reference</i>
Tree	radius-auth-policy
Reference	configure subscriber-mgmt radius-authentication-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface *reference*

Synopsis	Redundant interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> redundant-interface <i>reference</i>
Tree	redundant-interface
Reference	configure service ies <i>string</i> redundant-interface <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis	Enter the sap list instance
----------	------------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
Tree	sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis	SAP ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *keyword*

Synopsis	Type of anti-spoof filtering
Context	configure service ies string subscriber-interface string group-interface string sap string anti-spoof <i>keyword</i>
Tree	anti-spoof
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name
Context	configure service ies string subscriber-interface string group-interface string sap string app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group number partition number policy app-profile string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *string*

Synopsis	Calling station ID
Context	configure service ies string subscriber-interface string group-interface string sap string calling-station-id <i>string</i>
Tree	calling-station-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service ies string subscriber-interface string group-interface string sap string collect-stats <i>boolean</i>
Tree	collect-stats

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpu-protection

Synopsis	Enter the cpu-protection context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection
Tree	cpu-protection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

eth-cfm-monitoring

Synopsis	Enable the eth-cfm-monitoring context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring
Tree	eth-cfm-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring aggregate
Tree	aggregate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring car
Tree	car
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

policy-id *reference*

Synopsis	CPM protection policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i>
Tree	policy-id
Reference	configure system security cpu-protection policy <i>number</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

default-host

Synopsis Enter the **default-host** context

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host*

Tree *default-host*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ipv4 [address] reference prefix-length number

Synopsis Enter the **ipv4** list instance

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number*

Tree *ipv4*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

[address] reference

Synopsis IPv4 default host address

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number*

Tree *ipv4*

Reference **configure** *service ies string subscriber-interface string ipv4 address string*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

prefix-length number

Synopsis IPv4 address prefix length

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number*

Tree	ipv4
Range	0 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

next-hop *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> next-hop <i>string</i>
Tree	next-hop
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qinq-mark-top-only *boolean*

Synopsis	Mark top Q-tags
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i>
Tree	qinq-mark-top-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress qos sap-egress
Tree	sap-egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress qos sap-egress policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos sap-egress <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy

Synopsis	Enter the scheduler-policy context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress qos scheduler-policy
Tree	scheduler-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Scheduler policy name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress qos scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	configure qos scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm
Tree	eth-cfm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

collect-lmm-fc-stats

Synopsis	Enter the collect-lmm-fc-stats context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats
Tree	collect-lmm-fc-stats
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc *keyword*

Synopsis	Forwarding class name for profile-unaware counter
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats fc <i>keyword</i>
Tree	fc
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats fc-in-profile <i>keyword</i>
Tree	fc-in-profile
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure <i>service ies string subscriber-interface string group-interface string sap string eth-cfm collect-lmm-stats boolean</i>
Tree	<i>collect-lmm-stats</i>
Description	<p>When configured to true, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The show eth-cfm collect-lmm-stats command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to false, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

mep *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis	Enter the mep list instance
Context	configure <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	configure <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	configure <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Reference	configure eth-cfm domain <i>string</i> association <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the MEP

Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i>
Tree	squelch-ingress-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option. The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fwd-wholesale

Synopsis	Enter the fwd-wholesale context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> fwd-wholesale
Tree	fwd-wholesale
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-service *reference*

Synopsis	PPPoE service name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> fwd-wholesale pppoe-service <i>reference</i>
Tree	pppoe-service
Reference	configure service epipe <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-admin-state *keyword*

Synopsis	Administrative state of the hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> host-admin-state <i>keyword</i>
Tree	host-admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lockout-policy *reference*

Synopsis	Host lockout policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> host-lockout-policy <i>reference</i>
Tree	host-lockout-policy
Reference	configure subscriber-mgmt host-lockout-policy <i>string</i>
Introduced	16.0.R1

Reference	configure qos scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis	Enter the lag context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag
Tree	lag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i>
Tree	link-map-profile
Description	<p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p>
Range	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

per-link-hash

Synopsis	Enter the per-link-hash context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash
Tree	per-link-hash
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

class *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
----------	---

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

withdraw *boolean*

Synopsis	Withdraw the route when the CPE check fails
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw <i>boolean</i>
Tree	withdraw
Default	false
Notes	The following elements are part of a choice: (metric , preference , and tag) or withdraw .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i>
Tree	log
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time interval determining that a ping is missed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric associated with the managed route
----------	--

Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string metric number
Tree	metric
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Preference associated with the managed route
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string preference number
Tree	preference
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag *number*

Synopsis	Route tag associated with the managed route
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string tag number
Tree	tag
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy *reference*

Synopsis	RIP policy name
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string rip-policy reference
Tree	rip-policy

Reference	configure subscriber-mgmt rip-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv

Synopsis	Enter the shcv context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> shcv
Tree	shcv
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sla-profile <i>reference</i>
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Sub-profile name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
----------	--

Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>static-host ipv4 string</i> <i>mac string</i> <i>subscriber-id</i>
Tree	<i>subscriber-id</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Subscriber identification
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>static-host ipv4 string</i> <i>mac string</i> <i>subscriber-id string</i> <i>string</i>
Tree	<i>string</i>
String Length	1 to 64
Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>static-host ipv4 string</i> <i>mac string</i> <i>subscriber-id use-sap-id</i>
Tree	<i>use-sap-id</i>
Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6 [*prefix*] *string* *mac string*

Synopsis	Enter the ipv6 list instance
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>static-host ipv6 string</i> <i>mac string</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[prefix] string

Synopsis	IPv6 prefix
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string
Tree	ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac string

Synopsis	MAC address
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string
Tree	ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the static host
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anccp-string string

Synopsis	ANCP string
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string anccp-string string

Tree	ancp-string
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile

Synopsis	Enter the app-profile context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile
Tree	app-profile
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile *reference*

Synopsis	Application profile used by the static host
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile profile <i>reference</i>
Tree	profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scope *keyword*

Synopsis	Scope of the static host application profile
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile scope <i>keyword</i>
Tree	scope
Options	subscriber, mac
Default	subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id *string*

Synopsis	Intermediate destination ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> int-dest-id <i>string</i>
Tree	int-dest-id
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-linking *string*

Synopsis	IPv6 host linked with IPv4 host via learned MAC address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> mac-linking <i>string</i>
Tree	mac-linking
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-route [[ipv6-prefix](#)] *string*

Synopsis	Enter the managed-route list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i>
Tree	managed-route
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[ipv6-prefix](#)] *string*

Synopsis	Managed route prefix associated with IPv6 static host
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i>
Tree	managed-route
Description	This command configures the managed route prefix. The prefix length must be in the range of 1 to 128.

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpe-check

Synopsis	Enable the cpe-check context
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check
Tree	cpe-check
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check destination-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	destination-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check drop-count <i>number</i>
Tree	drop-count
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failed-action

Synopsis	Enter the failed-action context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action
Tree	failed-action
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric number

Synopsis	Metric associated with the provisioned managed route
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action metric number
Tree	metric
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (metric , preference , and tag) or withdraw .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference number

Synopsis	Preference associated to the provisioned managed route
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action preference number
Tree	preference
Range	0 to 255
Notes	The following elements are part of a choice: (metric , preference , and tag) or withdraw .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag number

Synopsis	Route tag used if CPE check fails
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action tag <i>number</i>
Tree	tag
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (metric , preference , and tag) or withdraw .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

withdraw boolean

Synopsis	Withdraw the route when the CPE check fails
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw <i>boolean</i>
Tree	withdraw
Default	false
Notes	The following elements are part of a choice: (metric , preference , and tag) or withdraw .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval number

Synopsis	Interval between ICMP pings to target CPE IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i>
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i>
Tree	log
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i>
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time interval determining that a ping is missed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i>

Tree	timeout
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric number

Synopsis	Metric associated with the managed route
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> metric <i>number</i>
Tree	metric
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference number

Synopsis	Preference associated with the managed route
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> preference <i>number</i>
Tree	preference
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag number

Synopsis	Route tag associated with the managed route
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag <i>number</i>
Tree	tag
Max. Range	0 to 4294967295

Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retail-svc-id *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Retail service ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> retail-svc-id <i>number</i>
Tree	retail-svc-id
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv

Synopsis	Enter the shcv context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> shcv
Tree	shcv
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sla-profile <i>reference</i>
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Sub-profile name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Subscriber identification
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id string <i>string</i>
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id use-sap-id
Tree	use-sap-id

Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service ies string subscriber-interface string group-interface string sap string static-host mac-learning
Tree	mac-learning
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data-triggered *boolean*

Synopsis	Enable learning of MAC addresses from data packets
Context	configure service ies string subscriber-interface string group-interface string sap string static-host mac-learning data-triggered <i>boolean</i>
Tree	data-triggered
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-mac *boolean*

Synopsis	Enforce single MAC address and subscriber for the SAP
Context	configure service ies string subscriber-interface string group-interface string sap string static-host mac-learning single-mac <i>boolean</i>
Tree	single-mac
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis	Enter the sub-sla-mgmt context
----------	---------------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt
Tree	sub-sla-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the defaults context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance <i>group</i> <i>number</i> <i>partition</i> <i>number</i> <i>policy</i> app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id

Synopsis	Enter the int-dest-id context
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults int-dest-id
Tree	int-dest-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Use the configured string
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults int-dest-id string string
Tree	string
String Length	1 to 32
Notes	The following elements are part of a choice: string or top-q-tag .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

top-q-tag

Synopsis	Use the top Q-tag of this SAP
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults int-dest-id top-q-tag
Tree	top-q-tag
Notes	The following elements are part of a choice: string or top-q-tag .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults sla-profile reference
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile string

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Default subscriber profile for the SAP
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults sub-profile reference
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis	Use auto-generated subscriber identification string
Context	configure service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults subscriber-id auto-id
Tree	auto-id
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID as default subscriber identification string
----------	--

Context	configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>defaults</i> <i>subscriber-id</i> <i>sap-id</i>
Tree	sap-id
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Default subscriber identification string for the SAP
Context	configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>defaults</i> <i>subscriber-id</i> <i>string</i> <i>string</i>
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-sub-parameters

Synopsis	Enter the single-sub-parameters context
Context	configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i>
Tree	single-sub-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

non-sub-traffic

Synopsis	Enable the non-sub-traffic context
Context	configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i>
Tree	non-sub-traffic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile <i>reference</i>
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Subscriber profile all non-subscriber traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id <i>string</i>
Tree	subscriber-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profiled-traffic-only *boolean*

Synopsis	Include all traffic in subscriber profile
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters profiled-traffic-only <i>boolean</i>
Tree	profiled-traffic-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt sub-ident-policy <i>reference</i>
Tree	sub-ident-policy
Reference	configure subscriber-mgmt sub-ident-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-limit (*keyword* | *number*)

Synopsis	Maximum number of subscribers on this SAP
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt subscriber-limit (<i>keyword</i> <i>number</i>)
Tree	subscriber-limit
Range	1 to 131071
Options	no-limit
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-parameters

Synopsis	Enter the sap-parameters context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters
Tree	sap-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *keyword*

Synopsis	Anti-spoof type of the SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters anti-spoof <i>keyword</i>
Tree	anti-spoof
Options	ip-mac, nh-mac
Default	ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters description <i>string</i>
Tree	description
String Length	1 to 80

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis Enter the **sub-sla-mgmt** context
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap-parameters](#) [sub-sla-mgmt](#)
 Tree [sub-sla-mgmt](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis Enter the **defaults** context
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap-parameters](#) [sub-sla-mgmt](#) [defaults](#)
 Tree [defaults](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis Default application profile name
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap-parameters](#) [sub-sla-mgmt](#) [defaults](#) [app-profile](#) [reference](#)
 Tree [app-profile](#)
 Reference **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-profile](#) [string](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis Default SLA profile
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap-parameters](#) [sub-sla-mgmt](#) [defaults](#) [sla-profile](#) [reference](#)

Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Default subscriber profile
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis	Subscriber ID that is autogenerated
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id auto-id
Tree	auto-id
Notes	The following elements are part of a choice: auto-id or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	String to be used as default subscriber ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id <i>string</i> <i>string</i>
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: auto-id or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt sub-ident-policy <i>reference</i>
Tree	sub-ident-policy
Reference	configure subscriber-mgmt sub-ident-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy *reference*

Synopsis	SHCV policy for IPv4 and IPv6 subscriber hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy <i>reference</i>
Tree	shcv-policy
Reference	configure subscriber-mgmt shcv-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy-ipv4 *reference*

Synopsis	SHCV for IPv4 subscriber hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv4 <i>reference</i>
Tree	shcv-policy-ipv4

Reference	configure subscriber-mgmt shcv-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy-ipv6 *reference*

Synopsis	SHCV for IPv6 subscriber hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv6 <i>reference</i>
Tree	shcv-policy-ipv6
Reference	configure subscriber-mgmt shcv-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

srrp [[srrp-id](#)] *number*

Synopsis	Enter the srrp list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i>
Tree	srrp
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[srrp-id] *number*

Synopsis	SRRP instance ID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i>
Tree	srrp
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SRRP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness
Tree	bfd-liveness
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dest-ip *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IPv4 prefix
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness dest-ip <i>string</i>
Tree	dest-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp number bfd-liveness interface-name <i>string</i>
Tree	interface-name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp number bfd-liveness service-name <i>string</i>
Tree	service-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp number description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gw-mac *string*

Synopsis	Gateway MAC address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> gw-mac <i>string</i>
Tree	gw-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keep-alive-interval *number*

Synopsis	Interval between SRRP advertisements
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> keep-alive-interval <i>number</i>
Tree	keep-alive-interval
Range	1 to 100
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

message-path *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to use as the SRRP message path
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> message-path <i>reference</i>
Tree	message-path
Reference	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group

Synopsis	Enter the monitor-oper-group context
Context	configure service ies string subscriber-interface string group-interface string srrp number monitor-oper-group
Tree	monitor-oper-group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-name *reference*

Synopsis	Operational group name
Context	configure service ies string subscriber-interface string group-interface string srrp number monitor-oper-group group-name <i>reference</i>
Tree	group-name
Reference	configure service oper-group string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority-step *number*

Synopsis	Step value to change priority of SRRP instance
Context	configure service ies string subscriber-interface string group-interface string srrp number monitor-oper-group priority-step <i>number</i>
Tree	priority-step
Range	1 to 10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

one-garp-per-sap *boolean*

Synopsis	Send one gratuitous ARP to each SAP
Context	configure service ies string subscriber-interface string group-interface string srrp number one-garp-per-sap <i>boolean</i>
Tree	one-garp-per-sap
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy reference

Synopsis VRRP priority control policy associated with the SRRP

Context **configure** *service ies string subscriber-interface string group-interface string srrp number policy reference*

Tree [policy](#)

Reference **configure** *vrrp policy number*

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preempt boolean

Synopsis Allow the SRRP instance to override an existing master

Context **configure** *service ies string subscriber-interface string group-interface string srrp number preempt boolean*

Tree [preempt](#)

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority number

Synopsis Priority for this interface at this level

Context **configure** *service ies string subscriber-interface string group-interface string srrp number priority number*

Tree [priority](#)

Range 1 to 254

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-fib-population-packets *keyword*

Synopsis	Mode used to send FIB population packets on switchover
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> send-fib-population-packets <i>keyword</i>
Tree	send-fib-population-packets
Options	all, outer-tag-only
Default	all
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suppress-aa-sub *boolean*

Synopsis	Enable application assurance suppression for ESM subscribers
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> suppress-aa-sub <i>boolean</i>
Tree	suppress-aa-sub
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> tos-marking-state <i>keyword</i>
Tree	tos-marking-state
Options	trusted, untrusted
Default	untrusted
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Group interface type
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> type <i>keyword</i>
Tree	type
Options	plain, lns, wlan-gw, gtp, bonding
Default	plain
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the wlan-gw context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WLAN Gateway
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-address [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the gateway-address list instance
----------	--

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	gateway-address
Max. Instances	10
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Gateway endpoint address of the WLAN Gateway tunnel
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	gateway-address
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

purpose

Synopsis	Enter the purpose context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose
Tree	purpose
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect *boolean*

Synopsis	Use tunnel IP address for crosse-connect traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose xconnect <i>boolean</i>
Tree	xconnect
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-router *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Routing instance the WLAN-GW endpoint resides in
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-router <i>string</i>
Tree	gateway-router
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group-encryption

Synopsis	Enter the group-encryption context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption
Tree	group-encryption
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-keygroup-inbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-inbound <i>reference</i>
Tree	encryption-keygroup-inbound
Reference	configure group-encryption encryption-keygroup <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-keygroup-outbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-outbound <i>reference</i>

Tree	encryption-keygroup-outbound
Reference	configure group-encryption encryption-keygroup <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-ap

Synopsis	Enter the I2-ap context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap
Tree	I2-ap
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-point [[sap-id](#)] *string*

Synopsis	Enter the access-point list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap access-point <i>string</i>
Tree	access-point
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[[sap-id](#)] *string*

Synopsis	SAP ID for the Layer 2 access point
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap access-point <i>string</i>
Tree	access-point
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the L2 access points
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service encapsulation type of this access point
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> encap-type <i>keyword</i>
Tree	encap-type
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

epipe-sap-template *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Parameters template for the L2 access point SAP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> epipe-sap-template <i>reference</i>
Tree	epipe-sap-template
Reference	configure service template epipe-sap-template <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-sub-id-fmt *keyword*

Synopsis	Format of the auto-generated subscriber ID
Context	configure service ies string subscriber-interface string group-interface string wlan-gw l2-ap auto-sub-id-fmt <i>keyword</i>
Tree	auto-sub-id-fmt
Options	include-ap-tags, sap-only
Default	include-ap-tags
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default encapsulation type for Layer 2 access points
Context	configure service ies string subscriber-interface string group-interface string wlan-gw l2-ap default-encap-type <i>keyword</i>
Tree	default-encap-type
Options	null, dot1q, qinq
Default	null
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the lanext context
Context	configure service ies string subscriber-interface string group-interface string wlan-gw lanext
Tree	lanext
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-bd *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of bridge domains

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[lanext max-bd](#) *number*

Tree [max-bd](#)

Range 1 to 131071

Default 131071

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis Enable the **learn-ap-mac** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[learn-ap-mac](#)

Tree [learn-ap-mac](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

Synopsis Delay AP-MAC until after ARP/ND authentication response

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[learn-ap-mac delay-auth](#) *boolean*

Tree [delay-auth](#)

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility

Synopsis	Enter the mobility context
Context	configure service ies string subscriber-interface string group-interface string wlan-gw mobility
Tree	mobility
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Minimum time between two mobility events for single UE
Context	configure service ies string subscriber-interface string group-interface string wlan-gw mobility hold-time <i>number</i>
Tree	hold-time
Range	0 to 255
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-tunnel-type *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable mobility between terminating tunnel types
Context	configure service ies string subscriber-interface string group-interface string wlan-gw mobility inter-tunnel-type <i>boolean</i>
Tree	inter-tunnel-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-vlan *boolean*

Synopsis	Allow mobility within different VLANs of the same range
----------	---

Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility inter-vlan boolean</i>
Tree	inter-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

trigger

Synopsis	Enter the trigger context
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger</i>
Tree	trigger
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

control *boolean*

Synopsis	Use control traffic as a mobility trigger
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger control boolean</i>
Tree	control
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data *boolean*

Synopsis	Use data traffic as mobility trigger
Context	configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger data boolean</i>
Tree	data
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

iapp *boolean*

Synopsis	Use IAPP messages as a mobility trigger
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger iapp <i>boolean</i>
Tree	iapp
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

oper-down-on-group-degrade *boolean*

Synopsis	Bring interface down when the ISA WLAN Gateway degraded
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw oper-down-on-group-degrade <i>boolean</i>
Tree	oper-down-on-group-degrade
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-mss-adjust *number*

Synopsis	TCP Maximum Segment Size (MSS) adjustment for gateway
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tcp-mss-adjust <i>number</i>
Tree	tcp-mss-adjust
Range	160 to 10240
Units	bytes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-egress-qos

Synopsis	Enter the tunnel-egress-qos context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos
Tree	tunnel-egress-qos

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of egress QoS for WLAN-GW tunnels
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

agg-rate-limit (*number* | *keyword*)

Synopsis	HQoS aggregate rate limit
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos agg-rate-limit (<i>number</i> <i>keyword</i>)
Tree	agg-rate-limit
Range	1 to 100000000
Options	max
Default	max
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

granularity *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Granularity of the egress shaping for WLAN Gateway
----------	--

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos granularity <i>keyword</i>
Tree	granularity
Options	per-tunnel, per-retailer
Default	per-tunnel
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time (*number* | *keyword*)

Synopsis	Minimum time to hold egress shaping resources
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos hold-time (<i>number</i> <i>keyword</i>)
Tree	hold-time
Range	1 to 86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-client-only *boolean*

Synopsis	Allow shaping for tunnel traffic for multiple UEs
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos multi-client-only <i>boolean</i>
Tree	multi-client-only
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress QoS policy linked with each interface tunnel
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos qos <i>reference</i>
Tree	qos
Reference	configure qos sap-egress <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress scheduler policy linked with each tunnel
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos scheduler-policy <i>reference</i>
Tree	scheduler-policy
Reference	configure qos scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-encaps

Synopsis	Enter the tunnel-encaps context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps
Tree	tunnel-encaps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-l2tp-cookie (*keyword* | *hex-string*)

Synopsis	System that learns the cookie from L2TP tunnels terminating on this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps learn-l2tp-cookie (<i>keyword</i> <i>hex-string</i>)
Tree	learn-l2tp-cookie
String Length	6

Options	never, always
Default	never
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-range [*range*] *string*

Synopsis	Enter the vlan-range list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i>
Tree	vlan-range
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[range] *string*

Synopsis	IEEE 802.1q VLAN tag range
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i>
Tree	vlan-range
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the authentication context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication
Tree	authentication
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Minimum time UE held down after failed authentication
----------	---

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication hold-time <i>number</i>
Tree	hold-time
Range	0 to 3600
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enable the local context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local
Tree	local
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

coa-policy *reference*

Synopsis	RADIUS ISA policy applied to CoA or disconnect messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local coa-policy <i>reference</i>
Tree	coa-policy
Reference	configure aaa radius isa-policy <i>string</i>
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-ue-state *keyword*

Synopsis	UE state accepted for immediate authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local default-ue-state <i>keyword</i>
Tree	default-ue-state
Options	portal, dsm
Notes	This element is mandatory.

Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

on-control-plane *boolean*

Synopsis Allow authentication on first control plane packet
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication on-control-plane** *boolean*
 Tree [on-control-plane](#)
 Default false
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis RADIUS policy for authentication
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication policy** *reference*
 Tree [policy](#)
 Reference **configure** [aaa](#) [radius](#) [isa-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-mismatch-timeout *number*

Synopsis Timeout if packet received with a non-matching VLAN tag
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication vlan-mismatch-timeout** *number*
 Tree [vlan-mismatch-timeout](#)
 Range 5 to 60
 Units seconds
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered-ue-creation

Synopsis	Enter the data-triggered-ue-creation context
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string data-triggered-ue-creation
Tree	data-triggered-ue-creation
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of data-triggered UE creation
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string data-triggered-ue-creation admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *boolean*

Synopsis	Authenticate ARP packets received from an unknown UE
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string data-triggered-ue-creation arp <i>boolean</i>
Tree	arp
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

create-proxy-cache-entry

Synopsis	Enter the create-proxy-cache-entry context
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string data-triggered-ue-creation create-proxy-cache-entry
Tree	create-proxy-cache-entry
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis MAC address format

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [data-triggered-ue-creation](#) [create-proxy-cache-entry](#) [mac-format](#) *string*

Tree [mac-format](#)

String Length 2 to 7

Default aa:

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis Enable the **proxy-server** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [data-triggered-ue-creation](#) [create-proxy-cache-entry](#) [proxy-server](#)

Tree [proxy-server](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis RADIUS Proxy server name

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [data-triggered-ue-creation](#) [create-proxy-cache-entry](#) [proxy-server](#) [name](#) *string*

Tree [name](#)

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance of the RADIUS proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server router-instance <i>string</i>
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp4

Synopsis	Enter the dhcp4 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4
Tree	dhcp4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv4
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns *string*

Synopsis	DNS servers signaled in DHCP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 dns <i>string</i>
Tree	dns

Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-aware-ip-address (*ipv4-unicast-address* | *keyword*)

Synopsis	L2-Aware NAT inside IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 l2-aware-ip-address (<i>ipv4-unicast-address</i> <i>keyword</i>)
Tree	l2-aware-ip-address
Options	from-pool
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active number

Synopsis	Lease time an authenticated user
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time active <i>number</i>
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	Lease time for migrant user (unauthenticated)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time initial <i>number</i>
Tree	initial
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nbns string

Synopsis	NetBIOS servers signaled in DHCP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 nbns <i>string</i>
Tree	nbns
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the protocol
----------	--------------------------------------

Context	configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime

Synopsis	Enter the preferred-lifetime context
Context	configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime</i>
Tree	preferred-lifetime
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active number

Synopsis	Preferred signaled lifetime after full authentication
Context	configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime active number</i>
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	Signaled preferred lifetime after full authentication
Context	configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime initial number</i>
Tree	initial
Range	300 to 3600

Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime

Synopsis	Enter the valid-lifetime context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime
Tree	valid-lifetime
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active number

Synopsis	Signaled valid lifetime after full authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime active <i>number</i>
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	Valid signaled lifetime UE is not fully authenticated
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime initial <i>number</i>
Tree	initial
Range	300 to 3600
Units	seconds
Default	300
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm

Synopsis Enter the **dsm** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **dsm**

 Introduced 21.10.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-parameter *string*

Synopsis AA URL parameter included for HTTP portal redirect
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [application-assurance](#) [url-parameter](#) [string](#)
 Tree [url-parameter](#)
 String Length 1 to 247
 Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis Enter the **egress** context
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [egress](#)
 Tree [egress](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis Policer for egress traffic

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm egress policer <i>reference</i>
Tree	policer
Reference	configure subscriber-mgmt isa-policer <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the ingress context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-filter reference

Synopsis	Filter for ingress traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress ip-filter <i>reference</i>
Tree	ip-filter
Reference	configure subscriber-mgmt isa-filter <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer reference

Synopsis	Policer for ingress traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress policer <i>reference</i>
Tree	policer
Reference	configure subscriber-mgmt isa-policer <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted-filter *reference*

Synopsis	Filter applied when soft volume quota is reached
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress soft-quota-exhausted-filter <i>reference</i>
Tree	soft-quota-exhausted-filter
Description	This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the ip-filter command in the configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs.
Reference	configure subscriber-mgmt isa-filter <i>string</i>
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

one-time-redirect

Synopsis	Enter the one-time-redirect context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect
Tree	one-time-redirect
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	Destination port of packets for HTTP redirect
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect port <i>number</i>
Tree	port
Range	1 to 65535
Default	80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url string

Synopsis	URL for redirected HTTP protocol packets
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dsm one-time-redirect url string
Tree	url
String Length	1 to 255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

volume-quota-direction keyword

Synopsis	Volume quota direction for WLAN GW
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dsm volume-quota-direction keyword
Tree	volume-quota-direction
Description	This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs.
Options	both, ingress, egress
Default	both
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

extension [extension-range] string

Synopsis	Add a list entry for extension
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string extension string
Tree	extension
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[extension-range] string

Synopsis	VLAN tag range used for matching
Context	configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string extension string

Tree	extension
Description	This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect-policy *reference*

Synopsis	Default HTTP redirect policy for portal authentication
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> http-redirect-policy <i>reference</i>
Tree	http-redirect-policy
Reference	configure subscriber-mgmt http-redirect-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

idle-timeout-action *keyword*

Synopsis	Action to perform when the idle timeout expires
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> idle-timeout-action <i>keyword</i>
Tree	idle-timeout-action
Options	remove, shcv
Default	remove
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-service

Synopsis	Enable the I2-service context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service
Tree	I2-service
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of Layer 2 service for VLAN range

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of allowed MAC entries on network side
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw lanext network max-mac <i>number</i>
Tree	max-mac
Range	1 to 64
Default	20
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policer for ingress data center traffic
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw lanext network policer <i>reference</i>

Tree	policer
Reference	configure subscriber-mgmt isa-policer <i>string</i>
Introduced	19.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect

Synopsis	Enter the xconnect context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect
Tree	xconnect
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting

Synopsis	Enter the accounting context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting
Tree	accounting
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility-updates *boolean*

Synopsis	Accounting updates triggered by mobility
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting mobility-updates <i>boolean</i>
Tree	mobility-updates
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS accounting policy for cross-connected UEs
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting policy <i>reference</i>
Tree	policy
Reference	configure aaa radius isa-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval number

Synopsis	Time between successive interim accounting updates
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting update-interval <i>number</i>
Tree	update-interval
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the cross-connect
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ID of WLAN Gateway ISA group that gateway binds to
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw wlan-gw-group <i>reference</i>
Tree	wlan-gw-group
Reference	configure isa wlan-gw-group <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wpp

Synopsis	Enable the wpp context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp
Tree	wpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WPP
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial

Synopsis	Enter the initial context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp initial

Tree	initial
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Initial application profile name
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp initial app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	Initial SLA profile
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp initial sla-profile <i>reference</i>
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Initial subscriber profile
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp initial sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time *number*

Synopsis	Lease time
Context	configure <i>service ies string subscriber-interface string group-interface string wpp lease-time number</i>
Tree	<i>lease-time</i>
Range	10 to 315446399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal

Synopsis	Enter the portal context
Context	configure <i>service ies string subscriber-interface string group-interface string wpp portal</i>
Tree	<i>portal</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Web portal server name
Context	configure <i>service ies string subscriber-interface string group-interface string wpp portal name string</i>
Tree	<i>name</i>
String Length	1 to 32
Notes	The following elements are part of a choice: portal-group or (name and router-instance).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group *reference*

Synopsis	WPP portal group for this interface
Context	configure <i>service ies string subscriber-interface string group-interface string wpp portal portal-group reference</i>

Tree	portal-group
Reference	configure aaa wpp portal-group <i>string</i>
Notes	The following elements are part of a choice: portal-group or (name and router-instance).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Virtual router instance of WPP portal for interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp portal router-instance <i>string</i>
Tree	router-instance
Notes	The following elements are part of a choice: portal-group or (name and router-instance).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

restore-to-initial-on-disconnect *boolean*

Synopsis	Restore initial profiles after a host has disconnected
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp restore-to-initial-on-disconnect <i>boolean</i>
Tree	restore-to-initial-on-disconnect
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

triggered-hosts *boolean*

Synopsis	Enable/disable triggered hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp triggered-hosts <i>boolean</i>
Tree	triggered-hosts
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis User database

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wpp user-db reference](#)

Tree [user-db](#)

Reference **configure** [subscriber-mgmt local-user-db](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time

Synopsis Enter the **hold-time** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [hold-time](#)

Tree [hold-time](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis Enter the **ipv4** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [hold-time](#) [ipv4](#)

Tree [ipv4](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down

Synopsis Enter the **down** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [hold-time](#) [ipv4](#) [down](#)

Tree [down](#)

Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system

attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up

Synopsis	Enter the up context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis Up hold time for the IP interface

Context **configure service ies** *string* **subscriber-interface** *string* **hold-time ipv4 up seconds** *number*

Tree **seconds**

Range 1 to 1200

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis Enter the **ipv6** context

Context **configure service ies** *string* **subscriber-interface** *string* **hold-time ipv6**

Tree **ipv6**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down

Synopsis Enter the **down** context

Context **configure service ies** *string* **subscriber-interface** *string* **hold-time ipv6 down**

Tree **down**

Description Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 down <i>init-only</i> <i>boolean</i>
Tree	init-only
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 down <i>seconds</i> <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up

Synopsis	Enter the up context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up <i>seconds</i> <i>number</i>
Tree	seconds

Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-linking

Synopsis	Enter the ipoe-linking context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-linking
Tree	ipoe-linking
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-router-advertisement *boolean*

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i>
Tree	gratuitous-router-advertisement
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session

Synopsis	Enter the ipoe-session context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-session
Tree	ipoe-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis	Maximum number of sessions on this group interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-session session-limit <i>number</i>

Tree	session-limit
Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address [[ipv4-address](#)] *string*

Synopsis	Enter the address list instance
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i>
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[ipv4-address](#)] *string*

Synopsis	IP address associated with the subscriber subnet
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i>
Tree	address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gateway *string*

Synopsis	Gateway IP address within the subnet for SRRP routing
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> gateway <i>string</i>

Tree	gateway
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis	Wait time before accepting new state attribute
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> holdup-time <i>number</i>
Tree	holdup-time
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

populate-host-routes *boolean*

Synopsis	Populate subscriber host routes in local FIB
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> populate-host-routes <i>boolean</i>
Tree	populate-host-routes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> track-srrp <i>number</i>
Tree	track-srrp
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-unmatching-subnets *boolean*

Synopsis	Allow subscriber hosts without a matching subnet
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 allow-unmatching-subnets <i>boolean</i>
Tree	allow-unmatching-subnets
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-dns *string*

Synopsis	Default DNS server addresses
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 default-dns <i>string</i>
Tree	default-dns
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the dhcp context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp
Tree	dhcp

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of DHCP
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) **admin-state** *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) **client-applications**
 Tree [client-applications](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis Enable IPoE clients to use the DHCP relay or proxy server
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) **client-applications** **dhcp** *boolean*
 Tree [dhcp](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis Enable PPPoE clients to use DHCP relay or proxy server
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) **client-applications** **ppp** *boolean*
 Tree [ppp](#)

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *string*

Synopsis	GI address for the DHCP relay
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp gi-address <i>string</i>
Tree	gi-address
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the option-82 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i>

Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i>
Tree	sap-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	User-defined ASCII string for the VSO
Context	configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option string <i>string</i>
Tree	string
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i>
Tree	emulated-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the lease-time context
Context	configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i>
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	DHCP lease time
Context	configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time value <i>number</i>
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	configure service ies string subscriber-interface string ipv4 dhcp python-policy reference
Tree	python-policy

Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay-proxy

Synopsis	Enable the relay-proxy context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i>
Tree	release-update-src-ip
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i>
Tree	siaddr-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-include-gi-address *boolean*

Synopsis	Include the GI address in DHCP relay messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i>

Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server string

Synopsis	DHCP server IP addresses
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp server <i>string</i>
Tree	server
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

src-ip-addr keyword

Synopsis	Type of source address to use for DHCP relay
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i>
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

virtual-subnet boolean

Synopsis	Enable a virtual subnet for DHCPv4 hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp virtual-subnet <i>boolean</i>
Tree	virtual-subnet
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

export-host-routes *boolean*

Synopsis	Allow export of subscriber management host routes
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 export-host-routes <i>boolean</i>
Tree	export-host-routes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unnumbered

Synopsis	Enter the unnumbered context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered
Tree	unnumbered
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	IP address for the subscriber interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered ip-address <i>string</i>
Tree	ip-address
Notes	The following elements are part of a choice: ip-address or ip-int-name .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-int-name *string*

Synopsis	Interface name from which an IPv4 address is borrowed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered ip-int-name <i>string</i>
Tree	ip-int-name
String Length	1 to 32
Notes	The following elements are part of a choice: ip-address or ip-int-name .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis Enable the **ipv6** context
 Context **configure service ies string subscriber-interface string ipv6**
 Tree **ipv6**
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address [ipv6-address] string

Synopsis Enter the **address** list instance
 Context **configure service ies string subscriber-interface string ipv6 address string**
 Tree **address**
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] string

Synopsis IPv6 address for the subscriber interface
 Context **configure service ies string subscriber-interface string ipv6 address string**
 Tree **address**
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Host type for subscriber interface prefixes
 Context **configure service ies string subscriber-interface string ipv6 address string host-type keyword**

Tree	host-type
Options	pd, wan, pd-wan
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 address <i>string</i> prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-multiple-wan-addresses *boolean*

Synopsis	Allow multiple WAN addresses
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i>
Tree	allow-multiple-wan-addresses
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-unmatching-prefixes *boolean*

Synopsis	Allow subscriber hosts without a matching prefix
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 allow-unmatching-prefixes <i>boolean</i>
Tree	allow-unmatching-prefixes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-dns *string*

Synopsis	Default DNS server addresses
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 default-dns <i>string</i>
Tree	default-dns
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-prefix-length (*number* | *keyword*)

Synopsis	IPv6 delegated prefix length
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 delegated-prefix-length (<i>number</i> <i>keyword</i>)
Tree	delegated-prefix-length
Range	48 to 64
Options	variable
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the dhcp6 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

override-slaac *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
----------	--

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 override-slaac <i>boolean</i>
Tree	override-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis	Enable the pd-managed-route context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i>
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications dhcp <i>boolean</i>
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications ppp <i>boolean</i>
Tree	ppp
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime (*number* | *keyword*)

Synopsis	Time for prefix to remain preferred on this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server preferred-lifetime (<i>number</i> <i>keyword</i>)
Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i>
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-timer *number*

Synopsis	Renew timer (T1)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i>
Tree	renew-timer
Range	0 to 604800
Units	seconds

Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the server-id context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i>
Tree	duid-en-ascii
String Length	1 to 58
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i>
Tree	duid-en-hex
String Length	1 to 118
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime (*number* | *keyword*)

Synopsis	Time for prefix to remain valid on this interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>)
Tree	valid-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 python-policy <i>reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay

Synopsis	Enter the relay context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay

Tree	relay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i>
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp boolean

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	configure service ies string subscriber-interface string ipv6 dhcp6 relay client-applications ppp boolean
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure service ies string subscriber-interface string ipv6 dhcp6 relay description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis	Enter the lease-split context
Context	configure service ies string subscriber-interface string ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	<p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> the renew time T1 committed by the server (long renew time) half of the preferred lifetime committed by the server when T1 committed by the server equals zero
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of DHCPv6 lease split
----------	--

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay lease-split admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay lease-split valid-lifetime <i>number</i>
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	Link address for the DHCPv6 relay messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i>
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	DHCP6 server(s) to which the DHCP6 requests are forwarded
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i>
Tree	server
Max. Instances	8

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	configure service ies string subscriber-interface string ipv6 dhcp6 relay source-address string
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	configure service ies string subscriber-interface string ipv6 ipoe-bridged-mode boolean
Tree	ipoe-bridged-mode
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-local-address

Synopsis	Enter the link-local-address context
Context	configure service ies string subscriber-interface string ipv6 link-local-address
Tree	link-local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis	IPv6 link local address
Context	configure service ies string subscriber-interface string ipv6 link-local-address address string
Tree	address

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix [ipv6-prefix] *string*

Synopsis Enter the **prefix** list instance
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*
Tree [prefix](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-prefix] *string*

Synopsis IPv6 address for a router interface
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*
Tree [prefix](#)
Notes This element is part of a list key.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis Time to wait before route accepts new state attribute
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string* [holdup-time](#) *number*
Tree [holdup-time](#)
Range 100 to 5000
Units milliseconds
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 prefix <i>string</i> host-type <i>keyword</i>
Tree	host-type
Options	pd, wan, pd-wan
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 prefix <i>string</i> track-srrp <i>number</i>
Tree	track-srrp
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisements

Synopsis	Enter the router-advertisements context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements force-mcast <i>keyword</i>
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds

Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the options context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i>
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the dns context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
----------	------------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options dns include-rdnss <i>boolean</i>
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime (*number* | *keyword*)

Synopsis	Maximum time for the RDNSS address to remain valid
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options dns rdnss-lifetime (<i>number</i> <i>keyword</i>)
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options managed-configuration <i>boolean</i>
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options mtu (<i>number</i> <i>keyword</i>)
Tree	mtu

Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options other-stateful-configuration <i>boolean</i>
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options reachable-time <i>number</i>
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options retransmit-timer <i>number</i>
Tree	retransmit-timer
Range	0 to 1800000

Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime (*number* | *keyword*)

Synopsis	Router lifetime
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>)
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the prefix-options context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options autonomous <i>boolean</i>
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options on-link <i>boolean</i>
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime (*number* | *keyword*)

Synopsis	Time for a prefix to remain preferred
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>)
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>)
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicit

Synopsis	Enter the router-solicit context
Context	configure service ies string subscriber-interface string ipv6 router-solicit
Tree	router-solicit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
Context	configure service ies string subscriber-interface string ipv6 router-solicit inactivity-timer (<i>number</i> <i>keyword</i>)
Tree	inactivity-timer
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enter the local-address-assignment context
Context	configure service ies string subscriber-interface string local-address-assignment
Tree	local-address-assignment
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	configure service ies string subscriber-interface string local-address-assignment admin-state keyword
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Request local addresses for PPP IPCP hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 client-applications ppp <i>boolean</i>
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis	Default pools
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 default-pool <i>string</i>

Tree	default-pool
String Length	1 to 32
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server reference

Synopsis	Local DHCPv4 server for local pools management
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 server reference
Tree	server
Reference	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the ipv6 context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the client-applications context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-slaac *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-slaac <i>boolean</i>
Tree	ipoe-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-wan *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i>
Tree	ipoe-wan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-slaac *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i>
Tree	ppp-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *reference*

Synopsis	Local DHCPv6 server for local pools management
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 server <i>reference</i>
Tree	server
Reference	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the pppoe context
Context	configure service ies string subscriber-interface string pppoe
Tree	pppoe
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service ies string subscriber-interface string pppoe description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis	Maximum PPPoE sessions
Context	configure service ies string subscriber-interface string pppoe session-limit number
Tree	session-limit
Range	1 to 333823
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wan-mode *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mode of operation for hosts with /128 WAN IPv6 address
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wan-mode <i>keyword</i>
Tree	wan-mode
Options	mode64, mode128
Default	mode64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enable the wlan-gw context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-manager

Synopsis	Enter the pool-manager context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager
Tree	pool-manager
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6-client

Synopsis	Enter the dhcp6-client context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client
Tree	dhcp6-client
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcpv4-nat

Synopsis	Enter the dhcpv4-nat context
----------	-------------------------------------

Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat
Tree	dhcpv4-nat
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	IPv6 address in the link address field of relay header
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat link-address <i>string</i>
Tree	link-address
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-name *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat pool-name <i>string</i>
Tree	pool-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ia-na

Synopsis	Enter the ia-na context
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na
Tree	ia-na
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	IPv6 address in the link address field of relay header
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na link-address string
Tree	link-address
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-name *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na pool-name string
Tree	pool-name

String Length 1 to 32
Introduced 16.0.R1
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lease-query

Synopsis Enable the **lease-query** context
Context **configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client lease-query**
Tree [lease-query](#)
Introduced 16.0.R1
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-retries *number*

Synopsis Retries before lease query assumes no allocated subnets
Context **configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client lease-query max-retries number**
Tree [max-retries](#)
Range 0 to 10
Default 2
Introduced 16.0.R1
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

servers *string*

Synopsis DHCPv6 servers that are used for requesting addresses
Context **configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client servers string**
Tree [servers](#)
Max. Instances 8
Introduced 16.0.R1
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

slaac

Synopsis	Enter the slaac context
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac
Tree	slaac
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	IPv6 address in the link address field of relay header
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac link-address string
Tree	link-address
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-name *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac pool-name string
Tree	pool-name
String Length	1 to 32

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-ip (*keyword* | *ipv6-address*)

Synopsis	Source IP address that is used by the DHCPv6 client
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client source-ip (<i>keyword</i> <i>ipv6-address</i>)
Tree	source-ip
Options	use-interface-ip
Default	use-interface-ip
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enter the watermarks context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark when new prefix is allocated
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks high <i>number</i>
Tree	high
Range	51 to 99
Default	95
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark when unused prefix is released
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks low <i>number</i>
Tree	low
Range	50 to 98
Default	90
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group reference

Synopsis	ID of WLAN gateway group where prefixes are installed
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager wlan-gw-group <i>reference</i>
Tree	wlan-gw-group
Reference	configure isa wlan-gw-group <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundancy

Synopsis	Enter the redundancy context
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw redundancy
Tree	redundancy
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of WLAN-GW redundancy
Context	configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw redundancy admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Route to export to peer
 Context **configure** service ies string subscriber-interface string wlan-gw redundancy export string
 Tree export
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Peer route to monitor
 Context **configure** service ies string subscriber-interface string wlan-gw redundancy monitor string
 Tree monitor
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-mgmt

Synopsis Enter the **subscriber-mgmt** context
 Context **configure** service ies string subscriber-mgmt
 Tree subscriber-mgmt
 Introduced 22.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-id *number*

Synopsis	Shunt ID for a pair of resilient nodes
Context	configure service ies <i>string subscriber-mgmt multi-chassis-shunt-id number</i>
Tree	multi-chassis-shunt-id
Description	<p>This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node.</p> <p>This configuration is required for BNG CUPS inter-UPF resiliency shunting, but not for non-BNG CUPS shunting. However, when configured, it is also used for shunting non-BNG CUPS sessions in the same service.</p>
Range	1 to 8191
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up-resiliency

Synopsis	Enter the up-resiliency context
Context	configure service ies <i>string subscriber-mgmt up-resiliency</i>
Tree	up-resiliency
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [[oper-group](#)] *reference*

Synopsis	Enter the monitor-oper-group list instance
Context	configure service ies <i>string subscriber-mgmt up-resiliency monitor-oper-group reference</i>
Tree	monitor-oper-group

Description

Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).

Note:

The following is only applicable for the **configure service vpls capture-sap** context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.

Max. Instances	4
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[oper-group] reference

Synopsis	Operational group name
Context	configure service ies string subscriber-mgmt up-resiliency monitor-oper-group reference
Tree	monitor-oper-group
Reference	configure service oper-group string
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

health-drop number

Synopsis	Number subtracted from the health value per failure
Context	configure service ies string subscriber-mgmt up-resiliency monitor-oper-group reference health-drop number
Tree	health-drop
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 255
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

video-interface [interface-name] string

Synopsis	Enter the video-interface list instance
Context	configure service ies string video-interface string
Tree	video-interface
Max. Instances	9

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[interface-name] *string*

Synopsis	Video interface name
Context	configure service ies <i>string</i> video-interface <i>string</i>
Tree	video-interface
String Length	1 to 29
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

accounting-policy *reference*

Synopsis	Accounting Policy
Context	configure service ies <i>string</i> video-interface <i>string</i> accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

address [[ip-address](#)] *string*

Synopsis	Add a list entry for address
Context	configure service ies <i>string</i> video-interface <i>string</i> address <i>string</i>
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

[ip-address] string

Synopsis	IPv4 address for the video interface within the service
Context	configure service ies string video-interface string address string
Tree	address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

adi**WARNING:**

This element is deprecated and will be removed in a future release.

Synopsis	Enter the adi context
Context	configure service ies string video-interface string adi
Tree	adi
Introduced	16.0.R1

agg-rate

Synopsis Enter the **agg-rate** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#)

Tree [agg-rate](#)

Introduced 20.10.R1

Platforms All

adaptation-rule *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Options max, min, closest

Default closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

burst-limit (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Units bytes

Options auto

Default auto

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	configure service ipipe <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i>
Tree	limit-unused-bandwidth
Default	false
Introduced	20.10.R1
Platforms	All

rate *number*

Synopsis	Enforced aggregate rate for all queues
Context	configure service ipipe <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i>
Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	All

filter

Synopsis	Enter the filter context
Context	configure service ipipe <i>string</i> sap <i>string</i> egress filter
Tree	filter
Introduced	20.10.R1
Platforms	All

ip *reference*

Synopsis	MAC filter ID
Context	configure service ipipe <i>string</i> sap <i>string</i> egress filter ip <i>reference</i>
Tree	ip
Reference	configure filter ip-filter <i>string</i>
Introduced	20.10.R1
Platforms	All

ipv6 reference

Synopsis	IPv6 filter identifier
Context	configure service ipipe <i>string</i> sap <i>string</i> egress filter ipv6 reference
Tree	ipv6
Reference	configure filter ipv6-filter <i>string</i>
Introduced	20.10.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos
Tree	qos
Introduced	20.10.R1
Platforms	All

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos policer-control-policy
Tree	policer-control-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

overrides

Synopsis	Enable the overrides context
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

root

Synopsis	Enter the root context
Context	configure service ipipe string sap string egress qos policer-control-policy overrides root

hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference hs-class-weight number</i>
Tree	hs-class-weight
Range	1 2 4 8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the hs-wred-queue context
Context	configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference hs-wred-queue</i>
Tree	hs-wred-queue
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue policy reference
Tree	policy
Reference	configure qos slope-policy <i>string</i>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis	WRR weight to parent with the queue into the scheduler
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wrr-weight <i>number</i>
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
----------	---

Context	configure service ipipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth
Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service ipipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure service ipipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number
Tree	violation-threshold
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure service ipipe string sap string egress qos sap-egress overrides queue reference parent
Tree	parent
Introduced	20.10.R1

Platforms All

cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [parent](#) **cir-weight** *number*

Tree	scheduler
Introduced	20.10.R1
Platforms	All

[scheduler-name] string

Synopsis	Scheduler name
Context	configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string parent

Tree	scheduler
Introduced	20.10.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service ipipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	configure service ipipe <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i>
Tree	link-map-profile
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration. If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64
Introduced	20.10.R1
Platforms	All

service-mtu *number*

Synopsis	MTU size
Context	configure service ipipe <i>string service-mtu number</i>
Tree	service-mtu

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

match

Synopsis	Enter the match context
Context	configure service mrp policy <i>string</i> entry <i>number</i> match
Tree	match
Introduced	20.10.R1
Platforms	All

isid [[value](#)] *number*

Synopsis	Enter the isid list instance
Context	configure service mrp policy <i>string</i> entry <i>number</i> match isid <i>number</i>
Tree	isid
Introduced	20.10.R1
Platforms	All

[[value](#)] *number*

Synopsis	Lowest service instance ID to match the entry
Context	configure service mrp policy <i>string</i> entry <i>number</i> match isid <i>number</i>
Tree	isid
Range	0 to 16777215

Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

higher-value *number*

Synopsis	Highest service instance ID to match the entry
Context	configure service mrp policy string entry number match isid number higher-value number
Tree	higher-value
Range	0 to 16777215
Introduced	20.10.R1
Platforms	All

scope *keyword*

Synopsis	Specify the scope of the mrp-policy definition
Context	configure service mrp policy string scope keyword
Tree	scope
Options	exclusive, template
Default	template
Introduced	20.10.R1
Platforms	All

nat

Synopsis	Enter the nat context
Context	configure service nat
Tree	nat
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classifier [[name](#)] *string*

Synopsis	Enter the classifier list instance
----------	---

Context	configure service nat classifier <i>string</i>
Tree	classifier
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	NAT classifier name
Context	configure service nat classifier <i>string</i>
Tree	classifier
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default

Synopsis	Enter the default context
Context	configure service nat classifier <i>string</i> default
Tree	default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the action context
Context	configure service nat classifier <i>string</i> default action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

destination-nat

Synopsis	Enable the destination-nat context
Context	configure service nat classifier <i>string</i> default action destination-nat
Tree	destination-nat
Notes	The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward .
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	Substitute destination IP address of matching packets
Context	configure service nat classifier <i>string</i> default action destination-nat ip-address <i>string</i>
Tree	ip-address
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forward

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Forward mode of operation
Context	configure service nat classifier <i>string</i> default action forward
Tree	forward
Notes	The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dnat-ip-address *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Default destination IP address for matching entries with dNAT action
----------	--

Context	configure service nat classifier <i>string</i> default dnat-ip-address <i>string</i>
Tree	dnat-ip-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat classifier <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [*id*] *number*

Synopsis	Enter the entry list instance
Context	configure service nat classifier <i>string</i> entry <i>number</i>
Tree	entry
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] *number*

Synopsis	Classifier rule entry ID
Context	configure service nat classifier <i>string</i> entry <i>number</i>
Tree	entry
Range	1 to 1000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the action context
Context	configure service nat classifier <i>string entry number action</i>
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

destination-nat

Synopsis	Enable the destination-nat context
Context	configure service nat classifier <i>string entry number action destination-nat</i>
Tree	destination-nat
Notes	The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward .
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	Replacement destination IP address for packets
Context	configure service nat classifier <i>string entry number action destination-nat ip-address string</i>
Tree	ip-address
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forward

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Forward mode of operation
Context	configure service nat classifier <i>string entry number action forward</i>
Tree	forward
Notes	The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward .

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [service](#) [nat](#) [classifier](#) *string* [entry](#) *number* [description](#) *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis Enter the **match** context
 Context **configure** [service](#) [nat](#) [classifier](#) *string* [entry](#) *number* [match](#)
 Tree [match](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port-range

Synopsis Enter the **dst-port-range** context
 Context **configure** [service](#) [nat](#) [classifier](#) *string* [entry](#) *number* [match](#) [dst-port-range](#)
 Tree [dst-port-range](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Upper bound of the port range
 Context **configure** [service](#) [nat](#) [classifier](#) *string* [entry](#) *number* [match](#) [dst-port-range](#) [end](#) *number*
 Tree [end](#)

Range	0 1 to 65535
Default	65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Lower bound of the port range
Context	configure service nat classifier <i>string</i> entry number match dst-port-range start number
Tree	start
Range	0 1 to 65535
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-ip-address string**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Foreign IP address as the match criterion
Context	configure service nat classifier <i>string</i> entry number match foreign-ip-address <i>string</i>
Tree	foreign-ip-address
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol keyword**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	IP protocol to match
Context	configure service nat classifier <i>string</i> entry number match protocol <i>keyword</i>
Tree	protocol

Options	tcp, udp
Default	udp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deterministic-script

Synopsis	Enter the deterministic-script context
Context	configure service nat deterministic-script
Tree	deterministic-script
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

location string

Synopsis	Remote location where Python script is exported
Context	configure service nat deterministic-script location string
Tree	location
String Length	1 to 180
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

firewall-policy [name] string

Synopsis	Enter the firewall-policy list instance
Context	configure service nat firewall-policy string
Tree	firewall-policy
Description	Commands in this context configure the attributes of the firewall policy, for use in contexts where basic protection from outside attack vectors is required. Firewall policies cannot be deleted if they are in use.
Max. Instances	2048
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Firewall policy name
Context	configure service nat firewall-policy string
Tree	firewall-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

alg

Synopsis	Enter the alg context
Context	configure service nat firewall-policy string alg
Tree	alg
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ftp *boolean*

Synopsis	Use FTP ALG for the policy
Context	configure service nat firewall-policy string alg ftp boolean
Tree	ftp
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtsp *boolean*

Synopsis	Use RTSP ALG for the policy
Context	configure service nat firewall-policy string alg rtsp boolean
Tree	rtsp
Description	When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip *boolean*

Synopsis	Use SIP ALG for the policy
Context	configure service nat firewall-policy <i>string alg sip boolean</i>
Tree	sip
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat firewall-policy <i>string description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

domain

Synopsis	Enter the domain context
Context	configure service nat firewall-policy <i>string domain</i>
Tree	domain
Description	Commands in this context configure the attributes of the domain for the firewall policy. All associated traffic must be part of the prefixes specified by this domain.
Notes	The following elements are part of a choice: domain or I2-outside .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Firewall domain name
Context	configure service nat firewall-policy <i>string</i> domain name <i>string</i>
Tree	name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router or VPRN service name
Context	configure service nat firewall-policy <i>string</i> domain router-instance <i>string</i>
Tree	router-instance
Description	This command specifies the router instance or VPRN service for this domain. All associated traffic must be part of the prefixes specified by this domain.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

filtering *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	configure service nat firewall-policy <i>string</i> filtering <i>keyword</i>
Tree	filtering
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-outside

Synopsis	Use Layer 2 outside service address location
Context	configure service nat firewall-policy <i>string</i> I2-outside
Tree	I2-outside
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.

Notes	The following elements are part of a choice: domain or I2-outside .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-limits

Synopsis	Enter the port-limits context
Context	configure service nat firewall-policy string port-limits
Tree	port-limits
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	configure service nat firewall-policy string port-limits forwarding number
Tree	forwarding
Range	1 to 64
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority-sessions

Synopsis	Enter the priority-sessions context
Context	configure service nat firewall-policy string priority-sessions
Tree	priority-sessions
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

fc

Synopsis	Enter the fc context
Context	configure service nat firewall-policy string priority-sessions fc
Tree	fc

Description	Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

af boolean

Synopsis	Prioritize traffic from AF forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc af boolean
Tree	af
Description	When configured to true , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to false , AF traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

be boolean

Synopsis	Prioritize traffic from BE forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc be boolean
Tree	be
Description	When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ef boolean

Synopsis	Prioritize traffic from EF forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc ef boolean
Tree	ef
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

h1 *boolean*

Synopsis	Prioritize traffic from H1 forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc h1 <i>boolean</i>
Tree	h1
Description	When configured to true , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

h2 *boolean*

Synopsis	Prioritize traffic from H2 forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc h2 <i>boolean</i>
Tree	h2
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l1 *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc l1 <i>boolean</i>
Tree	l1
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Prioritize traffic from L2 forwarding classes
Context	configure service nat firewall-policy <i>string</i> priority-sessions fc l2 <i>boolean</i>
Tree	l2

Description	When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nc boolean

Synopsis	Prioritize traffic from NC forwarding classes
Context	configure service nat firewall-policy string priority-sessions fc nc boolean
Tree	nc
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat firewall-policy string session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum number of sessions per subscriber
Context	configure service nat firewall-policy string session-limits max number
Tree	max
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved number

Synopsis	Number of sessions reserved for prioritized sessions
Context	configure service nat firewall-policy string session-limits reserved number
Tree	reserved
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat firewall-policy string session-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis	High watermark percentage
Context	configure service nat firewall-policy string session-limits watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
----------	--------------------------

Context	configure service nat firewall-policy string session-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure service nat firewall-policy string tcp
Tree	tcp
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mss-adjust number

Synopsis	TCP MSS adjustment value
Context	configure service nat firewall-policy string tcp mss-adjust number
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat firewall-policy string timeouts

Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6-query *number*

Synopsis	Timeout applied to an ICMPv6 Query session
Context	configure service nat firewall-policy <i>string</i> timeouts icmp6-query <i>number</i>
Tree	icmp6-query
Range	60 to 240
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip *number*

Synopsis	SIP inactive media timeout
Context	configure service nat firewall-policy <i>string</i> timeouts sip <i>number</i>
Tree	sip
Range	10 to 7200
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure service nat firewall-policy <i>string</i> timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat firewall-policy <i>string</i> timeouts tcp established <i>number</i>
Tree	established
Range	60 to 86400
Units	seconds
Default	7440
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rst *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	configure service nat firewall-policy <i>string</i> timeouts tcp rst <i>number</i>
Tree	rst
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

syn *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat firewall-policy <i>string</i> timeouts tcp syn <i>number</i>
Tree	syn
Range	6 to 86400
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

time-wait *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat firewall-policy string timeouts tcp time-wait number
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat firewall-policy string timeouts tcp transitory number
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat firewall-policy string timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns *number*

Synopsis	Timeout applied to UDP session with destination port 53
----------	---

Context	configure service nat firewall-policy string timeouts udp dns number
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat firewall-policy string timeouts udp initial number
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

normal number

Synopsis	UDP mapping timeout
Context	configure service nat firewall-policy string timeouts udp normal number
Tree	normal
Range	60 to 86400
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

unknown-protocol number

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Timeout for flows with an unknown protocol
Context	configure service nat firewall-policy string timeouts unknown-protocol number
Tree	unknown-protocol
Range	60 to 86400
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat firewall-policy string udp
Tree	udp
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat firewall-policy string udp inbound-refresh boolean
Tree	inbound-refresh
Description	When configured to true , this command extends the UDP session timeout on inbound traffic. When configured to false , the UDP session timeout is not extended.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

unknown-protocols

Synopsis	Enter the unknown-protocols context
Context	configure service nat firewall-policy string unknown-protocols
Tree	unknown-protocols

Description	Commands in this context configure the treatment of flows of unknown Layer 4 protocols that cannot be natively handled by the system.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Allow all protocols to create unknown flows
Context	configure service nat firewall-policy <i>string</i> unknown-protocols all
Tree	all
Description	This command specifies that all protocols are permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS are not treated as unknown protocols.
Notes	The following elements are part of a choice: all or protocol .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol *number*

Synopsis	IANA number of protocol allowed to create unknown flow
Context	configure service nat firewall-policy <i>string</i> unknown-protocols protocol <i>number</i>
Tree	protocol
Description	This command specifies the Internet Assigned Numbers Authority (IANA) number of a protocol that is permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS can be configured but are not treated as unknown protocols.
Range	0 to 255
Max. Instances	8
Notes	The following elements are part of a choice: all or protocol .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

map-t

Synopsis	Enter the map-t context
Context	configure service nat map-t

Tree	map-t
Introduced	16.0.R4
Platforms	VSR

domain [[name](#)] *string*

Synopsis	Enter the domain list instance
Context	configure service nat map-t domain <i>string</i>
Tree	domain
Max. Instances	63
Introduced	16.0.R4
Platforms	VSR

[name] *string*

Synopsis	MAP domain name
Context	configure service nat map-t domain <i>string</i>
Tree	domain
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of the MAP domain
Context	configure service nat map-t domain <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR

description *string*

Synopsis	Text description
Context	configure service nat map-t domain <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	VSR

dmr-prefix *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The Default Mapping Rule prefix
Context	configure service nat map-t domain <i>string</i> dmr-prefix <i>string</i>
Tree	dmr-prefix
Introduced	16.0.R4
Platforms	VSR

ip-fragmentation

Synopsis	Enter the ip-fragmentation context
Context	configure service nat map-t domain <i>string</i> ip-fragmentation
Tree	ip-fragmentation
Introduced	16.0.R4
Platforms	VSR

v6-frag-header *boolean*

Synopsis	Enable insertion of fragmentation header in IPv6 packet
Context	configure service nat map-t domain <i>string</i> ip-fragmentation v6-frag-header <i>boolean</i>
Tree	v6-frag-header
Default	false
Introduced	16.0.R4
Platforms	VSR

mapping-rule [[rule-name](#)] *string*

Synopsis	Enter the mapping-rule list instance
Context	configure service nat map-t domain <i>string</i> mapping-rule <i>string</i>
Tree	mapping-rule
Max. Instances	16383
Introduced	16.0.R4
Platforms	VSR

[rule-name] *string*

Synopsis	The name that identifies this mapping rule
Context	configure service nat map-t domain <i>string</i> mapping-rule <i>string</i>
Tree	mapping-rule
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of the MAP rule
Context	configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR

description *string*

Synopsis	Text description
Context	configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> description <i>string</i>
Tree	description

String Length 1 to 80
 Introduced 16.0.R4
 Platforms VSR

ea-length *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The length of the EA bits field in the End-user IPv6 prefix part of the IPv6 Map Address
 Context **configure** [service nat map-t domain string mapping-rule string ea-length number](#)
 Tree [ea-length](#)
 Range 0 to 48
 Default 0
 Introduced 16.0.R4
 Platforms VSR

ipv4-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The IPv4 prefix
 Context **configure** [service nat map-t domain string mapping-rule string ipv4-prefix string](#)
 Tree [ipv4-prefix](#)
 Introduced 16.0.R4
 Platforms VSR

psid-offset *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The offset of the Port Set ID (PSID) within a 16 bits wide port space
 Context **configure** [service nat map-t domain string mapping-rule string psid-offset number](#)

Tree	psid-offset
Range	0 to 16
Default	6
Introduced	16.0.R4
Platforms	VSR

rule-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The IPv6 prefix
Context	configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> rule-prefix <i>string</i>
Tree	rule-prefix
Introduced	16.0.R4
Platforms	VSR

mtu *number*

Synopsis	Configure the MTU
Context	configure service nat map-t domain <i>string</i> mtu <i>number</i>
Tree	mtu
Range	160 to 8686
Default	8686
Introduced	16.0.R4
Platforms	VSR

tcp-mss-adjust *number*

Synopsis	The value to adjust the TCP Maximum Segment Size (MSS) option
Context	configure service nat map-t domain <i>string</i> tcp-mss-adjust <i>number</i>
Tree	tcp-mss-adjust
Range	0 160 to 8626
Default	0
Introduced	16.0.R4

Platforms VSR

nat-policy [*name*] *string*

Synopsis Enter the **nat-policy** list instance
Context **configure service nat nat-policy** *string*
Tree [nat-policy](#)
Max. Instances 4096
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis NAT policy name
Context **configure service nat nat-policy** *string*
Tree [nat-policy](#)
String Length 1 to 32
Notes This element is part of a list key.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

alg

Synopsis Enter the **alg** context
Context **configure service nat nat-policy** *string* **alg**
Tree [alg](#)
Description Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ftp *boolean*

Synopsis Use FTP ALG for the policy
Context **configure service nat nat-policy** *string* **alg ftp** *boolean*

Tree	ftp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pptp *boolean*

Synopsis	Use PPTP ALG for the policy
Context	configure service nat nat-policy <i>string alg pptp boolean</i>
Tree	pptp
Description	<p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to false, PPTP ALG is not used.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtsp *boolean*

Synopsis	Use RTSP ALG for the policy
Context	configure service nat nat-policy <i>string alg rtsp boolean</i>
Tree	rtsp
Description	When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip *boolean*

Synopsis	Use SIP ALG for the policy
Context	configure service nat nat-policy <i>string alg sip boolean</i>
Tree	sip

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-limit *number*

Synopsis	Maximum number of port blocks per subscriber
Context	configure service nat nat-policy <i>string</i> block-limit <i>number</i>
Tree	block-limit
Range	1 to 40
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat nat-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dnat

Synopsis	Enter the dnat context
Context	configure service nat nat-policy <i>string</i> dnat
Tree	dnat
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classifier *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT classifier
Context	configure service nat nat-policy <i>string</i> dnat classifier <i>reference</i>
Tree	classifier
Description	When configured within the NAT policy, this command references a NAT classifier that activates DNAT functionality. The configuration uses a filter-like approach to identify the traffic that is subjected to DNAT. It is required for translation of the destination IP address.
Reference	configure service nat classifier <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dnat-only

Synopsis	Enable the dnat-only context
Context	configure service nat nat-policy <i>string</i> dnat-only
Tree	dnat-only
Description	Commands in this context configure the attributes of DNAT-only. When DNAT-only is configured, no source or port NAT (SNAPT) is performed. Only the destination IP address (going from inside to outside) is translated; the source IP address and port are not translated.
Notes	The following elements are part of a choice: dnat-only , l2-outside , or pool .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group
Context	configure service nat nat-policy <i>string</i> dnat-only nat-group <i>reference</i>
Tree	nat-group
Description	This command configures the NAT group in which DNAT translation takes place for the outside routing context.

Reference	configure isa nat-group number
Notes	The following elements are part of a mandatory choice: nat-group or wlan-gw-group .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	configure service nat nat-policy string dnat-only router-instance string
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	configure service nat nat-policy string dnat-only wlan-gw-group reference
Tree	wlan-gw-group
Description	This command configures the NAT WLAN Gateway (GW) group in which DNAT translation takes place for the outside routing context.
Reference	configure isa wlan-gw-group number
Notes	The following elements are part of a mandatory choice: nat-group or wlan-gw-group .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

filtering *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	configure service nat nat-policy <i>string</i> filtering <i>keyword</i>
Tree	filtering
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-log-policy

Synopsis	Enter the flow-log-policy context
Context	configure service nat nat-policy <i>string</i> flow-log-policy
Tree	flow-log-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipfix *reference*

Synopsis	IPFIX export policy
Context	configure service nat nat-policy <i>string</i> flow-log-policy ipfix <i>reference</i>
Tree	ipfix
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	configure service ipfix export-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

syslog *reference*

Synopsis	Syslog export policy name
Context	configure service nat nat-policy <i>string</i> flow-log-policy syslog <i>reference</i>
Tree	syslog
Description	This command configures a syslog export policy with a set of transport parameters used to transmit NAT flow records in syslog format to an external collector node. The policy name is referenced from the NAT policy applied to an inside routing context.

Reference	configure service nat syslog export-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-outside

Synopsis	Use Layer 2 outside service address location
Context	configure service nat nat-policy <i>string</i> I2-outside
Tree	I2-outside
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.
Notes	The following elements are part of a choice: dnat-only , I2-outside , or pool .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Enter the pool context
Context	configure service nat nat-policy <i>string</i> pool
Tree	pool
Notes	The following elements are part of a choice: dnat-only , I2-outside , or pool .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT pool name
Context	configure service nat nat-policy <i>string</i> pool name <i>string</i>
Tree	name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router or VPRN service name
Context	configure service nat nat-policy <i>string</i> pool router-instance <i>string</i>
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-forwarding-range-end *number*

Synopsis	End of the port forwarding range
Context	configure service nat nat-policy <i>string</i> port-forwarding-range-end <i>number</i>
Tree	port-forwarding-range-end
Description	<p>This command specifies the end of the port range available for port forwarding. The start of the range is always equal to one.</p> <p>The number of ports that can be configured is half of the available block => $64512 / 2 = 32256$. In combination with the configured value for port-forwarding-range-end, the formulas are:</p> <p>max port-reservation blocks = $65535 - \text{port-forwarding-range-end}$</p> <p>max port-reservation ports = $(65535 - \text{port-forwarding-range-end}) / 2$</p> <p>If port-reservation is already configured, the following applies for the maximum port-forwarding-range-end:</p> <p>max port-forwarding-range-end = $65535 - \text{port-reservation blocks}$</p> <p>max port-forwarding-range-end = $65535 - (\text{port-reservation ports} * 2)$</p>
Range	1023 to 65535
Default	1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-limits

Synopsis	Enter the port-limits context
Context	configure service nat nat-policy <i>string</i> port-limits
Tree	port-limits

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	configure service nat nat-policy <i>string port-limits forwarding number</i>
Tree	forwarding
Range	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of ports reserved for prioritized sessions
Context	configure service nat nat-policy <i>string port-limits reserved number</i>
Tree	reserved
Description	This command configures the number of ports per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy <i>string port-limits watermarks</i>
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark percentage
----------	---------------------------

Context	configure service nat nat-policy <i>string</i> port-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Low watermark percentage
Context	configure service nat nat-policy <i>string</i> port-limits watermarks low <i>number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority-sessions

Synopsis	Enter the priority-sessions context
Context	configure service nat nat-policy <i>string</i> priority-sessions
Tree	priority-sessions
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fc

Synopsis	Enter the fc context
Context	configure service nat nat-policy <i>string</i> priority-sessions fc

Tree	fc
Description	Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

af boolean

Synopsis	Prioritize traffic from AF forwarding classes
Context	configure service nat nat-policy <i>string</i> priority-sessions fc af boolean
Tree	af
Description	When configured to true , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to false , AF traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

be boolean

Synopsis	Prioritize traffic from BE forwarding classes
Context	configure service nat nat-policy <i>string</i> priority-sessions fc be boolean
Tree	be
Description	When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ef boolean

Synopsis	Prioritize traffic from EF forwarding classes
Context	configure service nat nat-policy <i>string</i> priority-sessions fc ef boolean
Tree	ef
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h1 *boolean*

Synopsis Prioritize traffic from H1 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc h1** *boolean*

Tree [h1](#)

Description When configured to **true**, traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h2 *boolean*

Synopsis Prioritize traffic from H2 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc h2** *boolean*

Tree [h2](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l1 *boolean*

Synopsis Prioritize traffic from L1 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc l1** *boolean*

Tree [l1](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis Prioritize traffic from L2 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc l2** *boolean*

Tree	l2
Description	When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nc boolean

Synopsis	Prioritize traffic from NC forwarding classes
Context	configure service nat nat-policy string priority-sessions fc nc <i>boolean</i>
Tree	nc
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat nat-policy string session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis	Maximum number of sessions per subscriber
Context	configure service nat nat-policy string session-limits max <i>number</i>
Tree	max
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	configure service nat nat-policy <i>string</i> session-limits reserved <i>number</i>
Tree	reserved
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure service nat nat-policy <i>string</i> session-limits watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark percentage
Context	configure service nat nat-policy <i>string</i> session-limits watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
Context	configure service nat nat-policy string session-limits watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure service nat nat-policy string tcp
Tree	tcp
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mss-adjust number

Synopsis	TCP MSS adjustment value
Context	configure service nat nat-policy string tcp mss-adjust number
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reset-unknown *boolean*

Synopsis	Generate TCP reset for packets from unknown flows
Context	configure service nat nat-policy <i>string</i> tcp reset-unknown <i>boolean</i>
Tree	reset-unknown
Description	When configured to true , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow. When configured to false , no TCP reset is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat nat-policy <i>string</i> timeouts
Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-query *number*

Synopsis	Timeout applied to an ICMP Query session
Context	configure service nat nat-policy <i>string</i> timeouts icmp-query <i>number</i>
Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip *number*

Synopsis	SIP inactive media timeout
Context	configure service nat nat-policy <i>string</i> timeouts sip <i>number</i>

Tree	sip
Range	10 to 7200
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-retention *number*

Synopsis	IP address hold time after host and port blocks expire
Context	configure service nat nat-policy <i>string</i> timeouts subscriber-retention <i>number</i>
Tree	subscriber-retention
Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Units	minutes
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure service nat nat-policy <i>string</i> timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat nat-policy <i>string</i> timeouts tcp established <i>number</i>
Tree	established

Range	60 to 86400
Units	seconds
Default	7440
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rst number

Synopsis	Suspend time for TCP connection ports closed by RST
Context	configure service nat nat-policy string timeouts tcp rst number
Tree	rst
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

syn number

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat nat-policy string timeouts tcp syn number
Tree	syn
Range	6 to 86400
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time-wait number

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat nat-policy string timeouts tcp time-wait number

Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat nat-policy <i>string</i> timeouts tcp transitory <i>number</i>
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy <i>string</i> timeouts udp
Tree	udp
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns *number*

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat nat-policy <i>string</i> timeouts udp dns <i>number</i>
Tree	dns
Range	15 to 86400
Units	seconds

Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat nat-policy <i>string</i> timeouts udp initial number
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

normal number

Synopsis	UDP mapping timeout
Context	configure service nat nat-policy <i>string</i> timeouts udp normal number
Tree	normal
Range	60 to 86400
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat nat-policy <i>string</i> udp
Tree	udp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat nat-policy <i>string</i> udp inbound-refresh <i>boolean</i>
Tree	inbound-refresh
Description	When configured to true , this command extends the UDP session timeout on inbound traffic. When configured to false , the UDP session timeout is not extended.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pcp-server-policy [*name*] *string*

Synopsis	Enter the pcp-server-policy list instance
Context	configure service nat pcp-server-policy <i>string</i>
Tree	pcp-server-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	PCP server policy name
Context	configure service nat pcp-server-policy <i>string</i>
Tree	pcp-server-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat pcp-server-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lifetime

Synopsis Enter the **lifetime** context
Context **configure service nat pcp-server-policy** *string lifetime*
Tree [lifetime](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis Maximum lifetime of explicit mappings made by the PCP servers
Context **configure service nat pcp-server-policy** *string lifetime maximum number*
Tree [maximum](#)
Range 61 to 86400
Default 86400
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum *number*

Synopsis Minimum lifetime of explicit mappings made by the PCP servers
Context **configure service nat pcp-server-policy** *string lifetime minimum number*
Tree [minimum](#)
Range 60 to 86399
Default 120
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-description-size *number*

Synopsis Maximum length of mapping descriptions made by the PCP servers
Context **configure service nat pcp-server-policy** *string max-description-size number*

Tree	max-description-size
Range	1 to 64
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opcode

Synopsis	Enter the opcode context
Context	configure service nat pcp-server-policy <i>string</i> opcode
Tree	opcode
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

announce *boolean*

Synopsis	Process the announce PCP requests
Context	configure service nat pcp-server-policy <i>string</i> opcode announce <i>boolean</i>
Tree	announce
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

get *boolean*

Synopsis	Process the get PCP requests
Context	configure service nat pcp-server-policy <i>string</i> opcode get <i>boolean</i>
Tree	get
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

map *boolean*

Synopsis	Process the map PCP requests
----------	------------------------------

Context	configure service nat pcp-server-policy <i>string opcode map boolean</i>
Tree	map
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

option

Synopsis	Enter the option context
Context	configure service nat pcp-server-policy <i>string option</i>
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *boolean*

Synopsis	Text description
Context	configure service nat pcp-server-policy <i>string option description boolean</i>
Tree	description
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

next *boolean*

Synopsis	Process the PCP requests that contain the next option
Context	configure service nat pcp-server-policy <i>string option next boolean</i>
Tree	next
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-reservation *boolean*

Synopsis	Process the PCP requests that contain the prefer failure option
----------	---

Context	configure service nat pcp-server-policy <i>string</i> option port-reservation <i>boolean</i>
Tree	port-reservation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-set *boolean*

Synopsis	Support the PORT_SET option in PCP MAP requests
Context	configure service nat pcp-server-policy <i>string</i> option port-set <i>boolean</i>
Tree	port-set
Description	<p>When configured to true, the PCP MAP option optimizes PCP performance for applications that require multiple sets of port forwards. A range of consecutive port forwards can be requested by the PCP client with a single PCP request.</p> <p>When configured to false, the default behavior is applied, where a plain MAP option is used to allocate a single port in a single request.</p>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefer-failure *boolean*

Synopsis	Process the PCP requests that contain the port reservation option
Context	configure service nat pcp-server-policy <i>string</i> option prefer-failure <i>boolean</i>
Tree	prefer-failure
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

third-party *boolean*

Synopsis	Process the PCP requests that contain the third party option
Context	configure service nat pcp-server-policy <i>string</i> option third-party <i>boolean</i>
Tree	third-party
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reuse-external-ip-address *boolean*

Synopsis Reuse external IP address for NAT subscriber

Context **configure service nat pcp-server-policy** *string reuse-external-ip-address boolean*

Tree [reuse-external-ip-address](#)

Description When configured to **true**, the system reuses the external IP address assigned to a subscriber when the requested well-known port or external IP mapping is not available.

When configured to **false**, a request for a well-known port is allocated as requested on a different external IP address if the port is already allocated to another subscriber sharing the same external IP address. The existing external IP address is initially allocated to the subscriber as a result of the initial traffic flow.

This configuration flag can be set dynamically but the flag affects only PCP port forwards that are created after the flag has been set.

Default false

Introduced 19.10.R3

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

version

Synopsis Enter the **version** context

Context **configure service nat pcp-server-policy** *string version*

Tree [version](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis Maximum protocol version supported by the PCP servers

Context **configure service nat pcp-server-policy** *string version maximum number*

Tree [maximum](#)

Range 1 to 255

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum *number*

Synopsis	Minimum protocol version supported by the PCP servers
Context	configure service nat pcp-server-policy <i>string</i> version minimum <i>number</i>
Tree	minimum
Range	1 to 255
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix-list [[name](#)] *string*

Synopsis	Enter the prefix-list list instance
Context	configure service nat prefix-list <i>string</i>
Tree	prefix-list
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	NAT prefix list name
Context	configure service nat prefix-list <i>string</i>
Tree	prefix-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application *keyword***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Prefix list for the application
Context	configure service nat prefix-list <i>string application keyword</i>
Tree	application
Options	l2-aware-dest-to-policy, dnat-only-subscribers
Default	l2-aware-dest-to-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix [[ip-prefix](#)] *string*

Synopsis	Enter the prefix list instance
Context	configure service nat prefix-list <i>string prefix string</i>
Tree	prefix
Max. Instances	1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-prefix] *string*

Synopsis	NAT prefix
Context	configure service nat prefix-list <i>string prefix string</i>
Tree	prefix
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Tree	ipv4-source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat syslog export-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

facility *keyword*

Synopsis	Facility number in the PRI part of the NAT SYSLOG messages
Context	configure service nat syslog export-policy <i>string</i> facility <i>keyword</i>
Tree	facility
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include

Synopsis	Enter the include context
Context	configure service nat syslog export-policy <i>string</i> include
Tree	include
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

destination-ip *boolean*

Synopsis	Include the translated destination IP address
Context	configure service nat syslog export-policy <i>string</i> include destination-ip <i>boolean</i>
Tree	destination-ip
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-ip *boolean*

Synopsis Include the original destination IPv4 address
Context **configure service nat syslog export-policy** *string include foreign-ip boolean*
Tree [foreign-ip](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-port *boolean*

Synopsis Include the original destination port
Context **configure service nat syslog export-policy** *string include foreign-port boolean*
Tree [foreign-port](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy-name *boolean*

Synopsis Include the NAT policy name in the flow log
Context **configure service nat syslog export-policy** *string include nat-policy-name boolean*
Tree [nat-policy-name](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sub-id *boolean*

Synopsis Subscriber ID in subscriber aware NAT
Context **configure service nat syslog export-policy** *string include sub-id boolean*
Tree [sub-id](#)
Default false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log-prefix *string*

Synopsis	Optional prefix text in the MSG part of the NAT syslog messages
Context	configure service nat syslog export-policy <i>string</i> log-prefix <i>string</i>
Tree	log-prefix
String Length	1 to 32
Default	TMNX
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-tx-delay *number*

Synopsis	Maximum time a syslog message delays in the output buffer to aggregate multiple events
Context	configure service nat syslog export-policy <i>string</i> max-tx-delay <i>number</i>
Tree	max-tx-delay
Range	0 to 100
Units	deciseconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum transmission unit
Context	configure service nat syslog export-policy <i>string</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9000
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Frame limit
Context	configure service nat syslog export-policy <i>string</i> rate-limit <i>number</i>
Tree	rate-limit
Range	10 to 2147483647
Units	packets per second
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

severity-level *keyword*

Synopsis	Severity level in the PRI part of the syslog messages
Context	configure service nat syslog export-policy <i>string</i> severity-level <i>keyword</i>
Tree	severity-level
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

up-nat-policy [*name*] *string*

Synopsis	Enter the up-nat-policy list instance
Context	configure service nat up-nat-policy <i>string</i>
Tree	up-nat-policy
Max. Instances	32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	UP NAT policy name
Context	configure service nat up-nat-policy <i>string</i>
Tree	up-nat-policy
Description	This command specifies the UP NAT policy name. The name default has a special meaning representing the default UP NAT policy template. The system uses the

default template when the BNG CPF does not receive a more specific name when the subscriber is instantiated.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

alg

Synopsis	Enter the alg context
Context	configure service nat up-nat-policy <i>string</i> alg
Tree	alg
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ftp *boolean*

Synopsis	Use FTP ALG for the policy
Context	configure service nat up-nat-policy <i>string</i> alg ftp <i>boolean</i>
Tree	ftp
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pptp *boolean*

Synopsis	Use PPTP ALG for the policy
Context	configure service nat up-nat-policy <i>string</i> alg pptp <i>boolean</i>
Tree	pptp
Description	<p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p>

	When configured to false , PPTP ALG is not used.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtsp boolean

Synopsis	Use RTSP ALG for the policy
Context	configure service nat up-nat-policy <i>string alg rtsp boolean</i>
Tree	rtsp
Description	When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip boolean

Synopsis	Use SIP ALG for the policy
Context	configure service nat up-nat-policy <i>string alg sip boolean</i>
Tree	sip
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-host

Synopsis	Enable the default-host context
Context	configure service nat up-nat-policy <i>string default-host</i>
Tree	default-host
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside).</p>

The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

The rate of redirected unknown traffic can be restricted by configuration.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	configure service nat up-nat-policy <i>string</i> default-host inside-router-instance <i>string</i>
Tree	inside-router-instance
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	IP address of the default DMZ host
Context	configure service nat up-nat-policy <i>string</i> default-host ip-address <i>string</i>
Tree	ip-address
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	configure service nat up-nat-policy <i>string</i> default-host rate-limit <i>number</i>
Tree	rate-limit
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

Range	1 to 10000
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service nat up-nat-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

filtering *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	configure service nat up-nat-policy <i>string</i> filtering <i>keyword</i>
Tree	filtering
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-log-policy

Synopsis	Enter the flow-log-policy context
Context	configure service nat up-nat-policy <i>string</i> flow-log-policy
Tree	flow-log-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipfix *reference*

Synopsis	IPFIX export policy
Context	configure service nat up-nat-policy <i>string</i> flow-log-policy ipfix reference
Tree	ipfix
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	configure service ipfix export-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-echo-reply *boolean*

Synopsis	Enable replies to ICMP Echo Request messages
Context	configure service nat up-nat-policy <i>string</i> icmp-echo-reply boolean
Tree	icmp-echo-reply
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-limits

Synopsis	Enter the port-limits context
Context	configure service nat up-nat-policy <i>string</i> port-limits
Tree	port-limits
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of ports reserved for prioritized sessions
Context	configure service nat up-nat-policy <i>string</i> port-limits reserved <i>number</i>
Tree	reserved
Description	This command configures the number of ports per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context

Context **configure service nat up-nat-policy** *string* port-limits **watermarks**

Tree **watermarks**

Description This command configures watermarks for NAT resources.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis High watermark percentage

Context **configure service nat up-nat-policy** *string* port-limits **watermarks high** *number*

Tree **high**

Description This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis Low watermark percentage

Context **configure service nat up-nat-policy** *string* port-limits **watermarks low** *number*

Tree **low**

Description This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority-sessions

Synopsis Enter the **priority-sessions** context

Context **configure service nat up-nat-policy string priority-sessions**

Tree [priority-sessions](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fc

Synopsis Enter the **fc** context

Context **configure service nat up-nat-policy string priority-sessions fc**

Tree [fc](#)

Description Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

af boolean

Synopsis Prioritize traffic from AF forwarding classes

Context **configure service nat up-nat-policy string priority-sessions fc af boolean**

Tree [af](#)

Description When configured to **true**, traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to **false**, AF traffic is not prioritized.

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

be boolean

Synopsis Prioritize traffic from BE forwarding classes

Context **configure service nat up-nat-policy string priority-sessions fc be boolean**

Tree [be](#)

Description	When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ef *boolean*

Synopsis	Prioritize traffic from EF forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc ef <i>boolean</i>
Tree	ef
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h1 *boolean*

Synopsis	Prioritize traffic from H1 forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc h1 <i>boolean</i>
Tree	h1
Description	When configured to true , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h2 *boolean*

Synopsis	Prioritize traffic from H2 forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc h2 <i>boolean</i>
Tree	h2
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I1 *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc I1 <i>boolean</i>
Tree	I1
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2 *boolean*

Synopsis	Prioritize traffic from L2 forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc I2 <i>boolean</i>
Tree	I2
Description	When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nc *boolean*

Synopsis	Prioritize traffic from NC forwarding classes
Context	configure service nat up-nat-policy <i>string</i> priority-sessions fc nc <i>boolean</i>
Tree	nc
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the session-limits context
Context	configure service nat up-nat-policy <i>string</i> session-limits
Tree	session-limits
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis Maximum number of sessions per subscriber
 Context **configure service nat up-nat-policy** *string session-limits max number*
 Tree [max](#)
 Range 1 to 65535
 Default 65535
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved number

Synopsis Number of sessions reserved for prioritized sessions
 Context **configure service nat up-nat-policy** *string session-limits reserved number*
 Tree [reserved](#)
 Description This command configures the number of sessions per block that are reserved for prioritized sessions.
 Range 1 to 65534
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context
 Context **configure service nat up-nat-policy** *string session-limits watermarks*
 Tree [watermarks](#)
 Description This command configures watermarks for NAT resources.
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis High watermark percentage

Context	configure service nat up-nat-policy <i>string session-limits watermarks high number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
Context	configure service nat up-nat-policy <i>string session-limits watermarks low number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
Context	configure service nat up-nat-policy <i>string tcp</i>
Tree	tcp
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mss-adjust *number*

Synopsis	TCP MSS adjustment value
Context	configure service nat up-nat-policy <i>string tcp mss-adjust</i> <i>number</i>
Tree	mss-adjust
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reset-unknown *boolean*

Synopsis	Generate TCP reset for packets from unknown flows
Context	configure service nat up-nat-policy <i>string tcp reset-unknown</i> <i>boolean</i>
Tree	reset-unknown
Description	When configured to true , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow. When configured to false , no TCP reset is generated.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeouts

Synopsis	Enter the timeouts context
Context	configure service nat up-nat-policy <i>string timeouts</i>
Tree	timeouts
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-query *number*

Synopsis	Timeout applied to an ICMP Query session
Context	configure service nat up-nat-policy <i>string timeouts icmp-query</i> <i>number</i>

Tree	icmp-query
Range	60 to 240
Units	seconds
Default	60
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sip number

Synopsis	SIP inactive media timeout
Context	configure service nat up-nat-policy <i>string</i> timeouts sip number
Tree	sip
Range	10 to 7200
Units	seconds
Default	120
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-retention number

Synopsis	IP address hold time after host and port blocks expire
Context	configure service nat up-nat-policy <i>string</i> timeouts subscriber-retention number
Tree	subscriber-retention
Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Units	minutes
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp

Synopsis	Enter the tcp context
----------	------------------------------

Context	configure service nat up-nat-policy <i>string</i> timeouts tcp
Tree	tcp
Description	Commands in this context configure TCP timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

established *number*

Synopsis	Idle timeout for TCP session in established state
Context	configure service nat up-nat-policy <i>string</i> timeouts tcp established <i>number</i>
Tree	established
Range	60 to 86400
Units	seconds
Default	7440
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rst *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	configure service nat up-nat-policy <i>string</i> timeouts tcp rst <i>number</i>
Tree	rst
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

syn *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	configure service nat up-nat-policy <i>string</i> timeouts tcp syn <i>number</i>

Tree	syn
Range	6 to 86400
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time-wait *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	configure service nat up-nat-policy <i>string</i> timeouts tcp time-wait <i>number</i>
Tree	time-wait
Range	0 to 240
Units	seconds
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transitory *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	configure service nat up-nat-policy <i>string</i> timeouts tcp transitory <i>number</i>
Tree	transitory
Range	60 to 86400
Units	seconds
Default	240
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat up-nat-policy <i>string</i> timeouts udp
Tree	udp

Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns number

Synopsis	Timeout applied to UDP session with destination port 53
Context	configure service nat up-nat-policy <i>string timeouts udp dns number</i>
Tree	dns
Range	15 to 86400
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	configure service nat up-nat-policy <i>string timeouts udp initial number</i>
Tree	initial
Range	10 to 300
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

normal number

Synopsis	UDP mapping timeout
Context	configure service nat up-nat-policy <i>string timeouts udp normal number</i>
Tree	normal
Range	60 to 86400
Units	seconds
Default	300

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp

Synopsis	Enter the udp context
Context	configure service nat up-nat-policy <i>string</i> udp
Tree	udp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	configure service nat up-nat-policy <i>string</i> udp inbound-refresh <i>boolean</i>
Tree	inbound-refresh
Description	When configured to true , this command extends the UDP session timeout on inbound traffic. When configured to false , the UDP session timeout is not extended.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

oper-group [[name](#)] *string*

Synopsis	Enter the oper-group list instance
Context	configure service oper-group <i>string</i>
Tree	oper-group
Max. Instances	32768
Introduced	16.0.R1
Platforms	All

[[name](#)] *string*

Synopsis	Operational group name
----------	------------------------

Context	configure service oper-group <i>string</i>
Tree	oper-group
String Length	1 to 32
Notes	This element is part of a list key.

mac-pinning *boolean*

Synopsis	Enable MAC address pinning on this spoke SDP
Context	configure service pw-template <i>string</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	16.0.R1
Platforms	All

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	configure service pw-template <i>string</i> fdb maximum-mac-addresses <i>number</i>
Tree	maximum-mac-addresses
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this PW template.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this PW template, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the PW template uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

protected-src-mac-violation-action *keyword*

Synopsis	Action for protected source MAC restriction
Context	configure service pw-template <i>string</i> fdb protected-src-mac-violation-action <i>keyword</i>

signaling *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Signaling protocol used to obtain pseudowire labels
 Context **configure** [service sdp number signaling keyword](#)

Tree	signaling
Description	This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs. Note: If the tldp option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is also deleted. To address this, recreate the T-LDP session by using the admin-state command to administratively disable and then enable the SDP.
Options	off, tldp, bgp
Introduced	16.0.R1
Platforms	All

source-bmac-lsb

vprn-next-hop [[ip-address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Enter the vprn-next-hop list instance
Context	configure service system bgp evpn ethernet-segment <i>string association vprn-next-hop (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	vprn-next-hop
Description	Commands in this list instance are used to associate an IPv4 or IPv6 address to an Ethernet segment. A virtual Ethernet segment using this VPRN next-hop association represents a Layer 3 Ethernet segment as described in <i>draft-sajassi-bess-evpn-ip-aliasing</i> . This IP address must be installed in the route table of the VPRN service identified by the EVI so that the Auto-Discovery per-ES or EVI routes for the ES are advertised. Only one VPRN next hop is supported per Ethernet segment.
Max. Instances	1
Notes	The following elements are part of a choice: lag , network-interconnect-vxlan , port , pw-port , sdp , or vprn-next-hop .
Introduced	22.10.R1
Platforms	All

iff-attribute-uniform-propagation *boolean*

Synopsis	Enable uniform propagation of BGP attributes
Context	configure service system bgp evpn ip-prefix-routes iff-attribute-uniform-propagation <i>boolean</i>
Tree	iff-attribute-uniform-propagation
Description	<p>When configured to true, this command enables the uniform propagation of BGP attributes for EVPN-IFF (Interfaceful) routes. EVPN-IFF is used in R-VPLS services with bgp-evpn ip-route-advertisement. When enabled, the received EVPN-IFF routes for the R-VPLS can be propagated with the original BGP path attributes into EVPN-IFL, IPVPN, EVPN-IFF (in other R-VPLS services) or BGP IP routes advertised for the attached VPRN. The command also enables the attribute propagation in the opposite direction, for example, from EVPN-IFL/IPVPN/IP/EVPN-IFF routes into EVPN-IFF routes.</p> <p>The propagation follows the uniform mode defined in draft-ietf-bess-evpn-ipvpn-interworking.</p>

When configured to **false**, this command re-originates the BGP Path Attributes when propagating EVPN-IFF routes into other Inter-Subnet Forwarding families.

Default	false
Introduced	21.2.R1
Platforms	All

iff-bgp-path-selection *boolean*

Synopsis	Enable BGP path selection for EVPN-IFF routes
Context	configure service system bgp evpn ip-prefix-routes iff-bgp-path-selection <i>boolean</i>
Tree	iff-bgp-path-selection
Description	<p>When configured to true, this command enables the EVPN-IFF routes to be ordered and selected in a similar manner as IPVPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p> <p>When configured to false, this command makes the system order EVPN-IFF routes based on their {RVPLS Iindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes are received for the same prefix on the same R-VPLS and with different RDs (Route Distinguishers), the route with the lowest RD is selected.</p>
Default	false
Introduced	21.2.R1
Platforms	All

multicast-leave-sync-propagation *number*

Synopsis	Multicast leave group synchronization delay
Context	configure service system bgp evpn multicast-leave-sync-propagation <i>number</i>
Tree	multicast-leave-sync-propagation
Description	<p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the configure services vrpn igmp robust-count command. The query interval value is taken from the configure service vpls sap igmp-snooping query-last-member-interval or the configure service vpls spoke-sdp igmp-snooping query-last-member-interval configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p>

This value should be configured consistently in all ES peers.

Range	0 to 300
Units	seconds
Default	5
Introduced	20.7.R1

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

Default	false
Introduced	16.0.R1
Platforms	All

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

mpls-fwd-policy boolean

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean
Tree	mpls-fwd-policy
Description	When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to false , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

rib-api boolean

Synopsis	Use RIB API gRPC service for next-hop resolution
----------	--

Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rib-api boolean
Tree	rib-api
Description	When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to false , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

rsvp boolean

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rsvp boolean
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-isis boolean
Tree	sr-isis
Description	When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance. When configured to false , IS-IS tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>

udp boolean

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp boolean
Tree	udp
Description	<p>When configured to true, BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.</p> <p>When configured to false, MPLS over UDP tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	16.0.R1

Platforms All

weighted-ecmp *boolean*

Synopsis Allow weighted load balancing

Context **configure** *service vpls string bgp-evpn mpls number auto-bind-tunnel weighted-ecmp boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default false

Introduced 22.7.R1

Platforms All

control-word *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable control word support

Context **configure** *service vpls string bgp-evpn mpls number control-word boolean*

Tree [control-word](#)

Description When configured to **true**, the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.

Default false

Introduced 16.0.R1

Platforms All

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service vpls string bgp-evpn mpls number default-route-tag string
Tree	default-route-tag
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the default-route-tag, then EVPN keeps tag A when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	configure service vpls string bgp-evpn mpls number dynamic-egress-label-limit <i>boolean</i>
Tree	dynamic-egress-label-limit
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	22.2.R1
Platforms	All

ecmp number

Synopsis	Maximum ECMP routes information

domain-id *string*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vpls <i>string</i> bgp-evpn routes ip-prefix domain-id <i>string</i>
Tree	domain-id
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as <code>domain-id:isf_safi_type</code> in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>

default-route-tag string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Default route tag

Context **configure service vpls string bgp-evpn segment-routing-v6 number default-route-tag string**

Tree [default-route-tag](#)

Description This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.

When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.

The following are examples of the conflict priority handling:

- If a service is configured with both **default-route-tag** *X* and **proxy-arp evpn-route-tag** *Y*, the EVPN uses route tag *Y* when sending EVPN proxy-arp routes to the BGP RIB for advertisement.
- If a given IP-prefix route is tagged in the route-table with tag *A* and the R-VPLS, in which the route is advertised, uses *B* as the **default-route-tag**, then EVPN keeps tag *A* when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ecmp *number*

Synopsis	Maximum ECMP value configured on the service
Context	configure <i>service vpls string bgp-evpn segment-routing-v6 number</i> ecmp <i>number</i>
Tree	ecmp
Range	1 to 32
Default	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

evi-three-byte-auto-rt *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	configure <i>service vpls string bgp-evpn segment-routing-v6 number</i> evi-three-byte-auto-rt <i>boolean</i>
Tree	evi-three-byte-auto-rt
Description	When configured to true , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> fdb
Tree	fdb
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

protected-src-mac-violation-action *keyword*

Synopsis	Relearn request for a protected MAC is received action
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	discard
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

force-vc-forwarding *keyword*

Synopsis	Datapath forwarding to force vlan-vc-type
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> force-vc-forwarding <i>keyword</i>
Tree	force-vc-forwarding

Description	This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations. This command may be used in conjunction with the sap ingress vlan-translation command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

mh-mode keyword

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode
Context	configure service vpls string bgp-evpn segment-routing-v6 number mh-mode keyword
Tree	mh-mode
Options	access, network
Default	network
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

oper-group reference

Synopsis	Operational group
Context	configure service vpls string bgp-evpn segment-routing-v6 number oper-group reference
Tree	oper-group
Description	This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group. When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.
Reference	configure service oper-group string

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

resolution *keyword*

Synopsis	Resolution options for routes
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> resolution <i>keyword</i>
Tree	resolution
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

route-next-hop

Synopsis	Enter the route-next-hop context
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> route-next-hop
Tree	route-next-hop
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	configure service vpls <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> route-next-hop ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Notes	The following elements are part of a choice: ip-address , system-ipv4 , or system-ipv6 .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

system-ipv4

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

default-route-tag string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service vpls string bgp-evpn vxlan number default-route-tag string
Tree	default-route-tag
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.

- If a given IP-prefix route is tagged in the route-table with tag *A* and the R-VPLS, in which the route is advertised, uses *B* as the **default-route-tag**, then EVPN keeps tag *A* when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

ingress

Synopsis Enter the **ingress** context
 Context **configure** [service vpls string capture-sap string ingress](#)
 Tree [ingress](#)
 Introduced 19.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis Enter the **filter** context
 Context **configure** [service vpls string capture-sap string ingress filter](#)
 Tree [filter](#)
 Introduced 19.5.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac reference

Synopsis	MAC filter policy name
Context	configure service vpls string capture-sap string ingress filter mac reference
Tree	mac
Reference	configure filter mac-filter string
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session

Synopsis	Enter the ipoe-session context
Context	configure service vpls string capture-sap string ipoe-session
Tree	ipoe-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of IPoE session management
Context	configure service vpls string capture-sap string ipoe-session admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description string

Synopsis	Text description
Context	configure service vpls string capture-sap string ipoe-session description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE Session policy to be used for new sessions
Context	configure service vpls string capture-sap string ipoe-session ipoe-session-policy reference
Tree	ipoe-session-policy
Reference	configure subscriber-mgmt ipoe-session-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for IPoE session authentication
Context	configure service vpls string capture-sap string ipoe-session user-db reference
Tree	user-db
Reference	configure subscriber-mgmt local-user-db string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap-defaults

Synopsis	Enter the msap-defaults context
Context	configure service vpls string capture-sap string msap-defaults
Tree	msap-defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface *string*

Synopsis	Group interface
Context	configure service vpls string capture-sap string msap-defaults group-interface string
Tree	group-interface
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	MSAP policy
Context	configure service vpls string capture-sap string msap-defaults policy reference
Tree	policy
Reference	configure subscriber-mgmt msap-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-name *string*

Synopsis	Administrative service name
Context	configure service vpls string capture-sap string msap-defaults service-name string
Tree	service-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq-auth-policy *reference*

Synopsis	Diameter NASREQ application policy to use for authentication
Context	configure service vpls string capture-sap string nasreq-auth-policy reference
Tree	nasreq-auth-policy
Reference	configure subscriber-mgmt diameter-nasreq-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the pfcp context
Context	configure service vpls string capture-sap string pfcp
Tree	pfcp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association reference

Synopsis	Association used for PFCP messages on the capture SAP
Context	configure service vpls string capture-sap string pfcp association reference
Tree	association
Description	This command links the capture SAP to a PFCP association. This enables CUPS for the capture SAP and any trigger packets are forwarded to the BNG CUPS CPF.
Reference	configure subscriber-mgmt pfcp association string
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

I2-access-id-alias string

Synopsis	String used as Layer 2 access ID for the capture SAP
Context	configure service vpls string capture-sap string pfcp I2-access-id-alias string
Tree	I2-access-id-alias
Description	This command defines a Layer 2 access ID alias for the capture SAP. It replaces the default underlying port-based or LAG-based Layer 2 access ID. Different capture SAPs on the same underlying port or LAG can have different Layer 2 access ID aliases.
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up-resiliency

Synopsis	Enter the up-resiliency context
Context	configure service vpls string capture-sap string pfcp up-resiliency
Tree	up-resiliency

Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [[oper-group](#)] *reference*

Synopsis	Enter the monitor-oper-group list instance
Context	configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference
Tree	monitor-oper-group
Description	Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby). Note: The following is only applicable for the configure service vpls capture-sap context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.
Max. Instances	4
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[oper-group] *reference*

Synopsis	Operational group name
Context	configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference
Tree	monitor-oper-group
Reference	configure service oper-group string
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

health-drop *number*

Synopsis	Number subtracted from the health value per failure
----------	---

Context	configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference health-drop number
Tree	health-drop
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 255
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the pppoe context
Context	configure service vpls string capture-sap string pppoe
Tree	pppoe
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy reference

Synopsis	PPP policy
Context	configure service vpls string capture-sap string pppoe policy reference
Tree	policy
Reference	configure subscriber-mgmt ppp-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy reference

Synopsis	Python policy
Context	configure service vpls string capture-sap string pppoe python-policy reference
Tree	python-policy
Reference	configure python python-policy string
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis Local user database
 Context **configure** [service vpls string capture-sap string pppoe user-db reference](#)
 Tree [user-db](#)
 Reference **configure** [subscriber-mgmt local-user-db string](#)

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority number

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size number

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
----------	---------------------------------------

Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number
Tree	max-rx-defect-window

Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed priority number
Tree	priority
Range	0 to 7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed boolean

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed rx-eth-ed boolean
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed boolean

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed tx-eth-ed boolean
Tree	tx-eth-ed
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean
Tree	tx-eth-vsm-grace
Description	When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number low-priority-defect keyword
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number mac-address string
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls string eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number one-way-delay-threshold number
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds

Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etree boolean

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use VPLS service as an E-Tree VPLS

Tree	learning
Default	true
Introduced	16.0.R1
Platforms	All

local-age-time *number*

Synopsis	Aging time for locally learned MAC addresses
Context	configure service vpls string fdb mac-learning local-age-time number
Tree	local-age-time
Description	This command configures the aging time for locally learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Distribution Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.

As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time).

Range	60 to 86400
Default	300
Introduced	16.0.R1
Platforms	All

remote-age-time *number*

Synopsis	Aging time for remotely learned MAC addresses
Context	configure service vpls string fdb mac-learning remote-age-time number
Tree	remote-age-time
Description	<p>This command configures the aging time for remotely learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Distribution Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.</p> <p>As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time). To reduce the amount of signaling required between switches, configure this time larger than the local-age-time command.</p>
Range	60 to 86400
Default	900
Introduced	16.0.R1
Platforms	All

mac-move

Synopsis	Enter the mac-move context

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	configure service vpls string mesh-sdp string egress vc-label number
Tree	vc-label
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	configure service vpls string mesh-sdp string entropy-label
Tree	entropy-label
Notes	The following elements are part of a choice: entropy-label or hash-label .
Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the eth-cfm context
Context	configure service vpls string mesh-sdp string eth-cfm
Tree	eth-cfm

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-fc-stats

Synopsis	Enter the collect-lmm-fc-stats context
Context	configure service vpls string mesh-sdp string eth-cfm collect-lmm-fc-stats
Tree	collect-lmm-fc-stats
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	configure service vpls string mesh-sdp string eth-cfm collect-lmm-fc-stats fc keyword
Tree	fc
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm collect-lmm-fc-stats fc-in-profile <i>keyword</i>
Tree	fc-in-profile
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm collect-lmm-stats <i>boolean</i>
Tree	collect-lmm-stats
Description	<p>When configured to true, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The show eth-cfm collect-lmm-stats command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to false, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the mep list instance
----------	------------------------------------

Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name reference

Synopsis	Maintenance Domain (MD) name
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Reference	configure eth-cfm domain string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name reference

Synopsis	Maintenance Association (MA) name
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Reference	configure eth-cfm domain string association string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id number

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais

Synopsis	Enable the ais context
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais
Tree	ais
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais client-meg-level <i>number</i>
Tree	client-meg-level
Range	1 to 7
Max. Instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interface-support <i>boolean</i>
Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Transmission interval for AIS messages
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais interval <i>number</i>
Tree	interval
Range	1 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
----------	--

Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais <i>priority</i> <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
----------	--

Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm boolean

Synopsis	Generate CCM messages
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority number

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size number

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier <i>decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-vsm-grace tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>string</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
----------	--

Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> primary-vlan <i>boolean</i>
Tree	primary-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip primary-vlan (*number* | *keyword*)

Synopsis	Enter the mip list instance
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag

Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MIP
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) mac-address <i>string</i>
Tree	mac-address
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-ctag-levels *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> eth-cfm squelch-ingress-ctag-levels <i>number</i>
Tree	squelch-ingress-ctag-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis Levels for which ETH-CFM packets are silently discarded

Context **configure** **service vpls** *string* **mesh-sdp** *string* **eth-cfm** **squelch-ingress-levels** *number*

Tree **squelch-ingress-levels**

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range 0 to 7

Max. 8

Introduced	16.0.R4
Platforms	All

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	This command references the name of a MAC protect exclusion list. Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list. An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.
Reference	configure service mac-list <i>string</i>
Introduced	20.5.R1
Platforms	All

mac-pinning *boolean*

Synopsis	MAC address pinning in active status
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb mac-pinning <i>boolean</i>
Tree	mac-pinning
Default	false
Introduced	16.0.R1
Platforms	All

protected-src-mac-violation-action *keyword*

policy *reference*

Synopsis	Multicast CAC policy name
Context	configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping mcac policy <i>reference</i>
Tree	policy
Description	This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	configure mcac policy <i>string</i>
Introduced	16.0.R1
Platforms	All

Tree	periodic-time
Range	10 to 100
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	All

periodic-timer boolean

Synopsis	Enable the Periodic Transmission Timer
Context	configure service vpls string mesh-sdp string mrp periodic-timer boolean
Tree	periodic-timer

Default	false
Introduced	20.10.R1
Platforms	All

policy reference

Synopsis	MRP policy to control Group B-MAC attributes
Context	configure service vpls string mesh-sdp string mrp policy reference
Tree	policy
Reference	configure service mrp policy string
Introduced	20.10.R1
Platforms	All

pbb

Synopsis	Enter the pbb context
Context	configure service vpls string mesh-sdp string pbb
Tree	pbb
Introduced	20.10.R1
Platforms	All

fault-propagation

Synopsis	Enter the fault-propagation context
Context	configure service vpls string mesh-sdp string pbb fault-propagation
Tree	fault-propagation
Introduced	20.10.R1
Platforms	All

backbone-mac-address [[address](#)] *string*

Synopsis	Add a list entry for backbone-mac-address
Context	configure service vpls string mesh-sdp string pbb fault-propagation backbone-mac-address string
Tree	backbone-mac-address

Introduced 20.10.R1
Platforms All

[address] *string*

Synopsis Backbone MAC address
Context **configure** [service](#) [vpls](#) *string* [mesh-sdp](#) *string* [pbb](#) [fault-propagation](#) [backbone-mac-address](#) *string*
Tree [backbone-mac-address](#)
Notes This element is part of a list key.
Introduced 20.10.R1
Platforms All

backbone-mac-name [[name](#)] *reference*

Synopsis Add a list entry for **backbone-mac-name**
Context **configure** [service](#) [vpls](#) *string* [mesh-sdp](#) *string* [pbb](#) [fault-propagation](#) [backbone-mac-name](#) *reference*
Tree [backbone-mac-name](#)
Introduced 20.10.R1
Platforms All

[name] *reference*

Synopsis Backbone MAC address name
Context **configure** [service](#) [vpls](#) *string* [mesh-sdp](#) *string* [pbb](#) [fault-propagation](#) [backbone-mac-name](#) *reference*
Tree [backbone-mac-name](#)
Reference **configure** [service](#) [pbb](#) [mac](#) *string*
Notes This element is part of a list key.
Introduced 20.10.R1
Platforms All

vc-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	configure service vpls string mesh-sdp string vc-type keyword
Tree	vc-type
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service vpls string mesh-sdp string vlan-vc-tag number
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

mfib

Synopsis	Enter the mfib context
Context	configure service vpls string mfib
Tree	mfib
Introduced	16.0.R1
Platforms	All

table

Synopsis	Enter the table context
Context	configure service vpls string mfib table
Tree	table
Introduced	16.0.R1

Platforms All

high-wmark *number*

Synopsis High watermark for the MFIB table
Context **configure** [service vpls](#) *string* [mfib table](#) [high-wmark](#) *number*
Tree [high-wmark](#)
Range 0 to 100
Default 95
Introduced 16.0.R1
Platforms All

low-wmark *number*

Synopsis Low watermark for the MFIB table
Context **configure** [service vpls](#) *string* [mfib table](#) [low-wmark](#) *number*
Tree [low-wmark](#)
Range 0 to 100
Default 90
Introduced 16.0.R1
Platforms All

size *number*

Synopsis Maximum SG entries in the MFIB
Context **configure** [service vpls](#) *string* [mfib table](#) [size](#) *number*
Tree [size](#)
Range 1 to 40959
Introduced 16.0.R1
Platforms All

mld-snooping

Synopsis Enter the **mld-snooping** context
Context **configure** [service vpls](#) *string* [mld-snooping](#)

Tree	mld-snooping
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of snooping
Context	configure service vpls string mld-snooping admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

evpn-proxy

Synopsis	Enter the evpn-proxy context
Context	configure service vpls string mld-snooping evpn-proxy
Tree	evpn-proxy
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of EVPN proxy
Context	configure service vpls string mld-snooping evpn-proxy admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

mvr

Synopsis	Enter the mvr context
----------	------------------------------

Context	configure service vpls string mld-snooping mvr
Tree	mvr
Introduced	16.0.R1

admin-state *keyword*

Synopsis	Administrative state of MVR
Context	configure service vpls string mld-snooping mvr admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure service vpls string mld-snooping mvr description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

group-policy *string*

Synopsis	Policy that applies MVR
Context	configure service vpls string mld-snooping mvr group-policy string
Tree	group-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls <i>string</i> mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	1 to 65535
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

query-source-address (*keyword* | *ipv6-address*)

Synopsis	Source IP address used in MLD queries
Context	configure service vpls <i>string</i> mld-snooping query-source-address (<i>keyword</i> <i>ipv6-address</i>)
Tree	query-source-address
Options	system
Default	system
Introduced	16.0.R1
Platforms	All

report-source-address *string*

Synopsis	Source IP address used when generating MLD reports
Context	configure service vpls <i>string</i> mld-snooping report-source-address <i>string</i>
Tree	report-source-address
Introduced	16.0.R1
Platforms	All

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>string</i> mld-snooping robust-count <i>number</i>
Tree	robust-count
Range	1 to 255

Default	2
Introduced	16.0.R1
Platforms	All

mrp

Synopsis	Enter the mrp context
Context	configure service vpls string mrp
Tree	mrp
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of MRP
Context	configure service vpls string mrp admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

mmp

Synopsis	Enter the mmp context
Context	configure service vpls string mmp mmp
Tree	mmp
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of MMP
Context	configure service vpls string mmp mmp admin-state keyword
Tree	admin-state

Options	enable, disable
Introduced	20.10.R1
Platforms	All

attribute-table

Synopsis	Enter the attribute-table context
Context	configure service vpls string mrp mmp attribute-table
Tree	attribute-table
Introduced	20.10.R1
Platforms	All

high-wmark *number*

Synopsis	High watermark for the MMRP attribute table
Context	configure service vpls string mrp mmp attribute-table high-wmark number
Tree	high-wmark
Range	0 to 100
Default	95
Introduced	20.10.R1
Platforms	All

low-wmark *number*

Synopsis	Low watermark for the MMRP attribute table
Context	configure service vpls string mrp mmp attribute-table low-wmark number
Tree	low-wmark
Range	0 to 100
Default	90
Introduced	20.10.R1
Platforms	All

size *number*

Synopsis	Maximum number of attributes accepted by B-VPLS
----------	---

Context	configure service vpls string mrp mmp attribute-table size number
Tree	size
Range	1 to 8192
Default	2048
Introduced	20.10.R1
Platforms	All

end-station-only *boolean*

Synopsis	Prevent generation or processing of MMRP messages
Context	configure service vpls string mrp mmp end-station-only boolean
Tree	end-station-only
Default	false
Introduced	20.10.R1
Platforms	All

flood-time *number*

Synopsis	Time when traffic is flooded after status change
Context	configure service vpls string mrp mmp flood-time number
Tree	flood-time
Range	3 to 600
Introduced	20.10.R1
Platforms	All

multicast-info-policy *reference*

Synopsis	Multicast information policy
Context	configure service vpls string multicast-info-policy reference
Tree	multicast-info-policy
Reference	configure multicast-management multicast-info-policy string
Introduced	16.0.R1
Platforms	All

pbb

Synopsis	Enter the pbb context
Context	configure service vpls string pbb
Tree	pbb
Introduced	16.0.R1
Platforms	All

backbone-vpls [[backbone-vpls-service-name](#)] *reference*

Synopsis	Enter the backbone-vpls list instance
Context	configure service vpls string pbb backbone-vpls reference
Tree	backbone-vpls
Max. Instances	1
Introduced	16.0.R1
Platforms	All

[backbone-vpls-service-name] *reference*

Synopsis	Service name
Context	configure service vpls string pbb backbone-vpls reference
Tree	backbone-vpls
Reference	configure service vpls string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

fdb

Synopsis	Enter the fdb context
Context	configure service vpls string pbb backbone-vpls reference fdb
Tree	fdb
Introduced	20.2.R1
Platforms	All

protected-src-mac-violation-action *keyword*

Synopsis	Action taken upon a relearn request for protected MAC
Context	configure service vpls string pbb backbone-vpls reference fdb protected-src-mac-violation-action <i>keyword</i>
Tree	protected-src-mac-violation-action
Options	discard
Introduced	20.5.R1
Platforms	All

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls string pbb backbone-vpls reference igmp-snooping
Tree	igmp-snooping
Introduced	16.0.R1
Platforms	All

mrouter-destination [[mac-reference](#)] *reference*

Synopsis	Add a list entry for mrouter-destination
Context	configure service vpls string pbb backbone-vpls reference igmp-snooping mrouter-destination <i>reference</i>
Tree	mrouter-destination
Introduced	16.0.R1
Platforms	All

[mac-reference] *reference*

Synopsis	Mac name reference
Context	configure service vpls string pbb backbone-vpls reference igmp-snooping mrouter-destination <i>reference</i>
Tree	mrouter-destination
Reference	configure service pbb mac <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

isid *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Backbone VPLS ISID

Context **configure** *service vpls string pbb backbone-vpls reference isid number*

Tree [isid](#)

Range 0 to 16777215

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

mesh-sdp [[sdp-bind-id](#)] *reference*

Synopsis Enter the **mesh-sdp** list instance

Context **configure** *service vpls string pbb backbone-vpls reference mesh-sdp reference*

Tree [mesh-sdp](#)

Introduced 16.0.R1

Platforms All

[sdp-bind-id] *reference*

Synopsis Backbone VPLS SDP Binding ID

Context **configure** *service vpls string pbb backbone-vpls reference mesh-sdp reference*

Tree [mesh-sdp](#)

Reference **configure** *service vpls string mesh-sdp string*

Notes This element is part of a list key.

Introduced 16.0.R1

mac-notification

Synopsis Enter the **mac-notification** context
Context **configure service vpls string pbb mac-notification**
Tree [mac-notification](#)
Introduced 16.0.R1
Platforms All

admin-state *keyword*

Synopsis Administrative state of MAC notification messages
Context **configure service vpls string pbb mac-notification admin-state keyword**
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 16.0.R1
Platforms All

count *number*

Synopsis MAC notification messages count
Context **configure service vpls string pbb mac-notification count number**
Tree [count](#)

Range	1 to 10
Introduced	16.0.R1
Platforms	All

interval *number*

Synopsis	Interval for MAC notification messages
Context	configure service vpls <i>string</i> pbb mac-notification interval <i>number</i>
Tree	interval
Range	1 to 100
Units	deciseconds
Introduced	16.0.R1
Platforms	All

renotify (*number* | *keyword*)

Synopsis	Re-notify interval for MAC-notification messages
Context	configure service vpls <i>string</i> pbb mac-notification renotify (<i>number</i> <i>keyword</i>)
Tree	renotify
Range	240 to 840
Units	seconds
Options	none
Default	none
Introduced	16.0.R1
Platforms	All

source-bmac

Synopsis	Enter the source-bmac context
Context	configure service vpls <i>string</i> pbb source-bmac
Tree	source-bmac
Introduced	16.0.R1
Platforms	All

address string

Synopsis	Base source B-MAC address for the B-VPLS
Context	configure service vpls string pbb source-bmac address string
Tree	address
Introduced	16.0.R1
Platforms	All

use-es-bmac-lsb boolean

Synopsis	Use LSB from Ethernet-segment backbone MAC
Context	configure service vpls string pbb source-bmac use-es-bmac-lsb boolean
Tree	use-es-bmac-lsb
Default	false
Introduced	16.0.R1
Platforms	All

use-mclag-bmac-lsb boolean

Synopsis	Use MC LAG backbone MAC LSB
Context	configure service vpls string pbb source-bmac use-mclag-bmac-lsb boolean
Tree	use-mclag-bmac-lsb
Default	false
Introduced	16.0.R1
Platforms	All

pbb-type keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

advertise-neighbor-type keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertisement type of static or dynamic entries in EVPN
Context	configure service vpls string proxy-nd evpn advertise-neighbor-type keyword
Tree	advertise-neighbor-type
Description	<p>This command enables the advertisement of static or dynamic entries that are learned as host, router, or host and router (only one option is possible in a specified service). It also determines the R flag (host or router) when sending Neighbor Advertisement (NA) messages for existing EVPN entries in the proxy-ND table.</p> <p>The router-host command option is only possible when the ARP/ND extended community is advertised along with the MAC/IP routes. It determines that both host and router (dynamic and static) entries are advertised in MAC/IP routes, with an indication whether the entry is host or router in the R flag. These EVPN entries are installed as host or router entries depending on the R flag of the route, and NA messages for them are sent with the proper host or router indication.</p>
Options	router, host
Default	router
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	All

bgp-vpls-mh-veid number

Synopsis	BGP-VPLS multi-homing VE-ID
Context	configure service vpls string sap string bgp-vpls-mh-veid number
Tree	bgp-vpls-mh-veid
Description	This command specifies a VE ID that is configured on SAPs that are part of an EVPN single-active Ethernet Segment. The configuration of this command allows the advertisement of L2VPN routes that indicate the state of multi-homed SAPs to the

remote BGP-VPLS PEs, which can trigger a MAC flush operation on the service to avoid traffic from being blackholed when a failure occurs in the active PE.

When unconfigured from the SAP, L2VPN routes are withdrawn, which causes MAC flush processing on the remote BGP-VPLS.

Range	1 to 65535
Introduced	20.5.R1
Platforms	All

bpdu-translation *keyword*

Default	false
Introduced	16.0.R1
Platforms	All

cpu-protection

Synopsis	Enter the cpu-protection context
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection
Tree	cpu-protection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm-monitoring

Synopsis	Enable the eth-cfm-monitoring context
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring
Tree	eth-cfm-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring aggregate
Tree	aggregate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection eth-cfm-monitoring car
Tree	car
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: eth-cfm-monitoring or mac-monitoring .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

policy-id *reference*

Synopsis	CPM protection policy
Context	configure service vpls <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i>
Tree	policy-id
Reference	configure system security cpu-protection policy <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service vpls <i>string</i> sap <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

dhcp

Synopsis	Enter the dhcp context
Context	configure service vpls string sap string dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	configure service vpls string sap string dhcp admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure service vpls string sap string dhcp description string
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

lease-populate

Synopsis	Enter the lease-populate context
Context	configure service vpls string sap string dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	All

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	configure service vpls <i>string</i> sap <i>string</i> dhcp lease-populate max-leases <i>number</i>
Tree	max-leases
Range	0 to 131071
Introduced	16.0.R1
Platforms	All

option-82

Synopsis	Enter the option-82 context
Context	configure service vpls <i>string</i> sap <i>string</i> dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	configure service vpls <i>string</i> sap <i>string</i> dhcp option-82 action <i>keyword</i>
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	All

circuit-id

Synopsis	Enter the circuit-id context
Context	configure service vpls <i>string</i> sap <i>string</i> dhcp option-82 circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	All

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	configure service vpls string sap string dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

hex-string *string*

Synopsis	User-defined hexadecimal value of the option
Context	configure service vpls string sap string dhcp option-82 circuit-id hex-string string
Tree	hex-string
String Length	1 to 66
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

none

Synopsis	Do not include the circuit ID
Context	configure service vpls string sap string dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure service vpls string sap string dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple

Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

remote-id

Synopsis	Enter the remote-id context
Context	configure service vpls string sap string dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	configure service vpls string sap string dhcp option-82 remote-id ascii-string string
Tree	ascii-string
String Length	1 to 32
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	16.0.R1
Platforms	All

hex-string *string*

Synopsis	Option as a hexadecimal string
Context	configure service vpls string sap string dhcp option-82 remote-id hex-string string
Tree	hex-string
String Length	1 to 66

Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	16.0.R1
Platforms	All

mac

Synopsis	Use the MAC address for the remote ID
Context	configure service vpls string sap string dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	16.0.R1
Platforms	All

none

Synopsis	Do not include the remote ID
Context	configure service vpls string sap string dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: ascii-string , hex-string , mac , or none .
Introduced	16.0.R1
Platforms	All

vendor-specific-option

Synopsis	Enter the vendor-specific-option context
Context	configure service vpls string sap string dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
----------	---------------------------------

Context	configure service vpls string sap string dhcp option-82 vendor-specific-option client-mac-address boolean
Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	All

sap-id boolean

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	configure service vpls string sap string dhcp option-82 vendor-specific-option sap-id boolean
Tree	sap-id
Default	false
Introduced	16.0.R1
Platforms	All

service-id boolean

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure service vpls string sap string dhcp option-82 vendor-specific-option service-id boolean
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	All

string string

Synopsis	User-defined ASCII string for the VSO
Context	configure service vpls string sap string dhcp option-82 vendor-specific-option string string
Tree	string
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure service vpls string sap string dhcp option-82 vendor-specific-option system-id boolean
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	All

proxy-server

Synopsis	Enter the proxy-server context
Context	configure service vpls string sap string dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	configure service vpls string sap string dhcp proxy-server admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	configure service vpls string sap string dhcp proxy-server emulated-server string
Tree	emulated-server
Introduced	16.0.R1
Platforms	All

lease-time

Synopsis	Enter the lease-time context
Context	configure service vpls string sap string dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	All

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	configure service vpls string sap string dhcp proxy-server lease-time radius-override boolean
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	All

value *number*

Synopsis	DHCP lease time
Context	configure service vpls string sap string dhcp proxy-server lease-time value number
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	All

snoop *boolean*

Synopsis	Enable DHCP snooping on the SAP
Context	configure service vpls string sap string dhcp snoop boolean
Tree	snoop
Default	false
Introduced	16.0.R1

Platforms All

dist-cpu-protection *reference*

Synopsis Distributed CPU protection policy for SAP
 Context **configure** [service vpls string sap string dist-cpu-protection reference](#)
 Tree [dist-cpu-protection](#)
 Reference **configure** [system security dist-cpu-protection policy string](#)
 Introduced 16.0.R1
 Platforms All

egress

Synopsis Enter the **egress** context
 Context **configure** [service vpls string sap string egress](#)
 Tree [egress](#)
 Introduced 16.0.R1

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference avg-frame-overhead <i>decimal-number</i>
Tree	avg-frame-overhead
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

burst-limit (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

drop-tail

Synopsis	Enter the drop-tail context
----------	------------------------------------

Context	configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	All

low

Synopsis	Enter the low context
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>)
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1 2 4 8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the hs-wred-queue context
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue
Tree	hs-wred-queue
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference
Tree	policy
Reference	configure qos slope-policy string
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wrr-weight number

Synopsis	WRR weight to parent with the queue into the scheduler
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number
Tree	hs-wrr-weight
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

mbs (number | keyword)

Synopsis	MBS
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference mbs (number keyword)
Tree	mbs
Range	0 to 1073741824

Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

monitor-queue-depth

Synopsis	Enable the monitor-queue-depth context
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth
Tree	monitor-queue-depth
Introduced	20.10.R1
Platforms	All

fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean
Tree	fast-polling
Description	When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number
Tree	violation-threshold
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1

Platforms All

Synopsis	Enter the scheduler list instance
Context	configure service vpls string sap string egress qos scheduler-policy overrides scheduler string
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service vpls string sap string egress qos scheduler-policy overrides scheduler string
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold <i>number</i>

Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation keyword
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority <i>number</i>
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed <i>boolean</i>
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean
Tree	tx-eth-vsm-grace

Description	<p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean
Tree	lbm-svc-act-responder
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
----------	------------------------

Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean
Tree	primary-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip primary-vlan (*number* | *keyword*)

Synopsis	Enter the mip list instance
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MIP
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) mac-address <i>string</i>
Tree	mac-address
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-ctag-levels *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-ctag-levels <i>number</i>
Tree	squelch-ingress-ctag-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option. The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i>
Tree	squelch-ingress-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM

criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vmep-filter *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	configure service vpls <i>string</i> sap <i>string</i> eth-cfm vmep-filter <i>boolean</i>
Tree	vmep-filter
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet ring operation
Context	configure service vpls <i>string</i> sap <i>string</i> eth-ring <i>number</i>
Tree	eth-ring
Range	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etree-leaf *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable etree leaf access-circuit status
Context	configure service vpls string sap string etree-leaf boolean
Tree	etree-leaf
Default	false
Introduced	16.0.R1
Platforms	All

etree-root-leaf-tag

Synopsis	Enable the etree-root-leaf-tag context
Context	configure service vpls string sap string etree-root-leaf-tag
Tree	etree-root-leaf-tag
Introduced	16.0.R1
Platforms	All

leaf *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Leaf tag value
Context	configure service vpls string sap string etree-root-leaf-tag leaf number
Tree	leaf
Range	1 to 4094
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fdb

Synopsis	Enter the fdb context
Context	configure service vpls string sap string fdb
Tree	fdb
Introduced	16.0.R1
Platforms	All

auto-learn-mac-protect *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	configure service vpls string sap string fdb auto-learn-mac-protect <i>boolean</i>
Tree	auto-learn-mac-protect
Default	false
Introduced	16.0.R1
Platforms	All

auto-learn-mac-protect-exclude-list *reference*

Synopsis	Referenced MAC protect exclusion list
Context	configure service vpls string sap string fdb auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	configure service mac-list <i>string</i>
Introduced	20.5.R1
Platforms	All

discard-unknown-source *boolean*

Synopsis	Discard frames with unknown source
Context	configure service vpls string sap string fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false
Introduced	16.0.R1
Platforms	All

discard-unprotected-dest-mac *boolean*

Synopsis	Discard packet with unprotected destination MAC address
Context	configure service vpls <i>string</i> sap <i>string</i> fdb discard-unprotected-dest-mac <i>boolean</i>
Tree	discard-unprotected-dest-mac
Default	false
Introduced	16.0.R1
Platforms	All

bandwidth

Synopsis	Enter the bandwidth context
Context	configure service vpls string sap string igmp-snooping mcac bandwidth
Tree	bandwidth
Introduced	16.0.R1
Platforms	All

mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	configure service vpls string sap string igmp-snooping mcac bandwidth mandatory (number keyword)
Tree	mandatory
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	configure service vpls string sap string igmp-snooping mcac bandwidth total (number keyword)
Tree	total
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

interface-policy *reference*

Synopsis	Name of multicast CAC interface policy
Context	configure service vpls string sap string igmp-snooping mcac interface-policy reference

Tree	interface-policy
Reference	configure mcac interface-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

mc-constraints

Synopsis	Enter the mc-constraints context
Context	configure service vpls <i>string sap string igmp-snooping mcac mc-constraints</i>
Tree	mc-constraints
Introduced	16.0.R1
Platforms	All

level [[level-id](#)] *number*

Synopsis	Enter the level list instance
Context	configure service vpls <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	level
Introduced	16.0.R1
Platforms	All

[[level-id](#)] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	configure service vpls <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Bandwidth available for this level
----------	------------------------------------

Context	configure service vpls string sap string igmp-snooping mcac mc-constraints level number bandwidth number
Tree	bandwidth
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

number-down [[number-lag-port-down](#)] *number*

Synopsis	Enter the number-down list instance
Context	configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number
Tree	number-down
Introduced	16.0.R1
Platforms	All

[number-lag-port-down] *number*

Synopsis	Number of ports that are down in this LAG link
Context	configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

level *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number level number
Tree	level

Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

use-lag-port-weight *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	configure service vpls <i>string</i> sap <i>string</i> igmp-snooping mcac mc-constraints use-lag-port-weight <i>boolean</i>
Tree	use-lag-port-weight
Description	When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	Multicast CAC policy name
Context	configure service vpls <i>string</i> sap <i>string</i> igmp-snooping mcac policy <i>reference</i>
Tree	policy
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p>

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	configure mcac policy <i>string</i>
Introduced	16.0.R1
Platforms	All

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>string sap string igmp-snooping mrouter-port</i> <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	16.0.R1
Platforms	All

mvr

Synopsis	Enter the mvr context
Context	configure service vpls <i>string sap string igmp-snooping mvr</i>
Tree	mvr
Introduced	16.0.R1
Platforms	All

from-vpls *reference*

Synopsis	MVR VPLS from which the multicast channels are taken
Context	configure service vpls <i>string sap string igmp-snooping mvr from-vpls</i> <i>reference</i>
Tree	from-vpls
Reference	configure service vpls <i>string</i>
Introduced	16.0.R1
Platforms	All

to-sap *string*

Synopsis	Multicast channels copied to SAP
----------	----------------------------------

Context	configure service vpls string sap string igmp-snooping mvr to-sap string
Tree	to-sap
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure service vpls string sap string igmp-snooping query-interval number
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure service vpls string sap string igmp-snooping query-last-member-interval number
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls string sap string igmp-snooping query-response-interval number
Tree	query-response-interval
Range	1 to 1023

Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

robust-count *number*

Synopsis	Number of retries after expected message loss
Context	configure service vpls <i>string</i> sap <i>string</i> igmp-snooping robust-count <i>number</i>
Tree	robust-count
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>string</i> sap <i>string</i> igmp-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	16.0.R1
Platforms	All

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>string</i> sap <i>string</i> igmp-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	16.0.R1
Platforms	All

static

Synopsis	Enter the static context
Context	configure service vpls string sap string igmp-snooping static
Tree	static
Introduced	16.0.R1
Platforms	All

group [group-address] string

Synopsis	Enter the group list instance
Context	configure service vpls string sap string igmp-snooping static group string
Tree	group
Introduced	16.0.R1
Platforms	All

[group-address] string

Synopsis	Group address of static IGMP multicast channel
Context	configure service vpls string sap string igmp-snooping static group string
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

source [source-address] string

Synopsis	Add a list entry for source
Context	configure service vpls string sap string igmp-snooping static group string source string
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	16.0.R1
Platforms	All

[source-address] *string*

Synopsis	Source IP address of multicast channel sending data
Context	configure service vpls string sap string igmp-snooping static group string source string
Tree	source
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

starg

Synopsis	any source address (*,G)
Context	configure service vpls string sap string igmp-snooping static group string starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	16.0.R2
Platforms	All

version *keyword*

Synopsis	IGMP protocol version
Context	configure service vpls string sap string igmp-snooping version keyword
Tree	version
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure service vpls string sap string ingress
Tree	ingress
Introduced	16.0.R1
Platforms	All

filter

Synopsis	Enter the filter context
Context	configure service vpls <i>string</i> sap <i>string</i> ingress filter

scheduler [[scheduler-name](#)] *string*

Synopsis	Enter the scheduler list instance
Context	configure service vpls <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

[scheduler-name] *string*

Synopsis	Scheduler name
Context	configure service vpls <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

parent

Synopsis	Enter the parent context
Context	configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent

lag

Synopsis Enter the **lag** context

Context **configure service vpls string sap string lag**

Tree [lag](#)

Introduced 16.0.R1

Platforms All

link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure service vpls string sap string lag link-map-profile number**

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

per-link-hash

Synopsis	Enter the per-link-hash context
Context	configure service vpls string sap string lag per-link-hash
Tree	per-link-hash
Introduced	16.0.R1
Platforms	All

class number

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	configure service vpls string sap string lag per-link-hash class number
Tree	class
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

weight number

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	configure service vpls string sap string lag per-link-hash weight number
Tree	weight
Range	1 to 1024

[id] *number*

Synopsis	Level identifier
Context	configure service vpls string sap string spb level number
Tree	level
Range	1

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

hello-interval *number*

Synopsis	Hello interval
Context	configure service vpls <i>string sap string spb level number</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 20000
Units	seconds
Default	9
Introduced	21.10.R1
Platforms	All

hello-multiplier *number*

Synopsis	Hello multiplier
Context	configure service vpls <i>string sap string spb level number</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

metric *number*

Synopsis	Metric
Context	configure service vpls <i>string sap string spb level number</i> metric <i>number</i>
Tree	metric
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

lsp-pacing-interval *number*

Synopsis	Lsp pacing interval
Context	configure service vpls <i>string</i> sap <i>string</i> spb lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

retransmit-interval *number*

Synopsis	Retransmit interval
Context	configure service vpls <i>string</i> sap <i>string</i> spb retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 65535
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	All

split-horizon-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Split horizon group

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
Context	configure service vpls <i>string sap string static-host ipv4 string mac string subscriber-id</i>
Tree	<i>subscriber-id</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Subscriber identification
Context	configure service vpls <i>string sap string static-host ipv4 string mac string subscriber-id string string</i>
Tree	<i>string</i>
String Length	1 to 64
Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	configure service vpls <i>string sap string static-host ipv4 string mac string subscriber-id use-sap-id</i>
Tree	<i>use-sap-id</i>
Notes	The following elements are part of a choice: string or use-sap-id .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

static-isid

Synopsis	Enter the static-isid context
----------	--------------------------------------

Context	configure service vpls string sap string static-isid
Tree	static-isid
Introduced	19.10.R1
Platforms	All

range [range-id] number

Synopsis	Enter the range list instance
Context	configure service vpls string sap string static-isid range number
Tree	range
Introduced	19.10.R1
Platforms	All

[range-id] number

Synopsis	Range ID for static ISID
Context	configure service vpls string sap string static-isid range number
Tree	range
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

end number

Synopsis	Upper bound of the ISID range
Context	configure service vpls string sap string static-isid range number end number
Tree	end
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

start number

Synopsis	Lower bound of the ISID range
----------	-------------------------------

Context	configure service vpls string sap string static-isid range number start number
Tree	start
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

stp

Synopsis	Enter the stp context
Context	configure service vpls string sap string stp
Tree	stp
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls string sap string stp admin-state keyword
Tree	admin-state
Options	enable, disable
Introduced	16.0.R4
Platforms	All

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service vpls string sap string stp auto-edge boolean
Tree	auto-edge
Default	true
Introduced	16.0.R4
Platforms	All

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
----------	--------------------------------------

Context	configure service vpls string sap string stp edge-port boolean
Tree	edge-port
Default	false
Introduced	16.0.R4
Platforms	All

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service vpls string sap string stp link-type keyword
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	16.0.R4
Platforms	All

mst-instance [**mst-inst-number**] *number*

Synopsis	Enter the mst-instance list instance
Context	configure service vpls string sap string stp mst-instance number
Tree	mst-instance
Introduced	19.10.R1
Platforms	All

[mst-inst-number] *number*

Synopsis	Multiple Spanning Tree Instance number
Context	configure service vpls string sap string stp mst-instance number
Tree	mst-instance
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

mst-path-cost *number*

Synopsis	MSTI path cost
Context	configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-path-cost <i>number</i>
Tree	mst-path-cost
Range	1 to 200000000
Default	10
Introduced	19.10.R1
Platforms	All

mst-port-priority *number*

Synopsis	MSTI port priority
Context	configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-port-priority <i>number</i>
Tree	mst-port-priority
Range	0 16 32 48 64 80 96 112 128 144 160 176 192 208 224 240
Default	128
Introduced	19.10.R1
Platforms	All

path-cost *number*

Synopsis	Configure path-cost
Context	configure service vpls <i>string</i> sap <i>string</i> stp path-cost <i>number</i>
Tree	path-cost
Range	1 to 200000000
Default	10
Introduced	16.0.R4
Platforms	All

port-num *number*

Synopsis	Configure virtual port number
Context	configure service vpls <i>string</i> sap <i>string</i> stp port-num <i>number</i>
Tree	port-num

Range	1 to 2047
Introduced	16.0.R4
Platforms	All

priority *number*

Synopsis	Configure STP priority
Context	configure service vpls <i>string</i> sap <i>string</i> stp priority <i>number</i>
Tree	priority
Range	0 to 255
Default	128
Introduced	16.0.R4
Platforms	All

root-guard *boolean*

Synopsis	Enable/disable STP root-guard
Context	configure service vpls <i>string</i> sap <i>string</i> stp root-guard <i>boolean</i>
Tree	root-guard
Default	false
Introduced	16.0.R4
Platforms	All

sub-sla-mgmt

Synopsis	Enter the sub-sla-mgmt context
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt
Tree	sub-sla-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt admin-state <i>keyword</i>

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the defaults context
Context	configure service vpls string sap string sub-sla-mgmt defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	configure service vpls string sap string sub-sla-mgmt defaults app-profile reference
Tree	app-profile
Reference	configure application-assurance group number partition number policy app-profile string
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id

Synopsis	Enter the int-dest-id context
Context	configure service vpls string sap string sub-sla-mgmt defaults int-dest-id
Tree	int-dest-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Use the configured string
Context	configure service vpls string sap string sub-sla-mgmt defaults int-dest-id string string

Tree	string
String Length	1 to 32
Notes	The following elements are part of a choice: string or top-q-tag .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

top-q-tag

Synopsis	Use the top Q-tag of this SAP
Context	configure service vpls string sap string sub-sla-mgmt defaults int-dest-id top-q-tag
Tree	top-q-tag
Notes	The following elements are part of a choice: string or top-q-tag .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	configure service vpls string sap string sub-sla-mgmt defaults sla-profile <i>reference</i>
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Default subscriber profile for the SAP
Context	configure service vpls string sap string sub-sla-mgmt defaults sub-profile <i>reference</i>
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the subscriber-id context
Context	configure service vpls string sap string sub-sla-mgmt defaults subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis	Use auto-generated subscriber identification string
Context	configure service vpls string sap string sub-sla-mgmt defaults subscriber-id auto-id
Tree	auto-id
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID as default subscriber identification string
Context	configure service vpls string sap string sub-sla-mgmt defaults subscriber-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Default subscriber identification string for the SAP
Context	configure service vpls string sap string sub-sla-mgmt defaults subscriber-id string string
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: auto-id , sap-id , or string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-da-hashing *boolean*

Synopsis	Use destination MAC address instead of subscriber ID to select egress LAG link
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt mac-da-hashing <i>boolean</i>
Tree	mac-da-hashing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-sub-parameters

Synopsis	Enter the single-sub-parameters context
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters
Tree	single-sub-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

non-sub-traffic

Synopsis	Enable the non-sub-traffic context
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic
Tree	non-sub-traffic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile <i>reference</i>
Tree	app-profile
Reference	configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile reference
Tree	sla-profile
Reference	configure subscriber-mgmt sla-profile string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Subscriber profile all non-subscriber traffic
Context	configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile reference
Tree	sub-profile
Reference	configure subscriber-mgmt sub-profile string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id string
Tree	subscriber-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profiled-traffic-only *boolean*

Synopsis	Include all traffic in subscriber profile
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters profiled-traffic-only <i>boolean</i>
Tree	profiled-traffic-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt sub-ident-policy <i>reference</i>
Tree	sub-ident-policy

Reference	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i>
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function

Synopsis	Enter the function context
Context	configure service vpls string segment-routing-v6 number locator reference function
Tree	function
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

end-dt2m

Synopsis	Enable the end-dt2m context
Context	configure service vpls string segment-routing-v6 number locator reference function end-dt2m
Tree	end-dt2m
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *number*

Synopsis	SRv6 function value
Context	configure service vpls string segment-routing-v6 number locator reference function end-dt2m value <i>number</i>
Tree	value
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

end-dt2u

Synopsis	Enable the end-dt2u context
Context	configure service vpls string segment-routing-v6 number locator reference function end-dt2u
Tree	end-dt2u

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *number*

Synopsis	SRv6 function value
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> locator <i>reference</i> function end-dt2u <i>value</i> <i>number</i>
Tree	value
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

micro-segment-locator [*locator-name*] *reference*

Synopsis	Enter the micro-segment-locator list instance
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i>
Tree	micro-segment-locator
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[*locator-name*] *reference*

Synopsis	Micro-segment SRv6 locator name
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i>
Tree	micro-segment-locator
Description	This command associates a pre-defined micro-segment SRv6 locator (defined in the configure router segment-routing segment-routing-v6 context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.

Reference	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function

Synopsis	Enter the function context
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function
Tree	function
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt2m

Synopsis	Enable the udt2m context
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m
Tree	udt2m
Description	Commands in this context configure the SRv6 uDT2M behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *number*

Synopsis	SRv6 function value
Context	configure service vpls <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m <i>value</i> <i>number</i>
Tree	value
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt2u

Synopsis	Enable the udt2u context
Context	configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u
Tree	udt2u
Description	Commands in this context configure the SRv6 uDT2U behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis	SRv6 function value
Context	configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u value number
Tree	value
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

service-id number

service-mtu *number*

Synopsis	MTU size
Context	configure <i>service vpls string</i> service-mtu <i>number</i>
Tree	service-mtu

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	16.0.R1
Platforms	All

shcv-policy-ipv4 *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	configure service vpls <i>string</i> split-horizon-group <i>string</i> fdb saps auto-learn-mac-protect-exclude-list <i>reference</i>
Tree	auto-learn-mac-protect-exclude-list
Description	This command references the name of a MAC protect exclusion list. Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list. An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.
Reference	configure service mac-list <i>string</i>
Introduced	20.5.R1
Platforms	All

Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

wait-for-up-timer *number*

Synopsis	Time waited for BFD up status
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	This command configures the time interval that is used to wait for a BFD session to come up. This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

block-on-mesh-failure *boolean*

Synopsis	Enable blocking after all SDPs are operationally down

Tree	ais
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level number

Synopsis	Client MEG level for AIS message generation
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level number
Tree	client-meg-level
Range	1 to 7
Max. Instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support boolean

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support boolean
Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval number

Synopsis	Transmission interval for AIS messages
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number
Tree	interval
Range	1 60
Units	seconds
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais low-priority-defect <i>keyword</i>
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ais priority <i>number</i>
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis Time that must expire before an FNG alarm is raised

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification](#) **fng-reset-time** *number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis Generate CCM messages

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **ccm** *boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-ltm-priority <i>number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i>
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> cfm-vlan-tag <i>string</i>
Tree	cfm-vlan-tag
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the csf context
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	multiplier
Range	0.0 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

direction *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
----------	-------------------------

Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword
Tree	direction
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern

Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation <i>keyword</i>
Tree	fault-propagation
Options	use-if-status-tlv, suspend-ccm

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority number

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</i>
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed boolean

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</i>
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed boolean

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i>
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</i>

Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i>
Tree	tx-eth-vsm-grace
Description	When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> primary-vlan <i>boolean</i>
Tree	primary-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip primary-vlan (*number* | *keyword*)

Synopsis	Enter the mip list instance
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
Tree	mip
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary-vlan (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
----------	--------------------------------------

Context	configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (<i>number keyword</i>)
Tree	mip
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag string

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (<i>number keyword</i>) cfm-vlan-tag string
Tree	cfm-vlan-tag
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address string

Synopsis	MAC address of the MIP
Context	configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (<i>number keyword</i>) mac-address string
Tree	mac-address
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-ctag-levels *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	configure service vpls string spoke-sdp string eth-cfm squelch-ingress-ctag-levels number
Tree	squelch-ingress-ctag-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	configure service vpls string spoke-sdp string eth-cfm squelch-ingress-levels number
Tree	squelch-ingress-levels
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vmep-filter *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm vmep-filter <i>boolean</i>
Tree	vmep-filter
Default	false
Introduced	16.0.R1

stp boolean

Synopsis Enable all spanning tree protocols
Context **configure service vpls string spoke-sdp string l2pt termination protocols stp boolean**
Tree [stp](#)

Default	true
Introduced	16.0.R1
Platforms	All

udld boolean

Synopsis	Enable unidirectional link detection
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> l2pt termination protocols udld <i>boolean</i>
Tree	udld
Default	false
Introduced	16.0.R1
Platforms	All

vtp boolean

Synopsis	Enable virtual trunk protocol
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> l2pt termination protocols vtp <i>boolean</i>
Tree	vtp
Default	false
Introduced	16.0.R1
Platforms	All

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping
Tree	mld-snooping
Introduced	16.0.R1
Platforms	All

fast-leave boolean

Synopsis	Allow IGMP fast leave processing
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping fast-leave <i>boolean</i>
Tree	fast-leave

Default	false
Introduced	16.0.R1
Platforms	All

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>string</i>
Introduced	16.0.R1
Platforms	All

maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping mrouter-port <i>boolean</i>
Tree	mrouter-port
Default	false
Introduced	16.0.R1
Platforms	All

query-interval *number*

Synopsis	Time between two consecutive host-query messages
----------	--

Context	configure service vpls string spoke-sdp string mld-snooping query-interval number
Tree	query-interval
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

query-last-member-interval number

Synopsis	Time between group-specific query messages
Context	configure service vpls string spoke-sdp string mld-snooping query-last-member-interval number
Tree	query-last-member-interval
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

query-response-interval number

Synopsis	Time to wait for a response to the host-query messages
Context	configure service vpls string spoke-sdp string mld-snooping query-response-interval number
Tree	query-response-interval
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

robust-count number

Synopsis	Number of retries after expected message loss
Context	configure service vpls string spoke-sdp string mld-snooping robust-count number

Tree	robust-count
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

router-alert-check *boolean*

Synopsis	Enable IP router alert check option
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	16.0.R1
Platforms	All

send-queries *boolean*

Synopsis	Generate IGMP general queries
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping send-queries <i>boolean</i>
Tree	send-queries
Default	false
Introduced	16.0.R1
Platforms	All

static

Synopsis	Enter the static context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping static
Tree	static
Introduced	16.0.R1
Platforms	All

group [[group-address](#)] *string*

Synopsis	Enter the group list instance
----------	--------------------------------------

Context	configure service vpls string spoke-sdp string mld-snooping static group string
Tree	group
Introduced	16.0.R1
Platforms	All

[group-address] string

Synopsis	Group address of multicast channel
Context	configure service vpls string spoke-sdp string mld-snooping static group string
Tree	group
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

source [source-address] string

Synopsis	Add a list entry for source
Context	configure service vpls string spoke-sdp string mld-snooping static group string source string
Tree	source
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	16.0.R1
Platforms	All

[source-address] string

Synopsis	Source IP address
Context	configure service vpls string spoke-sdp string mld-snooping static group string source string
Tree	source
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

starg

Synopsis	any source address (*,G)
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping static group <i>string</i> starg
Tree	starg
Notes	The following elements are part of a mandatory choice: source or starg .
Introduced	16.0.R2
Platforms	All

version keyword

Synopsis	Version of MLD running on the SAP or SDP
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mld-snooping <i>version</i> <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	16.0.R1
Platforms	All

monitor-oper-group reference

Synopsis	Operational group that affects state of the SDP bind
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Reference	configure service oper-group <i>string</i>
Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	16.0.R1
Platforms	All

mrp

Synopsis	Enter the mrp context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mrp
Tree	mrp
Introduced	20.10.R1

Platforms All

join-time *number*

Synopsis Maximum rate for attribute join messages sent on SDP

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [join-time](#) *number*

Tree [join-time](#)

Range 1 to 10

Units deciseconds

Default 2

Introduced 20.10.R1

Platforms All

leave-all-time *number*

Synopsis Frequency of LeaveAll PDUs by LeaveAll state machine

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [leave-all-time](#) *number*

Tree [leave-all-time](#)

Range 60 to 300

Units deciseconds

Default 100

Introduced 20.10.R1

Platforms All

leave-time *number*

Synopsis Time in LV state before transition to MT state

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [leave-time](#) *number*

Tree [leave-time](#)

Range 30 to 60

Units deciseconds

Default 30

Introduced 20.10.R1

Platforms All

periodic-time *number*

Synopsis	Frequency of periodic events generated by state machine
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mrp periodic-time <i>number</i>
Tree	periodic-time
Range	10 to 100
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	All

periodic-timer *boolean*

Synopsis	Enable the Periodic Transmission Timer
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mrp periodic-timer <i>boolean</i>
Tree	periodic-timer
Default	false
Introduced	20.10.R1
Platforms	All

policy *reference*

Synopsis	MRP policy to control Group B-MAC attributes
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> mrp policy <i>reference</i>
Tree	policy
Reference	configure service mrp policy <i>string</i>
Introduced	20.10.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group identifier
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> oper-group <i>reference</i>
Tree	oper-group
Reference	configure service oper-group <i>string</i>

Notes	The following elements are part of a choice: monitor-oper-group or oper-group .
Introduced	16.0.R1
Platforms	All

pbp

Synopsis	Enter the pbp context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pbp
Tree	pbp
Introduced	20.10.R1
Platforms	All

fault-propagation

Synopsis	Enter the fault-propagation context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pbp fault-propagation
Tree	fault-propagation
Introduced	20.10.R1
Platforms	All

backbone-mac-address [[address](#)] *string*

Synopsis	Add a list entry for backbone-mac-address
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pbp fault-propagation backbone-mac-address <i>string</i>
Tree	backbone-mac-address
Introduced	20.10.R1
Platforms	All

[[address](#)] *string*

Synopsis	Backbone MAC address
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pbp fault-propagation backbone-mac-address <i>string</i>
Tree	backbone-mac-address
Notes	This element is part of a list key.

Introduced 20.10.R1
 Platforms All

backbone-mac-name [*name*] *reference*

Synopsis Add a list entry for **backbone-mac-name**
 Context **configure** [service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference](#)
 Tree [backbone-mac-name](#)
 Introduced 20.10.R1
 Platforms All

[name] *reference*

Synopsis Backbone MAC address name
 Context **configure** [service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference](#)
 Tree [backbone-mac-name](#)
 Reference **configure** [service pbb mac string](#)
 Notes This element is part of a list key.
 Introduced 20.10.R1
 Platforms All

pim-snooping

Synopsis Enter the **pim-snooping** context
 Context **configure** [service vpls string spoke-sdp string pim-snooping](#)
 Tree [pim-snooping](#)
 Introduced 16.0.R1
 Platforms All

maximum-number-groups *number*

Synopsis Maximum groups for this interface
 Context **configure** [service vpls string spoke-sdp string pim-snooping maximum-number-groups number](#)

Tree	maximum-number-groups
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

pw-status

Synopsis	Enter the pw-status context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pw-status
Tree	pw-status
Introduced	16.0.R1
Platforms	All

signaling *boolean*

Synopsis	Enable the use of pseudowire status signaling
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> pw-status signaling <i>boolean</i>
Tree	signaling
Default	true
Introduced	16.0.R1
Platforms	All

spb

Synopsis	Enable the spb context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb
Tree	spb
Introduced	21.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Admin state
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

level [*id*] *number*

Synopsis	Enter the level list instance
Context	configure service vpls string spoke-sdp string spb level number
Tree	level
Introduced	21.10.R1
Platforms	All

[id] *number*

Synopsis	Level identifier
Context	configure service vpls string spoke-sdp string spb level number
Tree	level
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

hello-interval *number*

Synopsis	Hello interval
Context	configure service vpls string spoke-sdp string spb level number hello-interval number
Tree	hello-interval
Range	1 to 20000
Units	seconds
Default	9
Introduced	21.10.R1
Platforms	All

hello-multiplier *number*

Synopsis	Hello multiplier
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

metric *number*

Synopsis	Metric
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> metric <i>number</i>
Tree	metric
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

lsp-pacing-interval *number*

Synopsis	Lsp pacing interval
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

retransmit-interval *number*

Synopsis	Retransmit interval
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> spb retransmit-interval <i>number</i>
Tree	retransmit-interval

Range	1 to 65535
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	All

split-horizon-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the split horizon group where the spoke SDP bind belongs to
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> split-horizon-group <i>reference</i>
Tree	split-horizon-group
Reference	configure service vpls <i>string</i> split-horizon-group <i>string</i>
Introduced	16.0.R1
Platforms	All

static-isid

Synopsis	Enter the static-isid context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid
Tree	static-isid
Introduced	19.10.R1
Platforms	All

range [[range-id](#)] *number*

Synopsis	Enter the range list instance
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i>
Tree	range
Introduced	19.10.R1
Platforms	All

[range-id] number

Synopsis	Range ID for static ISID
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i>
Tree	range
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

end number

Synopsis	Upper bound of the ISID range
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> end <i>number</i>
Tree	end
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

start number

Synopsis	Lower bound of the ISID range
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> start <i>number</i>
Tree	start
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

stp

Synopsis	Enter the stp context
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> stp
Tree	stp
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R4
Platforms	All

auto-edge *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> stp auto-edge <i>boolean</i>
Tree	auto-edge
Default	true
Introduced	16.0.R4
Platforms	All

edge-port *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> stp edge-port <i>boolean</i>
Tree	edge-port
Default	false
Introduced	16.0.R4
Platforms	All

link-type *keyword*

Synopsis	Configure STP link-type
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> stp link-type <i>keyword</i>
Tree	link-type
Options	pt-pt, shared
Default	pt-pt
Introduced	16.0.R4

Platforms All

path-cost *number*

Synopsis Configure path-cost
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [stp path-cost](#) *number*
Tree [path-cost](#)
Range 1 to 200000000
Default 10
Introduced 16.0.R4
Platforms All

port-num *number*

Synopsis Virtual port number
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [stp port-num](#) *number*
Tree [port-num](#)
Range 1 to 2047
Introduced 16.0.R4
Platforms All

priority *number*

Synopsis Configure STP priority
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [stp priority](#) *number*
Tree [priority](#)
Range 0 to 255
Default 128
Introduced 16.0.R4
Platforms All

root-guard *boolean*

Synopsis Enable/disable STP root-guard
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [stp root-guard](#) *boolean*

Tree	root-guard
Default	false
Introduced	16.0.R4
Platforms	All

transit-policy

Synopsis	Enable the transit-policy context
Context	configure service vpls string spoke-sdp string transit-policy
Tree	transit-policy
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	configure service vpls string spoke-sdp string transit-policy prefix reference
Tree	prefix
Reference	configure application-assurance group number partition number transit-prefix-policy number
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vc-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	configure service vpls string spoke-sdp string vc-type keyword
Tree	vc-type

Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

vlan-vc-tag *number*

Synopsis	SDP bind VC tag
Context	configure service vpls <i>string</i> spoke-sdp <i>string</i> vlan-vc-tag <i>number</i>
Tree	vlan-vc-tag
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

stp

Synopsis	Enter the stp context
Context	configure service vpls <i>string</i> stp
Tree	stp
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of STP
Context	configure service vpls <i>string</i> stp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

forward-delay *number*

Synopsis	Configure forward-delay
----------	-------------------------

Context	configure service vpls string stp forward-delay number
Tree	forward-delay
Range	4 to 30
Default	15
Introduced	16.0.R4
Platforms	All

hello-time number

Synopsis	Configure hello-time
Context	configure service vpls string stp hello-time number
Tree	hello-time
Range	1 to 10
Default	2
Introduced	16.0.R4
Platforms	All

hold-count number

Synopsis	Configure BPDU transmit hold count
Context	configure service vpls string stp hold-count number
Tree	hold-count
Range	1 to 20
Default	6
Introduced	16.0.R4
Platforms	All

maximum-age number

Synopsis	Configure maximum STP information age
Context	configure service vpls string stp maximum-age number
Tree	maximum-age
Range	6 to 40
Default	20
Introduced	16.0.R4

Platforms All

mode *keyword*

Synopsis Configure protocol version
 Context **configure** *service vpls string stp mode keyword*
 Tree [mode](#)
 Options rstp, comp-dot1w, dot1w, mstp, pmstp
 Default rstp
 Introduced 16.0.R4
 Platforms All

mst-instance [[mst-inst-number](#)] *number*

Synopsis Enter the **mst-instance** list instance
 Context **configure** *service vpls string stp mst-instance number*
 Tree [mst-instance](#)
 Introduced 19.10.R1
 Platforms All

[\[mst-inst-number\]](#) *number*

Synopsis Multiple Spanning Tree Instance number
 Context **configure** *service vpls string stp mst-instance number*
 Tree [mst-instance](#)
 Range 1 to 4094
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms All

mst-priority *number*

Synopsis Priority of multiple spanning tree instance
 Context **configure** *service vpls string stp mst-instance number mst-priority number*
 Tree [mst-priority](#)

Range	0 4096 8192 12288 16384 20480 24576 28672 32768 36864 40960 45056 49152 53248 57344 61440
Default	32768
Introduced	19.10.R1
Platforms	All

vlan-range [*range*] *string*

Synopsis	Add a list entry for vlan-range
Context	configure service vpls <i>string</i> stp mst-instance <i>number</i> vlan-range <i>string</i>
Tree	vlan-range
Introduced	19.10.R1
Platforms	All

[range] *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	configure service vpls <i>string</i> stp mst-instance <i>number</i> vlan-range <i>string</i>
Tree	vlan-range
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

mst-maximum-hops *number*

Synopsis	Maximum number of hops in an MSTP region
Context	configure service vpls <i>string</i> stp mst-maximum-hops <i>number</i>
Tree	mst-maximum-hops
Range	1 to 40
Default	20
Introduced	19.10.R1
Platforms	All

mst-name *string*

Synopsis	MST region name
Context	configure service vpls <i>string</i> stp mst-name <i>string</i>
Tree	mst-name
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

mst-revision *number*

Synopsis	MST configuration revision
Context	configure service vpls <i>string</i> stp mst-revision <i>number</i>
Tree	mst-revision
Range	0 to 65535
Introduced	19.10.R1
Platforms	All

priority *number*

Synopsis	STP bridge priority
Context	configure service vpls <i>string</i> stp priority <i>number</i>
Tree	priority
Range	0 to 65535
Default	32768
Introduced	16.0.R4
Platforms	All

temp-flooding *number*

Synopsis	Temporary flooding
Context	configure service vpls <i>string</i> temp-flooding <i>number</i>
Tree	temp-flooding
Range	3 to 600
Units	seconds
Introduced	16.0.R1

Platforms All

vpn-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis VPN identifier for the service
 Context **configure service vpls string vpn-id number**
 Tree [vpn-id](#)
 Range 1 to 2147483647
 Introduced 16.0.R1
 Platforms All

vxlan

Synopsis Enter the **vxlan** context
 Context **configure service vpls string vxlan**
 Tree [vxlan](#)
 Introduced 16.0.R1
 Platforms All

instance [[vxlan-instance](#)] *number*

Synopsis Enter the **instance** list instance
 Context **configure service vpls string vxlan instance number**
 Tree [instance](#)
 Introduced 16.0.R1

[vxlan-instance] *number*

Synopsis VXLAN instance
 Context **configure service vpls string vxlan instance number**
 Tree [instance](#)

Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

assisted-replication

Synopsis	Enter the assisted-replication context
Context	configure service vpls string vxlan instance number assisted-replication
Tree	assisted-replication
Introduced	16.0.R1
Platforms	All

leaf

Synopsis	Enable the leaf context
Context	configure service vpls string vxlan instance number assisted-replication leaf
Tree	leaf
Notes	The following elements are part of a choice: leaf or replicator .
Introduced	16.0.R1
Platforms	All

acttime *number*

Synopsis	Time for the leaf to wait before sending traffic to a new replicator
Context	configure service vpls string vxlan instance number assisted-replication leaf acttime number
Tree	acttime
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Platforms	All

replicator

Synopsis	AR role as replicator
Context	configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> assisted-replication replicator
Tree	replicator
Notes	The following elements are part of a choice: leaf or replicator .
Introduced	16.0.R1
Platforms	All

egress-vtep [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for egress-vtep
Context	configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> egress-vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	egress-vtep
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VTEP IP address used when originating VXLAN packets
Context	configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> egress-vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	egress-vtep
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fdb

Synopsis	Enter the fdb context
Context	configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> fdb
Tree	fdb
Introduced	16.0.R1
Platforms	All

discard-unknown-source *boolean*

Synopsis	Discard frames with unknown source
Context	configure service vpls string vxlan instance number fdb discard-unknown-source <i>boolean</i>
Tree	discard-unknown-source
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-learning

Synopsis	Enter the mac-learning context
Context	configure service vpls string vxlan instance number fdb mac-learning
Tree	mac-learning
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

aging *boolean*

Synopsis	Enable/disable aging of MAC addresses
Context	configure service vpls string vxlan instance number fdb mac-learning aging <i>boolean</i>
Tree	aging
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	configure service vpls string vxlan instance number fdb mac-learning learning <i>boolean</i>
Tree	learning
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

maximum-mac-addresses *number*

Synopsis	Maximum number of MAC entries in the FDB from this vxlan instance
Context	configure service vpls string vxlan instance number fdb maximum-mac-addresses number
Tree	maximum-mac-addresses
Range	1 to 511999
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

protected-src-mac-violation-action *keyword*

Synopsis	Action when a relearn request for a protected MAC is received
Context	configure service vpls string vxlan instance number fdb protected-src-mac-violation-action keyword
Tree	protected-src-mac-violation-action
Options	discard
Introduced	16.0.R1
Platforms	All

igmp-snooping

Synopsis	Enter the igmp-snooping context
Context	configure service vpls string vxlan instance number igmp-snooping
Tree	igmp-snooping
Introduced	16.0.R5
Platforms	All

mrouter-port *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	configure service vpls string vxlan instance number igmp-snooping mrouter-port boolean
Tree	mrouter-port
Default	false
Introduced	16.0.R5
Platforms	All

mld-snooping

Synopsis	Enter the mld-snooping context
Context	configure service vpls string vxlan instance number mld-snooping
Tree	mld-snooping
Introduced	16.0.R5
Platforms	All

mrouter-port *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	configure service vpls string vxlan instance number mld-snooping mrouter-port boolean
Tree	mrouter-port
Default	false
Introduced	16.0.R5
Platforms	All

network

Synopsis	Enter the network context
Context	configure service vpls string vxlan instance number network
Tree	network
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure service vpls string vxlan instance number network ingress
Tree	ingress
Introduced	16.0.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos
Tree	qos
Introduced	16.0.R1
Platforms	All

network

Synopsis	Enter the network context
Context	configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network
Tree	network
Introduced	16.0.R1
Platforms	All

fp-redirect-group

Synopsis	Enter the fp-redirect-group context
Context	configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network fp-redirect-group
Tree	fp-redirect-group
Introduced	16.0.R1
Platforms	All

group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network fp-redirect-group <i>group-name</i> <i>reference</i>
Tree	group-name
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Introduced	16.0.R1
Platforms	All

instance number

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	configure service vpls string vxlan instance number network ingress qos network fp-redirect-group instance number
Tree	instance
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

policy-name reference

Synopsis	Ingress network policy name applied to this SDP binding
Context	configure service vpls string vxlan instance number network ingress qos network policy-name reference
Tree	policy-name
Reference	configure qos network string
Introduced	16.0.R1
Platforms	All

rx-discard-on-ndf keyword

Synopsis	Received multicast traffic type discarded on NDF
Context	configure service vpls string vxlan instance number rx-discard-on-ndf keyword
Tree	rx-discard-on-ndf
Options	bm, bum, none
Default	bm
Introduced	16.0.R4
Platforms	All

source-vtep-security boolean

Synopsis	Enable/disable source vtep security
Context	configure service vpls string vxlan instance number source-vtep-security boolean
Tree	source-vtep-security
Default	false

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vni number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VNI of the VXLAN
Context	configure service vpls <i>string vxlan instance number vni number</i>
Tree	vni
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

source-vtep (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Vxlan source virtual tunnel endpoint information
Context	configure service vpls <i>string vxlan source-vtep (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	source-vtep
Introduced	16.0.R1
Platforms	All

wlan-gw

Synopsis	Enter the wlan-gw context
Context	configure service vpls <i>string wlan-gw</i>
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WLAN-GW
Context	configure service vpls <i>string</i> wlan-gw admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service vpls <i>string</i> wlan-gw description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vprn [[service-name](#)] *string*

Synopsis	Enter the vprn list instance
Context	configure service vprn <i>string</i>
Tree	vprn
Introduced	16.0.R1
Platforms	All

[service-name] *string*

Synopsis	Administrative service name
Context	configure service vprn <i>string</i>
Tree	vprn
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

aa-interface [[interface-name](#)] *string*

Synopsis	Enter the aa-interface list instance
Context	configure service vprn string aa-interface string
Tree	aa-interface
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *string*

Synopsis	Interface name
Context	configure service vprn string aa-interface string
Tree	aa-interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vprn string aa-interface string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service vprn string aa-interface string description string
Tree	description
String Length	1 to 255
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis IP MTU applied to outgoing packets
Context **configure service vprn** *string aa-interface string ip-mtu number*
Tree [ip-mtu](#)
Range 512 to 9786
Units bytes
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis Enter the **ipv4** context
Context **configure service vprn** *string aa-interface string ipv4*
Tree [ipv4](#)
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis Enable the **primary** context
Context **configure service vprn** *string aa-interface string ipv4 primary*
Tree [primary](#)
Introduced 21.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis Primary IPv4 address assigned to the interface
Context **configure service vprn** *string aa-interface string ipv4 primary address string*
Tree [address](#)
Notes This element is mandatory.
Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis IPv4 address prefix length
 Context **configure service vprn** *string aa-interface string ipv4 primary prefix-length number*
 Tree [prefix-length](#)
 Range 0 to 32
 Notes This element is mandatory.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance
 Context **configure service vprn** *string aa-interface string sap string*
 Tree [sap](#)
 Max. 1
 Instances
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis SAP ID
 Context **configure service vprn** *string aa-interface string sap string*
 Tree [sap](#)
 String Length 1 to 45
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the SAP

Context	configure service vprn <i>string aa-interface string sap string admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure service vprn <i>string aa-interface string sap string description string</i>
Tree	description
String Length	1 to 160
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the egress context
Context	configure service vprn <i>string aa-interface string sap string egress</i>
Tree	egress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis	Enter the filter context
Context	configure service vprn <i>string aa-interface string sap string egress filter</i>
Tree	filter
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip reference

Synopsis	IPv4 filter policy name
----------	-------------------------

Context	configure service vprn <i>string aa-interface string sap string egress filter ip reference</i>
Tree	ip
Reference	configure filter ip-filter <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the qos context
Context	configure service vprn <i>string aa-interface string sap string egress qos</i>
Tree	qos
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service vprn <i>string aa-interface string sap string egress qos sap-egress</i>
Tree	sap-egress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	configure service vprn <i>string aa-interface string sap string egress qos sap-egress policy-name reference</i>
Tree	policy-name
Reference	configure qos sap-egress <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fwd-wholesale

Synopsis	Enter the fwd-wholesale context
----------	--

Context	configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> fwd-wholesale
Tree	fwd-wholesale
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pppoe-service *reference*

Synopsis	PPPoE service name
Context	configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> fwd-wholesale pppoe-service <i>reference</i>
Tree	pppoe-service
Reference	configure service epipe <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the ingress context
Context	configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> ingress
Tree	ingress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the qos context
Context	configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> ingress qos
Tree	qos
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-ingress

Synopsis	Enter the sap-ingress context
Context	configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress

Tree	sap-ingress
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the overrides context
Context	configure service vprn <i>string aa-interface string sap string ingress qos sap-ingress overrides</i>
Tree	overrides
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policy ID
Context	configure service vprn <i>string aa-interface string sap string ingress qos sap-ingress policy-name reference</i>
Tree	policy-name
Reference	configure qos sap-ingress <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis	Enter the lag context
Context	configure service vprn <i>string aa-interface string sap string lag</i>
Tree	lag
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aaa

Synopsis	Enter the aaa context
Context	configure service vprn <i>string aaa</i>
Tree	aaa

Introduced 16.0.R4
Platforms All

remote-servers

Synopsis Enter the **remote-servers** context
Context **configure service vprn string aaa remote-servers**
Tree [remote-servers](#)
Introduced 16.0.R4
Platforms All

radius

Synopsis Enable the **radius** context
Context **configure service vprn string aaa remote-servers radius**
Tree [radius](#)
Introduced 16.0.R4
Platforms All

access-algorithm *keyword*

Synopsis Algorithm used to access the set of RADIUS servers
Context **configure service vprn string aaa remote-servers radius access-algorithm *keyword***
Tree [access-algorithm](#)
Options direct, round-robin
Default direct
Introduced 16.0.R4
Platforms All

accounting *boolean*

Synopsis Enable RADIUS command accounting
Context **configure service vprn string aaa remote-servers radius accounting *boolean***
Tree [accounting](#)
Default false

Introduced 16.0.R4
Platforms All

accounting-port *number*

Synopsis Port number on RADIUS server for accounting requests
Context **configure** [service vprn](#) *string* [aaa remote-servers radius](#) [accounting-port](#) *number*
Tree [accounting-port](#)
Range 1 to 65535
Default 1813
Introduced 16.0.R4
Platforms All

admin-state *keyword*

Synopsis Administrative state of the authentication server
Context **configure** [service vprn](#) *string* [aaa remote-servers radius](#) [admin-state](#) *keyword*
Tree [admin-state](#)
Options enable, disable
Default enable
Introduced 16.0.R4
Platforms All

authorization *boolean*

Synopsis Enable RADIUS authorization
Context **configure** [service vprn](#) *string* [aaa remote-servers radius](#) [authorization](#) *boolean*
Tree [authorization](#)
Default false
Introduced 16.0.R4
Platforms All

interactive-authentication *boolean*

Synopsis Enable RADIUS interactive authentication

Context	configure service vprn <i>string</i> aaa remote-servers radius interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	16.0.R4
Platforms	All

port *number*

Synopsis	UDP port number on which to contact RADIUS server
Context	configure service vprn <i>string</i> aaa remote-servers radius port <i>number</i>
Tree	port
Range	1 to 65535
Default	1812
Introduced	16.0.R4
Platforms	All

server [[index](#)] *number*

Synopsis	Enter the server list instance
Context	configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i>
Tree	server
Max. Instances	5
Introduced	16.0.R4
Platforms	All

[index] *number*

Synopsis	RADIUS server ID
Context	configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4

Platforms All

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [address](#)

Notes This element is mandatory.

Introduced 16.0.R4

Platforms All

authenticator *keyword*

Synopsis Authenticator hash algorithm for the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number authenticator keyword**

Tree [authenticator](#)

Description This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.

Options md5, sm3

Default md5

Introduced 22.10.R1

Platforms All

secret *string*

Synopsis Secret key to access the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number secret string**

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R4

Platforms All

tls-client-profile *reference*

Synopsis	TLS client profile for the RADIUS server
Context	configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i> tls-client-profile reference
Tree	tls-client-profile
Description	This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS.
Reference	configure system security tls client-tls-profile <i>string</i>
Introduced	21.10.R1
Platforms	All

server-retry *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	configure service vprn <i>string</i> aaa remote-servers radius server-retry <i>number</i>
Tree	server-retry
Range	1 to 10
Default	3
Introduced	16.0.R4
Platforms	All

server-timeout *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	configure service vprn <i>string</i> aaa remote-servers radius server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	All

use-default-template *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
----------	---

Context	configure service vprn <i>string</i> aaa remote-servers radius use-default-template <i>boolean</i>
Tree	use-default-template
Default	false
Introduced	16.0.R4
Platforms	All

tacplus

Synopsis	Enable the tacplus context
Context	configure service vprn <i>string</i> aaa remote-servers tacplus
Tree	tacplus
Introduced	16.0.R4
Platforms	All

accounting

Synopsis	Enable the accounting context
Context	configure service vprn <i>string</i> aaa remote-servers tacplus accounting
Tree	accounting
Introduced	16.0.R4
Platforms	All

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	configure service vprn <i>string</i> aaa remote-servers tacplus accounting record-type <i>keyword</i>
Tree	record-type
Options	start-stop, stop-only
Default	stop-only
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
----------	--

Context	configure service vprn <i>string</i> aaa remote-servers tacplus admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

authorization

Synopsis	Enable the authorization context
Context	configure service vprn <i>string</i> aaa remote-servers tacplus authorization
Tree	authorization
Introduced	16.0.R4
Platforms	All

request-format

Synopsis	Enter the request-format context
Context	configure service vprn <i>string</i> aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	configure service vprn <i>string</i> aaa remote-servers tacplus authorization request-format access-operation-cmd <i>keyword</i>
Tree	access-operation-cmd
Description	This command sends an operation argument in authorization requests. In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.
Options	delete

Max. Instances	1
Introduced	21.10.R3
Platforms	All

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	configure service vprn <i>string</i> aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i>
Tree	use-priv-lvl
Description	<p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p>
Default	false
Introduced	16.0.R4
Platforms	All

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	configure service vprn <i>string</i> aaa remote-servers tacplus interactive-authentication <i>boolean</i>
Tree	interactive-authentication
Default	false
Introduced	16.0.R4
Platforms	All

priv-lvl-map

Synopsis	Enter the priv-lvl-map context
Context	configure service vprn <i>string</i> aaa remote-servers tacplus priv-lvl-map

Tree	priv-lvl-map
Introduced	16.0.R4
Platforms	All

priv-lvl [[level](#)] *number*

Synopsis	Enter the priv-lvl list instance
Context	configure service vpn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Introduced	16.0.R4
Platforms	All

[level] *number*

Synopsis	Privilege level for the mapping
Context	configure service vpn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i>
Tree	priv-lvl
Range	0 to 15
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

user-profile-name *reference*

Synopsis	User profile for the mapping
Context	configure service vpn <i>string</i> aaa remote-servers tacplus priv-lvl-map priv-lvl <i>number</i> user-profile-name <i>reference</i>
Tree	user-profile-name
Reference	configure system security aaa local-profiles profile <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

server [*index*] *number*

Synopsis	Enter the server list instance
Context	configure service vprn <i>string</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Max. Instances	5
Introduced	16.0.R4
Platforms	All

[index] *number*

Synopsis	TACACS+ server ID
Context	configure service vprn <i>string</i> aaa remote-servers tacplus server <i>number</i>
Tree	server
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	configure service vprn <i>string</i> aaa remote-servers tacplus server <i>number</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

port *number*

Synopsis	TCP port ID on which to contact TACACS+ server
Context	configure service vprn <i>string</i> aaa remote-servers tacplus server <i>number</i> port <i>number</i>
Tree	port
Range	0 1 to 65535

Default	49
Introduced	16.0.R4
Platforms	All

secret string

Synopsis	Secret key to access the TACACS+ server
Context	configure service vprn string aaa remote-servers tacplus server number secret string
Tree	secret
String Length	1 to 199
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

server-timeout number

Synopsis	Time to wait for a response from the TACACS+ server
Context	configure service vprn string aaa remote-servers tacplus server-timeout number
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	All

use-default-template boolean

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	configure service vprn string aaa remote-servers tacplus use-default-template boolean
Tree	use-default-template
Default	true
Introduced	16.0.R4
Platforms	All

aarp-interface [*interface-name*] *string*

Synopsis	Enter the aarp-interface list instance
Context	configure service vprn string aarp-interface string
Tree	aarp-interface
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *string*

Synopsis	Interface name
Context	configure service vprn string aarp-interface string
Tree	aarp-interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	configure service vprn string aarp-interface string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

aggregates

Synopsis	Enter the aggregates context
----------	-------------------------------------

Context	configure service vprn string aggregates
Tree	aggregates
Introduced	16.0.R1
Platforms	All

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the aggregate list instance
Context	configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Introduced	16.0.R1
Platforms	All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	aggregate
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

aggregator

Synopsis	Enter the aggregator context
Context	configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator
Tree	aggregator
Introduced	16.0.R1
Platforms	All

address string

Synopsis	Aggregator IP address
Context	configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address string

Tree	address
Introduced	16.0.R1
Platforms	All

as-number *number*

Synopsis	Aggregator AS number
Context	configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

as-set *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i>
Tree	as-set
Description	When configured to true , the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes. When configured to false , the AS_PATH attribute contains no AS_SET and will be originated by the ESR.
Default	false
Introduced	16.0.R1
Platforms	All

blackhole

Synopsis	Enable the blackhole context
Context	configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole
Tree	blackhole
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	16.0.R1

Platforms All

generate-icmp *boolean*

Synopsis Send ICMP unreachable messages for aggregate routes

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **blackhole generate-icmp** *boolean*

Tree **generate-icmp**

Description When configured to **true**, ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop.
When configured to **false**, ICMP unreachable messages are not generated.

Default false

Introduced 16.0.R2

Platforms All

community *string*

Synopsis Community name that is added to the aggregate route

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **community** *string*

Tree **community**

Description This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.

String Length 1 to 72

Max. Instances 12

Notes This element is ordered by the user.

Introduced 16.0.R1

Introduced	16.0.R1
Platforms	All

discard-component-communities *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) discard-component-communities <i>boolean</i>
Tree	discard-component-communities
Default	false
Introduced	19.7.R1
Platforms	All

indirect (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: blackhole or indirect .
Introduced	16.0.R1
Platforms	All

local-preference *number*

Synopsis	Local preference used when aggregate route is exported
Context	configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) local-preference <i>number</i>
Tree	local-preference

Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

policy reference

Synopsis	Policy name for the aggregated route
Context	configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) policy reference
Tree	policy
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	configure policy-options policy-statement string
Introduced	20.10.R1
Platforms	All

summary-only boolean

Synopsis	Advertise the aggregate route only
Context	configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) summary-only boolean
Tree	summary-only
Description	<p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

tunnel-group *number*

Synopsis	Tunnel group from which to associate the MC IPsec state
Context	configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i>
Tree	tunnel-group
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

allow-export-bgp-vpn *boolean*

Synopsis	Include BGP-VPN routes for export
Context	configure service vpn <i>string</i> allow-export-bgp-vpn <i>boolean</i>
Tree	allow-export-bgp-vpn
Default	false
Introduced	16.0.R1
Platforms	All

autonomous-system *number*

Synopsis	AS number advertised to peers for this router
Context	configure service vpn <i>string</i> autonomous-system <i>number</i>
Tree	autonomous-system
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated. If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

bgp

Synopsis	Enable the bgp context
Context	configure service vprn string bgp
Tree	bgp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	configure service vprn string bgp admin-state keyword
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	configure service vprn string bgp advertise-inactive boolean
Tree	advertise-inactive
Description	When configured to true , this command allows any inactive BGP route to be advertised, even though it is not the used route. When configured to false , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

advertise-ipv6-next-hops

Synopsis	Enter the advertise-ipv6-next-hops context
Context	configure service vprn string bgp advertise-ipv6-next-hops
Tree	advertise-ipv6-next-hops

Introduced	19.5.R1
Platforms	All

ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	configure service vprn <i>string</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	19.5.R1
Platforms	All

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	configure service vprn <i>string</i> bgp aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Description	<p>When configured to true, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.</p> <p>When configured to false, the AS number and router ID are added to the AGGREGATOR path attribute.</p>
Default	false
Introduced	16.0.R1
Platforms	All

asn-4-byte *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	configure service vprn <i>string</i> bgp asn-4-byte <i>boolean</i>
Tree	asn-4-byte
Default	true
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	BGP authentication key for all peers
Context	configure service vprn string bgp authentication-key string
Tree	authentication-key
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure service vprn string bgp authentication-keychain reference
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain string
Introduced	16.0.R3
Platforms	All

backup-path

Synopsis	Enter the backup-path context
Context	configure service vprn string bgp backup-path
Tree	backup-path
Description	<p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p>
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure service vprn <i>string</i> bgp backup-path ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure service vprn <i>string</i> bgp backup-path ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure service vprn <i>string</i> bgp backup-path label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Enable support for labeled unicast IPv6 routes
Context	configure service vprn <i>string</i> bgp backup-path label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	22.2.R1
Platforms	All

best-path-selection

Context	configure service vprn string bgp best-path-selection
Tree	best-path-selection
Introduced	16.0.R1
Platforms	All

always-compare-med

Synopsis	Enter the always-compare-med context
Context	configure service vprn string bgp best-path-selection always-compare-med
Tree	always-compare-med
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	16.0.R1
Platforms	All

med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	configure service vprn string bgp best-path-selection always-compare-med med-value keyword
Tree	med-value
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	16.0.R1
Platforms	All

strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	configure service vprn string bgp best-path-selection always-compare-med strict-as boolean
Tree	strict-as

Description	When configured to true , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS. When configured to false , the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.
Default	true
Introduced	16.0.R1
Platforms	All

as-path-ignore

Synopsis	Enter the as-path-ignore context
Context	configure service vprn string bgp best-path-selection as-path-ignore
Tree	as-path-ignore
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	16.0.R1
Platforms	All

ipv4 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	configure service vprn string bgp best-path-selection as-path-ignore ipv4 boolean
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	configure service vprn string bgp best-path-selection as-path-ignore ipv6 boolean
Tree	ipv6
Default	false
Introduced	16.0.R1

Default	false
Introduced	22.2.R1
Platforms	All

compare-origin-validation-state *boolean*

Synopsis	Allow comparison of origin validation states
Context	configure service vprn <i>string</i> bgp best-path-selection compare-origin-validation-state <i>boolean</i>
Tree	compare-origin-validation-state
Default	false
Introduced	19.7.R1
Platforms	All

d-path-length-ignore *boolean*

Synopsis	Enable D-PATH length ignore
Context	configure service vprn <i>string</i> bgp best-path-selection d-path-length-ignore <i>boolean</i>
Tree	d-path-length-ignore
Description	When configured to true , this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

deterministic-med *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	configure service vprn string bgp best-path-selection deterministic-med boolean
Tree	deterministic-med
Description	When configured to true , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases. When configured to false , paths are not grouped and the overall best-path selection can depend on the order of route arrival.
Default	false
Introduced	16.0.R1
Platforms	All

ebgp-ibgp-equal

Synopsis	Enter the ebgp-ibgp-equal context
Context	configure service vprn string bgp best-path-selection ebgp-ibgp-equal
Tree	ebgp-ibgp-equal

Description	<p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p>
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Consider EBGP and IBGP IPv4 routes equal
Context	configure service vprn <i>string</i> bgp best-path-selection ebgp-ibgp-equal ipv4 boolean
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 *boolean*

Synopsis	Consider EBGP and IBGP IPv6 routes equal
Context	configure service vprn <i>string</i> bgp best-path-selection ebgp-ibgp-equal ipv6 boolean
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	configure service vprn <i>string</i> bgp best-path-selection ebgp-ibgp-equal label-ipv4 boolean
Tree	label-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	configure service vprn <i>string</i> bgp best-path-selection ebgp-ibgp-equal label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	22.2.R1
Platforms	All

ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	configure service vprn <i>string</i> bgp best-path-selection ignore-nh-metric <i>boolean</i>
Tree	ignore-nh-metric
Description	<p>When configured to true, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to false, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the router context) or IP prefix learned from VPRN BGP peers (in the vprn context).</p>
Default	false
Introduced	16.0.R1
Platforms	All

ignore-router-id

Synopsis	Enable the ignore-router-id context
Context	configure service vprn <i>string</i> bgp best-path-selection ignore-router-id
Tree	ignore-router-id
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	16.0.R1
Platforms	All

origin-invalid-unusable *boolean*

Synopsis	Ignore routes with invalid origin validation state
Context	configure service vprn <i>string</i> bgp best-path-selection origin-invalid-unusable <i>boolean</i>
Tree	origin-invalid-unusable
Default	false
Introduced	19.7.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure service vprn <i>string</i> bgp bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to false , BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	16.0.R1
Platforms	All

client-reflect *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	configure service vprn <i>string</i> bgp client-reflect <i>boolean</i>
Tree	client-reflect
Description	When configured to true , routes received from neighbors considered to be RR clients are reflected to other peers as expected. When configured to false , routes received from neighbors considered to be RR clients are not reflected to other clients.
Default	true
Introduced	16.0.R1
Platforms	All

cluster

Synopsis	Enter the cluster context
Context	configure service vprn string bgp cluster
Tree	cluster
Introduced	16.0.R1
Platforms	All

cluster-id string

Synopsis	Route reflector cluster ID
Context	configure service vprn string bgp cluster cluster-id string
Tree	cluster-id
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	16.0.R1
Platforms	All

connect-retry number

Synopsis	BGP connect retry timer value
Context	configure service vprn string bgp connect-retry number
Tree	connect-retry
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	16.0.R1
Platforms	All

Introduced	19.7.R1
Platforms	All

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn <i>string</i> bgp damp-peer-oscillations
Tree	damp-peer-oscillations
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.
Introduced	16.0.R1
Platforms	All

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vprn <i>string</i> bgp damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

second-wait *number*

Synopsis	Time that doubles after each session failure
Context	configure service vprn <i>string</i> bgp damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1

Platforms All

damping *boolean*

Synopsis Use BGP route damping to reduce route flap

Context **configure** *service vprn string bgp damping boolean*

Tree [damping](#)

Description When configured to **true**, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.

Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:

- Half-life: 15 minutes
- Max-suppress: 60 minutes
- Suppress-threshold: 3000
- Reuse-threshold: 750

When configured to **false**, BGP route damping for learned routes is disabled.

Default false

domain-id *string*

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vprn <i>string</i> bgp domain-id <i>string</i>
Tree	domain-id
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>

Introduced 21.10.R1
 Platforms All

dynamic-neighbor-limit *number*

Synopsis Max dynamic BGP sessions to accept from remote peers
 Context **configure** *service vprn string bgp dynamic-neighbor-limit number*
 Tree [dynamic-neighbor-limit](#)
 Description This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
 Range 1 to 8192

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure service vprn <i>string</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fw

Default	none
Introduced	16.0.R1
Platforms	All

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn <i>string</i> bgp graceful-restart long-lived without-no-export <i>boolean</i>

Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	16.0.R1

advertise-inactive boolean

Synopsis	Advertise an inactive BGP route to peers
Context	configure service vprn string bgp group string advertise-inactive boolean
Tree	advertise-inactive
Description	When configured to true , this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors. <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised.

- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced	16.0.R1
Platforms	All

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [capability-negotiation](#) *boolean*

Tree [capability-negotiation](#)

Description When configured to **true**, this command enables the exchange of capabilities.

When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 16.0.R1
 Platforms All

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients
 Context **configure** *service vprn string bgp group string client-reflect boolean*
 Tree *client-reflect*
 Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.
 When the command inherits a value of **true**, client reflection of routes is enabled.
 When configured to **false**, this command disables client reflection of routes.
 Introduced 16.0.R1

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure service vprn string bgp group string damp-peer-oscillations
Tree	damp-peer-oscillations
Description	<p>Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.</p> <p>When unconfigured, command settings are inherited from the global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure service vprn string bgp group string damp-peer-oscillations error-interval number
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

Tree	dynamic-neighbor
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

interface [[interface-name](#)] *reference*

Synopsis	Enter the interface list instance
Context	configure service vprn string bgp group string dynamic-neighbor interface reference
Tree	interface
Description	<p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	22.10.R1
Platforms	All

[\[interface-name\]](#) *reference*

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
----------	---

Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p>

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

restart-time *number*

Synopsis	Restart time advertised by GR capability

Tree	hold-time
Introduced	16.0.R1
Platforms	All

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure service vprn <i>string</i> bgp group <i>string</i> hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. When unconfigured, the command value is inherited from the BGP global-level setting.
Range	0 3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure service vprn <i>string</i> bgp group <i>string</i> hold-time seconds <i>number</i>
Tree	seconds
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.

Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP global-level configuration.

Range	0 3 to 65535
Introduced	16.0.R1
Platforms	All

Synopsis	Send BGP updates as soon as the session comes up
Context	configure <i>service vprn string</i> <i>bgp group string</i> initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>service vprn string</i> <i>bgp group string</i> keepalive <i>number</i>
Tree	keepalive
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

label-preference *number*

Tree [passive](#)
Default false
Introduced 16.0.R1
Platforms All

path-mtu-discovery *boolean*

Synopsis Enable Path MTU Discovery
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [path-mtu-discovery](#) *boolean*
Tree [path-mtu-discovery](#)

Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

peer-as *number*

Synopsis	Peer AS number
Context	configure service vprn <i>string</i> bgp group <i>string</i> peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vprn <i>string</i> bgp group <i>string</i> peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	16.0.R1

Platforms All

preference *number*

Synopsis Route preference for routes learned from all peers
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* [preference](#) *number*

[family] *keyword*

Synopsis Address family to which the limit applies
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword*
 Tree [prefix-limit](#)
 Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

idle-timeout *number*

Synopsis Time BGP peering remains idle before reconnecting
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword* [idle-timeout](#) *number*
 Tree [idle-timeout](#)
 Description This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

Range	1 to 1024
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure <i>service vprn string bgp group string prefix-limit keyword log-only boolean</i>
Tree	<i>log-only</i>
Description	<p>When configured to true, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and idle-timeout cannot be configured simultaneously.</p> <p>When configured to false, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p>
Default	false
Introduced	16.0.R1
Platforms	All

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure <i>service vprn string bgp group string prefix-limit keyword maximum number</i>
Tree	<i>maximum</i>
Description	<p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> post-import <i>boolean</i>
Tree	post-import
Description	When configured to true , the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit. When configured to false , the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

Default	false
Introduced	19.7.R1
Platforms	All

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>string</i> bgp group <i>string</i> split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

static-group *boolean*

Synopsis	Use group for static peers
Context	configure service vprn <i>string</i> bgp group <i>string</i> static-group <i>boolean</i>
Tree	static-group
Default	true
Introduced	16.0.R1
Platforms	All

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure service vprn <i>string</i> bgp group <i>string</i> tcp-mss (<i>number</i> <i>keyword</i>)
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	configure service vprn <i>string</i> bgp group <i>string</i> third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	16.0.R1
Platforms	All

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure service vprn <i>string</i> bgp group <i>string</i> ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP accepts from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

type keyword

Synopsis	BGP peer type
Context	configure service vprn string bgp group string type keyword
Tree	type
Options	no-type, internal, external

Introduced	16.0.R1
Platforms	All

minimum-hold-time number

Synopsis	Minimum hold time between successive messages
Context	configure service vprn string bgp hold-time minimum-hold-time number
Tree	minimum-hold-time
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0 3 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

seconds number

Synopsis	Maximum time BGP waits between successive messages
Context	configure service vprn string bgp hold-time seconds number
Tree	seconds

Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.
Range	0 3 to 65535
Default	90
Introduced	16.0.R1

advertise-inactive *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-inactive** *boolean*

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops

Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	All

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i>
Tree	as-override
Description	When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute. This command should be used with caution, as it breaks BGP's loop detection mechanism.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When the command inherits a value of **false**, no AS override is performed.

Introduced	16.0.R1
Platforms	All

asn-4-byte *boolean*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.

Range 0 to 16777216

Default 16777216

Introduced 16.0.R1

Platforms All

forwarding-bits-set *keyword*

Synopsis BGP LLGR forwarding-bit behavior for address family

Context **configure** **service** **vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived forwarding-bits-set** *keyword*

Tree [forwarding-bits-set](#)

Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215

Introduced	16.0.R1
Platforms	All

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	<p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>

admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor all-stations <i>boolean</i>
Tree	all-stations
Description	When configured to true , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations. When configured to false , the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

route-monitoring

Synopsis	Enter the route-monitoring context
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring
Tree	route-monitoring
Introduced	16.0.R1
Platforms	All

post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring post-policy <i>boolean</i>
Tree	post-policy
Default	false
Introduced	16.0.R1
Platforms	All

pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring pre-policy <i>boolean</i>
Tree	pre-policy
Default	false
Introduced	16.0.R1
Platforms	All

station [[station-name](#)] *reference*

Synopsis	Add a list entry for station
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i>
Tree	station
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[station-name] *reference*

Synopsis	BMP monitoring station
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i>
Tree	station

Reference	configure bmp station string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

multihop *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	16.0.R1
Platforms	All

multipath-eligible *boolean*

Synopsis	Allow routes from this peer in multipath eligibility
Context	configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multipath-eligible <i>boolean</i>
Tree	multipath-eligible
Introduced	19.5.R1
Platforms	All

next-hop-self *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	configure service vpn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) next-hop-self <i>boolean</i>
Tree	next-hop-self
Description	<p>When configured to true, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the configure router bgp rr-vpn-forwarding command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p>

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 16.0.R1
 Platforms All

origin-validation

Synopsis Enable the **origin-validation** context
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation**
 Tree [origin-validation](#)
 Introduced 19.7.R1

ipv4 boolean

Synopsis Enable/disable family type ipv4.
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv4 boolean**
 Tree [ipv4](#)
 Default false
 Introduced 19.7.R1
 Platforms All

ipv6 boolean

Synopsis Enable support for unlabeled unicast IPv6 routes
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv6 boolean**
 Tree [ipv6](#)
 Default false
 Introduced 19.7.R1
 Platforms All

label-ipv4 boolean

Synopsis Enable support for labeled-unicast IPv4 routes

Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	19.7.R1
Platforms	All

passive *boolean*

Synopsis	Use passive mode for BGP communication
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i>
Tree	passive
Introduced	16.0.R1
Platforms	All

path-mtu-discovery *boolean*

Synopsis	Enable path MTU discovery
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

peer-as *number*

Synopsis	Peer AS number
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i>
Tree	peer-as
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

peer-creation-type *keyword*

Synopsis	Peer creation type
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i>
Tree	peer-creation-type
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	16.0.R1
Platforms	All

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p>

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, peer tracking is disabled.

Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	This command configures the route preference for routes learned from the configured peers. The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF. When unconfigured, the command setting is inherited from the group-level configuration.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

prefix-limit [*family*] *keyword*

Synopsis	Enter the prefix-limit list instance

Introduced	16.0.R1

Platforms All

extended *boolean*

Synopsis Advertise the Extended Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities extended** *boolean*

Tree **extended**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

large *boolean*

Synopsis Advertise the Large Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities large** *boolean*

Tree **large**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

standard *boolean*

Synopsis Advertise the Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities standard** *boolean*

Tree **standard**

Description	When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true . When this command inherits a value of true , BGP standard communities are sent to peers in the Communities attribute. When configured to false , all standard communities are removed from all routes advertised to BGP peers.
Introduced	16.0.R1
Platforms	All

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

tcp-mss (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tcp-mss (<i>number</i> <i>keyword</i>)
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p>

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) third-party-nexthop <i>boolean</i>
Tree	third-party-nexthop
Introduced	16.0.R1
Platforms	All

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ttl-security <i>number</i>
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded. When unconfigured, the command inherits the value of the group-level setting.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	configure service vprn <i>string</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i>
Tree	use-bgp-routes
Description	<p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p>

Default	false
Introduced	19.10.R1
Platforms	All

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure service vprn <i>string</i> bgp path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p> <p>When configured to false, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.</p>
Default	false
Introduced	16.0.R1

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	configure service vprn <i>string</i> bgp rib-management ipv6 route-table-import policy-name reference
Tree	policy-name
Description	<p>This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.</p> <p>When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.</p> <p>Aggregate routes are always imported into each RIB, independent of the specified policy.</p> <p>Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.</p> <p>When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.</p>

router-id *string*

Synopsis	Router ID for the BGP instance in the AS
Context	configure service vprn <i>string</i> bgp router-id <i>string</i>
Tree	router-id
Description	This command specifies the router ID to be used with the BGP instance. Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID. When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.
Introduced	16.0.R1
Platforms	All

Context	configure service vprn <i>string</i> bgp send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	19.7.R1
Platforms	All

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure service vprn <i>string</i> bgp split-horizon <i>boolean</i>
Tree	split-horizon
Description	When configured to true , this command enables the use of split-horizon. This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When configured to **false**, the use of split-horizon is disabled.

Default	false
Introduced	16.0.R1
Platforms	All

tcp-mss *number*

Synopsis	TCP maximum segment size override
Context	configure <i>service vprn string bgp tcp-mss number</i>
Tree	tcp-mss
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Introduced	21.2.R1
Platforms	All

third-party-nexthop *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	configure <i>service vprn string bgp third-party-nexthop boolean</i>
Tree	third-party-nexthop
Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>

Default	false
Introduced	16.0.R1
Platforms	All

bgp-evpn

Options	none, filter, any
Default	none
Introduced	20.10.R1
Platforms	All

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers.
Introduced	20.10.R1
Platforms	All

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter bgp boolean
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop. When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	20.10.R1
Platforms	All

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

mpls-fwd-policy boolean

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean
Tree	mpls-fwd-policy
Description	When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to false , the MPLS forwarding policy is not used for next-hop resolution.
Default	false

Introduced	20.10.R1
Platforms	All

rib-api *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rib-api <i>boolean</i>
Tree	rib-api
Description	When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to false , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

sr-isis *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>

Tree	sr-isis
Description	<p>When configured to true, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	20.10.R1
Platforms	All

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean
Tree	sr-ospf
Description	<p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	20.10.R1
Platforms	All

sr-ospf3 boolean

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 boolean
Tree	sr-ospf3
Description	<p>When configured to true, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false

Introduced	20.10.R1
Platforms	All

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p>
Default	false
Introduced	20.10.R1
Platforms	All

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	20.10.R1
Platforms	All

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp <i>boolean</i>

Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> default-route-tag <i>string</i>
Tree	default-route-tag
Description	This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed. When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority. The following are examples of the conflict priority handling: <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.
Introduced	20.10.R1
Platforms	All

domain-id string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vprn string bgp-evpn mpls number domain-id string
Tree	domain-id
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>
Introduced	21.10.R1
Platforms	All

dynamic-egress-label-limit boolean

Synopsis	Enables dynamic egress label limit
Context	configure service vprn string bgp-evpn mpls number dynamic-egress-label-limit boolean
Tree	dynamic-egress-label-limit
Description	<p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p>

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	22.2.R1
Platforms	All

evi number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN instance ID
Context	configure <i>service vprn string bgp-evpn mpls number evi number</i>
Tree	<i>evi</i>
Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	22.10.R1

max-dynamic-weight *number*

Synopsis	Maximum dynamic weight of the route
Context	configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise max-dynamic-weight number
Tree	max-dynamic-weight
Description	This command configures the maximum weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If weight dynamic is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight.
Range	1 to 128
Default	128
Introduced	22.7.R1
Platforms	All

weight (*number* | *keyword*)

Synopsis	Weight of the route
Context	configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise weight (number keyword)
Tree	weight
Description	This command configures the weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If set to dynamic , the weight is dynamically set based on the number of BGP PE-CE paths for the IP-Prefix that is advertised in an EVPN IP-Prefix route.
Range	1 to 128
Options	dynamic
Default	dynamic
Introduced	22.7.R1
Platforms	All

weighted-ecmp *boolean*

Synopsis	Enable weighted ECMP
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.</p> <p>Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).</p> <p>The command also enables the weighted ECMP functionality for BGP CEs that are configured with an evpn-link-bandwidth add-to-received-bgp weight.</p> <p>When configured to false, the router disables the processing of the EVPN link bandwidth extended community.</p>
Default	false
Introduced	22.7.R1
Platforms	All

vrf-import

Synopsis	Enable the vrf-import context
Context	configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> vrf-import
Tree	vrf-import
Introduced	20.10.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
----------	-------------

Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> vrf-import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	All

vrf-target

Synopsis	Enter the vrf-target context
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	20.10.R1
Platforms	All

community *string*

Synopsis	Extended BGP community
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> vrf-target community <i>string</i>
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	20.10.R1
Platforms	All

export-community *string*

Synopsis	Communities sent to remote PE neighbors
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> vrf-target export-community <i>string</i>
Tree	export-community
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	20.10.R1
Platforms	All

import-community *string*

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> vrf-target import-community <i>string</i>
Tree	import-community
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	20.10.R1
Platforms	All

segment-routing-v6 [**bgp-instance**] *number*

Synopsis	Enter the segment-routing-v6 list instance
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i>
Tree	segment-routing-v6
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[bgp-instance] *number*

Synopsis	BGP instance
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i>
Tree	segment-routing-v6
Range	1
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Administrative state of segment routing over IPv6
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

default-route-tag *string*

Synopsis	Default route tag
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> default-route-tag <i>string</i>
Tree	default-route-tag

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the default-route-tag, then EVPN keeps tag A when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

domain-id string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> domain-id <i>string</i>
Tree	domain-id
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p>

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

evi number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVI information
Context	configure service vprn string bgp-evpn segment-routing-v6 number evi number
Tree	evi
Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) or an R-VPLS (for the EVPN-IFF model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

resolution keyword

Synopsis	Resolution options for routes
Context	configure service vprn string bgp-evpn segment-routing-v6 number resolution keyword
Tree	resolution
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

route-distinguisher (*string* | *keyword*)

Synopsis	Route distinguisher
Context	configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> route-distinguisher (<i>string</i> <i>keyword</i>)
Tree	route-distinguisher
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify the VPN to which the route belongs. Alternatively, the system can automatically generate an RD based on the BGP automatic RD range configured at the configure service system level.
Options	auto-rd
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

source-address *string*

Synopsis	Source IPv6 address
Context	configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> source-address <i>string</i>
Tree	source-address
Description	When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet. When not configured, the source IPv6 address is inherited from the configuration of the global default address in the router "base" segment-routing segment-routing-v6 source-address context. A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

srv6

Synopsis	Enter the srv6 context
Context	configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> srv6
Tree	srv6
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

default-locator *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default route locator
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> srv6 default-locator <i>string</i>
Tree	default-locator
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

instance *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Segment Routing IPv6 instance
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> srv6 instance <i>reference</i>
Tree	instance
Reference	configure service vprn <i>string</i> segment-routing-v6 <i>number</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

vrf-export

Synopsis	Enable the vrf-export context
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-export
Tree	vrf-export
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

vrf-import

Synopsis	Enable the vrf-import context
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-import
Tree	vrf-import
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-import policy (<i>policy-expr-string</i> <i>string</i>)

Tree	policy
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

vrf-target

Synopsis	Enter the vrf-target context
Context	configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-target
Tree	vrf-target
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

community string

Synopsis	Extended BGP community
Context	configure service vprn string bgp-evpn segment-routing-v6 number vrf-target community string
Tree	community
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

export-community string

Synopsis	Communities sent to remote PE neighbors
Context	configure service vprn string bgp-evpn segment-routing-v6 number vrf-target export-community string
Tree	export-community
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

import-community string

Synopsis	Communities accepted from remote PE neighbors
Context	configure service vprn string bgp-evpn segment-routing-v6 number vrf-target import-community string
Tree	import-community
String Length	10 to 28
Notes	The following elements are part of a choice: community or (export-community and import-community).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

bgp-ipvpn

Synopsis	Enter the bgp-ipvpn context
Context	configure service vprn string bgp-ipvpn
Tree	bgp-ipvpn
Introduced	21.2.R1
Platforms	All

mpls

Synopsis	Enter the mpls context
Context	configure service vprn string bgp-ipvpn mpls
Tree	mpls
Introduced	21.2.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BGP-IPVPN MPLS
Context	configure service vprn string bgp-ipvpn mpls admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	All

auto-bind-tunnel

Synopsis	Enter the auto-bind-tunnel context
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel
Tree	auto-bind-tunnel
Description	Commands in this context configure the automatic binding parameters of a BGP-IPVPN service using tunnels to MP-BGP peers.
Introduced	21.2.R1
Platforms	All

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	When configured to true , a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available. When configured to false , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	21.2.R1
Platforms	All

ecmp *number*

Synopsis	Maximum ECMP routes allowed
Context	configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel ecmp <i>number</i>
Tree	ecmp
Description	This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level.
Range	1 to 32
Default	1
Introduced	21.2.R1
Platforms	All

enforce-strict-tunnel-tagging *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Description	When configured to true , the system must only consider LSPs marked with an administrative tag for next-hop resolution.

When configured to **false**, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.

Default	false
Introduced	21.2.R1
Platforms	All

resolution keyword

Synopsis	Resolution method for tunnel selection
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution keyword
Tree	resolution
Options	none, filter, any
Default	none
Introduced	21.2.R1
Platforms	All

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter
Tree	resolution-filter
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers.
Introduced	21.2.R1
Platforms	All

bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp boolean
Tree	bgp
Description	When configured to true , BGP searches the BGP LSP for the address of the BGP next hop. When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

Default	true
Introduced	21.2.R1
Platforms	All

gre boolean

Synopsis	Use GRE tunneling for next-hop resolution
Context	configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean
Tree	gre
Description	When configured to true , this command enables setting the tunnel type for the auto bind tunnel.
Default	false
Introduced	21.2.R1
Platforms	All

ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp boolean
Tree	ldp
Description	When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to false , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

mpls-fwd-policy boolean

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter mpls-fwd-policy boolean
Tree	mpls-fwd-policy
Description	When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.

When configured to **false**, the MPLS forwarding policy is not used for next-hop resolution.

Default	false
Introduced	21.2.R1
Platforms	All

rib-api *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rib-api <i>boolean</i>
Tree	rib-api
Description	When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to false , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp <i>boolean</i>
Tree	rsvp
Description	When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to false , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis <i>boolean</i>
Tree	sr-isis
Description	When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance. When configured to false , IS-IS tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i>
Tree	sr-ospf
Description	When configured to true , BGP uses an OSPF tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance. When configured to false , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

sr-ospf3 boolean

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	When configured to true , BGP uses an OSPFv3 tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPFv3 instance.

When configured to **false**, OSPFv3 tunneling is not used for next-hop resolution.

Default	false
Introduced	21.2.R1
Platforms	All

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy
Description	<p>When configured to true, SR policies are used to determine the address of the BGP next hop.</p> <p>The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p>
Default	false
Introduced	21.2.R1
Platforms	All

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	21.2.R1
Platforms	All

udp boolean

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter udp boolean
Tree	udp
Description	When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to false , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

weighted-ecmp boolean

Synopsis	Allow weighted load-balancing
Context	configure service vprn string bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp boolean
Tree	weighted-ecmp
Description	When configured to true , this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP. When configured to false , this command disables weighted ECMP for next-hop tunnel selection.
Default	false
Introduced	21.2.R1
Platforms	All

domain-id string

Synopsis	Domain ID of received BGP route before readvertisement
Context	configure service vprn string bgp-ipvpn mpls domain-id string
Tree	domain-id
